This plate gave an ultimate tensile strength of 40,780lbs. per square inch, an elongation of 10 per cent. in 2in., and the reduction of area at the point of fracture was 14.75 per cent. * * *

The possibilities of aluminum in ship construction, in the mind of the author, are very great, in two classes of boats especially—that is, the first and second-class torpedo-boats.

There is no reason why, in the second-class torpedo-boats, which are a very short time in the water, they could not be constructed wholly of aluminum.

This would be advantageous not only from a point of reduction in

PHILADELPHIA CORINTHIAN YACHT CLUB HOUSE——THE TAP ROOM.

draft, and additional speed, rigidity also following, but also from the fact that, being several tons lighter than any other possible construction, they could be with greater rapidity and facility put overboard incase of emergency, or removed from the water when necessary.

In the first-class torpedo-boats, where the boats will be overboard for some length of time, and where also a boat of great speed and as light as possible is desired, the construction which has been used in Defender will be hard to improve upon.

That is, build a boat which, from the waterline down, should be constructed of aluminum bronze, or some other of the bronzes, the aluminum bronze being suggested because lighter sections could be used, and for a given section it is the strongest known metal; the hull could not be built to greater advantage than by building it out of this metal. All the plating above the waterline, and the deck beams, bed plates for machinery, and all her frames could be constructed of aluminum.

Great care should be observed, in both kinds of construction above referred to, to use rivets of the same material as the sections which are to be riveted. Care should be taken either to keep the aluminum painted or keep it clean, if it is desired that it shall have good endurance.

There are also many places in our large ships where aluminum could be used advantageously, but to go into the individual parts and a discussion on this subject would occupy more time and space than is here permissible, and there is such a vast amount to be done and considered in constructing the smaller boats of aluminum before we get to the larger ones, that the author does not consider it advisable to enter upon this question at the present time.

Some adverse criticism was made by several naval constructors to statements in the paper concerning the attitude of the Government in the matter of using aluminum in the new naval vessels.

The paper on "Rudder Experiments on the U. S. S. Monterey," by Elliott Snow, Assistant Naval Constructor, U. S. N., was read by Sec'y Capps in the absence of the author. The discussion brought out a general appreciation of the importance of the tests described. Naval Constructor D. W. Taylor, U. S. N., read a very thorough and comprehensive paper on "Methods and Forms for Certain Ship Calculations," followed by a paper by Prof. W. F. Durand, Cornell University, on "The Number of Longitudinal Intervals in Ship Computation, as Affecting the Accuracy of Integration for Displacement," with a note on the subject treated by him last year, "The Relation Between Reduced and True Netted Surface."

On Friday the following papers were read: "Recent Designs of Vessels for the U. S. Navy," by Philip Hichborn, Chief Constructor, U. S. Navy; "Tactical Considerations Involved in War Ship Design," by Lieut. Albert P. Niblack, U. S. Navy; "Performance of the Twin-Screw Steamer City of Lowell," by Prof. James E. Denton, Stevens Institute of Technology; "Engineering Research in the Navy," by Prof. Wm. S. Aldrich, University of West Virginia; "The Ventilation of Ships," by F. B. Dowst, Esq., M. E.; "An Experimental Test of the Armored Side of the U. S. S. Iowa," by Albert W. Stahl, Naval Constructor, U. S. Navy.

Lieut. Niblack's paper was particularly rich in suggestions, and evinced a careful study of a very important subject. Prof. Aldrich's paper was both timely and to the point, advocating the immediate establishment of State or national institutions for investigation and research in matters of naval architecture and marine engineering. Prof. Denton's paper described some interesting tests of the new steamer City of Lowell, designed by Mr. A. Cary Smith, with remarkable results.

On motion of Admiral Meade a special committee was appointed to consider the subject of memorializing Congress in favor of the construction of the Nicaragua Canal. The committee of five reported in favor of such a memorial, with one dissenting member; but after a thorough discussion the report of the committee was not accepted, the opinion of the members being by a large majority against any action by the Society in a matter which was outside of its avowed object, the encouragement of the art of shipbuilding.

In the evening the annual banquet of the Society took place at the Hotel Brunswick, a large number being present. Among the principal speakers were Congressman Amos J. Cummings, of New York, and Admiral Meade.

Corinthian Y. C. of Philadelphia.

THOUGH but four years old, the Corinthian Y. C. of Philadelphia is a flourishing club, with a large membership and a fleet of 75 yachts, and a very fine station and club house at Essington, on the Delaware River, at the head of the club course. The officers of the club are: Com., Edgar F. Scott, steam yacht Sagamore; Vice-Com., Russell E. Tucker, cutter Mermaid; Rear-Com., Edwin P. Baugh, Jr., schooner Mon Rex; Sec., Addison F. Bancroft; Treas., Robert K. Neff; Meas., G. Herbert Millett; Fleet Captain, W. Barklie Henry; Fleet Surgeon, A. G. Thompson, M.D. The hall and "tap room" of the club house are shown in the accompanying cuts. Mr. Robert Baine, to whom we are indebted for the cuts, informs us that the house, which has recently been remodeled without destroying any of its architectural features, is an old Colonial mansion, built on Tinicum Island on the site and partly of the materials of the house of Col. Printz, Governor of the Swedish Colony. The antecedents of the place are very appropriate, the harbor being formed by Little Tinicum Island, which, as old records show, was given to the "keeper of the Governor's yacht."

American Model Y. C.

THE American Model Y. C. sailed a series of races on Election Day to close the season, the times being:

New Half-Raters.

ROSLYN, L. I.—*Editor Forest and Stream:* I have just completed for a New York gentleman a one-rater of 16ft. waterline length, 7ft. beam, 9in. draft. She is of the Bouncer type, with angle bilge; sloop rig, and is fitted with a removable cabin house. We have also now in frame a half-rater 23ft. over all, for a Southern owner. This boat is for racing, and is of the Bouncer type with round bilges. All her frames are identical in shape, so that but one mould is used for getting out all her ribs. Her timbers are spaced 8in. apart, each being worked from a hackmatack knee, and her entire frame weighs less than 50lbs. The planking and deck will be of cedar $\frac{7}{16}$in. thick, fastened with brass screws.

I have also orders for two other half-raters, to be commenced before January 1, and have several gentlemen *talking* about building for this class. I should think that half-raters are likely to be as numerous as summer gulls on the Sound next season. THOMAS CLAPHANS.

Look in the Attic.

MILWAUKEE, Wis., Oct. 28.—*Editor Forest and Stream:* For some time past the Mahn-a-Wauk C. C. men have suffered through numerous thefts committed at our boat house the loss of many articles, such as clothes, tools, etc., besides the damages the intruders had done to the building and our lockers. Nearly every member who had anything in his locker had sustained some loss. How to stop these depredations was a problem that had been considered many times, and it finally devolved on the genius of the club to carry out a good scheme. The last place that an entrance has been effected was through the door leading from our locker room to the veranda over the lake. This door had been broken in several times before, the first being by Mr. A. W. Friese himself some time ago, he having come down there one day without his keys. He promised to have it fixed at once, but neglected to, and the same scheme was worked by others who had no business there, as we soon found out. Finally some other members took it upon themselves to fix this door. One day last month on visiting the place we discovered that this door had been broken in again, and this is where our genius got in his work. A trap was set for the next visitor coming that way, consisting of a shelf just over the door loaded with pans, bottles, broken glass, etc. This shelf was so adjusted that when the door opened wide enough to admit a person this whole mess would fall on the intruder's head, and in addition would release a beer keg loaded with shot and weights from its suspended position, striking him just below the belt—surely an awful thing to run up against. If this did not cripple the victim or knock him over the veranda railing into the lake, a second keg was so adjusted at the head of the stairs leading down to the boat room, that it would be set a-rolling, bumping down the stairway, dragging its line of bottles and cans, making a terrible noise.

This mechanism was rigged up and tested several times and worked to perfection. The trap was set and left to do its horrible work. For three weeks we watched and waited, expecting any time to hear that the coroner had been suddenly called to attend a case at the lake front. We were disappointed in not securing our game, but also found part of our trap had been sprung a number of times from within. This was quite evident that one of our own members was doing this as a joke on the ones who had rigged up the trap. So a consultation was held by these few, and in checking up those who had knowledge of the scheme and who would be likely to spring the trap in this manner, the conclusion was quickly and unanimously reached that —— was that person. How to retaliate in a fitting manner was the next problem. Again our genius came to the front. ——was known to be going out of town for the next few days, so it was decided that one of his canoes would have to disappear. The plan was to store it away in the attic. Doors were taken off hinges, windows removed from their frames, hanging lamps taken down and everything made ready for an easy and quick transfer from the boat room to a cozy little berth under the rafters, where it was covered up with such things as cots, fish nets and other stuff accumulated there, completely concealing its identity. Everything else was replaced in its position and we waited impatiently, for we knew we were sure of some fun this time. In due time Willie returned from his bicycle trip and immediately went to the boat house. Of course he missed his fine new paddler the first thing, and I will give up any attempt at describing his troubles and perplexities. He interviewed all the people in the neighborhood and looked up everybody around town connected with the club, trying to get some information. Finally he invoked the aid of detectives and the police force. If he will only offer a reward the joke will have gone far enough, but as yet he is still looking for his canoe. A MAHN-A-WAUK.

American Canoe Association.

THE annual meeting of the executive committee of the American Canoe Association was held on Nov. 11 at Stanwix Hall, Rome, N. Y., with Com. W. R. Huntington presiding. The financial reports showed a most successful year, a cash balance of over $550 being turned over by ex-Sec'y-Treas. Cragge after all expenses of the meet were paid. It was decided without discussion to hold the meet of 1896 on the old camp ground at Grindstone Island in the St. Lawrence River. After considerable discussion, the date was fixed for Aug. 14-28 inclusive. No changes of racing rules could be made, but a number were favorably passed upon by the committee, to be voted on by mail. The principal ones, proposed by Mr. Butler, were the limiting of sail in all races to 130sq. ft., and the removal of the limit to drop of centerboard. After the meeting the visitors were entertained by the Deowainsta Canoe Club with an elegantly served dinner at the hotel.

Rifle Range and Gallery.

Cincinnati Riflemen.

CINCINNATI, O., Nov. 3.—The following scores were made by members of the Cincinnati Rifle Association at their range to-day.

Conditions: 200yds., strictly off-hand, 3lbs. trigger pull, rifles under 10lbs. weight, standard target, 7 ring black.

Captain Gindele again distinguished himself by making two consecutive clean scores and a 95. How's that for strictly off-hand shooting? Scores:

Gindele	7	6	10	8	8	10	9	9	10	8—85
	9	8	10	9	7	8	7	9	9	10—86
	8	9	8	9	8	9	8	8	8	10—85

Tournament of the Greenville Rifle Club.

THE two days' open shoot of the Greenville Rifle Club, of Jersey City, N. J., which commenced on the morning of Nov. 9, was brought to a conclusion at 11 P. M. on the following day. Owing to the lateness of the hour it was impossible to announce the winners' names until Monday morning, Nov. 11. The cash prizes, which amounted to quite a considerable sum, brought together many of the best shots in this part of the country, among them being F. C. Ross, Michael Dorrler, G. W. Plaisted, Louis Flach, George Rosenbaum, George Purkess, Robert Busse, etc.

The shooting was off-hand, German ring target, 75ft., best two tickets to count. The winners were:

George Purkess, Greenville R. C., 75, 74; Robert Busse, Zettler R. C., 74, 74; Michael Dorrler, Greenville R. C., 74, 73; Louis Flach, Empire R. C., 74, 73; George Rosenbaum, Empire R. C., 74, 72; Frederick C. Ross, Williamsburgh Shooting Society, 72, 73; Colin Boag, Greenville R. C., 72, 71; Walter C. Collins, Greenville R. C., 72, 71; Louis P. Hansen, Excelsior R. C., 71, 71; George Vogel, Zettler R. C., 71, 71; John Rebhan, Hudson R. C., 71, 70; G. W. Plaisted, Greenville R. C., 71, 68; James Boag, Greenville R. C., 70, 68; Christopher Scheeline, Greenville R. C., 70, 68; Gustav Graef, Greenville R. C., 70, 68; George Renker, Excelsior R. C., 69, 66; George Agneau, Greenville R. C., 63, 66; William Dodds, Greenville R. C., 68, 67.

Premiums—Michael Dorrler, Greenville R. C., 74, 73, 73, 73, 72; Louis Flach, Empire R. C., 74, 73, 72, 73, 72; Robert Busse, Zettler R. C., 74, 74, 72, 72, 71.

Revolver Shooting in England.

LONDON, England, Oct. 23.—The official report of the North London Rifle Club of its last day's revolver competition for the year has just been published; the report says: "Mr. Walter Winans secures the revolver championship with a more marvelous run of shooting than before." Score of to-day's revolver championship:

Revolver match, 18 shots at 20yds., committee vs. club:

Club team (captained by Lieut. F. E. Varley, Hon. Artillery Co.).

E Howe	35 36 36—107	A J Comber	27 31 36—94
Capt T W Heath	32 37 38—107	Lieut Howard	28 30 33—72—309

Committee team (captained by W. Winans).

Walter Winans	36 38 39—113	Major Cowan	31 32 35—98
Carter	36 37 38—111	Skilton	23 24 25—72—394

Revolver match, 20yds., stationary target:

Walter Winans	777777—42	Knapp	774747—36
Capt T W Heath	577667—38	Capt W Evans	575575—34
Carter	767567—38	Capt Earle	345777—33
A J Comber	676775—38	Denyer	577535—32
L Comber	764777—38	Lieut Clemence	465457—31
Major Palmer	577665—36	Bashford	455467—31
E Howe	677565—36	Lieut F Evans	365773—31
Lieut Richardson	774756—36		

Trap-Shooting.

FIXTURES.

Nov. 20 21.—IRONTON, O.—Holiday tournament of the Iron City Gun Club. H. E. Norton, Pres.

Nov. 26-28.—DES MOINES, Ia.—Tournament of the Des Moines Gun Club; live birds and targets. C O Perkins, Pres.

Nov. 28.—CANAJOHARIE, N. Y.—Thanksgiving tournament of the Canajoharie Gun Club; live birds and targets. Chas. Weeks, Sec'y.

Nov. 28.—RYE, N. Y.—Thanksgiving tournament of the Rye Gun Club; live birds and targets; shooting commences at 10 A. M. E. J. Pope, Sec'y.

Dec 7.—HOLMESBURG JUNCTION, Pa.—Team race, 25 men to a team, between All-Philadelphia and the Delaware State League; all day shoot on the grounds of the Keystone Shooting League.

Dec. 19, 20.—ELIZABETH, N. J.—Fifth bi-monthly tournament of the Elizabeth Gun Club; first day, targets; second day, live birds.

1896.

Jan. 4.—WILMINGTON, Del.—Second team race between All-Philadelphia and the Delaware State League, 25 men to a team; all day shoot on the grounds of the Wilmington Rod and Gun Club.

Jan. 4-5—PHŒNIX, Ariz.—Annual tournament of the Arizona State Sportsmen's Association.

Jan. 9-11.—SAN ANTONIO, Texas.—Grand mid-winter tournament, under the auspices of Texas State Sportsmen's Association and management of J. M. George and O. C. Guessaz (Texas Field).

Feb 1.—————.—Third team race between All-Philadelphia and the Delaware State League, 26 men to a team. (Place of shoot not fixed.)

April 1-3.—NEW YORK.—Interstate Association's Fourth Annual Grand American Handicap.

April 14-17.—ATCHISON, Kansas.—Thirteenth annual open to all, and second annual manufacturer's amateur tournament; $1000 added money and manufacturers' prizes. Lou Erhardt, Sec'y.

May 5-8.—NEW YORK.—Tournament of the American E. C. Powder Company; $2 000 added money.

May (second week) —MEMPHIS, Tenn.—Tournament of the Memphis Gun Club, $2,000 added money.

May 12-14.—DAYTON, O.—Annual tournament of the Ohio Trap-Shooters' League. Ed. Taylor, Sec'y.

May 20-24.—KANSAS CITY, Mo.—Nineteenth annual convention and tournament of the Missouri State Fish and Game Protective Association. J. H. Durkee, Sec'y.

May 19-23.—CINCINNATI, O.—Tournament of the Hazard Powder Co. R. S. Waddell, Agent.

May 26-28.—FRANKFORT, Kan.—Annual tournament of the Kansas State Sportsmen's Association.

May 30-June 1.—MILWAUKEE, Wis.—Eleventh annual tournament of the South Side Gun Club.

June 8-13.—BUFFALO, N. Y.—Thirty eighth annual tournament of the New York State Association for the Protection of Fish and Game, under the auspices of the Audubon Gun Club. E. W. Smith, Sec'y.

June 17-19.—CLEVELAND, O.—Third annual tournament of the Chamberlin Cartridge and Target Company.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 318 Broadway, New York.

The following is the programme for the Iron City Gun Club's tournament on Nov. 20, 21, at Ironton, O.: Six events at 15 bluerocks, $1.50 entrance each event, and four 20-target events, $2 entrance. The above ten events will constitute the programme for each day. Targets will be charged for at the rate of 2 cents each, the money being deducted from the purses. Shooting commences promptly at 8:30 each day. The following handicapping system will be tried: All making straight scores in any event will shoot in the next event at everything known, traps pulled in reverse order. Whenever they fail at this style of shooting to take a portion of either first or second money they go back to unknown angles. Mr. H. E. Norton, president of the club, in sending us the above particulars of his club's programme, adds: "This we think to be a fair way of shooting, and one that should suit the amateur, the expert and the professional. The club has already heard from enough shooters to feel safe in saying that it will have from four to six squads all the time. We promise to all who come a square shoot in every way and two days of good sport. Don't forget the dates—Nov. 20-21."

Mr. Harry A. Chisholm, secretary of the Portland, Me., Gun Club, send us the following under date of Oct. 26: "In a recent issue of FOREST AND STREAM you state that the Richmond, Me., team won the championship badge given by the Lovell Arms Co. The real truth of the matter is this: The Richmond team contains some members who shoot 10-gauge guns. While the shoot was in progress Mr. Huntington's load was challenged and found to contain very nearly one and one-half ounces of shot. At the end of the contest the badge was awarded to the Portland team, Huntington's score being thrown out, thus giving Portland the State championship."

In a letter dated from Memphis, Tenn., November 4, Noel Money, of the American E. C. Powder Company, says in regard to the sport he has had while on his trip through the South: "Am in a hurry, as I am just off to Little Rock, Ark., to shoot live birds with Paul Litzke. Have been having very good shooting here; been after quail three days and have bagged; first afternoon, 35; second day, 64, and third day, 75; grass and cover still very thick. I was at the Wacanaca club last week, where there are simply millions of ducks, geese and wild swans. This is a wonderful game country, turkeys and deer seem to be everywhere; one man at the club killed five turkeys on Saturday morning in about one hour." That sounds like a sportsman's paradise.

On Nov. 1 the colleges of Princeton, Yale and Harvard met before the traps, the gun clubs of each college sending teams of five to Dayton, N. J., where, on the grounds of the local gun club at Monmouth Junction, the teams decided the annual question of superiority with the shotgun. Princeton won, as the following scores show: Princeton—Kendall and Farr 26, Young 25, Johnson 22 and Paine 21—120; Harvard—Bartol 28, Hardy 25, Dove 22, Harris 21 and Sterling 20—116. Yale—Miller 26, McCahill 24, Hoyt 18, Sargeant 16 and Benedict 14—98. Each man shot at 30 targets, making 150 to the team.

The Pittsburg, Pa., *Dispatch* of Nov. 5 says: "At a meeting of the Herron Hill G. C. yesterday the following gentlemen were elected to membership: W. W. Wilcox, B. F. Jones, Jr., D. H. Hostetter, J. A. Wilson, John D. McKennan, William N. Murray, L. W. Dalzell, William L. Jones, C. M. Hostetter, T. H. Ewing, George A. Howe, O. L. Herlig, John H. Straub, T. H. Childs, W. C. Temple, E. E. Shaner, Sol Shaner, John W. Dickson, John G. Messner, H. Christy, J. A. Glesenkamp."

E. W. Hoffman, of Galena, Kan., has challenged W. W. McIlhany, of Weir City, Kan., the holder of the championship of the State of Kansas at live birds, for the trophy emblematic of the above championship. McIlhany has accepted the challenge, and the match will take place at Weir City on Nov. 21. The conditions of the match are 50 live birds per man, A. S. A. rules to govern.

The Wollaston, Mass., Gun Club's series of merchandise club shoots for 1895 have been brought to a close. In this competition each member is allowed to choose his three best scores in the series. As a result, the first prize goes to Morse with 73 out of 75, Federhen taking second with 72 out of the same number. D. B. Lincoln and Prescott are tied for third with 71 each; they will shoot off the tie to decide the owner of the prize.

The Westminster Kennel Club, Babylon, L. I., opened its pigeon-shooting season of 1895-96 on Election Day. The proceedings were informal, but some good shooting was done, the birds, as is always the case on these grounds, being fast flyers. C. A. Chapin did the best work during the day, killing 39 out of 40 from the 30yds. mark.

W. T. Irwin and A. H. Bogardus shot a live-bird match on Nov. 6, at Paris, Ill. This match was said to be "the second of the series of three for the championship!" Irwin won by killing 44 out of 50 to Bogardus's 41. Each has now won one match; the next is to be shot at Lincoln, when the "championship" question will be decided.

When five men step to the score and shoot at 50 targets each, unknown angles, scoring a total of 236 out of the 250, an average of 94 4 for the team—it is what may be called shooting. That was the record made on Nov. 4 by five members of the Cleveland Gun Club, as shown elsewhere.

The members of the Yantacaw Gun Club had good sport on Election Day, notwithstanding the fact that the scores were not up to the average, as is shown by the following: F. S. Delafield 16, R. K. Cooke 14, G. Deaken 12, E. R. Tilton 5, T. Wilson 14, E. Macy 12, F. Butler 10, S. H. Dorr 10, G. Malcolm 10.

In a 25 live-bird sweep shot at Patchogue, L. I., on Nov. 7, Wm. O'Berry, of St. James', carried off first money by killing 25 straight. The contestants were John Wolfert, of Islip; W. M. O'Berry, of St. James'; Dr. Beers, of Brooklyn; George O'Berry, of St. James'; John Harris, of Smithtown; Robert O'Berry, of St. James', and George Marks, of Bohemia.

We are indebted to Mr. Portus Baxter, of the Seattle *Post-Intelligencer*, the secretary of the Washington State Sportsmen's Association, for the scores of the association's tournament held recently at Seattle. The daily reports of the shoot given in the above paper were from the pen of Mr. Baxter, who handled the matter very ably.

W. J. Passmore, a member of the Crescent Gun Club, of Brooklyn, N. Y., won the November shoot of that club by killing 6 out of 7 live birds from the 28yds. mark. His competitors were: Walter G. Gilman (30) and Otto J. Schmidt (28).

The result of the first King-Messner match was a surprise; not so much from the fact that the men tied at the end of the 100th round, but on account of the poor scores made on what are termed by our correspondent "awfully bum birds."

At the Kewanee (Ill.) tournament on Nov. 8 the Galesburg, Ill., team beat the Kewanee team by the score of 41 to 39. During the three days of the shoot Rolla Heikes as usual rolled up some big scores. On the last day he divided, or took the whole of first money in ten events out of sixteen.

The managers of tournaments, and secretaries of gun clubs that contemplate holding tournaments, should not fail to send for samples of FOREST AND STREAM'S tournament squad pads. Having gotten them out in large quantities we can furnish them at a very low rate indeed.

There is no easier method of insuring a good attendance at your tournaments than by keeping your club before the eyes of the trap-shooting public. Send in your scores, not occasionally, but every time your club holds a shoot.

The Rye, N. Y., Gun Club announces that it will hold an all-day shoot at live birds and targets on Thanksgiving Day, Nov. 28. Shooting commences at 10 A. M.

The Elizabeth, N. J., Gun Club will hold its fifth bi-monthly tournament Dec. 19, 20. First day, targets; second day, live birds; open to all.

EDWARD BANKS.

Warren Gun Club Tournament.

WARREN, O., Nov. 7.—The Warren Gun Club held its third shoot of the season to-day. It was the most successful yet held by the club. The rapid-fire system was used and all shooting was at unknown angles. Twelve events were shot, half being for merchandise and half for money prizes; in the latter the percentage system was used; 3,370 bluerocks were thrown during the shoot. The weather was perfect for shooting, which began at 8 A. M. and lasted until dark. The following twenty-six shooters participated: Sterling and F. H. Snow, of Cleveland, O.; Weakland and Fry, of Youngstown, O.; O'Connell, Rummell and Naylor, of Niles, O.; Hull and Chapman, of Akron, O.; Flick, of Ravenna, O.; Nutt, of Kent, O.; Spires, Porter and Whittlesey, of Atwater, O.; Savage and Keck, of ——; Stiles, Ewalt, Jones, Perkins, Sheldon, Schoonover, Neracher, Biery, Williams and Dunham, of Warren, O.

The following is the percentage of each shooter exclusive of tie birds. The shooters with a * before their names shot in all events:

	Per cent.		Per cent.		Per cent.
*Weakland	92	*Spires	83	Naylor	70
*Snow	91	Neracner	81.3	O'Connell	70
*Sheldon	90	Rummell	80.5	Biery	62
*Flick	88.3	Savage	80	*Whittlesey	61
*Sterling	87.6	*Stiles	79	*Perkins	56
*Hull	86	*Chapman	75	Keck	52
*Schoonover	86	Dunham	74	Porter	40
Jones	85	*Nutt	73.9	Williams	36
*Fry	84	*Ewalt	72		

H. B. PERKINS, JR., Secretary.

Trap on Long Island.

NEW UTRECHT GUN CLUB.

BROOKLYN, N. Y., Nov. 5.—Eight members of the New Utrecht Gun Club competed this afternoon for the Holiday cup. The contest is at 10 birds, club handicap rise, with a sweepstake of $3, birds of course being extra. Louis Schortemeier, C. W. Floyd, E. B. Knowlton and H. P. Fessenden killed all their birds and shot off for the cup, miss-and-out. Fessenden fell down on his second tie bird; Knowlton killed four straight and then dropped out; Floyd missing his seventh and Schortemeier having killed, the latter was declared the winner. The scores were:

L Schortemeier (28)	2222222222—10	W Lair (28)	2212112012— 9
C W Floyd (28)	2222222222—10	C M Meyer (28)	2202222222— 9
E B Knowlton (26)	1122212211—10	J N Meyer (26)	2110120111— 8
H P Fessenden (27)	2222222222—10	G W Coulston (28)	2102201110— 7

Shoot-off of ties:

Schortemeier	2222222	Knowlton	21110
Floyd	2222220	Fessendea	20

JULIAN DEFEATS SCHMIDT.

Nov. 5.—S. H. Julian, of the Hell Gate Gun Club, and August Schmidt, president of the New York German Gun Club, shot a couple of live-bird matches this afternoon, the former coming out ahead in both. The conditions of the first race were: 25 live birds, 28yds. rise, $100 a side. Mott's traps were used, with his automatic electric pulling apparatus. The birds were a good lot and flew well, making good scores an impossibility. The score of the first race was as follows:

Julian	0222002022002121221012212—18
Schmidt	1220212220••12202020000220—14

Another match on the same terms was then arranged. This was a close affair, both men killing 19 of their birds. The score:

Schmidt	1112112221000•1•12110121 2—19
Julian	1122012221222•020020112 12—19

On the shoot-off at 5 birds both men killed all. A second string of 5 birds was then shot, Julian winning by killing 4 to his opponent's 3.

CONEY ISLAND ROD AND GUN CLUB.

Nov. 6.—Eleven members of the Coney Island Rod and Gun Club took part in the regular club shoot to-day. The contest for the Hughes gold medal was a good one, three men tieing for the badge with clean scores of 7 birds each: W. H. Lair (29), Herman Mueller (27), and John F. Schmaedke (27). Three other shooters tied for the second prize.

The scores were: W. H. Lair (29), Herman Mueller and John F. Schmaedke (27), 7; Henry Knebel, Jr. (29), Dr. G. H. Raynor (27), and Hugh McLoughlin (27), 6; J. B. Voorhees (28), John Schliemann (28), John E. Orr (28), and Harry M. Rockefeller (27), 5; Dr. J. H. Van Zile (30), 4.

Ties for first and second prizes were shot off, miss-and-out, as follows:

Ties on 7 for the Hughes badge: Lair 3, Schmaedke 2, and Mueller 0.

Ties on 6 for second prize: Raynor 6, McLoughlin 5, Knebel 2.

Ties on 5 for third prize were not shot off, Voorhees, Rockefeller, Schliemann and Orr dividing their share of the pot.

AT NORTH BEACH.

Nov. 11.—James W. Barton and Harry J. Lawrence, both members of the Eureka Gun Club, shot a race at 50 live birds per man, 28yds. rise, on the shooting grounds at North Beach, L. I. The birds were strong flyers and, aided by the high wind, they managed in a large number of instances to escape from the shooters. Barton, who ran 17 straight before he missed, won with ease by 11 birds, the scores showing: Barton 44, Lawrence 33.

BUSHWICK ROD AND GUN CLUB.

Nov. 11.—The Bushwick Rod and Gun Club held its monthly club badge shoot to-day on its grounds at Newtown, L. I. The high wind which blew across the traps made the flight of the targets very erratic and lowered the totals of breaks very materially. Henry J. Williams won the club shoot as follows:

Club shoot, 20 targets: Henry J. Williams 19, James H. Nolan 16, Thomas W. Richardson 14, George H. Schaeffer 15, William H. Johnson 15, George W. Morrison 13, Philip H. Young 12, Andrew T. Murphy 11, John J. O'Brien 9, Edward T. Hudson 6.

No. 2, 10 targets, known angles: Williams 9, Nolan 7, Richardson 6, Schaeffer 10, Johnston 9, Morrison 8, Young 7, Murphy 7, O'Brien 6, Hudson 4.

The same: Williams 7, Nolan 8, Richardson 10, Schaeffer 8, Johnston 9, Morrison 7, Young 9, Murphy 8, O'Brien 7, Hudson 3.

SUFFOLK COUNTY GUN CLUB.

NEW YORK, Nov. 7.—The Suffolk County Gun Club held its first regular monthly shoot for the season of 1895-96 this afternoon. The principal event was the 10-bird shoot for the club championship, which was won by G. Nicholl, who scored 9 out of 10. All contestants shot from the 30yds. mark in this event. Two other events were also shot off during the afternoon. Scores:

Club championship, 10 live birds:

G Nicholl	221-032222—9	R Vanwart	2022000222—6
H Miller	2222210202—8	L Stoddart	1220020020—6
J Foster	2110222202—8	F Hamilton	2102020200—5
F Dumont	2222002222—8	G Bader	2200220020—5

Other events were as follows:

No. 2, 5 birds, $10, then miss-and-out: S. Baudine 7, R. Fraser 6, L. Stoddart and J. Cardigan 4, H. Miller and F. Dumont 3.

No. 3, 10 birds: H. Miller 9, S. Baudine and G. Nicholl 8, Gil. Ford 6.

H.

Great Scores at Cleveland.

CLEVELAND, O., Nov. 4.—Some remarkably fine shooting was done here to-day at the contest for the championship of Cuyahoga county by the five contestants who took part in the shoot. The shooting was at 50 bluerocks per man, unknown angles. The following scores were made:

Redwing	1111111011111111111111111111111011111111111111111—48
Upson	1111010111111111111111111111111111111111111111111—48
Latham	1111111111111111111111111111111011111111111111111—49
Elliott	1101111111111111111111111111111011111111111111111—46
Sherman	1111111101110111101111111111111011101111111111111—45

The championship badge is a very fine diamond badge and has been contested for four times, Upson winning twice and Redwing and Latham once each. The conditions governing the badge make it necessary for a contestant to win four times in succession to own it; with the excellent target shots we have in Cleveland it will be almost impossible for any one to carry it off.

Cleveland holds the State championship at present and is unable to find any club in the State that thinks they have a good enough team of four to give them a match for the State championship cup held by them.

Dayton talks a great deal, but never comes after the cup. Any team has the privilege of challenging, but they do not seem to care for the cup somehow or other. They all say it's pewter anyhow. PULL

Climax Gun Club.

PLAINFIELD, N. J., Oct. 30.—The regular monthly shoot of the Climax Gun Club took place to-day in perfect weather. Owing probably to the counter attraction offered by the open season on game, the attendance at the shoot was light. Those that were present did some good work. Grier, who is J. G. Lindzey, of Dunellen, N. J., as usual did not require more than a quarter of his handicap allowance, scoring 31 out of 33 shot at. President Manning missed his first two targets and then ran 25 straight. Dutchy Smith and Brantingham both scored 24 out of 25, while D. Darby broke 24 out of 30 shot at. Swody and Singer gained 4 points each by breaking respectively 23 out of 31, and 23 out of 35. The shoot is at 25 targets per man, handicap allowance of extra targets, unknown angles. Score:

J Grier (33)	1111111111111101111101111111111	—31
R Manning (27)	0011111111111111111111111	—25
C Smith (25)	1111111101111111111111	—24
T Brantingham (25)	1111111111111101111111111	—24
D Darby (30)	1111111110001110110111110111	—24
J Swody (31)	0111110110101110011101111101111	—23
J W Singer (35)	1110101111110101100110101010001111	—23
J Goodman (32)	0010010001111111101111111101001	—19
Dan Terry (26)	1011111010100110101110	—17

The Seattle Tournament.

SEATTLE, Wash., Nov. 1.—The annual tournament of the Washington State Sportsmen's Association for the Protection of Fish and Game was brought to a successful close in the afternoon of Oct. 27. The shoot took place in the Madison street ball park and lasted four days, from Oct. 24-27. Targets were used on the first two days, live birds during the last two.

Some idea of the success of the meeting may be gathered from the fact that no less than sixty-one shooters took part in the target events, while in all the live-bird events the entry lists were very satisfactory.

During the meeting three interesting special events were shot off: the individual championship of the State at targets, the three-men team championship of the State at targets, and the individual championship of the State at live birds.

The team race was shot off on the first day. The weather proved dull and unpropitious during the early part of the day, but while this event was in progress the sun came out and made things as bright again as they were. The conditions of the team race were: three men to a team, all to be members of the same club, 30 targets per man, unknown angles. The result was a victory for Seattle team No. 1, with a score of 75; Tacoma teams No. 1 and No. 2 were tied for second place with 69 each. Seattle No. 2 was third with 68. The scores in this race were as follows:

Seattle No. 1.

A K Churchill	111011110100110011111111110111—23
J N Hardy	111111111110001111111110111110—25
E P Miner	101111111111010111111111111111—27—75

Tacoma No. 1.

Ellis	111100011111011101101111111000—22
Denham	001011100001111111001111011111—20
Sheard	111111111111011011111011111—27—69

Tacoma No. 2.

Lanning	111011111111111010011111111101—25
Eberly	100111011111111100011010011001—20
Smith	001111001110111111101111111111—24—69

Seattle No. 2.

Wallingford	110010111111111010011101111111—23
Ruppe	101101101011101101100101111—20
Purdy	111011111111011111111111001—25—68

Spokane.

F K McBroom	110111111010101011111111111011—24
F H Mason	011010000000110101111101111000—15
T Ware	011011111111111111111111111111—27—66

Tacoma No. 3.

Kimball	101110110110011111001110111101—21
Young	101111100000100101111011100001—15
Barlow	111111111011111111111111111010111—26—62

Seattle No. 3.

Schlumpf	111111010000001101111000110100—16
Hall	111110111100101111101010010000—18
F Charles	111001100101001011111010000011—16—50

The best work during the day is credited to W. F. Sheard, of Tacoma, formerly of Montana. Out of 110 consecutive targets he broke 104, there being a question also as to whether another target was not actually broken. He won first average in events outside the team race with 88 per cent. C. Miner, of Seattle, took second average with 87 per cent. E. B. Lanning, of Tacoma, is a new man at the traps, consequently his work must be classed as very good, his 24 out of 25 in the last event of the day surprising his opponets. Goodrich, of Seattle, also a new man in trap-shooting circles, did good work. An interesting incident of the day's proceedings was furnished by a wild swan which flew lazily over the shooters at the score, just high enough above them to be out of gunshot.

The second day was dark and raw, making the light extremely poor for target shooting. The individual championship of the State at targets was shot off to-day, some good scores, considering the weather conditions, being made by the contestants for the medal. Tom Ware won the medal by rolling up the capital score of 45 out of his 50 targets. He had not much to spare, however, as E. P. Miner was right after him with a score of 44, while close behind Miner came Sheard with 43, and Ellis and Hardy with 42 each. The scores made in the other programme events are given in the table given below, the detailed score of the championship match being as follows:

Individual championship of the State, 50 targets per man:

Ware	10111111111101111101111111111111111111—45
E P Miner	10101111111111101111111101111111111100111111111—44
Sheard	11011101111111111111111101011111111111001111111—43
Ellis	10101101111100110111111111110101011111111110111111—42
J N Hardy	10111111111111111100111101100111101111111111011—42
McBroom	11111111111001111111001111101111101111101101110—41
Cooper	11111110101011111111111011011111011111111011000111—40
Schlumpf	11111111111111111111111111111111111111111111111—40
Lanning	11111011101111100111101111111111011101111101010110—39
Smith	11110101111001101111111101111111111101011111111100—39
Barlow	11111100011101111111100111011111101000100111100—35
Purdy	01011100111111010101100010101011011111111111011—35
Denham	10111011111001111101011011011111110101100101100—34
Young	01111001010111011111101111011011001111001000111—31
Kimball	01111101110111010110111001101110000101010110011—31
Goodrich	11010001101011010110101111100001000111101111100—27
Eberly	11001111111000111111001101010111 —23

First, T. Ware, Spokane, winner of the medal and $20; second money, $34.75, E. P. Miner, Seattle; third money, $20.85, Sheard, Tacoma; fourth prize, $13.90, divided between Ellis and Hardy. McBroom, Cooper and Schlumpf won merchandise prizes.

The following table gives the totals of each man's scores in the regular programme events:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
Targets:	10	15	15	20	20	25	10	15	15	20	25	20	10	10	10

Nos. 1-6 were shot on the first day; Nos. 7-12 on the second, while Nos. 13-15 were shot as extras on the fourth day while live-bird events were also being shot.

LIVE-BIRD SCORES.

The scores made at live birds during the last two days of the shoot are given below. The championship event was unfinished on the third day, being carried over and completed on the last day of this most successful tournament.

PROCEEDINGS AT THE ANNUAL MEETING.

During the evening of the second day the annual meeting of the Association took place, the following being an account of the proceedings clipped from the Seattle *Post-Intelligencer* of the following morning:

"The Association met in the evening at the Butler Hotel and elected the following officers: President, Josiah Collins; Vice-President, E. E. Ellis, of Tacoma; Treasurer, George J. Willey; Board of Directors, W. F. Sheard, W. A. Hardy, A. L. Johnson, Joe Schlumpf, C. F. Treat, T. B. Ware, Dell Cooper. Capt. E. P. Miner, W. A. Eberly, F. H. Mason, E. B. Lanning and Mr. Doty.

"Resolutions were adopted thanking the Seattle Rod and Gun Club for the fine programme, it being voted one of the finest shoots ever held on the Pacific coast. A resolution was adopted thanking the *Post-Intelligencer* for its generosity in donating the beautiful State championship medal and also for the press reports. Portus Baxter was tendered the special thanks of the meeting for his accurate report of the tournament. After the meeting the board of directors met and decided to hold the next tournament at Tacoma, under the auspices of the Tacoma Rifle, Rod and Gun Club, some time next October. Portus Baxter was unanimously elected secretary of the Association."

THE LIVE-BIRD SCORES.

As stated above, the third and fourth days of the shoot were devoted to live-bird events. Three target sweeps were shot off on the fourth day, the scores made in those events being incorporated in the table given above.

The results and scores in detail of the minor live-bird events shot on the third and fourth days of the tournament are easily gathered from the scores run below; while in the majority of instances the flight of the bird tells how luck favored some and bore hard on others. Of course the interest on these two days centered in the contest for the State championship, the conditions of which were: 20 live birds per man, $20 entrance, $100 added, the winner taking a silver cup presented by Albert Hansen.

This contest was in an interesting condition when darkness put an end to shooting on the evening of the third day. All those who had scored at least three misses had withdrawn with a privilege of re-entry in the event of their being able to win any of the money. This left only eight men apparently in the event when shooting opened on the morning of the fourth day with the commencement of the 14th round: Purdy had 13 straight; Eberly, Cooper and Churchill 12 each; Ware, Stevens, Young and Doty 11 each. Doty shot a 10-gauge, with brass shells loaded with 5drs. of black powder.

As the score shows, things became decidedly interesting after Purdy lost his 15th bird dead out of bounds. This left him a tie with Cooper and Eberly, and as these three killed straight to the finish, they shot off for the cup, agreeing to divide first money. It took three series of 5 birds each to decide who should have the cup, the honor of holding it and of wearing the title of champion ultimately resting with Dr. Percival A. Purdy, of Seattle. Dr. Purdy's loss of his 15th bird let in one or two others, who thus had a chance for fourth money, making the contest of still greater interest.

On the whole the management was not favored with the best of weather, the last day being particularly cold and chilly, while the sky was overcast with a mass of dull gray clouds. That the tournament was a success under these conditions cannot but be satisfactory to the State Association, which is now in a most flourishing condition.

Scores in the live-bird events were:

Third Day.

In addition to the contest for the championship of the State at live birds, which was commenced to-day, the following live-bird events were shot off, No. 1 being at 12 birds, $10, 3 moneys, and No. 2 a miss-and-out, $1 entrance. Scores:

Fourth Day.

The contest for the State championship at live birds was decided to-day, Dr. Percival A Purdy, of Seattle, winning the cup after a protracted struggle with Cooper. The full score, showing the flight of the birds, together with the other live-bird scores shot to-day, are given below.

Championship of the State of Washington at live birds, 20 live birds per man, $20 entrance, three moneys and cup:

Cooper	1 2 2 2 2—5	Smith	0 2 ● 0 0—1
Purdy	2 1 2 2 2—5	Thomas	2 0 0 2 0—2

First prize—Marlin rifle and $35—divided between John, Cooper, Purdy, Stevens and C Miner; second money—$21—divided between McKee, E. Miner, McClure, Ellis, Ware, Scott, Eberly and Denham; third money—$14—Calhoun.

No. 3, miss-and-out, $2: Robinson, Cooper and McBroom, 5; Ware, 4; Calhoun and Young, 3; E. Miner, Lanning, Charles, Denham and John, 2; Garrison, Scott, McKee, Purdy and Ellis, 1; Stevens, Willey, C. Miner, Thomas, Schlumpf and Eberly, 0.

Bayside Gun Club.

KEYPORT, N. J., Nov. 6.—The Bayside Gun Club held its monthly shoot this afternoon, 23 members taking part. The badge was won by S. Cramer with a score of 17. It was a miserable day for trap shooting, there being a thick fog and the smoke of the guns hanging over the traps, making it very difficult to see the targets. Conditions: 25 targets, unknown angles, rapid fire. Following is the score:

W Maurer	0001001011010011101011000—11
D W Walling	0111101101001001101011010—14
E Seabrook	0101011100000011010100100—9
Wm Werner	1000001001000010010010001— 7
S Cramer	1111001110010110111101111—17
Wm Watts	0100010011000011111110100—12
W Walling	0000010010100100001010100— 8
M Brower	0000010000000010000100010— 4
T Compton	1001010010010101100101100111—13
C Ackerson	0011101000011101011001000—11
Wm Maurer	0000110110101000010000000— 7
J T Walling	1110111001100111100110010—15
G Pease	0011000111001000111001001—11
Wm Van Mater	1000001000001000000000000— 3
Wm Perrine	0100010111001010011111101—14
A Carhart	1000110110011111111101001—16
J Aumack	0000100110010101011000100— 9
L B Walling	0000000000001100000101000— 4
J Vigne	1010010000000010100100011— 8
G H Hoagland	0011011100101101101000100—13
G M Walling	0011000000100000100000000— 4
Wm Brower, Jr	0100100000001100010100000— 9

After finishing the above scores a sweepstake was shot, the winner being C. Ackerson. Then the fog became so dense that it put a stop to the shooting. WIDGEON.

Individual Championship at Cypress Hills.

BROOKLYN, N. Y., Nov. 5.—The third annual championship contest which took place at Cypress Hills Park to-day was favored with extra fine weather for the time of year. Everything pointed to good scores being made, and the promise was fulfilled before the end of the day by F. C. Ross piling up a total 2,222 for his 100 shots on the ring target, and by G. W. Plaisted's score of 233 for the championship medal.

The number of entries was most encouraging to the promoters of these annual gatherings, 32 experts with the rifle putting down their names as contestants in the day's main event. This is a larger number than in either of the two previous contests; in 1892 there were 28 contestants, while in 1894 24 shooters took part in the event. In '93 Ross made the highest total for 100 shots—2,194, following up his success with another victory in '94 with the total of 2,142, the weather on that occasion being decidedly unpropitious for high scores. The championship medal for 1893 fell to Louis Flach (after a tie with Charles Hutch), both scoring 230; on the shoot off Flach beat his opponent. In 1894 Ross carried off the medal by scoring 231. In to-day's contest he equaled his last year's score of 231, but was beaten two points by Plaisted's great total of 233.

The four highest scores for 100 shots were: F. C. Ross 2222, H. M. Pope 2,192, M. Dorrier 2,183, G. W. Plaisted 2,170. For the championship medal Plaisted as stated above was first with 233, Ross being second with 231.

Lynchburg Gun Club.

LYNCHBURG, Va., Nov. 5.—The regular monthly shoot was held to-day, the members shooting a few live birds after a couple of target events had been disposed of. The scores were:

	No. 1.	No. 2.

F. M. D.

Paul North Suggests a Handicap.

We have received from Paul North, of the Chamberlin Target and Cartridge Company, Cleveland, O., a letter dated Nov. 4, in which he describes a system of handicapping that has been suggested to him, and which has so taken his fancy that he thinks of trying it at his tournament next summer. Mr. North, however, does not want to adopt the system without having it thoroughly discussed. He asks us, therefore, to give his letter to the trap-shooting public, and also to express our views as to its feasibility and probable chances of popularity. The letter referred to runs as follows:

"*Editor Forest and Stream:*

"While at the Atlanta tournament, one evening in talking over tournaments with Judge Lindsay, of Knoxville, he suggested a handicap that was new to me and I believe new to most target-shooters, that struck me most favorably, and made such an impression that it is very possible that it will be used at the Chamberlin tournament in 1896.

"Handicaps have been a study with me for some years, and as yet a handicap that gives any sort of satisfaction has not been introduced. Handicapping by changing the style of shooting or by distance or by giving dead birds does not seem to fill the bill, and any fixed handicap that does not recognize the fact that at some tournaments a person does much better shooting than at others is manifestly unfair. As the judge says, if you give a man odds enough he will bet the sun won't rise the next morning, and this handicap is based on the giving of odds in the entry instead of in the style of shooting.

"The handicap is as follows: All events are at the same number of targets and have the same entry fee. Moneys divided 30, 25, 20, 15 and 10 per cent. Entry in first event, $3. In second event winners of first money in first event pay $4, winners of second pay $3.50, winners of third pay $3, winners of fourth pay $2 50 and winners of fifth or those not getting a place pay $2. The handicap will be a sliding handicap, each event being the basis for handicapping in the event following.

"Under this handicap the shooter who goes up into first and second money most of the time and never fails to land in the money somewhere, and is a winner in nearly every event, pays more for the privilege of shooting than the man who is out of a place part of the time and lands in fourth and fifth places most of the time only to find that he will rarely if ever get back his entrance money and is a sure loser. The good shot will pay from $12 to $14 a day more entrance than the poor shot and still be a winner, but not to so large an extent as formerly.

"At every large tournament this season there have been from twenty to twenty-five shooters who have won the bulk of the money and who if they were to shoot individual matches against any of the other shooters present would have to lay even better odds than four to two in order to get on a match. Why then should they not give odds in the sweepstakes? At small tournaments, where the entry fee is small, instead of making a difference of fifty cents in the entrance fees, from ten to twenty-five cents difference can be made.

"I would like very much to have this handicap discussed and tried, and to be advised personally or through the columns of the sporting papers of the opinions of all interested in the matter, and would like to have your trap editor give his opinion also, as, unless it is proved to be a failure in practical operation, it will be used at the next Chamberlin tournament. Hoping to have a general discussion on the subject, I remain, etc."

After carefully going through the above letter, and after examining the workings of the system by taking the scores made at tournaments where the events were equal in all respects, and comparing the totals of winnings and losings under the present system with those under the proposed system, we hardly think the handicap Gordian knot has been severed. Winnings and losings are cut down, it is true; the big loser finds that he is some dollars in pocket by the system, while the big winner finds that his balance is a few dollars less than it would be under the present style. Take a programme of eight 30-target events; $3 entrance would be the usual thing nowadays; the difference to a man who never got a portion of any purse would be $7, *i. e.*, first event $3, the balance $2, or $17 as against $24. Of course $7 is a consideration, but would any additional shooters be induced to enter an event under the proposed system? We don't believe in lynchings; we would rather every murderer had a fair trial. On the same principle we would prefer to see the proposed system given a fair trial also before placing it on the shelf with a dozen different systems that have failed while under fire.

We are of the opinion that the system might work to better advantage if the idea of class shooting were done away with. This may sound like heresy, but we believe the time will come when class shooting as at present practiced will be done away with. It is an anomaly, and is full of glaring injustices; a system that permits a man to win more money by missing live birds or targets than by killing the one or by breaking the others, is an outrage upon the common sense of the shooting public. Judge Lindsay, through Mr. North, has propounded a scheme for attracting shooters by penalizing winners, but he holds on to the old class shooting. May we suggest to the above-named gentlemen the following amendment to their motion:

Do away with class shooting and make it high guns.

That sounds like advocating the cause of the professional expert—but wait a moment: Adopt the system above described in so far as it penalizes winners, but do away with class shooting; make one money for (say) every 8 entries, *i. e.*, for 30 entries the money would go to the 10 high guns. Suppose at the end of a 20-target event that the caslier found that there were four straights, four 19s, and five 18s; the first 8 men would each take one money, while there would be 5 tied for two moneys; where that event was not the last on the programme, the tie should be settled by the longest *straight run* in the next event—practically on the miss-and-out plan—unless the 5 agreed to draw down their share of the two moneys. In the case of it being the last event, they could draw lots or divide.

The division of the moneys is the next thing to explain: With 30 entries at $3 each the purse would be $90, less the price of the 600 targets at 3 cents each—$18—that is $72 net. Divide that $72 on the plan suggested by Rose, of ratio points—4, 2 and 1. That would give us:

4×4—16
4×2— 8
2×1— 2

20)72(3.76
52
200
182
180
156
24

that is, $2.76 per ratio point.

Under this system the four straights would each receive 4 times $2 76—$11.04; the four 19s would draw twice $2.76—$5.52, while the two moneys for the five 18s to fight for would each be worth $2.76. (Where the 17s came in for any money, supposing there were not enough straights, 19s or 18s to take up all the moneys, the ratio points would be 8, 4, 2 and 1. If the straights and 19s took all the moneys, the ratio points would be 2 to 1, the principle being that the straights should each receive twice as much as each 19, and each 19 twice as much as each 18, and so on.) The above is really not as complicated as it looks; try a few examples and you will find that any ordinarily competent tournament cashier would experience no trouble in making out his pay-roll.

We would not penalize winners of anything less than second place. In the above case the 18s would enter in the next event at par—$3, while the 17s and all below them would go in at $2.50 or $2 per capita. Charge the winners in the first class $4 each, and those in the second class $3.50 each, as their entrance money in the next event they shoot in.

We do not claim for this system that it would attract any additional shooters to face the traps; it might do so or again it might not. But we do claim for it the merit of fairness, as it pays a man according to his just deserts. It would never pay to drop for place, since the higher number one broke, the more would one receive. The reason for penalizing winners is well explained by Mr. North, so we need not refer to that point.

Many men, many minds; pull us to pieces and thresh the question out. We can afford to sacrifice our feelings for the good of the cause.

Rye Gun Club.

Rye, N. Y., Nov. 5.—Election Day was the opening day of our club for the season of 1895-96. During the day 150 good birds were trapped; 40 of which proved too rapid for the shooters. The coming Thanksgiving Day shoot promises to be a good one. Many Connecticut shooters will attend, while entries from the neighboring towns, and from New York city members and their friends, shall make up a large and jolly list of shooters. Scores of to-days shoot:

Trap Around Pittsburg.

HERRON HILL GUN CLUB.

Pittsburg, Pa., Nov. 5.—The practice shoot at Brunot's Island to-day brought out thirteen members of the Herron Hill Gun Club. Three events were shot, the first two 10-bird events, the third a $2 miss-and-out. Fargo won the first event with a straight score; the second saw McWhorter and Ludwig kill their 10 straight. The miss-and-out went to C. A. May, who was forced by McWhorter to kill 18 straight to win. During the afternoon McWhorter ran 33 straight, shooting from the 28yds. mark. Scores:

KING AND MESSNER SHOOT A TIE RACE.

Nov. 8.—It took 2 hours and 27 minutes to finish the match shot to-day at Brunot's Island. The contestants were A. H. King and John G. Messner, the conditions of the match being: 100 live birds per man, 30yds. rise, $100 a side. The birds were a poor lot and it was the cause of much astonishment when all was over and it was found that the two men were tied with 88 each. Messner had only to kill his last bird to win, but a chocolate-colored bird from No. 3 trap beat him. A Pittsburg paper in giving an account of the match says:

"After each had shot at 25 birds Messner was two in the lead. When 50 had been shot at King was only one behind. Both were even when 75 had been fired at, and entered the home stretch neck and neck, each having 65 kills to his credit. Each killed the next 5 straight. King missed his 81st and Messner his 83d. With 17 more birds to fire at, the men buckled down to their work and the spectators followed each shot with bated breath. King missed his 92d, but Messner kept on bringing down his birds with a regularity that made him look like a sure winner. King finished his string one bird behind, and Messner got ready to pop at his last one. It was 10 to 1 that he would succeed. On the word 'pull,' the trap was sprung. All eyes were on the pigeon as it first looked one way and then the other, and finally, with stately step, walked out of the trap and away from the shooter. Messner, with not a tremor, his gun resting on his shoulder, his finger on the trigger, watched the pigeon as it bowed its way into liberty. Under the rules he was entitled to call for another bird, but he declined to do so. When the bird had walked 2yds. away from the trap it suddenly darted into the air, skimmed about 18in. off the ground and shot across the river toward Allegheny. Bang! bang! went Messner's gun, but beyond losing a few feathers the pigeon was safe. This lost the race for Messner, and made the first match a tie."

Trap score type—Copyright 1895, by Forest and Stream Publishing Co.

Boiling Springs Gun Club.

Rutherford, N. J., Nov. 9.—The members of the Boiling Springs Gun Club held their regular monthly club shoot this afternoon. The weather was perfect in all its conditions, and some good scores was made, as will be seen from the figures given below. The main event was at 50 targets, the first 25 being at unknown angles, the last 25 at reversed order. Scores:

Club shoot, 50 targets, 25 unknown angles and 25 reversed order:

Baltimore Trap-Shooters.

Baltimore, Md., Nov. 7.—A live-bird shoot was held to-day on the grounds of the Baltimore Shooting Association, the occasion being the first of a series of bi-weekly shoots arranged by the management for the purpose of keeping the trap-shooters of this city together. As at present arranged, a Maryland handicap will be shot off at 30 live birds per man, $10 entrance, every second Thursday during the winter months. The members are handicapped each time according to their records.

The birds to-day were a poor lot, having been kept in the coop since the Du Pont shoot; still the shooters did not make great scores, as out of the lot of duffers came now and then a corker that was able to beat anybody. Bert Claridge killed his 20 straight, Bonday, Stanley and Penrose scoring one less. Williar and Coe, the fourth men in the Du Pont handicap, tied for third money on 18. The full score, with the handicap of each man, runs as follows:

Claridge (30)	2212221212212212212—20
Bonday (26)	2222011211122111221—19
Penrose (30)	1212211202212112221—19
Stanley (36)	2222122220222222222—19
Coe (29)	1122202212122111012—18
Williar (27)	0111102121122111211—18
Heiskell (27)	2110121221122021012—17
Ducker (30)	1011101100211222122—16
Thomas (25)	1122202211212200210 2—16
Malone (30)	0112101111121l0w —11
Webster (25)	2022110101212w —11

South Side's Saturday.

Newark, N. J., Nov. 9.—We've heard of the Indian summer, but it was with us for fair this afternoon. Who ever knew of a lot of shooters up here in the North that would rather, at such a season of the year, sit around in their shirt sleeves than get up and shoot. But such was the case to-day; Asa Whitehead wilted, while Charlie Heddon followed suit. Lem Thomas was also absent. Two new members showed up, however—Messrs. Dawson and W. M. Smith. They haven't quite caught on to the swift-thrown empires yet, but the former improved his scores about 50% and the latter did nearly as well. On the team race, of course, centered the attraction, although there were only eight in it. As said before, Asa Whitehead and Charlie Heddon found the unprecedented heat too much for them, but in order to give them something to keep them out of mischief they were required to pick the teams. These teams, although each was composed of only four shooters, made a little over a squad, Ike Terril and Mr. Young being the two who shot together; as the full squad were only one point apart—58 to 57—not a little interest was had in the scores of these two. Young missed his first and sixth with howls from the opposition; Ike dropped his seventh and ninth, which made things even. Then Young broke his next fifteen straight, which made it look as though Charlie Heddon had a cinch. Mr. Young dropped his twenty-second and last and the pair landed even, with Heddon's team one to the good, as the score shows 79 to 78.

Regarding these Saturday shoots of the South Side Gun Club, they have been a success from the start, and as indicated above the team race is the principal attraction. The winning team have their targets free, and the losers only pay for those shot by them—not for the winners'. Thus all shooters get a rebate on targets shot above 25, and it is the cheapest way of enjoying a half-day's shoot which is afforded in the neighborhood. Again, there are no waits or standing around; if you want to shoot you can keep your gun hot all the afternoon. And the boys you meet—well, if you go once, you will go again and often. Try it and see.

Meadville Gun Club.

Meadville, Pa., Nov. 6.—Several of the members of the Meadville Gun Club using Parker guns, six of them about August 1, challenged the best six using other guns to a match team shoot. On August 14 they came together and shot two events of 25 targets each, the Parkers scoring 118 in each event, the "other guns" 117 in the first and 115 in the second event, the Parkers beating by 4 in the aggregate. A challenge by the "other guns" was decided to-day with the result of a victory for the challengers by 14 breaks. The following is the score, which is poor owing to the absence of some good shots.

Team race, 50 targets per man, unknown angles:

PUBLISHERS' DEPARTMENT.

Maine Big Game.

The Bangor & Aroostook Railroad has broken its last year's record of game shipped during the month of October. That was a phenomenal record, including as it did 479 deer, 24 moose and 10 caribou. This year, however, the record is away ahead, with 669 deer, 53 moose and 37 caribou. It is worth noting, too, that each one of these moose was a bull, as it is against the law to kill cows and calves.

The game was all shipped from but twenty railroad stations, giving an average of over a deer a day from each station.

Greenville, near Moosehead Lake, is the banner station, with a shipment for the month of 185 deer, 16 moose and 9 caribou. Next on the list comes Norcross, with 159 deer, 11 moose and 2 caribou. Oakfield shipped 12 moose, Sherman 5 and Schoodic 4.

The record is all the more remarkable in view of the fact that many deer are consumed in the woods for food. In addition to the game noted, many partridges and three bears were shipped over the B. & A. during the month.

Park and Farm Fencing.

Every spring the Page Woven Wire Fence Company, of Adrian, Mich., has on hand immense quantities of wire fencing, the product of their factory during the winter months. After the first orders begin coming in it only takes a few weeks to deplete the reserve, and after that it is a hand to mouth struggle to meet the demand. When the season began this year the company had on hand enough of their product to fence the entire boundary line between the United States and Canada, as well as enough left over to apply to a considerable length along the Mexican border. In less than two months, however, there was not a rod left on hand, and subsequent orders had to wait till they could be turned out by the factory.

A New Grass Duck Shooting Blind.

Mr. Frank Lawrence, the patron saint of duck shooters, has something new in the way of duck blinds. This is a marsh blind 3ft. high and 7ft. long, made of woven grass, and very light. Suitable stakes are provided with the blind, and it is only the work of a moment to push these in the mud and arrange the blind. Sportsmen who have wasted valuable time pottering around collecting wild rice and other materials for blinds will appreciate Mr. Lawrence's device.

Canvas Decoys.

Light, convenient, durable and life-like decoys that can be folded and carried in the pocket are advertised by Wm. Read & Sons, Boston, Mass. A sample pair will be mailed for $1.25.

ANSWERS TO CORRESPONDENTS.

C. T., Denver, Col.—The powder is advertised in our columns. We should think that it might be used with good results in the revolver.

It will give us great pleasure to forward a copy of our catalogue to any one who "goes a-fishing." Some people charge for their catalogues, some charge for the postage, some charge for both. We are more than willing to give away our catalogues and prepay postage on them. No angler, after looking at the catalogue, can resist buying from us or from our trade-customers all the fishing-tackle he can afford to pay for. That is where we get back a good deal more than cost of catalogue and postage.

ABBEY & IMBRIE,

18 VESEY STREET, NEW YORK CITY

MARSTERS HAS WORMS.

Sand Worms, 12c. per dozen. White or Blood Worms, 25c. per dozen.

I am with you again with lower prices for Fishing Tackle. I find by experience that putting down the prices and increasing the quality, increases my business every year.

One lot of Split Bamboo Fly and Bass Rods will be sold at 98c until all are sold. These Rods are all nickel mounted, solid reel seats, beaded butts, silk wound. Extra tip. Complete in wood form and cloth bag, and will give satisfaction. Lengths and weights of Fly Rods are: 9ft., 6oz.; 9½ft., 6½oz.; 10ft., 7oz.; 10½ft., 7½oz.; 11ft., 8oz. Reel seats below hand. Lengths and weights of Bass Rods are: 8½ft., 9oz.; 9ft., 10oz.; 9½ft., 11oz.; 10ft., 12oz.; 10½ft., 14oz; reel seats above hand. Any of the above rods sent by mail on receipt of price and 30c. extra for postage.

No. H.—A special lot of hard rubber and nickel, raised pillar, multiplying reel, with balance handle and side spring click, 40yds., 68c.; 60yds., 78c; 80yds., 88c.; 100yds., 98c. Any of the above reels sent by mail on receipt of price and 10c. extra for postage.

No. E—Special lot of hard rubber and nickel, raised pillar, click reels, 40yds., 48c.; 60yds., 58c. Sent by mail on receipt of price and 5c extra for postage.

No. C—Special lot of extra fine nickel plated, raised pillar, multiplying reels with click and drag, and screw off oil cup, 40yds., 58c.; 60yds., 68c; 80yds., 78c; 100yds, 88c.; 150yds., 98c.

Single gut leaders, mist color, 1yd., 20c. per doz.; 2yds., 40c per doz.; 3yds, 60c per doz. Double gut leaders, mist color, 2yds., 75c. per doz. Hand twisted treble gut leaders, 3ft long, 10c. each, 90c. per doz

A special lot of Trout Flies at 16c. per doz. Sent by mail, 1c. per doz. extra for postage.

A special lot of Bass and Pickerel Spoons at 5c. each. Sent by mail, 1c. extra for postage.

All kinds of **Hollow Point best quality hooks**, snelled to single gut, 10c per doz.; double gut, 15c per doz.; treble gut, 20c. per doz; four-ply, 25c. per doz. Sent by mail, 1c. per doz. extra for postage.

300ft. braided linen reel lines on blocks, 40c.; 300ft. hand made linen reel lines on blocks, 9 thread, 38c Sent by mail, 3c. extra for postage.

Brass box swivels, all sizes, Nos. 1 to 12, 15c per doz. Sent by mail, 1c. per doz. extra for postage

FOREST AND STREAM PUBLISHING CO.

The Spaniel and Its Training.

By F. H. F. MERCER To which are added the American and English Spaniel Standards. Cloth. Illustrated. Price $1.00.

The chapters are practical and sensible. There is no theory in them. Here is a man who trained his dogs; learned by experience how to do it; and now has put down that experience for the benefit of others. We predict for "The Spaniel and Its Training" that wide popularity and favor which of right belong to practical books by practical men for practical men. In addition to the chapters on training there are descriptions of the several varieties of spaniels, with portraits of typical specimens; notes on the spaniel in America, and the standards adopted by the English and American spaniel clubs

FOREST AND STREAM PUBLISHING CO.,
318 Broadway, New York.

Three New Books of the Field.

North American Shore Birds.

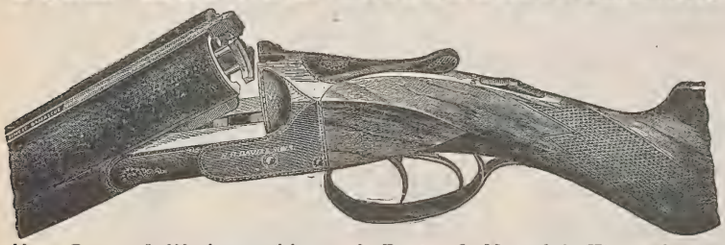
A History of the Snipes, Sandpipers, Plovers and their Allies inhabiting the beaches and marshes of the Atlantic and Pacific Coasts, the prairies and the shores of the inland lakes and rivers of the North American Continent; their popular and scientific names, together with a full description of their mode of life, nesting, migration and dispersions, with descriptions of the summer and winter plumages of adults and young, so that each species may be readily identified. A Reference Book for the Naturalist, Sportsman and Lover of Birds, by Daniel Giraud Elliot. With seventy-four plates. Price $2.50.

Mr. Elliot's purpose being to make a book which should be for the sportsman and bird lover rather than for the naturalist, he has written his descriptions so that they shall be plain and easily comprehended.

Scientific Duck Shooting in Eastern Waters.

By R. S. NYE. Cloth, 116 pages. Price $1.25.

The author has something to say about duck shooting, and he says it without drawing on a thousand extraneous circumstances, or dwelling on others beyond their value, and having skillfully presented what he had to say, he stops—a matter not always truly appreciated by speakers and writers.



Caribou Shooting in Newfoundland, 1894.

By DR. S. T. DAVIS ("Shongo"). Illustrated. Price $1.25.

A vast fund of practical information is embodied, which will be invaluable to any one who takes a similar trip, and which was obtained by the author only after much correspondence, study and personal experience.

FOREST AND STREAM'S OUTDOOR SCENES.

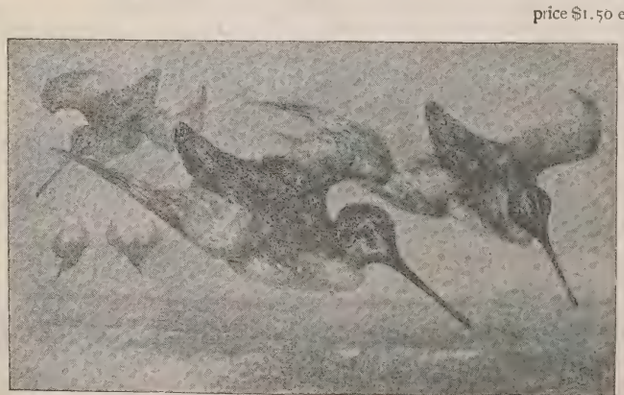
FROM ORIGINALS IN WATER COLORS AND OIL, PAINTED EXPRESSLY FOR THE FOREST AND STREAM.

HE'S GOT THEM.

AS PREMIUMS.

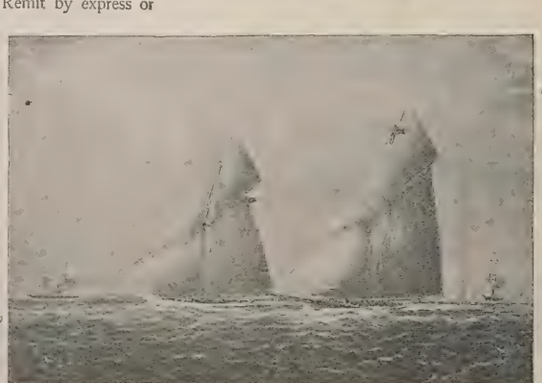
We have prepared as premiums a set of four beautiful and artistic reproductions of original paintings of realistic outdoor scenes. The art work is the best obtainable in New York; the pictures are rich in effect and are intended for framing. They are done in 12 colors. The yacht race is from an oil painting; the others from water colors. The scenes are shown in the small cuts herewith. The plates are 14¾ x 19in. The pictures are sent both to **new** subscribers and to **old** subscribers upon renewal, on the following terms:

Forest and Stream *one year and the four pictures*, $5.
Forest and Stream *6 months and any two pictures*, $3.



If subscribing for 6 mos. designate by title the two pictures desired. Single pictures will be sold separately, price $1.50 each, or the set, $5. Remit by express or postal money order, payable to Forest and Stream Publishing Co., 318 Broadway, New York.

The pictures are sent by mail, postpaid, wrapped in tube.



Copies of them may be seen at this office, and inspection is invited.

BASS FISHING AT BLOCK ISLAND.

JACKSNIPE COMING IN.

VIGILANT AND VALKYRIE.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2. | NEW YORK, SATURDAY, NOVEMBER 23, 1895. | VOL. XLV.—No. 21. No. 318 BROADWAY NEW YORK.

For Prospectus and Advertising Rates see Page iii.

The FOREST AND STREAM is put to press on Tuesdays. Correspondence intended for publication should reach us by Mondays and as much earlier as may be practicable.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

SEE REDUCED HALF-TONES IN OUR ADVT. COLUMNS.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream *one year and the set of four pictures*, **$5.**
Forest and Stream *6 months and any two of the pictures*, **$3.**
Price of the pictures alone, $1.50 each; $5 for the set.

Remit by express money order or postal money order. Make orders payable to

FOREST AND STREAM PUB. CO., New York.

LORD DUNRAVEN'S CHARGES.

THE full text of Lord Dunraven's letter was received in New York on Nov. 18, and on the evening of the same day a special meeting of the New York Y. C. was held, at Mr. Iselin's request, to consider the charges contained in the letter. The club cannot be too highly commended for the temperate and judicious position which it has taken in appointing a committee of gentlemen whose standing is above question, and who have in no way been associated with the conduct of the races, to consider the whole matter. On his side, Lord Dunraven has taken a bold stand in notifying the club of his readiness to come to New York and defend himself.

Apart from the charges against Mr. Iselin, it must be admitted that Lord Dunraven's letter is in the main an able and fair statement of his side of the controversy, and contains some points on which an explanation from the New York Y. C. is desirable. Pending the coming report of the Cup committee and the action of the special committee, it would be useless, if not improper, to discuss further the many points in dispute.

THE STILL-HUNTER.

THE typical hunter is the still-hunter. There are a many and diverse ways of taking big game—jacking, hounding, calling, floating, baiting—but none of them is so universal, none so truly typical of the essence of the thing as still-hunting.

The still-hunter trusts to beating wild nature at her own game. He enters the wilderness haunts with all the stealth of his aboriginal ancestors or of the wild things themselves.

Though his senses are less keen than theirs, he has the added power of reason; and a terrible foe he proves. No panther creeping for the spring, no wolf howling its wild pæan, strikes a keener terror to the heart of the deer than the suddenly realized presence of the still-hunter. And the fierce animals of the forest have learned to dread him likewise.

The still-hunter skirts the hardwood ridges noiselessly, his moccasined feet resting on the moss-covered rock or fallen tree trunk with a light sureness that suggests simian prehensile powers. His progress is slow, but terribly suggestive of reserve power. Frequently he stops altogether as he scans some hollow where mouldering trees have furnished food for a luxuriant growth of the young hardwoods, or peers under the dense shadows of some balsam brake.

The things he sees and hears are full of meaning to the still-hunter. The turned leaf, the depression in that red-brown soggy pile where some old forest monarch fell and disintegrated the sharply defined footprint in the black muck at the edge of the spring—all these tell their story—the broken branch and nibbled bough, the cracking of a stick far off under the forest arches. So he becomes aware of the presence of his game. Then with infinite patience the approach is compassed and he stands waiting his chance for a shot. An indefinable something causes the wild thing to look up, and as it catches the dread eye that seals its fate it is rooted to the spot with fear.

The still-hunter is the king of the forest. All nature owes him allegiance, and he exacts his tribute at will. He is close to the source of things and at night sleeps with the spirits of his primal ancestors—old Nimrod and the lot. To him the trees talk and the waters whisper. Old mother earth with all her burden of years is young again, and smiles as she did on the first man. Freedom and power is his song—freedom and power.

SNAP SHOTS.

And now if there be any doughty hunters of savage beasts, scarred by battle with the fierce denizens of the American wilderness, and disposed to scout at the perils braved by the FOREST AND STREAM'S special commissioners to the wilds of Long Island, as related on another page, we pray them to read the latest advices from the seat of war—the war which the savage deer are waging upon a peace-loving, inoffensive and bucolic people. To have penetrated to the heart of the Long Island deer fastnesses, and to have emerged therefrom alive, whole and in their right minds—this may be thought prosaic, but is truly heroic. For, grown bold by the immunity given them by the law—that wonderful law, which being retroactive, that is to say working backwards, was efficient to increase the deer supply by multiplying the stock at a time long anterior to the enactment of the statute—the Long Island *Cervidae* no longer flee from the genus *Homo*, but forthwith attack it on sight. Long Island men are forbidden to hunt deer; Long Island deer have taken to hunting men. Last Monday's papers reported the harrowing details of a tussle between Eric Evers, a hardy Norseman of Uniondale, and a monstrous and savage buck. It appears that Eric, walking along the highway, saw the deer in a field munching the poor farmer's crops; and incautiously and foolishly saluted it with derisive jestures. The deer resented the insult, promptly knocked Eric down, jumped up and down on him and would have tossed him into the branches of a tree but for the timely appearance of men with pitchforks and clubs of cordwood. The golden truth is that the wayfarer who fares on Long Island country roads carries his life in his hands. It was from such perils that FOREST AND STREAM'S expedition returned whole, and not only in their right minds, but as they naïvely confess at one point in the narrative, "brighter and better men."

But lest it shall be said that this is a serious subject treated with undue levity, it should be clearly understood that the current tales of a vast increase of Long Island deer, their ravages of farm crops and their attacks on human beings, are all lies invented for the purpose of influencing legislators at Albany this coming winter. The purpose is explicitly exposed in such declarations as these, in the Eric Evers story, which its Farmingdale, Long Island, correspondent sends to the *Times* of this city.

"As the season for deer hunting is closed, no one can shoot deer on Long Island, and, in consequence, the deer wander over farm lands, eating everything the farmers have planted for winter and spring use. The farmers say they cannot see why they should feed the deer through the season and suffer the consequent loss. One man, Eric Evers, of Uniondale, had a tussle with a deer yesterday, and as a result it is not unlikely that decisive steps will be taken shortly to ask the Legislature to amend the law."

There is just about as much ground for the Long Island deer "fake" as there was for that Alaska duck egg yarn.

The meeting of the American Ornithologists' Union, which took place in Washington last week, was of unusual interest, and was a thoroughly representative gathering of our ornithologists. From its foundation thirteen years ago the Union has done excellent work in behalf of science, and its membership has included most of the leading ornithologists of America and not a few of those of other lands. The importance of many of the principles that it has laid down for its guidance in matters of nomenclature has been so obvious that they have been adopted in other branches of zoölogical science. While the value of the investigations carried on by its members is great, still more important are the publication of its quarterly journal and the publication and frequent revision of its check list of North American birds. Its continued unselfish work, looking toward the preservation of our native birds from destruction for commercial purposes, must commend it to the grateful consideration of laymen as well as of those interested in science.

We have been looking for an explanation which Senator Redfield Proctor, of Vermont, owes to the public with respect to his Maine moose hunting this year. In an interview with a New York *Tribune* reporter, Senator Proctor gave this report of his luck "in the Maine woods for a month hunting moose:" "I had great luck. I managed to bag two moose—great big fellows with magnificent antlers. I am going to have the antlers mounted and hung up as a souvenir of my prowess. The hunting season is on full now and there is great sport up there." A notice of Senator Proctor's moose appeared in Maine papers early in October, certainly not later than the 5th. Allowing a few days for getting the Senator out of the woods, the killing must have occurred close to the danger limit as to time. Whether killed in or out of season, the Senator, from his own statement, killed double the number of moose permitted under the law. Perhaps he was only romancing when he talked to the newspaper man; an explanation from the gentleman would seem to be in order. The prevailing opinion among those in position to know is that the killing actually took place and that both moose were killed prior to Oct. 1.

The famous Follett case has now passed into history, and its decision has taken a place among the precedents which go to make up the law on fish protection. Follett, it will be remembered, was a Connecticut Fish Commissioner who was prosecuted for having taken trout from public waters in close time for breeding purposes, and claimed in defense that the fish were some that had been planted by him. This ridiculous contention was of course overthrown, and the judgment of the lower courts, carried on appeal to the Supreme Bench, has been upheld. The most remarkable feature of the Follett case was its revelation of an official's gross ignorance of the elementary principles of the laws of property.

There is not only good law but sound common sense in Judge McMahon's opinion in the Kinne Creek case, reported in our angling columns. The stream, says the Court, being private property, is under the complete control of its proprietors as to fishing rights. It is "private property in the full sense so far as the law governing trespass and private right is concerned." Trespass for fishing is the same in its wrong as trespass for robbing an orchard or vegetable garden. These are of course elementary, primary and foundation principles in law. The reason why they are not more generally understood and respected may be found in the fact that their application and enforcement are in many localities recent and unfamiliar. The lesson is slowly and unwillingly learned that a stream which has been free to fishermen from a time when man's memory runneth not to the contrary is no longer open to the public. We confess to an underlying sympathy, in many instances, for the shut-outs, the shooters and the fishermen who are confronted by trespass signs forbidding ingress to woods and waters they have frequented since they could walk and which were open to their fathers and their fathers' fathers before them. But in the case of the Père Marquette Club there appears to have been given no cause of just complaint by any curtailment of such privileges. The club has actually increased the stock of fish open to the public, and so has enlarged instead of restricting individual opportunities. For this reason it deserves the cordial support of the people of the neighborhood.

Commissioner Henry M. Stanley writes us that the game birds from Auburn have been turned over to the Commission and are now receiving proper care and attention at Dixfield. We hope to learn of some substantial results from the new order of things.

A St. Paul firm of game dealers have instituted a suit to test the constitutionality of the law which forbids the shipment of venison to market. The statute reads: "Provided, that it shall be unlawful for any person to consign by common carrier to any commission merchant or sale market at any time any elk, moose, caribou or deer, or any part thereof except the skin or head." This the dealers claim to be class legislation, for carcasses of game may be received by wagon or other conveyance, but not by common carrier. The case was set down for to-day.

The Saginaw crowd returned about this first of the month from their Western outing, and a note from Mr. W. B. Mershon tells us that the dozen men in the party managed to find enough game to keep them from starvation. We hope to have a story of the trip from his pen.

The Sportsman Tourist.

A LONG WILD NIGHT WITH WOLVES IN THE ROCKIES.

VINTON, Ia., Nov. 8, 1895.—*Editor Forest and Stream:* Living in this town is a man, who with a companion had an experience with wolves in Wyoming, which in the way of numbers seen and killed surpasses anything that I have seen recorded in book or paper, that was not given in jest or that was worthy of belief, and I would not give publicity to this story if I had any doubt as to its truthfulness. I have known him for a dozen years and during this time he has had little to occupy his time but to exercise his fishing rod and gun. I have hunted with him and fished with him, and few are the pleasant days that his tall figure cannot be seen along the banks of the Cedar River. His name is Americus Campbell, but he is known among the "boys" as the "Tall Sycamore" of the Cedar. He is 6ft. 2½in. high, straight as an Indian and with some gray hairs sprinkled over his head. He is not a brag. Few people living in this town have heard his story, and fewer still have heard it from his lips.

In the spring of 1866 Mr. Campbell started for the West. He went over the Union Pacific Railroad to North Platte, Nebraska, which was at that time the terminus of the road. From there he went by ox team to Fort Laramie. The following fall he contracted to make hay for the fort at $65 a ton, and with a gang of ten men and a military escort he would go down to the Platte River bottom, about ten miles from the fort, and after setting the men at work he and two others would ride around on the ridges and high points, keeping a sharp lookout for Indians, and shooting enough game to supply the camp with meat, which latter was an easy thing to do. But the Indians gave them much trouble and at times they would have one or more brushes with them every day.

During the next fall Mr. Campbell was at Red Buttes getting out ties and telegraph poles for the Union Pacific Company, which had its terminus then at Green River Junction. It was during the fall of 1867, while at Red Buttes and when Mr. Campbell was 25 years of age, that he was employed by a party of six sportsmen, who he thinks came from England and New York city, to supply two double teams of oxen and take them up into Sheep Mountain on a hunt. The sportsmen were to pay all expenses and give Mr. Campbell $10 a day. The season was getting well along, there had been several snow squalls, but Mr. Campbell employed Mr. R. J. Brown to drive one team, and after packing the camp outfit they started west for the mountains, one driver and three sportsmen to a team. During the three days out they came to a cañon that ran from the Laramie River back into the northeast side of the mountain, and after working up this cañon for about a half-day they camped near its head in some pine timber, where there was feed and water for the oxen. There was 2in. of snow in the mountains, which made good tracking, and a great deal of game. The sportsmen used to hunt by themselves, while Mr. Campbell and his companion on many a hunt after attending to the camp work would start out together.

One morning the sportsmen started early after deer, but Mr. Campbell and Mr. Brown thought they would hunt for elk. So after doing up the work they ascended a ridge to the north. From the top of the ridge they looked down into a sort of valley, broad and well timbered, and sloping from the river far back into the mountain. Down near the river was a large band of elk quietly feeding, some of which had no doubt for many years roamed through these valleys, where there was good shelter and luxuriant grass, happy and contented, and at this time were making part of a landscape scene, untouched as yet by the hand of civilization, and beautiful beyond description—a scene that comparatively few will look upon again, and only then unless they love nature enough to push far back into the wild and rugged mountain regions of the Northwest.

The hunters were well equipped, each having a good horse, a cartridge belt and vest filled with cartridges, and a sack filled with loaded shells. They had learned long before this never to be caught far from camp without plenty of ammunition. They carefully worked down the ridge toward the elk, which they estimated to be over 200, but the elk saw them before they got within range, and away they went back into the valley. The hunters followed the trail, which led them in among the ridges, through belts of timber, and all the time further up into the mountain. They seemed to keep traveling around in a circle, yet kept moving back into the rough country. All day long the hunters hung around that band of elk, sometimes following on the trail, sometimes moving across to a point which they thought the elk were making for; now circling on one side and then the other, and not once getting within rifle range. But now the hunters stop on the trail; the day is far spent, the last shadows have spanned the valleys, and daylight has changed to gloom.

"Americus, we have got to quit."

"Well, I suppose we have, but it is pretty rough. Which way is camp?"

"Blest if I know, you tell!"

"Well, Brown, the camp is sure enough at the head of an all fired handsome valley that runs down to the Laramie River, and if we can find the river we can find the head of that valley, and I think those ridges you see over there run down to the river. Come on; wait a minute; there is some venison for our supper."

As Mr. Campbell's rifle rang out a blacktail deer leaped from among some bushes and stretched out on the ground. He disembowled it and tied it on his horse. They had many chances to shoot deer that day, but deer was not what they were after. They thought they would find camp if possible, so they pushed ahead, saying but little, but keeping a sharp lookout for a game trail which they knew would lead to the river. For several minutes they had heard a howl of a lone wolf far back on their trail and it sounded dismal enough in the gathering twilight. Soon they heard other wolves on either side and they knew by the sound that they were closing in on their trail, and in a short time they caught sight of the pack, keeping however at a respectful distance behind, and as they went on they would catch glimpses of other wolves galloping abreast of them. The number was continually increasing and the howling by this time was anything but pleasing, but the belated hunters pushed ahead as fast as they could, now in the deep gloom of the overhanging pines, their heads bent far down on their horses' necks so as not to miss the trail that they expected soon to find; now hurrying across the openings, somewhat lit up by the reflections from the distant peaks; now peering into the gloom ahead, carefully, cautiously, the "Tall Sycamore" of the Cedar and his trusty companion hastened along the mountain ridge. They had now given up all hope of finding camp. They saw that the wolves had made a circle around them, some even galloping along in front, and as the gloom increased the wolves were moving in closer to them and the hunters were getting somewhat anxious to find a good place to camp for the night.

The wolves were now following a little too close, and Mr. Campbell reached down and tearing out the liver from the deer tossed it back, and as the wolves began fighting for it Mr. Brown said, "Americus, do not do that, it will make them all the more bold. You had better drop the whole deer; those wolves may give us some trouble yet."

Mr. Brown was four years older than Mr. Campbell and had had more experience with gray wolves, and there was something in the way he spoke that made Mr. Campbell feel it was growing chilly quite fast. He loosened his lariat and tied one end around his horse's neck, so if he had to take to the trees he could hold his horse and fight the wolves as long as possible. Then he began to saw away at one of the shoulders of the deer, and when it dropped on the ground and the wolves rushed for it with an uproar Mr. Campbell began to feel for the lock of his rifle and Mr. Brown's voice grew more in earnest, "I say drop off the deer; those wolves will make it hot for us if we do not find dry wood to camp by soon. We cannot take to the trees, we would freeze to death before morning."

"Brown, it may be you don't know how a fellow feels when between 6 and 7ft. of him is craving for something to eat. I say when I go into camp, whether it is in a snow drift or up a tree, my supper and breakfast will go with me."

Then another chunk of venison dropped to the ground and the howling and uproar was fearful to hear. They had now left the timber and were descending into a draw. As they settled down between the ridges the gloom turned to darkness and the wolves were quick to take advantage and closed right in. And now the rifles began to speak, *Bang! bang!*

"Americus," *bang! bang!*—"I say, Americus, look out for a dead log."

Bang! bang! "See here, we must find a dead log quick (*bang!*) and make a fire at once." *Bang! bang!*

"My heavens, Brown, we can't find one and make a fire too quick to suit me." *Bang! bang!*

"Look out there, Americus, they are coming up back of you! Eheu! man, eheu! I say, drop that deer you long-legged ——" *Bang!*

"Whoa! whoa!" yelled the hunters as their horses stumbled into some dry timber. In an instant the hunters were on the ground and for a moment they stood and sent lead, thunder and streams of fire into the very teeth of the mad brutes; they were cowed and settled back a little. And now while Mr. Brown was scrabbling some dry twigs together Mr. Campbell kept the wolves back. There was a little blaze, and as it caught the eyes of the wolves there was a lull in the howling, and as the tongue of fire lapped the air they let loose a roar long and savage as they saw that they were baffled. And now with their backs to the fire the hunters drove back the wolves to a safe distance, then after unsaddling their tired horses they made camp as secure and comfortable as possible.

Brown was arranging the saddles and horses when he saw Mr. Campbell sitting on a log roasting a big slab of venison. "Well, I swear to gracious."

"Sit right down, Brown, I will let you have all you want."

And the two hunters with their rifles across their laps roasted venison and ate a hearty supper after their long day's ride. Then cutting off enough for their breakfast they threw the rest out to the wolves, thinking that after they had eaten it they would not smell meat and would go away, but the wolves stayed right with them all night. Mr. Campbell says there were 200 wolves, and that they formed a circle around the camp, but the most of them stayed on the same side of the fire that the hunters were on. Some were trotting around, some were having a free fight, some were sitting in a circle, while all were fighting or howling like mad.

Mr. Campbell says that frequently a swarm of the gray brutes would come rushing by at full gallop, and when opposite the camp would make a dash at them, sometimes coming within 20ft. of them, and then sweep away and turn and dash back again like a hawk circling for its prey. A movement among the horses or a little carelessness by the hunters and the wolves would spring forward and come on pell mell as though they understood that "first come, first served," and "the devil take the hindmost." At these times the hunters would back up to the fire as close as possible and shoot among them, and the wolves would hustle back to a respectful distance. The wolves on the outside of the circle would work in and sit down ahead of those in front and so the circle continually grew smaller, and sometimes it would get within 40ft. of them before they would drive them back. There was a good deal of dry wood scattered around and the hunters would watch for a chance to get it, and when the chance came they would take a brand from the fire and run out to the stick, grab it up and hustle back to camp, and always with a howling mob close on their heels.

Throughout the long night sat the lost hunters with their rifles across their knees, their eyes unceasingly watching the circle of savage beasts as they moved in closer to them. The horses backed up to the fire as close as they could and shook like aspen leaves. But now the line has moved in too near, and as the hunters' eyes run along it and catch the gleam from theirs they snarl and show their teeth. Now Mr. Campbell begins to feel the lock of his rifle; his tall form straightens; he speaks a few quieting words to his horse as his rifle comes to his shoulder and a crash breaks on the night air, and another and another follows in quick succession, and as the report rolls along the mountain sides and dies away in the cañons the air is rent with the death cries of the wounded wolves and the savage howls of the uninjured ones as the latter rush upon their more unfortunate companions and tear them to pieces. It was a fearful night; a fearful scene for the lost hunters, within a circle of 200 hungry timber wolves around their cheerless camp in the snow, some of which would be trotting around with their sharp noses pointed toward them, their eyes glaring and their teeth snapping, while others, gathered in little knots, were snarling and fighting and yelping with pain as they tore pieces of flesh from and held a hullabaloo around some fallen wolf, while others were sitting on their haunches with their noses pointed skyward, howling out their impatience to get at the throats of the hunters. The frequent report of the rifles, followed with shrill cries of pain, the gaunt forms standing around with heads erect lapping blood from their fangs and eager for more, frightened horses and blood-stained snow, all lit up with the unsteady light from the camp-fire, together with the general row and uproar, made a night of horror upon that mountain side that is seldom seen or heard by man or savage beast.

Oh, for a brave dog during such a night, one that would not tremble, but that would take part in the watch and show his teeth and snarl back. But with watching and shooting and keeping up the fire the night wore away, and with the first gleam in the sky the wolves became restless, and as daylight came on they began to skulk away singly, in pairs and in packs, and long before the first rays of sunlight came streaming over the ridge the last wolf had disappeared, and soon a calm had settled over the place that had been made so grewsome and uncanny through the darkness of night. And now the 6ft. 2½in. of Iowa manhood for the first time since going into camp breathed easy. He straightened up, stretched out his arms, kindly called his horse by name, patted him on the back, took a few steps, grinned and kicked the first dead wolf that he came to, and with Mr. Brown commenced to drag them together. They piled up eighteen wolves that they found close around the camp and that did not have their skins injured by the other wolves. There were a good many others that had been more or less torn that they left, while many a bloody trail leading into the timber told of others beyond the camp, and Mr. Campbell has no doubt but that they killed thirty-five or forty wolves. They could have shot many more. They did not use near all their ammunition, and did not shoot once for amusement, nor once think of making a record. They only shot when they thought they must to drive back the wolves that were moving in too close to their camp. They first skinned the wolves, then ate their breakfast, rolled up the pelts and put them on their horses, and had but barely left their unsightly camp behind when they came to a game trail, which they followed to the river, and soon got into camp, where the rest of the party were waiting and fearful that the two hunters had lost their lives.

The party stayed in the mountains a week and were gone from Red Butte thirteen days. They shot seven elk, a good many deer, several bighorns and two white goats. In fact, both wagons were loaded with game when they left the mountains.

It is often said that wild beasts will not go near a fire. That may be, but sometimes some beasts under some circumstances will go in pretty close. There was danger around that camp that night. A few careless steps and they would have been dragged down.

In answer to a question Mr. Campbell said, "No, I will not say that the horses backed up to the fire so close as to scorch their tails, but I will say that at times my own back got a mighty sight hotter than I ever want to have it again."

"Say, what would you think of a man that was situated as I was and would say that he was not frightened when he saw a swarm of timber wolves come rushing toward him as if they would overrun him, his camp-fire and all, and no way for the man to run, no tree to climb up, or hole to climb down?" Mr. Campbell had had many a fight with the Indians; he had been roused from sound sleep in the dead of night by raiding Sioux warriors, who bore down upon him, whooping and yelling and firing their guns, and did not lose his nerve, but rushed out the door of his tent, hatless and shoeless, and gave them bullet for bullet, until some rode away holding others on their horses; but Mr. Campbell does not hesitate to say that this affair with the wolves was the worst piece of bad business that he ever sat up with.

During the Rebellion Mr. Campbell enlisted as a private. He was shot through the right arm, the bullet also making a deep gash across his breast; again he was shot through the left shoulder. A bullet cut the rim of his hat so it lopped down on his neck. He was made color bearer, and this with his unusual height made him a marked man. During one battle thirteen bullets went through the flag he carried.

He says he liked Mr. Brown because he was bold and cool in danger, and they were together several years in the West. This is the kind of stuff that faced 200 blood-thirsty wolves on that open mountain side, with nothing but a camp-fire standing between them and certain death, and at times there was nothing certain about keeping up the fire. They began to think that they would have to roast or be eaten raw. In fact, they stood "between the devil and the deep sea," and if they had been made of different material this story of one of the most dreadful nights that a hunter ever went through would never have been written.

Mr. Campbell says that some of the wolves that drove them into camp that night were buffalo wolves; that they were larger than gray wolves; that they had hunches between their shoulders upon which grew long hair, and that they also had long hair on their breasts.

Two years ago Mr. Campbell heard that his old friend was living in Helena, Mont., and he often wishes that they were again roaming in the Western mountains.

MOUNT TOM.

The Big Buck of Chesuncook.

CROSBY, the Bangor taxidermist, writes me that he has received for mounting what he believes to be the largest moose head ever seen in Maine. The animal was shot by T. D. M. Cardeza, of Philadelphia, at the foot of Chesuncook Lake. The spread of the antlers is 62in., just two inches more than the great moose head belonging to Hon. C. B. Hazeltine, of Belfast, Me., which has previously held the record.

A 200lbs. buck deer and a large score of partridges are the fruits of a trip into the Machias region made by W. P. Whitman, of Campello, Mass. This gentleman returned but a few days ago and has nothing but praise to bestow on the country he has visited. HACKLE.

The FOREST AND STREAM *is put to press each week on Tuesday Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.*

ON THE WHITE RIVER PLATEAU.

It is hard at any time for a sportsman to be chained to business, and doubly so when his friends are returning, one after another, from successful fishing trips, and giving glowing accounts of the sport they have had. So one Saturday, when I could no longer withstand the temptation, I packed my sleeping bag, sheet of canvas, rifle and two days' rations on Brownie, a handsome little pony, with a neck and shoulders that Bucephalus might have envied, and mounted on Sammy, a veteran cow horse and hunter, started for the high mesa that forms the divide between Grand and White rivers in northern Colorado.

My armament consisted of a .45-90 Winchester rifle with half octagon barrel, half magazine, pistol grip and shotgun butt, sighted with Lyman combination front and wind gauge rear sights. This makes an ideal weapon for quick shooting at large game. The half octagon barrel and half magazine give a perfect balance to the arm, while the shotgun butt permits of rapidly throwing the rifle to the shoulder.

I believe that the Lyman rear sight, above mentioned, is not nearly so well known as it deserves to be. Every time the aperture is raised one division a spring engages in a notch, and one can tell by the number of times the sleeve hesitates in turning how many divisions the sight has been raised or lowered without looking at it. My cartridges were loaded with 80grs. of powder and 405gr. bullets, which I imagine give better results than the light 300gr. ones. As an auxiliary I carried a Stevens skeleton stock rifle, .25cal., 12in. barrel, in a holster hung from my cartridge belt. These are excellent little arms for grouse, etc., where the report of a heavy arm would be liable to frighten large game. The .25cal. is unnecessarily large for such a purpose, and a .22 would be just as effective and far less noisy. It was my intention to proceed directly to Joe Hill's cabin on the edge of the mesa, and get him to come along with me. Joe is an old resident of this section, and at present is developing a gold claim. Besides being jolly good company, a keen sportsman and thoroughly acquainted with the country, he is an excellent cook, and for all these reasons it was especially desirable to secure his co-operation.

The road from New Castle leads along the valley of Elk Creek for about 4½ miles, then turns up Middle Elk past Pierson's ranch for about 4 miles, where a trail branches off to the right up a side cañon and after ascending about 2,000ft. vertically turns to the left and follows a steep branch cañon up 500ft. more to the edge of the mesa, about 8,500ft. above sea level.

It was nearly noon when I reached Joe's cabin, and to my intense disappointment Joe was away. There was a large notice conspicuously placed on a bundle covered with gunny sacks which read "Giant Powder." Knowing my aversion to having mice running over my face at night and a little predilection I have for taking a shot at any that make their appearance during daytime, Joe had thoughtfully taken this precaution against a possible disaster, for a bullet fired into that bundle would—well, it would cost quite a little time and money to repair the damage; to say nothing of the loss to a certain life insurance company. On the other door was tacked another notice which read, "Will be back soon. Wait, Joe." As I frequently spent Saturday nights and Sundays with Joe he partially expected me, and as usual had left the key where I could find it; so I went in, cooked some dinner and impatiently waited for the proprietor to return. Three o'clock came, but no signs of Joe, so I reluctantly decided to push on to an unused hunter's cabin seven miles back known as the Five Mile. Leaving a note to inform Joe of my whereabouts, I started out and reached the cabin just at sunset, having knocked over a couple of grouse.

By the time the horses were picketed, a supply of wood gathered and supper cooked, it was nearly dark, and the cold frosty air at this altitude (about 10,000ft.) made one thankful for a comfortable cabin instead of a bivonac under a spruce tree.

At daybreak next morning I was astir, and without waiting to eat beakfast started out. To my intense disgust I found that Brownie had broken loose during the night and was nowhere to be seen. Feeling certain that I could find him later, I commenced the ascent of a ridge, and after about half a mile of climbing came in sight of a doe standing in the edge of some spruce timber. In the dim light she looked over 150yds. away, so hastily raising the sight to 200yds. I fired at her breast, knowing that if the distance were less than I had sighted for the bullet would strike the neck, which it did, about 10in. above the spot aimed at. The distance was only 125yds. Hastily I gashed her throat, and dragged the head down hill in order to allow the blood to flow more freely, then started out across another ridge. Soon a fine buck bounded through an opening in the timber, but did not afford a shot. By this time the sun was peeping over the hills, and knowing from past experience that no more deer would be seen that day, I returned to the cabin, saddled Sammy and started for my doe.

It was a short job to dress and pack the carcass on the saddle, and after depositing it at the cabin I started to look for Brownie. For about 300yds. his trail could be followed, then all traces vanished, and a wide circle failed to show in what direction he had gone. I was quite certain, however, that he was with a bunch of horses which were grazing in the vicinity; so returning to camp I packed the deer, blankets, pack saddle, etc., on Sammy, and walked the seven miles back to Joe's.

Still his cabin was empty, and the presence of the note I had left and the dishes that I had used, but hadn't washed, showed that he had not returned during my absence. Knowing that it would be impossible to catch Brownie alone if he had got with the bunch of horses, I decided to leave my outfit and go down to Sam Harris's ranch in Elk Creek Cañon, where I was pretty certain of finding Joe; so after eating the last of my bread I started down the trail, and in an hour and a half was at Sam's and found the house empty. It was evident that some one would be home before supper time, so I patiently waited, and about 4 o'clock in came Master Andrew, Sam's son, with a fine string of trout.

Joe had come down Friday for his mail, thinking it was Saturday, and on finding his mistake had stayed over and gone into town with Sam. They both returned about sunset, and after explaining the situation it was decided to spend the night at Sam's and start out to hunt for the pony in the morning. Joe was fortunately riding a horse to which Brownie was very much attached, so we felt sure of getting him without much trouble.

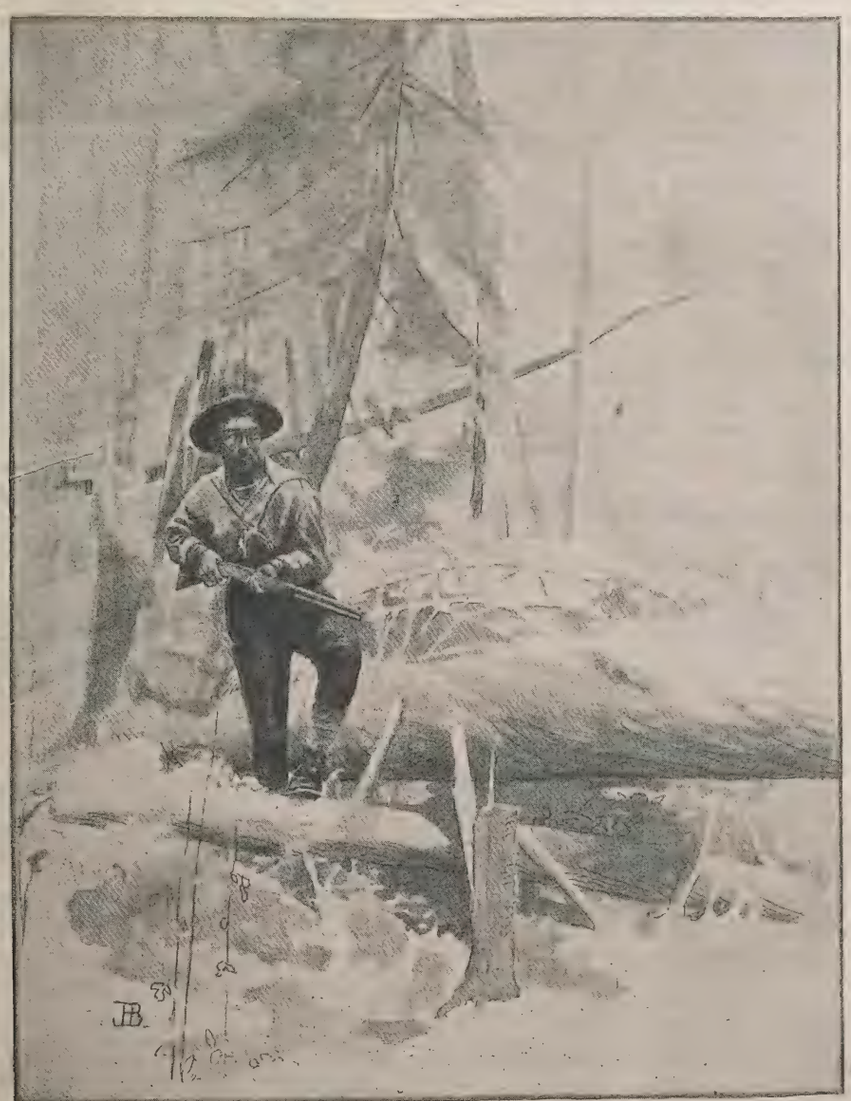
Next morning Joe, Andrew and myself started for the mesa, and after stopping at the cabin and cooking some biscuits and venison, we again took up the trail. After we had traveled about three miles a flock of grouse started up and scattered among the quaking asp. Master Andrew killed one with his .25 Winchester single shot, but for the life of me I could not locate a single bird.

A mile further on we found Brownie gayly disporting himself among a bunch of his former companions, but neither the presence of his old chum nor the tempting bits of salt which we held out had any attraction for him. The only thing to be done was to round up the whole bunch and drive them into an old corral that was close at hand. This was done without much difficulty and Mr. Brownie was secured, *i. e.*, he was haltered; but when the other horses were turned loose he was not subdued until he had dragged me about 50ft. In order to be avenged we put the heaviest pack on him and snubbed him to the horn of Sammy's saddle, after which a meeker and more submissive animal could not be found. Just as we got nicely started again a heavy rain and hailstorm came up. For a while we waited under the shelter of some spruce trees, but as we were certain of a comfortable cabin and dry beds we continued on in the storm, and by 4 o'clock were sitting before a brisk fire preparing a good meal of venison, pork, bread and butter and coffee. Unfortunately I do not care for coffee without milk, and for once I managed to get some, although miles from any cattle. The mare that Andrew rode had lately been separated from her colt and was still giving milk, so we milked her and could not detect any difference from the bovine article.

Before retiring I tried to impress upon my companions the advisability of starting out in the morning as soon as there should be sufficient light to see, but Joe was too old a veteran to fool around in the frosty grass when he had a comfortable bed to sleep in, and Andrew was too sound a sleeper, so when the stars grew dim and dimmer and finally faded from sight I arose and started out alone. How cold it seemed to a person just up from the valley where there was summer temperature! and for a moment I was tempted to wait and make a cup of coffee; but remembering how shy the deer were and how soon they retired to the heavy timber after sunrise, I shoved my hands deeper into my pockets and started for the ridge where I had killed the doe the day before.

With the utmost caution I worked through the timber, carefully scrutinizing every opening from behind trees, but although fresh tracks were numerous not a deer was to be seen.

After a while I arrived at the edge of the cañon of Middle Elk Creek, about 1,000ft. deep, and an irresistible curiosity seized me to explore its depths—there were such likely looking retreats down there for bears and elk. It did not take long to get down and across the creek, and there I beheld the loveliest park I have ever seen. The cañon was quite broad and the bottom on the west side was covered with luxuriant grass and beautifully dotted with large quaking asp. On the east the side of the cañon was densely covered with large spruce, while on the west the rocky wall rose almost perpendicularly, with an occasional gulch down which ran a sparkling stream.



There were some very large deer and elk tracks in the soft mud near the creek, and before I had gone far up jumped a fawn, and after running about 50yds. stopped and looked around. Now I wanted to shoot that fawn, but did not want to pack the carcass out of a 1,000ft. cañon, so I hesitated. Just then I remembered having been told of a side cañon that was passable for horses, so I decided to kill the fawn with a neat off-hand shot—the easiest thing in the world, apparently—but I didn't. The severe tramp during the morning had winded me far more than I realized, while my heart was banging away quite audibly, and try as I would that ivory-tipped front sight would not stay still half a second. In a fit of desperation I let drive anyhow, and away went the fawn, only to stop and look around not more than 75yds. away. Again I tried an off-hand shot, which succeeded in satisfying the fawn's curiosity and it bounded away out of sight unharmed.

Then I got mad and said "eheu!" or something to that effect, and tried to find some reasonable excuse for missing two such easy shots. Perhaps the sights were not set correctly, but an examination showed that that excuse wouldn't hold. Then I began thinking what a fine shot I would have made if I had only had my heavy barreled single-shot .40-90, and the remembrance of some long shots I had made with it, my favorite arm, somewhat soothed my ruffled feelings.

In order to regain my wind so that I could hold steadily, I sat down beside the creek and was soon lost in reveries, from which I was awakened by the appearance of two small animals which came bounding along, poking their heads over logs for an instant and then disappearing. A quick shot at one of the heads as it peeped over a log rolled over a fine mink, but before I could get a shot at the second one it had disappeared. The one killed had just been grazed by the bullet below the ear without fracturing the skull, and its skin was scarcely injured.

By this time the sun was getting pretty well up and my appetite ditto, so I started up the east side of the cañon and arrived in camp just as the boys were sitting down to breakfast.

After a little rest Joe suggested that we should ride down into the cañon where I had been and follow it up to the divide; so we saddled up and started down the side cañon before referred to. The old trail was almost entirely obliterated, and the horses occasionally had to do some scrambling to avoid sliding down the steep hillside. We reached the bottom about half a mile below the spot where I had climbed out, and as the sun was well up the grouse were out at the edge of the timber feeding. Andrew and I had good sport with them and soon filled our game bags, after which we tied them on our saddles until we must have presented a very pictur-

THE STILL-HUNTER.

esque appearance. For a considerable distance we rode through lovely parks, like the one I had visited in the morning. As we ascended, the quaking asp were replaced by spruce, the soil covering the rocks grew scanty and finally we entered a rocky basin—the source of Middle Elk Creek.

Climbing up the northwest side of the basin, we struck the old Ute trail over which the Indians formerly traveled from Utah to Denver. Following this, we were soon on the divide between the Grand and White rivers, two miles above sea level and almost at timber line. The trees were as large at the base as those at lower altitudes, but tapered off suddenly at the top, so that a tree large enough at the roots to reach a height of 75 to 100ft. would stop at 25ft. The rocks were swept bare of soil, and their weather-beaten appearance testified to the severe storms that swept over them. A few hundred yards to the northwest "Old Baldy" reared his treeless head, and in the cañons in his sides lay perpetual snow. Right below us lay the Indian Lakes, also known as the Elk Lakes, and from them flowed the South Fork of the White River. In the distance Marvine Mountain and the Flat Tops towered above the surrounding peaks—like Old Baldy, treeless and bare.

For several minutes we paused to gaze on one of the finest bits of mountain scenery I have ever beheld; then, as a sudden storm of rain and hail burst around us, we started for camp, returning along the top of the mesa. While we were still almost at timber line a fine cock grouse flew up into a stunted spruce, and Andrew added him to his string. Soon the storm passed and we entered a labyrinth of small box cañons, favorite resting places for deer during the heat of the day. Tracks were plentiful, but no deer. Along the rocky sides of the cañons a colony of woodchucks had their home, and Andrew rolled a fat one over in order to get his grease, which has the reputation among frontiersmen of making good gun oil.

In the top of a dead spruce I saw a large hawk, the arch enemy of grouse, and dropped him at 75yds. with a shot from the little Stevens.

We were wet and tired by the time we reached camp, but soon got dried out. After supper Joe and I watched for elk until dark beside a little lake where tracks were numerous, but nothing came.

At daylight next morning I started out and soon caught sight of a buck about 400yds. away in the open. While making a careful stalk through a clump of timber, a bunch of horses came along and frightened the deer. Before I had gone a quarter of a mile further, a cold rain set in and I returned to camp.

After the storm had ceased we packed up our dunnage and started back, knocking over some more grouse by the way.

While we were riding through a large open park, Joe noticed a hawk high in the air above us acting in a very peculiar manner. While we were looking we saw it drop something which fell close to where we were. The something proved to be a weasel which the hawk had endeavored to capture, but the wiry little animal had proved too tough a customer.

At Joe's cabin we had dinner, and after adding half of the deer's carcass to Brownie's pack, started out for New Castle. On the way I noticed a snowshoe jack rabbit hopping along into some spruce timber, but as soon as I dismounted to shoot he hid behind a pile of brush and rocks with only his big ears visible. I took a shot at the place where his head appeared to be, but fortunately for the rabbit a rock intervened and he escaped.

When I reached home I found orders which sent me up into the duck country on the Illinois River; then down into a spur of the Sangré de Christo range in New Mexico; and now I am longing for the time when I will again be in northern Colorado, where I can once more stand on the divide and look far across to the Flat Tops and Marvine Mountain, for the sight of their summits brings memories of many glorious days spent in the saddle or on foot with true friends, some of whom it may never be my fortune to see again.

SPORTSMANSHIP AGAIN.

Editor Forest and Stream:

"What is a sportsman?" "What is a true sportsman?" The subject is as old as I can remember. It was agitated in *The Spirit of the Times* in the old days, and *Rod and Gun* long before FOREST AND STREAM was published, and has bobbed up every now and then in the latter until every "sportsman" who reads FOREST AND STREAM must be familiar with it.

Now, what is sport?

"Mirth; diversion; contemptuous mirth; plaything; play; diversion of the field, as fowling, hunting or fishing; to represent by any kind of play, etc."

"Sportsman—one who pursues the sports of the field; one who hunts, fishes or fowls; one skilled in the sports of the field."

That ought to settle it so far as field sports go, but it don't seem to, for they still ask, "What is a *true* sportsman?" and then they call one kind of a hunter a "pot-hunter" and another a "game hog." Some look contemptuously upon the man who hunts with a $4 "Zulu" because he cannot afford any better, and others growl at the more fortunate man who is the possessor of an elaborate outfit, while both may share equal pleasure and be as conscientious in pursuit of it as it is possible for any human to be, and the "Zulu" man would possess an elaborate outfit too, if he could, because he has an equal love for the gun and dog.

I wish the question might be settled, for I want to see this great family of FOREST AND STREAM live harmoniously together as good brothers and sisters should. Aye, sisters; we are adding them to the family circle every day, God bless 'em! FOREST AND STREAM is making men and women better every day.

If I were asked to define my ideal "true sportsman," I would say that I think he is the man who hunts or fishes for the enjoyment he derives from it, whether he be rich or poor; one who anticipates and actually enjoys the fatigue that follows a successful or unsuccessful day afield. He is observant and enjoys the surroundings of nature, and is not discontented if unsuccessful. He loves his rod, or gun and dog, and is scrupulously neat and careful with his outfit, reading from it the stories of bygone days as from the pages of a well-worn book, longing for others to come. He is honest, manly and law-abiding, courteous, sympathetic and charitable in feeling toward his brother sportsman, always willing to give you the pleasure of his companionship afield when he is not "chained to business" or otherwise prevented, and one whom you wish to have with you again.

I used to have one such for a hunting chum, but, alas! he crossed the dark divide years ago and I hunt mostly alone now.

HAIR WORMS.

NO DOUBT many of our readers have heard what is sometimes alleged by those not properly informed, that a hair in water will turn to a worm, at least certain kinds of hairs under certain conditions. Mr. E. F. Rowe found yesterday morning in a rain barrel in his yard, which had not been used recently, a number of the whitish, repulsive looking, wiggling worms, upon the existence of which the story is based.

Some of the worms are nearly as large around at one end as a lead pencil for the distance of about an inch. Then it bluntly reduces in size to the size of a hair. This small part in some is dark colored like a hair throughout the several inches of its length, while in others it is dark only toward the tip, the rest having a whitish color the same as the body and giving evidence also of life.

One suggestion advanced as to the explanation was that some insect had laid its eggs on hairs or bristles that had gotten into the water and when hatched the product remained attached to the hair and the latter would be mistaken for a part of it. That might be in some cases, but not in this, for plainly the living worm and the apparently dead hair blend together, forming one existing body of whatever kind that might be.

Dr. C. Duffy informs us that he has many a time seen the same kind of worm in tan ooze, and that they exist in still unclean water which the sun reaches—it takes such conditions to hatch them. The Doctor furthermore informs us that he would not be at all surprised if some of them could now be found in cisterns around us.

The Doctor says the hair-like projection is simply an extension of the worm, a kind of tail they have, and he tells us moreover that if a bottle containing some of them were placed in the warm rays of the sun, it could be seen what kind of an insect was the parent of the worms, as they would change to it in a short time.—*Norfolk News.*

For the benefit of such of our readers as have been interested in "hair snakes" during boyhood, we propose to give a very brief outline of some of their habits and peculiarities. The development of these entozoa, though very obscure and difficult to trace, has yet been made out with a considerable degree of clearness; and, for the main additions to our knowledge of this difficult group, science is indebted to Dr. Joseph Leidy and M. A. Villot. It has recently been found, too, by Messrs. Riley and Packard that the hair worm is a valuable ally of the farmer, in that it is a formidable enemy of the locust, which has in recent years done so much damage to crops in the West. One observer indeed states that in a certain section of Minnesota these worms destroyed in 1875 as many hoppers as any other enemy. The worm or worms are found coiled up within the locust, occupying almost the whole inside of the body.

The *Gordius* is most easily found in late summer or early autumn in still pools of water near creeks or rivers, and though really quite common is easily overlooked, owing to its resemblance to the fibers of dead vegetation likely to be found in such situations and among which it often lies. Sometimes several are found together twisted and knotted into a tangled mass, and Dr. Leidy infers that these knots suggested to Linnæus the name given the worm from the famous Gordian knot of antiquity.

This worm is very tough and elastic, and is, besides, extremely tenacious of life, and will live and move for some time after being cut to pieces. It has not jaws nor vent, and no stomach nor intestinal canal, nor, so far as is known, has it any system of blood vessels or nutritive tubes. There are no eyes or special sense organs. The eggs are laid in the water in long chains and are enormously numerous, and they are deposited very slowly during a period extending over two weeks or more. Dr. Leidy estimated the number produced by a specimen of the variable *Gordius*, 9in. in length, as 6,624,800, the eggs being 1-5,750th of an inch in length by 1-1,000th in width. The young are developed and hatched in about four weeks, and in escaping from the egg they pierce the egg membrane, or shell, by the aid of the armature of the head.

The young is now about 1-450th of an inch in length, and its first move is to gain a comfortable resting place in which to pass this first stage of its free existence. This it soon finds in the fly larva, which share its watery home, and it lives encysted in them. In this stage the worm is active. The second stage of the larva's life begins when the fly larva, in which it has been domiciled, is swallowed by a fish. The process of digestion sets free the worm, which now proceeds to bore into the mucous lining of the fish's stomach, where it remains inactive and motionless for months. At length, in spring, it bores through its cyst and escapes into the stomach of its host, whence it is carried off with the fæces into the water. Here it undergoes great changes, and before long it increases in size, the integument grows harder, and when it is about 2in. in length it begins to move, turns brown and is soon a perfect "hair snake."

These hair worms are found principally on locusts, grasshoppers, katydids and crickets, but they are by no means confined to these. Dr. Leidy has reported one from a cockroach, and they have been discovered in beetles, moths, bees, flies, spiders and other small animals. It is difficult to comprehend how larvæ, developed in water, could ever attach themselves to creatures like grasshoppers, katydids, etc., which never go near the water, and Dr. Packard has indulged in some ingenious speculations relative to this point, on which, however, further observations are needed.

The account of these worms which we have thus given, brief as it is, and stripped of all its technicalities, will show our readers the absurdities of the old belief that these worms are animated horse hairs.

FROM CONE TO TREE.

I WILL try and give my idea of the life of a spruce tree growing in a mixed forest, starting from a seedling and continuing until it becomes a timber tree. Some effort of nature has prepared the ground for it. Some trees have overturned, thereby making an opening through which the light and sunshine necessary for the germination of the seed is let in. The seed has either been waed by the wind to this spot or a red squirrel that has been diligently gathering the spruce comes from a neighboring tree selected this place for his mid-day meal, and is greedily tearing the cones apart for the little seeds that lie on either side of the scales; some of these seeds are scattered and in the following spring germinate. It will take a sharp eye to detect them then, little delicate shoots almost like the moss that is found in the woods. After about three years they begin to have vitality enough to put out roots and you will notice a little cluster growing very thickly together. Meanwhile numerous other seedlings of different varieties begin to grow; some are short lived and others with a stronger constitution shoot ahead.

Providing one of these spruce seedlings has fallen in soil favorable for its growth it grows in height rather than in wood—the little seed branchlets have been overcome by the shade and drop off—the top is still reaching upward, but is a mere spray; it has not sufficient leaves or needles to help in the evaporation neccessary for the increase of wood. It simply gains in height. At last a favorable season gives it a new start, more roots are put out, new branches are formed and at the end of say 40 years it is a healthy looking tree or sapling—about 4in. in diameter. In time it reaches the desired point; it forms part of the crown cover and coming in contact with the sunlight and carbon begins to make trunk development. The others that have grown with it are out of the race and eventually drop out and die. The ground in time is covered with as many trees as it will support. Thus the seedling becomes a timber tree.

Now let the lumberman step in about this time. He harvests the crop of larger trees, possibly cutting about ten standard of logs to the acre. The smaller trees that have not been suppressed now make a new start. The hardwood trees around them serve as protection from the winds, etc., and eventually they become a new forest of second cut timber.

If it were not for the forest fires nature could reproduce a forest of some kind in a short time; but fire will destroy the work of ages—the soil is left almost barren and not anything but timber that is really not merchantable will grow in such places.

Fire has been the most disastrous agent in destroying a large part of our forests. Thousands of acres of land that at one time were covered with a great wealth of timber have been devastated by fire, and these lands never will be in shape to reproduce the amont of timber that would have been there to this day if the fire could have been kept out.

Laws should be passed making it a criminal act to allow fire to get out anywhere. Examples should be made and it could not take effect too soon, for unless a different system of forestry is carried on and more rigid laws enforced in regard to forest fires our beautiful Adirondack Forest will be a thing of the past.—*Frank C. Parker in Elizabethtown Post.*

AMERICAN ORNITHOLOGISTS' UNION.

THE Thirteenth Congress of the American Ornithologists' Union convened in Washington Nov. 11, and continued until Thursday, the 14th.

The evening or business session was held at the residence of Dr. C. Hart Merriam, the public meetings commencing Tuesday, Nov. 12, being in the Lecture Hall of the National Museum.

The active members present were: Dr. J. A. Allen, of New York; Maj. C. E. Bendire, of Washington; Wm. Brewster, of Cambridge, Mass.; Frank M. Chapman, of New York; Dr. Elliott Coues, of Washington; William Dutcher, of New York; D G. Elliot, of Chicago; Dr. A. K. Fisher, of Washington; Prof. Theo. N. Gill, of Washington; Leverett M. Loomis, of San Francisco; F. A. Lucas, of Washington; Dr. Edgar A. Mearns, of Washington; Dr. C. Hart Merriam, of Washington; Robert Ridgway, of Washington; John H. Sage, of Portland, Conn.; Hon. Geo. B. Sennett, of Erie, Pa.; Dr. R. W. Shufeldt and Dr. L. Stejneger, of Washington.

The associate members present during the session were: Job Barnard, W. F. Roberts, Wm. Palmer, Outram Bangs, Dr. E. M. Hasbrouck, J. D. Sornborger, R. P. Currie, Mrs. Olive Thorne Miller, Miss. Florence A. Merriam, Mrs. Nelly Hart Woodworth, Sylvester D. Judd, C. H. Townsend, W. E. Clyde Todd, Dr. Louis A. Bishop, Edward A. Preble, Vernon Bailey, J. van Denburgh, Prof. F. E. L. Beal, Colton Maynard, Gerrit S. Miller, Jr., C. J. Pennock, Dr. T. S. Palmer, A. M. Reed, C. W. Richmond, Stephen Rozycki, H. C. Oberholser, Prof. F. H. Knowlton, Edward Arnold, B. W. Evermann, E. J. Brown.

William Brewster, of Cambridge, Mass., was elected President; Dr. C. Hart Merriam and Mr. Robert Ridgway, of Washington, Vice-Presidents; John H. Sage, of Portland, Conn., Secretary; William Dutcher, of New York, Treasurer; Dr. J. A. Allen, Maj. C. E. Bendire, Frank M. Chapman, Charles F. Batchelder, Dr. Elliott Coues, D. G. Elliot and Dr. A. K. Fisher were elected members of the Council.

Mr. A. W. Anthony, of California, was elected an active member, and Mr. W. T. Blanford, of London, England, an honorary member. Mr. W. H. Hudson, of London, England, and Dr. D. Webster Prentiss, of Washington, were elected to corresponding membership. Eighty-eight associate members were elected.

The committee on classification and nomenclature of North American birds reported that the new check list is practically finished and will be published in a few weeks.

The protection of birds being considered, Mr. Leverett M. Loomis, of San Francisco, said that there had been wholesale destruction among birds and their eggs on the California coast the past year.

Mr. Witmer Stone, of Philadelphia, stated that so far as he knew only one colony of terns were left on the New Jersey coast. As these birds nested back in the meadows and away from the coast it was almost impossible to protect them. In recent years the "eggers" had destroyed immense numbers of the eggs of the clapper rail, which nested in favorable localities along the New Jersey coast. This rail had increased during the past

summer, as game wardens had watched the meadows and arrested several marauders.

Tuesday evening a public memorial meeting was held in the Lecture Hall of the National Museum in commemoration of the two distinguished honorary members of the Union who have died during the past year. The late Geo. N. Lawrence, of New York, was eulogized by Mr. D. G. Elliot, and Prof. Thomas Henry Huxley by Dr. Elliott Coues.

It was voted to hold the next annual meeting in Cambridge, Mass., commencing Nov. 9, 1896.

Resolutions were passed thanking the Board of Regents of the Smithsonian Institution for the use of the Lecture Hall of the National Museum as a place of meeting for the Thirteenth Congress of the Union, and thanking the Washington members for the cordial welcome and generous hospitality exteneded to the visiting members.

The attendance of members and visitors was large.

A group photograph of the members was taken on the steps of the U. S. National Museum.

The following is a list of the papers read at the sessions: Exhibition of Unpublished Water-color Paintings of Birds by Louis A. Fuertes, with remarks.; Elliott Coues. An Important Factor in the Study of Western Bird Life; Carl F. Baker. The First Plumage of the Philadelphia Vireo (*Vireo philadelphicus*); Jonathan Dwight, Jr. On Pallas's Cormorant; F. A. Lucas. Further Remarks on the Subgenus *Quiscalus*; Frank M. Chapman. Midwinter Migration Southward in the North Temperate Zone to Breeding Grounds; Leverett M. Loomis. The Terns of Muskeget Island, Part II.; George H. Mackay. Food of the Meadowlark; F. E. L. Beal. An Instance of Individual Dichromatism in the Screech Owl (*Megascops asio*); A. P. Chadbourne. The Pine Grosbeak (*Pinicola enucleator*) in Captivity; O. W. Knight. What Constitutes Publication? J. A. Allen. Kingbird and Sapsuckers of Southern California; A. J. Cook. Methods in Economic Ornithology, with special reference to the Catbird; Sylvester D. Judd. A few Effects of the Winter of 1895 upon the Spring and Fall Migration in Canton, Mass.; J. H. Bowles. Birds of Idaho; M. J. Elrod. On the Standing of *Ardetta neoxena;* Frank M. Chapman. A Critique on Trinomial Inconsistencies; William Palmer. Why are there so few Bluebirds? Mrs. Louisa M. Stephenson. On Gätke's Heligoland; George H. Mackay. The Value of the Tongue in the Classification of Birds; F. A. Lucas. Exhibition of Lantern Slides of Birds; William Palmer.

A Curiously Marked Deer.

PESHTIGO, Wis., Nov. 10.—The woods are full of them; that is to say, of hunters after deer. And of deer, too, according to what they tell. The queerest freak in the deer line we have ever had here was of a specimen brought in last week, which had on one side a broad band of white hair, pure white, extending longitudinally along the body. F. E. G.

Game Bag and Gun.

THE LONG ISLAND DEER PLAGUE.

SCENE.—*Office of Kennel Editor,* FOREST AND STREAM, *318 Broadway, New York.*

TIME.—*2 P. M., Nov. 4.*

DRAMATIS PERSONÆ.—*Kennel Editor and Trap Editor.*

TRAP EDITOR (*loquitur*).—"Have you read our esteemed Western contemporary's editorial account of the great number of deer on Long Island; the destruction of crops and gardens by those animals, and the quantities met with in a single drive?"

KENNEL EDITOR.—"No. What about it?"

TRAP EDITOR.—"Well, it's great. This is what it says:

"'The effects of the game law of New York protecting deer on Long Island until 1897 are already manifest, the deer being so numerous even now that they are quite an annoyance to farmers, and many complaints have already been made of their destroying the farmers' crops and gardens. They will enter a field of grain or cabbage patch at night, and before sunrise the next morning almost ruin it. One man at Farmingdale says he has driven as many as a dozen deer out of his field of cabbages in a single night. The deer range on the island is said to be one of the finest for deer propagation in the United States. The great rolling pond hills face to the north, and afford safe and warm protection for the young deer during the winter. The winter winds are, as a rule, from the north, and the deer seek the lee of the hills for protection from the cold and snow. People often drive over the road running through the range just to see the deer, for it is no uncommon thing to see from three to a dozen during a single drive. They have become so numerous that they wander out into and along the country roads, and occasionally venture into the outskirts of some of the smaller villages. The number of deer now on the range is estimated at not less than 600. The new law pleases the true sportsman immensely, for he realizes that great sport is in store for him two years hence. While the farmers wish the deer to thrive, they do not like to see them do so at their individual expense.'

"What a chance! Deer to the right of us, deer to the left of us, and ruined grain fields and cabbage gardens all around us! And, mind you, all this is due to a law not five months old, and which was passed seven months after the breeding season of the deer had closed!"

"By Jove," said the kennel editor, and he rushed to the water cooler. After taking a swallow, he added: "Had our esteemed friend studied 'Game Laws in Brief' as carefully as it should, it would not have made such an egregious blunder. Do you note that it informs us that 'the winter winds are, as a rule, from the north?' May kind providence temper the north winds of the coming winter to the lamb that wrote that editorial!"

"Now," proceeded the trap editor, as soon as his brother editor had fully recovered, "is the opportunity of our lives. Let us go forth into the wilds of Long Island (we can get back the same day) and see the deer in their native state, wandering along the roadways, ten and twelve at a time, or causing a shortage of the sauerkraut crop by reason of their ravages! I remember seeing the same thing in the *Sun* and other New York dailies weeks ago—in fact, here's another note to the same effect that appeared in the Greenport, L. I., *Watchman* of Oct. 19:

"'☞Complaints, bitter and loud, come from the vicinity of the deer range, in the towns of Smithtown and Islip, that deer are seriously depredating on the gardens and fields of farmers and small truck growers thereabouts. Despite the six days' saturnalia of drunken rowdyism and reckless slaughter which the open season for deer degenerated into last year, and after all the sharp pursuit of these animals during the past years, their number is said to be increasing. At all events there seems to be no doubt that they are numerous and destructive to crops within their reach. As the law now stands it is an offense, punishable with a fine of $100, to kill a wild deer on Long Island, and this condition will last for two years. Both the farmers, who want protection against the ravagers of their planted fields, and the hunters, who want to enjoy the sport of hunting deer at a proper season, cry out against the present law. We refer them to those responsible for the legislation of 1895.'

"And look here. This is a clipping from a regular Down-East publication, an agriculturists' paper that is brought forth in the hub of the universe; just listen to what it says:

"'A New York law prohibits killing of deer for two years in Suffolk county on Long Island. As a result the deer are becoming very numerous, and are doing great damage to the crops of farmers. Under this new law all the farmers can do is to drive the deer away, and as they do most of their depredating at night this makes the saving of their crops a difficult matter. One farmer named William Berry has driven as many as twelve deer out of his cabbage fields in a single night. Thousands of his cabbages are eaten down to the stalks. All this damage to farmers is to make a few days' sport for huntsmen two years hence, when the interdiction on killing deer will be removed. By that time the deer will have eaten five to ten times what their carcasses will be worth. It is doubtful whether the State has the constitutional right to prevent farmers from defending their property from destruction by wild animals. The farmers at least mean to test the question whether they cannot secure pay for property thus destroyed by authority of law. It seems that they can at least do this.'

"William Berry (I think that must mean William O'Berry, of St. James, quite a noted deer hunter down on

IN THE HEART OF THE DEER RANGE.

the island) has good cause for complaint. Think of it! 'Thousands of his cabbages are eaten down to the stalks.' I never thought until to-day it was anything but a fake or a kind of duck-egg story. Since, however, our excited Western contemporary finds the state of affairs worthy of an editorial note, it must be so. Let's go into this wilderness and view the deer wandering around in squads."

"Yes," said the kennel editor, "we are growing fleshy from overwork. Let's ask the editor-in-chief for a day off so that we may reduce some of our adipose tissue; we're too healthy looking to plead any broken-down constitution or ill health. Let us go where the farmers wish the deer to thrive, but 'not at their individual expense.' *Individual* is a good word."

"And we'll take the camera along," said the trap editor. "Then we'll get some living pictures of the cabbages, the deer and the jungles. You remember what Burnham and Jock Darling did with the camera in Maine this summer, and how Hough and Hofer *ski-ed* and camera-ed it through the Yellowstone winter before last? Here's *our* chance."

"Shall we go to Farmingdale, where the cabbage herder 'says he has driven as many as a dozen deer out of his field of cabbages in a single night?'" said the kennel editor, who is fresh from the Windy City.

"Farmingdale be eheued. Farmingdale is miles this side of the deer jungles. We'll go around and through those same jungles, and we're bound to find game before long, as it must be really very plentiful."

Thus it came about that the editor-in-chief assented to their request, and two of FOREST AND STREAM'S editors went forth to search out the wild places of Long Island and to learn whether these things were really so.

The Day off and its Result.

The early hours of the morning of Nov. 6 were not very inviting for a stroll through the wilderness. A heavy fog

BE'ER DEER CONSULTS THE "BRIEF."

that rolled in from the Atlantic before a gentle southeasterly breeze impeded traffic on the river, dampened the sidewalks and made things in general somewhat gloomy. It had but little effect, however, on us. We had our day off before us, and we were going to see the deer in their native state, and to commiserate with the farmers on their loss of their fields of grain and their cabbage crop. We had the camera with us too, and with the aid of the fog and the general boldness of the marauders we felt that the misty atmosphere would be no detriment. At 10 or 15ft. we could distinguish objects readily; with a long-time exposure (and we didn't think the bold and saucy deer would object to stand for us) we could get some negatives, even if they were a bit hazy, for at that they might not prove a whit more shadowy than the rumors.

Twenty miles this side of our destination the sun came out bright and strong, making it the sweetest of Indian summer mornings. When we got off the train, our umbrellas and overcoats were at a discount; it was a perfect day.

We first interviewed the proprietor of the hotel near the station. His house was a favorite resort for sportsmen, while he himself was a deer hunter of no small repute. The result of the interview from our point of view was scarcely satisfactory.

"Deer? Oh, yes, there are deer, of course, but they're nothing like as numerous as you imagine. Don't they injure the crops? Nothing more than usual. How could they? The law has only been in force a month or so; how could that affect the number of deer? Newspaper reports? Yes, that's just newspaper talk, nothing else. There's no more deer now than there were a year ago, and they don't do any more harm now than they did then that I know of."

It was a discouraging start; but we still hoped, thinking that he might have some occult motive for deceiving us as to the true condition of the deer plague. Our rudely shaken faith was considerably strengthened a few minutes later, when, within a stone's throw of the hotel, we discovered a cabbage eater. Seated at the root of an old tree was an undoubted specimen of the genus *Lepus*, and a fine one too, with its coat already changed in anticipation of the "winter winds" which in that part of Long Island "are as a rule from the north." Strange winter winds of Long Island!

The surroundings were wild, but were bare of any cover. The well-known ferocity of the *Lepus kottontalus rusticus*, to which sub-family the specimen before us unquestionably belonged, made the operation of obtaining a negative of the animal a decidedly hazardous task. The trap editor, with his usual self-denial, desired that to the kennel editor should belong the honor of photographing in its wild state the animal at once so engaging, so rare,

A CLOSE CALL.

and yet withal so dangerous to approach. "Nay," said the kennel editor, "for this time at least must I deny myself. To you rightly belongs all the *kudos* that is to be gained by securing on a gelatinous film a reproduction of such an animal in its wild and untamed state. This side of the fence is good enough for me."

Seeing that the kennel editor was determined to efface himself, there was nothing more for the trap editor to do but to prepare to photograph the cabbage eater. Taking advantage of every little inequality of the soil, every blade of ragweed and every frost-blighted stalk of goldenrod, he managed to approach within 10ft. of the subject, which, to his relief, he then discovered to be wrapped in the sound slumber that is born of a hearty breakfast of cabbage. Not even the click of the camera's shutter disturbed it; there was not a break in the continuity of its snores. The return to the trail was made in safety, and we at once proceeded on our way into the jungle. The only thing to mar our unity was a determined effort on the part of the kennel editor to belittle the dangers attending his brother editor's achievement. We soon forgot our troubles, however, in the joy at having so soon obtained a negative of a cabbage eater and a girdler of trees.

We felt much better again when, a few hundred yards further on, we came upon a very rare specimen of the fauna of this remarkably wild section of Long Island. Was this indeed a vision, or was it a real live specimen of the *simiadæ?* That it was not a vision is satisfactorily proved by the accompanying cut, a negative of fair quality being obtained after a careful and heart-thumping stalk.

This time the kennel editor essayed the task. Carefully keeping a sapling of some 4in. in diameter between him and the animal so as the better to conceal his approach, he succeeded in getting within 50ft. of the object. In his task he had been materially aided by the animal itself, which, with its back to the stalker, had been busily engaged in the pleasing operation of inspecting its limbs in search of marauding insects. Finding the distance too great for a satisfactory negative, the kennel editor attempted, by assuming a snakelike mode of progression, to make a near approach. The mistake was a fatal one; his form is not fitted for any such purposes; he caused trouble and aroused the animal, which, open-jawed, sprang for him. His presence of mind did not desert him, but, snapping the camera, he turned and fled.

Feeling morally certain that the negative would be

practically valueless, the trap editor volunteered to try again as soon as the suspicions of the animal had been somewhat allayed. (Later it was discovered that the negative contained only the gigantic body and legs of an animal that closely resembled a chimpanzee. This was caused by the proximity of the subject to the camera, showing the closeness of the call.) The kennel editor, fresh from the dangers attending the effort, did his best to dissuade his brother editor from immolating himself on the altar of scientific research; for, said he, "Do you

CHAINED TO BUSINESS.

not remember the horrible and malicious ferocity of this animal and its undaunted courage and strength without limit, as described by Paul Chaillu, the great African explorer? The animal has no end of accidental deaths and broken heads concealed about his person, which he gives with a lavish hand to those who incur his anger."

But this argument availed naught. The trap editor divested himself of his overcoat and umbrella, and there came that look on his face which boded ill for man or beast which crossed his purpose. He took the camera and left a message for the dear ones at home in the event that the worst befell him. The kennel editor volunteered to go along and hold the animal while the trap editor did the execution, which friendly offer was ignored.

The trap editor first stealthily crept along a fence for a few yards, then observing that his prey was seeking insects, he glided quickly and noiselessly behind a large tree, where he took breath for a few moments, and prepared himself for the final effort. No Indian in his native forest was more sinuous, silent and resolute, and few indeed ever showed more indifference to peril or a better nerve. The young man then set his instrument and roached his back and took aim; the click of the shutter alarmed the ferocious relative of man's ancestors, and with demoniac rage he sprang toward the daring intruder; his fetters rattled and we discovered that he was "chained to business."

After this startling episode we plunged still deeper into the wilderness, keeping our eyes open, as we hoped soon to espy a dozen deer or so in a bunch; ones and twos we expected to find so common as to be unworthy of notice. A distant cabbage patch that bordered on one of the wildest portions of the jungle caught our fancy. With ordinary luck a stealthy sneak might result in a negative showing a half-score of the cabbage destroyers taken *in flagrante delictu*. We remembered how Burnham had exhibited with pride a negative of a single pensive doe, daintily munching her breakfast of succulent lilypads; our negative would far transcend his—but there was no deer there, nor could we detect any ravages in the crops save those of the knife. This was one of the greatest disappointments of the day. We visited other cabbage patches during the day with like results.

Returning to the trail, we followed it for about a mile into the virgin wilderness, noting with some wonder that it was defaced by the tracks of horses and wagons, showing signs of much traffic. All the trails in this vicinity were marred in a similar manner. No game of any kind save a solitary and evidently vagrant specimen of the *felis domesticus tomcommunis* was seen. Of this animal we would gladly have made a negative, to prove further the wildness of the country and also on account of the Cimmerian darkness of its fur; but it stood not on the order of its going—it went.

Decayed and broken-down rail fences bore silent testimony to the great age of the wilderness and to the ease with which the cabbage eaters could assail their victims. A valuable piece of information was obtained from a husbandman whom we met up with a half mile further in he bowels of the jungle:

"Why, yes, there's some deer around here; not more'n usual tho'. Do I often see 'em? Haw-haw! Well, I'm gumswazzled! What do you city fellers think deer is, anyway?" and a broad grin illuminated his features. "Like groun' squir'ls, I suppose, runnin' along fences 'n' barkin' at people when they gets a good ways off? How about my cabbages? As good as ever, and that's sayin' a good deal, 'cause I can raise cabbages that is cabbages on this lot o' mine. Does deer bother me any? Why, nothin' to brag about: there's other things besides deer that like cabbages. What things? Why, just things that get in among 'em when I don't keep my fences up same as I ought to. Got a spare chew of terbacker, either of you gents? Don't chew! Gosh! Chew White's Yucatan gum, d'ye say? Good thing, push it along, is it? Well, mebbe it's all right for you city fellers, but out in these parts we chaws terbacker—when we can get it. B'gosh, it's good though. Yes, there'll be more deer next fall, I don't doubt, but this fall they're about the same as last, no more and mebbe less; there was a sight of 'em killed last year to my knowledge. It was like the Fourth o' July round here when the boys was out after 'em, cracking and banging to beat the devil. A man wasn't rightly safe in his own yard. Do the winds as a rule blow from the north in the winter? Haw-haw! Think yer right smart, don't yer? Well, s'long."

We were beginning to get a little disheartened. Negatives of deer, even of a single specimen, seemed now difficult of realization. It began to look as if we had been fooled. The only thing that cheered us was the husbandman's remark about the "things." Perhaps we might get some negatives of some of these cabbage destroyers so vaguely hinted at.

In Indian file, plunging still deeper into the mazes of the jungle, we kept on, the kennel editor leading the way. All of a sudden he turned, and in true hunter's fashion placed his finger to his lips and hoarsely whispered, "Hist." Following the direction of his eyes, the trap editor instantly spied the game, a veritable cabbage destroyer. When first seen it was lying down in one of the most impenetrable portions of the wilderness. Its sex could not then be ascertained, but it was noticed that it had horns. The wind was from the right quarter, and a negative of the cabbage destroyer in its lair might have been obtained but for the bulk of the trap editor, which made a noiseless passage across dry sticks an impossibility. The negative, as shown by the accompanying cut, tells that the cabbage destroyer was caught by the camera immediately after it had sprung from its lair and while it was contemplating a precipitate flight. (Note by the editor.—A close microscopic examination of the photograph discloses the fact that the specimen was a genuine *bos jersey anus*, a species by no means rare in the jungle of Long Island.)

Shortly after we had secured this negative we experienced another piece of luck, being overtaken by the "oldest inhabitant" of that wild region, who was riding in a springless wagon that was drawn by a sway-backed horse, which had evidently overstepped the span of life allotted to members of the equine race. Pulling up his horse, a feat by no means so difficult as it sounds, he offered to help us on our way. Here was indeed a chance. Did not our contemporary from the land of the setting sun assert that "it is no uncommon thing to see from three to a dozen during a single drive?" Of course we gladly accepted the offer and took our share of the single seat, willing to put up with any amount of jolting so long as we had a sure chance of seeing "from three to a dozen deer" thereby, as the authoritative information implied that the sight was for "a single drive"—not two or more drives,

A CABBAGE EATER.

and not for people afoot. Thus we left no stone unturned to fulfill the conditions enjoined by our esteemed contemporary.

How far we drove we had no means of calculating. It is sufficient to state that we rode as far as we could into the midst of the wilderness, only leaving the wagon when arriving at our guide's domicile, which was indicated by "the oldest inhabitant" saying that he wasn't "goin' no further." There was no help for it, and—we had not seen a single deer, let alone "from three to a dozen," in our long "single drive."

But our ride had not been fruitless. Our guide had been able, between his twinges of rheumatism, groans and licking the stolid horse, to impart additional valuable testimony in regard to the awful damage to "a field of grain or cabbage patch," caused by the deer in the jungles of Long Island.

"Deer 'round here? 'Course ther' is, and have been ever since I come here thirty-four years ago. Many as there used to be? Not likely, seein' as how they've been shootin' and killin' of 'em right along all these years. Fruit trees and cabbage patches 'ud be all right if people 'ud keep their fences mended, I reckon. Deer never bothered me none that I know of. It's all humbug this talk. Many monkeys about? Never saw one in my lot since I come here, and can't say as they're real numerous. Never bothered me and I never bothered them. I know fellers as has seen monkeys and blue mice too! Haw-haw! Geet up!"

In the midst of the wilderness we heard the ting-a-ling of a bell, a most startling sound where erstwhile was the silence of wild nature, broken only by the harsh notes of the bluejays, the caws of the crows, and the cries of the cabbage eaters without cause. Instantly thereafter there glided by us a beautiful vision, a dryad on wheels, none the less lovely and lovable whether seen on the solitary trail of the wilderness or on the boulevards of effete civilization. The bicycle girl! Benisons upon her! We did not classify her as a cabbage eater, but rather as a rosebud of the wilderness, adorning and dignifying it. The gloom that had settled on our spirits was dispelled, and we passed down the trail brighter and better men.

A ROSEBUD OF THE WILDERNESS.

We now had before us three miles of the trail that led us through the very heart of the jungle. It was again a sore disappointment to us to find that this trail, like the others we had struck, was much spoiled and cut up by the hoofprints of beasts of burden, and by marks that could only have been left there by the tires of wagon wheels.

As we meandered along we discovered another denizen of the wilderness. Wrapped in patriarchal dignity, and conscious of his own forceful dignity, stood a useful specimen of the *Capra buttsoria* (vulg. billygoat), one of the "things" which prey on cabbage when the eyes of the husbandman are not upon him, or when the tomato-can plant which he loves so dearly is not in bloom. The trap editor approached the goat, humped in that alarmingly stealthy manner so peculiar to the itinerant photographer, yet withal so harmless in itself. The goat interpreted it as an unfriendly attitude, and became eccentric in its deportment, as is truthfully depicted in his pen portrait. The attempt to photograph him was abandoned, he being "uncertain, coy and hard to please."

The next sign of game was apparent when we came to a place where a bevy of quail had been dusting. Not being able to locate them, we had to move on without obtaining a negative. From that point to where we struck the main line of the Long Island Railroad, a monument to the skill and hardihood of the fearless engineers who first ventured into this wilderness, we saw a fair amount of deer signs. Tracks in the sand, at varying intervals of from 200 to 500yds., showed us where deer had crossed the road some time within the previous few days. (We preserved carefully a few of the tracks. If any one cares to call at the office of FOREST AND STREAM to view them, we shall be glad to show the same at any hour on Nov. 28.)

Reaching the railroad, we followed its course to Center Islip, noting as we passed a runway where the deer crossed to and fro between the preserve of the South Side Club and the outlying portions of the jungle.

We found later on that the railroad formed the northern boundary of the game preserve of the South Side Club, of Long Island, in whose territory of 40,000 acres the deer find a safe harbor. That the deer are aware of their safety in the preserve is very evident, as we found on following the railroad track for about a half a mile deer crossings were quite numerous compared with what we had struck on the trail through the wilderness. We saw quite five or six places where single deer had crossed in and out of the preserves of the club.

On our arrival at Center Islip we made the acquaintance of an aged and experienced deer hunter who had resided in the jungle of Long Island for several years, and who had himself taken part in the slaughter of deer during the six days of open season last fall. After a few general remarks, we broached the subject of deer to him. This fortunately seemed to be a favorite theme with him, and upon it he talked readily. The conversation was a long one and covered the matter thoroughly—so much so that we shall only attempt to give the substance of it.

He stated that the two years' close season on deer was not a popular one in that section, inasmuch as it was scarcely safe for a man to take his dogs out into the jungle to hunt rabbits, the risk being that the dogs were liable to strike a deer trail and thus run a chance of being shot for illegally pursuing deer out of season. This risk hardly seems as great as he made out, since from his own statements the neighbors are all banded together and allow each other to hunt over their posted lands, objecting only when a stranger comes upon the scene. "Neighbors don't care to do nothin' agin' one another as a gen'ral thing," said he. He objected chiefly to the clause which permitted the killing of his dogs while pursuing deer, as the hunter might be out after rabbits and be wholly innocent of any intention of having his dogs run deer. (He forgot apparently that the law of previous years only permitted his dogs to run deer for the short period of six days. His objection seemed to have an ulterior and suspicious flavor.)

He said further that in respect to the damage to cabbage patches and grain fields, it was no greater this year than in previous years, and was not serious at any time. Once in a while it happened that deer did some damage to

ANOTHER CABBAGE EATER.

growing crops, but it was too infrequent and trifling to seriously consider.

As regards the number of deer, he said they were no more plentiful than last year, probably not so numerous. He mentioned that one had been seen passing through the outskirts of the town about ten days previous to our visit. This he referred to as a noteworthy event, although the incident occurred less than a mile from the runway. This would seem to indicate that the deer are not wandering around in marauding bands, and that they are not so easily seen, at least by actual residents, in the heart of the

jungle where deer abound and where "from three to a dozen" can be seen "during a single drive." ("During" is another good word.)

He also stated that he had seen no fawns, and had also noticed very few fawn tracks while out hunting in the wilderness. We ourselves had noted the fact that there were no signs of any fawns having crossed at the runway.

Our next information was obtained from a gentleman who resided outside the southern boundary of the South Side Club's preserve. To repeat his statement would be unnecessary, as it was only a corroboration of those given above. The gist of it was that deer in the immediate vicinity of the preserve did do some little damage occasionally, but nothing to speak of. This, however, he said, was not a new thing, but had been the case in all previous years—last year, the year before that, and the year before that again.

The most important portion of our interview with this gentleman was that which related to the probable cause of all the newspaper talk: "One man told me that the object of this agitation was to have the law changed at Albany next winter so that deer could be killed on Long Island the following fall."

Several other interviews were had with persons well qualified to judge of the situation, but as they were all in the same strain as those we have already recounted it is not worth while to occupy more space for the sake of righting the base libels on the innocent inhabitants of the jungles of Long Island.

Thus is the ghost of the Long Island deer plague laid, and the alarmist's cabbage head busted!

The Summary.

Sensationalism, press clippings and the grievances of individuals who wish to kill deer regardless of the claims of the people or of the next generation form poor authority from which to thunder forth instructive editorials on the game situation in Long Island or in the Island of Jal-

"THE SUMMARY."

abaloo, or anywhere else; that is, if gross exaggeration and perverted fact can be called instructive editorials.

The natural conclusion to be reached from the slaughter of deer last fall is that the breeding stock being thereby lessened, the increase in the supply of deer this year would be lessened in like ratio. The complaints upon which the editorial was based are, so far as we can ascertain, merely cloaks to the real purpose, which is to kill the deer. Moreover, in respect to these complaints, the conditions in regard to damage by deer are in nowise different from what they were in past years. B. WATERS}
EDWARD BANKS.

MR. ROOSEVELT'S SHOOTING.

THOMPSON FALLS, Mont., Oct. 30.—*Editor Forest and Stream:* In reading a paper a few days ago I noticed an attack upon Mr. Theodore Roosevelt by a Mr. Trude, of Chicago, in regard to the way in which he killed game.

I have accompanied Mr. Roosevelt on several hunting trips, and I feel that I can speak with some degree of accuracy in regard to this matter.

I was Mr. Roosevelt's guide when he killed his first white goat, and can truthfully say that he made one of the best shots I have ever seen made. At the time I thought that it must have been a chance shot, but when we got after the next band his shooting was such as any sportsman might feel proud of, especially his shot at a goat running up a cliff at a distance of 225yds., when he broke the animal's neck.

On our trip together to British Columbia I feel that his coolness and nerve saved me from being torn by a bear, as I had a heavy pack on my back and was unable to use my gun. The bear had been wounded by Mr. Roosevelt, who ran to where he last saw the bear. As the creek made quite a noise, the bear was right on me before I knew it, and was on his hindfeet, ready to strike me, when Mr. Roosevelt ran up and shot him in the butt of the ear and killed him.

Three days later I saw him make a good shot at a caribou, which he killed. There were five in the band and I tried to get him to kill the entire band, but he said he only wished those with good heads, and that under no circumstances would he kill a doe or fawn, unless he was compelled to for the meat.

We went through more hardships to the Big Hole Basin than on any of our other trips. As it was late in the season and Mr. Roosevelt's time being limited, we wished to cover as much ground as possible.

We usually started from camp in the morning without blankets and nothing but sour dough bread and salt, depending on our rifles for our meat. On one occasion I lost my reckoning and we did not find the camp for two days. During this time we ran on to a band of goats, and he could have killed the entire band, but only shot the best specimens. He displayed great nerve and endurance, and I do not think he ever lost his reckoning, but we were both played out by the time we reached the camp.

A few days later we ran on a band of elk. Two of them were fighting, and his description of this scene is very accurate. I have never known him to shoot a cow or calf elk or caribou, and on no occasion did we ever have any kind of a trap, but depended solely on his skill with the rifle.

I have read all the articles that he has written about his hunting trips on which I accompanied him, and I consider that he has underestimated rather than overestimated himself, as I think him one of the coolest and best shots at game, and he endured as many hardships as any man that I have ever known. Always in a good humor in camp, which is something unusual, as hunting will generally try a man's patience more than anything else.

I hope that you will give this letter space in your valuable paper. JOHN WILLIS.

THE WESTERN MASSACHUSETTS FOX CLUB HUNT.

A TYPE.

THE eighth annual hunt of the Western Massachusetts Fox Club was held at Westfield Nov. 13 and 14. The first day was all that heart could wish. The weather was perfect and the running good. Seven foxes were killed and accounted for, which, if we are not mistaken, is a record for the club. The second day opened cloudy and with indications of rain, which were verified later, but the trailing conditions were excellent all day, and not enough rain fell to destroy the scent. Four foxes were killed, which made the total for two days eleven, a showing which is really remarkable when it is considered that the hunting was all done in one locality, and that in the immediate neighborhood of Westfield.

The hunt was without question one of the most successful ever held—not only in the annals of the Western Massachusetts Fox Club, but of any similar organization in New England.

The occasion was notable not only on account of the number of foxes bagged, but also for the large attendance of visiting sportsmen. The unique features of the Westfield hunt are becoming more widely known each year, and the fame of its hospitality and of its oratory are reaching further and further.

The Fox Club hunt has come to be a sort of civic affair in Westfield. All the townspeople turn to to make it a success. The lawyers and public men, the flower of western Massachusetts oratory, lend their services to the cause, with the result that the after-dinner speaking is unsurpassed.

Visiting Sportsmen.

As has been remarked, the number of visiting sportsmen was unusually large. Worcester sent a delegation of eleven, while other sportsmen came from Milbury, Springfield, Great Barrington, Ware, Monson and Boston, Mass.; Waterbury, Farmington and East Granby, Conn.; Westport, Syracuse, Brooklyn and New York, N. Y.; Portland, Me., and other places. The following list includes most of the visiting sportsmen:

Messrs. Walter W. and C. L. Holmes, of Waterbury, Ct.; Judge Hubert Clark, Willimantic, Ct.; N. Wallace, Farmington, Ct.; J. H. Willey and W. A. Darling, Boston; L. Fisherdick and W. H. H. Perkins, Ware; W. J. Briggs, Syracuse, N. Y.; A. B. Blynue, Westport, N. Y.; Frank W. Whitlock, Great Barrington, Mass.; A. D. Norcross and L. C. Flynt, Monson; R. D. Perry, Portland, Me.; C. Van Deuzen, Melrose Highlands, Mass.; Ed. and Charles Owens, East Granby, Ct.; J. B. Hazleton, Brooklyn, N. Y.; L. B. Coe, Springfield, Mass.; M. L. Fuller, Chicopee Falls; Jno. M. White and Dr. C. H. Hakes, Milbury; O. M. Ball, Austin Esterbrook, A. B. F. Kinney, Jas. E. Fuller, Jerome Marble, C. H. Howe, C. W. Walls, E. Sprague Knowles, C. A. Hanson, Hon. Jno. R. Thayer, W. R. Dean and Geo. Goddard, of Worcester. The last mentioned gentlemen are all members of the Worcester Fur Company. Messrs. Owens, of East Granby, are members of the Tunxis Gun Club. Messrs. Holmes, of Waterbury, represent the recently organized Waterbury Fur Company.

Most of these gentlemen arrived Tuesday night, in order to be in season for the first day's hunt. At the Park Square Hotel, which was headquarters for the hunters, they were welcomed by President Roraback in the name of the club. During the course of the evening Mr. Roraback made a graceful speech of greeting, which was responded to in behalf of the visitors by Hon. Jno. R. Thayer.

The First Day.

Wednesday, Nov. 13, the hunter's horn sounded at 5 A. M. At 6, the hunters, having breakfasted, mounted the buses and other vehicles that were in waiting, and started for the scene of action. They left the town in a northwesterly direction and headed toward Montgomery Mountain. At the foot of the mountain in the Pochassic lowlands the dogs were cast loose, and before 7 o'clock three foxes were jumped and running races that each ended at the muzzle of a shotgun.

They were all started nearly at once, and the day's sport began with a flourish. Fifty hounds were out; and if the foxes did not hurry it was not their fault.

I have already given the names of many of the sportsmen, but perhaps the hounds deserved mention first. Prominent among the visitors was the Worcester delegation. There was the Kinney-White pack, headed by the celebrated Logan, who none will gainsay is a hustler. He was ably seconded by Aggie, Fly, Ned, Jack and Diamond K., of the same pack. Hon. John R. Thayer had Gus, a pup that had never smelled a fox track previous to last June, but who later in the day was in at the deaths of two foxes, and who was still running after the hunters had returned at night, in company with one of the Kinney-White pack and one of the Holmes Brothers' dogs. J. E. Fuller's Dick and Sprague Knowles's Dick Turpin completed the list of Worcester dogs.

The Holmes boys, of Waterbury, brought Tolland and Ranger, as handsome a pair as were seen at the hunt, and N. Wallace, of Farmington, had several good ones. Emil Kidner also had two hounds.

Of the local dogs one of the best known was Mr. Bert. Holcomb's Prince. This dog proved himself to be in the first rank by work in past years and ran a very pretty race which ended in the catching of the fox after it had been wounded the second day of the hunt. Mr. Holcomb had also a number of other dogs that gave good accounts of themselves.

Mr. James Jeffers, a well-known breeder of hounds, who is associated with Mr. Fred Shepard, ran the celebrated Southern-bred dog Commodore, which formerly belonged to Roger Williams, and which he has at present on probation, as well as several others. President Roraback had a couple of young hounds that have already shown considerable promise. Benj. Babb had Jack, a red dog that is at home in hot company. This dog had the misfortune to be caught in a steel trap the first day of the hunt, but was apparently none the worse for the experience the following day.

John T. Way had a dog named Jake that is said to be a good one, and Thomas Mountjoy was also represented by several hounds.

Of the three foxes first started two were soon killed, one falling to Benj. Babb about 7:15 A. M., but the third ran nearly all day. This fox was pressed hard by Logan, and the run was remarkable in more than one respect.

In the afternoon the chase was in sight of a number of hunters as the fox and hounds ran across some open field in the north end of Montgomery. About 3 o'clock, however, after the fox had circled back through some woodland, he ventured too near Perry Otis, and lost his life. Otis, who is a lucky fox hunter, occupied the same stand where Mr. Kinney shot his foxes last year.

About 10 A. M. Louis Pomeroy, of Westfield, killed the fourth fox. Other foxes during the day fell to the guns of F. H. Clapp, of Southampton; H. W. Stedman, Russell Tyler and Jas. Lynch, of Westfield. The total for the day was seven.

The Supper.

The Fox Club made an innovation this year and changed the scene of the banquet from the Town Hall, which has heretofore witnessed this function, to Beethoven Hall. The usual feast of good things was spread before the hungry sportsmen, who, with proverbial hunters' appetites, rapidly disposed of everything edible. Then the chairs were pushed back from the tables that ran the length of the hall in four unbroken ranks to the upper end, where the speaker's table was placed at right angles, and 200 sportsmen at peace with all the world settled at their ease. As the clouds of fragrant tobacco smoke arose, Mr. William H. Foote, of Westfield, the toastmaster, introduced Robert H. Kneil, the first speaker of the evening. He was followed by A. B. F. Kinney, ex-President of the Worcester Fur Company. The other speakers were Judge Hubert Clark, of Willimantic, Conn.; F. W. Whitlock, Great Barrington, Mass.; H. W. Ely, the silver-tongued orator of the Woronoco Valley; Rev. S. L. Gracey, of Westfield, ex-United States Consul at Foo-Chow, China; Charles L. Holmes, of Waterbury, Conn., President of the recently organized fox club; ex-Representative Jas. H. Bryan, of Westfield; Hon. John R. Thayer, President Worcester Fur Company; ex-Selectman L. F. Thayer, of Westfield; Hon. George D. Elbridge, Westfield; J. B. Burnham, of FOREST AND STREAM; E. Sprague Knowles, Secretary Worcester Fur Company; W. J. Briggs, of Syracuse, N. Y., and George C. Parker, the Chauncey M. Depew of Westfield. An amusing feature of the evening was the presentation by H. W. Ely to John T. Way, one of the popular members of the club, of a kodak enlargement of three foxes with the statement that they were the only foxes he would ever get. Mr. Way has consistently attended the hunts for a number of years without securing a fox.

After the banquet a business meeting was held and the old board of officers re-elected. This re-election was a foregone conclusion, and is following a precedent established of recent years. As long as President George W. Roraback lives no one will think of substituting another name for his. Mr. Roraback occupies a unique position. He is a popular dictator, made such by the loving esteem in which he is held by all who know him, and he will not be permitted to abdicate. Possibly it would be for the good of the club to make changes in some of the other offices, for most growing organizations profit by new blood, and stagnation of any kind is to be avoided, but this is only a suggestion.

The Second Day.

Like St. Patrick's Day, it always rains on the occasion of the Fox Club meet. And the Eighth Annual Hunt was no exception. Fortunately, the elements were as kind as they could be under the circumstances to the hunters. It was an absolute necessity that it should rain, but it rained with moderation—just enough to conform to precedent, and not enough to bother sportsmen or dogs.

As on the first day, the hunters drove directly to Wm. Moore's house in Pochassic, at the foot of Montgomery Mountain, which was constituted headquarters.

The selection of this place was due to the fact that a number of the hounds had not turned up the night before, and it was thought advisable to hunt the same locality in order to pick them up.

The section is extremely prolific of foxes, and there was no question but that some would be found.

The hounds were cast loose in all directions; some on the Pochassic lowlands, while others were taken up the mountain to start, and the air was soon resonant with the music that the fox hunter loves.

Many of the hunters climbed the mountain, while a few penetrated as far as Grindstone, but all these were disappointed. The running was all in the lowlands, to the eastward.

Shots could be heard from time to time in this direction, and once the air quivered with a volley as one of the hunters emptied a repeating shotgun at a fox, without effect, however.

During the forenoon the hunters began straggling back to Moore's and each had some interesting piece of news to tell.

John M. Lane had started a fox with Logan, and had headed the chase on a certain runway. He saw the fox coming, and prepared to shoot just as the fox ran behind a pine tree ten rods distant. Mr. White drew a mental picture of how he would paralyze that fox when he came from behind that tree, and in his mind's eye saw him stretched out limp as a dish rag, cold in death; but the pretty picture never materialized. The fox knew a thing or two, and when he came out from behind the pine tree he was half way down the mountain.

Mr. Bert Holcomb started a fox and shot at it twice. The fox ran along the foot of the mountain and crossed the main road where a piece of woodland borders it on the west, a quarter of a mile above Moore's house. Here Mr. J. B. Hazleton, of Brooklyn, was waiting with blood

in his eye and no intention of permitting foxes to pass that way.

The fox, however, saw that his gun was not cocked, and jumped across the road, only a few rods distant. Mr. Hazleton was on the alert, however, and cocked his gun and gave the fox one barrel in a fraction of a second. The fox almost immediately found the shelter of a stone wall and ran out of sight for some distance. Billy Dean had passed ahead of it only a moment before, but the fox saw that his gun was cocked, and considerately waited till he had gotten out of the way.

After circling back around Moore's house, the fox recrossed the main road and was caught by the hounds in a piece of plowed land. He had been hard hit, and the wonder is that he ran as far as he did.

The chase of the day, and one that was witnessed by many sportsmen, occurred a little later. A fox ran north in plain view from the road, followed by a pack of ten hounds in full cry. The music they made was something worth hearing, but most of the nearby hunters were too busy trying to interview the fox to appreciate its full melody at the time. This fox was killed eventually by Charles Upson in the neighborhood of the brickyard, three miles north of the point where it was jumped.

Other foxes were bagged by C. W. Walls, of the Worcester Fur Company, and Arthur Dibble, of Westfield, making the total for the day four, or eleven in all for the hunt.

Among the Westfield hunters seen on the grounds the second day were: President Roraback, John T. Way, Jas. Jeffers, Fred Shepard, C. D. Allen, B. R. Holcomb, Jas. L. Lynch, G. Austin, Geo. C. Parker, F. S. Dewey, John Warren, Delos Kellogg, John Sheldon, Howard Griswold, Arthur Dibble, Perry Otis, Benjamin Babb, Dr. James Holland, A. S. Kneil, Thomas Mountjoy, Dr. George W. Shepard, George Watermann, H. Upson, Russell Tyler and H. W. Stedman.

Notes.

All that is necessary to make Montgomery an ideal hunting country is a trolley road to the top of Grindstone.

Uncle Lisha Knowles is at a critical point. He has killed thirteen foxes, and the foxes now avoid him as an unlucky man.

The Southern hounds may be speedy, but for endurance we doubt if they are in it with R. D. Perry. Has anyone seen the man walk?

Mr. Babb and his bicycle in combination with a Winchester shotgun is bad medicine for foxes.

Talk about Orpheus charming the wild animals. He is a back number when Perry Otis is around.

Dr. Hakes, of Milbury, is a pedestrian and a gentleman, but he doesn't like cider.

Somebody will please tell John M. White, the next time he illustrates a fox hunt, not to compare the stone to a mountain and that the spittoon has other uses than to stand for a pine tree.

When two men shoot a fox and a dog catches it, who is entitled to the fox?

Roraback—in fox language a synonym for bugaboo, hoodo, the devil.

The foxes would like to exorcise the president of the Fox Club.

There are more ways of hunting by proxy than one—some men send their clothes to the hunt.

John T. Way hunted in person and by proxy as well.

It isn't wise to contribute to a pool for the first man who gets a fox. It is apt to spoil your chances for killing anything.

If you can't shoot a fox or dig him out of a hole or buy one, what are you to do?

Waterbury not only makes watches, but also hunts foxes.

The Westfield Band is all right after the guns are laid aside. But when the hounds are running no other music has charms.

The man who heard somebody snore and dreamed it was the hounds was sadly mistaken.

The farmers and fox hunters are on good terms. The farmers are short on hens and long on foxes.

Scenery is more beautiful when viewed at a distance than when climbing over it. The Berkshire Hills were made to be looked at.

A 10lbs. gun is good to shoot foxes with, but it can't walk.

People who say that women are the most fickle of creatures never hunted foxes.

A fox sat on one end of a log while a wood-chopper cut off the other end. But when a hunter came within half a mile the fox moved into the next county.

All stands are good for the lucky man.

One of the hospitable members of the Fox Club, to whom FOREST AND STREAM is indebted for many favors, is Mr. S. S. Conner, perhaps better known to our readers under his pen name of Woronoco.

This gentleman, in connection with Mr. Ed. L. Clark, of the Springfield *Republican*, who incidentally is a good fox hunter, and Harry R. Lloyd, morning editor of the *Union*, has formed an outing club known as the Woronoco Camping Club. They have put up a cabin on an island in Great Lake, East Otis, Mass., and spend part of their time there each summer. The fishing in the lake is very fine, and 5lb. pickerel are not uncommon. Great Lake is one of the prettiest ponds in the southern Berkshires. It has bold wooded shores and very clear water. Originally it was inhabited exclusively by trout, but years ago some one carried over pickerel from Congamond Pond, and the trout thereupon disappeared. The pickerel are plentiful, however, and gamy enough to compensate in a measure for the loss of the trout.

Mr. A. B. F. Kinney did not participate in either day's hunt, though he was present at the banquet as one of the speakers. He had made arrangements to attend the meet of the National Fox Hunters' Association at Owingsville, Ky., and notice of the postponement of the meet came too late to enable a change of plan.

N. Wallace, of Farmington, Conn., left immediately after the hunt for the scene of the Eastern field trials at Newton, N. C.

J. B. BURNHAM.

Illegal Game Shipments.

EAST HAMPTON, N. Y., Nov. 7.—*Editor Forest and Stream:* Shipments of quail and partridges are being made from here every few days. Most of the people here care only for what they can get out of them, without regard for future sport. With shells only 35c. a box they can gain considerable.

JUSTITIA.

CHICAGO AND THE WEST.

The Game and the Markets.

CHICAGO, Ill., Nov. 16.—There is a world of history in the brief paragraph in the current market reports for Chicago:

"Receipts of game were moderate, and much more would sell than is coming in. Prices on all varieties were firm, and prairie chickens were higher."

That covers it. There is your history and your location of the cause. "Much more would sell than is coming in"—much more than will ever come in now.

Never in the history of Chicago has game been so scarce in the region adjacent or tributary to Chicago. There has been no shooting at all, and reports do not indicate that there will be much. There are some bluebills in Lake Michigan, and one can get better shooting from the Government breakwater than he can in Minnesota or Dakota; but that does not comport with what most men call sport in the field. Outside of that I don't know where to tell a man to go to look for ducks.

In about every other line of field sports the same conditions obtain. The fishing season is over. The deer season in our North woods will soon be closed. There has not been any duck season. There has not been any snipe season. There has not been any plover season. There isn't going to be any quail season. I think we'd all better buy us a good rabbit dog and an anise seed bag apiece, or else play marbles.

The Lakes Disappearing.

The lakes of Wisconsin are disappearing under the long continued dry season. Beaver Dam Lake, one of the Northern Fox Chain, is drying up. The water now averages only 18in. in depth and is fast disappearing. Relic hunters are finding all kinds of curiosities, such as antlers from deer, arrow heads and other Indian relics. A move is on foot to get permission to remove the fish that now abound in the lake without interference from the fish warden before the cold weather sets in. The fish that are left will freeze solid with the ice to the bottom and cause a stench and perhaps an epidemic next spring. This movement should be watched with suspicion, as it is probably a commercial project. The State warden ought to go to work at once, after the able fashion of the Illinois Commission, and seine out these fish from the shallow waters and put them into cars for planting in other waters which are not drying up. They will do some good there. Sold at 3 cents a pound and shipped out of the State, they will do no one any good except the few immediately concerned.

The condition of affairs at Beaver Dam Lake is described to me as being most singular, and it is almost worth a trip up there to have a search along the shores left dry by the receding waters. Some very interesting Indian relics have been found, and scientists should surely have an eye on that locality. This year of 1895 is the *annus mirabilis* so far as shortage in water supply is concerned.

Maksawba Club House Not Burned.

One of the consequences of the protracted drought was the burning of the Kankakee marshes, which was duly mentioned. Miles and miles of what was once a famous shooting country literally went up in flame and smoke, at least in regard to its surface. The peaty soil in many places burned down 10 to 15ft.—which shows how far a man would have sunk in the mud in the old ducking days.

Along the Kankakee are located several club houses, the glory of all of which has in a measure departed with that of the now disappearing marshes. The Cumberland Club, the Diana Club, the Maksawba Club, the Pittsburgh Rod and Gun Club, and several minor organizations, all have property worth thousands of dollars along the Kankakee marshes. In some cases this property was in serious danger from the flames, and it was reported that the Maksawba Club house was destroyed with all its valuable contents. The *Game Dealers' Friend*, a sporting weekly printed in Chicago, this week printed the canard about the destruction of the Maksawba Club house. There are drawbacks in depending on a press bureau for "news," and then printing without ascribing credit to the source.

Maksawba Club is one of the oldest and most respected clubs of the long list of shooting and country clubs which at one time made Chicago famous, before the time when Chicago men had to travel so far for their shooting as they do to-day. The history of Maksawba Club takes one back to the time when Fred Taylor had a gun store and when Eddie Price was a youth only 60 years old, "before the Kankakee River was finished." Leroy Brown, Henry Sloan, John Watson, Col. Felton, Chas. Kern, Joel Kinney, Matt. Benner, Dr. Buechner, Chan. Lamos (deceased), Charlie Willard, Billy Mursey, Chas. Petrie, Fire Chief Sweenie, Fire Chief Musham, etc., etc., were all old-time members of Maksawba Club, and many of them were among the charter or early members.

Geo. Holden, long one of the regulars at Maksawba Club, when interviewed to-day said that the fire came up to the school house, within about an eighth of a mile of the club house. It destroyed a farmer's barn at that point, but came no nearer to the club house, and did not destroy any of the outbuildings belonging to the club. Many valuable guns, boats and outfits are always at Maksawba Club, and the members should feel glad over their good luck in escaping the danger threatened. Instead of the "total loss of $10,000" which was reported, there was no loss whatever. Otherwise, the report of the Chicago sporting paper was, as usual, quite correct.

Unfortunately True.

It is, however, unfortunately true that one Chicago club house was within the week destroyed by fire. On last Sunday (too late for this week's FOREST AND STREAM) the news came down of the burning of the Columbia Club house of Fox Lake, Ill. This club is mostly composed of Chicago gentlemen, and the club house has for years been one of the fixtures on the east shore of Fox Lake. There were two buildings, and both were entirely destroyed. Guns, boats, outfits, furniture and personal belongings, bringing the total loss to the figure of $15,000 or more, went with the buildings. The club will rebuild again, and will have better quarters. There are twenty-four members. Among those present at the time of the fire (or near by at the shooting stands) were Victor Born, Henry Dement, Ald. Watson, James Gardner, J. Sandler, J. Mathiesen, P. Johnson, Wm. Meyer and S. J. Mellin. Sen. Netherstrom lost a yacht and full outfit for fishing and shooting. Mr. Boyden lost his yacht and outfit. Mr. Born lost four guns. This fire was small, but disastrous. It is not due to the dryness of the ground, for the buildings are directly upon the lakeside. The fire sprang from an unknown cause in the sleeping apartments.

The Oldest Inhabitant.

Speaking of old-time shooters, an interesting bit of news develops in regard to the oldest shooter of them all. At a recent meeting of the Old Settlers' Society, of Chicago, a gold medal was voted to Mr. F. A. Howe, as being the oldest continuous resident of Chicago. It happens that Mr. F. A. Howe is also the oldest and perhaps the most revered of Chicago sportsmen. Since the memory of man runneth not to the contrary he has been the president of the Tolleston Gun Club, the wealthiest and hardest fighting duck club in Chicago. He always will be president. I do not know Mr. Howe's exact age, but he is not old, though he came to Chicago in 1834, and has lived here ever since. Twice a week he goes to Tolleston Club for a duck shoot in season. There are few better duck shots anywhere. He was bemoaning the fact that he only got twenty-six ducks on his last visit to the club grounds.

Mr. E. C. J. Cleaver (a nephew, I believe, of Mr. Howe) tells me that his mother is no doubt the second oldest inhabitant of Chicago. She came here in 1834 also.

If there is any city in the world that can claim a better shot and better sportsman for its oldest inhabitant, Chicago would like to hear from it. There is no doubt possible about it. Chicago has the noblest Roman of them all.

Ducks and Rats.

I have spoken of the ducks in the open water of Lake Michigan. This habit they have of going into the big lake has spoiled the shooting at Tolleston Club, the birds coming in at night to feed, but going out early in the morning into the lake.

Tolleston Club has long preserved the muskrats on its marsh, thinking that they were a benefit to the shooting, since they cut out open holes in the heavy cover. Now, however, the rats have increased until the club have concluded to kill them down a little. One keeper was once told to catch "a few," and he caught 1,700.

Deer.

Frank Place killed two deer on his hunt near Eagle River Station, Wis. The station-master would only check one deer to Chicago for him (though the law says two), but he found an obliging traveler who took the other one on his mileage ticket, and then got off about fifty miles down the road. So the station-agent never got the other deer.

Chas. Norris has returned from his Wisconsin deer trip. He says one party had six deer spoil in camp. He brought home the head of a spike buck which he solemnly avers he killed himself.

Bear Story.

I have heard of a great many ways of killing bears, and know of a great many bear hunters of credit and renown, but after all there is only one real good bear hunter, and that is Eddie Bingham, of this city. Eddie told me to-day (in the presence of witnesses, so it must be true) that one day down in Arkansas he was going home from a quail shoot, when his dog pointed at a brush heap.

"I noticed her hair was standing up while she was pointing," says Eddie, "and I thought that was funny. But I went up and kicked on the brush pile, and out jumped a grizzly bear—what? Well, maybe it was a black bear; an' I cut loose an' killed it with No. 8 shot. What? Why, how could I miss it? Of course I killed it."

I wish to point with pride to the habit Chicago shooters have of shooting bears over pointers, and this entire city will cheerfully back Eddie against all comers at this style of shooting. The gun must, however, be held below the elbow, and each man must flush his own bears.

Soaked.

Messrs. Beckwith and Nelson, who thought coffee-sacking was as good as wild rice for a blind, and so shot in open water, failed to appear for trial before Justice Burke, at Antioch, and the latter entered up "Twenty and costs."

Personal.

Mr. W. A. Roth, of the John Wilkinson Co., sporting goods, is lying ill in a hospital, after an operation for appendicitis which recently became necessary. Mr. Roth's pleasant face will be missed at the camera counter for a while.

The Seal Must Go.

The dispatches from the coast put a blue look on the seal question. In the last three months 4,314 skins had been brought into Port Townsend, according to the collector of customs, and of these 4,000 were females, at the season of nursing young. These figures do not cover one-eighth of the catch, for thirty schooners sail out of Victoria alone for seal cruising in the North Pacific waters. The seal must go.

A Foreigner in the West.

Some time last August I spoke of a German army officer, Capt. Brand, who was over in this country on three months' leave for a hunt in the Rockies. Capt. Brand had for his guide Frank Beller, Billy Hofer's partner in the guide business, and first went to Jackson's Lake for a hunt on wildfowl. Thence he went toward Pacific Creek, getting five antelope, and afterward went on the upper Buffalo River, where he killed six elk. The Captain has recently returned from his hunt, and writes me the above from New York city, whence he has by this time departed for Germany. He says that everything in the way of outfit was what he needed, that the guide Beller was thoroughly satisfactory and "ein guter 'fellow'" in every respect, and that the hunt was an entirely pleasing success in all respects. This I am glad to hear, but I would also have been glad to hear whether all the game was killed by the little small-bore Mannlicher rifle, and how it performed on the game.

The Thieves Grow Bold.

The thieves, they grow bold in Texas. Not long ago one of them stole a black bear which was kept at the Springs menagerie near San Antonio. It is thought that this was the same man who has just stolen the horse of one of the mounted police officers. Chicago thieves steal pretty well, but I have never known one to steal a live bear.

909 SECURITY BUILDING, Chicago E. HOUGH.

CAPE COD AND MAINE.

BOSTON, Nov. 16.—There has been considerable excitement among the hunters at Mattapoiset, Mass., the past week. A deer, with exceptionally fine antlers, has been seen at several points in that town. He was seen on Sunday near the Almshouse by a number of persons. On Monday, Melvin Harriman saw him swimming in the water near Angelica Point, and tried to lasso the animal. He was seen again on Tuesday near Pine Island. A friend sends me a newspaper account, and another friend from that town suggests that the deer has doubtless escaped from some private park in the vicinity of the Cape. A mob of hunters have been after him, and any one of them would shoot the beautiful creature at sight, though there is a perpetual close time on deer in Massachusetts in Plymouth and Barnstable counties.

Mr. Charles Z. Basset, of Appleton & Basset, is absent on a shooting trip in Plymouth county. He is quartered at Farewell's Camp, and several friends are with him.

I met a Mr. Pierson, of Boston, to-day. He is just out from a deer hunt in Maine. The weather has been very bad—raining nearly every day for a week. He went into the Kingfield region. He was out one day with his guide, in the rain. The guide says, all at once: "Now is your chance! take your time, and aim at the shoulder!" Looking carefully ahead and into the fog, Mr. Pierson saw two deer. He shot one, but was greatly displeased when he saw that it was a doe. The next day he came out of the woods in disgust.

How singular it is that the novice—the greenhorn—at hunting and fishing usually comes out ahead. The Gillams and Ed. Bean have had some luck, though the weather has not been all that could be asked. Mr. Bean's brother here has a letter from the woods stating that Ed. has shot a deer. His previous hunting experience had been nothing, though he had shot a military rifle some at targets. But the Gillams, old hunters and experts with shotguns and hunting rifles, have got no deer. The Cuttings, Will and George, were guides.

C. B. Seagrave has lately returned from a successful hunting trip into Maine. He was accompanied by O. A. Mason. They went to Machias, and from that city, sixteen miles, into camp. They got a deer.

A party will start as soon as the telegraph advises that there is snow, to be composed of Dr. Heber Bishop, Mr. W. T. Farley and Mr. C. C. Williams, of Boston, and Dr. McLeary, of Worcester. The other members of the party are good hunters, but they are looking to Dr. Bishop to take them into the land of the moose and caribou. They will go up the Aroostook Railroad nearly to the end, and thence twenty-two miles to Ashland. From that point they strike to their hunting grounds. They will have four camps, though one of the four will be made a home camp, to which all will look after each day's hunt. But if belated, either of the other camps will have supplies of provisions and sleeping accommodations. Each man will have a guide and hunt independently. The four camps are located some six or eight miles apart. A hunt of two weeks is on the programme, unless a plenty of big game is secured in less time. SPECIAL.

Brooklyn Men have Luck in Maine.

BROOKLYN, N. Y., Nov. 11.—*Editor Forest and Stream:* I noticed in last week's issue my letter from Maine and so send you another to finish our story. We went out the Monday following, each alone, and I walked perhaps a mile and a half from camp when I came upon a company of nine deer. I was even more surprised than they were, but they did not seem to mind me at all, so I picked out the largest buck I could judge from the distance. We had to drag him the whole distance to our camp, but I believe I have one of the best formed buck heads in Brooklyn, and am now having it mounted. My partner also killed his buck, but some three miles from camp, and it was one of the hardest pulls I ever had in dragging him to camp; his hair on one full side was dragged off as if it was shaved.

We now had our full law's allowance, our guide, C. Arbo, keeping his one deer, as he intended taking another party out. The American Express officials at Boston say we had as fine a lot of game as ever came into their office. I was charged with 251lbs. for my buck, so you can imagine it was a good-sized one. In all we were charged with 690lbs. of deer.

I send you under separate cover a picture of my place of business with the four deer hanging outside, and assure you they made a fine show. We both used the Marlin rifle .38-55.

We may mention that we would be only too pleased to recommend any of our fellow sportsmen to Eleme Pond, and if anyone would like particulars we will gladly tell them all we know about it.

P. P. WIGAND.
CHARLES MCLAUGHLIN.

Adirondack Deer Statistics.

THE Fisheries, Game and Forest Commission has sent out a circular letter to residents and guides in the Adirondack region asking that these questions be answered. The information thus gained is to be used in the forthcoming report:

1. Estimated number of deer killed in this territory.
2. Number killed by floating or night-hunting.
3. Number killed by hounding.
4. Number killed by still-hunting or otherwise.
5. Estimated proportion of bucks and does.
6. Are the deer in this locality increasing?
7. Were there more or less deer killed this year than last in this territory?
8. How did the deer killed this season average in size as compared with previous years?
9. Were any dead deer found in this locality last winter, and about how many?
10. How many deer in this particular territory are estimated as having been killed out of season in 1895?

REPORT YOUR LUCK
With Rod or Gun
To FOREST AND STREAM,
New York City.

Camp-Fire Flickerings.

"That reminds me."

IN a recent number of the FOREST AND STREAM I noticed an interesting account of coon hunting in western Tennessee. The facts related by Kling remind me of many incidents connected with the sport in the Old Dominion. Many a time I have had just such luck as he.

I heard a gentleman while discussing this subject relate the following incident in connection with some of his hunting experiences:

The party, consisting of hunters, dogs, axes and torches galore, had been hunting for a good part of the night without any luck whatever. Finally, however, the dogs "treed" a coon up a very large tree. While discussing the subject of cutting down such a large tree, one of the many negroes in attendance volunteered to climb the tree and investigate the whereabouts of his coonship. All agreed to this and sat around to await developments. Soon after the negro had disappeared among the branches the attention of all was drawn to a very peculiar sound emanating from the top of the tree. It was a kind of mixture of negro and coon dialect. Some one ventured the remark: "Bill, have you got that coon?" "Yas, sah," was his reply, "I'se got dis her' coon, but I wish you 'u'd send some o' dem niggers up her' to help me turn him loose." BANG-BANG.

LICKING, Va., Nov. 11.

Sea and River Fishing.

BLACK BASS WAYS.

The Leap and the Shake.

Editor Forest and Stream:

If you had not given me the assurance in advance that the readers of FOREST AND STREAM would forgive me for "threshing old straw" in reviving once more the question of leaping bass, I would not dare to give my experience or views.

It is not strange that anglers should differ in views, for with all the literature which we now have there is yet room for a most interesting book on this fish, and its title should be "What I do Not Know about Black Bass."

I have always believed, and still believe, that the bass leaps from the water for the sole purpose of throwing the hook from its mouth, and an experience of many years confirms this view. It is for this reason that a bass taken with a fly yields greater sport than those taken with bait, for its instinct leads it to believe that a hook in the mouth can be thrown out more readily than one lodged in the stomach. In my experience those hooked in the mouth invariably leap from the water, while those hooked deep in the throat or in the stomach very frequently do not leap at all.

Some years ago I was casting the fly for bass on Pleasant Lake near Monticello in Sullivan county, which was taken by a fish of good size, and on its first leap from the water the snell was broken at the shank of the hook. In a few seconds the bass leaped from the water at the same place and shook its head vigorously, and after an interval of a few seconds more it leaped again from the same spot, and on this occasion threw the hook from its mouth with such force that it fell on the water to a distance of from 10 to 15ft., but after this it did not leave the water any more. It follows that on this occasion at least the bass must have had its mouth open, for it could not have thrown the hook from a closed mouth, and that the head must have been shaken with great force to throw the hook so great a distance, and it also follows that it leaped to free itself from the hook, for after it had been thrown from the mouth the leaping ceased.

On the other hand I have frequently taken bass in Canadian waters, while drifting or dragging with a long line and using a minnow for bait, which did not leap from the water at all, and have commonly found that in such cases the bait had been swallowed and the hook was far down the throat or in the stomach, and in fact it is frequently possible to tell to what extent the bass has swallowed the bait by its tendency to leap or not to leap from the water. As to the frequent leaping of bass as a matter of habit, as claimed by some of your correspondents, I can only say that I have often seen them break water, and in such cases have always found that they were after food abounding on or near the surface, but I have never seen them leap clear of the water except when hooked.

The Migration of Black Bass.

A question of much greater importance in regard to the habits of the small-mouthed black bass seems to have been overlooked, or at least not to have elicited discussion, and it is one which must be carefully considered in our future legislation for the protection of these noble game fish.

It is well known that the Senate Fish and Game Committee of this State were authorized at the last session to confer with the representatives of the Canadian Government for the purpose of arranging if possible for the adoption of a system of uniform laws to apply to the common waters of the St. Lawrence. The fish needing especial protection is the black, and one of the principal questions to be considered is whether the bass which spawn in the St. Lawrence inhabit those waters during the entire year, or whether they migrate to a large extent from Lake Ontario in the early spring for the purpose of spawning, and then retire to the lake for the winter.

During the conferences held in the latter part of last August I made this the subject of careful observation and inquiry, and am satisfied that most of the bass which spawn in this river migrate from the lake, descending as far as Ogdensburgh or lower. As the shad leave the ocean and ascend our rivers to reach congenial spawning grounds, so the bass leave the deep waters of Lake Ontario and descend the St. Lawrence until the shoals at the foot of the lake and for a distance of sixty miles or more down the river become every spring one vast spawning ground for the bass of at least the lower part of the lake.

A single fact, if my information on this point is correct, will corroborate this view. In July the bass fishing down the river begins to fall off, and then as the season advances anglers are obliged to frequent grounds nearer and nearer the lake. I met a party of gentlemen about Sept. 1 last at Marysville, in Canada, across the Bay from Kingston, who told me that they had visited that place for many years because the bass fishing continued good there after it had fallen off down the river.

The bass, as they work toward the lake, stop to feed on the shoals, and the nearer the lake the longer the season.

If I am correct as to the above facts and conclusions, then the protection of the bass in the St. Lawrence is a matter of much more than local importance. We protect the shad as they ascend the Hudson River, and especially protect them on their spawning beds and as they descend to the sea, so that they may return with each recurring year, and we must likewise protect the bass of the St. Lawrence, so that the lake can every year yield a full abundance of brood fish for the great spawning grounds at the head of and in the river.

To accomplish this result three things are necessary. The close season should be slightly extended, say until about June 10, although many of the bass are even then on their beds or brooding their young. The limit of size should be not less than 12in. in length, which is about the length of a fish weighing 1lb., although many fish of this length will not exceed 11oz. in weight; and the number of fish allowed to a rod or to a boat, if more than two rods are used, should be limited.

Such a law if passed should certainly command the heartiest approval and support of all true anglers who are interested in the restoration of these waters, and if respected and obeyed the St. Lawrence would soon regain its former wealth of black bass. J. S. VAN CLEEF.

POUGHKEEPSIE, N. Y., Nov. 11.

MASSACHUSETTS ASSOCIATION.

BOSTON, Nov. 15.—*Editor Forest and Stream:* The first regular monthly meeting of the Massachusetts Fish and Game Protective Association since the summer vacation was held on Thursday evening, Nov. 14, at the Copley Square Hotel. Between sixty and seventy members were present, and an excellent dinner was served by Proprietor Risteen. President B. C. Clark occupied the chair, and opened the speechmaking with congratulations upon their successes during their various outings with rod and gun, and urged upon the members renewed activity in the work of the Association. He read the decision of the Supreme Court, just promulgated, in the case of the Commonwealth vs. Follett, of Lee, Mass. This was the case where Mr. Follett was convicted of the illegal taking of trout in close time. He claimed the right to take trout from a brook running through his own land for the purpose of securing their spawn for breeding purposes, having planted the trout to that end. It was shown that the brook was a natural trout stream and that it contained other fish than those planted by him. He was convicted in the lower court, and the case was carried to the Supreme Court upon exceptions. These are now overruled, the Chief Justice—Judge Field—holding that as it was shown that the stream was in part a public waterway, the defendant had no right to take the fish.

The routine business was then proceeded with. The following gentlemen were appointed a committee to nominate a list of officers for the ensuing year: Dr. J. F. Stetson, Charles Stewart, Dr. J. W. Ball, Alexander Pope, W. B. Hastings, Ivers W. Adams, Luther Little; and Messrs. Dr. Heber Bishop, Walter M. Brackett, C. J. H. Woodbury, Senator Robert S. Gray, Hon. George W. Wiggin, Senator Charles F. Sprague and William B. Smart were appointed a committee to arrange for the annual dinner in January. Messrs. A. R. Coolidge, Clifton A. W. Bartlett and Geo. L. Young were elected to membership, and the applications of Sumner A. Gould, William L. Henry, Arthur R. Robinson and E. B. Parker were received and will be acted upon at the next meeting.

Then followed an hour of interesting talk by members and guests. Hon. John F. Hutchinson, president of the Fruit and Produce Exchange, told of his experiences with rod and gun in various parts of the country. J. Russell Reed, Esq., was warmly welcomed back to the ranks after a long illness. He said that for several years past business had taken him to the West, and he always took his rods and guns along, to get a day's sport whenever the opportunity offered; and it was his opinion, based upon actual experience, that better shooting could be had within 100 miles of Boston than within the same distance of Denver; that on the whole there was better shooting right here in New England than in very many parts of the great West. Dr. Ball, ex-president E. A. Samuels and others added to the general fund of experience and information, and the meeting was brought to a close at a seasonable hour after a very enjoyable session. Mr. Clark makes an admirable presiding officer and there is no lagging when he is in the chair.

WILLIAM B. SMART.

To Protect Potomac Bass.

THE MARYLAND STATE GAME AND FISH PROTECTIVE ASSOCIATION, BALTIMORE, Nov. 15.—*Editor Forest and Stream:* The Maryland Game and Fish Protective Association has for some time had under consideration the best means for the better protection of black bass in the Potomac River, and, after a very thorough investigation of the subject, is convinced that it is absolutely necessary for Maryland, Virginia and West Virginia to agree upon a uniform law regulating the catching of bass in the Potomac, and then have the law agreed upon enacted by the Legislatures of the respective States. I will not say anything about the many nefarious methods employed in depleting the Potomac of bass, but it is apparent to all who have investigated the subject that unless radical and speedy measures are adopted the black bass of the Potomac will soon be a thing of the past. Our Association is equally as pronounced in the opinion that with proper laws restricting and regulating angling (the only way game fish should be taken) in the Potomac the supply of bass will be inexhaustible, affording anglers of the tri-party agreement and whosoever will perpetual, healthful and delightful recreation.

Earnestly desiring the accomplishment of the plan briefly outlined, the Maryland Game and Fish Protective Association has issued this call for a conference to meet at the club house of the Blue Ridge Rod and Gun Club, Harper's Ferry, W. Va., Nov. 23, 2:30 P.M., for the purpose of discussing and drafting a satisfactory uniform law. GEORGE W. MASSAMORE, Secretary-Treasurer.

POTOMAC FISHING.

WASHINGTON, D. C., Nov. 14.—We might almost call our notes now "Winter Angling," but for the fact that they are records of long drawn out seasons. Angling for black bass in the Potomac opens up in the spring of the year, when smaller fish, usually known as "bucks," are running. These movements of the fish are from the deep water winter quarters to the purer waters of the spawning beds. Just what effect this early fishing has on the natural propagation of the bass is hard to determine. That fish with developed ovaries are taken is not to be questioned; however, we are assured by anglers that the fish as a rule are small males, and that very few well-developed females (mother bass) are caught before the natural spawning season, so it is possible this spring fishing is not very injurious.

As to the season running late, we have records of good fishing last week, excellent hook and line bass fishing in the Potomac at Point of Rocks, where Mr. H. A. Parker, of this city, fished Friday and Saturday, Nov. 8 and 9, being the guest of Mr. Dave Conrad, near the Point. On Friday twenty-one bass were taken, the total weight being 22lbs. The largest weighed over 4lbs. On Saturday the fishing was good again, and Conrad and Parker had a successful two days of it.

Dave Conrad has fished at Point of Rocks for years. He knows the haunts of the bass. The past season has been a successful one for him, although the water has been exceedingly low and clear. Parker says they saw plenty of bass in the water. Used the river chub (known around the Point as suckers) for bait.

Point of Rocks is well patronized by Washington anglers, owing to its location and the good bass fishing. The Baltimore & Ohio R. R. runs by the Point, and being but an hour's ride is especially accessible to business men.

One of the habitues of the Point is—as angling goes—an oddity, as well as being a school teacher. This particular gentleman resorts to the Point every Saturday to fish for bass. He fishes seven lines without a rod. The lines are connected with a windlass (reel if you like), but are operated more as handlines. The bait used are large-sized catfish, ranging in length from 5 to 10in., and this fisherman invariably takes home two bass of the giant mossback order. He says he does not care for many fish, but will not have them under 4lbs. weight. Calls 1-pounders little trash, and now most of the boys are beginning to blackguard him.

Several members of the Anglers' Club have taken bass during the past week below the Great Falls.

Speaking of the late season here for bass, an old fisherman and the writer were discussing the subject a few days since. He said that he had recently taken eight bass at the Long Bridge, here at the city, and that he has taken them there as late as Dec. 16 or 18. It seems only to depend upon the condition of the water. Last week the weather was warm, the water clear and the bass were biting.

To-day in market I saw a small pickerel, several yellow perch and a small-mouthed bass on the same string. These were apparently fresh-caught Potomac fish. I wonder who hooked them out with a net! BART.

THE PERE MARQUETTE WATERS.

SAGINAW, Mich., Nov. 9.—*Editor Forest and Stream:* I send you a copy of the Lake County *Star;* the most important thing in it is the article relating to the Père Marquette Club waters. As you have already noted in the columns of FOREST AND STREAM, we have been bothered there with poachers. Whenever we have made an arrest for trespass we have won our suit, but the fine was so small (6 cents and costs) that it had very little effect. There is a State law, making it a crime for any one to enter upon waters that are used for the private hatching and rearing of fish, and it was on the strength of this that we hoped for criminal convictions. Public sentiment has awakened somewhat in our favor, and yet many of our big breeding trout have been stolen and other depredations committed.

This paper is published in the heart of the hunting and fishing section, and you will notice is full of items relating thereto.

We got home from our Western trip about ten days ago and had a splendid time. We did not find as much game as usual, but enough for a dozen men to eat during the three weeks we were away. The trip was replete with thrilling incidents, and I hope I have not grown so old and lazy that I cannot write an account of the Saginaw crowd's doings for FOREST AND STREAM. I am sorry to say I was the only one of the old original crowd that went along this year. Some have died, some are on the sick list and others moved away so far that it was impossible for them to go with us.

I am happy to say that the game laws are being rigidly enforced in Saginaw county. Deputy Game Warden Carpenter is a hustler and doing good work. The law prohibiting the sale of quail, woodcock and partridges is being enforced, and will no doubt greatly increase our local game supply. Our county board of supervisors fixed the county warden's salary at $500 per annum, a wise move, I think. A few years ago they laughed at game protection and would pay nothing for a warden.

W. B. MERSHON.

From the Lake County Star.

At the last term of the Circuit Court held in this village, Henry A. Rudd was prosecuted criminally for fishing in the waters of Kinne Creek, which is a private stream owned by James B. Peter and George B. Morley, trustees, of Saginaw, for certain gentlemen who are using the same as private fishing grounds and are engaged in propagating speckled trout for the purpose of stocking said stream to be used for such purposes.

By the order of the Circuit Judge the defendant was discharged, the court holding that the act of the Legislature under which he was prosecuted did not apply to such a stream as this so as to make the fishing in the creek a crime under the statute, and holding that the waters covered by the act of the Legislature, making such fishing a crime, would be either a lake or a pond not connected with any public water. In rendering this opinion, however, the Judge used language which is of interest to every resident of this county, and fully determined and decided the question as to the rights of anybody to fish upon said stream without the consent of the owners, and on that subject we quote from the opinion of the Court. Judge McMahon said:

"The owners of the banks own the bed of this stream, whether it is navigable or non-navigable, and these proprietors of Kinne Creek and of the lands adjoining its bank own the stream and the soil under the water in the same sense in which they own all the land of which they have the title, unless it be that if the stream be navigable it is subject to the public easement of navigation and must be held subject to that easement. * * * In a certain sense the waters of Kinne Creek are certainly private waters. The owners of the banks and shores of the bed of the stream in fee are the absolute owners of these waters, subject to the easement only of which I have heretofore spoken in case it is navigable, but that easement in no sense impairs their title, and they may do with this stream anything not absolutely forbidden by statute which does not impair a public right. * * * And therefore in this case the proprietors of Kinne Creek may do as they please with it. It is theirs in the largest sense, and therefore these waters are private waters in the largest sense, and the owners may protect it against all trespassers.

"There is no question, therefore, that when any person goes upon the banks of Kinne Creek, or wades within its current to catch fish, he is a trespasser and liable to be prosecuted in a civil action for trespass. He is a wrong-doer and has no business there whatever. It is the same as though a man comes into my orchard and robs my fruit trees or goes into my garden and pulls up my vegetables and flowers; it is a trespass of wrong. This is private property in the full sense so far as the law governing trespass and private right is concerned. * * * I have no sympathy with this defense. This club has come on there and instituted a public improvement. They have improved this stream, propagated large numbers of fish, and put them in this stream and other streams in Lake county. They come here in considerable numbers, men of property and influence, and advertise the affairs of Lake county and community, and they should be treated as gentlemen and respected; and there is no reason why interlopers should be allowed to go and catch their fish at random, and that policy is the policy of the man who killed the goose that laid the golden eggs. To drive these men out of this county is an outrage. There are plenty of waters for the rest of us to fish in without disturbing them. There is no harm to the public in their owning that stream and having their club house there and fishing on it. I therefore wish to say that I have no sympathy with the defense, and making the decision I do in this case merely because I believe it is the law, and I never, at least knowingly, allowed my sympathies to control my judgment in deciding a case. Gentlemen of the jury, you will bring in a verdict of not guilty."

Fishculture.

New Jersey Fish and Game Interests.

From the annual report of the New Jersey Fish and Game Commission.

Annual Report.

IN submitting our annual report we desire in the first place to call attention to the fact that there is perhaps no State in the Union better adapted for the preservation of fish and game than the State of New Jersey. Nature has been lavish in her gifts in this direction, for we have not only the primeval forest with its many hiding places for game, but also the clearest and purest streams and lakes in this part of the country. If it were possible for science to follow in the footsteps of nature and create a vast preserve for game and fish, no better model could be found than the State of New Jersey. Our woods are admirably adapted for the propagation of all the different kinds of game that thrive in temperate climes; our streams and lakes furnish in abundance natural homes for the finest fish created by nature, and along the eastern boundary of the State sweep the waters of the Atlantic, carrying to our State a never-failing and inexhaustible supply of fish.

It is perhaps on account of this wealth of natural advantages that the State of New Jersey has in the past paid so little attention to the preservation of fish and game. Other States have for many years enforced the most stringent laws, laws so severe in their provisions that the people of New Jersey would never have permitted of their enactment here. States younger in statehood and far less advanced in civilization than New Jersey have for years annually spent thousands upon thousands of dollars in maintaining hatcheries and competent corps of officers for the protection and propagation of game. One of the most important duties of their legislatures has been the enactment of laws to regulate the taking of fish and game and the keeping up of a supply of food fish. Not only the commonwealths immediately contiguous to our State, but those removed from us by hundreds of miles have deemed it prudent to enforce laws absolutely prohibiting the export of fish and game. The past decade has been an era of advancement and progress, so that the scientists of the country have become so thoroughly acquainted with the habits of game and fish that with judicious laws and their proper enforcement there need be no lack of either in any State offering even mediocre advantages. For many years New Jersey did not join in this march of advancement; we were so well supplied that we could afford to be extravagant. But even as the largest patrimony may be squandered, so may the resources of New Jersey become exhausted. The depletion of the woods and waters in the more thickly settled counties of the State called attention to the necessity of more stringent laws and the better enforcement of existing statutes. The Legislature at its last session passed a code of laws far superior in many respects to anything New Jersey has ever had.

It was but natural that some of the enactments should be considered irksome by some people who had been accustomed to revel in a plentiful supply at all seasons of the year, and who could not understand why the same source of supply should not be sufficient for an ever-increasing number of inhabitants. But the necessity of these laws has been recognized by every person who has made a study of nature and her ways, and there is now a healthy disposition prevalent in the State in favor of taking better care of our resources. Many States with a population far smaller in proportion than New Jersey have found it advisable and at times absolutely necessary to prohibit altogether the taking of fish and game for periods of years; others have practically restricted such taking to their own inhabitants. There is no need in New Jersey for any such measures, for with the laws as we have them at present, perhaps somewhat altered in some respects, and facilities for their enforcement similar to those furnished by the last Legislature, we have a plentiful supply of fish and game not only for ourselves, but also for the stranger within our gates.

Transplanting Fish.

The supply and quality of the fish in a great many of the lakes and streams of this State have materially deteriorated during the past few years on account of the want of the infusion of new blood. In a great many waters the original stock fish were very few in number, and although these increased materially for some years it was but a question of time when the results of inbreeding would be apparent. This was perhaps not so much the case with the indigenous fish as with those brought hither from other States. It was thus found that in some lakes and streams the small-mouthed bass were small and weak; in others a similar condition prevailed in regard to the large-mouthed bass. In some waters the pickerel had been greatly reduced in number and quality, and the pike had altogether disappeared from some waters. Although it will take several years to wholly overcome this evil, your Commission proceeded to take such steps as were deemed necessary for a beginning of the work.

For the purpose of ascertaining where the fish supply had become exhausted by inbreeding or from other causes your Commission caused blanks to be prepared and forwarded to the wardens, with instructions to fill them out properly. In this way a history of every pond in the State was obtained as far as the fishing interests were concerned, and your Commission was placed in possession of information of great value for the carrying out of a systematic replenishment of the fresh waters of the State. It became apparent from the reports received that a great deal of work could be done toward improving fishing without going outside of the State for a supply of fish. In a number of cases it was found that the fish in ponds within a short radius of each other could be improved by taking fish from one pond and placing them in some of the others and vice versa. Unfortunately the season was not well adapted to this work. Transferring fish is attended with considerable difficulty and expense during the warm months, and some time before the fall set in there was a cold spell of weather which served to drive the bass and other fish from the shallows into deeper water, where it was frequently impossible to reach them. In a number of instances arrangements were made with fishermen, who were glad to take stock fish for the Commission in return for the privilege of keeping the carp taken in the nets. In this way a number of thousand of stock fish were taken and placed in other waters. The work is still in progress at the date of this report, and consequently the details thereof cannot be here adduced. To publish in this report the information gathered by wardens in relation to the lakes in the State would be an unnecessary expense. But in order that the work done in this respect may be seen your Commission has caused a detailed report to be entered into two books, which are on file with your Commission and which may be seen by any person interested at any time. Your Commission expects in the early spring to resume the work of replenishing the waters, which will shortly be interrupted by the cold weather, and has no doubt that the good results thereof will be apparent in time.

Carp.

The United States Fish Commission, assisted by private enterprise, some years ago introduced into the waters on this side of the Atlantic a number of the different varieties of English and German carp. This fish, which apparently held an enviable place in Europe, was expected to do well in the waters of the United States and to materially add to our supply of food fishes. It is almost superfluous to state that the carp have multiplied very rapidly, easily accommodating themselves to the conditions of our waters. As to its value opinions differ. Glowing reports have been published by the United States Fish Commission relative to the benefits accruing from the introduction of carp in some of the large lakes and ponds of the West, but your Commission believes that it is perfectly safe to say without chance of successful contradiction that the introduction of carp into the waters of New Jersey has been attended by nothing but evil results, and that of the most aggravating kind. In a great many of the waters of this State the carp have practically driven out the far superior indigenous fish, and unless a stop were put to the further propagation of carp it is only a question of time before there would be no fish in our waters but carp. The edible qualities of the carp have not been appreciated in this State, and viewed from the standpoint of an angler the carp is utterly valueless. The habits of this fish tend to drive away all other kinds of fish. Not only does the carp destroy the clearness of our streams, so necessary to the successful development of American fish, but the carp has also shown a decided liking for the spawn of our native fish. Although the bass and other American fish may successfully defend its young against the ordinary intruder into its nest, it stands no chance whatever against the bulky carp, which, by reason of its strength and size, easily overcomes the weapons given by nature to other and smaller fish. Under these circumstances your Commission deemed it necessary to take energetic measures toward putting a stop to the further importing of carp into this State. The Legislature was appealed to for help and passed a law making it an offense to liberate carp in any of the waters of this State. This law was not passed a day too soon, for the State was threatened with the introduction of the English tench, in reality nothing but a carp of a very inferior quality to those already imported. The tench is not regarded anywhere as fit to eat unless it has been fed expressly for this purpose. Some places in other parts of the country may want fish of this kind, but New Jersey, blessed as it is by nature with an excellent and bountiful supply of the finest food fish in the world, has no need for anything of the kind, and nothing but serious harm can result from its introduction. Your Commission accordingly instructed the wardens to be especially vigilant to prevent the liberation of more carp in this State.

But, to a great extent, the evil has already been done and carp are on the increase in this State. Your Commission accordingly entered into correspondence with a number of fishculturists in the country for the purpose of ascertaining whether in any way the multiplication of the carp could be stopped. One fact developed by this correspondence was that a great many other States were engaged in endeavoring to find some means of outgeneraling the carp. Experience has shown that attempts to introduce carp had proven failures in waters inhabited by pike perch, a fish frequently called the wall-eyed pike and later the Susquehanna salmon. This fish had shown a decided liking for the spawn of the carp, and instances were found where the introduction of pike perch was followed by the extinction of the carp. The pike perch, although not as gamy as the black bass and inferior to it in other respects, is regarded by all as a valuable food fish; it was placed by nature in the streams of this country and its transplanting has been attended with success in every case where the waters were suitable to its habits. Your Commission at once endeavored to secure the introduction of this fish into the waters of this State, but met with disappointment. Arrangements had been made with the fish commission of a Western State for a supply of this fish, but lack of appropriation prevented the taking of the fish, the Legislature of the State referred to having for once declined to make the annual appropriation. Your Commission would have been very glad to have secured a supply of adult pike perch, but was prevented from doing so. Neighboring States, where pike perch had been recently introduced, were naturally jealous as to their removal before they had materially increased in number, and to bring the fish to New Jersey from places where they naturally abound would be attended by so many difficulties that the project was not considered feasible. Your Commission has, however, made arrangements for the securing of a large supply of this fish in the early part of next year.

For the purpose of preparing our streams for the introduction of the pike perch and also for the purpose of taking

stock fish for the replenishing of the waters of the State, your Commission entered into arrangements with a number of fishermen by which the latter were permitted to net carp under the supervision of wardens. In a few instances these permits were abused and promptly revoked, but in most cases the fishermen were conscientious in returning to the water all the food fish not wanted by the Commission. The result of this netting was the removal of hundreds of tons of carp from this State and the establishment of the fact that in a number of the waters of the State the carp had driven away all other kinds of fish.

Legislation.

During the last session of the Legislature certain laws were passed for the better protection of the fishing and gunning interests of the State. Some of these laws were suggested by your Commission; others emanated from members of the Senate and General Assembly. A practical application of these laws has developed the fact that there are in them a number of incongruities. Your Commission has been at considerable pains to ascertain the desires and wants of various portions of the State, and sees no reason why a law should not be passed providing at the same time for the better protection of sport and paying a judicious regard to the interests of those who may be injuriously affected by a too close attention to the wants and desires of the sportsmen.

For this reason your Commission desires to offer the following suggestions:

The law dividing the State into two game sections has at times given rise to some complications, but it is difficult to see how these can be avoided. The habits of birds and fish would naturally indicate the necessity of different laws for different portions of the State. Although the law has given satisfaction on general principles to the southern portion of the State serious objections have been made thereto in the northern portion. At present the general season is opened on Oct. 25 in the northern section of the State. In many years woodcock take their southern flight before that date, and consequently the sportsmen of the northern section who are compelled to abstain from killing the birds until Oct. 25 are deprived of all sport as far as woodcock are concerned. Giving the sportsmen ten more days at the beginning of the season would be in a measure satisfactory in the northern section without being open to the objection that there would be no birds left for the people in the southern section. Your Commission would accordingly recommend opening the season on Oct. 15 in the northern game section.

The law at present provides that the season for upland plover and doves shall be from Nov. 1 to Dec. 15. Long before the opening of the season both plover and doves have left the State, and if these birds should be shot at all—and there seems to be little reason to the contrary, especially as far as plover are concerned—a season should be established beginning as early at least as the opening of the season for woodcock and quail.

The seventeenth section of the general fish and game act provides that eel baskets or eel weirs may be maintained from Sept. 15 to Nov. 1. There are serious objections to this law. Although the principle that fish and game belong to the State and not to the individuals on whose property they may be found has been generally adopted, there is no reason why some special privileges should not be given to the farmer and land-owner, who in some instances are annoyed by the presence of game on their properties. Eel weirs are destructive to the life of fish, and if these were permitted to be indiscriminately used there would soon be an end to the fish supply in the fresh waters of this State. Your Commission would accordingly suggest the passage of a law by which farmers and land owners may be permitted to make use of eel pots and eel baskets placed on the bottoms of streams at all times of the year. These contrivances are more easily constructed and are more effective in the taking of eels and catfish than are eel weirs, and the result of such an enactment would be that land-owners would be enabled to take these fish whenever it suited them to do so.

The section of the law making it unlawful to remove game and fish from the State excepting by the person who may have lawfully captured the same has met with considerable opposition in the southern portion of the State, where there are still a few men who depend on marketing game to assist them in gaining a livelihood. Your Commission would, however, respectfully urge that something must be done to put a stop to the diminishing of game and fish within the borders of New Jersey, and for this reason the section above referred to was enacted. The last Legislature in passing this law only followed in the footsteps of twenty-seven other States where such measures have been in force for many years. States in the extreme West and South, which are still teeming with game, have adopted similar laws, and compared to the laws of those States the law of New Jersey is anything but stringent. The principal objection to the law was that it prevented the marketing of reed birds by dealers. In this connection it should be remembered that the reed bird is during the larger portion of the year an insectivorous bird of great value to the farming community. To permit the shooting of these birds by the thousands would eventually drive them from our shores, and the result would be a serious loss to the citizens of this State engaged in agricultural pursuits—a loss which, once sustained, would be irreparable.

Your Commission would also respectfully call attention to a law at present upon our statute books which has given rise to a great deal of complaint. The law referred to grants a charter to the West Jersey Fish and Game Protective Society, and provides that no person shall gun or fish in the six southern counties of the State without having first complied with such by-laws as this society may have seen fit to enact. The principal by-law of this society provides that non-residents must become members before they can shoot or fish, but any non-resident can attain membership upon the payment of $5 for the first year and $2 for each subsequent year. Aside from the questionableness of a delegation of the lawmaking power by the Legislature to another body comes the objection that the by-law opens our fields and streams to such non-residents as can afford to pay for the same. The law in our opinion is not in accordance with the spirit of American institutions. To exclude a man from certain privileges because he cannot afford to pay $5 therefor does not speak well for the hospitality of New Jersey. Numerous complaints concerning this law have been received, and information obtained from our wardens is to the effect that the violators of the law who have been prosecuted in the counties where this law applies were almost invariably members of this society. Your Commission is also informed that the membership of this society is composed principally of sportsmen from Philadelphia and other places. Your Commission would accordingly suggest the repeal of this law.

Game and Fish Protection.

Pennsylvania Association.

PHILADELPHIA, Nov. 16.—The regular monthly meeting of the Pennsylvania Fish Protective Association was held Saturday evening, Nov. 9, at the rooms, 1020 Arch street, Philadelphia.

The following resolution was passed:

Whereas, A recent Act of the Legislature of New York, permitting the use of eel weirs in the inland waters of that State, has resulted in restoring a number of these destructive devices in the Delaware River, which, unless destroyed, must work irreparable injury to the vast fishing interests involved in said stream, and nullify much of the hard and persistent effort of the Pennsylvania and New Jersey Fish Commissions,

Resolved, That the Pennsylvania Fish Protective Association heartily indorse the decision of the Pennsylvania Commissioners of Fisheries, that the Delaware being a boundary stream is not affected by the New York eel weir act, and urge upon the New York Commissioners of Fisheries concurrent action, that the Delaware may remain clear of these deadly obstructions.

A special committee reported that enough evidence has been adduced during the period that these weirs have been placed in the river to show their damaging effect. Large numbers of fish have been captured, especially wall-eyed pike and black bass, while the slats of the eel weirs have been covered with young shad caught on their way down the river and killed in the traps. The following was also passed:

Resolved, That the Pennsylvania Fish Protective Association earnestly commend the action of the Pennsylvania Commissioners of Fisheries in their effort to design with the New York Commissioners of Fisheries a uniform interstate law for the protection of fish in the upper Delaware, similar to that now in force with New Jersey; and that the influence of the Association be exerted in behalf of securing such legislation.

The Committee on Protection and Distribution of Fish submitted a lengthly report. The distribution of fish by the State Commission had exceeded the output of any previous year. Owing to the extraordinary demand for bass, an extra appropriation of $5,000 had been secured from the Legislature for the purchase of same; 35,000 black bass had been distributed, together with large quantities of calico bass, white bass, rock bass, yellow perch, and upwards of 30,000 Lake Erie sunfish. The distribution of brook trout exceeded 3,500,000 in addition to 750,000 other species of trout fry, a grand total exceeding 4¼ millions.

The warden service of the State has improved to a marked degree, as attested by the number of arrests and fines. The new law prohibiting the taking of black bass in the Delaware River under 9in. had been very effectually carried out by the wardens; notices and posters have been placed along the river and the New Jersey wardens have been equally active. Arrests and convictions were made for erecting eel weirs in the Delaware at Port Jervis.

The special committee referred to on page 2 also reported that the Attorney-Generals of Pennsylvania and New York sustained the decision of the Pennsylvania and New York Commissions that the law applied to the inland waters of that State, and the erection of eel weirs in the Delaware by citizens of New York was therefore illegal.

It was decided to send a number of letters of inquiry to every county in the State, in an effort to secure information regarding the effect of the extended drought upon fish life in the streams.

M. G. SELLERS, Sec'y.

A Michigan Fyke Net Case.

THE observers of the game law in Ottawa county will remember the case of the People vs. Derimo, which was called up in the Circuit Court some time ago. Frank M. Derimo was at the time accused under Section 5, Act 111, passed in 1889, of unlawfully using a fyke net. Prosecuting Attorney Visscher represented the people and Walter I. Lillie appeared for the defendant. The latter, in behalf of his client, plead that the net was set for a legitimate purpose, not of catching fish, but turtles. In the circuit Derimo was convicted, but exceptions were entered and an appeal taken to the Supreme Court.

Early last month the conviction was set aside and a new trial awarded on the ground that a conviction under this act could not be sustained. It was claimed that the accidental imprisonment of fish in such a net was not sufficient. In this opinion Judges Long and Montgomery concurred with Judge C. J. McGrath. Following is the decision rendered:

Respondent was convicted under Section 4 of Act No. 3, laws of 1889, which provides that "It shall be unlawful for any person to take or catch any fish at any time with seines, pound nets, gill nets, or any species of nets" in certain waters. * * * "provided, that the use of dip nets in catching mullet, redsides and suckers shall not be unlawful." The complaint alleged that respondent "did feloniously and unlawfully, then and there, catch and attempt to take and catch fish with a fyke or hoop net."

The respondent offered proof tending to show, "That he had made over the nets for the purpose of catching turtles; that the funnel was made large enough so that when fish went into the nets, they could swim out again; that in a fish net proper the funnel was hanging loose, so that there was no opening for the fish to come out; and that these particular nets were made with the opening and with strings tied from the end of the funnel or opening to the main side of the net so that when the net was set as these nets were set, the opening of all the funnels was pulled open thereby, giving the fish plenty of room to swim out after they went into said nets; that all of said nets were so arranged and for the purpose of letting fish which swim in to swim out; that the turtles which went in could not get out because of their size and shape, and that all of these nets were hoop nets; that these nets were set differently than nets were set for catching fish; that these nets were set with pieces of heavy chains at the bottom so that the bottom of the nets would be in the mud, and to catch them the nets had to be on the bottom and were set in about 12 to 15ft. in depth of water; that in setting nets for fish there are no chains on the bottom to hold them in the mud, for the reason that fish do not crawl on the bottom; that the respondent told Hammond (the Deputy Game and Fish Warden), in the winter before, that he was going to set nets for the purpose of catching turtles, and that said Hammond saw said respondent set said nets long before the time of taking these nets, and said nothing about it; that the respondent told said Hammond that he, respondent, had caught turtles in said nets before Hammond took them up, and that there were a few fish in them, and that respondent put them back in the water unharmed."

It appeared that the nets were drawn by the Deputy Game Warden, and that fish were found therein.

The trial court refused to give to the jury certain instructions asked for by defendant's counsel, respecting respondent's intent and purpose in setting the nets, and instructed the jury as follows: "That the nets that were set there were such nets as would take and catch fish. I say, if you find those to be the facts and beyond reasonable doubt, then this respondent would be guilty of the offense here charged although he may not have drawn the nets himself. If you find that the nets were drawn by this game warden and fish were then and there caught in those nets, and that those nets belonged to and were set by this respondent, then he would be guilty under this act of unlawfully taking or attempting to take or catch fish. The intent with which he set those nets there has nothing to do with the law in this case; and if he set them with the intent to catch turtles, and actually did and were well calculated to catch and imprison fish and take fish, and the fish were actually taken at the time, it would be a violation of this law."

This instruction was erroneous. The respondent's testimony tended to show that he set the nets for another purpose.

The statute does not prohibit the setting of nets, but the catching or taking of fish from the lake by means of nets. It would be a narrow view to take of the language employed, to say that a fish accidentally imprisoned by the use of a net employed for another purpose, and not one which was shown to be entirely legitimate, was caught within the meaning of the statute. Whether or not the net was set for the purpose of catching fish, was a question for the jury under all the facts and circumstances of the case.

Judge Hooker dissented, and he was supported in his opinion by Judge Grant as follows:

The defendant was convicted of the offense of unlawfully taking fish by the use of fyke nets, in contravention of Section 5 of Act No. 111, of the Public Acts of 1889. This section provides, "It shall be unlawful for any person or persons to take or catch, or attempt to take or catch, any fish at any time with seines, pound nets, gill nets, or any species of nets in any of the waters of this State," etc.

The defendant does not deny that he set the nets, or that fish were caught and killed thereby, but says that he did not set these nets from a desire to catch fish, but to catch turtles, and that he made no use of the fish that were caught, but released such as were alive when he took up his net.

The trial court held that this did not constitute a defense.

It is admitted that the defendant used a net adapted to and commonly used for the purpose of catching fish. There is every reason to suppose that he knew that it would catch fish, for it had done so to his knowledge. To hold him guiltless is to say that a man may do those things which will certainly result in the destruction of fish, if he has another object in view, and will return such fish as he may take, alive or dead, as the case may be, to the water, and not use them, while his neighbor who desires to keep them is guilty.

In my opinion a man who sets a net with the knowledge that it will result in the taking and destruction of fish intends to take them, notwithstanding the fact that his primary object may be to accomplish another purpose. He wants the turtles, and to get them he is willing to take or catch the fish. This does not show an absence of intent, for it is just as unlawful to take fish that turtles may be caught as to take fish to sell or to eat.

The right to protect fish by law is within the police power of the State, and there is force in the claim that the act is punishable regardless of the intent. Many cases can be found that hold that convictions may be sustained in the absence of criminal intent, *e. g.*, the sale of adulterated milk, Commonwealth vs. Farren, 9 Allen 469; selling liquor not known to be intoxicating, Commonwealth vs. Boynton, 2 Allen, 160; marriage of minors by one honestly supposing them of proper age, Beckham vs. Nacke, 56 Mo., 246; the killing and sale of a calf under a specified age, though the defendant was ignorant of the animal's age, Commonwealth vs. Raymond, 97 Mass., 567; transporting a slave on a steamboat, State vs. Steam. Co., 13 Md., 189.

These cases and others cited in People vs. Roby, 52 Mich., 580, where the subject is discussed, fully justify the doctrine that neglect may be criminal. Here there is not mere neglect, but a positive expectation of doing the act prohibited, and immunity is expected upon the claim that the defendant designed to catch turtles, and to do so involved the taking of fish, but his indifference as to the fate of the fish relieved him from liability under the law.

In my opinion, the man who sets a net adapted to the purpose and known by him to be likely to catch fish, and which actually does take them, cannot be said to be guiltless.

The Kennel.

FIXTURES.

BENCH SHOWS.

Nov. 26 to 29.—Bridgeport Kennel Club's show, Bridgeport, Conn. E. M. Oldham, Supt.

1896.

Feb. 19 to 22.—Westminster Kennel Club's twentieth annual dog show, Madison Square Garden, New York. James Mortimer, Supt.

Sept. 2.—Morris, Man.—Manitoba Field Trials Club. John Wootton, Sec'y.

Canadian Kennel Club.

A MEETING of the executive committee of the Canadian Kennel Club was held Nov. 8. Among the business that came up for discussion was the question of cropping dogs' ears; it was decided to take a vote by mail of the club members on this point. The question of mutual recognition of suspensions was not considered pending further negotiations with the A. K. C. It was also decided that it is in the interest of the club that the publication of registrations for 1895 be in abeyance for the present.

The president, H. Bedlington, and Geo. B. Sweetnam were appointed a committee to submit a draft of a revised constitution and by-laws at the next meeting. A resolution of condolence with Mrs. Alfred Geddes, the widow of a late member of the C. K. C., was also passed.

Great Dane Club Prizes.

NEW YORK, Nov. 15.—*Editor Forest and Stream:* The Great Dane Club of America offers the following special prizes for great Danes, to be competed for at the Westminster Club kennel show, February, 1896, these prizes being open for competition to members of the Great Dane Club of America only, viz.: First, $10 for best in open dog class; second, $5 for second best in open dog class; first, $10 for best in open bitch class; second, $5 for second best in open bitch class; first, $10 for best puppy of either sex shown in any class; second, $5 for second best puppy of either sex shown in any class.

CLIFFORD WOOD, Sec'y.

The FOREST AND STREAM *is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable*

Cropping and the A. K. C.

Editor Forest and Stream:

At the next meeting of the American Kennel Club, to be holden in December next, there will come before the members of that club, to be voted upon by them, a resolution that the rules of the club be changed, and that no dog whelped after a date to be fixed and with cropped ears can be shown in competition at any bench show held under the recognition of the American Kennel Club.

The discussion of the question of prohibition of cropping versus non-prohibition in the public press has been carried on up to this time chiefly by those opposed to cropping, and by gentlemen not interested in any breed of dogs which will be affected by the proposed resolution. The arguments advanced in favor of the proposed change are: that the practice is cruel and that cropping is prohibited in England.

I have not yet seen expressed by those interested in the breeds affected, at any length in print, the results which the proposed resolution would have upon these breeds.

I believe that the effect of such a resolution is more far-reaching in the case of, and inimical to the interests of, the great Danes than to those of any other breed, and that such a resolution, if passed at this time, would result in the general abandonment of the breeding of great Danes.

The great Dane stands in a different position from almost every other breed of dog. In almost every breed either there are now owned in this country as good dogs of that breed as can be found in any country of the world, or such dogs as are imported for the improvement of the breed are imported from England, where cropping is prohibited; with the great Dane this is not the case. This breed is comparatively a new one in this country and we have not here as good dogs as can be found elsewhere. The quickest way in which to improve the breed is by the importation of dogs for that purpose, and in this breed such dogs are not imported from England, but from Germany. The great Dane is, I think, the only dog customarily cropped which is not imported from England, and will, therefore, be more affected by the proposed legislation than any other breed of dog.

I have found very few among those who advocate the prohibition of cropping who even claim that the prohibition of cropping in this country is likely to produce any modification of the practice in Germany, where the great Dane has been cropped from time immemorial; and that the proposed resolution will not have the slightest effect on breeders of great Danes in Germany is conceded by all those who are without prejudice on the question.

While the German breeders have paid great attention to the purity of the breed, they have paid little attention to registering and recording the pedigree of their dogs, and for years Americans have urged that this negligence be corrected, so that when great Danes are imported into this country it may be done without the payment of duty, without producing any material change in the practice of the German breeders; and if we have been unable to induce the German breeders to cater to our needs to this extent, and in this very important matter, it is idle to say that if we wish dogs with uncropped ears they will cease their practice with regard to cropping.

The great Dane is an expensive dog to import; his size and the difficulties already mentioned, which lie in the way of importing him without the payment of duty, make him so. Wins which the dog has made in competition in Germany have very little if any effect in making his services sought for, as a stud, in this country. In order that the services of the dog be in demand here, he must be shown, and win prizes here. A man who intends to import a great Dane from Germany, as a sire, will not import an untried, immature puppy, of six months or less in age. If he imports an older dog than that he imports a dog with cropped ears. Now if the proposed resolution applies to that dog, the importer goes to his great expense, trouble and risk, knowing that he cannot show his dog in competition in this country; that he can win no prizes with him in this country; that the dog will be unknown to other breeders interested in the breed in this country; that the services of that dog as a sire will not be in demand, and that he will be unable from stud fees to recoup himself in any measure for the expense he has incurred in importing the dog. Who, if this resolution be passed and under such circumstances, will import a great Dane for the improvement of the breed?

Objection may be made that the rule will only prohibit the importation of great Danes whelped after a certain date, and that dogs whelped before that date may still be imported and shown in competition with cropped ears. This is still in effect a prohibition of importation. A short time in the life of a man is a long time in the life of a dog. In a very few years, perhaps two, the rule is in effect prohibitory. The importer would be limited to bringing to this country "has beens," dogs who are growing old, who were once good, but who have in Germany been supplanted by other younger, better dogs. The American, when he imports, wants to and does buy the best, often without any regard to expense, and it is due in large measure to this that after he has imported dogs of any breed for a few years it will generally be found that the best dogs that there are of that breed are in this country.

The passing of this resolution would seriously affect this breed in another way. In all probability, more than one-half of the great Dane dogs owned in this country are owned by Germans, or those of German descent. A German is, in my experience, very often positive, not to say obstinate, in his likes and dislikes; and a man is more likely to be so, and perhaps with good reason, in matters which concern his pleasure than in those which concern his business. The German who keeps great Danes has been accustomed to having the ears of his dogs cropped, and often does not care to continue to keep the dog if the entire character and appearance of his head is to be changed. Many owners of great Danes, German or of German descent, have told me that if they could not show their dogs in competition with cropped ears they would not care to continue to keep the dogs at all. With so strong a feeling against owning uncropped great Danes, held by a large class which now owns and supports the breed, it is evident that, if the proposed resolution be passed, the number of those who will own dogs of this breed will be greatly lessened, and the demand for and sale of puppies of this breed will be greatly restricted. This is not a matter of sentiment, but is a serious condition which we may expect.

Relying in the past that the ears of this breed would be cropped, breeders have paid very little attention to the shape of the ear, and have only tried to get an ear which was strong at the root, and would stand up easily when cropped. The ear of most great Danes is not a thing of beauty, and changes entirely the expression which has come to be considered characteristic of the breed. That it is possible with time to breed the great Dane or any other dog with an ear of any particular shape, or with no external ear at all, may be conceded, but it could not be done at once, and the appearance of the dog would in the meantime be greatly injured.

The opposing of cropping, and gross exaggerations as to the amount of suffering which the dog undergoes in the operation, is at the present time the popular fad in the kennel world; it is popular, and for that reason alone advocated by many who have no interest in the question one way or the other. A nervous toy dog, whose ears are cut to a long sharp point, suffers much more in the operation than the great burly Dane, all muscle and with few nerves, whose ears are cut to a shorter point, or simply cropped short with no point at all, and what may be great cruelty in the case of another is simply a temporary inconvenience. Let us not go wild on this subject simply because it is temporarily popular.

It may be conceded however that some suffering attends the cropping of the ears of any dog, and the Society for the Prevention of Cruelty to Animals is within its province in urging the adoption of the proposed resolution, but this society has not for one of its objects the improvement or advancement of any breed of dogs; in seeking to have the resolution passed it is simply seeking its own ends, worthy as they may be, and without any regard or consideration whether their attainment means the ceasing of the breeding of any one breed, or of all breeds, of dogs or not. The objects of that society and those for which the American Kennel Club and the different specialty clubs were formed were entirely different, and may and in this case do conflict; and when they do conflict that society will look after its own interests and seek its own ends only, and the American Kennel Club must look after its own interests and those of the element which supports it, and to advance whose interests it was formed and exists.

It seems to me that this question, which involves the type of several breeds of dogs, is one to be dealt with in the case of each breed by the specialty clubs which devote their time and attention to that breed, and should be left to be dealt with by them. And when you come right down to brass tacks, what right have the St. Bernard men, the spaniel men, the pointer men, the setter men, the bulldog men, the collie men, the poodle men and others to say what the type of hounds, great Danes and terriers shall be, and the condition and shape in which they shall be shown in competition at bench shows. We do not drive pegs between the teeth of our great Danes, we do not break their noses, we do not inflict on them heavy coats of hair under which an Esquimau would faint, we do not fire bird shot into them, either fine or coarse, we do not use spiked collars on them, and we do not do to them a great many other things which breeders and owners of many other kinds of dogs do, or are said to do, to their dogs. There are some remarks about beams and motes in the eye, and about casting the first stone, which were written a great many years ago, which are accessible to all, and which it would be a good thing for some people to read and bear in mind. Some people are said not to know on which side their bread is buttered until it falls on the floor.

The question of whether the Great Dane Club should or should not change its standard so as to prevent the cropping of great Danes was brought up and discussed by that club long before it was considered, and esteemed a vital question which must be settled before they could sleep by men who are not affected by it. And the club then expressed its opinion that the action was too radical and could not then be taken with respect to our dog, but great Dane men were warned that they must prepare for such a change in the standard and breed with reference to it. According to the standard great Danes may be shown either with or without cropped ears, and several great Danes were shown with uncropped ears at the last Westminster Kennel Club show.

Sentiment is a good thing; mixing with common sense and discretion improves it.

I would furthermore say that I have at different times owned foxhounds, beagles, pugs, fox-terriers and great Danes, and that I have never had the ears of a dog cropped, also that I have no dogs for sale. I may therefore be believed when I say that I write without prejudice on the subject, and only from a deep conviction of the disastrous effects which the prohibition of cropping will have upon my favorite dog, the great Dane.

CLIFFORD WOOD.

NEW YORK, Nov. 15.

Bridgeport Bench Show.

THE Bridgeport Kennel Club have added the following classes to their premium list: Challenge class, foxhounds, dogs and bitches, first, $5; puppy class, St. Bernards, dogs and bitches, first, $4; second, $2.

The following is a list of judges; in your mention there was an error in the names: Dr. James E. Hair, Bridgeport, Conn., for pointers, English, Irish and Gordon setters and beagles; German Hopkins, Hempstead, L. I., all terriers, foxhounds, greyhounds and whippets; R. K. Armstrong, Highland Falls, N. Y., bulldogs and collies; James Watson, New York, all other classes.

Entries close Nov. 16. E. M. OLDHAM, Supt.

Collie Field Trials.

NEW YORK, Nov. 18.—*Editor Forest and Stream:* My committee at the last minute, at my earnest request, have consented to hold field trials for sheep dogs, at our coming show of cattle, sheep, etc., to be held at Madison Square, Nov. 25 to 30. If you will kindly make this fact known through your widely-read paper, you will be conferring a great favor on me personally (as it has been my pet idea), and also on the society. We shall put up liberal prize money and charge no entry fee. Entries can be made to me at Madison Square Garden.

JAMES MORTIMER, Asst. Sec'y and Supt.

THE E. F. T. C. TRIALS.

The Members' Stake.

THE competition between the six starters of the Members' Stake began on the afternoon of Nov. 16. The judges were Messrs. S. C. Bradley and W. S. Bell. Mr. N. Wallace, who had consented to act as judge with Messrs. Bell and Bradley, was detained at home by pressing business.

The weather was delightfully pleasant. The sun shone brightly, and but the gentlest of warm breezes stirred at intervals. It was a day of sunshine and warmth, such as one may experience in June in the North, though each is set in widely different colors. While the weather, warm and balmy, was pleasing to the unusually large group which followed the competition, it added greatly to the work of the dogs, making it in itself more laborious and the birds more difficult to find. Among those in attendance were three ladies, Mrs. and Miss Phelps and Mrs. Meares, who honored and graced the event. It is auspicious for the future of field trials when the ladies enhance them by their presence, and it is better for the ladies too, for there comes from it good health, and from good health comes color to the cheeks, bright eyes and wit and vivacity.

Birds were lazy and disinclined to fly even when found, the warmth of the temperature seeming to provoke a most marked indolence in them, and as they were not moving it added to the dogs' labors. The numbers found were nevertheless satisfactory, although the point work is meager.

The entrance to the sweepstake was $10, divided into two prizes, 65 per cent. to first, 35 per cent. to second. As is well known, each member handled his own dog.

In the matter of quiet and gentlemanly handling the stake was worthy of the careful consideration and emulation of many professionals and amateurs; in the matter of skillful handling it ranked very high. There was an entire absence of loud and prolonged whistling or effort to take any unfair advantage.

Joyful, the winner, exhibited great judgment and a rare knowledge of the best manner of working on birds, with at the same time a most trustworthy observance of work to the gun.

Following is the order of running:

Mr. Pierre Lorillard, Jr.'s, b., w. and t. setter dog Shad (Eugene T.—Lou) with Eldridge Kennels' l. and w. pointer bitch Graceful II. (Duke of Hessen—Concave). Mr. C. E. Phelps, handler.

Mr. Fred Hodgeman's liv. and w. pointer dog Arthur (Graphic—Meally) with Eldridge Kennels' b., w. and t. setter bitch Antonia (Antonio—Miss Nellie Y.).

Mr. W. B. Meares's white setter dog Joyful (Dion C.—Natalie) with Mr. Pierre Lorillard, Jr.'s, b. b. setter bitch Antoinette (Antonio—Daisy Hunter).

First Series.

SHAD—GRACEFUL II. were started at 1:30. The range of both was lacking in judgment. Shad pointed; nothing found. Graceful pointed a bevy nicely. Shad pointed one of the scattered birds. Mr. Lorillard killed it and Graceful retrieved it nicely. Shad pointed near a bevy in the open. A wounded bird fluttered before him, tempting him on, resulting in flushing several others. Up at 2:14.

ARTHUR—ANTONIA were started at 2:22. Both worked industriously, though the pointer was rather slow in his gallop. Some work was done on a bevy by Antonia which we could not see. Some of the spectators said it was a good point on a bevy, and it had every appearance of being so. Following down a valley in corn, Antonia flushed a single and the rest of the bevy flushed. Up at 3:24.

JOYFUL—ANTOINETTE began their heat at 3:30. Joyful pointed a bevy in thick cane, a most difficult piece for a dog to work in. The birds were flushed a few yards from his point by a horseman, and several of them dropped back in nearly the same place, but wisely no further work was attempted on them in the dense weeds, briers and cane. Sent on, Joyful next pointed a bevy nicely in thick grass. Antoinette flushed one as she came up, then stood. Up at 4:10. Joyful showed excellent "bird sense," obedience and an honest purpose to work to the gun.

Second Series.

GRACEFUL II.—ANTONIA were cast off at 4:21. Both dogs made game, but being urged on too fast, the handlers flushed the birds. Graceful flushed a bevy and Antonia pointed on the footscent of it a few moments later; Graceful backed. Up at 4:42. Both worked diligently; their range was middling.

ANTOINETTE—ANTONIA began at 5:01. Antoinette stopped to a point after flushing a bird or two of the bevy. The birds were followed into woods. Antoinette made two points on singles and one point to which nothing was found, and Antonia made one point. Up at 5:30.

The judges announced the winners as follows: First, Joyful; divided second, Antonia and Antoinette.

[*Special to Forest and Stream.*]

NEWTON, N. C., Nov. 19.—There are fourteen starters in the Derby as follows: Arapahoe, Ranee, Gleam's Ruth, Domino, Virginia, Sister Sue, Tory Fashion, India, Marie's Sport, Patrician, Mazeppa, Nabob, Kent B., Fen Follet.

The first series and one brace of the second were completed yesterday. In second series are Tory Fashion, Gleam's Ruth, India, Marie's Sport, Nabob, Arapahoe, Ranee, Domino.

The All-Age has nineteen starters: Tick Boy, Brighton Tobe, Sanford Druid, Elgin's Dash, Jingo, Joyful, Cynosure, Harold Skimpole, Tippoo, Belle, Palona, Joe Bowers, Tory Dotlet, Lady Mildred, Rod's Top, Revenue, Minnie T., Gleam's Pink and Tony Boy.

The weather is too warm for best work. Birds have been found in fairly good numbers, enough to determine the competition so far. There is a good attendance of noted visitors.

B. WATERS.

Bird Supply for U. S. Trials.

NEWTON, N. C., Nov. 14.—*Editor Forest and Stream:* Birds are not so scarce as has been said on the trial grounds, and it is a lucky thing for field trials that the unwarranted report of one man has not succeeded in stopping the United States trials, as was first intended. If it had been carried, it would have been a death blow at the prestige of clubs, and that only on the unofficial report of one man.

G. MUSS-ARNOLT.

FIELD TRIALS OF THE NATIONAL BEAGLE CLUB.

THE National Beagle Club held its sixth annual field trials at Hempstead, N. Y., Nov. 11–14. The trials were a great success, and will go on record as the best in the history of the club. During the week a number of ladies followed the beagles, and among the gentlemen registered at Roth's Hotel, the club headquarters, were C. Staley Doub, Chas. W. Quynn, Richard T. Cramer, Frederick, Md.; W. S. Clark, Linden, Mass.; Geo. F. Reed, Barton, Vt.; Thos. Shallcross, Providence, R. I.; N. B. Baldwin, East Orange, N. J.; G. W. Appleton, G. W. Rogers, New York, N.Y.; D. F. Summers, Thorndale, Pa.; Wm. Saxby, Chas. Shoemaker, Ilion, N. Y.; L. H. Peters, Lenox, Mass.; H. S. Joslin, Oxford, Mass.; F. H. Bolton, Poughkeepsie, N. Y.; John Bateman, Gravesend Beach, N. Y.; G. B. Post, Jr., A. W. Post, Bernardsville, N. J.; H. F. Schellhass, Brooklyn, N. Y.; A. D. Lewis, Hempstead, N. Y.; Horace Porter, Garden City, N. Y.; A. C. Pickhardt, Massapequa, N. Y.; Bradford S. Turpin, Roxbury, Mass.

The only drawback to the week's enjoyment was the scarcity of game. Rabbits were hard to find, but when found they ran well and furnished splendid sport. Many of them left the scanty cover and made long races in the open fields, giving all a perfect view of the chase.

The judges were Chas. W. Quynn, of Frederick, Md., and Bradford S. Turpin, of Roxbury, Mass. Their decisions met with general approval.

The majority of the winners are already well known from their previous records, but among these that were honored for the first time are Triumph, Young Royal and Talor. All three are good ones, and Triumph and Talor showed great speed and excellent nose.

The entries in all classes were called to fill on Monday morning. The following were absent: A. C. Pickhardt's Jester III., Walter Randall's Belle, W. S. Clark's Sunbeam, Somerset Kennels' Marvel, C. J. Prouty's Becky Bates, William Saxby's Bessie, George Laick's Laick's Rattler, G. F. Reed's Spinaway R. and William Saxby's Dime's Daisy.

When the hounds were measured William Saxby's Bessie was transferred to the 15in. class and D. F. Summers's Talor and Summers's Kit to the Derby.

The drawing resulted as reported below. Immediately after dinner the club left the hotel for the hunting grounds, and succeeded in running off the 15in. class for dogs. The field marshal was George F. Reed.

All-Age Class for Dogs, 15 to 13in.

First Series.

ZENO—SNYDER III.—The former was handled by Thos. Shallcross and the latter by H. S. Joslin. Scent lay badly, but the race was an interesting one. Both worked well, but Zeno was the better hunter and a trifle faster than Snyder. Much of the work was done in the open, giving all an excellent chance to see the sport. Two sight chases added to the interest. The heat was a close one, without great advantage to either. Down 1 hour and 10 minutes.

SPARK R.—ZENO.—The former was the bye dog. He was handled by George F. Reed, and Zeno was put down with him. The race was an exciting one, and much of it took place in the open fields. The rabbit was finally run down and killed fairly on the ground. Zeno ran in splendid form and showed speed, nose and hunting sense. He surpassed Spark, who did not run as well as at Oxford. Down 31 minutes.

Second Series.

SPARK R.—SNYDER III.—An uninteresting race. The driving was slow. Snyder showed the better nose and defeated Spark. Down 31 minutes.

The judges gave Zeno first, Snyder III. second and Spark R. third.

SUMMARY.

HEMPSTEAD, N. Y., Oct. 11.—All-Age class for dogs, 15 to 13in., that have not been placed first in any open class at a field trial. Fee to run $10, of which $4 must be paid at closing of entries. First prize $40, second $25 and third $10.

First Series.

ZENO—Awashonk Kennels' b., w. and t. dog (Deacon Tidd—Daisy), handler, Thomas Shallcross,

with

SNYDER III.—H. S. Joslin's blue ticked dog (Synder II. —Nancy), handler, owner.

SPARK R.—George F. Reed's b., w. and t. dog (Kenneally's Lee—Skip), handler, owner, a bye.

Second Series.

Spark with Snyder III.

Winners: Zeno first, Snyder III. second and Spark R. third.

The running in the class for bitches, 15 to 13in., was begun immediately.

All-Age Class for Bitches, 15 to 13in.

First Series.

ADA B.—LUFRA—The former was handled by N. A. Baldwin and the latter by J. W. Appleton. They failed to make a start and were taken up at dark. Down 37 minutes.

The annual club meeting was held in the evening, Vice-President J. W. Appleton presiding. The following members were elected: C. M. Chapin, Bernardsville, N. J.; J. Q. Bourne, Mt. Vernon, N. Y.; L. H. Peters, Lenox, Mass.; Wm. Saxby, Ilion, N. Y.; J. L. Kernochan, Hempstead, N. Y.; F. B. Robinson, Port Jefferson, N. Y.

The election of officers resulted in the choice of H. F. Schellhass, president; J. W. Appleton, Geo. B. Post, Jr., J. B. Lozier, vice-presidents; Geo. Laick, treasurer; G. W. Rogers, secretary; N. A. Baldwin, John Bateman, A. Wright Post, executive committee.

The club voted to select the official judges for bench shows annually from the active members. The following were elected for '96: W. S. Clark, Geo. Laick, G. F. Reed, H. L. Schellhass, John Davidson, Jos. Lewis. Adjourned.

Tuesday.

The day was clear and cold, with a northeast wind. The 15in. class for bitches, and one brace in the All-Age, 13in. class, was run off.

ADA B.—LUFRA—The scent was poor and there was no steady driving. Both did some backtracking and made many losses both in swamp and upland. Down 25 minutes.

MARGUERITE—TRIUMPH.—The latter was handled by C. Staley Doub and the former by W. S. Clark. Triumph ran at a killing pace, driving evenly and well, and leaving Marguerite far in the rear. Down half an hour.

BESSIE—NELL R.—Wm. Saxby handled Bessie and Geo. F. Reed Nell R. Bessie was the better worker in the search for game, but after the rabbit was up Nell was superior in nose and in catching the losses. Down 1 hour and 35 minutes.

LUCY S.—DIME.—This brace were wide, rapid rangers, and under little control. Lucy was in charge of D. F. Summers and Dime of Wm. Saxby. Lucy was better in nose and outfooted Dime when on game. Down 1 hour.

Lunch was now served, and photographs of the party and of the officers were then taken.

Second Series.

TRIUMPH—LUCY S.—The race run by this brace was the fastest and best yet seen in the trials. Triumph showed the better nose and possessed greater speed than Lucy. The rabbit saved his life by checking the beagles on a plowed field. No faster race was ever run at a beagle trial. Down 41 minutes. A splendid exhibition of nose and speed.

DIME—NELL R.—This race was dull and uninteresting to a degree. Neither could lift a hot trail where the last brace had carried their game without difficulty. Down 31 minutes.

Third Series.

LUCY S.—NELL R.—This heat was a formal one to comply with the running rules. Down 5 minutes. No start was made.

The judges then awarded first prize to Triumph, second to Lucy S., and divided third between Nell R. and Dime. Bessie won the reserve. Cheers were given for Triumph and her owner, whose win was a thoroughly popular one.

Winners—First, Triumph; second, Lucy S.; third, Nell R. and Dime; reserve, Bessie.

The running in the All-Age 13in. class was commenced immediately.

All-Age Class—13in. and Under.

First Series.

SKIP II.—LOLA LEE.—The handlers were George F. Reed and W. S. Clark. Skip was frightened and refused to hunt. Lola ran a beautiful race, driving steadily and showing that she possessed an excellent nose and a sweet voice. Down 20 minutes.

YOUNG ROYAL—LOLA LEE.—The former was the bye dog and was put down with Lola Lee. Royal was handled by F. H. Bolton and showed himself a stylish, merry worker. Lola started a crippled rabbit that went to earth after a short run, and was the only rabbit that was put into the ground during the trials. Further search for game was unrewarded. Down 38 minutes.

This closed the day's sport.

Wednesday.

A northeast wind and a cloudy sky. Scent was bad and the game seemed to have vanished from the face of the earth. The morning's work was tedious, but in the afternoon four races were run on one rabbit and the sport was good. The Derby was commenced and the 13in. open class was finished. Skip II. was withdrawn, as she was sick.

YOUNG ROYAL—LOLA LEE.—This was the most tiresome heat of the trials. It was nearly three hours before a start was made and then the rabbit was shot by some local gunners before the hounds could be put on. However, they could do little with it. Roy backtracked a few yards and Lola trailed an equal distance and lost. Later, Roy made another start, but could not carry. Both showed great powers of endurance. Down 2 hours and 50 minutes.

The judges gave first to Lola Lee and second to Young Royal.

The Derby.

First Series.

TALOR—PHŒBUS.—They were handled by D. F. Summers and J. W. Appleton. Talor showed great speed after the rabbit was up and was a busy worker before the game was found. Phœbus lacked experience and was left far behind by his speedy rival. Down 2 hours and 45 minutes.

PISEN—JUTE II.—The former was handled by C. Staley Doub and the latter by J. Q. Bourne. The greater part of this run was in a weed field and in full view of the spectators. The scent lay badly and the rabbit skulked in the weeds. Pisen cast wildly when at a check and Jute was inclined to potter. What little driving there was was jerky. Down 30 minutes.

BARONET—SUMMERS'S KIT.—W. S. Clark handled Baronet and Kit was in charge of D. F. Summers. The rabbit was driven for a long distance in the open fields and then back to the weeds. Both showed speed, but Baronet had the better nose and was quicker on the turn. He had the advantage in the heat, though Kit proved herself a good one. Down 30 minutes.

Second Series.

TALOR—BARONET.—A rabbit was started by Baronet, but, as Talor did not get into the chase on even terms with him, the judges decided to give them another run the next morning. Down 41 minutes.

Thursday.

Another cloudy morning, with the same northeast wind that had been blowing all the week. The trials were completed.

TALOR—BARONET.—These flyers ran a pretty race in a thicket of scrub oaks and bull briers. Baronet winded a rabbit and had a decided advantage in the race, showing greater speed and a better nose and catching more turns. Down 13 minutes.

The judges awarded first prize to Baronet, second to Talor, and reserve to Summer's Kit.

There were no entries in the pack, brace or 15in. champion stake. The 13in. champion class had two entries.

Champion Class—13in. and Under.

LADDIE—SPOT R.—N. A. Baldwin and Geo. F. Reed were the handlers. Two rabbits were started during the race and both were driven to a loss. Both beagles did dashing work and the heat was one of the best of the trials. Spot excelled in the care with which she hunted her ground and in nose, but Laddie was in the race from first to last. Down 1 hour and 24 minutes.

The judges gave first to Spot and second to Laddie.

In the evening a club meeting was held, H. F. Schellhass in the chair. A. C. Pickhardt, Massapequa, N. Y., and Horace Porter, Garden City, N. Y., were elected to membership.

It was voted to give two special prizes of $10 each at the New York show: one for the best dog and one for the best bitch with a field trial record owned by a member of the club.

A futurity stake for future trials was proposed and generally approved. Adjourned.

A session of the field trial committee was held, H. F. Schellhass presiding.

A vote of thanks was passed to A. D. Lewis and Joshua Barnum for the use of their land in running the trials, and to the field marshal and the judges. Adjourned.

The special prize offered by Geo. F. Reed for the beagle that best marked its game to earth by giving tongue was not awarded.

J. A. F.

Field Trials at Newton.

NOV. 15.—There is already a goodly gathering of field trial supporters, stanch men whose names are familiar with yearly regularity in connection with field trial competition. There are here Messrs. Hitchcock, Meares, Stafford, Avent, Costar, Hodgeman, Arnolt, Kidwell, Bell, Bradley, Sturgis, Mr. and Mrs. C. E. Phelps, Major Taylor, and in town and within easy striking distance a number of handlers. Mr. Edward Dexter was here a day or two ago and is now absent for a day or two, returning later.

At Washington, *en route* here, I had the pleasure of meeting Mr. W. L. Bell and Major J. M. Taylor, also *en route* to the field trials, and at Salisbury we met Mr. Merriam and son, who were *en route* to western North Carolina on a shooting trip. By mistake, their dogs were carried on to Atlanta, thus forcing them to remain at Salisbury two or three days awaiting their return. The dogs having arrived, they continued their westward journey.

Birds are reported as being in fairly good numbers on the Eastern Club's grounds, Mr. Hitchcock having, with an assistant, found sixteen bevies in three hours one day last week. Still, I think there will be many heats run in which the work will be very light and the heats discouraging, from the few finds following the fruitless though persistent effort. However, I will be highly pleased if birds are found in abundance.

The trainers are a unit in insisting that birds are scarce, and as they have had experience during some weeks, day in and day out, their statements should bear great weight.

Most outspoken dissatisfaction prevails over the act of the Continental Field Trials Club in canceling its trials. A number had prepared dogs for the Continental Club's stakes, and they felt that it was treating them curtly and unfairly to declare the event off without so much as saying by your leave. It moreover seems that, at its own solicitation, the Continental had entered into a compact with the Eastern to run its trials on the ground of the latter, paying therefor one-half the rent. The United States Club was an applicant at the same time for the same privilege. On the assurance by the Continental Club that it would hold a trial jointly with the Eastern, its claims were recognized and its application accepted.

Without any request or effort to be released from this agreement, but ignoring it entirely, it declared its trials off.

There are several here who do not hesitate to openly state that the action of the Continental was inspired not so much by the scarcity of birds as by the fact that it was bound to lose some money on account of the number of entries being too few to "pay out," and therefore that the scarcity of birds was but a pretext to avoid running the trials at all, and also to avoid the loss of money.

They hold the act as being most ungenerous in the face of the fact, which is well known to all of them, that the Continental made a great deal of money out of its chicken trials, and was therefore in condition to stand the loss which would be a consequence of running the quail trials.

The United States wavered, declared its trials off at Newton, then, on the assurance of several club members that they would stand good for a deficit of $400 or $500, they reconsidered their action and decided to continue. Under the circumstances of declaring the trials off without sufficient reason, breaking faith with the Eastern Club, avoiding a loss with plenty of money in their treasury, etc., the Continental Club at the present moment is looked upon with unkind eyes by the ones who were to make its competition.

Mr. H. B. Duryea, whose name is familiar to the sportsmen of America, more especially to field trialers, and whose name also is a synonym of enthusiasm, fair play and the highest sportsmanship, whether as a club member, judge, competitor or spectator, will be missed from the trials for a while—not long, let us hope—he having recently married. If he realize but a fraction of the good wishes which are bestowed upon him, life will be happy, long and prosperous.

The drawing for the Members' Stake took place to-night. On the blackboard is the following legend:

"The Eastern F. T. Club is here to stay, and we don't give a Continental."

After this follows the date of running the Members' Stake and Derby, and the date of closing of entries.

The Eastern Field Trials Club received the following official notification on the 15th inst., the first it had concerning the matter:

"INDIANAPOLIS, Ind., Nov. 10, '95.—*Mr. Washington A. Coster, Sec'y Eastern F. T. Club, Newton, N. C.*—Dear Sir: Owing to the scarcity of birds at Newton this year, the Advisory Board of the Continental F. T. Club has declared its trials off. Yours very truly,

"P. T. MADISON, Sec'y-Treas."

There is much disapprobation in respect to the Continental Club's act in declaring off its trials. B. WATERS.

Game Laws in Brief.

THE *Game Laws in Brief*, current edition, sold everywhere, has new game and fish laws for more than thirty of the States. It covers the entire country, is carefully prepared, and gives all that shooters nd anglers require. See advertisement.

Yachting.

THE unfortunate termination of this year's international racing teaches a double lesson which we hope will no longer be lost on yacht clubs. The FOREST AND STREAM has urged for years the adoption in this country of the English method of visible marks at the end of the waterline, placed by the owner and measured and certified by the official measurer; and with this, the enforcement of the rule that a yacht shall be measured and her official measurement properly recorded before she shall start in a race. It is easy to see now how much trouble might have been avoided had these two important and practicable conditions been insisted on.

The marking of the waterline of a racing yacht is absolutely necessary under the present rules and conditions of match sailing, and should long ago have been made compulsory by American, as it is by British clubs. It takes the responsibility of a very difficult task from the measurer and places it where it belongs, on the owner who builds a yacht with freak ends; it is fairer to those owners who live rigidly by the rules, and it tends greatly to prevent such charges as are now being made against Vigilant and Defender. It would put a stop to one unfair practice which prevails in some cases. A new yacht is measured within a month of her launch and comes within her class by such a margin as $^1/_{100}$ft.; in the ordinary course of things she may race on this same measurement for four or five years, exceeding it before the middle of her first season, and always after being far out of her class. Of course, through necessary and open alteration a remeasurement may be made necessary; but such is not always the case, and protests on measurement are so seldom made here that yachtsmen as a rule are willing to submit quietly to an obvious injustice, racing a yacht which is well within the class against one which is known to be over it, rather than to enter a protest. If the waterline were marked this state of affairs would at once cease.

In the cases of Valkyrie II. and III., in 1893 and the present year, we see no reason why Lord Dunraven's repeated request that the waterline be marked should not have been acceded to, and every reason why it should—for the protection of the American yacht, if nothing else.

In discussing the Dunraven matter, the American papers have confined themselves mainly to two points, the condemnation of Lord Dunraven and the absurdity of his charge that more ballast was added to a yacht that was concededly stiff enough already. The arguments on the latter point are not only superfluous; as it first remains to be proven that Mr. Iselin was dishonest enough to wish to cheat, and foolish enough to risk the terrible consequences of an almost certain detection; but they are in themselves essentially weak. Lord Dunraven's charges do not imply solely that Defender's normal ballast was increased by 12 to 15 tons after measurement, which, it is generally conceded, would be no advantage to her; but they include another supposition, that the normal ballast was decreased by a lesser amount, say 10 to 12 tons, prior to measurement, raising her some four inches above her normal trim; and that after measurement and before the first race this ballast was replaced, bringing her to her proper waterline. The gain from such a proceeding is quite as plain as the loss from the opposite course, of carrying an excess of ballast in light weather; and completely nullifies the argument as to the absurdity of the act.

At the same time it must be said that such a change would be even more difficult than the other; it would have been necessary to remove the ballast at New Rochelle, where the yacht was haunted day and night by reporters and sightseers, prior to reaching the Erie Basin about noon on Sept. 6. At the Basin there was a crowd of possibly two thousand people eagerly watching every detail of the measurement under the eyes of Messrs. Herreshoff and Watson. If the yacht had been recently raised several inches, it is hardly possible that the marks would not have been visible in the discoloration of the bronze to some of the thousands of prying eyes.

THE rule calling for the measurement of a yacht prior to starting in a race is practically the same on both sides of the ocean, and on the other side, at least, it has been strictly enforced up to last year. The first exception was in the case of Vigilant, who raced on the Clyde and on to the Solent, sailing eleven times without being measured. This year the same thing was done, for a different reason, in the case of Valkyrie III., she being allowed to sail her three races on the Clyde without measurement. The example had already been set in this country by the special exemption from the provision of Rule V. granted to Defender in order to conceal her length and sail area from the challenger. Whatever may be said in defense of this action in the cases of Valkyrie III. and Defender, it cannot be disputed that such a rule and its rigid enforcement are necessary to the proper carrying on of general yacht racing, and consequently should be upheld by all yacht clubs and in all cases. It is no defense of Lord Dunraven's latest action to say that his request for the marking of the waterline was fair and reasonable, and that if it had been granted, and if Defender had, in her first trial race with Vigilant, been compelled to observe the rule of the New York Y. C., just as smaller yachts are, the present trouble could never have arisen.

THE *Field* of Nov. 19 says:

Nobody in this country supposes that Mr. Iselin could possibly have been implicated in any tampering with the Defender, but Lord Dunraven's suspicion that the Defender was deeper in the water on Sept. 7 than previously could have been proved or disproved if the course Lord Dunraven communicated to Mr. Fish had been adopted. It ought to have been done.

Nobody in *this* country who is at all familiar with yachting supposes for a moment that any one connected with Defender, from Capt. Haff down to the cabin boy, would have cared or dared to have made any alteration on the yacht without the express orders of Mr. Iselin. In all of the yachts which he has owned, from Mary Emma down to Titania, Vigilant and Defender, Mr. C. Oliver Iselin has never been a passenger, but has been master in every sense of the word His part on these boats has been the same as that of Gen. Paine on Mayflower and Volunteer, supervising and directing every detail, and it is simply inconceivable that a radical change of ballast, whether permissible under the rules or not, could have been made without his direct orders. Lord Dunraven's charge is to all intents a direct accusation of foul dealing against Mr. Iselin, and must be considered as such. It cannot be accepted as impersonal and directed merely against some unknown members of the crew.

THE past week has produced but two sensations, and those but mild ones—a renewal of the rumor that Sir George Newnes will challenge for the America's Cup, and a report that Vigilant was guilty of shifting ballast in her British races last year. The facts that Sir George Newnes is not a yachtsman—we believe he is not yet a member of any yacht club—and that he is a successful publisher and the proprietor of several popular and widely advertised periodicals, are not in themselves very promising. The reports as to Vigilant are too indefinite and general to call for special attention.

WE have received too late for publication this week the particulars of a new restricted class of 30ft. l.w.l., for which seven yachts have already been ordered of the Herreshoff Co.

Lord Dunraven's Charges.

THE full text of Lord Dunraven's letter as it appeared in the *Field* is as follows:

CIRCUMSTANTIAL STATEMENT OF THE EARL OF DUNRAVEN.

Sir—So much has been written and said loosely and from the standpoint of imperfect knowledge concerning the races between the Valkyrie and Defender for the America's Cup, and I have received so many requests for fuller information concerning that matter, that it is, I think, due to the yachting and general public and to myself to make a short statement on the subject. This statement will be mainly extracted from a letter which I sent to the secretary of the Royal Yacht Squadron on September 24 last. I would confine myself entirely to the cause of my withdrawal, namely to the overcrowding of the course, were it not that other matters have been alluded to in the report to the New York Yacht Club, made by the America's Cup committee.

On August 30 I met the America's Cup committee at the New York Yacht Club, and, after some conversation, mainly on the question whether the races should be stopped after dark and declared off, the agreement as to terms and conditions, which had been previously arranged between us by correspondence, was mutually accepted, with a few small modifications. Among the conditions in this agreement the following have place:

The competing yachts shall be measured with all of the weights, dead and alive, which they intend to carry during the race on board; but the competing yachts shall not have on board more persons, all told, during any race than is permitted by the club rules.

If either yacht carries water tanks they must be filled with water at the time the measurement is taken.

The measurement referred to above covers all restrictions as to weights, system of measurement, time allowance, and the racing rules at present in force in the New York Yacht Club shall govern all the races.

The rules of the New York Yacht Club at page 142 say, among other things:

The official measurer, at the time of making his measurement, shall affix a distinctive mark at each end of the load waterline.

I was under the impression at the time that this rule meant that the competing vessels would be marked on stem and stern, in such a way as to make the marks externally visible, as is the case under our Yacht Racing Association rules. I learned, however, at the time of the meeting with the Cup committee on Aug. 30, that according to the practice of the New York Y. C. load waterline length is marked by a couple of copper tacks driven into the deck.

I did not consider this method of marking satisfactory, as it obviously afforded no means of judging whether the vessel was sailing on her proper measured length or not. I contented, myself, however, with observing that it did not appear to me to be of much practical value. I went no further than this, as I did not feel justified in demanding any departure from the ordinary usage, without some strong and definite cause.

On Sept. 4 Mr. James D. Smith, the chairman of the Cup committee, informed me that Mr. Iselin was anxious that our agreement should be amended so as to insure the intervening of one clear week day between each race. To this I agreed, and I took advantage of the opportunity offered by this reopening of the agreement to press upon the Cup committee, in the following letter, my views on the subject of measuring and marking, which I had previously expressed in conversation:

No. 439 FIFTH AVENUE, New York, Sept. 5.—*Dear Mr. Canfield:* I have received your letter notifying me of a contemplated alteration of racing dates. That question having been reopened, I wish to call your attention to another matter which, on reflection, I do not consider satisfactory.

This contest may possibly extend over a period of ten days, or, perhaps, a fortnight. It is obvious that alterations in the load waterline length of either vessel may, under present conditions, be made without orders, without the knowledge of the principals and without the possibility of detection. It is, of course, impossible to guard absolutely against such an occurrence.

But these contests cannot be compared with ordinary races, and in the interest of the public and of the owners, who have to do their best to see that rules are obeyed, it is surely right and necessary that the America's Cup committee should take every precaution to see that both vessels sail on their measured load waterline length.

For this reason I have to request that the official measurer be instructed to mark each vessel's measured load waterline length on both stem and stern and to take any further steps that either he or the committee thinks advisable by remeasurement at any time, or by any other means, to ascertain that the load waterline length, as measured, is not exceeded in sailing.

To mark vessels in this way is a perfectly simple matter. A scratch with a file or chisel or a distinct paint mark would suffice. Yours very truly, DUNRAVEN.

To that letter I received no written reply, but I was given verbally to understand that the committee saw no object in reconsidering the points involved. I did not further press the matter, as I considered the committee responsible, and that, unless necessity compelled, I had no right to insist on my points.

The agreement involving the conditions of the race was signed by Mr. Smith and myself on board the Valkyrie's tender, the City of Bridgeport, on Sept. 6.

The first race was sailed on Sept. 7.

I am of the opinion that the Defender did not sail on her measured load waterline length during that race.

I should first explain that, to the best of my belief, none of the gentlemen interested in the Defender lived on board her or on board her tender, the Hattie Palmer; that the Defender's crew slept on board her, and that, in consequence, a good deal of material—men's coats, etc.—had to be transferred backward and forward between the Hattie Palmer and the Defender. A good opportunity was afforded us of observing Defender when she lay close to us in the Erie Basin previous to docking after her final trial race with Vigilant on Aug. 31. When she came into the same basin to be measured on Sept. 6 it was plain to me—as it was to all on board the City of Bridgeport—that she was floating considerably higher then than she floated on the former occasion, but that was, of course, quite unobjectionable.

I may further mention that, according to the statement of Mr. Hyslop, the official measurer, Defender was some 6in. shorter when measured for the America's Cup races than when she was measured for the Goelet cup race.

Both yachts lay inside Sandy Hook on Friday night. Defender's tender, the Hattie Palmer, lay alongside her, and her crew were at work from dark to 1 o'clock in the morning. Early on Saturday morning my attention was drawn by those on board the City of Bridgeport, including representatives of her American crew, to the effect that Defender was visibly deeper in the water than she had been when measured. She so appeared to me, but as her tender was alongside and engaged apparently in taking material out of her, it was impossible to form a definite opinion at that time.

When, however, I put Mr. Henderson, my representative, on board Defender, about 9 A. M., after the Hattie Palmer had left her, I felt perfectly certain that Defender was immersed deeper than she was when measured. Not only was her bobstay bolt nearer the water (which might have been the result of alteration of trim), but, judging by the line of bronze plating and by the fact that a pipe amidships, which was flush with the water when measured, was now nowhere visible, she was, in my deliberate opinion, floating about 4in. deeper in the water than she was when measured.

I was reluctant to make a formal complaint to the Cup committee on a matter which it was, of course, impossible for me to verify.

In any case, nothing could be done before the race was started, but as soon as Mr. Lathan Fish, a member of the committee, came on board the Valkyrie as Defender's representative, and before the race was started, I stated the whole case to him.

I told him I thought some mistake had been made, and that all of the weight put into Defender after measurement had not been taken out of the before the race. I added that I was positively certain she was sailing at least 1ft. beyond her proper length, and requested him to take the earliest opportunity of mentioning the matter to the committee.

Mr. Fish asked me what suggestions I could make, and I replied to the effect that I wished the committee to put one of their members, or some reliable representative, on board of each yacht immediately after the race, and to have both vessels remeasured, if possible, that evening.

If that were impossible, then I said I would suggest that members of the committee, or their representatives, should stay on board in charge of both vessels until they were remeasured; that the load waterline should be marked on both vessels, externally, in such a way as to be plainly visible, and that the committee should take any other steps they thought desirable to insure that both yachts should not exceed their load waterline length when racing.

I met Mr. Fish on board the committee boat immediately after the race. No action was taken that evening beyond ordering the vessels to be remeasured and marked externally on the day following.

No members or representatives of the committee were placed in charge pending the remeasurement, as I had requested should be done. Had this been done, my contention that Defender exceeded her measured length and the extreme limit of length imposed by agreement and deed of gift, namely, 90ft., would have been proved or disproved.

Defender lay Saturday night at Bay Ridge, with the Hattie Palmer alongside her.

Both yachts were remeasured on the following day, Sunday afternoon, when their load waterline length was found to be practically the same as when measured on the Friday previous, but obviously that fact afforded no proof that either or both of the yachts had not exceeded their measured length when sailing on Saturday.

My action in making this complaint has been severely criticised. I will only say that I considered it my duty to act as I did, and that I asked for nothing that I was not ready and willing to submit to myself.

The first race, on Sept. 7, was fifteen miles to windward and back. The starting line was so dangerously crowded by all sorts of steam vessels under way that it was impossible for the boats to maneuver properly or in safety. Craft were constantly passing in front of the markboat, and it was impossible to pick up the line accurately. When Valkyrie came near the line, the lee markboat—a small tug—was completely hidden from view, and, not knowing where the line was, and fearing we might be too soon for the gun-fire, we bore away for a time and spoiled our start.

On the fifteen-mile reach home from the weather mark Valkyrie was badly hampered by numerous boats, being surrounded on all sides by large steamers and tugs, which gave her the full effect of their wash and completely blanketed her. It was not until they had drawn out a little wider that we got anything like a true wind and sea. Defender was also doubtless interfered with, but to nothing like the same extent. This was in accordance with my former experience—that the vessel astern got much the worst of the wash.

The second race was sailed on Sept. 10. The starting line was again blocked and crowded to a dangerous extent, making it impossible to maneuver with any reasonable degree of safety. So much so, that after the gybe and when both vessels were going for the line, a large iron coasting steamer, the Yorktown, had to go full speed astern to clear the Valkyrie. While maneuvering for the start a foul occurred which led to a protest by Defender against Valkyrie, and to a decision of the regatta committee awarding the race to Defender.

The race was over a triangular course, the courses to steer by compass being given us by signals from the committee vessel before the start, the first side of the triangle being laid off to windward. During the turn to windward to the first mark we had fairly clear water to sail over; and on the reach from the first to the second mark a fairly clear course was also preserved; but on the reach from second mark home the excursion steamers interfered with us to an extent unprecedented in my experience, either on this occasion or in 1893.

Some eight or nine vessels crossed our bows; a number were to the windward of us, and, what was worse, a long line of vessels, packed closely together and steaming at a high rate of speed, accompanied us to leeward, their wash running against wind and natural sea, giving us heavy broken water to sail through. We sailed the whole way in a boil of wash, and were blanketed on both sides. It was difficult to steer our vessel, and racing was reduced to an absolute farce.

I make no accusation of partiality. I only say that, whereas the ship which was astern on the first day got much the worst of the wash, the ship which was in front got much the worst of it on the second day.

Even assuming the absolute impartiality of intention, the result was a race sailed over a course impeded by some 200 steamers and tugs, and which was an issue of chance. I made up my mind that it was perfectly useless to sail under such circumstances, and communicated my decision then and there to the gentlemen on board Valkyrie. What course I should have taken had I been merely personally interested I do not know, but as representing a British yacht club in an international race I had no hesitation in declining to sail under conditions which precluded the possibility of a fair trial of the merits of representative vessels.

I had come out to race, not to take part in a show.

It has been stated that in coming to this decision I was influenced by the fact that Valkyrie had been protested against.

That is not true.

I was not aware that any protest had been made until we were brought up at Bay Ridge, some hours after I had informed the gentlemen on board Valkyrie (Mr. Kersey, Mr. Glennie and Mr. Ratsey) that under existing circumstances I would race no more. On my return to the City of Bridgeport that evening I wrote the following letter to the Cup committee:

SEPT. 10, 1895.—Gentlemen: It is with great reluctance that I write to inform you that I decline to sail Valkyrie any more under the circumstances that have prevailed in the last two races, and for the following reasons:

First. To attempt to start two such large vessels in a very confined space and amid moving steamers and tugboats is, in my opinion, exceedingly dangerous, and I will no further risk the lives of my men or the ship.

Second. On the reach home from the second mark to-day eight or nine steamers crossed my bows close to. Several were to windward of me, and, what was worse, a block of steamers was steaming level with me and close under my lee. I sailed nearly the whole distance in the tumbling water and in the heavy wash of these steamers.

To race under those conditions is, in my opinion, absurd, and I decline to submit myself to them again.

I would remind your committee that, foreseeing the trouble that would occur, I urged upon them the desirability of sailing off Marblehead or in some locality other than New York Bay, and that they refused to do so. At the same time I wish to testify to my belief that your committee have done everything in their power to prevent overcrowding.

The fact is that when a contest between representatives of two yacht clubs creates so much popular interest and attracts such crowds of people (if the race is sailed in the immediate neighborhood of a great city, and if the dates of races and the times of starting are known and advertised), it is impossible to keep the course free from the cause of exceptional danger and clear enough to insure the probability that the result of the match is decided according to the relative merits of the competing vessels.

I have the honor to remain your obedient servant,

(Signed) DUNRAVEN.

Finding, soon after my return to the City of Bridgeport, that a protest had been lodged against me, and believing that the Cup committee had heard the protest, I did not think it right to hand them this letter pending their decision. I wished to avoid the possibility of appearing desirous of influencing them, or of being myself influenced by the fact of the protest. I therefore handed the letter to a third party—Mr. Kersey—with written instructions to deliver it after the protest was decided.

As it turned out, this precaution was perhaps unnecessary, as on arriving at the New York Y. C. on the following morning I ascertained that the regatta committee had decided the protest, and that the Cup committee were not concerned in it. I met Mr. Canfield, the secretary of the Cup committee, at the New York Y. C. about noon, and requested him to call a meeting of his committee to consider a letter of importance. My letter was opened by Mr. Canfield at 2:30 P. M., and it was, I believe, laid before the committee then, or shortly after.

About 9 P. M. Mr. Canfield and Mr. Busk called upon me at the Waldorf, where I was at a dinner party, and we had a short conversation on the subject of my letter. I understood their proposal to be that if I would sail the following day, the committee would not start the vessels until the starting line was clear, and that the dates and times of starting any other races should not be published. I did not consider that arrangement satisfactory, and told Mr. Canfield and Mr. Busk that I did not see how I could depart from my decision.

I begged that the next day's race might be postponed to give me time for deliberation, but offered to sail if the committee would undertake to declare the race off if, in their opinion, either vessel was unduly crowded. I asked for a distinct proposal in writing and a little time for its consideration. At 10:30 o'clock I received the following proposal in writing:

"SEPT. 11, 1895.—My Lord: The America's cup committee will postpone the start to-morrow as long as may be necessary to secure a clear space and plenty of room for the yachts to maneuver and start in. In case of such postponement a preliminary signal will be given fifteen minutes before the preparatory signal.

"I have the honor to remain your obedient servant,

"(Signed) A. CASS CANFIELD."

The following reply declining to sail round the course, but saying that I would cross the line, was delivered at the New York Y. C. at 12:15 the same night:

No. 439 FIFTH AVENUE, September 11, 1895, 11:30 P. M.—*Dear Mr. Canfield:* I have received your letter. I regret that, being engaged at the time you and Mr. Busk were kind enough to call at the Waldorf, I could not give you a decided answer to the proposition made in our short conversation.

I have since considered the matter carefully. Your proposition to postpone the start until we have sufficient room meets only one out of the more serious difficulties mentioned in my letter of the 10th, and if no solution can be found to those difficulties I must adhere to my decision as expressed in that letter.

I am fully convinced that the committee have done and would do to-morrow all in their power to keep a clear course, but under existing circumstances they are powerless. As I told you, I would sail if the committee would take it upon themselves to declare the race void if, in their judgment, either yacht was interfered with by steamers and tugboats.

I regret that you are unable to agree to that. I regret also that the race fixed for to-morrow could not be postponed in order to give the committee ample time to consider my former letter, and I am sorry my letter was not delivered to you sooner. As I explained to you, I was under the impression that the Cup committee heard the protest, and pending decision I did not think it right to place the letter in their hands. When I learned this morning that the Cup committee had nothing to do with the protest I requested Mr. Kersey, to whom I had intrusted the letter, to hand it to you.

In case you do not receive this letter to-night, I shall take Valkyrie

to Sandy Hook Lightship to-morrow morning and will cross the line to give Defender a start. Yours very truly, (Signed) DUNRAVEN.

I am in ignorance as to what followed on receipt of this letter, and I do not know whether the contents were communicated to Mr. Iselin or whether any steps were taken to inform the public.

As regards the foul, I do not for one moment impugn the motives of the regatta committee, but I think myself entitled to call attention to the protest. The protest is as follows:

To the Regatta Committee, New York Y. C.:

DEAR SIRS—It is with much regret that I hereby protest Valkyrie.

In the race to-day I shaped my course for the line, which course, according to my orders, was not altered in the slightest degree on the starboard tack with sheet trimmed down when Valkyrie bore down on us with wide sheets, and in luffing fouled our starboard main rigging with her main boom, carrying away our spreader and springing our topmast. Respectfully yours,

(Signed) C. OLIVER ISELIN.

The following is a written statement handed by me to the committee before giving verbal evidence:

At about two minutes to the starting gun both vessels gybed on to the starboard tack, Valkyrie being to windward and slightly ahead of Defender; the vessels being distant from each other about 50yds. Owing to the presence of a steamer right in our track to the starting line, the vessels separated a little, Valkyrie passing ahead and Defender astern of the steamer.

After clearing the steamer, Valkyrie held her course for a little, then luffed, pointing a little to the windward of the committee boat for a few moments, then kept away so as to cross the line well clear of the committee boat.

Defender, after clearing the steamer, held the same course as Valkyrie for a little, then luffed, and would, if she had kept that course, have passed considerably to windward of the committee boat. I judged she was going for my weather quarter. She then kept hard away; then luffed again and fouled Valkyrie. Neither vessel had sheets in. Defender was overtaking and had overlapped Valkyrie to leeward directly after clearing the steamer, and was nearly abeam of her when the foul occurred.

Valkyrie's helm was eased in order to avoid a foul if possible. Had she luffed more a foul would still have occurred, and Valkyrie would have run into the committee boat.

Had she stayed, the foul would have been much more serious, and Valkyrie would have been forced to cross the line on the wrong side of the committee boat. As it was, we had to pull the helm hard up in order to clear the committee boat, and only just succeeded in doing so.

I submit that Defender broke rules 7, 10, 14 and 16 of the New York Y. C. She was not luffing to prevent herself from being passed to windward. She was the overtaking vessel. An overlap existed long before she luffed. She was bound to give room at the mark and had no difficulty in doing so. Even on the supposition that Defender steered a straight course from the steamer, I submit that she was bound to give room to another vessel approaching the committee boat on the same tack. Either vessel would, if close hauled from the time they passed clear of the steamer, have passed about 150yds. to windward of the committee boat.

Had I deemed it possible that Defender would protest I should have protested against her. I believe the foul to have been the result of accident. I thought that, being affected by my wash and her headsails being right under my mainsail, she had probably taken a sudden sheer to windward and unintentionally fouled me. Under these circumstances I did not think it necessary to protest.

The decision of the regatta committee is given below:

REGATTA COMMITTEE, Sept. 11.—*C. Oliver Iselin, Esq.:* Dear Sir—We beg to acknowledge the receipt of your letter of yesterday.

We have given the matter our careful consideration and believe that the foul occurred through a miscalculation of distance between the two yachts at a critical moment.

From our own observation, confirmed by that of others who were in a good position to see all that occurred, we find that Valkyrie, in contravention of Section 11 of racing rule No. 16, bore down upon Defender and fouled her by the swing of her main boom when luffing to straighten her course.

We also consider that Defender left Valkyrie sufficient room to windward to pass clear of committee boat. Your protest is therefore sustained. Yours respectfully,

(Signed) S. NICHOLSON KANE, CHESTER GRISWOLD, IRVING GRINNELL, } Regatta Committee.

To my written statement I have little to add.

Photographs taken just before and immediately after the foul clearly show the positions of the vessels. I do not see how we can have had sufficient room to windward, for I know that we were in imminent danger of running into the committee boat. I could see her to leeward, of our bowsprit and close to us that I was within an ace of ordering the helm hard down instead of hard up, fearing we could not clear her, but eventually we just scraped clear by putting the helm hard up.

When two vessels are rapidly converging nothing is more difficult than for an onlooker (unless he is exactly astern of them) to decide whether any alteration of helm takes place or whether one luffs or the other bears away, and I still hold that Valkyrie was pointing just well clear of the weather end of the line—namely, the committee boat—and that we did not bear down, but that Defender luffed into her. But assuming me to be wrong, I fail to see what rule was broken. Section 11 of racing rule 16 of the New York Y. C. states that "A yacht shall not bear away out of her course so as to hinder another in passing to leeward." Passing to leeward is, I apprehend, intended to apply to a vessel sailing a definite course to some definite point, and cannot apply to vessels maneuvering for a start and steering half a dozen courses in as many minutes. Under such circumstances the only course that can be said to be given them is to get to the starting line. Both vessels were on the same tack; both off the wind, Valkyrie a little ahead and to windward, Defender to leeward and overtaking. There could not be any question of preventing Defender passing to leeward, as she had her whole length of the line clear to leeward, and I fail to see how any rule could be broken unless we had borne her down on top of or to the leeward of the lightship, which represented the other or leeward end of the line.

Section 7 of the racing rules of the New York Y. C. lays it down that "an overtaking yacht shall *in every case*, (the italics are mine) as long as an overlap exists, keep clear of the yacht that is being overtaken." There can be no question that Defender was overtaking, and that an overlap existed.

While accepting the verdict of the regatta committee as final, and, of course, given in perfect good faith, I am bound to say I think their judgment was founded on a mistaken estimate of circumstances and of the relative courses and positions of the vessels in respect to the direction of wind and starting line. I saw no protest flag shown on Defender, nor, I may add, did Mr. Henderson, my representative on Defender. Had I been aware Defender had protested I would certainly have done the same.

My declining to accede to Mr. Iselin's proposal to sail the race over again after it had been awarded to Defender has excited considerable comment. It was quite impossible for me to do so. Protest was made; it was not withdrawn; it was disputed; the proper authority investigated the case and gave their decision. I could not resail the race at the personal request of Mr. Iselin after the committee had given a verdict against me, even had I been willing to do so.

It was not within the power of Mr. Iselin and myself to resail the race, nor within the power of the regatta committee to permit it. The regatta committee could, under Article 10 of the New York Y. C. rules, have ordered the race to be resailed without taking evidence. They could have done so after taking evidence on the ground that it was inconclusive, or that the foul was on both sides accidental, but, having once heard the protest and decided that one of the vessels broke a regulation under which she was sailing, their decision was final, and could not be revoked by any private arrangement with or without their sanction.

When I went before the regatta committee they asked me, on their own initiative, and without any authority from Mr. Iselin, whether I did not think it would be a good thing if the race could be resailed by mutual agreement.

I replied to the effect that they had the power to order the race to be resailed, but that a definite protest having been made and not withdrawn, I supposed they ought to hear it, and that so far as I was concerned I was perfectly willing to have the case decided on its merits. I do not see what other answer I could possibly have returned.

Owing to some ambiguity in the words of a letter from Mr. Iselin to Mr. Smith, the chairman of the America's Cup committee, dated Sept. 16, my refusal to resail this race has led to the erroneous supposition that I declined to resail the whole series.

Mr. Iselin made, I believe, a proposal at the New York Y. C. to resail the series under any conditions agreeable to me, but this proposal was never communicated to me by Mr. Iselin, or by either of the committee. I would have been more than glad to avail myself of it, with a reasonably clear course assured.

As my action on Sept. 12, when the last race took place, appears to have been misunderstood, especially in respect of my crossing the line, I may be permitted more fully to explain.

Having made up my mind on Tuesday, the 10th, to sail no more under the circumstances that had prevailed during the race of that day and of the previous Saturday, I endeavored to carry out my determination with the greatest courtesy to every one. When I was towed down to Sandy Hook on Thursday morning I was in complete ignorance as to the intentions of the committee, but thought that they would postpone the race by the simple process of hoisting the letter G. As they did not do so, I crossed the line to make a race and conclude the match.

The accusation made against me freely in America that I broke my agreement by not sailing around the course is unreasonable. A fair field and reasonably clear course is an understood condition of any match. It was the business of the committee to provide such a course. It was not my business to dictate to them in any written agreement the means they were to employ. Failing a fair field and reasonably clear course, no man can be bound by any agreement as to terms to continue sailing under circumstances which gave the vessel no chance. To complain of the condition of the course, and to sail over it again without effective steps having been taken to remedy that condition, would have been absurd. To refuse to make a start would have been improper, and I think rude. I fulfilled all the strict liabilities by crossing the line. I had agreed to sail the best out of five races. By crossing the line I made a race and concluded the contest.

Moreover, I thought it the most courteous thing to do, and I had told Mr. Canfield and Mr. Busk that I would do so. Having crossed the line and returned, the match and the international character of the proceedings were over, and I took down my racing flag and hoisted the burgee of the New York Y. C. (of which I have the honor of being an honorary member), instead of the Royal Yacht Squadron's burgee, which I had hitherto worn. I hoped that this would have been construed, as I intended it to be, into a sign of courtesy.

I have no desire to comment upon the action of the committee, but I must express my regret that the third race was not postponed. The fact of overcrowding was not disputed nor denied. To ask for a day for consideration or proper means for the abatement of an admitted evil was not a very exorbitant demand. It was refused on the ground of public convenience, and I have been accused of deliberately causing inconvenience to the public by my action. Timely action on the part of the committee would have averted any inconvenience that arose.

My letter refusing to sail under existing conditions was considered by them early on Wednesday afternoon. Nothing could have been easier than for the committee, having such an important matter to consider and decide upon, to have notified the evening press that the race for the following day was postponed. If on Wednesday afternoon they determined to make no concession, other than undertaking to secure a clear starting line, they must have been perfectly well aware that I would not sail round the course. Mr. Canfield and Mr. Busk had it verbally from me at 9:30 o'clock that I would not do so, and my letter distinctly declining to do so was at the New York Y. C. at 12:15 o'clock that night, and if they were still in any doubt as to my intentions, it was perfectly easy for them, when passing the Valkyrie on her way out to the Lightship on Thursday morning, to have come alongside and ascertained them.

It was further perfectly possible, and quite within the rights of the committee, at the last moment to have hoisted the letter "G," which, according to instructions, means: "Do you assent to calling the race off for the day."

Valkyrie's answering pennant was got ready to reply to the signal, in the full expectancy that it would be hoisted. Defender, naturally not wishing to sail over the course alone, would no doubt have at once agreed to the postponement, and no more inconvenience would have been experienced by anybody than in the case of a postponement owing to the lack of wind, to fog, to some accident to either vessel or to any similar cause.

In any case, the object of the challenge was to try the merits of the two vessels in a series of races for an international cup, and with that object no other consideration should have interfered.

I can only add that nothing was further from my thoughts than a desire to appear discourteous, or to cause any inconvenience to the owners of the Defender, to the committee or to the public. If any inconvenience was caused I regret it, but I cannot hold myself to blame therefor. Failing postponement, I regret that the committee refused to take upon themselves the responsibility of determining whether the two vessels were unduly crowded during a race. They could have called in the assistance of a referee if they had so desired.

Steps were taken to insure a clear start on the last day. It is a pity that they were not taken sooner. Had steamers been at the same time informed that the race would be called off if they hampered the vessels, it is possible that a fairly and reasonably clear course would have been preserved.

As to the merits of the vessels, as far as I can judge, on the first race we made a bad start. We lost sight of the markboat, and when close on the line we bore up without, as it turned out, any necessity for doing so, and so lost our weather berth. But the ship sailed remarkably well, especially considering that the conditions we least desired prevailed—namely, a very light wind and a good deal of swell. She worked out clear very fast into a very good position, and would, I am convinced, have rolled the weather mark well ahead had not the wind constantly southerned and broke us off badly.

We made two palpable mistakes. When we stayed to eastward to fetch the mark the wind broke us off about three points; and when we stayed to port to cross Defender on the starboard tack, the wind broke us off again and freed her and we were forced to stay again. She rounded the weather mark 3m. 23s. ahead, and made the whole of that gain in the last quarter of an hour or twenty minutes. Against all that, of course, there is nothing to say—it was bad judgment on our part or bad luck—but I was perfectly satisfied with the way the vessel turned to windward.

As to the reach home, it is impossible to judge, owing to the crowding of the steamers already alluded to, but my belief is that Defender would have gained on us in any case, though certainly not to anything like the same extent.

On the second day, I do not think that the fact that Defender carried no jibtopsail to windward made any difference. We carried a jibtopsail because we had set it at the start, and as it was no detriment we did not risk losing anything by taking it in, but Valkyrie would have got to the weather mark as soon without it. We gained 2m. 50s. on that leg of the triangle. On the reach from the first to the second mark, Defender lost time by not carrying—I presume by not being able to carry—a larger jibtopsail; but, on the other hand, we lost a good bit by having to shift sails.

I think the tug employed to lay down the second mark made a mistake in the course given her, or that her compass had a larger error than was allowed for. I had Valkyrie's compasses adjusted to every point by a skilled man from Messrs. Negus, who attend to all the compasses and instruments of the White Star Line, and I had them tested with special reference to the possible effect of the steel boom in various positions. My navigating officer, Mr. Harrison, verified the adjuster's work and found it correct. We steered the course given us—namely, N.E. by E. magnetic—and Defender for some time steered identically the same course that we did. Therefore, either both the yachts made a mistake or the tug did. Having covered some six miles, as we estimated, we were much puzzled at seeing no sign of the tug or mark. There was the tug steaming along to windward of us, and our attention was specially called to her by seeing Defender haul her wind a couple of points or so, but we concluded that this could not possibly be the markboat, as she was not steering the course given us, and was not far enough ahead. Shortly after this the tug steamed head to wind and let go the float about one mile from us. Defender, having steered for this tug some fifteen minutes before, fetched the mark easily, but we were then so much to leeward that we had to take in our bowsprit spinaker and set staysail, jib and jibtopsail to do so.

How much we lost by sailing over the additional ground and in handling these big sails, with a crowd of men out on the bowsprit and forward, I cannot say; but we certainly lost considerably through the inefficient marking of the course. We lost 17s. on this leg of the triangle.

Of the reach home, when overcrowding was intolerable, it is unnecessary to speak further. We lost 1m. 17s. in that nine and a half or ten miles.

On the whole, my belief is that Defender is the better of the two vessels on a reach, and Valkyrie, in turning to windward. We never came on a run, owing to the wind shifting so much during the first race; but as running is Valkyrie's best point and seems to be Defender's worst point—judging by her sailing against Vigilant—I have no doubt that Valkyrie is the better of the two vessels on that point of sailing also. DUNRAVEN.

The special meeting of the New York Y. C. called at Mr. Iselin's request was held on Nov. 18, with Com. Brown presiding. The club house was packed with members, the meeting being by far the largest ever held. The first order of business was the reading of the following letter, to which was appended Lord Dunraven's communication:

"NEW YORK, Nov. 18, 1895.—*To the New York Yacht Club:* Gentlemen: I desire to lay before you for your consideration the charges made by Lord Dunraven in his letter to the London *Field*, of which a copy is annexed.

"A careful perusal of his letter will show that Lord Dunraven makes the charge that, after having been measured for the Cup races in September last, the Defender was surreptitiously loaded so as to sink her 4in. deeper in the water; that she sailed in that condition on the first day's race, and that immediately after that race the ballast so loaded was secretly removed, so that, when remeasured the next day—Sunday—no discrepancy was found to exist between the two measurements. While Lord Dunraven intimates that I was not personally cognizant of the fraud, the charge is none the less explicit.

"Now, Lord Dunraven is an experienced yachtsman, and when he made this charge he knew perfectly well, as every yachtsman knows, that it was a practical impossibility for such a thing as he charges to have been done on the Defender between her measurement on Friday and her sailing on Saturday, without being known or made known to me, who, on behalf of the owners of the Defender and in the name of the New York Y. C., was charged with the sole responsibility of managing her during the race. Officers and men to the number of thirty-eight were on board all the intervening time, and it is impossible that the fourteen tons of ballast necessary to accomplish the result charged could have been put into her on Friday night and taken out again before Sunday without the fact being known to a large number of witnesses. I was responsible for the proper officering and manning of the yacht. I personally examined the Defender's hold and every part of her on the morning of the 7th immediately before the race, and I know the absolute falsity of the imputation. I consider myself, therefore, as standing before the world solemnly charged by Lord Dunraven with an offense as base as could possibly be imputed to a sportsman and a gentleman, and which I indignantly resent and repel; and more than that, with having betrayed the confidence of my associates in the ownership of the Defender, the trust placed in me by the New York Y. C., and the good name of my country, whose reputation for fair play was involved in the contest.

"Lord Dunraven claims to have sailed the race on Saturday after being satisfactorily assured that he had been cheated in the fraudulent overloading of the Defender. He sailed the next race on the 10th with the same conviction on his mind that on the first day's race he had been cheated. He broke off the last day's race, not upon any such ground, but on the entirely distinct ground that the course would not and could not be kept clear. He went home, and after a silence of more than two months, he makes this odious charge in a communication addressed, not to me, nor to the owners of the Defender, nor to either the New York Y. C. or the Royal Yacht Squadron, whom we respectfully represented in the races for the America's Cup, but to a public newspaper on the other side of the Atlantic, which it would be impossible for me to read or reply to before it had already made a deep impression on the minds of his countrymen.

"Relying upon its belief in my integrity, the New York Y. C. deemed itself justified in placing its honor and that of the country in my hands in the conduct of the race. I could not have imagined that, in assuming that trust, I should expose myself and you to such gross imputations. But now that they have been made, I place myself in your hands, in order that the club may take such steps as it sees fit, not alone to vindicate the Defender and the honor of her owners, but also to refute the imputation cast upon the good faith of the club and the country. C. OLIVER ISELIN."

The reading of the letter was greeted by hearty cheers for Mr. Iselin. The following motion, made by Lewis Cass Ledyard, schooner Montauk, and seconded by Ogden Goelet, steam yacht White Ladye, was passed unanimously:

"*Whereas*, The London *Field* has lately made public certain charges purporting to have been made by the Earl of Dunraven in reference to the recent Cup races sailed under the challenge of the Royal Yacht Squadron; and

"*Whereas*, This club is of the opinion that, notwithstanding the extraordinary conduct of the Earl of Dunraven in respect to the time and manner of making such charges, it is due to its honor and dignity that suitable action should be taken in relation thereto,

"*Resolved*, That J. Pierpont Morgan, William C. Whitney and George L. Rives are hereby appointed a committee, with power in their discretion to add to their number, to whom the matter of said charges is hereby referred, and that said committee shall have full power to represent this club in reference to the matter, and to take, on behalf of the club and in its name, any action which may seem to them proper in the premises."

Secretary Oddie then read the following letter:

"NEW YORK, Nov. 18.—*Dear Commodore Brown:* I understand that a motion may be made at the meeting of the New York Y. C. this evening to appoint a committee of the club to look into the matter of measurement referred to by Lord Dunraven in his letter to the Cup committee of Sept. 7 last and subsequently.

"I have a cable from Lord Dunraven to-day saying that, while he thinks it is now too late to investigate, if a desire exists among the members of the club to do so he will come over here and place himself at the disposal of the club or its committee. He says that he would not be able to get away before the fourth proximo.

"Will you kindly inform either the club or the committee as you may think desirable? Yours sincerely, H. MAITLAND KERSEY."

After the reading of this letter the meeting adjourned.

Seawanhaka Corinthian Y. C.

THE regular November meeting of the Seawanhaka Cor. Y. C. was held on Nov. 12, with Com. Benedict in the chair. The race committee read its report and Secretary Hayden then read three challenges for the club's international cup: one from the Royal St. Lawrence Y. C. of Montreal, in behalf of Messrs. G. H. Duggan and F. S. Sherwood, which, being first in order, was accepted. The second was as follows:

LONDON, Nov. 7, 1895.

Secretary Seawanhaka Y. C., New York:

The Royal Corinthian Y. C. challenges for an international race in the 15ft. class for Mr. Linton Hope's Kismet. Letter follows.

T. J. F. WINSER, Sec'y.

No. 72 MARK LANE, London.

It was resolved to accept this challenge conditional on the cup being still held by the club after the races with the Royal St. Lawrence Y. C. Mr. Brand's challenge was entirely informal, nothing having yet been heard from the Minima Y. C., but a formal challenge, if received, will be accepted by the club on condition that the first and second challenges are unsuccessful.

The race committee proposed a vote of thanks to Com. Benedict for his aid in the races, and one to Vice-Com. Rouse for the construction of a defending boat. A vote of thanks was also passed to the Indian Harbor Y. C. for its hearty aid throughout the races, and in providing three boats for the trial races. Some changes were made in the by-laws by which the board of trustees is increased to nine members instead of five, one of them being chairman of the house committee. The following members were elected: Rhinelander Waldo, Frank H. Boynton, William H. Starbuck, William M. Renwick, H. T. Blodgett, C. A. Garland, A. A. Bibby, Deforest Manice, J. M. Woodbury, H. A. Van Liew, E. W. G. Welling, D. B. Burnham, C. S. Hoyt, W. H. Burgess, John R. Drexel, Howard Ford, August Z. Van Winkle, Richard Stevens, Robert Goelet, Guy Phelps Dodge, William K. Vanderbilt, Jr., Edmund Clarke and Samuel Insull.

Since the meeting it is reported that Vice-Com. F. E. Walker, Victoria Y. C. of Hamilton, Ont., will send a fourth challenge.

YACHTING NEWS NOTES.

Mr. H. C. Wintringham has just completed the designs and specifications for two very handsome steam yachts, the larger, of 140ft., to be built of steel; the smaller, some 20ft. shorter, of composite construction.

Dr. Wm. C. Herring, owner of the schooner Mohican, which was burned last March at Shoreham, Eng., has won his suit for $15,000 insurance on the yacht.

John R. Fell, Cor. Y. C. of Philadelphia, owner of the steam yacht Baracouta, died at his home in Philadelphia on Nov. 16, at the age of 35.

Canoeing.

AFTER all that has been urged for the Lake Champlain sites, Willsborough and Bluff Point, in the last few years, it is somewhat of a surprise that the return to the St. Lawrence River and Grindstone Island came so quietly, so naturally and as almost a matter of course. Very little has been said about it this year, and much has been said at the past meet, as at the preceding ones, in favor of Lake Champlain; but all at once opinion seems to have changed in favor of the St. Lawrence.

We look to see a very pleasant and successful meet at old Grindstone, under the management of Com. Huntington. The material features of the camp are likely to be well looked after, and the preliminary arrangements, so far as they have gone, are very satisfactory; the site has been obtained, the Delaneys have arranged to supply ice, meat, etc., as in the past, and the manager of last year's mess at Bluff Point has signified his willingness to undertake it this coming season. The idea of revisiting the old camp ground will bring back many who have not been seen at recent camps, and the fame of Grindstone, as oft recounted by the old fellows, will bring many of the newer ones.

WHILE we look forward with pleasure to the meet of 1896, it is with a certain apprehension that there may be some disappointment on all hands. To the old men the camp on Eel Bay will recall memories of many who are absent and of some, like Fairtlough, Lloyd Thomas, Carter and Van Deusen, who are dead; and the pleasure of the reunion will be dimmed by sad recollections. While the three camps at Grindstone were, in location and arrangements, the best the Association

has ever known, their one great charm was in the familiar intercourse of many old comrades, practically the same set of men attending each year. This inner circle of canoeing has long since been broken, and the old men—those who made the A. C. A., Bishop, Oliver, Vaux Bailey, Richards, Rathbun, with Tyson, Jack Weller, Neilson, Baldwin, Ford Jones, Whitlock, Phil Wackerhagen, Kirk Munroe, Westcott and Andrews, all of the old Grindstone's party—are seldom seen at the meets. We hope that this year may bring back many, but it will bring them back, if at all, older, busier, and long out of racing; and nothing can bring back, in one short year, the old-time fellowship that did so much to strengthen the A. C. A. in its earlier years.

THE financial report of the year is most gratifying, not only in that it shows that the past year, with a meet quite equal in the perfection of its arrangements to the previous ones, the Association has actually made nearly $600, and has now a sinking fund of over $1,000 in place of a debt of $500 just four years ago; but because it shows that, with ordinary economy and good business management, there is money enough to conduct a first-class meet, to provide adequate transportation between the camp and the nearest town, and to purchase instead of begging all prizes; with a neat balance over each year toward the purchase of a permanent camp site. Commodore Witherbee has every reason to be proud of an administration which, while suffering nothing in comparison with the previous ones in the management of the camp and meet, has at the same time made such a successful financial showing.

The excellence of the work of the camp site committee of 1895 has been recognized by all who attended the meet, and it is highly gratifying, after the large sums spent at times in preparation of the ground for a two weeks' camp, to find that the net cost to the Association this year has been under $100. While all of the members of the camp site committee were present during the meet, each doing his share of the work, the credit for the excellent business management of the committee's finances is due chiefly to the present commodore, then chairman of the committee.

THE question of transportation between Clayton, Gananoque and Grindstone would be a very simple matter if it were not for the wise and beneficent regulations made by this Government apparently for the annoyance of American citizens. By a law of long standing, no Canadian vessel is permitted under heavy penalties to call at two American "ports" in succession. In other words, the small steamers plying between Gananoque on the Canadian side, and Clayton, owned by the company of which ex-Com. Rathbun is the head, could and would make the trip from Gananoque to Clayton, taking on passengers, and then to the camp, just on the boundary line; the service being reasonably expeditious and convenient and quite cheap. Here the law steps in; having taken on passengers at the American port of Clayton, the vessel is not allowed to land them at the American port of the A. C. A. log dock at Grindstone Island. Canoeists from Clayton might take the boat, stay on it while it stops at the camp and lands its passengers from Gananoque, proceed to that port and return on a later trip, but such a loss of time is out of the question. Unless that ancient and probably useless restriction is waived for this special occasion by the Treasury Department, some independent and more expensive means of transit between Clayton and the camp must be arranged.

American Canoe Association.

EXECUTIVE COMMITTEE, 18TH ANNUAL MEETING.

Rome, N. Y., Monday, Nov. 11, 1895.

PRIOR to 1883, the business of the American Canoe Association was transacted at a "pow-wow" around the camp-fire or in the wigwam at Lake George, the pipe of peace—a veritable calumet of the Delaware Indians—being passed around the circle. When a more complex organization was found necessary, in 1883, an executive committee was created, to meet in the fall of each year and select a camp site, elect general officers and attend to other business of the Association; this plan being further elaborated with the formation of divisions in 1886. Since then the annual meetings of the executive committee have been held in various places, as designated by the incoming commodore—Albany, New York, Boston, Toronto, Kingston, Oswego, and finally in Rome, the home of Commodore W. R. Huntington and of the Deowainta C. C.

The meeting was called to order by Com. Huntington at 10 A. M. on Monday, in a parlor of Stanwax Hall, the following members answering to the roll as called by Sec'y-Treas. T. H. Stryker: Librarian, W. P. Stephens; Atlantic Division—Vice-Com., James K. Hand; Rear-Com., W. C. Lawrence, by C. V. Schuyler, proxy; Purser, H. M. Dater; executive committee, H. L. Quick, H. H. Smythe and P. F. Hogan. Central Division—Vice-Com., H. D. McVean, by L. C. Allen, proxy; Rear-Com., A. T. Smith; Purser, W. H. Martin; executive committee, H. V. Backus. Eastern Division—none; Mr. Paul Butler, of the Board of Governors, as proxy for Howard Gray, of executive committee. Northern Division—Vice-Com., A. H. O'Brien; Rear-Com., D'Arcy Scott; Purser, D. H. McDougal, by W. G. McKendrick; executive committee, F. C. Johnston, by J. W. Sparrow, proxy. Dr. W. J. Nellis, of the Central Division executive committee, arrived during the meeting.

The minutes of the annual meeting of November, 1894, were read and approved, also the minutes of the two meetings held in camp last August. The following reports were then read; we have been unable to obtain a copy of the secretary-treasurer's report:

REPORT OF CAMP SITE COMMITTEE, 1895.

Expenditures.

Labor and teams	$196 32
Tents for headquarters	159 62
Tent pegs	3 50
Lumber	252 63
Nails	15 28
Flag poles	2 00
Disinfectant	8 94

Services of man on boat	2 00
	$14 97

The purser of the Central Division made no report of any kind, and a motion was made and passed to the effect that he be requested to forward a formal report, the commodore and secretary-treasurer being empowered to receive it if properly audited. The purser of the Eastern Division forwarded merely a press copy of an informal statement of his accounts, which was accepted conditionally on the presentation of a properly made out and audited report. The pursers of the Atlantic and Northern Divisions presented reports in proper form and duly audited, which were accepted by the committee, with the reports of the secretary-treasurer, camp site committee and regatta committee, the latter being laid on the table for future action on the proposed changes of rules.

The following new committees for 1896 were then announced by Com. Huntington: Camp Site—J. R. Robertson, chairman; J. S. Wardwell, Rome, N. Y.; F. F. Andrews, Rochester, N. Y., and J. G. Frazer, Ogdensburg, N. Y. Transportation—J. K. Hand, New York, chairman; C. V. Winne, Albany, and F. S. Rathbun, Deseronto. Regatta Committee—W. C. Witherbee, Port Henry, N. Y., chairman; E. D. Edwards, Peterboro; Butler Ames, Lowell, Mass.

Mr. Wardwell made a verbal report for the new camp site committee, recommending the old camp ground on Grindstone Island, which was received with hearty applause. He reported that the site could be had from Mr. Will Delany, who would furnish ice, etc.; that arrangements for transportation between Gananoque and Clayton were in progress, and that Mr. Mulvany, who managed the mess at Bluff Point last summer, would be willing to undertake the mess at Grindstone.

No arrangements had as yet been made for providing electric light for the camp, and it may not be possible to do so, consequently the committee recommended that the date be made from Aug. 14 to 28 in order to get the benefit of the full moon. This provoked a very long discussion, some favoring the middle two weeks of Aug., 7 to 21, but the original date was finally chosen after a close vote. No objection was made to the proposed site, and no others were mentioned.

A recess was taken to permit of a meeting of the Board of Governors; only Mr. Paul Butler, of the Eastern Division, was present, the other divisions being represented by proxy. After the meeting the board reported that it would continue the arrangement made last year, allowing to the officers and committees 80 per cent. of the total receipts for the present year to cover running expenses; at the same time advancing $250 to the Sec'y-Treas. until money was received from the divisions in the spring.

The question of the Year Book was taken up, bringing out a number of proposals, most of them impracticable or undesirable. As the report of the secretary-treasurer shows, the book is now not only self-supporting, but an actual source of profit to the Association. It was proposed that the book be published with no advertisements; that it be published with just enough advertisements to pay the cost, leaving no profit; that it should include the flags, in colors, of all the clubs, a complete list of all clubs and the dimensions and class of all canoes. If all these improvements were adopted, it is probable that there would be a loss of $500 per year as compared with the present method. It was finally decided after much discussion that the book should be published, as now, with the advertisements, and that each division purser should furnish to the secretary-treasurer a list of clubs and club officers in his division, to be printed in the book, and that the proofs of lists of members should be sent to each purser for final correction before printing.

The associate list was then taken up and some changes made, the following ladies being elected: Miss Cartwright, Miss Mary F. Cartwright, Kingston; Miss Wright, Miss Marion H. Wright, Miss Margaret J. Wright, Miss Martha J. Robbins and Miss Lillarene R. Hopkins.

Vice-Com. Hand offered a resolution to the effect that the executive committee disapproves of the use of the A. C. A. burgee with any lettering other than as prescribed by the by-laws, which was carried with very little discussion. Mr. Hogan recommended that the regatta committee be instructed to provide boats to patrol the course and lend aid in the event of capsizes. The discussion showed that such a provision was generally approved, it being suggested that two good rowboats in the middle of the triangle, or two or more war canoes of suitable size, with crews of about four each, would make the most efficient lifesaving corps. No formal action was taken, the matter being left to the regatta committee.

The report of the regatta committee was then taken from the table, but owing to the recommendations not having been published for fourteen days, no final action was taken. A number of proposals for the change of the racing rules were taken up, however, and discussed, those approved by the committee to be passed upon by a mail vote. Mr. Butler started with the proposal to drop from Rule I., Par. 1, the words "except the unclassified boats, etc.," and to substitute a new clause, "Sail area shall be limited to 130sq. ft." Mr. Quick seconded the motion, which was generally approved and unanimously carried. The question of a limit of size for the so-called "club four" race, or more properly for canoes for four-men crews, was taken up and discussed, the following amendment, proposed by Vice-Com. O'Brien, being finally adopted: Add to Rule I., to follow Par. 5, "Canoes for four-men crews shall not exceed 20ft. length and shall have a minimum beam of 30in." On motion of Mr. Scott, it was recommended to the regatta committee that it should insert in the race programme a provision that canoes in the tandem paddling race, event 16, shall not be less than 30in. in beam and 55lbs. in weight. Mr. Butler moved, seconded by Mr. Quick, that Rule I., Par. 2, be amended to read: "The centerboard, when hauled up, must not project below the keel." The words, "must not drop more than 18in. below the garboards," which had been in the rules since 1881, are hereby omitted, the motion being carried with no dissenting voice. Several members spoke in favor of removing the limit of drop, as it has long since ceased to be of use. On Mr. Butler's motion the following words were omitted from Rule I., Par. 5, defining the cruising canoe: "The sliding seat shall not be longer than the beam of the boat, and."

Rule V., Par. 2, was amended by inserting after the word "men" on fourth line, the words "provided ten or more men finish; prizes shall only be given for each two or fraction of two finishing." The object of this was to meet the contingency, never contemplated a few years ago, but met with now, of but five or less men competing for the record, each receiving a prize. The motion was passed and Mr. Scott then brought up the matter of the lettering on the record flags, suggesting that the present lettering was insufficient, and that it be changed, which was done by a proposal to omit in Rule V., Par. 2, lines two and three, the words "with the year and race plainly marked thereon;" and to substitute the words "paddling, sailing, or record, as the case may be; the letters A. C. A.; and the year, expressed in full figures."

A motion was then made by Mr. Quick that the giving of silk flags be abandoned and that a metal shield or some similar emblem be given

GENERAL SUMMARY OF RACES, 1895.

Six events—the club sailing, cruising "go-as-you-please," unclassified, novice combined, hurry-scurry and war canoe—had no entries for not more than one; and five had but two starters. Only nine events out of twenty-four scheduled showed four or more starters. Six entries failed to start at all. But fifteen of the entries started four or more times.

(The above table and summary are somewhat enlarged from the official report.)

instead. It was urged that the silk flags decay in about five years, and that a permanent trophy in the form of a silver or bronze shield mounted on polished wood would be permanent and quite as valuable as a souvenir. The proposal was favorably received and it was decided to leave to the regatta committee the question of putting it in practical form. Mr. Sparrow proposed that the allotment of prizes for each different event should be made before instead of after the event was decided; the proposal was favorably discussed, but no action was taken. Rule V., Par. 6, was changed by omitting in line five the words "rig or" and substituting in line ten the word "trial" for "unlimited." All of these proposed changes will be submitted to the entire committee by a mail vote. Vice Com. O'Brien moved that the Canadian journal, *Athletic Life*, be made an official organ of the association. After discussion it was decided that this journal, being a monthly, would not be available as a means of giving speedy notice of the names of applicants for membership, but that such names and other A. C. A. matter might be published. The following was finally passed: "It is the sense of this meeting that names of applicants shall be published in the FOREST AND STREAM and other official organs." The meeting then adjourned. In the evening the guests were entertained by the Deowainsta C. C. at a dinner in the hotel, followed by a visit to the Rome Club; most of the party leaving on the midnight train for New York, Albany and Boston.

The report of the regatta committee is as follows:

REPORT OF A. C. A. REGATTA COMMITTEE, 1895.

The 1895 regatta committee respectfully report the following result of the races held at the annual meet at Bluff Point on Lake Champlain, August 9 to 23, 1895:

RECORD.

Event:	1	2	3	Total Points.
Wasp, Howard Gray	5	3	5	12
Az Iz, J. R. Stewart	4	3	0	7

In Event 3 Az Iz was disabled immediately after the start and was obliged to withdraw after finishing the first round, but the committee allowed her to count 0 on the record.

RACES.

Event No. 1, combined. Start 10:11:

				Points.
Wasp, Howard Gray	10 35 02	11 07 18	0 55 42	5
Az Iz, J. R. Stewart	10 34 35	11 08 43	0 56 17	4
Eel, J. W. Sparrow	10 34 47	11 09 19	0 57 41	3
Kit, H. W. Treadway	10 34 28	11 12 03	1 01 03	2
Kiowilla, C. E. Cragg	10 33 40	11 18 03	1 07 03	1
Crescent, C. Cartwright	Withdrew.			0

Event No. 2, paddling. Start 5 P. M.:

	Place.	Points.
Eel, J. W. Sparrow	1	5
Kit, H. W. Treadway	2	4
Az Iz, J. R. Stewart	3	3
Wasp, Howard Gray	4	2
Kiowilla, C. E. Cragg	5	1

Event No. 3, sailing:

					Points.
Wasp, Howard Gray	5 34 28	5 53 15	6 14 15	0 59 15	5
Az Iz, J. R. Stewart	Disabled.	Withdrew.			0
Eel, J. W. Sparrow	Withdrew.				0
Kit, H. W. Treadway	. . . .	. . . .	. . . .	. . . .	0
Kiowilla, C. E. Cragg	. . . .	. . . .	. . . .	. . . .	0

Event No. 4, trophy paddling:

	Time.
R. O. King	0 08 49
D'Arcy Scott	0 08 51

Paddled in service canoes.

Event No. 5, trophy sailing, 9 miles, start 10:10:

	1st.	2d.	3d.	4th.	5th.	Finish.	Elap'd.
Wasp	10 28 48	10 47 17	11 06 15	11 24 53	11 43 46	12 00 07	1 50 07

Northern Div. Crew—D'Arcy Scott, R. O. King, J. W. Sparrow, F. S. Howard	Swamped.	

Event No. 18, paddling upset:

J. R. Stewart	1
C. W. Lansing	2
Thos. Hale, Jr.	3

Event No. 19, sailing upset. Start 3:00:21:

	Finish.	Elapsed.
Pagan, C. W. Lansing	3 50 20	0 49 59
Az Iz, J. R. Stewart	3 50 40	0 50 19

Event No. 20, hurry scurry: No starters.

Event No. 21, swimming:

D'Arcy Scott	1
W. F. Brown	2
Wendel Sandrock	3

Event No. 22, war canoe: No starters.

Extra No. 23, Jabberwock trophy. Start 2:55:

Az Iz, J. R. Stewart	3 10 23	3 30 08
Zaidee, H. V. Backus	3 10 50	3 31 38
Kit, H. W. Treadway	3 13 05	3 50 08
Kiowilla, C. E. Cragg	3 15 00	Withdrew.

Extra No. 24, Hotel Champlain Cup. Start 2:50:

Mab, C. E. Archbald	3 46 36	0 56 36
Az Iz, H. L. Quick	3 47 30	0 57 00
Bug, Paul Butler	3 47 30	0 57 20
Wasp, Howard Gray	3 50 16	1 00 16
Zaidee, H. V. Backus	3 52 55	1 02 55
Bee, D. S. Goddard	3 56 32	1 06 32

Sailed as part of event 6, course three rounds, 4½ miles.

The committee are under obligations to Com. Witherbee for relieving them of the responsibility of securing prizes, which duty he performed by personal correspondence. We are aware that it was his intention to write personal letters thanking each one, and should any not have received such, it is due to their gifts having been sent in during the meet, when the name might accidentally have been omitted from the list. The committee also wish to thank for the Association and for themselves the donors of prizes, as follows: Mrs. H. V. Backus, Miss Smith, Mrs. R. C. Black, Miss L. Francis, Miss F. Archbald, Mrs. W. C. Witherbee, Mrs. Bowman, Misses Braine, Mrs. C. G. Belman, Mrs. W. H. Cotton, Miss E. Draper, Miss F. Dartnell, Mrs. Howard Gray, Mrs. Heron, Miss E. Pauline Johnson, Mrs. Leigh, Mrs. Lawrence, Mrs. F. L. Mix, Mrs. Mather, Miss Wiser, Miss Lillie Sherwood, Misses McVean, Miss Scott, Miss M. Leonard, Mrs. McLaughlin, Mrs. Holden, Miss Severance, Mrs. Warner, Miss G. Fraser, Mrs. Hittler, Messrs. J. F. Turrill, Robert P. Wakeman, Peterborough Canoe Co., Knickerbocker C. C. and Hotel Champlain.

In addition to the full official record of the races and donors of prizes, the report of the 1895 regatta committee is as follows: Owing to the absence of two of the regularly appointed regatta committee, Mr. E. M. Fulton was appointed a substitute. Mr. Fulton very kindly placed his yacht Gadabout at the disposal of the committee for the entire meet, of which we take this opportunity to express our appreciation. We also desire to thank Messrs. James A. Smith and Percy F. Hogan for their services as clerk of the course and starter respectively, and Mr. Carpenter for the use of his yacht and assistance in logging courses, placing buoys, etc., and the Rochester C. C. for the use of their cannon for starting races. Several letters are herewith submitted, from members who have been good enough to favor us with their opinions concerning a modification of the sailing rules. In consideration of these expressions, and of the general sentiment of our members, so far as we have been able to learn, we beg to suggest the following changes:

First. In Rule 1, lines 7 and 8, strike out words "except the unclassified boats, to which class the limits of length and breadth only shall apply."

Second. In Rule 1, lines 24, 25, 26 and 27, defining the dimensions of cruising canoes, make such changes in size of well and restrictions to centerboard as shall meet the requirements of the improved modern cruising canoe.

Third. Provide a rule that shall limit the length of the sliding seat, for all races, to not exceeding the beam of the canoe.

Fourth. Provide a rule that shall make the limit of length and beam of canoes for club fours sufficiently larger than the dimensions of the regular limits to meet the requirements for such races.

And we would further suggest that the executive committee recommend to the incoming regatta committee that they provide races similar to event 9 (limited sailing) and event 21 (swimming) on the programme of this year; and that they consider the advisability of continuing the classification as used in events 7 and 8.

(Signed) MORTON V. BROKAW, Chairman,
FRED. A. NICKERSON,
H. K. TILLEY,
E. M. FULTON,
Regatta Committee.

To the report are appended several letters containing suggestions to the committee, most of which were published in the FOREST AND STREAM last spring. The following, however, was not published then:

TEHERAN, Persia, March 30, 1895.

Chairman Regatta Committee A. C. A.:

Dear Sir—I have read with much interest the plan of the A. C. A. to revive the sport of canoe racing by a system of handicapping; and although I shall not have the pleasure of taking part in the meet of 1895, yet I shall watch closely the events attending your handicapping experiment.

As I consider it to be the duty of every racing canoeist to give the committee the benefit of his experience or advice, I beg leave to lay before you the following suggestions, in the hope that you may find it of some use in determining upon a system of handicapping.

My observation in England last summer led me to believe that in canoe and small yacht sailing, as well as in larger craft, the most satisfactory results are to be obtained by a system of handicapping based on length and sail area, and that, except in individual cases, or exceptional circumstances, the handicapping rule should be hard, fast and immovable, in order that men might have a definite standard to build to in planning boats for future racing. Anything in the way of sealed handicapping or temporary guess work is, in my opinion, most injudicious. I would suggest, therefore, that as a basis of your deliberations you take the rules of the Seawanhaka Corinthian Y. C. of New York, and the Yacht Racing Association of England. For the purpose of canoe racing I think that the Y. R. A. rule is to be preferred, as it is much simpler in form and places a greater penalty on sail area.

It seems to me that if new men are to be encouraged to take up canoe racing, and the veterans of the sport are to be encouraged to come back and compete with the present day experts, a very considerable tax should be placed upon sail area. Every inducement should be given for the improvement of form of hull; and to that end I think that hull should not be taxed, lest the racing canoe degenerate into a tub.

The Y. R. A. rule is as follows: $\frac{L \times S.A}{6000}$ = Rating. This rule is especially good for small raters, whatever tendencies it may have to produce boats of abnormal beam in the larger classes. It would be difficult to imagine a better rule for half-raters and under. The Seawanhaka rule is practically the same, with the exception that it does not place so great a tax on sail area. In canoe racing, if the modern experts desire to carry great spreads of sail, they should be made to pay a heavy penalty for it. In this way we may in time work out a better all-round racing canoe, that will give every man a fair chance in most of the A. C. A. events. MR. WILLARD HOWARD.

Rifle Range and Gallery.

Pacific Slope Riflemen.

SAN FRANCISCO, Cal., Oct. 27.—The following scores were made to-day by members of the Columbia Pistol and Rifle Club at Shell Mound range:

Kuhnle rifle medal, 200yds: Dr. L. O. Rodgers 88, H. R. Crane 74, F. O. Young 72, G. Schultz 68.

Rodgers ladies' medal, 50yds., .22cal. rifles: Mrs. O. M. Peck 93, 95, 96.

Military rifle medal (circular 8in. bullseye):

F Poulter	5	5	5	5	5	4	4	5	5	—48
E Hovey	5	4	5	5	4	5	5	4	5	—47

Blanding medal, pistol, 50yds.: C. M. Daiss 94, J. E. Gorman 93, F. O. Young 92, Dr. Rodgers 89.

Nov. 10.—The weather conditions were unusually good, and all the shooting clubs were out in force. The Schuetzen Verein had a turkey shoot for its members, 3 shots allowed. A. H. Pape was high man, 73 on German ring target.

The Nord-Deutscher Club held a bullseye shoot and the Germania Club a monthly medal shoot. In the latter the winners were:

Champion class—Dr. Rodgers 421; first class—H. Huber 403; third class—N. Ahrens 422.

The Columbia Club's targets were kept busy all day, some good shooting being done. Scores: Pistol, 50yds.; rifle, 200yds.; standard target:

For members only, no re-entry:

Champion class: F. O. Young 91, S. Carr 89, Pape 85.

First class: Dr. L. O. Rodgers 91, A. B. Dorrell 87, D. W. McLaughlin 86, F. Poulter 76, A. Gehret 73.

Second class: A. Fetz 82, E. Jacobsen 75, Kennedy 65.

Pistol, Blanding medal, re-entry: S. Carr 93, 94, 94, 95; J. E. Gorman 92, C. M. Daiss 91, Young 89.

Military rifle: E. Hovey 46, 46, 46, 47; F. Poulter 46, 46, 46; F. O. Young 45.

Target rifle, members only, no re-entry:

Champion class: D. W. McLaughlin 91, Dr. Rodgers 89, Young 83.

First class: P. Bohr 86, H. Hellberg 80, A. Gehret 79, A. B. Dorrell 76, F. Poulter 73, G. Schulz 70.

Second class: J. E. Gorman 73, G. Barley 69, A. Fetz 71, Jacobsen 72, A. H. Kennedy 68, Crane 66, Unfred 54.

Kuhnle medal, target rifles, re-entry: Dr. L. O. Rodgers 89, Young 86, McLaughlin 85. ROEEL.

Turtle Bay Rifle Club.

NEW YORK, Nov. 10.—A prize shoot of the members of the Turtle Bay Rifle Club was held to-day at Woodside. Some handsome prizes were awarded the winners. It was a cause for regret Captain Jantzer was unable to attend the shoot on account of illness. The scores were:

Distance, 128ft., .22-cal. rifles:

C H Plate	204	204	213—621	W Lubeck	183	193	206—581
J Ochs, Jr.	198	215	202—615	F Pophusen	156	169	175—500
H Walter	210	190	201—601	J Hassmer	109	106	110—415

A special match was also shot between C. H. Plate and H. Walter—the latter a member of the Empire Athletic Club—the former winning by only 8 points:

Plate	186	216	—402	H Walter	184	210	—394

J. OCHS, JR., Secy.

Zettler Rifle Club.

NEW YORK, Nov. 15.—The winter season of the Zettler Rifle Club was opened this week, 18 members taking part in the opening shoot:

Conditions: 75ft., 25 ring target.

Dr. J. A. Boyken 247, M. B. Engel 247, L. Flach 247, F. C. Ross 247, R. Busse 246, Henry Holges 246, B. Zettler 246, C. G. Zettler 244, P. Fiegel 241, H. S. Mueller 240, A. Kronsberg 238, H. Muntz 238, S. Buzzini 237, G. W. Downs 235, A. Klein 232, William Soll 230, Col. H. Fabrourais 224, F. C. Roidel 206.

The list of prize winners for the spring and summer season, which commenced on April 14 and closed a week ago, is not a large one considering the membership of the club, and the attendance which characterized the weekly shoots of the club up to the time of the National Schuetzenfest at Glendale Park; up to that date the average of attending marksmen for the 13 shoots was 22, a number that shows the members were interested in their work. After the Schuetzenfest they seemed to lose interest and the result was that only ten men qualified for prizes. The Brooklyn *Eagle* gives the following on the subject:

"All the shooting in the tournrment was done at the 200yds. range and the main condition was that each man's best fifty scores of ten shots each would count, so that in order to qualify for a prize a member would have to fire 500 shots or over during the season. Champion Ross made a total of 11,215 points out of a possible 12,500, an average of 224 and a little over for ten shots, and the fine average of nearly 22½ per shot for 500 shots. His highest score was 232 for a series, and at that he was beaten by George W. Plaisted, who made 235 out of a possible 250, the high score of the tournament for ten straight shots. The ten men divided $325 in cash prizes. Besides that, Ross, Plaisted and Gus Zimmermann, with 73 points each out of a possible 75, and John Blumberg, with 72 points, divided the cash prize of $25, presented by Charles O. Wissel for the best straight target of honor scores."

The following table shows each man's total number of points scored, his average per ten shots, and his highest ten-shot score:

	Total points.	Average for 10 shots.	High score for 10 shots.
F C Ross	11215	224.3	232
L Flach	10932	218.6	232
H Holges	10919	218.2	232
G W Plaisted	10665	213.3	235
M B Engel	10602	212	226
L P Hansen	10455	209.1	231
C G Zettler	10377	207.5	223
B Zettler	10150	203	226
G Krauss	9914	198.2	215
J Blumenberg	9908	198.1	221

Pittsburg Rifle Club.

PITTSBURG, Pa., Nov. 12.—A good attendance marked the opening night of the Pittsburg Rifle Club's tournament, sixteen riflemen being present and taking part in the contests. Al. Hofmeister, Ingersol, Aber, Sperling and Kestner did the best work. Following are the scores:

German ring target, 3 shots, 60ft.:

L F Ingersol	73	74	75
Goldstrom	68	69	71
Smidt	59	60	62
Barrett	62	65	70
Kestner	60	62	73
Galbraith	65	66	69
Grau	60	63	67
A Hofmeister	62	64	67

Honor target:

Albert Hofmeister	71		
L F Ingersol	70		
L P Ittel	67		
J C Dias	67		
H Spurling	66		

Al. Hofmeister	70	72	74
Dias	67	68	69
Sperling	70	71	71
Sorg	64	65	69
Aber	71	71	72
Ittel	69	70	72
Burt	66	70	70

Dr D L Aber	66
W C Galbraith	61
J J Barrett	57
C N Burt	56
J A Jacobs	54

Ross-Martin vs. Dorrler-Plaisted.

NEW YORK, Nov. 18.—Riflemen in this section will have a chance on Thanksgiving Day of witnessing a good four-handed match at Cypress Hills Park, Brooklyn, between Fred. C. Ross and Ignatz Martin on one side, and M. J. Dorrler and G. W. Plaisted on the other. The conditions will be: 200yds., German ring target, off-hand shooting, 100 shots per man, Zettler Rifle Club rules to govern; all the contestants are members of the Zettler Rifle Club. The match may be styled Brooklyn vs. New Jersey, as Ross and Martin live in the City of Churches, while Plaisted and Dorrler are both residents of New Jersey.

The match is for a stake of $200, and is the second that has taken place between the two teams. In the first match Ross and Martin won by 39 points, and this pair are the favorites in the coming contest. Given a fine day and perfect weather conditions, the affair ought to be productive of some fine scores, as the shooters are among the best in the country.

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

Nov. 26-27.—ATLANTA, Ga.—Amateur tournament of the Kirkpatrick Hardware Company; targets; professionals barred.

Nov. 26-28.—DES MOINES, Ia.—Tournament of the Des Moines Gun Club; live birds and targets. C O Perkins, Pres.

Nov. 28.—CANAJOHARIE, N. Y.—Thanksgiving tournament of the Canajoharie Gun Club; live birds and targets. Chas. Weeks, Sec'y.

Nov. 28.—RYE, N. Y.—Thanksgiving tournament of the Rye Gun Club; live birds and targets; shooting commences at 10 A. M. E. J. Pope, Sec'y.

Nov. 28.—MARION, N. J.—Thanksgiving tournament of the Endeavor Gun Club; targets. J. A. Creveling, Sec'y.

Nov. 28.—CHICAGO, Ill.—Thanksgiving tournament of the Eureka Gun Club; targets. W. F. de Wolf, Sec'y.

Nov. 28.—INDIANAPOLIS, Ind.—Thanksgiving tournament of the Limited Gun Club; targets. Royal Robinson, Sec'y.

Nov. 28, 29.—MORRISTOWN, N. J.—Two days tournament at the Morristown Driving Park; live birds. Frank Class, proprietor.

Dec 7.—HOLMESBURG JUNCTION, Pa.—Team race, 25 men to a team, between All-Philadelphia and the Delaware State League; all day shoot on the grounds of the Keystone Shooting League.

Dec. 19, 20.—ELIZABETH, N. J.—Fifth bi-monthly tournament of the Elizabeth Gun Club; first day, targets; second day, live birds.

1896.

Jan. 4.—WILMINGTON, Del.—Second team race between All-Philadelphia and the Delaware State League, 25 men to a team; all day shoot on the grounds of the Wilmington Rod and Gun Club.

Jan. 4-5—PHŒNIX, Ariz.—Annual tournament of the Arizona State Sportsmen's Association.

Jan. 9-11.—SAN ANTONIO, Texas.—Grand mid-winter tournament, under the auspices of Texas State Sportsmen's Association and management of J. M. George and O. C. Guessaz (Texas Field).

Feb. 1.— ———.—Third team race between All-Philadelphia and the Delaware State League, 25 men to a team. (Place of shoot not fixed.)

April 1-3.—NEW YORK.—Interstate Association's Fourth Annual Grand American Handicap.

April 14-17.—ATCHISON, Kansas.—Thirteenth annual open to all, and second annual manufacturer's amateur tournament; $1000 added money and manufacturers' prizes. Lou Erhardt, Sec'y.

May 5-8.—NEW YORK.—Tournament of the American E. C. Powder Company; $2,000 added money.

May (second week) —MEMPHIS, Tenn.—Tournament of the Memphis Gun Club, $2,000 added money.

May 12-14.—DAYTON, O.—Annual tournament of the Ohio Trap-Shooters' League. Ed. Taylor, Sec'y.

May 19-22.—CINCINNATI, O.—Tournament of the Hazard Powder Co.

R. S. Waddell, Agent.

May 20-24.—KANSAS CITY, Mo.—Nineteenth annual convention and tournament of the Missouri State Fish and Game Protective Association, J. H. Durkee, Sec'y.

May 26-28.—FRANKFORT, Kan.—Annual tournament of the Kansas State Sportsmen's Association.

May 30-June 1.—MILWAUKEE, Wis.—Eleventh annual tournament of the South Side Gun Club.

June 8-13.—BUFFALO, N. Y.—Thirty eighth annual tournament of the New York State Association for the Protection of Fish and Game, under the auspices of the Audubon Gun Club. E. W. Smith, Sec'y.

June 17-19.—CLEVELAND, O.—Third annual tournament of the Chamberlin Cartridge and Target Company.

July 30, 31.—GOSHEN, Ind.—Midsummer tournament of the Goshen Gun Club.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 318 Broadway, New York.

Charlie Fehrenbach (Bilderbach), of Wilmington, Del., writes us under date of Nov. 11 as follows: "Arrangements have been completed for a 25-men team race between All-Philadelphia and the Delaware State League, i. e., Philadelphia proper against the Diamond State, A. S. A. rules to govern, 25 targets per man. The first race will be shot on the Keystone League grounds, at Holmesburg Junction; the second race on the Wilmington R. and G. Club gronnds, this city; the place for holding the third race to be decided by the winners of first race. As this will be an all-day affair, the following sweepstake programme has been announced by the Keystone League for Dec. 7. (First race): No. 1, 10 targets, known angles, $1; No. 2, 10 targets, unknown angles, $1; No. 3, 15 targets, known agles, $1.50; No. 4, 15 targets, unknown augles, $1; No. 5, 20 targets, known angles, $2; No. 6, 10 targets, unknown angles, $1; No. 7, 10 targets, known angles, $1; No. 8, 20 targets, unknown angles, $1.50; No. 9, 10 targets, known angles, $1; No. 10, 15 targets, unknown angles, $1.50. If 20 entries or over in the 15 and 20 targets, 5 moneys. Entertainment committee, W. Wolstencroft, H. Thurman and Jos. Leaming. Harry Thurman will captain the All-Philadelphia team and Chas. Fehrenbach will captain the Delaware State League. First race, Dec. 7, '95; second race, Jan. 4, '96; third race, Feb. 1, '96."

W. H. Brady, of Detroit, Mich., a member of the Swan Creek Club, in a letter to us relating to other matters tells of a few days' sport he has had recently: "I have been north of Alpena to Grand Lake with Joe Marks, of Hodgson & Howard, whom I presume you met when you were here. We went from Detroit to Alpena with Ed Gillman, Louis Duryea and other members of the Turtle Lake Shooting Club; they were going on their annual deer hunt to that point in a special car from here, and they invited us to join their party until we arrived at our destination. There we were met by our friend, George MacDonald, of Alpena, who had a team and outfit; we then drove twenty-six miles north to Grand Lake. It is a beautiful inland lake, eleven miles long and two miles wide, and has thirty-seven islands on it. The east side is lined by a high bluff on which they have a fine club house used principally for outings in the summer. We made our headquarters there for about four days, hunting ruffed grouse, making a nice bag of fifty birds. Before I went north to Alpena I had two days' duck shooting at the club while Parker was away at Atlanta; I bagged sixty-three redhead, mallard and teal." Mr. Brady is now in Detroit, chained to business, but he enjoys life fairly well notwithstanding, as he does the next best thing—he reads FOREST AND STREAM.

At the Altoona, Pa., Gun Club's annual tournament, held last July on the summit of Wopsononock Mountain, the visitors made the Wopsononock Hotel their headquarters. Every evening after dinner the poolroom of the hotel was the general lounging place; experts, semi-experts and duffers, all measured their skill with the cue. The only drawback to the evening's amusement was the lack of chalk, there being but one small piece for both tables. Dutchy Smith, who by the way is an expert cueist, took charge of that piece of chalk, everybody whose cue needed any attention in that line going to Dutchy to have it chalked. So jealously did he guard that chalk that on his return to his home in Plainfield, N. J., he found it reposing in his pocket. It now seems that he has lost it, for we have received the following card: "$5 rewarts. For dea peobels dot stole dea las pieses of chaks dot wos at dea pool rooms uf dea Wopsononok Mountains Hotel at dea dime uf dea Altoona shuting tournements, July 10, 1895. Dea above liknes is dea correct pikture uf dea chaks. Ef found dea above rewarts will bea giving by me—Irish." ("Dea obove pikture" is a photograph, actual size, of the piece of chalk.)

The Des Moines (Ia.) Gun Club will hold its annual autumn trap shoot on Nov. 26-28. In sending out its programme, which contains events both at live birds and at targets, the club says: "You will notice that in the division of purses we have departed from the customary sweepstakes method, and make all divisions under the equitable system. We feel confident that the amateur shooters throughout the State will appreciate this departure from the old custom, under which it was possible for the expert trap-shot to win a good income for two or three months in two or three days. We regret it is not possible to adopt a plan of purse division under which all may be winners, but we are confident our effort to popularize a system whereby the good shooter may win some and the poor shot lose but little will meet the approval of our club members and visiting friends." The four and five-place equitable provides that each man shooting into a place shall receive an equal amount for each bird killed or each target broken. The four-place equitable will be used on the first day, the five-place equitable on the second; the "full equitable," used on Nov. 28, gives each contestan participating in an event an equal amount for each bird or target scored.

Is this another instance of "mental telegraphy" such as was outlined by Mark Twain a few years ago? While we were writing the article, which appeared in last week's issue, advocating to a certain extent the adoption of Rose's system of division of purses in connection with a proposed new handicap, Mr. Rose, in his distant home at Salida, Col., was busily engaged writing us a letter on that same subject. With the letter he also sent us a number of examples worked out on his plan, using for his examples events shot at some of the more prominent tournaments of the season; for the sake of ready comparison he had also worked out the examples on the present basis of divisions. We hope at some early date to reproduce some of Mr. Rose's examples in order that the trap-shooting public may be able to judge for itself the merits and demerits of this system.

At the conclusion of the second King-Messner match, at Pittsburg, Pa., on Nov. 15, the loser, Messner, at once claimed the right to a third match for a stake of $200 a side, that right being given him by an agreement entered into by both parties when arranging the first two matches. The third match will not be shot until after the holidays, as King will be away on a hunting trip for several days. There is some talk of matching Harry Mohler against King, and it is understood that Mohler is ready to shoot a race with Messner's conqueror. A Pittsburg paper commenting on the shoot says: "Neither Clark, of Altoona, nor any person representing him, was at the match to challenge the winner." Do the Pittsburgers really want Clark?

The Ohio Trap-Shooters' League has decided not to alter its dates, which are the same as those claimed for the Memphis tournament. The idea of the League is that the programme for its shoot, which is a State affair, would have very little attraction for outsiders, so far as open events were concerned, and that the absence of some of the Ohio experts at the Memphis shoot would not be prejudicial to the best interests of the sport in that State; on the contrary, we understand, the absence of those experts is held as likely to be conducive to a larger entry list of purely amateur shooters. We are not at all sure but what the League is right, and shall watch the outcome of the experiment with much interest.

The championship contest at the E. C. Powder Company's tournament, held at New York during the first week of May, will draw a large number of entries. As already stated, the E. C. Powder Company has decided to adopt FOREST AND STREAM's idea of arriving at a "champion of the world at targets," and will incorporate in its programme, with some slight modifications, the plan as outlined in FOREST AND STREAM of October. There can be no question that the man who breaks the largest percentage of the 400 targets—100 unknown angles, 100 expert rules, 100 reversed order and 50 pairs—would be honestly entitled to the name of "champion."

Capt. Bartlett, of the Burgess Gun Company, Buffalo, N. Y., has been in this city for a week or so. Bartlett has attended all the big tournaments this year, and will be on hand again in '96. He can look back upon the season of '95 as the one in which he made what we believe to be a record, breaking 151 straight at unknown angles at the Rochester, N. Y., tournament. Capt. Bartlett's handling of the Burgess gun at the score makes many friends for the weapon, but we think his wonderful trick shooting, showing off as it does the rapidity with which the gun can be fired, adds largely to that list at every tournament which he attends.

During the struggle for the ownership of the gun donated to the New Jersey Trap-Shooters' League by the Winchester Repeating Arms Co., details of which are given elsewhere, Major Taylor ran out of shells, and was compelled to shoot during the afternoon four different kinds of shells. It will be noticed that the changes from one ammunition to another made little difference to him. So long as you're holding right, you can use pretty nearly anything that is loaded properly. Richmond, who of course uses Walsrode, had to beg and borrow shells loaded with other nitro powders before night put a stop to the shoot.

Jordan L. Mott, Jr., the patentee and inventor of the Mott live-bird trap and automatic pulling apparatus, has offered to wager J. Seaver Page a certain sum of money that he cannot kill 81 selected birds trapped from his traps. He offers W. S. Edey a similar chance, but reduces the number to be killed to 80. Knapp will try his hand at 85, the number which George Work tried to kill and failed. The general opinion among the amateurs who have tried the traps is that they are 3yds. faster on quick-starting birds than any other trap now in general use.

Those who have attended the three annual tournaments held on Wopsononock Mountain by the Altoona, Pa., Gun Club, will remember the patch of woods and swamps that lie between the shooting ground proper and the tournament grounds at Lookout Point. It will be of interest to them to learn what happened one day last week to Billy Bell, a prominent member of the club, who was out with a party hunting ruffed grouse in that patch of territory. Billy carries a Daly three-barrel gun, two barrels 12-guage, the third a .38cal. rifle barrel; his fellow club members have often joked him on the subject of "old three legs," but this time "three legs" came in handily. Kate, Billy's setter, made a curious demonstration in the way of making game, following a trail for some hundreds of yards, finally coming to a stanch point near a ledge of rocks. The game proved to be a 300lbs. bear that stood at bay not dreaming of "three legs." The .38cal. spoke, and now Billy and Kate are hero and heroine respectively, while "Wopsy" has added another laurel to its crown.

The fifteenth competition for the President's Cup, at the Carteret Club, took place on Wednesday, Nov. 6. On this occasion there were only 5 members present to fight for it. These were W. H. Stafford, George Work, J. P. Knapp, W. H. Mead and H. Mackey. Stafford was the winner with a score of 18 out of 20, Work and Knapp being in second place with 17 kills each. The cup must be won five times before becoming the individual property of any member; as matters now stand the following have wins to their credit: Knapp and Duryea 4 wins each, Work 3, Seaver, Page, Mead, Hoey and Stafford 1 each.

The All-Philadelphia vs. the Diamond State matches, the first of which is scheduled to be shot on Dec. 7 on the grounds of th Keystone Shooting League of Philadelphia, at Holmesburg Junction, P. R. R., will be purely sporting affairs and should be productive of much genuine fun and real benefit to the cause of trap-shooting, both around Philadelphia and in the State of Delaware. Neither Father Time Thurman (who is shooting very well now) nor Charlie Fehrenbach will have an easy task in picking their respective teams of twenty-five men.

A two days' shoot at live birds will be held at the Morristown, N. J., Driving Park on Nov. 28 and 29. The programme for Thanksgiving Day (the first day of the shoot) is as follows: No. 1, 5 birds, $5; No. 2, 7 birds, $7; No. 3, 25 birds, $15 (birds extra, with $50 added). Second day: No. 1, 5 birds, $5; No. 2, 7 birds, $7; No. 3, 15 birds, $15, birds extra. In this last sweep the conditions will be: 25yds. rise, use of one barrel only, gun below the elbow until the bird is on the wing, in fact —Long Island rules to govern.

The Crescent Athletic Club, of Brooklyn, N. Y., opened its target-shooting season for 1895-96 on Saturday afternoon, Nov. 16; the grounds are located at Bay Ridge, L. I. The attendance was small, but this may be attributed to the greater interest displayed by the Crescents in the outcome of the football game at Eastern Park that afternoon.

There was a small shoot at Fanwood, N. J., on Saturday afternoon, Nov. 16, on the Climax Gun Club's grounds. John Benner defeated Harkins in a race at 15 live birds by the score of 11 to 7, while Neaf Apgar defeated C. C. Hebbard by 3 targets in a 50-target race, unknown angles, the scores standing 47 to 44; Neaf broke his first 25 straight.

Preparations for the San Antonio midwinter shoot next January are progressing favorably. A strong delegation from the Buckeye State is contemplated, among the number being Raymond, Heikes and Dando. New Jersey will have her representatives there too; neither Ferd Van Dyke, Noel E. Money nor Tom Keller are likely to be absent when the time comes.

With the wind-up of the New Jersey Trap-Shooters' League season for 1895 we ought to begin to hear of some interclub team races. The afternoons are short, but team races would bring the boys out for an hour or two of sport, and would help to keep the clubs from going to sleep.

The Limited Gun Club, of Indianapolis, Ind., will hold an all-day shoot at targets on Thanksgiving Day. During the morning a series of 15-target races, $1.50 entrance, will be decided; in the afternoon a 100-target event, $10 entrance, will be shot off.

An all-day shoot will be held on the grounds of the Eureka Gun Club, Chicago, Ill., on Thanksgiving Day. W. F. de Wolf, secretary of the organization, will see to it that all who attend have a good time and all the shooting they want.

A. H. Hebbard has severed his connection with the Empire Target Co. Mr. Hebbard has been the superintendent of the target factory for some time. His brother, Charlie Hebbard, of course, remains with the company and looks after its interests as usual.

The Endeavor Gun Club, of Jersey City, will hold an all day shoot at its grounds, Marion, N. J., on Thanksgiving Day, Nov. 28. All the events will be at targets. The club issues a general invitation to all shooters to attend this holiday shoot.

FOREST AND STREAM's tournament squad pads seem to have hit the bull'seye. All clubs that contemplate holding tournaments, and that are not already supplied with squad pads, should send to FOREST AND STREAM for samples and prices.

On Saturday, Nov. 9, Leander B. Campbell, of Little Silver, N. J., and W. H. Conklin, of Red Bank, N. J., shot a match at 25 live birds on the Elkwood Park grounds. Both men killed 20 birds; Campbell refused to shoot off the tie.

The Vernon Gun Club, of Brooklyn, N. Y., will hold its regular monthly club shoot at live birds this afternoon; there will be no shooting at the club's grounds on Enfield street in consequence.

The Kirkpatrick Hardware Company, of Atlanta, Ga., will hold a two days' tournament on Nov. 26 and 27. This tournament will be for amateurs only, professionals being barred.

H. D. Swartz, of Scranton, Pa., announces that there will be a live-bird shoot at the Driving Park on Thanksgiving Day, Nov. 28.

The first annual meeting of the Cook County, Ill., Trap-Shooters' League will be held on Monday evening, Dec. 2.

EDWARD BANKS.

Boston Shooting Association.

BOSTON, Mass., Nov. 8.—The Boston Shooting Association's two days' tournament, held on its grounds at Wellington, Mass., was brought to a close this afternoon. Tables showing the scores of the winners on the various events are as follows:

Altoona Gun Club.

ALTOONA, Pa., Nov. 15.—To-day was the day set for a two-men team race between Bill Clark and Kotty on the one side and Billy Sands and Clover on the other. The day dawned as bright as one in June, and although the contest was not to begin until 2 P. M., quite a crowd of spectators had gathered several hours before that time. The contestants are all good shots and there was much speculation on the result. There was no handicap, all standing at the 30yds. mark. The boundary was a 50yds. semicircular one.

The feature of the event was the magnificent work of Clark. These birds were a selected lot and with a few exceptions were very strong. He had made a run of fifty-two straight on Tuesday until his gun practically broke down.

Kotty's only excuse for being on earth this evening is that he is not in form and hopes to even things up in another contest. Sands was shooting a new Forehand ejector which had never been used before. His score indicates that he will keep it. Scores:

Trap score type—Copyright 1895, by Forest and Stream Publishing Co.

Nov. 13.—A number of interesting live-bird contests were shot this week. She first took place on Tuesday afternoon, the affair being an impromptu one. The first events were a series of three 10-bird races between Clark and Clover, Clark killing all his birds. Then followed a three-cornered race in which the high gun took the purse and the low man paid for the birds. Then came a similar event in which five contestants took part. During the sixth event Clark, who had made a run of 52 straight through the events, lost his third bird by a very decided flinch. This occurred again in two of the miss-and-out events. On returning to the city he had a gunsmith examine the weapon and found the mechanism of one of the locks so much out order that he turned it in for repairs. The birds throughout the afternoon were a mixed lot, some of them being corkers. The weather was cold. Following are the scores in detail:

King Defeated Messner.

PITTSBURG, Pa., Nov 15.—The second of the series of races between J. G. Messner and Alex. King was decided to-day, King winning by 4 birds, killing 79 to Messner's 75. Both scores were poor ones, and although the birds are said to have been remarkably fast, neither man was shooting anything like his gait. The first match, shot Nov. 8, resulted in a tie on 88 apiece. To-day's match was, therefore, for double the original amount—$100 a side—making the purse worth $400 to the winner. The result, so far as the scores are concerned, was both a surprise and a disappointment to the many friends and admirers of both men.

The Pittsburg, Pa., *Post*, in giving an account of the match says: "King began strong. He killed 23 of his first 25 birds, but was unfortunate to lose 2 which fell dead out of bounds. At the end of the first 25 birds King was in the lead by 1 bird. He fell off woefully on his second 25, killing only 15, whereas Messner brought down 20. This put Messner 4 birds ahead. Then came King's brilliant spurt. Of the next 25 he killed 24, bringing down 17 straight, the best record of the match. When each had shot at 75 birds the score was even at 60 apiece. Messner then missed 3 straight, which greatly surprised the large crowd of spectators. Before he finished his string he had 7 more, 3 falling dead out of bounds. He wound up by killing only 15 out of the last 25. King, on the other hand, though he was also in bad form, killed 19 of the last 25, finishing 4 birds ahead. Messner's best record was 12 straight. Three times he missed 2 birds in succession. King, including dead out of bounds, missed 2 birds in succession three times. Messner had 4 birds dead out of bounds, and King 3."

The scores in detail were as follows:

A H King	2222222122022••2222202222—21 02022•2202022222202202060—15 2222220222222222222202222—24 0222220202220222222202212—19—79

F. M. D.

On Long Island.

VERNON GUN CLUB.

BROOKLYN, N. Y., Nov. 9.—Only six members of the Vernon Gun Club put in an appearance at the club's grounds, Enfield street, near Liberty avenue, this afternoon. The weather was very fine and the conditions altogether as perfect for trap shooting as one could wish. Seven events, all at 10 targets, were shot during the afternoon:

Events:	1	2	3	4	5	6	7	Events:	1	2	3	4	5	6	7

ROCKAWAY POINT ROD AND GUN CLUB.

Nov. 12.—Members of the Rockaway Point Rod and Gun Club spent nearly the whole day to-day, busily engaged smashing targets at their grounds at Rockaway Park. Schorty and Wash made the best records, the latter leading by 6 breaks more than his opponent. Scores:

Events:	1	2	3	4	5	6	7	8	9	10	11

NORTH SIDE GUN CLUB.

Nov. 12.—Six members of the North Side Gun Club took part in that club's regular monthly badge shoot this afternoon. The shoot is at 7 live birds per man, club handicap rise, modified Hurlingham rules governing. Harry Meyer, the winner of last season's club championship badge, was the only one to kill his 7 birds, thus winning a heat for this season's badge without a shoot off. Events Nos. 1 and 2 were $1 miss-and-outs, the Meyer brothers cutting up both of them. Scores:

BERGEN GUN CLUB.

Nov. 12.—The opening shoot of the Bergen Gun Club for the season 1895-96 took place this afternoon at the grounds at Flatlands Neck. The attendance was very good, eleven members taking part in the club shoot, which is at 7 live birds, club handicap rise, A. S. A. rule governing. The birds were a good lot and were aided by a strong wind. John B. Purdy, whose handicap is 26yds., was the only one to kill all his birds, winning the diamond badge without a shoot-off. In the miss-and-out sweeps which followed the club shoot, Rynhart, Richards, Murray and Valentine took the largest share of the pots. Score of the club shoot:

PARKWAY ROD AND GUN CLUB.

Nov. 13.—The Parkway Rod and Gun Club held its regular monthly shoot this afternoon, 8 members being in attendance. The wind helped the birds so materially that there was not a straight score, no less than 5 out of the 8 contestants tieing for the badge on 6 kills. Ties were shot off at 3 birds, then miss-and-out. Bookman, who was in the tie, withdrew without shooting his tie birds. In the end Andrews, a Class C man with a handicap of 25yds., carried off the badge with 4 straight kills. A 3-bird sweep, $1 entrance, brought the afternoon's sport to a close, Bennett winning the pot by killing his 3 birds. Scores:

No. 1, club shoot:	Ties:	No. 2:
A Andrews (25) 1221021—6	2212—4	013—2
E Helgans (28) 22●2222—6	2220—3	101—2
A Bothy (30) 2022212—6	2220—3	010—1
H Bramwell (25) 2122220—6	10w—1	●01—1

T Short (28) 102●211—5	....	...
J Bennett (28) 1020102—4	....	222—3
H J Sclover (25) 0120100—3	....	...

UNKNOWN GUN CLUB.

Nov. 14.—The Unknown Gun Club's monthly shoot was held this afternoon, nine members competing in the club contest. This competition is at 7 live birds, club handicap rise, the scores counting for the club championship at the end of the season. A sweepstake in connection with this event serves to keep up the interest of the shooters. Moses Brown won first money alone with a straight run of 7 kills; second money went to Vroome, Voorhies and Knebel, Von Staden taking third money alone with 5 out of 7. Of the nine shooters present two of the number were over 70 years of age, while five others were past the 60 years mark. The scores were as follows:

Moses Brown (28)	2221121—7	Richard Smith (25)	0121010—4
E A Vroome (28)	0111211—6	W J Skidmore (25)	1010110—4
J B Voorhies (26)	2211110—6	John Akhurst (24)	0020112—4
Henry Knebel, sr (26)	1111101—6	A C Rankin (23)	2002011—4
Henry von Staden (26)	1201101—5		

IDLE HOUR GUN CLUB.

Nov. 18.—Eight members of the Idle Hour Gun Club took part in the club's regular shoot. The club event is at 7 live birds, 28yds. rise. The following were the scores:

Helmstead 6, Wilsheimer 5, Landiford 4, Bauman, Vremeister and Schroeder 2, Lambert 1, Hoffman 0.

Helmstead won the first medal, Wilsheimer second medal, and Landiford third medal.

Carteret Gun Club.

WEDNESDAY, Nov. 13, was a special sweepstakes day at the Carteret Club's grounds, Bayonne, N. J. The programme consisted of three events: No. 1, 10 birds, optional sweep of $10 or $5; No. 2, 5 pairs, $10, and 5 birds $5, club handicap and allowance. Although the weather was all that could be desired, the attendance was light, mainly owing to the absence of so many members of the club, who are away from the city on hunting trips.

The birds were an excellent lot of quick, strong flyers; just such a class of birds as Phil Lumbreyer, the club's superintendent, always has on hand nowdays whenever there's any shooting at Carteret. The change in the quality of the birds provided at the club's shoots of recent date is remarkable, when one compares them with the class of birds trapped there one year ago. Aided as they were on the above date by a fairly strong northeast wind, the birds were calculated to beat anybody; the scores, therefore, are by no means as bad as they look, while Yale Dolan's record of 27 out of 28 from the 30yds. mark will compare very favorably with any score on a similar class of birds. Seaver Page dropped in late, but made his mark in the first sweep he shot in, and was doing excellent work in the next, No. 4, until his gun broke down. His lost bird in that event, however, was not the fault of the gun; it was just one of those cases where a second barrel could have been used with telling effect, but—wasn't.

W. H. Mead, the secretary of the club, was the victim of a bad headache, and failed in the majority of instances in the first sweep to place his load of shot anywhere near his birds. Usually Mr. Mead is a dangerous man in a handicap event, but on this occasion his physical condition outweighed his allowance and handicapped him too severely. Chapin, from the 30yds. mark, killed 17 out of 21, and it should be added that of the birds he missed none were easy ones; his lost bird in event No. 1 was perhaps an exception, and could have been scored with a little care. H. G. Wright bunched his misses and came out with a total of 19 out of 23; his weakness seemed to be an inability to be careful when he drew an easy bird. On really fast birds, with no poor ones in the crate, Wright would be no gift for anybody if he stood at his handicap distance of 29yds. W. S. Edey shot well throughout, but experienced some ill luck in event No. 1, having two of his three cyphers scored to him on birds that fell dead just outside the boundary; he scored altogether 25 out of 30, standing at the 28yds. mark, losing two dead out of bounds and making a bad miss on his last bird in event No. 6. Knapp killed 18 out of 22 from the 31yds. mark; with one exception, his fifth bird in No. 1, all his lost birds were good ones, and yet he did not seem to be shooting as he can shoot. He appeared to be careless, too, when at the score, handling himself as if he did not care whether he killed or missed. George Gould has had little experience in trap-shooting, but he managed to divide the first sweep he took part in. Dolan's work, as stated above, was very good, killing his birds in good time and very cleanly. He arrived at the club house just in time to enter the 10-bird race, and walked away with first money as a result of some good shooting. All the above remarks apply only to the single-bird sweeps, No. 2 being at pairs.

In that event two birds were placed in each trap and only one trap pulled at a time; this is an improvement over the idea of pulling two traps when shooting at pairs of live birds, as there is less likelihood of sitters to our way of thinking, while wild, fast birds it is hard enough to make one's choice and kill one's birds in time to have them scored. Dolan shot well in this event, but was somewhat favored by the birds; he killed 7 out of 9, not scoring at the 10th for reasons that follow: The club rules do not call for both birds to be on the wing when killed; it is only necessary that the bird killed shall be on the wing when killed to be scored to the shooter. When No. 5 trap was pulled for Dolan's last pair, he had only to kill one bird to win the sweep; both birds proved to be sitters and had to be flushed in the usual manner—with balls rolled along the ground; one rose and was promptly killed, but the other refused to fly, although the club limit of five balls was rolled to scare it up. As Dolan had already won by killing his first bird, the referee, John S. Hoey, told him to kill the bird on the ground to save time.

Wright shot well in this event, and but for extremely hard luck on his second pair would have given Dolan some trouble to take first money. Edey also shot well, but should have killed his fourth pair; his first bird in his fifth pair fell dead just outside the club's grounds after towering high in the air, the wind eventually carrying it over the fence when it fell. Knapp started in badly, but finished strongly; his 1st, 3d and 5th pairs were made up of some of the strongest birds trapped during the afternoon.

The way the traps fell to each man is given below; it will be noticed that Nos. 1 and 5 were pulled below the average, No. 1 slightly, but No. 5 decidedly so. The traps were pulled 190 times during the six events 38 being thus an average for each trap to be pulled:

	No. 1.	No. 2.	No. 3.	No. 4.	No. 5.	Total.
Chapin	6	6	7	6	1	26
Wright	4	9	6	6	3	28
Edey	6	12	4	7	6	35
Mead	6	4	5	5	2	22
Knapp	5	5	6	7	4	27
Dolan	5	8	6	9	5	33
Page	2	2	4	2	2	12
Gould	1	3	1	1	1	7
	35	49	39	43	24	190

The scores in detail, showing the flight of each bird, number of trap and whether killed or missed, are given below. Nos. 1, 2 and 3 were the programme events; Nos. 4, 5 and 6 were $5 miss-and-outs. In the first three events the money went to the two high guns, hence to keep things moving, those with one miss and who had no allowance dropped out at the close of the third round. The club boundary is 50yds., and is marked by a small wire fence about 2ft. high. Scores:

EDWARD BANKS.

Cobweb Gun Club.

NEW YORK, Nov. 14.—The Cobweb Gun Club held its monthly live bird shoot to-day in rainy weather. Notwithstanding the bad conditions, so far as comfort was concerned, twenty-two members put in an appearance and shot for the three class medals. The scores below show how the medals were distributed.

Club shoot, 5 live birds, club handicap rise, ties shot off on 3 birds, then miss-and-out:

Class A (30yds. rise).

*McKeon	11211—5	Odell	21110—4
Hoffman	11111—5	C Zahn	11201—4
Pilkington	22011—4	Dickson	01120—3
Train	11201—4	Knapp	10201—3
Gecks	21021—4	Loomis	0210w
Greiff	12220—4	Hendricks	2100w

Ties:

McKeon	23●2—3	Hoffman	2200—2

Class B (28yds. rise).

*Jarvis	12022—4	Donnelly	21102—4
Byrnes	22210—4	Kerker	10210—3

Ties:

Jarvis	122—3	Donnelly	10 —1
Byrnes	10 —1		

Class Z (26yds. rise).

*Bage	20120—3	Magee	02010—2
Nagle	10210—3	Goldie	00022—2
Curren	10100—2	Gochnour	00010—1

Ties:

Bage	121—3	Nagle	020—1

*P. F. McKeon won the medal in Class A, Frank Jarvis the Class B medal, and A. Bage the medal in Class Z. F. A. KERKER, Sec'y.

Kirkpatrick Hardware Co.'s Tournament.

WE have received a programme of the tournament to be held at Atlanta, Ga., Nov. 27, 28, which is given by the Kirkpatrick Hardware Co. of that city. The tournament is indorsed by the Fulton Gun Club, of Atlanta. The following extracts from the programme explain the plan on which the tournament will be run:

"Rules of the A. S. A. will govern this tournament, except where they conflict with the special features adopted herein. Manufacturers' agents and those who receive their guns and ammunition free and all known professionals will be barred from shooting for purses. We will, however, be glad to see such persons who wish to attend and show their goods. This is intended to be a strictly amateur shoot, and no one but amateurs will be allowed to enter for purses.

"Shooters will shoot targets at known traps, unknown angles. Any shooter who wins or divides first money must shoot in the next event which he enters according to expert rules, which will be unknown traps, known angles. If in this event he fails to win or divide any part of the purse he will fall back to known traps, unknown angles, in the next event which he shoots in, and so continue to be graded.

"All purses at this tournament will be divided 30, 25, 20, 15 and 10 per cent.; price of birds will be deducted from each purse and all ties divide.

"The referee's decision is final under all circumstances. Shooting to commence promptly at 8:30 A. M. each day. Money will be refunded for all uncontested events. Grounds will be open for practice shooting the morning of the 26th. Shooters are requested to make entry for the entire programme each day. If they wish to withdraw from any event for which they have entered they may do so and their money will be refunded, provided of course they do so before the event commences."

Among other particulars it may be noted that 10-gauge guns and black powder are barred, as well as the professionals. A sole leather gun case will be given each day to the shooter making the highest average in that day's events. The programmes for each day are identical: eight 15-target events, $2 entrance, and two 20-target events, $3 entrance. The company adds $10 to every purse. Empire traps and targets will be used, the traps being under the personal supervision of Chas. C. Hebbard, of New York, who leaves to-day for Atlanta to take charge of same.

As an Amateur Sees it.

CINCINNATI.—*Editor Forest and Stream:* I am an amateur. I make this statement at the start to inform you of my standing as a trap-shooter and that you may the better understand my views in the relation of amateur and professional, and the many lively questions, theories, systems and what not which appertain to those interesting personages.

Speaking as an amateur myself, it seems to me that the amateur at large is too constant and too clamorous in his demands for advantage, thinking entirely of his own interests, asking for special concessions that are more or less outside of the matter at issue in a trap contest—that is to say, skill with the gun—and so arguing that one could easily infer that great skill and ability militated against some vague and vested right which the amateur possessed simply because he is an amateur.

Stated in simple English, he says: "I can't shoot so well as you can, Mr. Expert, or Mr. Professional, and I am too indolent to devote the time and too thrifty to expend the money that you have expended in obtaining skill and knowledge; therefore I wish you would devise some system of handicapping yourself, so that, without going through the rigorous schooling and great expense which were necessary in attaining your skill, knowledge, etc., you will so oblige me that I can win your money. Any system which does not make my awkwardness equal to your skill is a failure, and I will continue to howl 'wolf' and 'wolves' till I can get the prey myself, whereupon my cry of wolf will cease."

It is true that I am an amateur, but that is no reason why I should be blind to all the principles of equity, or why I should be blind to what constitutes real progress and improvement.

The expert once made a beginning. He was an amateur. His progress was marked by enthusiasm, industry and diligent study of his art. Energy overcame obstacles; disappointments stimulated greater effort; success now and then inspired confidence and hope for greater successes.

The same course is open for the sluggish amateur to become an expert. Let him pursue the same course to attain his success. Begging for favors at the hands of experts savors too much of a weak, cringing and indolent spirit; ambition which is groveling instead of soaring; a sordid eye for gain instead of a true spirit of sportsmanship and not from a desire to compete and excel. The course of practice which made the skill of the expert is open to the amateur to follow. He asks for something before he has tried and before he is worthy.

As to systems, it is my belief that none can be devised to put the amateur and expert on a level, and it is my conviction that none should be attempted. The skill of the expert will always surpass the inefficiency of the amateur, for if he is inefficient in his shooting no "system" will improve it. Moreover, any handicap which is imposed on the expert and which relates to his skill, such as amateurs angling against known angles, will never avail, since the expert's skill is so equal to all the varieties of shots which can be offered that his success is diminished but little, while the amateur's untrained nerve will leave breaks in his score regardless of the advantages conceded to him by the handicap.

So much for the question of skill. Now let us consider the injustice of handicapping by distance. In this way the skill of the shooter is thrown out of consideration in part, and his gun is handicapped. He is not only required to show greater personal skill, but his gun must do greater and more difficult work than the gun of the amateur. He is required to show greater skill in his own person in the difficulty of the shots, and the power of the gun is lessened inasmuch as it must make longer shots. He is forced to give attention to every detail. And all this—as a result of diligent effort, coming from a desire to excel and from constant application and great expense as compared to the spasmodic and temporary efforts of the amateur—results in loud declaiming against the winning of the expert, which is really a protest against the expert's success, and an admission of perpetual inferiority.

It is the more surprising to me that there is such a silent and spiritless acceptance of all these arguments against the expert; first because there is nothing which compels the amateur to compete with the expert if he objects to do so, and second because the expert seems to present his own side of the case improperly. The latter may know how to shoot expertly and yet be wholly inefficient in presenting his side of the argument and in defending his rights. To me it seems as if the plea of the amateur is a special plea, or rather a begging for something more than rightly belongs to him. He admits his own absence of skill and asks that he be given something for the sole reason that he is incompetent.

In all the affairs of business the man of skill reaps the reward of the industry, research, knowledge and skill which come to him who makes a success of a specialty.

In the business world the competition is not so direct, but it is none the less keen. No man with any sense in the business world would plead his own inefficiency as a plea to handicap his superior. Every one must stand on his own merit.

As proficiency in the art is the ultimate aim and purpose of the competition, if it is really a sport and not a mere means to juggle for money, the sport should be so systematized on that basis. The manner of developing the skill and educating the amateur should be paramount to the matter of dividing the purses.

But do we read of competitions as educators? Are these competitions for the love of the sport? Are these "systems" for the benefit of all concerned, for the sake of all concerned? I think not. It is this and that for the benefit of the amateur—some complex artificial arrangement to bolster up the shortcomings of the amateur, which often is a term denoting incompetency against knowledge and skill.

The real purpose of trap-shooting, which I trust I am not wrong in assuming is a gentlemanly diversion, has been clouded and partially smothered in a complexity of systems, no one of which is based on the competition as a sport; but, on the contrary, all are based on some way of splitting up the money. All this naturally prompts the inquiry: What is trap-shooting for? Is it a sport for gentlemen or is it a scramble for money? Are the benefits those of practice for real work in the field, the pleasing emulation of competition to spur one to his utmost endeavor, the improvements which come from efforts to reach the higher standards of skill exhibited by some one else, or is it a compromise by which all hope to keep all in a game which has a basic principle on the matter of dollars and cents?

To me, as an amateur, it seems all very simple. I shoot when I feel like it, pay my money, and if I am beaten I submit to superior skill. I have thus a standard to aspire to. I work harder and endeavor to improve. When I am near men who are incomparably my superiors, I stay out. If I go into the competition and I am beaten, I admit that I am beaten. I can go into training in private to beat the man who beat me in public if I think it worth while. There is no need that I should come forward and, with thumb in mouth, plead the baby act in public.

I write this as an amateur who asks nothing of no one or any one.

AMATEUR.

WESTERN TRAPS.

TURKEY DAY TRAP.

CHICAGO, Ill., Nov. 16.—The Eureka Gun Club, of Chicago, will hold an all-day shoot on Thanksgiving Day at its grounds, 79th street and Vincennes avenue.

The Limited Gun Club, of Indianapolis, Ind., will hold an all-day shoot on Thanksgiving Day.

The Anderson, Ind., Gun Club is making preparations for its tournament to be held on Nov. 27 and 28.

A trap-shooting contest of English sparrows, open to all, will take place at Indianapolis, Ind., Nov. 27.

The Des Moines, Ia., Gun Club will hold its annual autumn tournament Nov. 26, 27 and 28. The management departs from the old sweepstakes system and announces boldly that it will divide purses under the equitable system. Progress.

MATCHES.

George Deiter, of Milwaukee, defeated George Franklin in the 100-live-bird match for $100 a side, at Evanston, 80 to 85. The weather was unfavorable for good shooting. At 30 birds Franklin led by 4, and at 50 he was still in the lead by 2. The contestants tied at the 95th bird. Franklin missed 2 out of his last 5 birds and Deiter won the match by killing 4 out of the last 5.

At Lincoln, Ill., the contest for the gold medal offered by Bogardus was won to-day by Gilbert, the Iowa champion. The match between Irwin and Bogardus was postponed until the Springfield tournament.

VISITING.

J. A. R. Elliott, of Kansas City, is in Chicago. He is not looking for matches, but visiting with the boys. He says all is lovely at K. C.

E. HOUGH.

909 SECURITY BUILDING, Chicago.

In New Jersey.

ENDEAVOR GUN CLUB.

JERSEY CITY, N. J., Nov. 9.—This was a day set for a practice shoot of the Endeavor Gun Club, at Marion, N. J. This afternoon was a perfect one, but the members of the club turned out very poorly. Event No. 1 was at 15 targets, Corson scoring 13 to Edwards's 10. No. 2 was a 10-target event, the following scores being made: Corson 10, Edwards 8, G. Piercy, Piercy, Jr., and Fry 7. This was followed by two 25-target events, some of the scores in which counted in the club shoots, as several members had back scores to shoot up:

	No. 3.	No. 4.
Edwards	0111111011111010101011111—19	
Corson	1101101111111011101011111—20	1101111111001101111101111—20
Piercy	1101111111110011111111111—22	1111111110111111111111111—24
Fry	0101111101110101000010010—14	1001010110110010110100110—14
Piercy, Jr.	0111101110011101000110111—16	1110111111001110110111111—20
Duff		0110111111011110110001101—17

No. 5 was a 15-target event, resulting as follows: Corson 15, Piercy and Piercy, Jr., 10, Duff 8.

The four above named then shot at 5 live birds each, scoring as follows: Corson 4, Piercy, Piercy, Jr., and Duff 3.

J. A. CREVELING, Sec'y.

CENTRAL GUN CLUB.

Nov. 9.—The Central Gun Club, of Perth Amboy, held its monthly shoot this afternoon, six members taking part in the club event. This event is at 10 live birds per man, A. S. A. rules governing. A sweep of $3 was shot in connection with the event, the first money being won by Spencer Dayton with a score of 8 out of 10. The scores were:

S Dayton	1212102021—8	Wm Dayton	0021000120—4
H Jones	1110001122—7	Jas Glenn	0200202122—6
H Dayton	0201012120—6	S Hornsby	0000221002—4

H. J. MASON, Sec'y.

NEW JERSEY TRAP-SHOOTERS' LEAGUE.

Nov. 12.—This was a gala day at the grounds of the South Side Gun Club, of Newark, N. J. The occasion was the shoot-off for the gun donated as a prize for the league members by the Winchester Repeating Arms Company. It had been decided during the last shoot of the league, which was held at Red Bank, N. J., in the month of October, that the gun should be shot for by any member of the league who wanted to try for it. The event was to be a 50-target handicap race, the handicaps of the members of the league being computed from the records made by them in the various league contests held during the year. Lots were drawn for the privilege of holding the shoot and the lot fell to the South Side Club.

The day was a lovely one, but there was a trifle more wind than target-shooters like to have playing with the targets when they want to make good scores. The attendance was satisfactory, thirty-eight shooters taking part in the handicap. The conditions were: 50 targets per man with a handicap allowance of extra targets to shoot at; the first 25 at known angles, the second 25 and the allowance at unknown angles; no man to score more than 50, all scores of 50 or more being counted as 50; ties shot off at a like number of targets with same allowance and under same conditions.

The men shot in squads of six as usual, shooting their 25 known angles first; they shot their remaining targets whenever it was convenient for the management to get them to the score with a view to saving time. There was no regularity about it, as the shooters did not show up at the start, straggling in up to a late hour, although the shoot was set to commence at 11 A. M.

The first squad to shoot was: W. Sigler (52), F. Van Dyke (scratch), Dutchy Smith (55), M. Herrington (58), Gus Greiff (55) and Johnny Hoffman (54). Of this squad there were no survivors, although Herrington, who scored 49, and Sigler, who ran up 48 out of 52, came very near the mark. Sigler scored 22 out of his 25 known angles and then broke 26 out of 27 at unknown angles. Dutchy's shells went back on him, as any one can see who looks at the scores made by this usually reliable shot. The second squad consisted of Maj Taylor (59), George McAlpin (51), H. Folsom (60), Capt. Money (52), L. Thomas (56) and J. H. Richmond (58). McAlpin and Thomas did not shoot anything like their usual gait and were left out in the cold, being joined by Harry Folsom and Capt. Money, the latter breaking 25 out of his 27 unknown angles. Maj. Taylor and Richmond both survived the ordeal and went away to prepare for another bout; the Major scored 21 out of 25, known angles, and 31 out of 34, unknown angles—52; Richmond led him with 54—24 out of 25 known angles, and 30 out of 33 at unknown angles.

The third squad was made up as follows: E. Sickley (54), W. N. Drake (52), Asa Whitehead (54), Dr. T. J. Jackson (59), G. Piercy (60) and R. Heber Breintnall (55). Of this number Sickley and Dr. Jackson landed in the first division, the former scoring 24 out of 25 known angles, and 26 out of 29 unknown angles; the latter also broke 24 out of 25 known angles, and 28 out of 34 unknown angles. Bailey Drake shot well, but could not total more than 47 out of his 52; Breintnall and Asa Whitehead made 46 and 45 respectively. The fourth squad then toed the mark: Neaf Apgar (51), C. F. Lenone (57), R. Manning (57), E. Edwards (59), Tom Keller (55) and Louis Schortemeier (55). Schorty was the fifth man to join the A class, breaking 23 out of his 25 known angles and 28 out of his 30 unknown angles—51. Manning came within a single break of getting in among the upper ten, while Lenone only fell 3 short of the requisite number. Keller blames the rheumatism and Edwards's "chinning" for his defeat.

Squad No. 5 did not send a single man into the second round, although Charlie Hebbard (56) and E. A. Geoffroy (55) came within 2 breaks of the necessary 50. Charlie Heddon (56) and Aaron Woodruff (57) each made 45; Astfalk (58) scored 41. Bartlett, the other member of this squad, shot from scratch as a guest of the club, scoring 22 in each series of 25 targets. The sixth squad added 3 new members to class A: F. Walters (56), Tom Brantingham (58) and J. Shaw (60) being the lucky men. Of the remainder Dan Terry (57) broke 47, Van Iderstine (60) scored 45 and A. Sickley (53) 43. Eddie Collins started well by breaking 24 out of his known angles, missing his 25th target; by losing 4 out of his first 25 at unknown angles he retired, as with a score of 45 out of 50 he could only total 49 if he broke his allowance of 4 targets. Batsch (60) was never dangerous and did not shoot up his allowance, as the day was drawing to a close.

The first series of ties was then started with only eight left in, Taylor, Richmond, E. Sickley, Jackson, Schortemeier, Brantingham, Walters and Shaw. Of this number Dr. Jackson, Brantingham, Walters and Shaw failed to reach the maximum, although Shaw only lost his chance by dropping his last target, scoring one less than the number required. As time was getting very short and the sun was getting down to the horizon very fast, no unnecessary targets were shot at, each man dropping out as fast as he reached the maximum or when he could not reach the 50 mark.

The second series commenced with four men, Taylor, Richmond, E. Sickley and Schortemeier. All but Sickley reached the 50 mark; had he broken his four extra targets he could not have made more than 49 as his total, for the 50 was only 45—good shooting, but not enough for the purpose. The first 25 of this round produced some remarkable work, even if it was at known angles; Sickley broke the first 25 straight of the day, while the other three shooters each totaled 24—97 out of the 100 targets shot at!

The third series, and the last for the day, again produced some very good work, the light being very poor indeed. Maj. Taylor broke 25 straight in his known angles and 25 out of 31 at unknown angles. Richmond scored 23 out of 25 at known angles and 27 out of 33 unknown angles; he had to break his last 10 at unknown angles to score his 50. Schortemeier retired at the end of the eleventh round in the unknown angles, as he could not make more than 49 if he broke straight. That left only Maj. Taylor and Richmond to fight it out for the gun. The light was now so poor that a target could hardly be seen and Richmond claimed that the tie should be shot off some other day, as it was too dark for shooting. As Maj. Taylor had to leave for the South for a stay of three weeks while attending the field trials, he naturally wanted to shoot it off anyhow and have done with it. It was decided, however, that the tie should be shot off on some date not yet fixed.

It will be of interest to know just what percentages the four leading men made at the different styles of shooting. Here are the figures:

Major Taylor.		J. H. Richmond.	
Known.	Unknown.	Known.	Unknown.
21	31 out of 34	24	30 out of 33
24	26 out of 27	24	26 out of 29
24	26 out of 28	24	26 out of 30
25	25 out of 31	23	27 out of 33
—	—	—	—
94	108 120	95	109 125
Schortemeier.		E. Sickley.	
23	26 out of 30	24	26 out of 29
24	26 out of 28	22	28 out of 29
24	26 out of 29	25	20 out of 25
20	10 out of 11	—	—
—	— —	71	74 83
91	90 98		

The actual percentages were: Known angles—Richmond 95, E. Sickley 94.6, Taylor 94, and Schortemeier 91. Unknown angles—Schortemeier 91.8, Taylor 90, Sickley 89.1 and Richmond 87.2. The total number of targets thrown during the handicap was 2,887; this was good work, as the sun sets about 4:45 P. M. at this time of the year, and the handicap did not commence until the noon hour whistles had got ready to blow the employees to dinner.

As usual the South Side management did all they could to make the boys happy, but barring the fortunate few who got into the upper ten, there was very little shooting for some of the others. This was not altogether an unfortunate thing for a good many, as they still had some money to spend that would otherwise have found its way into the pockets of a few. The full score follows:

W Sigler (52)	1111101111110111111111110111

	1111111110 —30

EDWARD BANKS.

NEWARK GUN CLUB.

Nov. 14.—Secretary Green didn't feel very well this afternoon, first, because his especial pet, the Newark Gun Club, didn't turn out strong, and second, because he himself had not recovered from a hard day after ruffed grouse. Still, a few of the old stand-bys were in evidence; the rest of the crowd which usually attends the Newark's monthly meeting were prevented this time by the rain, which dripped and drizzled all the afternoon. Erb, as usual, had a good lot of pigeons, which, however, were, like the non-attendants, handicapped by the weather. All the same, there were a lot of good ones among the birds, as several of the contestants will vouch for. Scores:

	No. 1.	No. 2.	No. 3.
C Wright	1211—4	1212—4	1120—3
S Castle	110 —2	1110—3	1121—4
*W Hollis	1● —1	1111—4	2122—4
J Erb	20 —1	20●2—2	2210—3
F Van Dyke		2112—4	1122—4
Liddy		....	2111—4

	No. 4.	No. 5.
F Van Dyke	2212222211—10	2222●211221— 9
S Castle	1211111211—10	1012112121— 9
J Erb	1221112111—10	2101122011— 8
W Hollis	1001112212— 8	0111012010— 6
C Wright	0221122201— 8	2112112122—10

*In event No. 2 Wright, Hollis and Van Dyke shot off their tie for first money; Van Dyke missing his first tie bird, the other two divided, having killed their birds. No. 1 was at 4 birds, $3, high gun; Nos. 2 and 3 were the same, with the exception that there were two moneys; No. 4 was the club event, with a sweep of $2.50; No. 5 was $5 entrance, two moneys.

W. R. HOBART.

ELKWOOD PARK.

Nov. 14.—A few well-known target and live-bird shots took part in a shoot held at Elkwood Park, near Long Branch, N. J., to-day. The weather was wretched, rain falling in torrents during the day. Among those who were present was Edgar G. Murphy, of Long Branch, who a few weeks ago very nearly lost his trigger finger by monkeying with the sprocket wheel of a bicycle while it was being cleaned. The scores were:

No. 1, 25 targets: J. S. Shaw 21, L. B. Campbell 21, W. H. Conklin 20.

No. 2, 10 targets: Conklin 7, Henry White 6, Fred Hoey 5, Campbell 4, Shaw 3.

No. 3, same: Shaw 8, Conklin 7, Edgar Murphy 6, Hoey 4, White 0.

No. 4, same: Shaw 8, Conklin 7, Murphy 5, Hoey 1.

No. 5, miss-and-out: Shaw 6, Campbell 5, Conklin 3.

SOUTH SIDE'S SATURDAY.

Nov. 16.—The regular Saturday afternoon shoot of the South Side Gun Club, of Newark, N. J., was held to-day in glorious weather. In the team race Breintnall's team won easily, defeating Warren Smith's team by the score of 84 to 72. Scores:

SECRETARY.

Trap around Buffalo.

BUFFALO, N. Y., Nov. 7.—B. F. Smith and Otto Besser, Jr., shot their race to-day with the result that Besser won with ease, scoring 92 to Smith's 85. Over 200 persons witnessed the match, which went off in an orderly and quiet manner, there being no kicking at the referee's decisions, etc.; N. E. Story was referee, George MacArthur, official scorer; Besser was handled by A. Downs, while Harry Kirkover looked after Smith's interests. Both men used 12-gauge guns; Besser shot a Burgess with 44grs. of E. C.; Smith an L. C. Smith with 4drs. of Du Pont smokeless. Smith did fairly well, but was undoubtedly outclassed, his opponent shooting consistently well throughout the match, scoring 45 out of his first 50 and 47 out of his last 50. Smith on the other hand did not strike his gait until toward the end; he only killed 40 out of his first 50, but rolled up 45 out of his last half, scoring 38 out of his last 40 birds, the other two dropping dead out of bounds. Besser made the longest run, killing 37 straight, and 42 out of his last 44, one dead out of bounds. Score:

B F Smith	1221112●012112022112●12222—21

After the match Besser issued a challenge to shoot any man in Buffalo a match at 200 targets for $50 a side. His challenge was promptly accepted by F. Alexander, B. F. Smith being made stakeholder, and Dec. 11 fixed as the date for the match. The conditions are: 200 targets per man, three unknown traps, one man up, to shoot 3 targets and retire. The match is exciting a lot of interest, as Besser is no doubt an excellent target shot, but in Alexander (*a nom de plume*, by the way) he will meet a foeman worthy of his steel, for the latter is one of the best target shots in and around Buffalo.

At Smith's grounds on Main street there is every facility for either target or live-bird shooting, Mr. Smith having a set of new blue rock traps with North's electric pull in position; in addition to this there are the two sets of traps used by the Audubon Club at its club shoots. The Audubon Club holds a shoot every Saturday afternoon; the Idle Hour Gun Club every Thursday, while there is an open shoot at targets and live birds every Wednesday during the season.

PUBLISHERS' DEPARTMENT.

Leaves from Our Letter File.

"STRAWS indicate the way the wind blows. Here are a few selections from our business mail the last month, showing the effect of advertising in FOREST AND STREAM. The letters are given just as received. They are spontaneous expressions of approval, and represent the opinion of many other advertisers who do not write, but who continue to advertise year after year because FOREST AND STREAM pays.

THIS IS FROM A YACHT AGENCY.

NEW BEDFORD, Mass., Oct. 1.—Inclosed please find amount due on bill. Continue our ad. till further notice, and send rates for three months, six months and one year.

We have had very satisfactory returns from the ad. already running. Respectfully yours, BUZZARD'S BAY YACHT AGENCY.

A PROMINENT MANUFACTURER OF SPECIALTIES IN SHOES WRITES.

PHILADELPHIA, Pa., Oct. 24.—The ad. to remain until forbid. This is probably as good a contract as you wish, is it not? You are doing us good and we appreciate it.

We are too well pleased with the results to take it out of your truly valuable paper. Respectfully, M. A. SMITH.

A TRIAL OF FOREST AND STREAM RESULTS IN CONTINUOUS ADVERTISING.

PROVIDENCE, R. I., Oct. 15.—In reply to your notice that our ad. ends in your issue of the 19th inst., we wish you to continue our ad. for one year at present terms and conditions. Send us duplicate contract blanks, to be signed by us and returned to you, and oblige

ALMY WATER TUBE BOILER CO.
SPENCE, Sec'y.

CONTINUOUS ADVERTISERS FOR 20 YEARS INCREASE THEIR SPACE.

NEW YORK, Oct. 22.—Kindly change the ad. of Schieffelin & Co. for the next twenty-six insertions to double the space (4in. instead of 2in.), and insert the ad. in the order the copies are marked.

M. VOLKMANN.

FROM THE PROPRIETOR OF MUCKROSS KENNELS.

SPRINGFIELD, Vt., Oct. 26.—Please change ad. in the next paper sure. We have had a phenomenal demand for our stock, and have sold everything in the way of a setter that we have got to sell.

W. W. BROWN.

ANOTHER TESTIMONIAL.

MONTROSE, Pa., Nov. 8.—Receipt and return bill for this check. Sold dog already and got order for another. I never missed a sale when I advertised with you. Truly, J. M. KELLY.

New York Day.

COTTON STATES AND INTERNATIONAL EXPOSITION, ATLANTA, GA.

NOV. 25 is New York day. The Southern Railway, "Piedmont Air Line," will carry an immense crowd. Preparations have been made for over 2,000 from the city of New York. Brooklyn will send several special trains. Already a special train for Mayor Schieren and city officials has been arranged. The Trunk Lines have announced low rates for Nov. 19 and 21 from all points in the State of New York. The Mayor of every city in the State has been invited.

The round trip rate from New York to Atlanta will be $20.50 and good to return within ten days. Special rates for military companies. Everybody should go and visit the great Cotton States and International Exposition. By taking the Southern Railway you pass through the most interesting section of the South.

Three trains daily, New York to Atlanta, carrying vestibuled coaches, Pullman drawing-room sleeping car and dining car service.

For further information call on or address Alex. S. Thweatt, Eastern Passenger Agent, or R. D. Carpenter, General Agent, 271 Broadway, New York.—*Adv.*

Blue Ribbon Smokeless.

MR. E. D. HICKS, who made the highest average during the Summer Prize Contest of the Rochester Rod and Gun Club, used Blue Ribbon smokeless. In expressing his approval of that powder he writes the Hazard Powder Co. as follows:

ROCHESTER ROD AND GUN CLUB.—Incorporated June 5, 1891.—Rochester, N. Y., Nov. 1, 1895.—The Hazard Powder Co.: Gentlemen—I have fully tested your nitro powder Blue Ribbon both in the field and at the trap, and find that I can do better work with it than with any other smokeless powder. I take pleasure in recommending your Blue Ribbon smokeless powder to all brother sportsmen who are looking for the best. Yours respectfully,

(Signed) E. D. HICKS.

COMMENCING on Monday next, 18th inst., the Fall River line steamers will leave New York at 5 P.M. instead of 5:30 P.M., as at present.—*Adv.*

WE HAVE BEEN TOLD that there are some dealers in FISHING TACKLE who do not keep our goods in stock. If you are so unfortunate as to live in a place where our goods are not offered for sale, let us know and we will send you our catalogue.

The FOREST AND STREAM is put to press on Tuesdays. Correspondence intended for publication should reach us by Mondays and as much earlier as may be practicable.

THE BANNOCKS AND THE GAME.

FOR the first time in the history of the Bannock Indian hunting troubles in Wyoming, the matter has been taken into court and a legal decision respecting it has been made. The point at issue was as to the right of the Bannock Indians to kill game on the unoccupied lands of the State in contravention of the game laws as to seasons. The Indians claimed that they had such a right, and last summer some of them set about exercising it in the vicinity of Jackson's Hole. Thereupon the settlers of the Hole, constituting themselves judge, jury and executioner, apprehended certain of the Indian hunters and killed them. Having executed the penalty of death upon them, they then instituted the customary procedure to determine the guilt or innocence of the individuals they had shot down.

To make a test case, one of the Bannocks, named Race Horse, was arrested by the State authorities on the charge of having violated the Wyoming game laws, and he was tried in the United States Court at Cheyenne, where Judge Riner has just given an opinion, which finds that the right of hunting was conceded by the treaty made between the Bannocks and the Government, and that treaties having been declared by Congress to be the supreme law of the land, this one could not be abrogated by the State of Wyoming, nor has the State any power to enforce laws which conflict with or restrict in any way the full rights guaranteed the Indians by treaty. To alter the existing privileges of the Indians with respect to hunting on unoccupied lands in the State of Wyoming is solely within the province of the United States Government, and until action shall be taken at Washington to purchase from the Bannocks their present rights, Wyoming is powerless to restrict them. However unfortunate may be the conditions which have arisen, the opinion of Judge Riner commends itself as a sound exposition of the law. There the matter rests. Attorney Gen. Fowler and Judge Van Deventer, counsel for the State, have given notice of an appeal to the Supreme Court of the United States. There is little reason to believe that the decision just given will be reversed.

THE VERMONT LEAGUE.

AN argument that is very generally advanced in favor of protecting fish and game is that we should preserve them for the benefit of those who are to come after us, as well as for our own future use. The argument is certainly a sound one, and in many States is really about the only plausible one. In Vermont, however, a solid business-like view is taken. The State has a magnificent lake and some lovely fishing rivers, and mountains and valleys well wooded and eminently fitted for the purposes of rearing and fostering of furred and feathered game in large quantities. The scenery is grand, and the climate during the summer and early months of the fall, added to her natural beauties, make Vermont a favorite resort for a vast number of visitors during that season. This friendly invasion is a good thing for the State. Every individual visitor means money expended in her borders and the sum total left in Vermont each year by her temporary visitors cannot be computed with any degree of accuracy in cold dollars. The Vermonters are by no means slow people; they have recognized in their lake and rivers, in their forest-clad mountains and valleys, a fruitful source of revenue if properly looked after and cared for, correctly surmising that if the hunting and fishing shall be improved, the number of annual visitors will proportionately be increased.

At present the Vermont Game and Fish League is engaged in looking closely after the game now in the State, and is doing its best to prevent violations of the existing game laws. The State hatchery, under the able care of Superintendent Titcomb, is also doing great work in stocking the waters of Lake Champlain with game fish. Efforts are also being made, as will be apparent by a perusal of a report of the proceedings of the recent annual meeting of the League, given elsewhere, to introduce new game birds into the State, with a view to making a day's hunt in the forests of Vermont the more attractive by reason of the variety of game that shall be obtained. The League is therefore doing good work in behalf of fish and game protection, perhaps from neither a semi-selfish nor a purely philanthropical motive. There is a solid business motive at the bottom, but we cannot see that its work is any the less commendable; it is working for the best interests of the Commonwealth.

The supply of deer in the State is yearly increasing very satisfactorily. The penalty for killing a deer is severe and the laws in this respect are well observed. From most reliable sources we have heard of deer being seen in certain favored sections with a frequency that augurs well for the first open season, that of 1900. With five more peaceable breeding seasons before them, the number of deer now in existence should be very largely increased. What the people of Vermont must now look to is the preservation of those deer from total extinction as soon as "the law is off." It should not be a case of a colored man's dog after a hog-killing—full as he can stick for two weeks and half starved the remaining fifty. A short open season, say from Oct. 15 to Nov. 15; non-shipment of deer out of the State; a limit placed on the number of deer to be killed by each hunter—all such restrictions will be of incalculable benefit when it comes to protecting the deer from extermination in 1900 and the succeeding years. The Vermont Fish and Game League may be trusted to see to it that these points will not be overlooked when it comes to framing a law in regard to the legal killing of deer.

THE FOURCHETTE BUFFALO.

FOR a long time it has been an open secret among cowmen in Montana and travelers through the State who are interested in such subjects that there were still left on the Big Dry Fork of the Missouri River, and perhaps on the heads of Big Porcupine and Little Porcupine, a very few buffalo. The country is one of extreme difficulty, being exceedingly rough with bad lands and almost waterless. The few buffalo left there were the remnants of that last remnant of the great northern herd which furnished to Crees, Blackfeet, Assinaboines and Gros Ventres 50,000 hides in the year 1883, the last considerable shipment of buffalo hides which went down the Missouri River. Later it was into this same desolate and forbidding country that Hornaday went to secure specimens of the buffalo for the National Museum; and later still Dr. Daniel Gérard Elliott, now Curator of the Field Columbian Museum in Chicago, but then connected with the American Museum of Natural History, New York, made an expedition thither in behalf of the last named institution.

Buffalo were there, but so few in number and so exceedingly wary that it was almost hopeless to attempt to find them. At the same time we have known that from time to time within the last few years an occasional buffalo has been killed in that country.

At first these animals were seen only by twos and threes, later we heard of a bunch of half a dozen, and later still of eight, one a calf. For the last two or three years it has been stated that the cattle owners, whose herds range in this country, have been protecting these buffalo. This they did in two ways, namely, by denying to inquirers that there were any buffalo in the country, and by threatening with death any one who should disturb the animals. It is known that within the last two or three years the cowboys have branded a number of calves, and it is said that last summer the iron was put on at least four.

It had been hoped by many residents of Montana that this system of protection might ultimately result in a herd of semi-domesticated buffalo ranging on tributaries of the Missouri from the south. Unhappily this hope seems now in vain. It is now reported that this little band of buffalo, sometimes known as the Fourchette band, have been killed off by the vagrant Cree half-breeds, who, finding Canada too hot to hold them at the collapse of the Riel rebellion, crossed the boundary line at that time and have since made Montana their home. These people are inveterate hunters, and since their invasion of the State they have probably killed more game than all its other inhabitants put together. As they are known, and as their acts are known to the authorities, it is difficult to see why the law is not set in motion and why some of them are not punished for the illegal killing of game of which they are so frequently guilty. It is sometimes said that because they are citizens of Canada the State of Montana has no right to punish them for offenses against the game law, but we fancy that no such explanation would be given if these people had been guilty of murder or of cattle killing, or of any one of a hundred other offenses which more nearly touched the people of the State, and we are inclined to think that the inertness of the authorities must be due to a carelessness about the enforcement of game laws, rather than to any doubt of their ability to punish these people.

The laws of Montana prohibit absolutely the killing of buffalo and fix a penalty for the same. These laws are sometimes enforced against white men and more frequently against Indians. It is not so very long ago that three Assinaboines on the Missouri River were imprisoned for killing game illegally, nor since half a dozen Indians in Flat Head county, captured with elk skins and heads in their possession, were promptly locked up. If this is good medicine for our Indians, it should be good medicine for Canadian Indians guilty of like offenses if they can be captured on our soil and the offense proved against them.

SNAP SHOTS.

An obliging correspondent who writes anonymously sends as marginal commentary on an Adirondack deer hunting note, recently printed in the FOREST AND STREAM, this comment: "The rankest, meanest pot-hunter in the State; preaches God's law Sunday and breaks State laws. Hunts out of season. Is a meat-hunter, and a disgrace to the cloth and to the name of sportsman." Such an indictment as that deserves authentication by the name of the person preferring it. The uselessness and ineffectiveness of anonymous letters is understood by most intelligent persons. If this anonymous accuser can make good his charge, we trust that he will make an opportunity to communicate with the game protector. A straightforward statement of facts, given to the proper authorities, will accomplish something. No-name letters are not worth the paper they are written on.

This is not to question the perfect good faith and right motive of the sender of an unsigned letter or of one signed "Justice" or "Veritas" or other substitute for a real name. In many cases "Justice" or "Veritas" may have actual knowledge of game law violations, and information and evidence which would prove amply sufficient to convict offenders, and which it is his duty as a good sportsman to lay before the authorities. Resort is had to anonymous writing only because the writer fears to give his name; he is apprehensive of the vengeance of the guilty; he thinks that his barn would be burned, or his cows would be killed, or his dog poisoned. What course he shall pursue under such circumstances is for each one to determine for himself. It is reasonable to conclude, however, that in every case where an informant will substantiate the information he has to give by coming out in his own proper person, the editor or the game protector or the army officer will respect his communication as confidential.

Mr. N. P. Leach, chairman of the committee on introducing new kinds of game into Vermont, has recently received a lot of Mongolian pheasants. He reports that the birds arrived in good shape, are bright and lively. They will be kept in a suitable inclosure and their eggs distributed among the members of the Fish and Game League, with instructions how to set the eggs and care for the young birds, etc. Mr. Leach expects very soon a lot of ptarmigan. These birds in the spring will be released on Mount Mansfield and other bald-top mountains in the State.

There are compensations. The world is full of them. Only one must have the correct philosophy, and look for them in the right spirit. Sometimes they are to be angled for with a fishing rod, sometimes hunted for with a shotgun. The weapon matters little, provided the spirit is right. Here is a man who looks on the bright side. "The Blanktown *Times*," he writes, "will suspend publication until next year. I will now devote the most of my time to hunting, and will keep you posted about the sport in this section." There are many editors who would suspend if they could put in most of their time in hunting in Virginia.

The twenty-second reception of the Cuvier Club, of Cincinnati, on the evening of Nov. 20, was an occasion of pleasant reunion and review of the year's pleasures with rod and gun.

The Sportsman Tourist.

HOW FUR IS CAUGHT.

The Pine Woods in Winter.

In the month of February last winter I was delegated by FOREST AND STREAM to secure a little information in regard to the modern methods of trapping fur, more especially that of the smaller fur-bearing animals. The public in general knows little of where the furs come from, how they are caught, or what are the conditions of their pursuit. To supply such information *in extenso* would of course be impossible, and undesirable if possible; but it was thought that a trip into a region where some of the commoner furs are regularly taken in some quantity would prove of interest and would supply the material for the story. Knowing that upper Wisconsin and the Michigan North Peninsula furnish each year a great many furs of the otter, beaver, lynx, marten, fisher, fox, mink, muskrat, etc., I decided upon visiting that region, the month of February being chosen because that is the time when the most of the above furs are prime, although of course every one knows that trapping begins as early as the fall and continues well on toward spring. It would perhaps have been easier to make the trip in the fall, before the woods were filled with snow and before the severity of a Wisconsin winter had reached its height, but to make it at that time would have given no idea of some of the harder conditions of a trapper's practical life, so of course the winter trip was decided upon, both as being more typical and more interesting of itself. After correspondence with different dealers and trappers all over the pine country of the two States above mentioned, I decided to go to Mercer, Wisconsin, near the northern State line, and near the head of the muscallonge waters, that point being on part of the Turtle chain of waters, which make up to the divide separating the muscallonge waters from the Lake Superior waters, and forming in part the division line between Wisconsin and Michigan. At Mercer I learned of G. W. Buck & Son, who were shipping a good quantity of fur, and I made in advance an arrangement with them to take me out with them over their trapping lines, so that I could see practically just how they lived and how they worked. Perhaps the simple story of our trip will serve well enough to show, in a modest way, a little about the methods of the fur-catchers of to-day, and will give something of a notion of the difficulties of the much misunderstood calling of the trapper.

I was accompanied for a part of the trip by Mr. Charles Norris, of Chicago, whose duties as a traveling passenger agent of a railroad take him much through the country indicated. We left Chicago early in February, and taking the evening train of the Northwestern Railway found ourselves at about 5 o'clock of the next morning some hundreds of miles further north, and in the heart of the pine forests of that great region between the lakes and the wild prairies of Dakota, a region which in spite of lumberman and angler, of iron miner and tourist, still remains a desperate and impracticable wilderness, which for generations yet will defy the patient and smoothing hands of the man who reaps the cultivated products of the soil. When we alighted at Mercer it was dark, except for the white reflection from the snow. The pine woods came down close to the railroad tracks, and the village, of a few log houses, also huddled close to the iron rails, as though afraid to venture far from that strong arm of adventurous civilization. The snow lay very soft and white and deep over the face of the world. The pine trees talked unceasingly, as they always do. Evidently we were in a winter country. The thermometer was some degrees below zero. It was impossible to help noticing the great difference of the air we now breathed from that we had left at Chicago. The atmosphere was keen, but sweet and exhilarating as some rare tonic. Once more I thought of the wisdom of letting a vacation fall in winter and in a winter country, instead of spending it in summer in some crowded so-called summer country, where relaxation and not building up must be the natural result, albeit desirable by contrast to the fatigue and fag of business life. Our whole trip was proof enough of this theory. I lost entirely the throat troubles and colds which annoy the average Chicago man in winter, and Norris, who had been weak and sick, came out feeling well and vigorous. There is potent medicine and stimulant in the frozen, balsamic, germless air of the winter pine woods.

Stimulus enough there surely was to make us eat a hearty breakfast, after we had found the long, low log house of our trapper hosts, one of the half-dozen of residences of summer guides and trappers which made up the town. It took us but short time to get acquainted with Mrs. Buck, who was frying sausage, and Mr. Buck, who was stringing a snowshoe, and Fayette Buck, a stalwart boy just about to reach 21 years of age, who was also snuffing the sausage afar off, and with Frank Brandis, who was soon crawling down out of the loft which made the upstairs sleeping apartments in the log house. Brandis, as we learned, was one of the three equal partners in the trapping lines. Mr. Buck, being somewhat disabled by long sickness, did not run the long lines, but tended a short line of sets for lynx and fox, which took him comparatively few miles from home. Fayette, practically the head of the family in hustling and hard work, joined Brandis in running a line which extended its two arms far over into the State of Michigan. I was pleased to hear that we should have to travel in all about 100 miles and return to cover the full lines of traps then attended by these three. All of this, of course, had to be done on foot and on snowshoes, and all supplies would have to be taken in in packs on our backs, except what supplies had been taken into the line camps before the closing of navigation at the advent of the snow season. Thus we were to see winter trapping in one of its very hardest forms, devoid of the ameliorating conditions of boat or horse transportation.

Snowshoes and Winter Wear.

In regard to the means of locomotion, I found that the Norwegian *ski*, which I had hoped to find practicable, was useless in that country as a practical shoe, except on the beaten sled track of the lumbering road, or upon the level surface of the ice-covered lakes and streams. On the lakes I could go quite away from my companions, who were using the web shoes: but in the timber and brush, where the hills were short and choppy and where there was much down timber, the web shoes proved themselves altogether superior, and indeed the only practical shoe. My *skis* were objects of much comment in that country, and I found that the residents knew little or nothing of that sort of shoe, the environment having produced the proper development in the web shoe universally used by the trappers, lumbermen, and indeed everybody who travels in that country in the winter time. I had until that time never worn a web shoe, and of course had read all kinds of things about the awful difficulties of learning to use them, and of the terrible pains accompanying their use by the beginner. I found all this much like other bugbears, with very little to it. We did fifteen miles the first half

WISCONSIN WINTER COSTUME.
O. W. Gayner.

day I ever wore the webs, and I was surprised to find how easy it was to learn the step—far easier than to learn the use of the *ski*.

As to clothing, we found that the country had evolved its own proper and distinctive garb. The pine country is a country of wool. The heavy Mackinaw jacket, flannel shirt and heavy lumbering stockings make the best possible wear for that climate. The feet especially demand the best of care, and we found the practice of wearing several pairs of great stockings a very commendable one. The pine woods man thrusts his trousers in his long stockings, and pulls on over these only a low rubber shoe—not an arctic, but a pure rubber shoe, made without any heel step on the floor irside, and usually provided with rough corrugated soles. This shoe is sometimes fastened by a strap over the instep, but is more usually worn without any fastening, the full woven stockings filling it up so completely that little snow can work in at the edge of the shoe. On the rough wool of the stockings the snow has little effect, and unless the snow be damp they keep the feet dry and warm. The trappers of that region use the garb as above described. A few use the moccasin on the web shoe when the snow is dry and frozen, but I could not learn that they did this for any reason so much as that the rubber shoe is harsh on the lacings of the snowshoe. The Indians use the moccasin, and from what I saw of it in that country I should say the moccasin without other covering was a very sloppy, troublesome and dangerous footwear in thawing weather, though very fine when the weather was dry.

Transportation.

No doubt many readers have noticed the different methods of transportation employed in different sections of the country, each according to the necessities of the land. On the plains the wagon may be used. In the mountains the pack horse becomes a necessity, and the diamond hitch is invented. In the pine woods not even the horse can go, and the man must be his own pack horse. I had renewed occasion to wonder at the loads that a woodsman can pack. It is no unusual thing for a timber cruiser to start with a pack of 80lbs. when out "looking land." The guide and trapper who traverses the pine country must learn the same facility in carrying heavy packs. Fayette Buck, though still but a boy, was a man in stature and strength. I think his pack when we left for the line of traps weighed over 60lbs. Brandis packed as much when occasion came. The man who cannot carry these weights on the snowshoes, no matter what the condition of the snow, cannot successfully run a winter line of traps in that country. Let my lady, who nestles her cheek against the soft fur of her boa in the cold winter days, reflect that upon some other winter day, perhaps colder, some sturdy trapper, with a load upon his back amounting to almost as much as her saddle horse would like to carry, set out into the deep pine woods to live alone for a while, in search of the little fur bearer which at that time was wild in the snowy wilderness, and wearing his own best and warmest clothing. And let my lady's husband, who has read that trappers are a lazy set of fellows, read FOREST AND STREAM, and so learn that they are anything in the world but lazy. Methinks they might often teach my fine gentleman a lesson or so in manhood. The world is big, and men have different tastes. Some love the woods, where the air is clean. Some prefer the city life, where one perpetually parallels the gutter, if he does not walk therein. To cling to the sweet pine woods, some men follow trapping in the winter time, because there is little else to do then. In the summer they guide and row for other men who can't do that sort of thing for themselves.

There does not seem to be money enough left in the trapping business in these regions now to make it an exclusive calling. The Bucks in the summer time have a summer fishing resort and a line of boats from the railroad up the river to Turtle Lake and all the adjoining waters—a very good place to go, too, for muscallonge and all sorts of fish. As soon as the last of the summer fishers and the fall deer hunters have gone they begin putting out their lines of traps. This is before the snow has fallen to any great extent and before the waters are frozen. It is possible at that time to use boats for taking in the bedding and supplies for one or two of the main camps, and of course the trapper clings to his boat as long as he can. In spite of the most favorable conditions, however, the great bulk of the traps must be carried in on man back. A load of sixty to eighty traps, together with the omnipresent axe and the necessary food, constitutes a considerable proposition, but the trapper must be able to take it all cheerfully.

Sorts of Traps.

I should at this time say that the deadfall and the artful wooden traps of all sorts, which we see described in the trapping guides, are practically things of the past as to actual use to day, at least in all the country anywhere near the railways. In Wisconsin and Michigan one does not now hear of a deadfall, except the large deadfalls set for bears. There is progress in trapping as in everything else, and nowadays the steel trap is relied upon altogether. I went prepared to make some pretty pictures of ingenious deadfalls and snares, but none of my trappers had any such things, and in the 200 miles or so I traveled on the trapping lines I never saw any sort of trap except the steel trap.

The Laying of the Line.

Let us say then, roughly, that the trapper is going to rely entirely on the steel trap. He decides where he is going to lay his lines, of course not intruding on any other trapper's country, in which case there would be complications. He will cling to the creeks for his mink and otter, having before this time paid good attention to the muskrats on the streams and lakes of his territory. He will follow up the streams, setting a trap here and there, perhaps one in each half mile, perhaps one in two or three miles. Then he will swing out over some divide or along the ridges, scouting for sign of marten or fisher, which he knows will be apt to cross there. On these high ridges he will drop a few traps here and there, depending on the sign he sees. He may see a bit of country where some foxes are working. Then he follows some game trails into a heavy thicket or bit of windfall, and discovers that to be a good place for a lynx. He wanders on, his pack growing lighter as he leaves his traps—which latter he does not scatter promiscuously, but with the most conservative care and deliberate judgment. When night finds him he may be twenty miles from his home camp or his central line camp He figures that it will take him about that long to run the traps, after they are out, each time that he comes over the line; so he builds him a rough shelter at that point, in order to have a place to sleep when he comes in there tired and cold at the close of some win

SNOWSHOE COSTUME.
The FOREST AND STREAM Man.

ter day—when my lady is out sleigh riding in the city in her furs. If he is in a hurry, and not sure that he is going to leave his line of traps down long, he does not take much pains with his shelter. It is often only a lean-to of boughs built against a log, or an open-faced camp made of pole and pine-needle thatching.

A Tale of Two Fires.

In some cases the trapper makes a permanent hut of logs and boughs well out on his line. He cannot pack in a stove very well, and he has no rocks to make a chimney, yet he must be warm when he comes to this camp, say forty miles from the home cabin, perhaps with some furs in his pack besides his tea and beans and blanket; he cannot carry many blankets, though the thermometer be far below zero in this bitter winter land where the fur grows good. So he makes a sort of wooden tepee out of logs, with a hole in the middle of the roof and a den

MOOSE HEAD OWNED BY MR. H. C. PIERCE, ST. LOUIS, MO.

Killed November, 1890, about ninety miles northeast of Winnipeg, Manitoba. Age about 25 years. Weight about 1,400lbs.

HEAD MEASUREMENTS (ACTUAL).

Length of head between ears to point of nose	32 inches.	Circumference of horn at burr	14½ inches.
Length of ear	11 "	Longest point on lower palm	12 "
From tip to tip of ears, straight line	30 "	Longest point on upper palm	13½ "
From eye to point of nose	22 "	Widest part of lower palm	12 "
Circumference of nose 7in. from point	26 "	Widest part of upper palm	18 "
Circumference of ear	12½ "	Length of upper palm	35 "
From tip to tip of horns, straight line	56 "	Points on left horn	17 "
Length of horn from burr to tip	42 "	Points on right horn	17 "

back under the logs, where he can doze for a few hours each night between mendings of the fire after he has dried his stockings and skinned out his fur and had his tea and beans. He dozes here under the slant roof of logs, his head upon the precious furs for which he seeks, his feet to the fire. Outside the wind shrieks, and the temperature goes down and down. The awful winter of the pine woods sets in in full sway. He dozes, he sleeps unharmed, himself a creature of the wild woods, and fit to survive. Meantime, in the city, my lady is returning from the ball. Her maid removes the fur-lined mantle. She sits for a moment near the grate, her feet to the fire, resting them comfortably upon the soft depths of the fur rug which lies before the fireplace. She does not dream of the trapper out in his lodge of logs, his head upon furs such as she holds under foot. Fire and frost are not the same elements for her and the trapper. And once, she thinks, perhaps she remembers, her husband, when they were together up in the woods at the hotel somewhere, had said to her that a trapper was a lazy fellow. My lady eats a wafer and a cup of tea—a very thin shell of a small cup. My trapper, if he sleep very cold at that hour, makes him a pint or two of tea in a can that was once a lard pail. It came up from the city, where the furs go—these furs, which he must not allow too near the fire. Good night, my lady, and may you sleep well. Of course if one be only a lazy fellow, it does not matter if he lose a few hours' sleep.

The Running of the Line.

It will be seen, then, that one of the great labors in trapping is establishing the line of traps in the first place, looking out the territory, setting out the traps, putting up the main camps and supplying them, and building the temporary camps and shelters. All this had been done on our line of traps, of course, some months before I arrived on the scene; but it remained to see how the traps had been put out and how they were attended in the actual winter work. Since the establishment of the lines the traps had been visited each week, or say not less often than each eight or ten days. I was glad to hear that the take of fur had been good in nearly all sorts of furs common to that region. Marten had been most plentiful, but our trappers had caught a number of foxes, a lot of fishers, several lynx and a few otter. Mink had been abundant, but did not bring much. They had trapped a family of beaver—an animal now becoming very scarce in that region, and protected by law in Wisconsin—and were expecting before long to get results from some poison they had out for a pack of wolves which had several times swept down across their territory. On the whole, it had been a good season, as trappers viewed it. If all went well, the three of them would clean up $500 or more that winter. At the time of our arrival they had just made a run of the lines and had shipped all the furs. It was now time to go over the lines again, and if we thought we could stand the trip, we were welcome to go along and see how they did it. It would be necessary to walk twenty miles or so each day, to sleep out pretty rough at times, and to eat trappers' diet of plain food. All this was just what we were looking for. I felt glad when at noon of one bright winter day we left the railway and with pack on back set out into the woods. At that time I had just returned from a trip to Texas, and as I pulled on my lumberman's socks for the voyage over 3ft. of snow I thought of the barefoot children we had a month before seen playing out in the open air along the Gulf coast. I wondered at and admired the more this great country of America, of which we were now to see another phase.

E. HOUGH.

909 SECURITY BUILDING, Chicago.

About Some "Forest and Stream" Writers.

BISCAYNE BAY, Fla., Nov. 10.—*Editor Forest and Stream:* Although FOREST AND STREAM is always a joy and is always well worth reading from cover to cover, it contains every now and then an article, sketch or story of such extra merit as to be worthy of especial commendation. For instance, what reader did not experience an added thrill of pleasure upon opening his paper of three numbers back to discover that Uncle Lisha, Antwine, Sam Lovel, Joseph and Peltier had come again to camp with us for awhile? In this connection I am certain that every one of the widespread FOREST AND STREAM brotherhood will welcome a few words concerning the genius who created those characters and has again evoked them for our entertainment.

Last summer, when taking a bicycle trip through Vermont, I made an especial pilgrimage to North Ferrisburgh in the hope of meeting Mr. Robinson. Nor was I disappointed; for I not only met him, but I received such a kindly greeting and was so charmingly entertained that I came away feeling that the day was to be marked with a red letter, and that I had gained a friend. Mr. Robinson is a man of striking presence—tall, straight and broad-shouldered, with snow-white hair, and a face beaming with good-will to his fellows. He is a gentleman, and his speech is pleasantly punctuated with the "thou" and "thee" that betray his Quaker origin. Although he is always cheerful and gives no sign of what he suffers, he is a victim of one of the greatest misfortunes that can come to man; for he is totally blind, and can no longer gaze abroad over the widespread valley of Otter, that he loves so well and of which he writes so well. He writes, as he always did, with pencil on paper, but now he must lay the sheet on a corrugated board and slowly feel his way from line to line. Does it not make his work doubly precious to know of the well nigh insurmountable difficulties that attend it? To me it does. And now, when I find a chapter shorter than I would wish it to be, I no longer complain of its brevity, but am thankful for the dauntless perseverance that has given it to us at all.

Besides thanking this blind wizard of the Green Mountain State for his wonderfully lifelike word pictures of that corner of our country, and for the best examples of Canadian-Yankee patois extant, I want to thank you, and through you Dr. Robert J. Morris, for his story of a salmon in one of your September numbers. Never have your pages held a sketch more happily conceived or more deftly woven than that. Can't you persuade Dr. Morris to write another, and when he does, won't you announce it beforehand that we may enjoy it in anticipation?

Then there is Mr. Hough's masterly but terrible picture entitled "My Lady's Plumes." I would that it might be reprinted in every paper in the land until it reached the eye of every man whose brutish greed leads him to the slaughter of God's innocent creatures for money, and of every woman whose contemptible vanity leads her to deck herself with the blood-stained fruits of his crime.

I am sorry that Mater should have so woefully misconceived Mr. Hough, and so misinterpreted his words as to imagine that he was attacking her sex, for I am certain that no more chivalrous knight than E. Hough ever wielded pen in defense of right or defiance of wrong. As I read his article it contains no word of indiscriminate attack against womankind, but is leveled solely at those whom every right-minded woman should be quick to condemn for their thoughtlessness, cruelty and silly vanity. And, Mater, look about you the next time you go to church or to the theater. For every feminine hat unadorned by feather or plume do you not see two decked with wing, breast or other evidences of slaughter? Even if the proportion claimed does not hold in your locality you will see enough to convince you that the annual sacrifice of bird life for millinery purposes is incredibly enormous, and it is well to remember that while it is man who does the killing it is invariably woman who pays his shameful wages. O. K. CHOBEE.

UNCLE LISHA'S OUTING.

IV.—The Ducks of Little Otter.

WHEN Sam and Antoine paddled out from the landing a thick film of fog lay upon marsh and channel, undulating in the almost imperceptible breath of the morning breeze, but disclosing the dun and green rushes and glassy water the canoe's length away, beyond which color and substance dissolved and vanished in the pearl gray mist. Now a vague form loomed up in the marsh's edge till it shrunk to the solid reality of a muskrat house, then again became unreal in the veil of vapor. To the voyagers' eyes there was nothing substantial but themselves and their canoe and the little circle of glassy water sliding smoothly into the fog before, rippling a widening wake into the fog behind.

Now and then the raucous quack of dusky ducks was heard calling to their befogged mates, and the rustle and splash of some unseen life occasionally stirred in the marsh; but far or near there was no sound telling of human presence save the tinkling drip of the paddles or the scratching of a weed along the canoe's side, or a few whispered words of consultation.

So for half an hour they drove the arrow of their wake through the fog till at a turn of the channel Sam saw the ripple of another wake ruffling the water before him, and following it toward its point discovered five dark objects appearing as if hung in the mist. In two cautious noiseless motions he laid down the paddle and took up his gun, then aimed and fired just as the ducks, now suspicious and restless, were pivoting on the point of taking flight. As the smoke slowly lifted it disclosed two ducks killed outright and one fluttering toward the marsh with a broken wing, while two drove away into the fog, uttering wild quacks of terror. Antoine stopped the cripple with a timely shot, and then sent the canoe forward with a few dexterous strokes of his paddle till Sam could recover the dead birds.

The report of the guns was followed so quickly by the roar of myriad wings, as a mighty host of waterfowl uprose from the marshes, that it seemed a part of the echo which rebounded from along the wooded shores and far away among the distant hills, and then for a few moments the air was filled with the whistle of wings as the disturbed flocks circled above the almost invisible intruders or set forth in flight toward the lake.

"Wal, there!" said Sam, after listening till the confusion of sounds subsided to a faint whisper of retreating flight and the splashing flutter of laggards suddenly alarmed at finding themselves alone, "I guess we started aout the last duck in the hull crik, an' might as well go back tu camp. The' can't be no more, the' hain't no room for 'em."

"Oh, Ah'll tol' you, Sam, dey was roos' top one 'nudder, an' dey a'n't honly top one flewed off yet," Antoine answered in a low voice. "Naow we go in de ma'sh for load off aour gaun."

With a few strokes they sent the canoe her length among the wild rice stalks to insure greater steadiness while they stood up to reload their guns. The sun was rising, and the first level beams paved a gilded path and pillared and spanned it with resplendent columns and arches of mist as it lifted and wreathed in the light wafts of the uncertain air, and now through and beneath the rising vapor a stretch of the channel shone in a curving line of silver, still barred with fading ripples of the canoe's wake. Sam's eyes were following it as he capped his gun, when suddenly he crouched upon his knees, whispering hurriedly:

"Scrooch daown, Antwine, th's su'thin' comin'; I'm goin' tu try 'em if they don't light."

Antoine bent his head low as a flock of teal came stringing down the channel in arrowy flight, and Sam, aiming a little ahead of the leading bird, pulled trigger. The hindmost teal in the line slanted downward, and, striking the water with a resounding splash, lay motionless when the impetus of its fall was spent.

"Wal, if that don't beat all natur'," Sam said with a gasp of surprise. "That 'ere duck was ten foot ahind o' the one I shot at. What sort o' ducks du ye call 'em, Antwine?"

"He come 'fore you call it dis tam, but w'en he a'n't, you call heem steal dawk in Angleesh, Ah b'lieved so. He was plumpy leetle feller," Antoine remarked as he picked up the bird, when Sam had reloaded and the canoe was again in mid-channel.

"An' a lively breed they be, tu shoot a-flyin'," Sam commented, as he examined this victim of chance. "'Tain't no use a-shootin' at 'em. You got to shoot 'way off int' the air ahead on 'em, an' let 'em run ag'in your shot. Naow be we goin' tu poke among er lay low for 'em?"

"Wal, seh, it bes' was dis tam o' day, we go 'long kan o' slowry. 'Long mos' to evelin' was be de bes' tam for hide in de ma'sh, w'en de dawk come for hees suppy. Naow you be ready for shoot an' Ah'll paddle de cannoe, me,"

They had not gone far up the channel when the canoe in its stealthy progress came close upon a dusky duck sitting among the wild rice, where she might have remained unseen and unsuspected but for her alarm. As she sprang with a startling splash and flutter clear of the rank marsh growth, Sam thought to profit by his experience with the teal and fired too far ahead his mark, making a clean miss.

Sam stared at the escaping duck and Antoine offered the consoling comment: "Dat feller a'n't run ag'in you shot, prob'ly." ROWLAND E. ROBINSON.

Natural History.

RATTLESNAKE FANGS.

Editor Forest and Stream:

I have intended for some time past to reply to some correspondents who have asked information on some matters of natural history which I have made a study of and especially to defend the handsome, brave and valorous rainbow trout from an undeserved aspersion that he eats the little speckled trout, and thus constitutes himself a general nuisance to the breeder of this highly esteemed fish.

First let me set your correspondent, who averred that the fang of the rattlesnake was double, at his ease for what he avers is true. I send you a drawing made this past summer of the fang on one side of the jaw of a rattler that I caught and dissected for the satisfaction of supporting my frequent conclusion that the cyclopædias are not of much account on scientific subjects. The Britannica says the fang is single and is set in the center of the mouth on the upper part of it, the palate, I should say it was. But it is no such thing; there are two distinct fangs, one solid and one hollow. The solid fang is firmly fixed to a loose bone, held in the jaw by a muscle which permits the fang to lie back until it is erected. The two fangs are a true copy of some taken from a snake which I caught and held by the throat in a pair of blacksmith tongs while I examined his mouth carefully. Then I killed the beast by decapitating his head from his body, as was once said by a noted historian, to be sure the operation was complete, and then the mouth opened and shut and the fangs were exserted and drawn in again, just as the sting of a wasp is. One of the fangs is hollow. It is the shorter one, and it seems as if when the creature strikes it first makes the wound and then by the second fang, which is a real hypodermic syringe, it ejects the virus into the wound.

The socket of the fang is a loose bone held by a muscle, and this is retractile, thus raising the fang and forcing it out of its sheath, which is a loose sac over the jaw, having an opening through which the fangs are forced when the jaws are spread. When at rest and with the mouth only partly open the fangs are closed in the sheath. It is doubtless the case that when the rattler strikes the spreading of the jaws presses on the poison sac attached to the roots of the smaller fang and inclosed in the hollow space at *a* in the drawing. In the specimen described, on pressing this sac a minute drop of liquid appeared on the point of the fang. The sac in this specimen was the size of a small pea.

This snake, after it was beheaded and while I held it by the neck to draw off the skin, had vitality enough to strike back on to my arm with considerable strength. This it did twenty times at least during the taking off of the skin. The snake was a yellow diamond back and I stepped over it while it lay coiled under the hay as my men were raking it off a meadow on the low bank of one of my ponds. Doubtless this was the same snake I saw in the water a few days before taking some of my young ducks, drawing them down by the feet and swimming to the bank with them. I was too late to catch it then, and had just stepped over the hay when it started its rattle. I teased the snake for some time, trying to get it to jump, as some assert that it will, but it made no attempt, but simply darted its head to the stick with which I was stirring up the beast. Neither did it spit venom, even while I held it in the tongs, during my closer investigation of it. I never saw one jump or spit and I have come across a score of them at least. I doubt very much that they do either.

Writing of my ponds recalls that one correspondent made an inquiry some time ago about otters. Unfortunately I have several of them in my ponds, and doubtless they take many fish. I have seen scores of them on the shores of Lake Superior, where I spent some years and fished a good deal. The otter slides are or rather were quite frequent there, and I have seen them like boys sliding down the steep banks into the water one after the other, diving into the stream and running up the bank and taking turns one after the other. These slides are favorite places for the trappers to set their traps under water, where the playful animals get their feet caught as they run along the bottom to climb the bank again. They will eat a great many fish; I have seen one take a rainbow trout of fully 2lbs. weight and swim with it to the shore within 20ft. of my boat. My men have informed me that they have seen them quite often take fish and carry them ashore. They eat crawfish, frogs, newts and ducks when they are short of fish.

Now about the iridei eating trout. I have always opened and dressed my fish, and never saw a trace of fish in one of the stomachs of this species; neither in the stomachs of the fontinalis. The commonest food is clearly the diatoms which are gathered on the water plants and the dead trees and drift in the ponds. I have found the shell of crawfish in them, and occasionally the remains of a newt. I once saw a large iridei take a big frog; it was a pretty picture. It was on a beautiful evening in the autumn when the foliage was in its glory. The water was quite still and the reflections on it were as if another world appeared to open below between the banks, more glorious and far more distinct than the upper world above the water. I floated slowly and silently down the current, when something moved on a forked limb sticking out of the water near one bank. I was looking fixedly to see what it was; when the boat was only a few feet from the branch a large frog leaped into the water or tried to. But it never reached the water, a big rainbow darted clean out of the surface and took that frog on the fly, making a big splash when he, with his prey, fell back into the pond. The bright crimson streak of the fish's side and his open mouth as he made a sharp curve and fell into the water again were quite conspicuous. The ruffled water soon became still and the erewhile glassy surface returned, and the other world below belonged to the fish. It is curious to observe how very distinctly every leaf and twig may be seen in these reflections, while on the shore they seem confused and not nearly so clear. I have often observed this.

H. STEWART.

HIGHLAND, N. C.

The Fourchette Buffalo.

BILLINGS, Mont., Nov. 20.—*Editor Forest and Stream:* I have reports from the "Big Dry" (of the Missouri River) that our little band of buffalo have been killed lately by the Cree Indians, who are refugees from the British Northwest. We had great hopes from this little band of buffalo, as they were gradually increasing on their native heath. Last summer the cowboys reported branding four calves, two the year before, so we hoped ere many years to have a real live herd. But alas! these prowling Indians have killed them all off. We are powerless unless we go to work and kill the Indians, in which case the Indian Department would want to kill us. These (Cree) Indians are a remnant of the Riel rebellion Indians, roaming about our State, killing all the game at all times of the year. Our Governor says we can't do anything, as the Indians are not our wards. So says the Canadian Government also. It occurs to me that our Indian Department should see about these Indians at once, or a killing will be the result.

JOHN D. LOSEKAMP.

THROUGH YELLOWHEAD PASS.

I WAS one of a party prospecting for mica through the Yellowhead Pass, Canada, by pack trail for five months last summer. An account of the hunting met with in that unfrequented place would probably not be amiss.

From the time of crossing the Pembina River one enters upon the chief moose and elk country now left in northwestern Canada, especially between the headwaters of the Brazeau and McLeod rivers. Bear are frequent along the trail. Passing through the White Mud, we enter upon the foothills where caribou and deer are found, and rapidly approach the Jasper House, the eastern entrance to the pass, an old Hudson Bay post, now occupied by a free trader. The mountains around the Jasper House abound in sheep and goats. The Roche Miette, Jack's Rock, Stoney River and the mountains opposite Fiddle Depot on the north side of the Athabasca River are the best for sheep and goats. The usual method of hunting is to wait until they come down to the salt licks and then get above them; owing to the formation of the rock the animals are forced to come up within a few rods of the hunter and present good chances for a shot. One of our party who was with me, above one of the licks, killed a goat with an ounce of BB. from a shotgun. Near the Henry House there is also another good place for sheep, but that is as far as they are found west. On a back trail near the Mi-at-in River caribou are plentiful.

Our party crossed the divide on the old Government railroad survey pack trail, and a place called Buck or Cowdung Lake is particularly good for bear, caribou, goat, porcupine and other small game, fur-bearing animals such as marten, beaver and lynx also being plentiful. Near the Yellowhead Cache is a place worthily named the Swift Current, where bears are so plentiful that the Rocky Mountain Iroquois snare them without trouble, grizzlies being the only bear that will not be readily caught. The mountain Indians never shoot at a grizzly unless they are above it, and if it charges they always wait and give him the final shot at close quarters. I have seen numbers of grizzly hides burnt with powder, showing how close they get. John Moberly and Isidore are notable among the Iroquois for this, and I understand this is done with a .44-40 Winchester carbine. These men are particular about their ammunition, and will only use Winchester or U. M. C., rejecting that made in Canada; rightly, too, for it is unreliable in the extreme. Near the Tete Jaune or Yellowhead Cache on the Fraser River the grizzlies have their home, being rarely disturbed by the few Indians who penetrate so far west.

The salmon run arrived at the cache on Aug. 23. On our return we met at the Roche Miette Mr. Loring, the energetic field naturalist of the Biological Department, Washington, with Dan Noyes as guide. He was collecting specimens of birds and animals, also taking notes of their various habits. When hunting for sheep above the lick he came across a large black bear, which he killed and prepared while we were there. I informed him of the large grouse found in the recesses of the mountains, it being as large or larger than a domestic hen, also of the mountain siffler or whistler found about timber line, of which he intends obtaining specimens.

Unfortunately for this grand game preserve gold indications have been found, and if ever they are proven of value they will cause numbers to come in prospecting and mining, and drive the game out.

Any one intending to visit this part hunting I strongly advise to obtain an Indian lodge, it being easy transported and every way superior to any tent for comfort, and also a portable canvas boat for crossing rivers; the one used by our party was an Osgoode; while easily packed on a horse it proved entirely satisfactory under many severe trials.

G. P.

In spite of the persistent efforts of explorers within the past decade, there would seem still to be some new country left, if one is of a mind to go far enough. Mr. Warburton Pike, Prof. Frank Russell and others have recently told of the Far North of the Mackenzie River region. Prof. R. Bell has just found a whole new big river in Canada, running north into James Bay, in a country where no one has suspected a big river of being concealed. In such connection the recently completed work of J. Alden Loring, Field Naturalist of the U. S. Department of Agriculture, in the Jasper Pass region of the McLeod River, Northwest Territories, is of interest. Prof. Loring's purpose in visiting the locality, he says in the Winnipeg *Bulletin*, was to make a biological survey of the country and collect a series of animals that could not be found elsewhere. In this he was very successful, taking in all over 300 specimens and filling a journal with valuable information. Although most of the time was taken up with this work, he managed to get in a few hunts and shot two black and two cinnamon bears. The rest of the party killed two cinnamon and two grizzly bears, four sheep, two caribou and a moose, besides a lynx and quantities of small game, such as grouse, ducks and rabbits. There were seven in the party: George Gagnon, Walter Bisson, Samuel A. Dirr, Willie Shanno, Dan E. Noyes and his son, who acted as guides. The trip occupied just two months and a half, during which time they traveled over 800 miles, besides numerous hunting trips of fifteen or twenty miles. The first part of the trip was very wet, but the weather afterward was all that could be asked for. Several snowstorms hindered the work considerably. The scenery in the Jasper Pass is simply grand. On either side the mountains rise for thousands of feet. At the head of the Maligne River they found a cañon fully 300ft. deep and not more than 15ft. wide, through which the water rushes and boils for more than a mile. Near by are several hot sulphur springs, which will undoubtedly be of much value when the country is opened up. Prof. Loring has returned to Washington, D. C., to prepare his report on the trip.

An Otter in Ohio.

CLEVELAND, O., Nov. 15.—*Editor Forest and Stream:* While at Sandusky Bay this week I learned of the capture there last winter of an otter. It was taken in one of the nets of a local fisherman, but had unfortunately been dead so long before it was discovered that its fur was not prime.

I imagine it has been some years since an otter has been taken in Ohio before this one, as I have seen no record of one in a long time.

F. M. COMSTOCK.

Game Bag and Gun.

THE MAINE IMPORTED BIRDS.

LEWISTON, Maine, Nov. 5.—*Editor Forest and Stream:* Perhaps a few words in regard to the game bird experiment that has been made in this vicinity might not be without interest. Nearly two years ago a meeting of sportsmen was called in Lewiston, to agitate the question of introducing game birds into the State, in particular the capercailzie and black grouse.

The meeting was held at the Hotel Rockingham and Mr. Gay, the proprietor of the house, was the chief agitator and the leading spirit of the enterprise.

At the meeting, which proved a very interesting and well attended one, an organization for a game protective association was made, including among its members prominent men from different sections of this State and outside. There was no lack of speeches and enthusiasm, and many letters were read from interested parties all over the country who were unable to be present.

Of this association Mr. Gay was the head and he received ample promises of funds; in fact, as he stated, "there was no lack of money," at that time, at least. The committee appointed for the purpose at once set about the procuring of birds of four varieties: capercailzie, black game, sharp-tailed and pinnated grouse, the first two varieties from the Scandinavian Peninsula and the last two from the West. Land was leased in the immediate vicinity of the Lake Auburn Fish Hatchery and work was begun at once. The site selected was on the northerly side of a hill covered with a thick growth of evergreen, and a clear spring furnished an abundant supply of excellent water. The tops of the trees were cut off about sixteen feet from the ground, posts were set and a framework built, and wire netting stretched over the whole space of about one hundred feet in length, by fifty in width, by sixteen in height.

Later in the winter the birds began to arrive; first the pinnated and sharp-tailed grouse. These, when taken to the pens, seemed to be hearty and strong birds, and, with the exception of some injuries by flying against the netting, seemed to take quite kindly to their new life. The cold did not trouble them in the least, and they gradually became accustomed to their keeper, Mr. Waterman, and also to the sight of strangers, who visited the grounds in large numbers.

The black grouse also arrived in good condition, and were beautiful birds; but the capercailzie were a long time on the way, and apparently were not properly cared for on the passage by steamer; so that several were dead when they arrived in New York. Then another blunder was made by the transportation company in shipping them as freight instead of expressing them through direct; so that when finally the birds came to their owner's hands only two were alive—one male in a dying condition and a female that lived for some months at the breeding pens. In this way a part—and the most interesting one of the experiment—was nipped in the bud; for although an attempt was made to have the one capercailzie mate one of the black game males, of course it was futile.

As there were about a hundred of the pinnated and sharp-tailed grouse, a part were liberated on an island in Merry Meeting Bay and others on Mt. Desert. The remainder were kept at the pens with the idea of breeding them in captivity.

The first spring the birds nested and laid to some extent, and the eggs were set under bantam hens; but only one or two live chicks, and not strong enough to be any test, were the result. This last spring the results were a little better, and something over half a dozen of fairly strong chicks were kept for some time in the care of the bantams; but they did not take kindly to their foster mothers and died, one after another, all in a few weeks; and the trial is still a very doubtful experiment.

A few months since, the association being financially embarrassed and its members discouraged, the property was turned over to the State through the agency of the Fish and Game Commissioners. Mr. Arthur Merrill, superintendent of the Lake Auburn Fish Hatchery, now has charge, and as the State has leased the works, the chances will be better at least of paying the bills, although the conditions are very shady for future results, for there are now but a handful of birds.

Of nearly 100 birds put into the pens at first only thirteen are left—three black grouse, one male and two females, and five each of the pinnated and sharp-tailed grouse. These are now so tame that they will come to their keeper and eat out of his hands, and are apparently no more timid than domestic fowl.

Mr. Merrill thinks that one serious mistake has been made in feeding the birds entirely on grain and not allowing them any green food. Under this treatment the birds constantly died off, one after another, but of late they have been fed partially with green stuff, cabbage leaves, etc., and since the change they have all seemed to thrive much better. It is evident that there was something wrong in the feeding, for the birds ate the twigs from the evergreens (firs and cedars) in the pens, until the most of the trees are dead. What few birds are left are in excellent hands, and Mr. Merrill will do all in his power to make a thorough trial of the material left in his care, and if any one can make a successful experiment of it, he will do so.

Mr. Waterman, the former keeper, had everything to discourage him; his salary was not paid and he was obliged to purchase feed at his own expense. His experience was about on a par with nearly all who furnished or

did any work for the association, as Mr. Collins, the contractor who built the pens, and others can testify. As to where the trouble existed it is hard to say, as there are said to be no books showing what the expenditures or receipts have been.

The expenses in starting were about as follows: Ten capercailzie at $14 each, nineteen black game at about $10 each and one hundred pinnated and sharp-tailed grouse at $1 each. To this must be added the cost of transportation in each case, so that the whole cost of the birds when they reached the grounds of the association was not far from $650. The pens cost about $200, so that the entire cost of starting was not far from $850. To this the cost of feed for a year and a half must be added and the keeper's salary—if it were paid. The whole outlay up to the present time has been about $1,500, a portion of which still remains to be paid and probably will remain. At this rate the thirteen remaining birds have cost over $100 a piece, and it has been suggested that they be kept in gold cages after this, or better, in fire-proof vaults.

As to just how much money has been paid into the association for membership fees and private subscriptions it is doubtful if any one can tell or ever can. Mr. Gay stated on several occasions that "the money was coming in freely," and that "the association could have all the funds it wanted." This was when the broom was new. It did not sweep so clean afterward.

As to the grouse mentioned as being liberated in other places, no certain results can be given. People living in those localities reported that they bred the first season; but it is thought that all were shot in the fall; at least no further indications of them have been seen.

It is a great pity that the venture should have so nearly fallen through, for while it has always been a question if the pinnated grouse could be made to thrive in a thickly-wooded country like the State of Maine, there is no doubt of the feasibility of introducing the capercailzie and black game—especially the former. They are magnificent birds, nearly as large as turkeys, and are accustomed to a wooded country. Minister W. W. Thomas, Jr., thinks that they would thrive well in Maine and would be a great addition to the game of the State. Why could not another importation be made and the birds liberated in the central part of some one of the nearly unoccupied townships, say in Oxford county? A special act of protection could easily be gained from the State Legislature for that section, and continued for a term of years. Three or four hundred dollars expended in procuring birds, to be brought here and liberated the last of March or first of April, would be almost certain to make the test a success, and the money could be easily raised if some one interested would lead off. OUTSIDER.

Commissioner Stanley writes us of the bird enterprise under date of Nov. 18:

In your paper, Nov. 2, I read with much interest an article from Mr. C. H. Ames in regard to the attempt that has been made at Auburn by the Maine Game Protective Association (so called) to breed in captivity the young of sharp-tail and pinnated grouse, black game and capercailzie, also an editorial note making some inquiries and criticisms on the subject. The Maine Fish and Game Commissioners had nothing to do with the enterprise, but as the experiments have been conducted on our grounds at East Auburn, where the bird pens are located, perhaps I could give you the information as to what has been done as well as anyone. I am at the hatchery every few days and see the birds often and know how they have been treated. The Maine Game Bird Association should not be confounded with the Maine State Fish and Game Association. They are separate, with no connection or common pecuniary interests whatever. The Bird Association was started for the express purpose of raising in captivity new and desirable game birds for the purpose of stocking the forests of Maine. The expenses of the experiment depended entirely on subscriptions from its friends.

One year ago last spring the Association started in, I think, with about twenty birds each of the pinnated and sharp-tail grouse. A portion of these were sent to New Hampshire and Bar Harbor last season. I think six of the black game and the same number of capercailzie were purchased in Sweden. The black game arrived in good condition. The capercailzie, when they arrived in New York, I understand, were all right, but through some mismanagement or misunderstanding were shipped by freight instead of by express, were several days on the road without food or water, and, as might have been expected, were dead or dying on their arrival at Auburn. A farmer near by was hired to care for the birds. Their feed was almost entirely corn, with but little change. Very seldom was any green vegetable given them, of which they appear to be very fond. Yet with what I call poor care the larger part of the birds have lived. The grouse of both varieties laid a few eggs which were hatched under bantam hens, but died in a few days. They were not strong when hatched. Last spring the black game laid a few eggs for the first time, which hatched and died the same as the others, probably from the same cause. The man who had charge of these birds was apparently ignorant of their habits and food necessary for their young. The care they have had was no better, if so good, as that given by the average farmer who lets his poultry shift and care for themselves. That the few birds that are left are even in as good condition as they are now is more than I should have expected. There are now left five sharp-tail and five pinnated grouse, three black game, one cock and two hens.

Owing to lack of means further to carry on the experiment, the Association turned over the birds to the Maine Fish and Game Commissioners a few days ago. We have thoroughly renovated and cleaned the pens, have set out evergreens, and are giving the birds a variety of grain and seeds, also vegetables of various kinds, of which they are very fond. We have also ordered from Sweden four hens and two cocks each of the capercailzie and black game. We intend to try breeding them for one season.

As to the success of the experiment I am skeptical, but it can be done with very little expense to us, and perhaps is worth trying. Of course we are ignorant as to the proper treatment of the young birds and must depend on common sense and what information we can gather from others. If any readers of FOREST AND STREAM can give us any information to help us, it will be thankfully received.

If we fail in raising any young birds next year, we shall take what stock we have left back into the forests of Maine as far as possible from the haunts of the sportsmen and turn them loose, which course appears to me would be the most likely to be successful.

I have had considerable discussion with Hon. W. W. Thomas, Jr., our late Minister to Sweden, which is the home of the capercailzie and black game. He has seen and hunted them in Sweden and is familiar with their habits, etc. The climate and forests of Sweden are identical with ours. He is firm in the faith that they will thrive in Maine as well as in Sweden. But he thinks as I do that the proper and surest way to succeed is to buy the birds in sufficient numbers, turn them loose in some secluded locality in our forests and let them do the rest. If successful they would be a great attraction and addition to our game birds, and well worth the cost. As for the pinnated and sharp-tail grouse, I have no faith in their introduction into Maine. We shall not waste any money in trying experiments with them. HENRY O. STANLEY.

TEN DAYS WITH THE PRAIRIE CHICKENS.

MARYSVILLE, O.—*Editor Forest and Stream:* Who would sell a farm to join a circus? I would not, or at least that is what I thought about Sept. 1, '94. It had been my misfortune to sigh with the Kirkhart show early in May, and we traveled in the State of Iowa the whole season. It was far from a P. T. Barnum outfit, yet it did stay out all the season, and I should not have shed a tear had it "busted" the second month out; still, if it had done so I would have missed ten days of the finest chicken shooting that ever fell to my lot.

The season had been extremely dry and hot, and it was anything but pleasant. About Sept. 1 I was congratulating myself on soon returning home, when I chanced to make the acquaintance of a young man named Bert, at La Verne, on Sept. 7. I was invited by him to take a ride after the show was over to find some chickens, and I accepted.

Bert was one of those fellows who make you feel, after a few minutes' conversation with them, that you had been on familiar terms all your life. He was a farmer, owned a good horse and buggy, and two as fine English pointers as ever stood staunchly, and which were as finely broken as they could possibly be. He owned a double-barreled Parker and a repeating shotgun.

Soon after 3 P. M. Bert and I were driving for the chicken grounds as fast as a good road horse could take us. We stopped at a cornfield about three miles from town, turned into it, and as there were no fences we had full sway. The dogs first worked out a stubble field through which we were going, but without finding, it being rather early in the afternoon. The birds were resting in the corn where the sun could not strike them, a fact which the dogs well knew, as they turned from the open field and made for the corn. We waited about five minutes for them to come out, but they not appearing we concluded to investigate. We had not entered more than five rods into the corn when we found them both standing as if they had grown there with it. Talk of living pictures! There was one. The order to flush was given, and was promptly obeyed. The result was not quite what we expected. Only a single cock bird flushed, which at that time of the year are always found by themselves. He rose and soared away, but not far, as Bert had leveled the Parker on him, and I had the repeater. He hit the ground with a thud and was retrieved nicely by Little Dick, who acted like a trained dog. His brother Ben did enough of the ranging to make matters even. I doubt if I ever saw two dogs work better to each other's interests, and without a spark of jealousy. They are a brace to be proud of.

After we had worked the cornfield for a while without finding any more birds, we returned to the buggy, the horse having quietly grazed in our absence.

The sun was now going down in the west. We worked for a stubble not far away which we could always mark by the straw stacks, and where there was a stubble there were chickens, providing that it was in the cool of the morning or evening. Once near the stubble, the dogs worked with a vim, and soon they were both stiff as a stick on a point. I am not a very lazy man, but to ride up to the dogs is much easier than to walk when one is hunting prairie chickens. We got out, gave the order to flush, and the moment that the first bird fluttered both dogs dropped to wing.

To one whose shooting has been confined to Bob Whites, which, when flushed, rise all at once with a whir, chicken shooting offers something quite different. The chickens rose two at a time, just long enough between times to permit us to get ready for the next pair. Bert scored two, and if he had taken advantage of the opportunity he could have reloaded his gun and shot two more before they flew out of range. As for myself, all I had to do was to stand and pump, and with fairly good results too, for by the time I had fired five times the birds had stopped rising. I had one cartridge left in my gun, and a remaining bird tried to steal a march on us and nearly did so. He flushed wild all of 60yds. away, when I pulled on him with little hope of bringing him to grass, but he fell with a broken wing and ran toward the corn. However, Little Dick had his weather eye on him, and as soon as he tried to steal away Dick ran after him, and soon both were out of sight in the corn—not for long; in a short time Little Dick came out with much dignity, trotting to us with the bird in his mouth.

On counting the result we found that we had seven birds besides the old fellow we got in the corn at the start.

We had marked the birds down and had no difficulty in finding them again, and in the next flush we brought three more to bag. This was enough for one day and we then returned to town.

We were billed to show at Algona on Sept. 17, and as it was not more than ten hours' drive from La Verne I arranged to join Bert for ten days.

If I were to tell of even half the sport we had with the prairie chickens it would crowd the pages of FOREST AND STREAM. There were about fifty people with the circus, and for ten days they had all the chickens they wanted. We had all the morning to hunt between towns, as the jumps were not long, then in the afternoon from 3 o'clock till dark we hunted and shot when we found the chickens to shoot. At Algona I shook the hand of Bert in farewell, and said good-by to Little Dick and Ben and the horse. I left the show there and took the train for Ohio. I could not remain longer. I expect to see them all again soon, but I will not be with a circus. H. S.

NEW BRUNSWICK GAME.

FREDERICTON, N. B., Nov. 18.—The season for gathering feathered fruit is now about over in this region, and many of the gun cranks are beginning to den for the winter. Of course our chief game bird is the partridge. The crop has not been up to the average of former years. The fruit has been well ripened, but hard to pick. The cranks have patrolled all the country roads faithfully, and once or twice in a while have been able to persuade some infatuated bull partridge to lay aside formality, fuss and feathers. But no large bags have been taken—except in the newspapers.

Woodcock have been more plentiful this season than for years past here. Harry Atherton, as usual, is top-notcher in this style of sport with a total of 67. Rainsford Wetmore has accumulated 44, and George Hoegg 35. Other gentlemen have been seen by reliable witnesses punching holes in the twilight, but without any needless shedding of blood. Of course accidents are bound to happen and birds are apt to be killed or wounded by the hasty discharge of firearms at some other bird.

The star actor down here in the drama of the chase has been our genial friend, "Rains" Wetmore, whose score of over 100 geese, brant and duck at Miscou is not going to be easily duplicated. Rainsford assures me that he saw some birds over there which he did not shoot.

Our equally genial friend, Will Chestnut, is away in the region of Little Sou-West Lake with that king of guides and woodsmen, Henry Braithwaite, and though the weather has not been up to specification, it is dollars to doughnuts that moose or caribou, or both, will fall to William's deadly rifle.

This reminds me to remark that the most genial of all our friends, Fred Irland, of Detroit, was down here this fall and as usual went home covered with gore and glory. He shot a fine bull moose and a bull caribou, and his companion, Herbert Flowers, who is only 14 years old, shot another big caribou right in the neck. There wasn't any fluke about it. Of course the gun knocked Herbert over, but Herbert says he didn't mind that when he saw the caribou come down. Some of these grown-up people who indulge in buck fever ought to communicate with Herbert.

Some people have more luck than some other people. A bicyclist was down here from Boston the other day. His name was Wintergreen. He said he would like to go hunting. He did not care whether it was moose, caribou, bear or deer—most anything would do him. He went out to Zionville, and in company with a boy named Tommy Evans, son of a well-known trapper, entered the forest. Then hadn't gone more than three miles from the house when they flushed a flock of three bull moose. Mr. Wintergreen promptly shot two of them and brought the whole business into town next day. He says this is a great country for moose, and if he has a week to spare next year he is coming down here to get a few more.

With each succeeding season deer are increasing in number in this Province. They are drifting over the line from Maine all the time and threading their way on nimble feet into the remotest regions of the wilderness. If the game authorities can prevent the indiscriminate slaughter of deer by crust hunters in the winter they will soon be very numerous. As yet the only deer shot this season by a Fredericton marksman was the fine fat doe scored by Frank Risteen a fortnight ago on the Maryland road. It is certain that others will be taken as soon as snow falls.

Jimmy Hawkins had a sad experience the other day. James is a deadly foe of the bull partridge, so the other day he chartered a buggy and in company with his wife drove out on the Wilsey road. Becoming suspicious of game at a certain point he got out of the carriage and strolled up an "old road." While James was gone four partridges scurried across the highway in front of the horse, and immediately afterward a large lucifee ran across, apparently in pursuit of the birds. Mrs. James called aloud for her husband, but without success. When James finally emerged and learned of this he made a few hasty remarks and plunged into the bush in pursuit of the lucifee and the partridges. He was gone a good while and went a good ways, and therefore he did not hear Mrs. James, who was again calling aloud for her husband. At last James appeared, and Mrs. James showed him where a great big deer with horns on had come out the "old road" and then gone into the bush as though in pursuit of James and the lucifee! The exact words used by James are not known. Of course he went into the bush in pursuit of the deer, but this time he kept his ears wide open, and hence, when Mrs. James once more called aloud for her husband, he reached the road so quickly that Mrs. James was able to show him where a large bear, not more than a minute before, had crossed the road and gone into the bush in pursuit of the lucifee, the partridges, the deer and James! James then turned the horse and started in pursuit of—home. He says the next time he goes into the woods he will leave the gun in the wagon.

PROWLER.

Deer in Rhode Island.

A FEW days since, a reputable resident in the vicinity of Sneech Pond, near Cumberland, R. I., reported as having seen a good sized buck deer in that neighborhood and stated that if he had at the time had his gun he could easily have proved his story. Such stories circulate now and then here, but of course the teller is well laughed at and his hearer seldom believes the yarn.

For the past few days my chum and I have been the laughing stock of various friends, and in going to and from the office I now haunt the back streets, and all because we report deer tracks in the vicinity of Greene near the Connecticut line. It came about in this way: We went down to our old grounds rabbit and squirrel shooting, and in talking with men who hunt in that vicinity were told that a deer's tracks were plainly visible. Where these tracks were seen no cattle have been and the explanation that they may be hogs' tracks is offset in the same way. The hogs are confined, or killed off. The tracks are sharp and clear, having been made during the last week when the ground was soft from the rains. Now what is the opinion of the brethren of FOREST AND STREAM? Could a deer find its way down into our State, and what domestic animal is there whose tracks could be mistaken for one of these animals?

The simple fact of seeing the tracks might be overruled, but the fact that a deer was actually seen may prove that some strayer has found his way down among us. TODE.

SPORTSMANSHIP.

DICK OF CONNECTICUT tells us of his deep pondering as to whether it exists in this country, and concludes that we haven't got the genuine article.

Don't this nearly take you off your feet? Eheu don't express it; in the language of a dear lady friend, this is "jes' turribul!"

Here we have been all this time carelessly allowing the universe to wobble along as best it might, and the earth to revolve, as dear old Artemus Ward used to say, "on its own axletree, subject only to the constitution of the United States;" all the while supposing that if we each paid several "puns sterlink" for a Hinglish shotgun and joined in a concerted howl of indignation over the effrontery of the skipper of Defender in presuming to enter a protest against Dunraven's playful, kittenish style of winning a yacht race, that we were all sportsmen.

But here we are, it seems, up a stump after all. Like the little children of the old colonist, who, having heard that their father had been unexpectedly made corporal of a militia company, began instantly to execute an impromptu war dance, and in their childish glee shouting "We're all corporals, we're all corporals!" were rudely awakened from their dream of bliss by the harsh voice of the mother crying, "Shet yer mouths, you little fools! there is nobody corporal but your daddy and I"; we find that it is pretty tough to learn at this late day that there is nobody corporal but Dunraven and Dick.

Possibly he is right. It may be that Boone, of Kentucky, plunged into the depths of the greatest forest any continent of this earth ever knew, 700 miles distant from civilization, home, friends, wife and babies; loving the great wilderness with an intensity of devotion which made these days of peril from wild beasts and savage men—peril unshared by mortal man—the very happiest of all his long life; it may be that he was no sportsman. Was Nessmuk? Was Carson? Were any of the great host of true American pioneers who, from sheer love of the great unexplored wilderness, eagerly encountered its thousand perils rather than accept the life of security and ease in the settlements?

Dick of Connecticut (who whole families of us are about ready to conclude has mistaken his place of residence, and belongs rather to Berwick-upon-Tweed, or Stratford-upon-Avon, or Lunnon-on-Tems) asks in conclusion, "Who says nay?"

Before I, for one, make reply, I want to know if we each buy a complete new shooting outfit imported from England, and when procuring camp supplies reject entirely any and all canned salmon from the Columbia or any other American canneries and take instead only the straight tinned product from some English tinnery, and when on our journey to our inclosed game preserve we insist strenuously upon having the cars shunted instead of side-tracked, and put in all our spare time shouting "Great is Diana of the English Ephesians!" whether this will entitle us to take rank with the grandees across the water or not?

It might also be even possible for some American (who had lost the sense of smell, and was possessed of a gunny-sack stomach) by dint of hard practice to eat birds which had been hung up by the neck until the feathers dropped out of them, but I doubt it.

Still, if any one on this side of the water is ambitious to try it he has one assurance—there is no law (but that of decency) against it. If Dick of Connecticut is right there is surely a great gulf fixed between Americans and sportsmanship.

Count me with Boone, Carson, Nessmuk and the rest of our worthies—an American hunter. ORIN BELKNAP.

POTOMAC GUNNING NOTES.

WASHINGTON, D. C., Nov. 22.—Just outside of the shadow of the dome of the U. S. Capitol Building, as the sun goes down, is William Wagner's Washington headquarters for the Hallowing Point Gunning and Fishing Club. The members of this club are: Wm. Wagner; John Peyton, executive officer; James H. Smith, Daniel W. Edelin, Wm. D. Dyer, John Arth, and Richard W. Barker. All of these gentlemen are gunners of good marksmanship and true sportmen. The president, Wm. Wagner, is an authority on guns and their uses, and one of the leading marksmen in the city. At the Du Pont shoot, recently held in Baltimore, he stood third out of a very large number of entries, killing thirty-nine out of a possible forty. Every evening of the week, except Sunday, Wagner's shop, at the back of his gun and hardware store, is filled with men and smoke, tobacco smoke—the stove draws well. When the writer called Tuesday evening the smoke was strongly tinged with sulphur. This was owing to the sudden return of genial John Arth, who had been down to the Point for ten days. With all his inborn modesty John could not refrain from giving a glowing account of his experiences. He went down the river for a good time and declared he had it. John now swears by corn bread and mushrooms, they saved his life, for he lived on them the ten days. We have John's word for it that mushrooms are to be picked up by the barrelful in the marshes around the club house.

Ducks were somewhat scarce, so John had plenty of time to devote to his corn bread and mushrooms. The weather was too nice and warm for ducks. On Friday the weather thickened up and brought some ducks toward the Point. John prepared his battery, felt good, prospects seemed bright. The ducks showed signs of settling on the water, sure signs, and John pictured them swimming toward him by the fifties, even marked the place on the water by eye where he would let loose and pump the lead into the innocent, unsuspecting creatures. But something was wrong, the birds wouldn't light, they just acted so as to let John know that they were tired of flying and would gladly light if things suited them, and then away they went to alight miles away. Our lone gunner couldn't see what bothered the birds until about 10 o'clock a miserable, dirty-canvased sloop sailed out from the cove back of the point, the skipper of which thoughtfully yelled to John, "D'ye have eny lo-uk," and John replied in language too harsh and rasping to be here mentioned.

Notwithstanding the little circumstance of losing his best morning's shooting, Mr. Arth brought home thirty-two ducks, counting, as he puts it, the three Johnnie shot. They were mostly blackheads and butterballs. The two redheads that were in the number made a good showing. John took them and carefully split the feathers of the head so that there was a broad chrysanthemum effect, then he put all of the smaller ducks into the center of the bunch out of sight, and the two redheads were spread all over the outside in such a manner that when John boarded the Macalester at Glymont Captain Blake opened wide his eyes at the sight of such a lot of fine ducks.

One of the mornings John was surprised to have some mallards swim right up to him; he let go a No. 8 shell at them and didn't ruffle a feather. It was a pure case of duck fever, if there is such a thing. John says he can't see where the lead went to.

The Hallowing Point Club is well located, it being one of the best shooting points on the Potomac. The Point is on the Virginia side opposite Glymont, Md., about twenty-five miles below Washington.

As Peyton remarks, shooting on the Potomac is not what it used to be. However, in spite of changed conditions, the iniquitous big guns and steam launches, very good sport is often enjoyed even nowadays. Edelin and Smith a short time ago killed ten redheads over the decoys. On one of his shoots last season Wagner killed sixty-six redheads and blackheads. Capt. Blake and Wagner killed fourteen blackheads in Nanjemoy Creek one day last year. Some one jocularly remarked that more ducks are killed each season in Wagner's shop than on the Potomac River.

The marshes around Hallowing Point are very good rail shooting grounds. With a very high tide these birds are to be found there in great numbers. There is also good snipe and woodcock shooting.

One great trouble about the Potomac is the fact that the game laws are not enforced. There is plenty of law, but no enforcement to it. If the big guns and steam launches were suppressed the sportsmen would have a chance to reach the game.

Speaking of this part of the river we are reminded of Craney Island, artificially built years ago by a Mr. Chapman as a shad fishing station. Thousands of dollars' worth of the savory Potomac shad were landed here, and the owner was at one time offered $30,000 for the island, so valuable was the fishery, now about worthless. Some very good ducking is to be had off this island at times.

That birds of various kinds know a thing or two and will profit by protection is well illustrated in the marshes back of the Alexander race track, in Virginia, opposite this city. The authorities of the race track control the marsh adjoining and will not allow gunning there, as it interferes with the racing. As a consequence the marsh is full of reed birds, rail, etc., in their seasons.

BART.

WILL'S FIRST WAPITI.

FOR nearly a week we had been riding laboriously over steep hills covered with fallen timber and through deep cañons tangled with underbrush, when about 2 o'clock one afternoon we saw some fresh elk sign, and the guide and our map agreeing that we were safely out of the Park we decided to go into camp.

Neither the General nor Will had ever killed an elk, and to do so was the prime object of the hunt. We were all growing tired of bacon and trout, and our horses were getting tired from six days' hard traveling without their accustomed allowance of oats. Dismounting in a little grove of pines at the edge of a grassy meadow our horses were soon unsaddled and refreshing themselves by a roll in the soft grass. The pack mules were soon unloaded, and lifting up their melodious voices in gratitude, the aprarejos ranged neatly side by side, and the coffee-pot simmering over a fire of dry pine boughs. After a hasty lunch the rifles emerged from their cases, cartridge belts were buckled on and the General and the guide went up back of camp full of murderous intent.

Will and I crossed the little meadow and entered the forest, heading for a little bench about half way up the mountain beyond, and almost smacking our lips in anticipation of a fat juicy elk steak for supper. I confess to having been somewhat amused as Will caressed the polished stock of his little .38-55 Marlin and asked who was the best taxidermist to put up elk heads. But I wisely concluded to say nothing and let him learn by experience that it required something more than a pretty toy and a tenderfoot to kill an animal nearly as large as a horse.

After an hour's toilsome climbing up the rocky and almost perpendicular face of the cliff we reached the bench, and were delighted to find some very fresh sign. Slowly and cautiously now, with rifles "ready," we advanced through the virgin pine forest. Carefully stepping around or over every dry twig and stopping at every little rise to search carefully the valley beyond, we finally came to one of those little open grassy glades of perhaps three acres in extent called parks by the mountaineers.

Peering cautiously out from behind a clump of firs, our hearts bound, and hands grip the stock tighter; for there, about 75yds. away and all unconscious of our presence, stands a bull, his rump to the wind and his full broadside toward us. He has evidently just finished a good dinner from the rich grass and washed it down with a draft of cool water from the little stream which runs through the meadow, and is now thoughtfully chewing his cud in blissful ignorance of the close proximity of his deadly foe; meditating, perhaps, on the charms of those young cows in a herd he knows of, and thinking he would go and call on them if the "old man" wasn't so fearfully big and strong and ill-tempered.

Ye gods! what a sight for a sportsman, and how it tends to make the eyes and mouth of a tenderfoot open wide, and his knees shake under him. And I notice that Will's eyes are very bright and big, though his hand is perfectly steady, and he doesn't forget to cock the little Marlin as he brings it slowly to his shoulder.

A spiteful little crack, and as Mr. Wapiti looks quickly around to see what is the matter, he finds out to his sorrow for the repeater cracks again, and this time he starts off with his hindleg broken just below the gambrel, and held only by a bit of skin.

Right bravely does he plow crashing through the forest for about 60yds. down to another little park, where he falls in a slough, and now the first little pellet seems to give him a queer feeling in the vicinity of his stomach, for he lies quite still until we come crashing out of the timber after him. Another brave effort brings him out of the slough, but his progress is slow and labored. Once again the little "pop gun" cracks, and this time it is fatal, and the noble bull goes down to rise no more. He is a beautiful specimen, just medium size, with ten points—one of them curiously bent down and misshapen, probably from some injury while still in the velvet. But he is fat and sleek, and in perfect condition.

Will doesn't say much, but I notice as he pushes his hat back the absence of three out of the five wrinkles that I noticed in his manly brow when we left civilization, and he stands erect, with shoulders, back and chest thrown out more like a soldier than a staid bank cashier. And I? I am glad now, when I see the leg and the big cervical vertebra spattered by the little "pop gun," that I didn't express all I thought about it and its owner. But the sun is already out of sight behind yon tall cliff. Guns are laid aside, sleeves rolled up, and—well, let me tell you. If you have never dressed a big elk, and don't know how, just you go to a butcher and learn before you start hunting in the Rocky Mountains with no hatchet or saw. But after half an hour's hard work and a big nick in Will's new hunting knife, we conclude that he is butchered plenty, for to-night at least. And another hard hour's work brings us safely into camp with a big piece of liver for supper and breakfast.

Of course it only illustrates a human weakness to say that we were both secretly gratified to learn that the General and the guide "hadn't seen anything," and after a hearty supper we told them all about it. E. L.

MY FIRST DEER HUNT IN AROOSTOOK.

"I HARDLY think the old army rifle will do to kill deer with," was a remark I made to my wife one evening in the latter part of September, "and if I want to be fully equipped I had better be hustling and get a gun that won't shoot around corners." I had brought the rifle from the garret, where it had been laying for the past three years, and it took me but a few minutes to come to the conclusion that it was a back number, and in the morning's mail was a request to rifle manufacturers for a copy of their latest catalogue of "destroyers."

Away back in the spring Dick, an old chum of earlier days, now a farmer and woodsman of that mecca of the hunter's dreams, Aroostook, and one of the jolliest and best all-round companions on an "expedition" that you could scare up in a day's journey, in one of his letters had said: "In my opinion it is most time for me to do some killing, and I am going to commence oiling up my shooting irons and get into training for the fall," and knowing that I had never killed anything larger than a fox, asked me if I was going to join him. Well, that started me off on the same tack, and for the next three or four nights I cleaned out everything with horns and four legs in Aroostook county, and would just be getting a bead on that big fellow with the fine pair of antlers when I would get a jab in the ribs "and a gentle voice would softly whisper," "For goodness sake turn over on your side and stop snoring."

About five weeks ago I heard from Dick again, saying that he had made all necessary arrangements for the trip after big game, and to be on deck sure Oct. 1.

In three days the catalogue had been thoroughly dissected and I had decided on a .38-55, octagon barrel, of the latest model. A prettier gun I never handled, and it weighed but 7½lbs.

Friday, Sept. 27, found me getting off the train at Sherman Station on the Bangor & Aroostook Railroad, and when Dick saw me he executed a regular "nigger breakdown," or at least as near to it as he could come. Inside of five minutes we had started on the seven-mile ride to his farm, where a hearty dinner already waiting for us was treated in a most affectionate and brotherly manner. After dinner I unpacked, and of course the new rifle was the main object of interest to Dick, who, having "tried" it to his satisfaction, proposed that I go out in the field and see if I could shoot a deer should I get the chance. I looked at him, "but spoke niver a wurrd," packed up the gun and a handful of cartridges and started for the field, and in a few moments had made kindling wood of a small box at 250yds. (I had been practicing before leaving home). This seemed to relieve him wonderfully, so we went up the hill to where a four-horse machine was digging out potatoes. Six men were picking up and barreling, and kept a two-horse team busy hauling them to the house. He told me that this crew could house 200 barrels per day. The principal things of interest though were the deer tracks and they were thick all over the field. Alongside of this field ran a thick piece of woods, in which Dick said we would find plenty of sign. Sure enough there had been deer around during the previous night, but as it was getting too late in the day to commence operations we returned to the house. About 8 o'clock I began to get restless, and as the full moon was shining brightly I said to Dick, "Let's take our guns and go up on the hill. Perhaps we can spot something." "I'm your huckleberry," said he, and soon we were going cautiously up the rise and keeping close in the shadow of the woods. We made a complete circuit of the field before stopping, and then sat down beside a large pile of stones where the shadows were so black that we were completely hidden, but had a fine view of the open.

I think we must have sat there about two hours, when I leaned over to whisper something to Dick. Hark! what is that? Every sense is keenly on the alert, and your fingers instinctively put the triggers of the guns in cock. We listened breathlessly, for a little further above us, apparently in the edge of the woods, we could hear the regular swish, swish, swish of some large animal walking over the dead leaves. It seemed to have no sense of danger, and came on in a direct line toward us. Nearer, nearer, when of a sudden it stopped, and peering out we tried to locate the beast, which was now almost upon us. Now it starts again, but this time headed directly for the open field. Ah! there he is. Both rifles cracked almost together, and then we saw a black object whirling around as if chasing its tail. We put two more bullets in its hide before he gave up the ghost, and then we ran for the spot. There lay one of the finest black bears that had been seen in many a day. I straightened up and let out three of the heartiest cheers that ever came from mortal throat; for I had killed my first bear. We bled him and then went down to the house, considering that we had commenced the season in right good style, and to say we were happy is drawing it very mildly.

The next morning at break of day we took one of the horse teams and an extra hand and went after our game. It was a beauty, with long, jet black hair. Dick said the hide was good for $15, and the nose $5, which is the bounty paid by the State of Maine for bears' noses. After the skin was taken off we found that three of the bullets had gone clear through the body.

Monday morning the rain was coming down as though engaged for the rest of the day. Dick said to me, "Now I will leave it to you whether we start to-day or to-morrow. Either way will suit me." "We start to-day," said I. That settled it, and we got down to business in short order. Into a light two-horse wagon we packed enough straw, hay and grain to last the horses a week, a tent and small stove, rations for ourselves, and last, but not least, a good boat. About 10 A. M. we were off, and just before dark reached the East Branch of the Penobscot, after a hard drive of eighteen miles.

A short distance down stream Dick knew of an old logging camp, which we headed for, but when in sight saw smoke coming out of the chimney, and knew some one was ahead of us. Then we drove down stream to another place he was familiar with, but that was "rented" also, so we compromised by camping between the two, and making ourselves as comfortable as possible, went to sleep full of supper and bright hopes, for the law would not be on big game after 12 o'clock of that night.

Tuesday morning we turned out bright and early, finished up our chores, ate breakfast, and before sunrise had our canoe in the water. Our course lay up stream, and until the time we landed I did not see a canoe on the river that morning. I sat in the bow, rifle in hand, while Dick paddled the canoe, his rifle lying on the bottom. I do not believe I ever enjoyed a trip of any kind better than that early paddle up stream. The rain of the day before had left everything bright and fresh, and the air was keen and bracing with just a touch of winter in it, enough in fact to make you turn the coat collar up and wish for another jacket.

We went on for about a mile, and finding a suitable place to land hauled the canoe up on the bank. By this time I was getting a little excited, and knew that if everything worked well I would have my first deer before night if I had anything to say in the matter, which latter proved to be the case. Dick said to me, "Now you go ahead, and I will follow about a rod behind. Creep along and make just as little noise as possible, and above all things be ready to shoot at a moment's notice." I started on, and we entered a fine piece of hardwood growth. We had gone about a mile in this fashion, and I had stopped for a moment to wait for Dick, who had fallen some way in the rear, when I heard a crash in the bushes some distance ahead, and almost at the same moment saw a fine doe coming in my direction, but well down to the right. She evidently had not sighted me yet, but when about 30yds. away she stopped and looked in my direction. The rifle was already at my shoulder, and before she could bound away I fired, and through the smoke saw her lying on the ground. Well, I believe I was the happiest man in the State of Maine, and when Dick came running up, his congratulations only added another feather to my hat.

Now, I have read lots of fiction and heard all sorts of stories about "buck fever" and "buck ague," etc., etc., and although that deer was the first wild one I had ever seen, and she came on me suddenly, I do not believe I held my gun a bit steadier when I fired at the soap box the day before. The men who tell of their soul-stirring and harrowing experiences, about how their false teeth dropped out and the cartridges exploded in the gun, they had the "ague," or whatever they call it, so badly, will find no sympathy from me, for I do not believe it, and my own experience backs up what I say. (That is pretty strong, Mr. Editor, but it is funny that I didn't have an "attack.")

After bleeding and dressing her we cut two stout poles, and with the line which Dick had about his waist bound the carcass to the poles, took the ends on our shoulders and started for the canoe. Just as we got there we saw three canoes passing up the river containing a party who, answering our hail, said they were going into camp near Mt. Katahdin, and, congratulating us on our luck, passed on. We loaded our game and started for the camp, where we arrived about noon. After eating a hearty dinner Dick said we would go up the river again, but land on the east side. On the way up we passed an old lumber camp, and noticing that one of the buildings was fitted up in very good shape I asked Dick what it was, who told me that an old guide by the name of Fred Brackett took all his parties there, and had a large one stopping at the place then. Inside of a mile we passed four camps in sight from the river, which showed very plainly that the hunters were out in full force.

We landed and struck back through a territory recently visited by the lumbermen, and where the traveling was very rough, unless you kept in the old lumber roads. All the afternoon we tramped without seeing or hearing anything in the shape of game. We concluded to return again to the river, and turned into an old tote road that led up over a small rise. I was about 10yds. in the lead, and had reached the top of the hill, when out jumped two deer from under the brush and started like a whirlwind down the road in front of us. The first one had not taken more than three leaps when I clapped my rifle up and fired point blank without taking aim. I saw the doe stagger, and I pumped another bullet in, and down she went in a heap. In the meanwhile Dick had picked out the one in the rear, and brought her to earth almost at the same time I fired my second shot. Well, it was the nicest bag I ever expect to make, and we paced off the distance between them as they lay and found it to be less than 20ft. I began to feel quite like an old hand at the business, and was ready to meet anything from a chipmunk to a moose.

We dressed them as quickly as possible, and then had to hang them up, it now being so late in the day that we could hardly reach the river before dark. We blazed the trees on our way out, and in the morning had no difficulty in finding the game. They were both full-grown does, and after getting them to the river found that they made a good boatload. After several minor mishaps we landed them safe in camp before noon, and then hustled around to get dinner. We were pretty tired by this time, and decided to lay around the rest of the day and go to bed early.

Along in the afternoon about 3 o'clock we saw a large canoe coming down the river loaded with five fine deer. Two men from Haverhill, Mass., were the lucky hunters. I asked them how it was that two men had five deer, and they told me that there were three in the party, but one had gone out to Grindstone the day before, as he was taken sick. The deer made a heavy load for the canoe, and one man went forward with a long line and towed it, while the other kept it from the bank with a pole. They had been traveling all that morning in just such fashion and were wet to their waists. The men said that they had gone in several days ago without a guide, and from the results it was evident that they were fully able to take care of themselves. Upon seeing our team they made a bargain for us to take them down to Grindstone Station, so we loaded the deer in and Dick drove the team down, while I stayed around camp and got supper, as he would be back before 7 o'clock.

The moon rose early that night, and we sat around the camp-fire and discussed the events of the past two days, yawned a little, yarned considerable, and about 9 o'clock turned in.

Tuesday morning it was decided, as I had shot all the deer the law allows one man to shoot, that I should try the river for fish and shoot partridges around camp, while Dick was going to strike up river again for the other deer. He seemed worried that I had shot my two while he had only got one, but said he was going to stay in the woods until he got his other one if we stopped there until the snow came; and I knew he meant it.

It was nearly 4 in the afternoon when I heard a shout, and looking up river saw Dick coming down in the canoe at a rate that would have made Bob Courtney hustle to keep up. He said he had shot a fine deer with a good set of horns, and that we could hitch up the team and get it back to camp before dark. In five minutes we were riding over an old lumbermen's road that had apparently not been used for the last seventeen years. We went as far in this with the wagon as we could, then hitched the horses to a tree and started to follow the line Dick had blazed when coming out. It was now getting dark, and with his axe Dick would strip off a good-sized piece of bark from the trees we passed, so the white would show if we did not get back to the team before nightfall. It got so dark within the next few minutes that we could not follow the line at all, and had to start back for the team, which we reckoned was about a mile away. I verily believe we walked over the whole of Aroostook county trying to find that team, and I was minus part of one ear from running into an alder swamp and getting tangled up in the bushes, and about 13in. of skin from various places on my shins before we struck an old timber road, and if ever I was thankful to get back to camp that was the time. There was a run on the arnica bottle that night (which Dick had fortunately brought along), and several very uncomplimentary remarks about things in general were passed the following morning when we found the lantern under the seat of the wagon.

Having relieved our feelings somewhat by getting on the outside of a substantial breakfast, we hitched up the team once more and started for the deer. This time we had no trouble, and by 10 o'clock were again at the camp; at 10:30 we had finished our dinner, packed up, struck tent, and with four nice deer and nineteen partridges started on the return for Dick's home.

When we reached Staceyville Station there was a man waiting for the train bound for home with two nice deer which he shot on the East Branch near Mt. Katahdin.

Saturday morning I started for home, and at all the stations hunters were getting aboard with their game. At Norcross Station I counted fifteen deer, one caribou and two moose heads that were put aboard, and the brakeman told me that on one trip they took out over fifty deer.

So ended my first hunting trip in the Aroostook, and being so successful I thought FOREST AND STREAM would like to hear of it.

Next year I am going again, and before I start I shall inscribe on my banner "A Moose or Bust."

D. ROBERTS.

Nov. 2.

BOSTON MEN AFIELD.

IN a FOREST AND STREAM issue of about six weeks ago I mentioned a proposed big game hunt in Maine by a party of Bangor and Boston men. They were to be gone five weeks and intended penetrating to the best moose hunting region in the State. The party consisted of W. L. Miller, C. P. Webber and A. L. Bramm, of Bangor, and W. T. Jenkins, of the Babcock Varnish Co., of Boston. They have just returned to their homes, having stayed in the woods the full time intended, and tell a story of their experiences which must prove interesting to the many hundreds of FOREST AND STREAM readers who find their way annually to the Maine woods. When all ready to start (about Oct. 1) they found, much to their indignation, that the guides whom they had engaged for the trip had abandoned them for another party who had overbid their services, and right here I would remark that this kind of business is getting altogether too common in Maine. I have heard of a few other cases like it this season, and I believe the blame rests almost entirely on the sportsmen who do it. It is more than unsportsmanlike; it is mean. The guides are nearly all poor men, and while they cannot be held blameless, they should not be tempted to such dastardly acts by men who call themselves gentlemen. In most cases such a proceeding would cause the abandonment of a trip, but the Miller party pocketed their disappointment, and procuring a couple of good canoemen, started out to do the best they could. Mr. Miller was especially well equipped for the situation, having been moose hunting for twelve successive years. He has a well-earned reputation as a moose caller, and is generally able to bring his victim right to the water. Their trip was wholly a camping one, and owing to the low water in the many streams and thoroughfares proved to be a hard one. At one time they spent nearly a day in hard work, damming a brook in order to send the dead water back so they could canoe up the stream, thus saving a long carry. They went first to the Allegash country and stayed for a time around Eagle and Churchill lakes. Afterward they went far into the woods from these points, and it was there they had the best results. The entire party saw thirty-four moose during their five weeks' stay in the woods. Mr. Jenkins saw six spike bulls at different times all in range, but did not shoot at any of them. On one night he called a spike bull down, but did not shoot.

The next morning occurred the grand scene of the trip. While paddling up stream with guide they heard a cow moose whine and a great noise ahead. Rounding a bend in the stream they beheld a sight only forty paces off which it is safe to say neither of the men will ever have the good fortune to see again. There in broad daylight stood two great bull moose battling for dear life, their only witness (other than our friends) being a demure-looking cow moose, who with head above the bushes off to one side stood watching the scene. The fight was terrific. With lowered heads they would charge like mighty rams, each seeking to turn the other's guard in order to reach the exposed side. Then rising on hindlegs they would dash the forefeet full at each other's heads with lightning rapidity, all the time bellowing and making a frightful noise. It was a never-to-be-forgotten sight. Finally Mr. Jenkins fired at the largest one, wounding him with a .45-90 bullet. Filled with excitement he clambered up the banks of the stream only to find the angry moose almost upon him. The guide shouted a word of warning, and realizing his danger he quickly fired again. Straying off a short distance the moose dropped dead. Mr. Jenkins then propped him up and took a fine picture, which I have had the pleasure of seeing. He measured 6ft. 5in. from forefeet to withers; estimated weight between 1,000 and 1,100lbs. He had a fine head, crowned with very regular antlers, and was indeed a prize. Mr. Jenkins also killed a bull caribou, the animal having an excellent head. Mr. Miller got a bull moose, and called the animal down himself. He wounded him with the first shot, and the moose went into the woods. The next day they followed him until 3 P. M. and finally found him lying down. Another shot killed him before he could get up. A fine bull caribou with a head resembling the Newfoundland species in wealth of horns also fell to the lot of Mr. Miller. A large number of deer were seen, but only enough were killed to provide them with venison. Chas. Morris, the guide who so fearfully wounded Warden Collins in the Aroostook country some time ago, walked into the camp one day. He looked careworn and threadbare, and is evidently suffering many hardships alone in the woods. He stated that he had seen the sheriffs go by him, and when told they would come after him when the snow came, declared he would never be taken. He held to his rifle all the time he was in camp, and would not receive some clothing tendered him as a gift, although sadly needing it. By his ghastly act he has made himself an outcast, and I fear will do more harm before he is captured.

Haggett's Pond, near Andover, Mass., is a favorite place for pickerel fishing just now. Some good catches have been made there lately, and it is said that luck had no part in it either. The Haggett's Pond pickerel has a reputation for cuteness. He is educated and the man who succeeds in taking him out of his native element must know all the points. John Saunders, of Andover, is posted about him, and is therefore high line among the fishermen who go there. Mr. Saunders is a born angler, one of the kind that studies the sport from pure love of it, and gives every detail of preparation the most minute attention. This quality combined with a good knowledge of the water he fishes almost insures success in advance. Last Saturday (accompanied by a friend) he went to Haggett's, and brought home fourteen pickerel, the largest weighing nearly 4½lbs. His generosity is proverbial, and a nice, fresh pickerel for breakfast, as a reminder of Mr. Saunders, is a common occurence among his friends.

Geo. D. Loud, of Boston, has made several trips this season to Bonny River country, in New Brunswick. He has just returned from the last one, and as usual expresses himself as well pleased with the results. Partridge shooting was the main object of his trip and he bagged seventy-five birds during his thirty days' stay. Another Boston party were down there during his stay. They were Chas. D. Sias, Mr. and Mrs. Grant, and Mr. and Mrs. Pierce. Ten days was the length of their stay, and they killed about sixty birds during that time. Mr. Loud saw a number of deer, but did not get a shot.

The Florida tourists are beginning to show activity, and are only awaiting the advent of real cold weather to start them on their journey southward. G. W. Pitcher, of Providence, R. I., will leave very soon for Homosassa, intending to stay all winter. He has been South for many successive years. The Gulf coast is his favorite country, and he has hunted and fished over a good part of it. For many seasons he went to Miakka, but lately seems to prefer the Homosassa region, where he says he can be very comfortable, and at the same time find good sport with rod and gun.

One hundred and fifty birds (woodcock and partridges) killed in a little over two weeks' time by F. H. Talcott and a friend, both of Boston, demonstrates the fact that Massachusetts covers can still furnish some good sport in spite of ripe old age and long years of abuse. It all happened pretty near Boston too. A large share of credit is due Mr. Talcott's very excellent dog. What is the use of going two or three hundred miles away when shooting like this can be found so near at home?

C. A. Taft, J. M. Lasell and C. V. Dudley, of Whitinsville, Mass., left on Nov. 8 for a two weeks' stay at Mr. Taft's camp near Flagstaff, Maine. Big game hunting on the first snows is the object of the party. They have gone to a good region, and ought to do well.

BOSTON, Mass., Nov. 23.—Boston boasts of many great sportsmen, but there are few among the number who are so indefatigable as Dr. Heber Bishop. One trip a year satisfies the most ardent, as a rule, but the Doctor is made of different stuff, and a moderate vacation such as most men take only serves to whet his appetite for more. Last spring he went into Maine on a fishing trip. Early this fall he went to Nova Scotia and the Moosehead region with a party of three or four others. They were at the latter place at the opening of the shooting season and came home a few days later with a very creditable assortment of big game killed on the trip. Now the time and desire are ripe again, and in a few days the Doctor is off to the woods again, this time bound for the great northern Aroostook wilderness. The men who will accompany him this time are William Farley, Charles C. Williams and a Mr. Wilbur, all of Boston; Dr. George McAleer, of Worcester, and I. K. Taylor, of New York city. Moose and caribou are the game they expect to get, and surely they are going to a region where these animals are said to be more plentiful than anywhere else in Maine. I believe they enter the woods from Caribou, and will devote three weeks to an attempt to provide each man of the party with his full legal number of animals allowed. Deer are more abundant than anything else up there, but they are not after them and will only kill enough venison to provide for the table.

The most delightful reminiscence of the average New England hunter is the recollection of how he got his first deer. The scene, even to its smallest detail, is indelibly impressed on his mind, and memory never proves treacherous to him who would recall the experience. The head always graces the home of the ambitious novice, and he is

ever ready to tell his friends just how the deed was done. The latest aspirant of my acquaintance for honors of this kind is Mr. Horace S. Dame, of Boston. It was a buck, and a big one too, that first broke upon the vision of my young friend when seeking sportsmanship honors, and barring a slight touch of the fever which closely follows in the track of every tenderfoot, it may be said that he did exceedingly well. The first shot broke one of the animal's hindlegs, a fact which only seemed to increase the speed of the fast-running deer. The next shot went clean through his neck and tumbled him to the ground. He was on his feet and off again in an instant, but one more leaden messenger just back of the shoulder caused a complete somersault, and our young hunter with his guide ran up only to find him again on his feet and inclined to show fight. It was but a moment, however, before he toppled over and died. The scene was laid in the burnt lands just off the Eustis stage road, some five or six miles from the "Greene" farmhouse, where Mr. Dame was stopping; and after cutting off the head and skinning the animal a large part of the meat was hung up where it could be found later, and the two men started for home, loaded with a good part of the anatomy of the victim. It proved to be pretty heavy before Greene's was reached, but Mr. Dame confidently declares that he would have carried that head clear to Boston rather than abandon even a fraction of an ear. His companion of the trip, Mr. L. Dana Chapman, went on to Chase Pond, about six miles from Eustis, a day or two later and succeeded in killing a doe and buck. This gentleman is a veteran of the woods and very persistent in the chase. If there are any deer in the region he visits he is pretty sure to find them. Mr. Dame's buck had an exceptionally fine head, and I believe all three of the heads are being mounted by Frazer. On the week previous to their visit there was quite a fall of snow, and while it lasted twenty-two deer were brought into the town of Stratton. Harry Haines, of Boston, killed two bucks near Chase Pond that week, and Blyn Viles a fine doe.

The 2,000 young salmon taken in to Big Island Pond for the Megantic Club by Mr. Chapman arrived there in good shape, only four or five dying out of the lot.

A party of Worcester sportsmen, consisting of Gilbert H. Stone, Oscar R. England and Joseph G. Vandreuil, have just returned from the Katahdin region. Mr. England is happy over the killing of an immense moose with a head second only to the one recorded in FOREST AND STREAM of last week as killed by Mr. Cardeza, of Philadelphia. The spread of the antlers was about 62in., and the sportsman and his guide followed him all of one day, camped on his trail over night, and killed him the next day after two hours' hard work on the edge of a swamp where he had taken refuge. Mr. Vandreuil also killed a moose. Mr. Stone was ambitious to make the ascent of Mt. Katahdin. His guide advised him to take his gun, but he thought he would travel light, and has ever since bemoaned his lack of judgment. On reaching the flat table land near the top they found about thirty caribou simply waiting to be shot and not even a popgun to do execution with. What strange things we see, etc., etc.

Stories about the great abundance of deer in Maine are still coming into Boston. John Carver, Fred S. Moxon and Seth Waterhouse, of Atlantic, Mass., have just returned from the Aroostook country. They went in from Grindstone, up East Branch of the Penobscot and stopped at their guide's camps on Soldiers' Pond. During the eight days they were in the woods they saw sixty-seven deer and brought out six handsome bucks. It is a good bear country in there, and signs of bruin were everywhere visible. When trapping last spring their guide (Frank Cram) made a record of nine bears, catching them, it is said, in nine separate traps which he had set for a grand round-up. HACKLE.

Nov. 23.—Mr. L. P. Daniells is just out of the Maine woods with a nice buck deer to his credit. He went to Bethel, Me., and from that point to Upton, and up into the Magallaway region. Very hard hunting came to his lot, with a lack of snow for tracking. It took a good many days of hard work to win success. Hounding from over in New Hampshire has made the deer of the Magallaway very shy and thinned their numbers. Mr. H. L. Hubbard is back from King and Bartlett lakes with a deer of his own shooting. He also found rather slow hunting for want of snow. Mr. L. Dana Chapman, treasurer of the Megantic Club, and Mr. H. S. Dame, of Dame, Stoddard & Kendal, have been to Big Island Pond with 1,500 young salmon, purchased by the club of the State, and taken from the hatchery at Auburn, Me. The salmon were taken through without any loss whatever. Mr. Chapman had the good fortune to secure a couple of deer, while Mr. Dame, who is a beginner at hunting, got a fine buck. L. P. Washburn has returned from a Maine hunting trip. He found bad weather and no snow. It rained for several days of his absence nearly all the time. He got no deer and no moose, though a novice at hunting. He says that the rule that the beginner always gets the game and the largest fish did not hold good in his case. He also says that one should go over the Bangor & Aroostook R. R., as he did, in order to see how many greenhorns at hunting there are going into Maine this year. Nearly every train is loaded with them. A deer to every man would exhaust the game supply of any country in the universe. He says that to see the crowd that embarks on the trains of that road to Bangor, to listen to their talk, to see their toggery, is enough to make one sick. "Talk about game. Why, there isn't game enough in the world to satisfy such hunters! If Maine had a law to keep such fools out of the woods, now!" Here the conversation was cut short.

There are reports of the shooting of a big white moose at Grafton, Me. Reports say that the animal was a large one, weighing nearly 700lbs. when dressed; also pure white, and the first instance of the kind on record.

SPECIAL.

Vermont Small Game.

SHELDON, Vt., Nov. 15.—Ruffed grouse are more numerous in this vicinity than for many years. It is not an unusual thing in a day's shooting to flush from thirty to fifty of these king of game birds. Gray squirrels are also fairly numerous. Northern hares plentiful. Foxes scarce. Woodcock shooting at both native and flight birds has been poor. STANSTEAD.

The FOREST AND STREAM is put to press each week on Tuesday Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

The Season and the Game.

STOCKTON, Worcester County, Md., Nov. 21.—We are having splendid success with the quail. I have never known them so plentiful as they are this year. The cover is quite heavy and some skill is required to pick out your birds after they flush in the covey. Mr. C. Clark and party from Darby, Pa., were here last week, and although the weather was bad and the wind northeast all three days they were here they shot nearly 100 quail and several woodcock and jacksnipe. They also got quite a number of ducks, although it is yet too early for good duck shooting.

Quite a number come here shooting and fishing. We have geese, brant and ducks in winter, jacksnipe and yellow perch in the spring, thousands of all kinds of beach birds in August and September and lots of partridges (quail) and rabbits. The whole eastern shore, as you know, is a famous gunning ground, and why gunners go way down to North Carolina when quail are so plentiful here is more than I can say. Two good shots with a pair of true dogs ought to get at least fifty birds here a day, with a few jacksnipe and woodcock thrown in.

O. D. FOULKS.

BRUCEVILLE, Ind., Nov. 14.—Quail in this section were *early* and the flocks full, from 12 to 20; never so plentiful before. The dry season was certainly favorable for hatching

MOUNTED IN VERMONT STYLE.

See Page 472.

and raising young. Our season opened 10th inst., but no shooting to any extent. Mr. J. A. Gude shot one *hen quail* that had eggs in her ready to lay. Would she have nested? I. T. M.

[She probably would have carried out her mission so far as she could by nesting and sitting.]

ELMENDORF, Texas, Nov. 13.—The bird supply in this section is larger than it has been for the past three years. I find that the birds were late in hatching, as there are still some very small birds, but I think this is due to the fact that the small birds are from the second hatching. I found about a month ago an old bird with a brood that couldn't have been over a week old. Have been out on several hunts and found birds fairly plentiful, as we had most excellent shooting. Last week Mr. J. R. Hooper, Z. O. Stocker and myself found seven coveys of birds in one field about five miles from the ranch, and I am certain that this amount of birds over so small ground has not been found before for the past three years, so I can say we are not short in this section this year, though we were last year and year before last.

Why we have more birds than usual I cannot say, but think it is caused from the rains we have had that has made most excellent cover. C. M. ROUNDS.

The Jackman Country.

SEVERAL of my friends who are lovers of the rod and gun have requested me to write you regarding the quality and quantity of game in this region—especially to extol the virtues of Jackman as a center from which to make their circuitous excursions. Having spent six seasons in this vicinity—from May to January, each year—I feel somewhat gratified to make a comparison between this and other regions.

Jackman is a border town of Maine, situated on the Canadian Pacific Railway, and has been hitherto an unexplored region. Though easy of access at present, it formerly was an entirely isolated settlement, the nearest railroad being 100 miles from it.

It lies in the valley of the headwaters of the Kennebec River. Its main stream is the Moose River, which derived its name from the abundance of that game which formerly existed along its banks. This stream is the largest tributary to Moosehead Lake, that paradise of sportsmen.

In former years my friends and self had been annual visitors to the Rangeley region. Since Rangeley has become so esthetic in its habits, many sportsmen who rather enjoy their flannel outfit, and not the conventional dress suit, have been making Jackman their headquarters. Within a radius of thirty miles I can now number fifty-four camps where three years ago not half a dozen camps existed. Possibly the most acceptable place of all for those desiring to bring their families with them is the Parlin Pond establishment. N. W. Murphy, proprietor, and pioneer caterer to the wants of sportsmen, is an ideal landlord. He was the first in the vicinity to see that an inexhaustible supply of fish and game would naturally be a source of good revenue to this region, and accordingly made preparations to advertise for and entertain the lovers of the rod and gun.

His judgment was good, for to-day he controls the largest and best class of sportsmen coming to northern Maine. His hotel is a model of convenience and his camps, situated within easy distances of the hotel, are located at ponds that teem with trout. Ex-Gov. Burleigh of Maine, ex U. S. Senator Williams of California, Rt. Rev. Bishop Healy of Portland etc., are annual visitors to this resort.

The Hotel camps, L. P. Kinne, prop., are scattered throughout ten thousand acres of land. They are the "happy hunting grounds" where abound moose, caribou and deer. Its ponds, besides its natural supply, have been liberally stocked by the State Fish Commission. He is a most entertaining host. It is to the "wild and woolly" North, though, that the true lover of roughing it finds it to his heart's content.

No place in all Maine can compare with the headwaters of the Penobscot and St. John's rivers for game in superabundance, and fish large and small without end.

More moose and caribou are taken from this region alone than from all the rest of Maine combined. Especially on the St. John's waters is this true.

One of the most beautiful specimens of the moose ever seen here was recently brought from that region by Mr. Vaughan, of New York. He intends mounting it entire and placing it in the Maine sporting building in New York city.

It will surely be a speaking advertisement of Maine's noblest animal. The Heald Pond camps, the Churchill and Parlin Stream region alike abound in game. In my next letter I will tell you of them. T. J. M.

Wild Turkey Vitality.

DUNCANNON, Pa., Oct. 18.—One day last week I was fortunate enough to get a shot at a wild turkey which came down at the report of the gun and started to run. I put my setter, Gipsy, on the scent and soon found her holding the turkey and waiting for me. The turkey was still alive and with the exception of a broken wing was apparently uninjured. It had gone a distance of nearly 200yds. from where I shot it. Now there is nothing peculiar about this, but when the turkey was served for dinner the next day a No. 4 shot was found imbedded in the heart. I have always been under the impression that the heart was a vital spot, but after this occurrence I am not so sure about it. Is it not remarkable that it should have run so far under those conditions?

Some years ago I shot at a gobbler which was not more than 25yds. from me, and which at the discharge of the gun fell over, but quickly righting himself started to run at such a rapid pace that, had his wing not shown that it was broken, I would have thought I had missed him. I stopped him with the second barrel. On examination it was found that almost the entire load of No. 4 had struck him the first shot, and the side that was toward me somewhat resembled a porous plaster. Eight of the shot had gone completely through him. Had I not stopped him he certainly would have died in a short time from the wounds, and I would have lost a turkey that I would to this day have believed was only winged. C. C. R.

Old Weeks, of Erie.

WEEKS was all gun. Gunsmithing was his trade. He not only worked at it, but it was the sun and moon of his ambition; yea, the sidereal system of his universe. He practiced what he preached; was the famousest turkey-shooter of Erie; winning when all others failed. His one perpetual song was:

"I want to be a gunsmith,
And with the gunsmiths stand."

For many peaceful, prosperous years he was what he aimed originally to be; then deceased, a true son of a gun. Peace to his empty cartridge!

Once upon a time I called at Weeks's gun shop to buy a gun for my son Conyers. On making known my mission to good old gun Weeks, he, evidently taking me—because of my somewhat somber cut of jib—for a member of the clergy, remarked sententiously as he handed me his best double-barreled English shotgun: "My friend, if a parent wishes to rear his son so that his boy will be an honor to his parents, an upright citizen, a manly man, in every sense of the term, he should buy him a gun." Then he glanced over his spectacles at me in a way that satisfied me of the simple-hearted old fellow's perfect sincerity and confidence in his estimate of what constitutes a model son. C. CROZAT CONVERSE.

HIGHLAND, N. Y., Nov. 23.

A Virginia Game Country.

SURRY, Va., Nov. 15.—This county is on the south bank of the James River and is very easy of access to Northern cities. Game consisting of deer, turkey and ducks can be found in large numbers in this section. There has been killed in the immediate vicinity in the past few weeks sixteen deer and about twenty turkeys. A week ago a friend of mine while out on a hunt of only about three hours killed three turkeys and a deer. I killed a large turkey about three days ago only about 500yds. from my house, and it is no unusual sight to see them from the house.

Since the cold weather set in ducks have begun to come in in larger numbers than I have ever seen them before. With good blinds and decoys good sport can be had with them.

Black bass have been biting very well for the past two weeks, and several large catches have been made. The sportsman who desires a few days' outing at a small expense can secure it in this section. He can leave New York in the evening via the N. Y., P. & N. R. R. on Mondays, Wednesdays and Fridays and connect with the James River line of steamers at Old Point, arriving here about 12 M. the next day. By writing beforehand he can have things arranged for a hunt the afternoon of his arrival. A. B. GILL.

Advices from the Seat of War.

MEMPHIS, Nov. 21.—I am just from our camp on Sunflower River, where we have had three or four days of splendid shooting. We killed one bear Friday, one Saturday, two Monday, and two Tuesday. This would indicate

very fine sport, but I am sorry to say that large game such as bears and deer is growing very scarce in these swamps, and within the next two or three years I am afraid it will all be gone. At the end of a most exciting chase after a bear Tuesday, Mr. Noel Money of New Jersey killed his first black bear. The weather is fine, and our camp will not break before the middle of next week. Hough is on the ground and I am pretty sure he will get his bear to-day. T. A. DIVINE.

Sea and River Fishing.

VERMONT FISH AND GAME LEAGUE.

Introductory.

THE sixth annual meeting of the Vermont Fish and Game League was held at the Van Ness House, Burlington, Vt., on Wednesday evening, Nov. 20. This meeting was the most successful in the league's history and must have been very gratifying to the present President of the league, J. W. Titcomb, of St. Johnsbury, who was the promoter and foster father of the league itself.

Organized on Nov. 24, 1890, with 112 charter members, the league has done good work in obtaining legislative reforms in the fish and game laws of the State. The State hatchery at St. Johnsbury, of which President Titcomb is superintendent, is a direct result of the organization's work, the charter members, prior to their regular organization as a body of fish and game preservers, having done a great deal toward obtaining an appropriation for the purpose of installing such a hatchery.

The dissemination of information relating to the game and fish laws by the league has been general throughout the State, cloth posters imparting that information being posted in every railroad station and every post office in Vermont; the railroad authorities themselves have aided the league in this matter by assisting in the distribution of the posters.

In 1892 a new chapter of game laws was formulated by the league, presented to the Legislature at Montpelier, and became a law of the State. At the same session of the Legislature an appropriation of $5,000 was secured for the further equipment and maintenance of the State hatchery. The league has also been very instrumental in bringing violators of the fish and game laws to justice, and may be said now to be more than ever in touch with the people of Vermont on the subject of fish and game protection. Vermonters in general have awakened to the importance of stocking their lakes and rivers with fish, and their mountains and valleys with furred and feathered game. They have realized the fact that a very large source of revenue to the State is derived from those who are commonly termed "summer visitors;" and they have also realized the fact that summer visitors need some attractions to draw them into the State, and they feel that they can best fill the bill by making the days spent by these visitors on the lakes and rivers, and in the woods and swamps of the Granite State, as attractive as possible by reason of a good supply of fish in the one and of game in the other.

The growth of the league in numbers, and the consequent widening and strengthening of its sphere of action, from Nov. 21, 1894, to Nov. 20, 1895, is best evidenced by the figures given in the proceedings at the annual meeting: The annual meeting in 1894 closed with the membership of the league standing at 197; when the annual meeting on Nov. 20, 1895, was adjourned, the secretary's books showed that the league numbered on its roll 355 members, an increase of 158 as a result of the twelve months' work.

The league has big work ahead of it, but under the leadership of President J. W. Titcomb, backed as he is by the members of the league who comprise the best element in the State, the result of its labors in the future will far transcend that in the past, beneficial as it has been.

The Annual Meeting.

At 8 P. M. on Wednesday, Nov. 20, the sixth annual meeting of the league was called to order by President Nelson W. Fisk. The other officers present were: J. W. Titcomb, Secretary, and A. W. Ferrin, Treasurer. There was an excellent attendance of members, considerable interest being evinced in the proceedings by all present.

The reading of the minutes of the previous meeting was dispensed with, as the same had been printed and placed in the hand of all members.

The treasurer's report showed a balance to the credit of the association of $241.44. This balance was largely increased during the evening by the payment of initiation fees and dues by new members, and by the payment of dues by old members. The report showed an income for 1894–95 of a little over $800; with an expenditure of some $40 over and above receipts, the balance in the hands of the treasurer on Nov. 21, '94, being $281.07. Of the sum expended by the league during the past twelve months, $144.55 is credited to attorney's fees, the league having found it necessary in several instances to employ its own attorneys in order to carry cases before the court.

Treasurer Ferrin also presented a report of a fund known as the Leach fund, of which he is the treasurer. This fund was created by voluntary contributions for the purpose of importing and acclimatizing new varieties of feathered game in the State. The report showed that the fund had a balance to its credit of $135.83, the total receipts having been $222.03. The expenditures were: $5.50 for personal expenses of Mr. Leach, $50 for Mongolian pheasants for the league's aviary, which is superintended by Mr. Leach, and $30.70 for expressage on same.

Before going into the election of new members, Gen. W. W. Henry moved that the chair appoint a committee on nomination for officers for the ensuing year. He stated that it would take such a committee quite a long while to do its work, and that it would be a saving of time if it got to work while the election of new members was being proceeded with. The motion prevailed and the president appointed as such committee: Gen. W. W. Henry, chairman; L. Bart Cross, D. A. Bisbee, J. W. McGeary, Capt. S. E. Burnham, F. A. Howland and C. G. Williams.

Before retiring General Henry addressed the president as follows: "Mr. President, allow me one minute before we retire to go into executive session on nominations. I want to know whether you meant what you said to some of us prior to this meeting—will you consent to act for another year as president of this league?"

To this the president replied: "I did mean just what I said when I asked several members of the league to look out for a new president. We have many capable men in our ranks and it is only fair that the honor should be passed around. There are many, too, who have more time to devote to this work than I have, and I find that there is a lot of work that can be and should be done by the president of this league. For that reason I much prefer to have the committee name another person to fill my place." The committee then retired.

New Members.

The secretary announced that he had 47 applications for membership that had all been favorably reported upon by the committee on membership. These 47 were turned in 55 before the proceedings closed, thus making the total membership of the league 355 as against 197 one year ago, 103 members having been elected at the special meeting held at Montpelier on April 11 last, and at the summer meeting held at the residence of President Fisk —Isle La Motte—in July. The 55 new members were all duly elected, the following being a list of their names:

C. L. Woodbury, Dr. H. E. Colvin, F. C. Smith, G. E. Terrill, G. G. Benedict, E. C. Tuttle, J. K. Lynde, E. A. Chittenden, F. G. Butterfield, W. G. Isham, L. E. Woodhouse, W. H. Waters, Z. M. Mansur, J. H. Seymour, S. W. Laudon, S. S. Leach, E. B. Taft, D. J. Foster, C. Clough, F. W. Baldwin, H. C. Gleason, S. A. Andrews, G. L. LaFountain, A. A. Richardson, F. D. Hale, W. H. Stowell, Orrice Ballard, L. F. Abbott, F. M. Barstow, M. G. Safford, E. M. Barlow, C. G. Austin, E. R. Morse, J. H. Edson, Benjamin Cronyn, F. L. Fish, H. B. Salisbury, F. L. Hyde, C. L. Soule, G. E. Blair, C. H. Lane, B. M. Lambkin, E. W. Shipman, A. G. Wittemore, H. E. Tutherly, E. J. Booth, Frederick Gay, Frank Brown, Thomas Arbuckle, H. C. Tinkham, C. N. Mosley, L. H. Bixby and E. S. Adsit.

The committee on game was continued in office, but no report was made by that committee, the chairman, N. P. Leach, of Highgate, Vt., being absent. The secretary, however, made a brief statement as to what had been done in the matter of importing and propagating new game birds in the State, mentioning the fact that Mr. Leach had purchased a quantity of quail on his own responsibility, the committee not being a unit in favor of turning down quail on account of the birds being unable to withstand the rigors of the climate of Vermont.

Hon. E. A. Brackett, of Winchester, Mass., who had contributed a valuable article on "Breeding and Care of Pheasants," was elected an honorary member of the League.

While the meeting was waiting to hear from the committee on nominations, the president requested the secretary to read a letter from W. J. van Patten, Mayor of Burlington, regretting his inability to attend the gathering owing to his having to leave for New York on the morning of the day of the meeting. In his communication the mayor said *(inter alia)*: "I am greatly interested in the work of the league, and trust that your efforts will be as fruitful in the future as they have been in the past." The president announced also that he had received a letter from Senator Edmunds, who regretted that he could not be present; having left the letter at home, the president said he was sorry that he could not read it to the members present. Letters were also received from Hon. Redfield Proctor, Gen. J. J. Estey, Hon. H. H. Powers, Hon. E. J. Phelps, etc.

New Officers.

The committee on nominations then handed in the following slate for officers for the next twelve months:

President, J. W. Titcomb; Secretary, T. M. Deal; Treasurer, C. F. Low; Vice-Presidents: W. R. Peak, N. W. Fisk, F. D. Proctor, E. C. Smith, W. S. Webb, J. W. Brock and Erastus Baldwin; Membership Committee: F. H. Wells, C. H. Bradley and C. H. Heaton; Auditors: Olin Merrill, C. W. West and A. W. Ferrin.

Executive Committee: Addison county, D. A. Bisbee, Bristol; Bennington county, H. S. Bingham, Bennington; Caledonia county, L. K. Hazen, St. Johnsbury; Chittenden county, B. J. Derby, Burlington; Essex county, Nathan Hobson, Brighton; Franklin county, F. W. Baldwin, St. Albans; Grand Isle county, E. S. Fleury, Isle La Motte; Lamoille county, George M. Powers, Morrisville; Orange county, H. E. Parker, Bradford; Orleans county, F. C. Kinney, Greensboro; Rutland county, C. A. Gale, Rutland; Washington county, C. C. Warren, Waterbury; Windham county, F. W. Childs, Brattleboro; Windsor county, F. S. Mackenzie, Woodstock.

Committee on Legislation: Addison county, C. M. Wilds, Middlebury; Bennington county, Wm. E. Hawks, Bennington; Caledonia county, C. M. Libby, South Ryegate; Chittenden county, Wm. W. Henry, Burlington; Essex county, Z. M. Mansur, Brighton; Franklin county, Horace Baxter, Swanton; Grand Isle county, Edwin Adams, Grand Isle; Lamoille county, C. S. Page, Hyde Park; Orange county, W. S. Curtis, Randolph; Orleans county, L. D. Miles, Newport; Rutland county, F. H. Chapman, Rutland; Washington county, George Atkins, Montpelier; Windham county, F. J. Holman, Brattleboro; Windsor county, Fred. Arnold, Bethel.

In making his presentation, the chairman of the committee, Gen. Henry, stated that the change in the treasurership was occasioned by a personal request from Mr. A. W. Ferrin, who had stated to him that, owing to his other business, he was unable to spare the time necessary to be devoted to the affairs of the league. The slate was adopted as presented.

President-elect Titcomb, in thanking the members for the honor done him, said that although the bulk of the work of the league devolved upon the president, the secretary and the treasurer, yet it was absolutely necessary for every individual member to pitch in and work for the interest of the league and of the State. With the stamp of men that composed the membership of the league, they would now, he added, be able to go to the Legislature with every hope of obtaining desired legislation.

After the secretary had read a letter from Rowland E. Robinson in regard to certain fish and proposed legislation in their behalf, Gen. Henry, on behalf of Dr. Curtis, who was unable to speak on account of throat trouble, offered the following resolution, which was adopted:

Resolved, That the president and secretary be empowered to use such sums as they and the Commissioners in coöperation deem necessary, upon proper notice and recommendation of members of the league and others, for the purpose of shadowing persons suspected of violating the fish and game laws, to the end that evidence be more surely obtained and conviction more certain.

Before the meeting was adjourned President Nelson W. Fisk said a few words of instruction to the members of the legislative committee. He told them that they had serious work before them, and that each member of that committee should make up his mind to devote as much time as possible during the session of the next Legislature to the cause of the league; he urged upon them that each member of the committee should go to Montpelier during that session and spend all the time he could in furthering the best interests of the league and of the State. Vermont, he said, derived a very great deal of benefit from the amount of money expended within her borders by visitors to the State, and it was necessary, if such visitors were to be attracted to Vermont, that the State of Vermont should herself look after those things which drew men to the State—fish and game. He expressed himself as more than pleased with the results of the league's work so far and predicted a bright future for it.

A vote of thanks was then tendered the officers who had so ably looked after the interests of the league in the past year, and the meeting adjourned.

The Banquet.

The annual banquet of the league, which was held in the dining room of the Van Ness House, immediately upon the adjournment of the above meeting, was very largely attended. Covers had been laid for 150, but it was found necessary to increase that number by three additional covers, the total number of members and their friends amounting to 153.

Those who were present from a distance were:

Ex-Gov. C. S. Page, of Hyde Park; H. W. Bailey, of Newbury; Congressman W. W. Grout and J. W. Titcomb, of St. Johnsbury; F. D. Hale, of Lunenburgh; Frank Howe, of Jericho; C. G. Austin, of Highgate; Edwin Adams, of Adams; J. S. Colvin, of Rutland; Gen. W. H. Gilmore, of Fairlee; C. G. Williams, of Essex Junction; L. H. Lewis, of Hyde Park; C. C. Warren and C. F. Clough, of Waterbury; E. T. Bradley and Col. C. C. Gilmore, of Swanton; Col. A. A. Hall, F. G. Smith and T. M. Deal, of St. Albans; N. W. Fisk, of Isle La Motte; O. C. Phillips, of St. Louis, Mo.; Olin Merrill, of Enosburgh Falls; P. E. Moller, of Hoboken, N. J.; S. J. Davis, of Norwich; L. V. Smilie, of Cambridge; Dr. E. A. Smith, of Brandon; J. H. Edson, of Proctor; G. E. Blair and J. J. Collamer, of Shelburne; N. Phelps and F. L. Hyde, of Barre; J. N. George and A. A. Richardson, of Boston, Mass.; H. M. Wires, M. L. Washington, J. F. Mead, W. S. Curtis and H. B. Salisbury, of Randolph; H. S. Bingham, L. S. Norton, Col. E. D. Bennett and L. F. Abbott, of Bennington; Dr. D. A. Bisbee and A. D. Evarts, of Bristol; F. A. Howland, W. A. Barrett, L. H. Bixby, C. C. Bancroft, C. H. Ferrin, J. M. Boutwell, C. H. Heaton, C. W. Ferrin, J. W. Brock, L. B. Cross, G. A. Peck and G. L. Nichols, of Montpelier; D. H. Lewis, S. A. Andrews, F. L. Fish and J. G. Hindes, of Vergennes; A. C. Johnson, of Mechanicsville, N. Y.; Orrice Ballard, of Georgia; Geo. M. Powers, of Morrisville.

Burlington herself turned out in great shape, no less than 71 gentlemen of that city being present at the banquet: Governor Urban A. Woodbury, General W. W. Henry, Captain H. E. Tutherly, U. S. A.; Captain Smith S. Leach, U. S. Engineer Corps; Judge H. S. Peck, Major C. L. Woodbury, G. G. Benedict, of the Burlington *Free Press*; Joseph Auld, of the Burlington *Daily Press*; A. Arnaquac, of the Burlington *Clipper*; City Treasurer L. C. Grant, Rev. P. M. Snyder, Hon. D. J. Foster, Hobart J. Shanley, H. T. Taft, W. O. Lane, F. A. Rousseau, J. W. O'Sullivan, F. L. Taft, Frederick Gay, W. G. Isham, Lawrence Bartley, W. B. McCarthy, E. S. Adsit, E. B. Taft, J. R. McMahon, F. H. Parker, W. F. Hendee, F. M. Barstow, F. E. Burgess, John W. McGeary, F. H. Wells, E. M. Barlow, A. C. Spaulding, W. J. Seward, H. R. Conger, A. W. Hill, Dr. H. C. Tinkham, W. E. Greene, Henry Wells, W. J. Henderson, David Manson, F. A. Isham, L. S. Drew, W. P. Conger, Dr. J. H. Linsley, George W. Beckwith, E. F. Henderson, J. G. Bellrose, J. B. Scully, W. L. Stone, J. H. Hines, W. H. Lane, Jr., Thomas Arbuckle, C. M. Smith, H. S. Weed, Dr. H. E. Colvin, Dr. L. M. Bingham, F. B. Boynton, J. E. Cook, Dr. Wm. H. Waters, E. J. Booth, W. V. Scully, J. A. Austin, J. A. Haynes, Benjamin Cronyn, A. R. St. Pierre, W. H. S. Whitcomb, Dr. A. P. Grinnell, A. G. Whittemore, B. J. Derby and E. H. Shattuck.

The banqueting hall had been elegantly decorated with trophies of the chase, guns, rods, oars, snowshoes, etc., by the members of the committee on arrangements, F. H. Wells, M. C. Berry, W. P. McKillip, B. J. Derby, W. E. Greene and J. G. Bellrose. The general effect in the handsome dining room was a charming one and the scene was truly an animated one. The bill of fare, which had a good deal to do with the animation above referred to, was as follows:

MENU.

RAW OYSTERS.

Consomme Julienne.

Queen Olives. Celery. Dressed Lettuce.

Baked Stuffed Lake Champlain Pike, Sauce au Juice.

Boiled Fresh Saguenay Salmon, Egg Sauce.

Saratoga Chips.

Fillet of Beef Larded, Mushroom Sauce.

Escalloped Oysters à la Creme.

Vermont Duck, Currant Jelly.

Young Turkey, Cranberry Sauce.

Green Goose, Apple Sauce.

Chicken Salad à la Mayonnaise.

ROMAN PUNCH.

Mashed Potatoes. French Peas. Hubbard Squash.

Charlotte Russe. Vanilla Ice Cream.

Assorted Cake. Rum Jelly.

Florida Oranges. Grapes. Fameuse Apples.

Layer Raisins. Mixed Nuts.

Cheese. Crackers.

COFFEE.

The toastmaster of the evening was George M. Powers, of Morrisville, son-in-law of Governor Woodbury. Mr. Powers is an ideal toastmaster, having a good command of language, an infinite fund of wit and a power to draw upon that fund at the proper moment. With a very humorous short speech he introduced each speaker to his audience.

Governor Woodbury, who is a new member of the league, was the first to address the members and their friends. After referring to his two set speeches, both well known to his hearers, the Governor said: "I see before me a body of enthusiastic business men who have come together here to-day to further the best interests of the State of Vermont. To an old man, such as myself, the preservation of fish and game is of no benefit, except in so far as it is for the decided benefit of the general public. I notice here this evening a body of men the equal of any in Vermont, who are working together for what I firmly believe to be the best interests of our State. You have great reason to congratulate yourselves on the success of this meeting. I know that great good has been accomplished by the league in both good legislation and action. I know of nothing that you could engage in that would be more beneficial to the State of Vermont, and I predict that the success of the league in the future will be equal to that of the past."

On taking his seat, Governor Woodbury was greeted with loud applause.

Toastmaster Powers next called upon the representative of FOREST AND STREAM to get up and talk, introducing him under the title of a "dead-game sport—he looks like it." The applause that greeted the rising of the man so tersely described proved one thing: that Vermonters appreciate both FOREST AND STREAM and a "dead-game sport."

The discourse of the "dead-game sport" was based upon comparisons drawn between the work accomplished by the Vermont Fish and Game League and that of other

kindred State organizations, particularly the work of the Pennsylvania State Sportsmen's Association. These comparisons, it must be admitted, were favorable to Vermont, which has such a strong and representative body of men working for it. Before closing he placed before the league the following nut for it to crack: "You have had a close season on deer for many years, and there are lots of deer now in your woods; the season does not open until 1900, and by that time the number of deer in the State will be such as will attract a large body of hunters to come and help to kill them off. How are you going to prevent them from being killed off all at once? Are you going to adopt something like the Michigan law on deer and make non-residents pay high license? Are you going to restrict the number of deer killed by each man? What are you going to do about it, because I understand from your president, Mr. Titcomb, this question has never yet been considered by your body?"

Col. E. R. Morse, who was the next speaker, made a very able and amusing after-dinner speech. He regretted that he possessed none of the special attributes of a sportsman. It gave him the shivers to take a fish off his hook, but—he didn't shiver very often. Now that he had retired from the militia, he could say with safety that he had never shot a gun off in his life. Another drawback was his absolute regard for veracity, a quality which he and the immortal George inherited equally. Notwithstanding the difficulties enumerated, the Colonel made a speech that brought into play the risible muscles of his audience during the whole time he was on his feet.

Rev. P. M. Snyder, of Burlington, who was then called upon by Mr. Powers, said that for the first time in his ministerial career he felt that he was not in it. Brethren of the cloth were always supposed to be right in it all the time when it came to talking, but here he was at fault, knowing so little about the subjects of which his hearers knew so much. "One definite article of my creed," said Rev. Snyder, "is that the sport which you are here to foster and further is perfectly innocent. My fishing and shooting have been very limited; when I fish I simply hold on to a line, and it's the fish's fault if he's caught. I have been hunting once in the State of Vermont, going out into the woods with an acquaintance; his gun went off once by accident, mine didn't go off at all." In closing the reverend gentleman said that the meeting was the most representative one possible in the State of Vermont, and he congratulated the league upon the success that had attended its efforts.

Capt. Smith S. Leach, of the United States Engineer Corps, a newly elected member of the league, brought the proceedings to a close with one of the most humorous speeches of the evening. He began thus: "'Truth is eternal and must prevail.' That's not original and I don't know who said it, but it's true nevertheless. It is generally supposed that a man cannot make a speech in the presence of sportsmen and adhere to the truth and be amusing. I am confronted, therefore, by the following difficulty: Shall I be truthful and dull, or shall I prevaricate and be amusing? I choose the truth." And so he did, as all who heard him will bear witness, nevertheless keeping his audience smiling all the time.

So closed the annual social gathering of the Vermont Fish and Game League for 1895.

Planting Trout in Lake Champlain.

Wednesday, Nov. 20, will be long remembered (if indeed a fish has any memory) by some 800 troutlets which, under the fatherly care of A. L. Barrows, found a permanent residence in the waters of Lake Champlain on that day. There were others present at the time, but we feel justified in giving the major part of the credit to Mr. Barrows, because it was he who, as tenderly as any mother to her offspring, watched over the infant troutlets from the time of their arrival at Burlington from the hatchery until they were finally introduced to the rocky nurseries of Hog's Island Reef and the hospitable shores of Stave Island.

J. W. Titcomb, superintendent of the State hatchery at St. Johnsbury, reached Burlington on the above date on the noon train, bringing with him six cans of lake trout fry to be planted in the lake. Local members of the Fish and Game League had made preparations for taking the fry to the localities best suited for their protection during the exciting times such young fish usually go through in the transition stage from little wigglers to full-grown lakers. Superintendent Titcomb was unable to join the party owing to his work as secretary of the league; but there was a large body of volunteers who willingly manned the Mariquita, a capable craft generously placed at their disposal by the Lake Champlain & Lake George Transportation Co. The weather was scarcely favorable for the object in view, as there was a lot of rain and a threatening look in the sky that boded a strong blow before long. Outside the breakwater the southwest wind did not "blow softly," neither was the water as smooth as the very generally quoted mill pond. On the contrary, there was enough wind to raise a good-sized lumpy sea, that the Mariquita took to in the most graceful manner. She bowed and she courtesied in a way that a minuet dancer in the early days of this century would have envied. Sea legs were at a premium, and it required all the skill Mr. Barrows could muster to fill the bucket with water from the lake so as to acclimate the little ones to the beverage most commonly patronized in the prohibition city of Burlington.

The list of the crew and passengers on board the Mariquita on this occasion was as follows: The captain (whose name has unfortunately escaped our notebook) and the engineer, whose name has gone to join that of his superior officer; first mate, Dan Loomis (of the Lake Champlain & L. G. T. Co.); purser, J. W. McGeary; purser's assistant, H. R. Conger; steward, M. C. Berry; supercargo, A. L. Barrows; cook, L. C. Grant; apprentice, Byron Lambkin; deck hands, F. H. Wells, W. L. Stone, W. J. Henderson and E. F. Henderson; saloon passenger, Edward Banks, of FOREST AND STREAM; steerage passengers, 800 youthful members of the *Namaycush* family in the six cans.

Pointing the Mariquita's nose about due north, our helmsman took us past Rock Point, a curious geological feature on the lake shore. The saucy waves were roughly rocking the craft as we sped on toward the Hog's Back Reef, marked by a lighthouse, whose keeper and a doctor from Burlington had a serious interview with floating ice one day last winter; the lighthouse keeper's family was visited by sickness and a doctor was urgently needed; the trip to the shore for the doctor was made in safety and a medico was secured; on the return trip the boat was caught in an ice-pack and it was late at night when they finally managed to make a landing on Stave Island, some miles to the north, and there build a fire with which to thaw out their frozen limbs.

On reaching the reef, the Mariquita's boat was pulled up alongside and three of the six cans containing the trout were transferred to her stern; she was then headed for the reef manned as follows: Stroke, A. L. Barrows; No. 3, Dan Loomis; No. 2, H. R. Conger, and bow, W. L. Stone. Notwithstanding the total disregard for time evinced by the three oarsmen behind their able stroke, fair speed was made to the reef; shipping their oars, Barrows and Loomis consigned to their new nursery about one-third of their passengers, distributing the balance along the shores of Hog's Back Island.

Returning to the Mariquita, the boat's crew was taken aboard and the vessel headed for Stave Island, a few miles still further to the north. Ragged storm clouds to the northwest assumed a very threatening aspect, and some of the more timorous of the crew wanted to batten down the hatches, but the storm passed over with nothing more serious than a heavy downpour of rain. During the heaviest part of the rain the wind died away, returning later with accumulated force and from a different quarter—the northwest. It was blowing quite strongly and was rapidly growing colder when we landed on Stave Island, the property and summer camp of deck hand F. H. Wells, who has a lovely cottage, where he dispenses generous hospitality during the warm days of the summer months. On the island, which at a rough guess covers probably six or eight acres—maybe more, as owing to the rain we could not judge its extent accurately—there are some English pheasants and a host of rabbits, one of the latter being disturbed by our footfalls on the piazza and making a break for the shelter of a friendly woodpile.

The visit to Stave Island, and the distributing of the remainder of the 800 steerage passengers among the rocks that line the southern shore of that island, completed the business of the trip. The return to the harbor at Burlington was made through a fairly heavy sea kicked up by the northwest wind which was now blowing with ever-increasing force. The entire trip occupied about four and one-half hours, every minute of which is looked upon by the saloon passenger as having been well spent.

Echoes from Burlington.

Among the trophies of the chase which decorated the banqueting hall on Wednesday night were several deer heads, mounted in a most artistic manner by W. P. Conger, a local taxidermist and a member of the league. As shown by the accompanying cut, Mr. Conger softens the hard lines which are always so marked where the deer's head meets the wood of the panel by making good use of the superfluous skin on the neck, the ruffle or collar, adding greatly to the general effect and making the mounted head much more lifelike. We believe the idea originated with him, being the result of a chance use of some superfluous skin on a head he was mounting.

Toastmaster George M. Powers said at the banquet: "We have not come here to blow for Burlington." Capt. Smith S. Leach, in his speech a little later in the evening, stated that he was "full of just such talk, and was going to blow a good deal for Burlington." We feel now just like Captain Leach did then, and we're going to blow too, a whole gale.

The hospitality of Burlington toward her guests was unlimited; the Algonquin Club and the Ethan Allan Hose Company, a purely social organization since the volunteer fire department was done away with, both kept open house on Wednesday, entertaining the members of the league and their guests right royally. The committee on arrangements also looked well after the creature comforts of the visitors.

Prominent among the guests from outside the State were A. C. Johnson, president of the Mechanicville, N. Y., Rod and Gun Club, and P. E. Moller, of Hoboken, N. J. The latter, who is a personal friend of President Titcomb, made a mistake as to the day of the banquet, arriving a day too early. Thanks to his error the morning hours on Wednesday were made to pass the more rapidly for FOREST AND STREAM's representative.

A magnificent specimen of the finny residents of Lake Champlain was accorded a place of honor among the decorations of the banqueting hall. This was a 15lb. lake trout, superbly proportioned and well mounted by Mr. W. P. Conger. This trout, which was taken in Shelburne Bay, has a history: A man and a woman were fishing for smelt through the ice in that portion of the lake one day last winter; all of a sudden the woman felt a great strike and a man took the line with the idea of landing the fish more surely than the lady. While he was hauling it in the hook gave way and the fish was loose; as it happened, however, the other line was being hauled in at the same time so as to be out of the way, and the hook on that line fastened securely in the dorsal fin, the fish finally being landed on the ice. The fish showed no fight, being "loggy" from either the severe cold of the water or from an overdose of smelt, his belly being really chock full of those delicate fish.

The huge eagle which spread his wings in a protecting manner over the head of Toastmaster Powers was a trophy of W. L. Stone's skill with a rifle. The eagle flew over Mr. Wells's cottage at Stave Island one day this fall and settled in a pine tree on the southern shore, being successfully stalked and killed with a single bullet that must have penetrated very close to the region of the heart.

The management of the Van Ness House deserve a vote of thanks for the able way in which it handled the sudden influx of guests on Wednesday. The Van Ness House opened its doors wide on this occasion and made everybody feel at home.

Winter descended suddenly on the State of Vermont last week. On Wednesday morning, Nov. 20, although it was rainy and unpleasant, a light overcoat was all that was necessary for comfort. By midnight there was an inch or two of snow covering a couple of inches of frozen slush, while a howling gale blowing about forty miles an hour was whirling snowflakes around the corners in a true midwinter style.

Under the fostering care of the Vermont Fish and Game League, furred and feathered game has increased very largely in the State. Partridges are more numerous this year than for some time past, while deer are frequently met with in those portions of Vermont wher the country is such as they prefer. In 1900, when th first open season occurs, there'll be lots of deer for the Vermont hunters. With five more years yet to come in which they can go unmolested, the natural increase of the deer will add greatly to the number now within its borders.

Dr. G. H. Woodward is one of Burlington's prominent citizens who finds time to take a few weeks off and go into the woods and enjoy life properly. Dr. Woodward has a camp in the Adirondacks which he makes his home while in the woods, getting good hunting and fishing in its vicinity. In talking about the game of the Adirondacks, the doctor said: "If FOREST AND STREAM wants to do a good work, let it enter into a crusade against 'jacking' and put a stop to that branch of deer hunting. For every deer that's secured by this means, there are many more that get away and die, owing to the almost impossibility of finding a wounded deer in the brush after you have knocked him down while 'jacking.'" Dr. Woodward cited five cases that had occurred to him, in each of which the deer had been severely wounded, often falling in the bushes after reaching the shore, and in only one of which he ultimately secured his game.

It is just seventeen years since Captain S. E. Burnham, J. C. Dunn and A. W. Higgins purchased five deer in the Adirondacks and took them over into the State of Vermont and turned them into the woods. They repeated the operation about a year later, but this time the number of deer purchased was one less—four. This, we understand, was the first *bona fide* attempt at replenishing the game supply of Vermont, deer being then extinct in that State.

An extremely cold day; a snowfall that has weighted down the branches of the spruces, hemlocks and cedars; Vermont "partridges" that have learned a thing or two by experience; the day of the week—Friday; and a companion who has spent the previous night in room No. 13 at the Van Ness House! With such a combination, it is scarcely to be wondered that Henry E. Spear and his companion on Friday, Nov. 22, returned from their hunt empty-handed. The remarkable feature of the hunt was the predilection shown by the birds for the highest and thickest trees; not a single one of the score or more flushed (not all different birds probably) was on the ground. Perhaps after all this fact had more to do with the lightness of the bag than No. 13 and Friday. EDWARD BANKS.

ANGLING NOTES.

Black Bass Records.

IT was FOREST AND STREAM, I believe, that was credited with offering a money reward for a small-mouth black bass of 6lbs. in weight, a story without foundation, although it is current to this day in some of the back precincts, and I expect that our children's children will hear of the supposed reward and apply to FOREST AND STREAM for the money a hundred years or so from this date. I have been asked what I know about record weights of black bass of the small-mouth species.

In 1876 a small-mouth black bass was caught in what was then known as Long Pond, in Warren county, N. Y., which was said to have weighed 7lbs. 10oz., and I have no reason to doubt the weight. The bass was caught by Julius Seelye, and it was the first one of the really big black bass of which I have any knowledge. The capture of this bass was not known beyond the locality in which Seelye lived. Long Pond, now called Glen Lake, is about midway between Lake George and Glens Falls, on the line of the Delaware & Hudson R. R., and is about a mile and a quarter long and a third of a mile wide, and it was stocked with black bass from Lake George in 1868.

Thirteen little bass did the stocking and no bass have been placed in the pond from that time until this year, when the State planted a few hundred little bass about 2in. long.

Early on the morning of Aug. 1, 1877, I caught a black bass in Long Pond weighing 8¼lbs., and I may say once for all that there is nothing but the small-mouthed species of bass in the pond or lake.

I allowed the bass to dry in the boat, after taking it ashore to be weighed by a disinterested party, and the evening of that day the fish weighed but 7lbs. 14oz. I recorded this fish in FOREST AND STREAM, and thereafter for two or three years my life was made miserable by people who had never seen a black bass approaching that weight and consequently did not believe it possible for the species to attain it. I caught another black bass the same morning weighing 6¼lbs., and the two fish were photographed and copies of the photograph sent far and wide only to increase the number of doubters.

In 1883 a small-mouthed black bass was caught in Lake Ronkonkomo, Long Island, for which a weight of 8lbs. was claimed, and it was exhibited in Mr. Blackford's market in New York. Mr. H. H. Thompson writing of this fish said: "Placed in the scales under my own eyes, the sparkling eyes of 'A. N. C.' in my imagination looking through mine, the weight was carefully noted at exactly 7lbs." Mr. Thompson had been one of the doubters concerning the species of my fish. The next year, 1884, I sent a black bass to Mr. Blackford which was caught in Glen Lake in September of that year, and informed FOREST AND STREAM by wire that the fish would be exhibited at Fulton Market. A representative of this journal weighed the bass and announced the weight as 8¼lbs. and the species a small-mouth.

This fish was caught by Mr. Edward Reed, the sheriff of Warren county, and is now in the cellar of the National Museum, at Washington. Reed's bass was not allowed to dry and it weighed the same in New York as it did when I shipped it. The next big bass from Glen Lake was caught by Mr. Boynton and weighed 8lbs. 10oz. Mr. George Pardo was next to break the record with a bass of 8lbs. 12oz. from Glen Lake.

July 26, 1891, Nathaniel Parker caught a black bass of 10lbs. I weighed and measured the fish, and reported it in FOREST AND STREAM as having been caught in Glen Lake; but this was an error. I asked Parker if he caught it in the pond, and he said yes. It was not until some time later that he told me he did not mean Long Pond (Glen Lake), but Round Pond, which is a stone's throw away, and was stocked with black bass from Glen Lake.

Parker's bass is generally considered to be the record fish, and it is mounted in New York city, as is Boynton's bass. Reuben Seelye, father of Julius, caught a black bass in Glen Lake which, it is claimed, weighed 11¼lbs. I do not include this fish in the list above, because there was supposed to be a question about the accuracy of the

scales; but all things considered, I now believe the weight given to have been correct. There was another bass taken from Glen Lake, and one of the parties to the taking, in whom I have every confidence, assures me that it weighed 13¼lbs. This fish was speared, and consequently never exhibited, for it was taken in an illegal manner and out of season; but having heard the whole story I cannot doubt the weight. For the purpose of comparison, I will give the dimensions of the fish I have mentioned:

Captor.	Weight.	Length.	Girth.
Cheney	8¼lbs.	22in.	18½in.
Reed	8¼lbs.	22½in.	18⅝in.
Boynton	8lbs. 10oz.	25in.	16¾in.
Pardo	8lbs. 12oz.	23½in.	19in.
Parker	10lbs.	25½in.	19in.
Seelye	11½lbs.	25in.	21in.

I weighed and measured Reed's, Boynton's, Parker's and my own fish; the other figures were given to me by the people who caught the fish and confirmed by witnesses.

A. N. CHENEY.

THE NEW CANADIAN TROUT

(*Salmo salvelinus marstoni*).

IT was recently my privilege to feast my eyes upon a number of specimens of this newest and most beautiful of Canadian chars, which were taken (by special permit, for scientific purposes) from a series of lakes in Rimonski county. I call the Marston trout advisedly a char, recalling the fact that the word "char" comes from the Gaelic *ceara* (blood) and the Irish *cear* (red or blood-colored), which are almost synonymous with the more western *torgoch* (red-bellied). And certainly the new trout is the most brilliantly blood-colored of any non-tropical fish that I am acquainted with. In the words of Professor S. Garman, who first identified *Salvelinus marstoni* as a variety new to science, who asked Mr. A. N. Cheney to name it, and who examined last year a single specimen that I was able to procure for him from a lake between Quebec and Lake St. John: "Some artist with his pencil will delight everybody interested in the fishes if he will give the public a few ideas of the splendid colors, drawn from life, of the male of Marston's namesake." The Rimonski specimens that I was recently privileged to see, and enabled to identify as members of the same variety, lack none of the radiant beauty and brilliancy of coloring of the fish that I sent to Professor Garman at the Museum of Comparative Zoölogy at Cambridge, Mass. In fact, perhaps because it is nearer their spawning season, the Rimonski fish that were shown me early this month more nearly approached in the coloring of their flesh that of the red snapper than did that of any specimens that I had previously seen. Held before a bright light, the thinner portions of the fish adjoining the ventral, anal and caudal fins are of deepest salmon. Its unvermiculated, dark-brown back with its bluish tinge shades into a pale orange on the sides, deepening as it descends with a *soupçon* of pink, which latter color increases in intensity and depth until it becomes upon the belly a brilliant crimson; while among the varied colored spots of this bewitchingly beautiful leopard of Northern water are some of deepest scarlet. The colors fade somewhat after death, but even after shipment of the fish to Quebec, a distance of nearly 200 miles, are beautiful beyond compare.

I am told by those who have fished in the lakes where Mr. Marston's namesake is found that it is held in no great esteem by the residents of the vicinity who act as guides upon these waters. With them fish is only food and food is chiefly fish. Quantity is more than quality, and with such enormous specimens of thick, deep *fontinalis* as there abound, they regard with something like contempt the rapid rush toward the surface lure of what they call the doré of those lakes. This name applied to these trout can only be accounted for by the golden yellow of a portion of its sides. The fish is of course no more like the true doré of Canadian waters (*Stizostedion vitreum*)—the pickerel of Upper Canada and elsewhere, and pike-perch or wall-eyed pike of different parts of the United States—than the latter resembles the John Dory of South British and Mediterranean seas—the much-prized *Zeus faber* of the ancients. The only points of outward similarity between these last two are the hard, bony spines of the first dorsal and the outer coloring, including sometimes the dark spot on the shoulders, supposed to correspond with the finger mark of St. Peter, which has caused the "John" to share with the haddock the honored myth of having been the fish from whose mouth the tribute money was taken. No doubt the familiar English name of the acanthopterygian fish is merely a corruption, as vulgarly supposed, of the French *jaune dorée*, applied because of its golden yellow color. The early French settlers of Canada from the fishing coasts of Brittany must have been well acquainted with the English John Dory, and as color, next after size, would be the most attractive feature to them of a new fish, it is pretty certain that they gave the Canadian *doré* its name, for no other reason than its resemblance in color to the European fish from which it differs so materially in most other respects.

It has been hitherto supposed that the *marstoni* trout were only bottom feeders, but their discovery in the Rimonski lakes and the method of their capture deal a death blow to the theory that they will not rise to the fly, and place them beyond any question among the first game fishes of the American continent. It is probable that they are not to be taken by fly-fishing in summer, nor am I aware that until the present season it was known to fly-fishermen that they would rise even in the fall of the year to their gay deceit. This is now established beyond peradventure by members of the club controlling the fishing of these Rimonski lakes. When the Marston trout takes the fly, it does not spring from almost immediately below it, as the brook trout seems to do, but pushes at it with a rapid dart, often for some distance along the top of the water, like the run of a hooked salmon, leaving a swirl behind it resembling the wash of a small narrow boat. It leaps repeatedly out of the water when hooked and makes a desperate fight, its rapid motions being apparently due to its slender shape and graceful form. A pound fish of this variety is nearly a third longer than a brook trout of the same weight in good condition, but not more than half the circumference. From what I can learn of its methods of fighting when impaled upon a fly-hook, it must come nearer to the ouananiche than to any other Canadian fish in the sport that it affords. Like that silvery monarch of rapid waters which it resembles in outer form much more than it does its nearer relative, *fontinalis*, it seems constructed for about the greatest velocity attainable by fish of its size.

Salvelinus marstoni spawns later in the season than the American brook trout. Opportunities for observation have not thus far been very abundant, but it is likely that it only spawns in January or February. It is found in October and November, however, upon the spawning beds of the brook trout or in their immediate vicinity, and hence perhaps the report that it frequents them to devour the spawn. Whether the tongue of slander has been raised against it in this respect, or whether there be truth in the grave charges so brought against this handsome fish, the question of its spawn-eating qualities ought to be definitely settled before it is introduced into waters already inhabited by *fontinalis*. There is at least this in its favor, that it is found at Rimonski in lakes that contain vast quantities of brook trout. E. T. D. CHAMBERS.

QUEBEC, Canada, Nov. 23.

TO TEXAS FOR TARPON.

PORTLAND, Ore., Nov. 4.—*Editor Forest and Stream:* Having for some time past contemplated taking a trip to the Gulf coast of Texas to fish for tarpon, I read carefully everything obtainable in the way of literature bearing upon the capture and subjugation of the silver king, whose very existence, not to speak of his eccentricities, seems, except to the favored few who have been presented at his court, to be shrouded in some degree of mystery.

Last month, upon making a personal investigation, I found that I had not been sufficiently informed as to many essential details. In the hope, therefore, of guiding the footsteps of sportsmen seeking knowledge in this direction, I beg to relate my experience as follows:

On Oct. 3 I left this city for Aransas Pass, Tex., a favorite haunt of the tarpon. Upon inquiry at home and *en route* at Kansas City, I found dealers knew nothing about the outfit I required; but at San Antonio, Tex., had no difficulty in equipping myself, although even there those who deal in fishing tackle have something to learn about the needs of the angler for tarpon.

They told me, for instance, that a sinker was necessary; but this I found to be a mistake. The outfit which I bought, and which was found to be ample for a short trip, was as follows: A bamboo tarpon rod (not jointed), fitted with tip, leaders and hold for reel, $2; one 200yd., No. 36, Conroy line, $3 50; one 200yd., No. 21, Tryon line, $4; one 200yd. tarpon reel, $3.50; one dozen tarpon hooks, each mounted on piano wire, with two swivels (one in the middle and the other at proximal end to attach to line), $3.60. I also bought some hooks mounted on heavy leather and tubular cotton snells, such as are used for bottom tarpon fishing on the Florida coast; but found those on piano wire much to be preferred, as the hooks on leather and cotton snells are too visible and are not provided with swivels, and on this account the constant rotation of the bait in the water is inclined to cause kinking of the line.

Running down by rail to the town of Aransas Pass, where, unlike some Texas towns, there is an excellent hotel, I was joined by my brother, Mr. S. P. Panton, an angler who seems to hold all finny creatures in absolute subjection, calling them at will to his fly or bait. The neighborhood of Aransas Pass is a very paradise for the sportsman, unequaled tarpon fishing being only one of its many attractions; for the waters of that region abound in gamy and delicious food fish, including the jackfish—which is probably the greatest fighter of all, not excepting tarpon, trout and salmon—redfish, flounders (four varieties), Spanish mackerel, pompano, sea trout, catfish (three varieties), skipjacks, jew or June fish, etc. The surrounding country is the home of the wild turkey; also wild hogs or peccaries (locally called javalinas), deer, etc., while the bays are covered with myriads of ducks, geese, plover, curlew, etc., throughout the winter.

After a few days of delightful sport, fishing for redfish, flounders and trout, during which a huge blue shark bit off the end of our cast line, with a couple of large hooks on 2ft. of wire, on Oct. 14 we sailed across the bay to Aransas Pass, a channel 1,000ft. wide, from which the town takes its name and which joins the Gulf of Mexico and the beautiful harbor inside, separating Mustang and St. Joseph islands, on the former of which is a hotel. Mr. Silver, the veteran tarpon slayer, was engaged as my boatman; and when he had laid in a supply of live mullet for bait, he prepared me for action by securely tying my reel to the rod and lashing a piece of stout leather to the rod behind the reel to act as a brake. The free end of this leather projects forward over the reel, and is forcibly pressed by the thumb against the line on the reel during the struggles of the fish. Pushing off across the little cove in front of the hotel about 4:30 P. M., we entered the pass and steered for rough water toward St. Joseph Island. As I sat facing the stern I hooked on a live mullet through the jaws, dropped him overboard and paid out about 50ft. of line. No sinker was used, for the silver king is essentially a surface feeder, and the headway of the boat kept the mullet on top of the water. As we got into waves so rough that the boat seemed in danger of swamping, a gleam of silver and gold on the crest of a billow told me I had seen a tarpon, and in about ten minutes from the time we left the shore I hooked my first fish. It was a mighty one. The tarpon was plainly visible as he took the bait with a grand lunge. There was no such thing as waiting for him to swallow the bait and then striking him in due and ancient form, as I have read in descriptions of tarpon fishing off the coast of Florida. Away he went at railway speed—my reel shrieking, not singing, as reels are said to do—and immediately there was a rush to the surface, and the huge fish jumped 8 or 9ft. into the air with mouth wide agape, shaking his head furiously from side to side in a vain endeavor to get rid of the hook. In the brilliant sunshine the spray thrown from the struggling fish assumed prismatic colors, which enveloped the royal captive in a halo. Then followed the wildest exhibition of jumping and vaulting I ever witnessed. Sometimes the fish turned a complete somersault in the air, then varied the programme by plunging to the bottom and rushing back to the surface. Both of my thumbs firmly pressed against the brake seemed for long enough to impede his antics but little. At times he came so near that I was afraid he might jump in upon us, but Silver assured me that a hooked tarpon never does that, although sometimes when in play or chasing mullet one has landed in a boat or vaulted over it. I would as soon have had the foul fiend himself in the boat with us as that tarpon. When the fish was rushing toward me it seemed that he was gone; but he was securely hooked. Of course I kept my line as tight as possible, and especially when he was in the air gave him the butt. When possible I took in line by turning the crank of the reel in the ordinary way; but more commonly the reel had to be turned just as one would wind a clock or turn a screw driver, for the line was too taut to work it otherwise. The tide was going out, and the water of the pass ran like a mill race. This favored the fish and kept us in constant danger of being washed out into the breakers of the gulf; but after an hour of the hardest work ever undertaken by an angler, I had the satisfaction of seeing my fish rise and lie upon the waves, having apparently given up the fight. I reeled in my line until we had him only about 15ft. away and could deliberately examine his proportions. Silver declared he was over 6ft. long and one of the largest tarpon he had ever seen. At that time we were near the Mustang Island shore, and could have landed him but for the tugs and barges which are engaged in the great harbor improvements going on at this point. In endeavoring to tow our fish up the beach out of the way of these obstacles we waked him up again, and after a few surges he settled down on the bottom and sulked there among the rocks. At this point, although I am no weakling, my hands and arms became completely exhausted, and I gave my rod to Silver till I could get the cramps out of my muscles.

The sun had set and night was rapidly closing in upon us, as is usual in this semitropical region. I began to fear the energy of this marine monster could not be conquered, and to wonder whether we had captured the fish or he had captured us, when some explosive cursory remarks from Silver announced the end of the contest. He reeled in my Conroy line and found it parted, frayed and torn. I was disgusted, supposing the long struggle had been too much for the line. Indeed the wonder was that any line could have stood it.

Dejectedly wending my way in the darkness to the hotel, before retiring I took off my Conroy line and wound the Tryon, not very tightly, into the reel, muttering death and destruction to tarpon on the morrow.

In the morning we were up in time to see the sun rise gorgeously out of the gulf, and found Silver wading about in the shallow water of the cove flinging his cast net at the mullets. Bait was very scarce, however, and it was nearly 10 o'clock before we were ready for business. As soon as we reached rough water in the pass, tarpon were to be seen on all sides—a perfect shoal of them. In a few minutes away went my line like lightning; but, as it was not tightly wound on, the great tension caused it to cut down between the wound line and the inside of the reel, where it jammed and would not run out. In an instant my beautiful Tryon was broken off; and, as the fish did not appear upon the surface, I thought it must have been a shark.

Now my line is properly wound and I put on another mullet; a large tarpon takes it and flings himself into the air, throwing a shower of blood in all directions. Every time he comes to the surface the water round about is reddened, showing very copious hemorrhage; but still he fights till I am obliged to give Silver the rod in order to rest my hands. In a moment he is off; but we see him twice afterward, apparently disabled. However, by this time we are so busy with another fish that we have to let him drift out to the gulf.

Several other lively fish took my bait, and, after a few wild rushes, broke away; but at last one was well hooked and about 11 o'clock I landed my first tarpon on St. Joseph Island. I got ashore, lifting him inward on each succeeding wave, until Silver was able to rush into the surf and gaff him. Although such a splendid creature in the water, the tarpon quickly dies when landed. This was a beauty, 5ft. long, and succumbed only after a great fight. It was now time for luncheon; and at the hotel, from which my brother and other people had been watching our sport in the pass, Mr. Jenkins, the chief engineer in charge of the great jetty works, photographed the writer and his beautiful silvery victim.

In the afternoon I landed two fine tarpon, one 5 and the other 4ft. long. One of these fish dived among the rocks in the same manner as my first one, and when he came up again I discovered that my line was almost severed. Seizing the opportunity afforded by the interval before his next plunge Silver deftly took in a loop of the line, including the cut portion, and tied it, thus enabling me to hold my fish. I lost two other fish through their cutting the line in the same way. On account of these rocks, which lie close to Mustang Island, I would advise sportsmen to insist upon landing their tarpon on St. Joseph Island, where the conditions are more favorable, otherwise they are apt to lose them.

Altogether I hooked about thirty tarpon and saw probably a hundred. We ran out of fresh bait, but they took the dead mullets left from the day before. Not once did we row across the pass without getting ferocious bites.

The sportsman who desires to catch tarpon may rest assured of getting all he wants at Aransas Pass. They are also found all through Aransas Harbor and the bays communicating with it, but are nowhere so numerous as in a certain strip of water in the pass with which the boatmen are familiar. I fished altogether less than one day, and stopped simply because my hands and arms were tired out. They were sore for a week afterward. Next year I hope to try the sport again, but will prepare my muscles by a course of club swinging and other such training. This I would strongly recommend to those, no matter how stalwart, whose daily life does not involve vigorous exercise of the hands and arms.

Tarpon fishing will be good up to Dec. 1 or later, unless they have some unusual northers on the gulf, in which event the fish disappear. The harbor improvements will be completed in January, and next year there will be plenty of shipping traversing the pass, going to and from the harbor inside. It remains to be seen what effect this will have upon the fish, but they do not seem at all timid, and I imagine this great fishing ground will continue to be the ideal one for the tarpon angler.

A. C. PANTON.

Lake Champlain.

SHELDON, Vt., Nov. 15.—*Editor Forest and Stream:* Hook and line fishing in the northern part of Lake Champlain has been this season fairly good, but it is safe to say that it will be much poorer another year, as the seine fishermen are taking tons and tons of game fish out of the lake. Licenses were granted during the autumn months for the purpose of allowing the whitefish, wrongly called shad in this vicinity, to be taken as they come up

on the shoals to spawn. Our local fishermen claim that this is the only time that these fish can be caught, which is the Jehu-est kind of folly, for the whitefish can be taken in Lake Champlain as in other large lakes during the summer months by going into the deepest water for them.

It would be a thousand times better to grant licenses during the months of May, June, July and August to set gill-nets in the waters of the lake that are over 100ft. in depth, than to allow seining in the autumn.

Another season a few experiments with the gill-net would prove the truth of the statements, that these fish will be found nearly alone in the deepest waters of the lake, as in the great northern lakes. STANSTEAD.

Virginia Fish and Game.

WEST POINT, Va., Nov. 21.—The three large rivers centering here are teeming with fish, and there never was better sport available in this section at this season of the year than is now being enjoyed. Yesterday Judge Thos. J. Christian, a true disciple of Izaak Walton, caught eighty-five fine perch and rock with hook and line, and in two hours this morning landed twenty-five fine perch, many of these fish weighing 1½lbs. He says that he catches these fish up to Jan. 1.

Ducks are very plentiful. Mr. Henry Binghan, one of our local sportsmen, went up the Pamunkey River after dinner yesterday and returned before supper, having bagged seven mallards.

GEO. R. QUINCY (of Terminal Hotel).

Fishculture.

Maine Spawning Season.

Editor Forest and Stream:

The spawning season of the trout and landlocked salmon in Maine has just closed. Owing to the extreme low water it has been a very poor season, there not being water enough in the streams for them to reach their usual spawning grounds, more especially the landlocked salmon, which require larger streams than the trout. Up to ten days ago we had about given it up as a failure in procuring any stock of salmon eggs of any amount, as the usual time for them to come on their spawning grounds was past and the fish usually gone from the beds. At Auburn Lake, Nov. 7, the salmon made their appearance in four different places at the same time—at the outlet, North Auburn, mouth of Townsend Brook, and at the water pipe where the city takes its water, the current probably attracting them. We were expecting them only at the inlet at North Auburn, where really the smallest number came. Only at this place were we prepared to take them; but by working day and night we secured the run at the outlet, from which we took 150 salmon, and about fifty more at North Auburn, from which we took 250,000 eggs.

This lake we commenced to stock six years ago with salmon about 3in. long, having been fed four or five months. These are the first eggs we have ever taken there. The weight of the fish taken at the outlet was from 3½ to 8½lbs., averaging over 4lbs. I weighed them myself, and know I am correct. I am also sure I saw much larger salmon at the water pipe, I think of 10 or 12lbs. They came on their beds, spawned, and were gone in two or three days.

The results of restocking not only this lake but many others in Maine with salmon has been much beyond my most sanguine expectations—not only in numbers, but the large growth they attain in so short a time. In addition to the eggs taken at Auburn we have 300,000 at Sebago and 100,000 at Weld, also at Auburn 900,000 trout eggs, also 200,000 at Weld and Sebago.

The trout in Auburn Lake also run large, 1 to 6lbs., averaging about 2½lbs. There is no fly fishing except in September, of which month the last week is the best. The salmon will then take the fly. I took two, Sept. 30, with fly, of 6 to 8lbs. each. In fact, they rise better than the trout. More salmon were taken in September than trout. The most fish are caught in May and June, trolling in the lake in July and August by still-fishing in deep water. The lake is very deep, fed almost entirely by springs, with but few small streams flowing in. A large one flowing out, 3½ miles long, 2½ miles wide, holding its width nearly the whole length, is ten minutes' ride on electric cars from the Elm House, Auburn.

From our State hatchery at Auburn we have stocked forty different ponds and lakes with salmon, being fed fish about 3in. long. HENRY O. STANLEY.

Game and Fish Protection.

New Hampshire Law Enforced.

NASHUA, N. H., Nov. 23.—*Editor Forest and Stream:* Protection of fish and game in this State is now making rapid strides. The number of prosecutions in the past few months, a few of which I reported a short time since, seems to have set people to thinking; and the respect for law, so strong in all our better citizens, is slowly but surely asserting itself with particular reference to the once sneered at game laws. It seems to me that a large share of the apathy regarding their enforcement has been due to the irregular, not to say half-hearted, way in which they have usually been enforced.

The vigorous measures taken of late have caused hearty approbation in all sections and the very fact of successful prosecutions leads to the offering of evidence in other cases. A large number of the recent prosecutions were based on evidence furnished the officers of the Hillsborough County Game and Protective Association by upright citizens, who show their disinterested motives in declining to accept the $25 reward offered by the Association for any evidence leading to a conviction.

I had a short conversation with Commissioner Wentworth to-day, who passed through here *en route* for the arrest of an offender in the eastern part of the State. He had just returned from Newport, where he had been notified that dynamite had been used on July 4 last in a pond in Croydon. From the slight clue furnished him he was able to work up evidence sufficient to convict the following persons of using dynamite. They were fined $5 and costs each, amounting to $87 altogether: Geo. W. Brown, Geo. Brown, John McAllister, Geo. Lafountain, Murt Miller, Robert Miller. The first three named are in the employ of Austin Corbin at his large game preserve in Croydon—a fine set of men surely to be employed in the preservation of game or fish.

Commissioner Wentworth took the men on two complaints—one for use of dynamite, the other for taking fish other than by the use of a single hook and line.

The fine on either of these complaints should have been $15 and costs or $30 and costs for the two. The evidence was conclusive on both points, but the trial was before a justice of the peace at Newport, and for some unknown reason he seemed content to let the offenders off with a very light fine, considering the character of the offense.

One method adopted by the Hillsborough County Game and Protective Association seems worthy of being in more general use. They issue posters printed on cloth giving a brief synopsis of the close seasons for fish and game, also penalties for violations of all game laws (on game common to this county). The posters also state that $25 will be paid for any evidence leading to a conviction. These posters are distributed among members of the Association, and by them nailed in country stores and hotels, also on barns and trees, and near all streams, ponds and game covers. They are, to some extent, an education for the many who never saw a copy of the laws.

The bird season is fast drawing to a close, and in spite of rosy predictions has hardly been up to the average. Partridges reported so plenty before the season opened failed to materialize when the law was off, and a good bag of woodcock is almost unheard of. If the snow will stay off this December the best of the partridge shooting will yet come; the birds are now strong on the wing and full-feathered, and it takes straight powder and straighter shooting to kill them. B.

Camp-Fire Flickerings.

"That reminds me."

HINTS ON SKUNK FARMING.

Note to Editor: I intended to be more explicit, and to append a little poetry to this theme to give it a sincere and sentimental tone, but wandered into narrative and verbosity too soon; probably this is worth printing only as being valuable natural history.—RANSACKER.

SHASTA MOUNTAINS, California.—*Editor Forest and Stream:* I observed some time ago that space in your journal was given to the natural history of skunks. It appears you had been investigating and expounding for the benefit of persons who wanted to know about skunks and skunk farms, or, as I may say, skunkeries. It just occurs to me that I can help you forward, if not further.

Skunk farming being a modern industry—or one that has been neglected a long time—is either in its infancy or totters in its dotage on the verge of oblivion and desuetude. Therefore but little is known of it by city folk and the upper strata of society at large.

It is probable, however, that about the time you have gleaned what information your readers in various parts of the world, including me, have to furnish, you will be reassured there is nothing new and fresh under the sun. By the time we have fixed up and presented to the public a manual upon skunk culture some misfit genius will arise and proclaim that we are trying to revive an antique and obsolete industry that never did pay. It will be said that skunks were incubated and promulgated in the early ages, that they were among the flocks tended by Abraham and his nephew Lot, that they were fostered in Greece and Rome, and that some one has dug up an unmistakable aroma in the ruins of Herculaneum or Pompeii; while some Chinaman will assert that Confucius had an aggregation of skunks that modern ambition can not possibly parallel or even imitate. Such Silurian observations tend to discourage spirit and enterprise everywhere. Hence persons engaged in the melodious and pastoral business of skunk raising should not be criticised if they are somewhat reluctant to publish everything they know.

As for me, however, I am always willing to distribute such knowledge as I possess when it can be utilized or enjoyed by other worthy folks, and I send it abroad absolutely free, unabridged and stringless to all who shall see these presents, greeting.

The ethical knowledge of skunks in my possession has been acquired by experience and the personal contemplation of them upon their native heath, and it is both reliable and comprehensive. In fact, I feel that I can contribute all the information about skunks that anyone should desire or your columns can stagger under. If I omit any essential particular and you will call at my ranch I will supply the deficit and stir up a skunk or two for your inspection.

Most people have—or they ought to have—a general impression as regards skunks. Those who are interested in skunks or who desire to experiment or otherwise tamper with them should know them at a glance, and have at least a dictionary understanding of their characteristics—several of which are unique and peculiar.

Now, if you desire to start a skunk ranch, go about it as you would go about any other enterprise, only more cautiously. Don't gather up a lot of skunks hastily or promiscuously. Select choice ones to begin with, just as you would in starting with any other fowl. It costs no more to rear good skunks than it does to bring up a variegated lot of plebeians.

In skunks, as in every other style of bird and insect, there are aristocrats and commoners, nobility and rabble, and it is cheaper and more satisfactory to deal with high grade skunks than to endeavor to educate the miscellany up to an ideal standard.

Having selected good skunks, decide upon how many you want. This is an important consideration. You may just as well start with a large number as a few. It is just about as much trouble to have a few on hand as it is to have more, and you can arrange for a gross about as easily as you can for a dozen, while time is saved from the start.

You can buy skunks at any reputable skunkery that has them for sale, go into the woods and catch them or send some ambitious boy out with a city dog; country dogs as a rule are not good at hunting up skunks.

As has been observed by other skunkologists the quadruped is eccentric and nervous, but this is not saying that he is easily intimidated. Skunks are not readily frightened away even by city dogs or little Lords Fauntleroy. When flushed they do not whir off like wild turkeys or eagles, but simply ruffle up their plumage and assume the dignified airs of the peacock and some of their own. They sometimes *chassez* forward and back with a sort of double-shuffle, Sir-Roger-de-Coverly movement, while they beat time with their plumed tails.

Sometimes skunks are easily acquired in the suburbs, where all you have to do is catch them and put them in a cage. They will frequently come to a ranch without any special inducement and stay a while under the front porch. They usually come from the woods in the gloaming, and when all is quiet you may hear them as their twitter floats in on the summer air. Indeed their peculiar melody may be so loud, or, as I may say, insidious, you may hear it whether the evening is particularly quiet or not.

When the McDonegals moved into their new house, which j'ins our clearing, they proved a little too high-toned for the vicinity, although they were good enough people in other respects. They brought city airs with them and tried to revolutionize the entire township. They had "lunch" at dinner time and dinner at supper time, and they milked the cow with gloves on.

Well, just before dinner one night, Mrs. McDonegal went into the crematory, where they stored milk and butterine, and when she got in she yelled that there was an owl or some other wild baste after the milk. Mr. McDonegal and all four of the young McDonegals went to the rescue and found there was no owl, but a guinea pig. They got a broom and a basket, and after closing the door of the crematory they tried to sweep the pretty creature into the basket, and the whole family surrounded it. Ah me! for a few minutes they had one of the liveliest times since Finnegan's wake, and they didn't know they had a full-fledged and talented skunk until the lamp went out in the fog, and no one could find the door. When they finally did get out they let the skunk get away, when they might just as well have kept him while they were about it. They moved back to town before the potatoes began to hatch.

A few years ago skunks were not considered valuable, and over on Juniper Creek the farmers just killed them and threw 'em over the fence.

One night they had a big dance over at Robinson's, and Sam Walker's girl went to the dance with another feller. Sam went to the dance too; but somehow he didn't seem to take much interest in the music or the crowd, and only hung around outside. Along just before the supper promenade some one upset a cracker box that had been used for a bench, and a pair of thoroughbred, three-stripe mountain skunks were under the box. The lights and music and the big crowd had jarred upon their nervous natures until they were crazy, and they had probably wanted to get out for some time. They waltzed into the middle of the floor and then the excitement commenced, and it continued when a rush was made for the door, which had been carelessly locked by some one—on the outside. The skunks seemed to know that every one was trying to get out the door, and they wanted to get out too. They got into the crowd, and some one trod on the poor things in the crush. As the newspapers say, the excitement become intense; but it was really mild compared with the intensity of the atmosphere in Robinson's Hall.

No one came after the skunks or seemed to want them, and they went under the house as soon as they got out. The people all went home from the dance earlier than usual, and for several days you could tell from the front gates as you went by who had been to Robinson's.

Sam Walker stepped over to the Simpkins place and left his card with a note, which read:

"AMANDA—I wasn't there; will be glad to see you in 90 days. S. W."

Bill Jobson, who took 'Mandy to the dance, met Sam a few days later and, without much formality, shot one of his legs off.

But as I was saying, or as I intended to say, if you intend to approach skunk culture, go about it judiciously. A man without any brains to speak of can undertake almost anything, but nowadays he can't make it pay unless he goes to Congress. If you expect to get a good crop of feathers from low-grade skunks, and pluck them twice a year, without a careful selection of the best birds to start with, and systematic care all the time, you had better raise turkeys or ostriches. RANSACKER.

"Cow Devouring Partridge and Chickens."

London Field, Oct. 19.

IN a two-acre field situated at the back of Mr. Broadbent's garden, Eton, I observed the other day a cow belonging to that gentleman pursuing some animated creature, which I found to be a wounded partridge. Curious to see what would happen, I retreated a few paces, and presently saw the cow pick up the partridge in her mouth and proceed to chew it, only leaving the legs, head, and a few feathers. Much surprised by what I had seen, I communicated the matter to Mr. Broadbent, who told me that on various occasions remains of chickens had been found in the cow's field, adjacent to the poultry yard. He now thus accounts for the loss of several fowls, and a strict watch will be put upon the animal. The milk has in no way suffered from this unusual diet. If any of your readers could inform me of any similar case I should be much obliged. HENRY DAMAN.

HIGH STREET, Eton, Bucks.

London Field, Oct. 26.

A letter was inserted under the above heading in the *Field* of last week, giving an account of a cow eating a partridge. As it was signed with the name of a gentleman well known at Eton, and as similar instances of depraved appetite in cattle have not unfrequently been recorded, we had no suspicion that it was a forgery, and it was accordingly inserted. We have since been informed that there is no truth whatever in the statements made, and we regret that we should have given currency to the forgery. We cannot congratulate the writer of this silly fraud on his success; he is doubtless aware that any fool can be a liar, and, to quote one of Solomon's proverbs, "It is as sport to a fool to do mischief." Probably the writer imagined he was recording an impossibility, not being aware that similar cases are on record as well authenticated as that which is here annexed.—ED.

The letter under the above heading in your issue of the 19th inst. reminds me of a similar incident that occurred near Lowestoft about four years ago. I was shooting rabbits one summer evening, and hung two upon a tree about 6ft. from the ground at the end of a plantation adjoining a field in which there were cattle. On returning to fetch them about an hour later, I found several bullocks collected round them and two in the act of devouring the remains of the rabbits, which in one case consisted of only the hindquarters, and in the other rather more. I allowed them to continue their meal until thoroughly convinced of their carnivorous intentions, and had I not driven them away they would undoubtedly have devoured all that remained, as they were feeding voraciously when I drove them off. I should have recorded the case in your columns at the time, only it struck me as being such an extraordinary occurrence that I thought probably no one would believe it, and so refrained from doing so. Had the animal been an Indian *bheestie's* bullock I should not have been surprised, as they are decidedly omnivorous; but I was not aware before that English cattle also indulged in that peculiar taste. LIEUT.-COL. E. A. BUTLER.

BRETTENHAM PARK, Ipswich.

The Kennel.

FIXTURES.

BENCH SHOWS.

1896.

Feb. 19 to 22.—Westminster Kennel Club's twentieth annual dog show, Madison Square Garden, New York. James Mortimer, Supt.
March 10 to 13.—Chicago.—Mascoutah Kennel Club's bench show. John L. Lincoln, Sec'y.
March 17 to 20.—St. Louis Kennel Club's show, St. Louis. W. Hutchinson, Sec'y.

FIELD TRIALS.

Dec. 2 to 4.—High Point, N. C.—Irish Setter Club's trials. Geo. H. Thompson, Sec'y.

1896.

Jan. 20.—Bakersfield, Cal.—Pacific Coast Field Trial Club. J. M. Kilgarif, Sec'y.
Jan. 20.—West Point, Miss.—U. S. F. T. C. trials. W. B. Stafford, Sec'y.
Feb. 3.—West Point, Miss.—Southern F. T. C. seventh annual trials. T. M. Brumby, Sec'y.
Sept. 2.—Morris, Man.—Manitoba Field Trials Club. John Wootton, Sec'y.

THE E. F. T. C. TRIALS.

THE trials of the Eastern Field Trials Club were successfully concluded. There was grave apprehension at first concerning their success in consequence of the prevailing scarcity of birds. While they were not so abundant as they were last year, they still were in sufficient numbers to afford competition.

Mr. W. S. Bell, Pittsburg, and Mr. S. C. Bradley, Greenfield Hill, Conn., judged throughout.

There was a good attendance of visitors, among whom were a number of newcomers. These were Messrs. F. R. Hitchcock, Edw. Dexter, F. A. Hodgman, G. Muss-Arnolt, F. H. Beale, J. Meares, S. B. Cummings, Pittsburg; Edm. H. Osthaus, Toledo; Mr. and Mrs. C. H. Phelps, Miss Phelps, New York; Mr. and Mrs. W. B. Meares, Mr. Theo. Sturgis, H. H. Hargrave, Irving Hoagland, New Brunswick, N. J.; H. M. Kent, Lenoir, N. C.

The Derby.

This was a stake of merit, much of the work being quite worthy of praise. The conditions of dry weather and bad cover were specially difficult for the puppies or young dogs to work under, the latter being either too thin and light or too dense and heavy, mostly the former.

Tory Fashion, winner of first, is a lightly built dog, and while he did some superior work under very favorable conditions on Monday evening, in most of his work he requires a great deal of coaching and careful helping on birds, so much so that it lowers the grade of his work very much. Still the helping is done so deftly that it is difficult to say just what he would do if left to his own resources in working to the gun.

Marie's Sport, second, showed a great deal of merit, has a great deal of confidence, and works on his own judgment. He needs more finish in his point work, which will come with more age and experience.

Gleam's Ruth, winner of third, showed a great deal of merit, but there were faulty places in her work which more experience will correct.

The two pointers India and Nabob were promising candidates for third, or part of it, much of the time. The decisions were well received.

This stake was for all setter and pointer puppies whelped on or after Jan. 1, 1894. Prizes, $300, $200 and $100; first, second and third respectively. First forfeit, $10; additional forfeit, $10; $10 to start.

P. Lorillard, Jr.'s, b., w. and t. setter dog Arapahoe (Eugene T.—Maiden Mine), C. Tucker, handler, with Irving Hoagland's b., w. and t. setter bitch Ranée (Gladstone's Boy—Buena Vista), W. W. Boyce, handler.

Manchester Kennel Co.'s b., w. and t. setter bitch Gleam's Ruth (Count Gladstone—Gleam's Maid), N. B. Nesbitt, handler, with Blue Ridge Kennels' b., w. and t. setter dog Domino (Antonio—Ruby's Girl), D. E. Rose, handler.

H. K. Devereux's liv. and w. pointer bitch Virginia (Little Ned—Pearl's Dot), Geo. Gray, handler, with N. T. DePauw's liv. and w. pointer bitch Sister Sue (Jingo—Roony Croxteth), N. B. Nesbitt, handler.

F. R. Hitchcock's b., w. and t. setter dog Tory Fashion (Count Gladstone IV.—Fleety Avent), J. M. Avent, handler, with Charlottesville Field Trial Kennels' or. and w. pointer bitch India (Rip Rap—Dolly D.), C. E. Buckle, handler.

H. B. Ledbetter's b., w. and t. setter dog Marie's Sport (Gleam's Sport—Marie Avent), Geo. Gray, handler, with Avent & Thayer's b., w. and t. setter dog Patrician (Chevalier—Patsy), J. M. Avent, handler.

T. H. Gibbe's lem. and w. setter dog Mazeppa (Rod's Dan—Bondhu Nellie), Joe H. Wilson, handler, with Charlottesville Field Trial Kennels' b., w. and ticked pointer dog Nabob (Rip Rap—Dolly D.), C. E. Buckle, handler.

Dr. J. S. Brown's b. and w. pointer dog Kent B. (Rip Rap—Croxie Kent), Frank H. Beall, handler, with Avent & Thayer's b., w. and t. setter bitch Feu Follet (Count Gladstone IV.—Folly), J. M. Avent, handler.

Joe Meares's b. and w. setter dog Senator Zeb (Dion C.—Thompson's Norah) was drawn to run in the first heat with Arapahoe, but he was withdrawn on account of sickness, and Ranée, the bye dog, was moved up into the vacant place.

Monday.

A warm sun, hardly a breeze blowing and rather a high temperature were the weather conditions of the first day of the trials, which began at the Gibson Farm, a few miles from town. It was weather of the most pleasing kind for the people, but far from the best weather for good competition. The forenoon's work was meager in competitive results on birds, although a reasonably fair number of birds were found. The work of the afternoon was on more favorable grounds, and more birds were found and consequently there was much more point work. A good number of spectators followed the trials all day. Some weak birds, ones which were turned out, marred the work betimes, mostly in the forenoon.

First Series.

ARAPAHOE AND RANÉE began their heat at 8:35. The former was drawn to run with Senator Zeb, but the latter was sick, and Ranée, the bye, was moved into his place. On some birds flushed by spectators and marked down, Arapahoe made two points on singles. Next he pointed on stubble and Ranée made an indifferent back. Next Arapahoe pointed; Ranée joined in the point, then both dogs moved on to locate and each made a point on weak birds which could not fly. Down 1 hour and 13 minutes. Ranée had much the better speed, range and judgment in beating out the ground. The point work was very ordinary.

GLEAM'S RUTH AND DOMINO began at 10:01. Domino flushed a bevy excusably and the birds were followed. Ruth pointed twice—single birds—and shortly afterward she again scored a good point. Next she pointed in the open and Domino backed; nothing found. Next she pointed a bevy, and on the scattered birds made three points on singles and Domino pointed once. Up at 11:22. Both worked diligently; Ruth the better in every respect.

VIRGINIA AND SISTER SUE ran a heat of ordinary merit, beginning at 11:45 and ending at 1:06. Sue soon exhausted some energy in a rabbit chase. On a marked bevy on almost bare ground, in the open, Virginia flushed an outlying bird, excusably, across wind, and chased it. Both were more or less erratic in their ranging; Virginia the better. Sister Sue was in season, which may have had its effect on her work.

TORY FASHION AND INDIA were cast off at 1:36, after lunch. A bevy was flushed by horses in woods. The handlers were ordered to work in the open. India worked in the open obeying orders and Tory made four points in the woods, where Mr. Avent was ordered to call him out of, but did not do so, the dogs being separated at the time. India pointed, moved on and located a bevy on a side hill in weeds and was steady to shot. Sent on, India pointed; nothing found. Sent on, both dogs ranged well. India pointed; nothing found; at the same time Tory pointed, drew on to locate better, when India crossed in a heat and pointed the birds. Both showed good speed and range and fairly good work on birds. Tory required a lot of urging to keep him out at work and prompting in his bird work.

MARIE'S SPORT AND PATRICIAN began at 2:22. The latter ran a wretchedly poor heat. He was excessively timid. Sport pointed a bevy in weeds and was steady to shot. Next he made two points on singles in a half-hearted way, next he flushed twice, next made a point, then moved about 10yds. further and made a stanch point on a single. Next he pointed a bevy in the open cornfield and soon afterward the heat ended. Sport in range, speed and diligence made a very good showing. Patrician showed an intention once or twice to quit and return to the wagons.

MAZEPPA AND NABOB started at 3:08. Nabob pointed a bevy in woods; he was steady to shot. On the scattered birds Nabob pointed a single, Mazeppa pointed twice on singles and each backed well. Sent on, Nabob pointed a bevy in weeds on top of a hill; good work. Some scattered birds were next followed, but no work was done on them. Both were industrious; Nabob much the better in bird work. Up at 3:43. The heat was quite a good one.

KENT B. AND FEU FOLLET were cast off at 3:49. Feu began by an assault on a tame chicken. Feu pointed a wounded bird and endeavored to catch it. Next a bevy flushed near both dogs. Working on the scattered birds, Kent flushed a single. Kent started with a fair range and fair speed; he was often kept in by the noisy handling of the opposing handler, Feu handling very hard and receiving much whistling, shouting and coaching. Up at 4:18. Kent's gallop was slow at the beginning, but he gradually improved for a while as the heat progressed, till the whistling and loud orders checked him. It would have been better to have given Kent a run alone, to determine his real capabilities, before the heat was finally concluded—this in view of his being balked as aforementioned. He might not have won a place, but he would have had an opportunity to show what he could do.

Second Series.

In the second series there were eight dogs, run as follows:

TORY FASHION AND GLEAM'S RUTH were cast off at 4:43. In corn, Tory pointed a bevy and was steady to shot. At the same time Ruth, about fifty or sixty yards away, pointed on the footscent. On the scattered birds, Tory made two points, in the first of which Ruth went by him and joined. Sent on, Tory pointed and Ruth crossed in ahead and pointed the birds; both steady to shot. Ruth pointed a single. Sent on, Tory pointed a bevy and Ruth joined in a point on it later as it was being flushed. Tory made a point on a single. Up at 5:16, with the heat decidedly in Tory's favor. This was the best heat which Tory ran, and his work was done with little coaching.

Tuesday.

Hardly a breath of air was stirring, and the morning was warm, the heat increasing as the day advanced till it was mildly uncomfortable. The dogs worked well throughout the day nevertheless. Twenty-one bevies were counted, as against twelve or thirteen the day before. The work of the day was satisfactory as a whole. There were parts of the work which were superior. The running in the Derby was resumed. The handling was perceptibly less noisy.

INDIA AND MARIE'S SPORT started at 8:22. Sport soon pointed a bevy in a hollow in a cornfield and India backed well. The birds were running on the ground and when they flushed Sport broke in, but stopped to order. The birds were followed and each dog made four points; next India pointed where a wounded bird had run. Sent on, India pointed a bevy in pines; Sport called in to back caught scent of some outlying birds and pointed. Next, sent on, Sport pointed some scattered birds in the open and India backed nicely. Up at 9:07. Both were diligent workers and accurate on point work, Sport cutting out the work and maintaining his range well throughout the heat. India fell off in his range betimes.

NABOB AND ARAPAHOE were cast off at 9:12. Nabob pointed a bevy in sedge at the edge of woods, and Arapahoe, called in to back, pointed the same bevy about twenty yards away. Sent on, a bevy was marked down in cotton and the dogs were worked in a circle to it. Arapahoe was coached to the birds and cautioned to point. He saw them on the ground and broke in and flushed. Nabob backed. Up at 9:43. Arapahoe ranged the wider, but Nabob's point work was better and cleaner.

RANÉE AND DOMINO began at 9:54. Domino made two points to which there were no birds, and Ranée refused to back. Ranée spoiled the favorable impressions made the previous day. She appeared to be frivolous and careless. The heat was a poor one. Up at 10:29.

Third Series.

TORY FASHION AND MARIE'S SPORT started at 10:48. A bevy was flushed in the open weeds by the horses, and the birds went into a bad place for work. The handlers followed them against the orders of the judges. Both dogs made flushes. On scattered birds in woods Tory made some points, locating indecisively and being coached constantly. Up at 11:41. Tory's work was much inferior to that of the previous evening. Both showed good speed and range.

GLEAM'S RUTH AND INDIA were started at 11:51. In woods Ruth pointed a bevy and to shot both were steady. On the scattered birds each flushed. Ruth pointed footscent. India pointed and Ruth refused to back; nothing found. India pointed a single bird well and next she pointed a bevy. Up at 12:52.

At lunch the judges announced Tory Fashion first, Marie's Sport second and Gleam's Ruth third. This ended the Derby, and after lunch the All-Age Stake was begun.

The All-Age Stake.

Considering the number of entries, the number of starters was quite a large percentage. This stake contained nineteen entries, drawn as follows:

Kidwell & Stoddard's b. and w. pointer dog Tick Boy (King of Kent—Bloom), J. B. Stoddard, handler, with Eldred Kennels' b. b. setter dog Brighton Tobe (Canadian Locksley—Leddesdale II.), W. H. Hammond, handler.

Westminster Kennel Club's liv. and w. pointer dog Sandford Druid (Don Exon—Sandford Quince), John White, handler, with F. W. Dunham's lem. and w. pointer dog Elgin's Dash (Kent Elgin—Mack's Juno), N. B. Nesbitt, handler.

N. T. DePauw's liv. and w. pointer dog Jingo (Mainspring—Queen II.), N. B. Nesbitt, handler, with W. B. Meares, Jr's., lem. and w. setter dog Joyful (Dion C.—Nathalie), owner, handler.

N. T. Harris's b., w. and t. setter bitch Cynosure (Roderigo—Norah II.), J. M. Avent, handler, with W. H. Beazell's b., w. and t. setter dog Harold Skimpole (Whyte B.—Nettie Bevan), Geo. Gray, handler.

Charlottesville Field Trial Kennels' liv. and w. pointer dog Tippoo (Rip Rap—Monterey), C. E. Buckle, handler, with Rancocas Kennels' liv. and w. pointer bitch Rancocas Belle (Rip Rap—Maud), C. Tucker, handler.

Rancocas Kennels' b., w. and t. setter bitch Paloma (Eugene T.—Lou), C. Tucker, handler, with Whyte Bedford's b., w. and t. setter dog Joe Bowers (De Sota—Ruth Gates), W. W. Titus, handler.

F. R. Hitchcock's b., w. and t. setter bitch Tory Dotlet (Count Gladstone IV.—Tory Della), J. M. Avent, handler, with Hobart Ames's b., w. and t. setter bitch Lady Mildred (Antonio—Ruby's Girl).

P. M. Essig's b., w. and t. setter dog Rod's Top (Roderigo—Topsy Avent), J. M. Avent, handler, with C. P. Powers's b., w. and t. setter dog Revenue (Antonio—Nellie Hope).

W. W. Titus's b., w. and t. setter bitch Minnie T. (Dick Bondhu—Betty B.), owner, handler, with Massachusetts Kennel Co.'s b., w. and t. setter dog Gleam's Pink (Vanguard—Georgia Belle), N. B. Nesbitt, handler.

N. T. Harris's b., w. and t. setter dog Tony Boy (Antonio—Laundress), D. E. Rose, handler, a bye.

This stake was open to all setters and pointers which had never won first in any all-age open stake at the Philadelphia, Southern, United States or Central trials. Prizes, $300, $200 and $100. Forfeit, $10; $20 additional to fill.

The first prize was won with something to spare by the pointer dog Jingo, and in this connection—that is to say, in reference to pointers—they made a most pleasing and meritorious exhibition, as will be seen by the more detailed mention. Jingo showed excellent judgment, wisdom in work on bevies and single birds, beat out his ground skillfully and worked with commendable loyalty to the gun. He is indeed a high-class dog.

As for the winners after first, your reporter regrets his inability to perceive their claim to specific superiority, at the same time feeling reluctant to express an opinion in opposition to such experienced judges. In respect to Harold Skimpole, it is true that he ran wide and dashingly, but part of the time he was working out of bounds or too far from the gun, and while some of his bird work was sharp, it was meager, while other parts of it were faulty. As compared to the work of Tick Boy his work was really insignificant. Tick's first heat was in dry weather, and was specially noticeable for the excellence and success of it. Every heat he ran was a heat noticeable for its successful finding and successful bird work. He was always industrious and when ranging was feeling the air with his nose, having birds in his mind, and he showed rare intelligence in working out his ground. In his last heat his range narrowed toward the close, but on work done he was then ahead of his competitor. He was surely deserving of consideration for second place, while third lay between Harold Skimpole and Tippoo, with Tony Boy in for another chance, if more heats were run, to make him establish a better claim or more conclusively prove that he was not in the money.

Tony Boy's work was light on birds, and he had made several errors which were serious. It seemed as if wide range condoned many grave errors in proper work to the gun.

The competition was managed skillfully in respect to the procedure and taking advantage of the grounds. The judges were most zealously industrious and painstaking, and if there was any mistake made in the decisions it was purely one of judgment, to which all are liable.

First Series.

TICK BOY AND BRIGHTON TOBE started at 1:57. Soon Tobe pointed a bevy in the open and was steady to shot. The birds were followed. Tick pointed; footscent, probably. Next both made game and Tick drew quite a distance in the open outside of woods and pointed a bevy nicely; Tobe backed. This work was of a very high order. Both steady to shot. In the thicket, on the scattered birds, Tick made three good points on singles and Tobe flushed a single excusably. Tick was just recovering from the effects of a large tumor on his neck and jaw. His point work was very superior. Their range was middling. Up at 3:07.

SANDFORD DRUID AND ELGIN'S DASH began at 3:13. Druid was making game, but took the back track, and his handler flushed the bevy accidentally. On the scattered birds Druid made two excellent points. Next he flushed and dropped to a point on some remaining birds. Next he pointed a single and made three flushes. Dash pointed one bird and flushed another. Up at 3:44. The heat was

one of extraordinary noisy handling. Druid had a decided advantage in every respect.

JINGO AND JOYFUL were cast off at 3:56. The handlers flushed a bevy and marked it down in open woods. Going down wind Joyful made three flushes on singles. Jingo pointed, then roaded; nothing found. Joyful pointed; nothing found. Jingo made a good point on a single in briers. Joyful pointed a bird well and Jingo backed. Joyful made a good point on a single. Sent on. Jingo roaded down wind at the edge of a cornfield to a flush on a bevy. An attempt was made to work on the scattered birds in a very bad place, with unsatisfactory results. Jingo had a decided advantage in every part of the work. Up at 4:56.

CYNOSURE AND HAROLD SKIMPOLE ran a most unsatisfactory heat, beginning at 4:59. Soon after they started they were quite a distance away when two bevies were seen to rise on the top of a hill near where the dogs were. While it could not be absolutely proven, it appeared as if Cynosure flushed them. Next Harold was lost for a few minutes, he working out of range. Harold made a point on some of the scattered birds, Cynosure securing a point on a single, which she then flushed. Sent on. Next, quite a distance away, Harold pointed a bevy and Cynosure backed. The heat was decidedly a poor one considering the opportunities and the merit of the dogs. Work ended at dark.

Wednesday.

Rain in the night and a lower temperature decidedly improved the conditions for work. Heavy clouds gave threatening indications of a storm, but gradually the sky cleared and there was sunshine without warmth, a cold, raw wind blowing steadily from between north and west all day. The ladies pluckily braved the unpleasant weather and remained out all day. The work was quite good, and the birds were sufficiently numerous for a good competition.

TIPPOO AND RANCOCAS BELLE began at 8:53. The work on birds was begun by Belle, she pointing a bevy and was steady to shot. The scattered birds were followed. They were in a narrow line of cover. Belle pointed them. At the same time Tippoo took a cast off to one side and pointed a bevy. Both ranged well and with speed and judgment. Up at 9:34.

PALOMA AND JOE BOWERS were started at 9:38. Paloma pointed a bevy on a side hill in weeds. Sent on, Joe found a bevy in corn and pointed it well; Paloma backed; both were steady to shot. Sent on, Joe found another bevy and pointed it. He was held some minutes on point while Paloma was brought up to back, which she did voluntarily and well. In the meantime the birds had probably run, for both dogs began roading and Paloma reached the birds first and pointed them, though the credit of the find was Joe's. Up at 10:33. Both showed good range and speed.

TORY DOTLET AND LADY MILDRED were cast off at 10:38. Tory began bird work by bringing in a badly mutilated domestic chicken. Sent on, Tory pointed in woods and Lady backed; nothing found. Next Lady pointed a bevy and was steady to shot. The handlers were unnecessarily keeping wide apart and were cautioned that they must keep together. The birds were followed. Tory pointed; nothing found. Lady at the same time pointed a single at the moment it flushed. Lady next pointed two singles well and Tory pointed one. Tory pointed; nothing found. Up at 11:32. Lady had much the better of the heat.

ROD'S TOP AND REVENUE began at 11:39. Both dogs were out of sight in woods for a few moments. As one of the judges came near to them he saw birds flying, and Revenue had dropped, while Rod was running riot. Sent on, Rod pointed; nothing found. Sent on. Next in the open, Rod dropped to a point, broke in and flushed, stopped to order and his handler flushed more birds ahead of him. The birds were marked down a short distance away in the open. Avent got his dog and secured a point on them, though that kind of work possessed no special merit further than to show the dog would point. Revenue backed stanchly. Up at 12:29. Both ran well, Revenue the better.

The party then went to lunch.

MINNIE T. AND GLEAM'S PINK, were cast off at 1:11. Minnie was lost for a few minutes. Pink found a bevy, pointed it well, though in poor style, and was steady to shot. Sent on, Minnie pointed a single bird in thick briers, a rather difficult piece of work. About fifty yards further on Pink pointed and Minnie backed; nothing found. Minnie pointed in the open and roaded at the same time. Pink dropped to a point at the edge of woods about fifty or sixty yards from Minnie. The birds had run and the dogs followed the scent about in the wrong direction, and sent on to take a new search for other birds, one of the handlers walked the bevy up. Up at 2:06. Gleam's Pink showed good judgment and fairly good range and a knowledge of work. Minnie did not work up to her capabilities, or rather she did not get properly in touch with the grounds. She showed excellent speed and powers of range.

TONY BOY ran a bye, beginning at 2:09 and running 47 minutes. His range and speed were very pleasing, covering the ground well and with judgment. He pointed a bevy and on the scattered birds made a sharp point, stopping while going at speed. His run was a very pleasing exhibition of good bird work, yet it is but fair to mention that a dog running alone has special advantages, since there is no competitor to take the work away from him or to mar it.

Third Series.

In this round there were eight dogs retained in the competition.

JINGO AND CYNOSURE started at 3:49, the judges having consulted about 40 minutes. Soon Jingo pointed a bevy and was steady to shot. Sent on, Cynosure pointed a bevy and Jingo backed well; steady to shot. Cynosure pointed on open stubble, drew about and pointed again, then abandoned the trail and was sent on, her handler not seeming to have confidence in the point, yet near where she made it a bevy was afterward flushed by the horsemen. Up at 4:15. Jingo was the better ranger and worker on birds.

HAROLD SKIMPOLE AND TIPPOO started at 4:23, and of the former it is proper to say that the work and inferences therefrom in his first heat were set in a far better light by this heat. Tippoo pointed, then roaded, and some horsemen crossing the trail disturbed the birds. One or two were seen to rise, then settle again. Tippoo settled on the trail and roaded accurately to them, but was unfortunate in the result. He stopped just as they flushed, but whether in time to save himself from a flush or not it was difficult to determine. In any event he was entitled to much consideration. In corn Harold pointed a bevy well and was most stanchly backed by Tippoo; both were steady to shot and the performance was most pleasing and finished. On the scattered birds Tippoo pointed one and was well backed by Harold. Tippoo finished up the work by pointing a single. Up at 5:05, and the competition ended for the day.

Thursday.

The morning was frosty and clear. Ice had formed during the night. There was not the slightest breeze blowing. Every sound could be heard with weird distinctness. As the sun mounted higher the rime of the frost dissipated, drops of water hung from every spear of grass and every leaf, and later the moisture evaporated. The weather then was warmer, but still the day was most favorable for good work on birds.

MINNIE T. AND TONY BOY were the first brace down. They started at 8:58. Minnie pointed a bevy in woods at the moment it flushed. Several said it was a flush; others said it was a safe point. Tony pointed nicely in corn. He had a bevy, but marred the point by a lack of stanchness, for he moved on and flushed the birds. They were followed into woods. Tony pointed a single and was steady to shot. Tony stopped to a flush on a single outlying bird, then steadied and pointed the rest of the bevy. Up at 9:46. The heat was not particularly noticeable for ranging with judgment, and the work on birds was rather inferior, although both showed speed and needed no urging to keep out at work.

GLEAM'S PINK AND ROD'S TOP started at 9:51. Rod pointed a bevy in open and Pink backed; Rod was steady to order. Next Rod pointed; Pink backed; nothing found. Next Pink pointed and moved on, and a single flushed. Sent on, Rod pointed a single. Up at 10:20. The heat was inferior.

REVENUE AND TICK BOY at 10:26 were cast off. Tick made an excellent find and point on a bevy in the open. The birds were followed into a pine thicket, where Tick pointed a single. Revenue pointed and nothing was found. Next Tick pointed a single accurately, and it ran into a small tree top, and Tick seeing it showed a disposition to catch it, as any live dog would do under the circumstances. Sent on, Tick pointed a bevy in the open, locating it skillfully; a good piece of work. Up at 11:01. Tick ran an excellent working heat, dashing and useless range in the horizon being absent, but a proper range and good bird work being present.

SANDFORD DRUID AND RANCOCAS BELLE started at 11:05. Druid pointed a bevy and marred a good piece of work by pressing forward and flushing the birds. The birds were followed into woods. Belle pointed some scattered birds, and next she made two good points on single birds, and Druid backed. Next Druid pointed a single. Up at 11:38. Both dogs showed a great deal of merit, but their work was not of the sustained quality required in a keen competition.

The running was suspended while lunch was served. The judges announced that Jingo and Harold Skimpole, and Tippoo and Tick Boy would run together, and that Cynosure and Tony Boy would be held in reserve.

Third Series.

JINGO AND HAROLD SKIMPOLE started at 12:46. The dogs soon became separated. Jingo, ranging in a cornfield in bottom, caught scent, drew into a ditch, and about 200yds. away was lost to sight during some moments. A bevy flushed near the place where he disappeared. He was found behaving well, and the presumption is that the bevy flushed wild. In the meantime Harold was making casts outside of bounds, as he was working entirely too far from the gun. He was making game in corn when Jingo, down wind further—about 30yds.—pointed the bevy and was steady to shot. Harold flushed a single, and next he pointed a single and was steady to shot. Sent on, Jingo found and pointed a bevy, and next he pointed a single. Up at 1:40.

TIPPOO AND TICK BOY started at 1:56. Tick roaded to a point on a bevy at the same time Tippoo was making game on it. Both secured a point, the bulk of the credit being Tick's. Tippoo flushed a bevy, stopped and pointed and a single remaining bird was flushed. Up at 2:20. Tick showed greater judgment and bird sense in the heat.

The judges soon announced the winners as follows: First, Jingo; second, Harold Skimpole; third, divided between Tony Boy and Tippoo.

The Subscription Stake.

This stake was open to all setters and pointers. To first, $300; to second, $150; to third, $50. Subscription, $50, payable Oct. 1, 1895. A subscription entitled the owner to start any dog he pleased, whether it was his own property or not. It is transferable to any person not objectionable to the club. The first round to consist of two-hour heats, afterward the running was at the discretion of the judges.

In this stake were eight starters, namely: Charlottesville Field Trial Kennels' pointer dog Tippoo (Rip Rap—Monterey), handled by C. E. Buckle, with N. T. Harris's setter bitch Cynosure.

Charlottesville Field Trial Kennels' pointer dog Delhi (Rip Rap—Queen III.), C. E. Buckle, handler, with Manchester Kennel Co.'s setter dog Gleam's Pink (Vanguard—Georgia Belle), N. B. Nesbitt, handler.

N. T. Harris's setter dog Tony Boy (Antonio—Laundress), D. E. Rose, handler, with N. T. DePauw's pointer dog Jingo.

W. W. Titus's setter bitch Minnie T., owner, handler, with Avent & Thayer's setter dog Topsy's Rod, J. M. Avent, handler.

Minnie T., winner of first, came into her hunting form in this stake, entirely dissipating the unfavorable impression made in the All-Age Stake. Her work was accurate and intelligent. She worked diligently, showed a good range, was successful in finding, and was strong in her point work on bevies and singles.

Jingo was a good second, but he was not working up to his best form. He was industrious and ran a good race.

Third place was most difficult to determine, as the work of all except that of Minnie T. and Jingo was very faulty. Tony Boy was on the whole the best candidate for third, and he won.

Friday.

The morning was much like that of the preceding day—cool, calm and frosty. The heat of the sun soon dispelled the frost, and the day was warm. Birds were hard to find in the forenoon. In the afternoon they were in sufficient numbers, though in the forenoon the grounds were less favorable.

First Series.

TIPPOO AND CYNOSURE started at 8:01. A bevy was seen to flush, but the dog which was in fault was unknown. On the scattered birds Cynosure made a point on a single in woods. Next she pointed, roaded and stopped to a flush. Next she pointed a single. At this time the dogs were separated. Tippoo flushed a single. Next Cynosure pointed a bevy and was steady to shot. The birds were followed. She next pointed a single. At the end of the two hours she had much the better of the heat, although her work was faulty and she reqired much coaching. The grounds were unfavorable, and although Tippoo worked with fair diligence, he seemed to be in poor luck.

DELHI AND GLEAM'S PINK started at 10:09. Delhi pointed and Pink backed; nothing found. Sent on. After awhile a couple of quail were seen feeding. After awhile the dogs were worked back to them. Pink flushed them and dropped to wing. Sent on, Pink flushed a bevy and Delhi backed. The birds were in cane in a ditch and very hard to flush. Sent on, Pink pointed and there was nothing found. Delhi next pointed a bevy and behaved well to shot. Pink fell off greatly in his work toward the last of the heat.

This completed the forenoon's work. Lunch was next in order and about an hour's rest was taken.

TONY BOY AND JINGO were cast off at 1:00. Jingo pointed, roaded and located and pointed a bevy, and on the scattered birds he made five points, the dogs being separated at the time. Tony pointed a bevy on a side hill at the edge of woods and it flushed wild a moment later. The birds were followed into woods. Jingo pointed twice and Tony backed. Next in open Tony pointed a bevy and Jingo backed. Next Jingo pointed; nothing found. Next Jingo was lost, and when found was on point on a bevy. In the meantime Tony pointed a small bevy. Both were steady to shot. Both maintained their speed and range to the end of the heat and manifested no fatigue or loss of interest in the work. Jingo's work and his manner of searching were superior.

MINNIE T. AND TOPSY'S ROD started at 3:04. Rod ran a very poor heat and Minnie ran a very good one. She found four bevies well, one of which Rod pointed after passing her point and joining in it, then abandoning it and going on. She pointed also a single bird and flushed one. Rod pointed one bevy, three singles, four points to which nothing was found, and one point on tame chickens. About a minute after the heat was ended Minnie pointed another bevy. Rod was tired some minutes before the heat ended, and had greatly shortened his range; Minnie at a later time also showed some signs of being tired, though she kept at work.

Saturday.

The weather was uncomfortably warm, far too warm for the best bird work. The work in part was good notwithstanding.

DELHI AND TONY BOY started at 9:05. On some scattered birds of a bevy flushed by one of the handlers, Tony pointed a single and was not perfectly stanch. Tony next pointed a bevy and made some very slobbery work on the scattered birds, flushing repeatedly. Delhi made three points on singles, and Tony pointed another bevy, pointed a single and flushed one. Both ranged well, Tony the better. Delhi's point work was light considering the number of opportunities, and Tony's was mixed, good and poor. Up at 10:07.

JINGO AND MINNIE were cast off at 10:15. Minnie outfound and outworked Jingo, the latter, however, not working up to his best form. Minnie pointed a bevy and Jingo backed. On the scattered birds Minnie pointed twice, showing accuracy and care in her efforts. Jingo made one point on a single. Minnie next found and pointed a bevy in open weeds, and made a point on a single. Up at 11:05. Minnie's speed and range were fairly well sustained, and she showed excellent skill in bird work.

GLEAM'S PINK AND TOPSY'S ROD, which were ordered to be held in reserve, were started at 11:11. Pink pointed a bevy and was steady to shot. Rod pointed a marked bird at the edge of the cane, but the cover was so dense that it was impossible to flush the bird. Pink next pointed a single in the open. Sent on, some birds were flushed in a corn bottom, but it was impossible to determine the work. Up at 12 M.

The judges announced the winners as follows: First, Minnie T.; second, Jingo; third, Tony Boy.

Boston Terrier Specials.

BOSTON, Nov. 18.—*Editor Forest and Stream:* The Boston Terrier Club beg to advise you that they have voted the following special prizes for the Westminster Kennel Club bench show in February, 1896: $10 for best dog or bitch, open to all; $10 for best dog or bitch, bred and owned by the exhibitor, open to all; $10 for best dog, $10 for best bitch, and $10 for best puppy, open to club members only.

The club also expect to offer two $100 silver cups for competition, open to club members only, one for best dog or bitch in show, and the other for a breeders' cup. The club also voted unanimously to recommend the name of Mr. Walter C. Hook for judge of the Boston terriers at this show, and the Westminster Kennel Club have accepted our recommendation and have appointed Mr. Hook as judge for these dogs.

We expect a record entry of these dogs in New York next February. FREDERICK G. DAVIS, Sec'y.

United States Field Trials.

NEWTON, N. C., Nov. 16.—At a meeting held on Saturday evening, Nov. 16, the Eastern Field Trials Club consented to exchange courtesies with the United States Field Trials Club by each running on the other's grounds as would best conduce to the success of the running. Mr. S. C. Bradley and Dr. J. S. Brown were admitted to membership. WATERS.

RANGER, A TALE OF A DOG.

Editor Forest and Stream:

I always like to read about the almost human intelligence, the loving disposition, and the sense of gratitude that dogs show toward their masters sometimes. I know dogs are good. I have seen dozens of them and can see a dozen any day by passing almost any six houses in Northwood, and these tales of deeds on game dead or alive, and of frisky smart dogs, always make me think, these days, about my dog. Ranger is his name and choicer Wheelertown stock never was bred.

His eyes are brown, his hair is mostly black, his nose is long and pointed, and intelligence—what dog lover can really do his dog's intelligence justice? I almost fear to try and do my dog justice, but I feel that Ranger ought to be told about.

I got him when he was a little staggering puppy and when his hair had just begun to assume the lovely wavy appearance which characterizes well-bred dogs. A double kennel was made for him and he was made happy with choice food. Good dogs should be fed with care and bad ones shot. Even now, as I think how we pampered Ranger, I almost feel that we never treated him justly.

Ranger was like all puppies in his youth. As he grew older and got over the sickness brought on by being carried three miles in a basket he developed rapidly in that peculiar line of intelligence which dog fanciers so love to see in their own dogs. We fondly watched his growth till one memorable day he sowed his first wild oats. It was in midsummer just after noon that Ranger pushed his nose into the crack of the kitchen door and first eyed the mysteries within.

He had been down to the spring not long before and thoroughly washed himself. I always thought it was because he wished to present himself to the household in a proper spirit and in proper garb. Unfortunately he crossed first a place where my brother had dug not long before a few fish worms, then a heap of wood ashes. When the circumspection had been finished he stepped gingerly on the freshly mopped floor; then walked to the wood box, crawled along under the stove, walked under the table to a chair. On to this he hopped, then opened up his delicately formed mouth. He closed his jaws on the beef roast which rested steaming on a platter.

The dog carefully dragged the dripping roast toward him across the white tablecloth. It was too large to be carried by such a small puppy, and so he dragged it across the floor, having rested it a moment in my father's chair seat.

As he reached the door leading out the servant, having called the family to dinner, gave one glance and gasped:

"Oh, my clean floor!"

My father was just behind her and with a stride crossed the floor, and as the puppy was about to leave the back porch lifted roast and dog into the air. Our dinner that day consisted of other things than roast, if I remember correctly.

Now, the Wheelertown stock is of remarkable intelligence, and it is not its fault if there is one dog fancier who does not know it. It is a remarkable fact that when anything belonging to my father, after that kick, if left exposed within Ranger's reach he would immediately show fight, but he never touched anything belonging to any of the rest of us except as shall be told.

He succeeded in ruining an overcoat belonging to my father one day, and only escaped with his life over the bank, as my father came out of the house armed with a shotgun. As the irate man reached the bank he saw Ranger sitting forty rods away on the flats with his jaws up in the air howling dismally. Two days later he signally retrieved himself by putting a herd of cattle to wild flight from our front yard.

One day our servant found the dog in the kitchen. She promptly threw a club at him; and thereafter her dresses (or anything else of hers), hung on the clothesline, in the house or anywhere accessible, were torn down and made away with, while dresses belonging to my mother were untouched. The dog showed human intelligence in its revenges as well as in other things.

About this time I had to leave Northwood for six to eight months. Letters from home often reached me, and usually contained some such footnote as this:

"That dog of yours ought to be shot. He brought five beheaded chickens into the kitchen yesterday—at least we suppose he brought them. We don't know whose they are, but Elgie heard Bill Brant say last night that something, presumably a fox, had carried off six of his chickens the night before."

Bill Brant, it may be remarked, lived a mile distant from our house.

Then again: "I wish some one would shoot your dog. Rance Rude, four miles up the road, saw a gray dog chasing his sheep about 8 o'clock two nights ago. About 9 o'clock that night Ranger came across the porch covered with dust till he looked gray. He went down to the spring, and in a little while came back as black as ever."

When I came home for the summer about the first thing I saw was Ranger in the road. It is positively marvelous how good the memories of some dogs are. One has only to read the lines of the FOREST AND STREAM to find that out, but the Wheelertown is different a little. When I got out of the carriage I said to Ranger: "Hea-a! good dog, yes he is." It was truly affecting to see the dog, having been barking loudly a moment before, for joy, I fondly believed, go around the corner of the house with his tail between his legs.

All summer I coaxed him with tender meat in my hands and tossed it lightly toward him, but he probably thought the meat was stone. At any rate, if I came within five rods of him he fled in fear to bark from some safe distance.

The dog was and is a first-class watch dog, but I sometimes feel that he is an unmitigated nuisance. If I return from anywhere after dark, or before for that matter, that dog barks his "man bark;" for, strange to say, he has a bark for dogs, for cows and for men, each of which is different from the other and very easily recognized.

My dog is now in good health, but though I got him in hopes that I might make a famous hunter out of him, he persists in leaving rabbit tracks to flush chickadees; leaving partridge trails to run mice, weasels and such things.

I hope that no one will disbelieve this life of Ranger. Ranger is a curious dog of a curious stock, and I believe somewhat different from the ordinary run of blooded dogs. RAYMOND S. SPEARS.

Field Trial Dogs.

LYNCHBURG, Va.,—*Editor Forest and Stream:* The letters that have appeared in your valuable paper lately, anent field trial dogs and their handling, etc., have struck a responsive chord in my heart. Mr. Brailsford's letter which was published in FOREST AND STREAM of Oct. 12 I have before me now, and it seems to me to touch upon a very weak spot in what I gather to be the system now in use. I say "gather" because I only get my information from Mr. Brailsford and others who have written on the subject, and also from your able reports; I have never been fortunate enough to witness the work of any dogs at field trials.

It seems to me that I would not care to shoot over a dog that minded his own business and not mine; that quality is all very nice and proper in a human being, but in a dog I don't want it. To my mind a dog should obey his master and go where that master wishes him to go, and for that reason a dog should frequently be on the watch for signals from his master. The stealing of a point by a greedy dog is to my mind as reprehensible as a hold-out at poker; a well-established case of a steal of that kind should according to my idea disqualify a dog in any stake, with a possible exception in the case of a puppy. Puppies will do things that older dogs would not think of doing.

Here is my idea of the whole matter (and for that reason I wish Messrs. Titus and Dexter well in their endeavors to establish something like a championship event): I am the possessor of a dog that I claim to be as good a dog as any in the country at what I consider to be true field work. He is young, fast enough for a man on foot and a wide ranger where the country is open; where the country is more or less rolling and covered with scrub he never goes very far out of my sight. He takes care to have the best of the wind, and when he catches sight of me on looking up to locate me a single wave of the hand sends him to the spot I want him to hunt. He knows me, and I believe has recognized the fact that I am older than he, and that I have good bird sense; anyway he does not grudge trying every bit of the ground when I have silently expressed my desire for him to do so. Some men whistle and shout to their dogs, but it is all in the way you teach them. To proceed: My dog is stanch on a point, steady to shot and wing, retrieves when told to, and, though I cannot say what he might do were a good meaty bone in the case, he won't steal a point from another dog, but just backs him in a manner to make you love him.

Now then, what I am getting at is this, although I have perhaps gone a long way to get at it: Do field trials produce a better ideal of a hunting dog than the above? If reports are correct, and if my ideas are correct, they certainly do not, and I have Mr. Brailsford's opinion to back me up in some measure. If Mr. Titus and Mr. Dexter will give me a chance, should business engagements not prevent, I will be on hand to try what my dog can do against the others, just to see if he is as good as I think he is. VIRGINIA.

The Field Trial Champion Association.

ON the evening of Nov. 20, at Newton, N. C., pursuant to a call for those interested in forming a champion field trial organization, a number met for that purpose. The following is a list of the charter members: Edw. Dexter and Bayard Thayer, Boston; N. T. Harris, Lynden, Ky.; J. L. Adams, Louisville; J. N. Seale, Jackson, Tenn.; George J. Gould, F. R. Hitchcock, Theo. Sturgis, New York; P. Lorillard, Jr., Jersey City; W. R. Holliday, Prairie Station, Miss.; C. H. Phelps, Jr., Philadelphia; A. M. Young, Manchester, Tenn.; W. W. Titus, Waverly, Miss.; J. M. Avent, Hickory Valley, Tenn.; W. B. Stafford, Trenton, Tenn.; C. E. Buckle, Charlottesville, Va.; W. H. Hammond, G. Muss-Arnolt, Tuckahoe, N. Y., and Prof. Edm. H. Osthaus, Toledo. Following is the list of officers elected: President, Edw. Dexter; First Vice-President, C. H. Phelps; Second Vice-President, J. N. Seale; Secretary-Treasurer, W. B. Stafford; Executive Committee of five, P. Lorillard, Jr., A. M. Young, N. T. Harris, W. H. Holliday and Theo. Sturgis. A committee on constitution and by-laws and running rules was appointed, to report at an adjourned meeting on the following Friday night. At the adjourned meeting the report on constitution and by-laws was adopted. Report on running rules was referred back to the committee, to report on them at an adjourned meeting. The prize is to be $300 and the champion cup offered by Mr. Ewing. The winner is to be entitled to the name of champion field trial winner. The nominating fee was fixed at $20; starting fee $10, to be paid at the time of drawing for positions. Any dog that has been placed in an all-age subscription stake, and possibly of Derby's, shall be eligible to compete. Entries to close on Jan. 1, 1896, except for dogs which are placed in all-age stakes subsequent to that date and prior to the running of the stake. Such dogs must make entry within five days after the date on which they won. The first trial was set for Feb. 10, at West Point, Miss., but in case the Southern Field Trials are not concluded by that date the stake will not be started till two days after those trials are completed.

E. F. T. Club Annual Meeting.

THE meeting was held on Thursday, Nov. 21. Present, Messrs. Lorillard, Hitchcock, Phelps, Sturgis, Bradley, Hodgeman, Dexter, Meares, Osthaus and Coster. P. Lorillard, Jr., in the chair. Rules of election suspended and the secretary was instructed to cast a ballot electing the following gentlemen to membership: Dr. J. S. Brown, Montclair, N. J.; Joe Meares, Linwood, N. C.; W. S. Bell and S. B. Cummings, Pittsburg, Pa.; G. Muss-Arnolt, Tuckahoe, N. Y.

Board of Governors: W. A. Coster, Edw. Dexter, H. B. Duryea. F. R. Hitchcock, Joseph H. Hunter, P. Lorillard, Jr., W. B. Meares, Jr., F. A. Hodgeman, S. C. Bradley, C. H. Phelps, Theo. Sturgis, W. S. Bell, Edw. H. Osthaus, Bayard Thayer, J. E. Orr.

The following is a list of officers for the ensuing year: President, P. Lorillard, Jr.; Vice-President, C. H. Phelps; Secretary and Treasurer, Simon C. Bradley. The club tendered to the retiring secretary-treasurer a vote of thanks for his past services. Stakes of 1896 to be the same in every respect as those of this year. Carried that the officers constitute a committee to arrange for grounds for the trials of 1896. Winners of Subscription Stake, excepting they be winners of previous All-Age Stakes, shall not be barred from competing in the All-Age Stake.

Irish Setter Trials.

ROOM 22, 400 Chestnut st., Philadelphia, Pa., Nov. 22.—Inclosed please find entries for the Irish Setter Club's trials, to be run at High Point, N. C., Dec. 2, 1895:

ALL-AGE.

Mr. W. L. Washington's dog Finglas (Fingel III.—Aveline), whelped April 13, 1890.

Dr. G. G. Davis's bitch Loo (Finglas—Currer Belle IV.), whelped July, 1893.

Dr. G. G. Davis's bitch Currer Maud (Finglas—Currer Belle IV.), whelped July, 1893.

Muckross Kennels' dog Henmore Shamrock (Muskerry—Avoca), whelped Jan. 28, 1888.

Mr. James B. Blossom's bitch Squaw (Darrah Pat—Ruby Glencho), whelped April, 1890.

Mr. Alfred von Cotzhausen's bitch Lady Finglas (Finglas—Lady May Swiveller), whelped March 21, 1894.

DERBY.

Dr. Wm. Jarvis's bitch Signora (Signal—Oline), whelped July 20, 1894.

Mr. F. E. White's bitch Mollie Gibson (Dakin—Jessie Fremont), whelped Oct. 13, 1894.

Mr. Alfred von Cotzhausen's bitch Lady Finglas (Finglas—Lady May Swiveller), whelped March 21, 1894.

GEO. H. THOMSON, Sec'y I. S. C.

United States Trials.

[Special to Forest and Stream.]

NEWTON, N. C., Nov. 25.—The Pointer Derby was run yesterday with nine starters. Blethely, Sister Sue, Sappho and Hessie D. were cast out after first series. Competition very inferior. Winners were: Virginia first, Crackerjack second, Rip Saw third, Ridgeview Cash fourth, Leo fifth.

Setter Derby begins to-day with seven starters: Domino, Arapahoe, Marie's Sport, Tory Fashion, Mazeppa, Gleam's Ruth and Feu Follet. All-Age Pointer has eleven starters: Rexfast, Ridgeview Regent, Nongull, Rancocas Belle, Tick Boy, Jingo, Komus, Elgin's Dash, Glad's Lady, Tamarack, Jr., Tory Baron. Heavy rains delay start to-day. The judges are J. King, J. L. Adams, W. S. Bell. B. WATERS.

National Association of Field Trial Handlers.

A MEETING of the Association was held on the evening of the 19th inst. at Newton, N. C. It was decided to make a gift of the balance in the treasury, $30 and a few cents, to the Champion Field Trial Club and to disband the Association, which were done accordingly at an adjourned meeting on the 21st inst.

National Fox Meet.

OWINGSVILLE, Ken., Nov. 23.—Visitors coming to the National Meet here should buy tickets to Preston, Ky., on the C. & O. R. R. We are five miles from Preston and will meet all comers there. S. C. ALEXANDER.

POINTS AND FLUSHES.

Mr. G. Muss-Arnolt, whose oil paintings and pen-and-ink portraits of dogs have been received with so much approbation by American sportsmen, had two oil paintings of field scenes which he gave his friends the pleasure and privilege of seeing during his stay at Newton, N. C., while the field trials were on. One painting was of two setters on point and back, the other of two pointers in the same attitudes. Both were of marvelous finish and there was a fidelity to detail which made a realistic effect. It is hardly necessary to add that the paintings were greatly admired.

Hunter—"Boy, did you see a rabbit run by here?" Boy—"Yep." Hunter—"How long ago?" Boy—"It'll be three years nex' Chris'mas."—*Judge.*

Newfoundland Caribou.

CARIBOU SHOOTING IN NEWFOUNDLAND, 1894, by S. T. Davis, M.D. (Shongo), with a history of England's oldest colony from 1001 to 1895, is the title of an exhaustive work treating on the physical features of that island, so near and yet so little known; and of its fauna and flora, fisheries, agriculture, mineral resources, government and finance, education and aborigines, introductory to a description of a hunting trip. The last five chapters are devoted to a most interesting and instructive history of the preliminary arrangements of the trip, beginning at New York as the rendezvous and starting point of the party, and following all the journeyings and events from the start to the return. A vast fund of practical information is embodied, which is invaluable to any one who takes a similar trip, and which was obtained by the author only after much correspondence, study and personal experience. The reports that vast numbers of caribou were in Newfoundland were the incentive to the trip. On investigation, the author was convinced that the reports, which he at first doubted, were short of the reality. The fall of 1894 was set as the season for the outing. A native guide was engaged through correspondence, he agreeing to furnish carriers, canoes, a log tilt and game. A camp stove, specially made, was secured, in which, besides its own furniture, were packed cooking utensils, a coil of copper wire, ½lb. of arsenic, one pair of moccasins, two pairs shoe packs, one pair heavy woolen stockings, forty rounds of rifle cartridges (.40-65), one bag chewing tobacco, two bags smoking tobacco, 1lb. alum and one hank of heavy cord. The bottom of the stove was padded with excelsior to protect the carrier's back, then all covered and sewed securely with heavy bagging, and all completed by buckling on the carry strap; total weight, 76lbs. Each member of the party took as much baggage as he pleased to the point of disembarkation, Pilley's Island, after which each one was restricted to one hunting hat, one hunting cap, one hunting coat, one cardigan jacket, two undershirts, one pair hunting pants, one extra pair pants, four pairs stockings, two overshirts, one pair hunting shoes, one extra pair shoes, one pair rubber boots, one pair gloves, one pair woolen blankets (single), one rubber blanket, one carry-all, one match safe, six handkerchiefs, and one towel, washrag, cake toilet soap, gun (rifle or rifle and shot), jointed cleaning rod and oil, light reel, short trunk rod, fly book, extra hooks, etc., case needles, thread, buttons, compass, hunting knife, drinking cup, pair slippers (heavy soles), package paper, envelopes, postals, pipe and tobacco, cigars, etc., and one good opera or field glass. A few of the common and most necessary medicines were taken along, and a case of implements for mounting skins, repairing guns and fishing tackle, etc. A combination shotgun and rifle is recommended so that both grouse and big game can be shot. Two guns add too much to the weight of the baggage. A small tent is a necessity, and the party found the Protean, 7×7ft., 8oz. army duck served admirably. By way of the Red Cross Line, which has two steamers, which leave Brooklyn every two weeks, the first stop is at Halifax, the next at St. Johns, Newfoundland, and the next at the Pirytes Mines, Pilley Island, Bay of Notre Dame, where North American reindeer or caribou can be shot. The average time northward from New York, including stops, is about six days, two days of which are consumed at St. Johns, and twenty hours at Halifax. The return trip, including stops, is about one day more. The rates, including meals and stateroom berth, cabin, first-class, are: New York to Halifax and return, $28; New York to St. Johns and return, $34; New York to Pilley's Island and return, $72. For a party of four, $14.40 deduction, 5 per cent. less. Twenty cubic feet of baggage allowed regardless of weight. No duty on baggage or guns if they are brought back to the States. The author bestows words of praise on the accommodations. He recom-

mends that the traveler convert his money into drafts from $10 up, as it is better than having all in one large draft and will effect a saving. After the party—Dr. S. T. Davis, Mr. A. C. Kepler, Lancaster, Pa., and Mr. J. W. Davis, Burlington, N. J.—had taken out their license, which cost each member $100 and 100 cents; they were required to subscribe to a written obligation that they would exercise their utmost endeavors to preserve the flesh of the animals taken, which were not to exceed more than five stag and three doe caribou. The party purchased its supplies at St. Johns. The author's description of his arrival at the hunting grounds, the camp and incidents of camp life are intensely interesting. On the first afternoon (Oct. 17) eighteen caribou were seen, though rain was falling, and abundance were found on following days. The strategic maneuvers in killing the big stags for their antlers, the extraordinary abundance of game, the novelty of the surroundings cannot fail to excite the interest of every reader. In connection with killing the largest stags the author adds: "I then looked at my watch and saw that in forty-five minutes I had killed four deer and seen fifty-one." To the guide, Richard Le Buffe, P. O. Wolf Cove, Notre Dame Bay, N. F., the author bestows much praise. The crowning success was the killing of the big stag which they dubbed "The Emperor." His antlers had forty-seven points, and measured, tip to tip, 32¼in. The right beam, from hair to tip, measured 42in.; the left, 41½in. Other specimens of rare quality were secured. The author closes with a description of the caribou and its habits, some remarks on the Micmac Indians and the economics of the island. To the sportsman who is a stranger in Newfoundland and who contemplates a hunting trip within its boundaries, the work abounds in practical information, and to all readers it has interest and profit.

Yachting.

A CORRESPONDENT offers a very sensible and practical suggestion in regard to the new 30ft. special class, that instead of measuring about 31ft. racing length, and thus being at variance with an established class, it should be made to conform to that class, by a very trifling reduction of the proposed limits to sail and waterline. If the clubs are right in adopting racing length as the proper basis of measurement and classification, then such special classes as may be created from time to time should be made to conform to the standard rather than to differ from it by a nominal figure.

THE new special class promised for next year gives further evidence of the dissatisfaction of yachtsmen with those plain and simple rules of measurement which favor large hulls and unlimited sail; and that even the partial restrictions afforded by classification by length and sail area combined, as adopted last year, have come too late or are not heavy enough. The avowed object of the class, to prevent speedy outbuilding and to produce a yacht of some further use when finally outbuilt, are excellent ones, and we hope that the time is not far distant when all the clubs by common consent will endeavor to formulate one common rule of measurement and classification on the basis of placing some certain value on all the main factors of advantage—length, sail, displacement, etc. The day of the unlimited racing machine is evidently drawing to a close.

ONE of the most striking features of the new rules for the special class is the requirement that the waterline shall be plainly marked on bow and stern. Like the racing length classification, the limitation of crews and most other modern innovations, this marking of the waterline has been advocated by the FOREST AND STREAM and cried down by a certain set as un-American and too English; but it is certain to be adopted as a universal rule in America before many seasons have passed. There has never been a valid reason offered why it should not have been adopted five years ago.

Lord Dunraven.

THE banquet in honor of Lord Dunraven, given by the citizens of Cardiff, took place on the evening of Nov. 21. The following report of Lord Dunraven's speech was sent by cable to the American papers:

Responding to a toast to himself, Lord Dunraven said it was the proudest moment of his life when a few gentlemen of Cardiff visited him and asked him to accept their friendship and assurance of respect. They, at least, believed in his honor. He regretted the absence of Mr. McCalmont and Mr Robinson. Both of them were interested in the little vessel he had left, but not abandoned, on the other side. He referred to the controversy his pamphlet on the Cup races had aroused in America, and said he did not think that the care and attention of those who had the management of the races had increased in proportion to the interest shown in them.

In cases of this kind, where there was so much international importance attached to the races and so much money involved, he did not think it right or fair to the public or the parties immediately interested that anything should be left to a question of the honor of A or the honesty of B, or to the keenness of the moral principles of one man or another. Those having control of the conduct of the races ought to take the responsibility themselves, and leave none to be taken by private individuals.

He had been subjected to the most extraordinary accusations. It had been said that he withdrew from the race from a desire deliberately to insult the American Nation. He had also been accused of acting in pique because Valkyrie had been beaten. Most astounding of all was the new accusation of suddenly, and at a safe distance, preferring a charge against the owners of Defender or the New York Y. C. He resented that. He resented it because it was a most contemptible thing to do behind a man's back what it was not dared to do before his face. As a matter of fact, he had done nothing of the kind.

He wished to be precise in what he said, for somehow everything got twisted, contorted and misunderstood by the somewhat excitable persons across the Atlantic. He had always felt some difficulty in speaking, because he desired to avoid saying anything that could possibly be offensive to the nation for which he entertained the deepest respect.

This had led to his being accused of reticence. Then, when he spoke, however guardedly, his motives and actions were misunderstood. He did not hope to convert the American press to take a more rational and more wholesome view of the situation. The delusion that somebody is bent on insulting and persecuting you is one of the most hopeless, incurable forms of mild insanity; but he could explain his position to his hearers.

He believed it would be understood that he published his pamphlet because in yachting circles in this country (England) there was generally a very confused idea of what had actually occurred.

Defender sailed the first race too deeply immersed, and was consequently longer on the waterline than she was entitled to be. He had not at that time or now the smallest doubt on that subject. Whether he was right or wrong was a matter of opinion, and he feared it would always remain, seeing that the only possible chance of ascertaining was not utilized, and had now gone forever. He made a complaint the morning of the race, obviously not in pique, because it was made before the race occurred.

Lord Dunraven rehearsed the contents of his pamphlet relative to his subsequent request that a watch be put on the vessels and that they be remeasured. If that request had been complied with, none of the ill feeling on this account would have occurred. He denied that any attempt had been made to conceal his complaint. He had mentioned it to several gentlemen. He had conversed with Mr. Hyslop, the official measurer of the New York Y. C., on the subject.

Everybody on both yachts, the committee and the official measurer were all aware of the complaint, yet an attempt was now made to prejudice him in the eyes of England and the United States by pretending that now for the first time he had brought a new charge against Defender. They called the complaint a gross insult. Why did they not do so when it was lodged before the race? It appeared to him that the violent hurricane of indignation that had swept the press of the United States would have carried greater conviction if it had occurred then.

He had also been criticised a great deal here, and had been told that he ought not to have revived the point. He did not wish to do so. It was not necessary, inasmuch as it did not form part of the reason why he withdrew from the contest, but he had been compelled to mention it to the Cup committee, which reported it to the New York Y. C. The report was published in the American papers on Oct. 25. After it appeared there, he thought he had an equal right to publish it here in his own words:

He had not wished to say a word on the distasteful subject, and was extremely surprised to see that the committee had reported thereon. The report stated that the vessels had been remeasured and his statement disproved. It was not disproved. It was impossible to disprove it. It was ridiculous to suppose that the measuring twenty four hours after was the slightest proof. If he had been absolutely silent in regard to the matter, his silence would have given consent to the deduction that his statement had been disproved.

He greatly deprecated the introduction of personal feeling. He had traveled in the United States and had made many personal friends. It was hardly likely that he would seek to alienate or intentionally offend any of them. The New York Y. C. was hardly the right tribunal to make the inquiry. Moreover, the time for proof was past. He had not the slightest doubt that the club inquiry would be absolutely impartial, but he thought it was a question of personal honor, and that the contention that the honor of the country was concerned might well be omitted.

He reiterated his statements regarding his position in the matter of his complaint and declared that he was unable to understand the feeling that had been aroused. He hoped that he was able to take a beating in a proper spirit. He had done so in previous years. If the new Valkyrie was to be beaten it must be under fair conditions and in a fair field. These he hand not found, and therefore withdrew.

Lord Dunraven was much applauded throughout his speech.

The *Yachtsman* of Nov. 11 has the following editorial:

"That international yacht racing is unique in every way is surely proved this week by Lord Dunraven's manifesto, portions of which are reprinted in another column. Be it understood, however, that by international yacht racing we refer only to matches sailed for the America's Cup. Such matches, ever since they have been sailed, have been cursed or blessed with a distinct originality that has made them, as we say, unique. But Lord Dunraven has, unfortunately, we think, put the coping stone on the America's Cup triumphal arch by the ill-timed pamphlet which he has issued in justification of himself.

"We have no fault whatever to find with Lord Dunraven's manifesto, save such as is conveyed by the adjective 'ill-timed.' It may or may not be that Defender took in ballast at night after she was officially measured, but the truth of the charge cannot now be proved, and, therefore, should not be made now. The time has long since passed when such an accusation against Defender's sailing master should have been made. Lord Dunraven, be it observed, makes no accusation directly against the New York Y. C.'s Cup committee, but contents himself with hinting that the evil deed of shipping extra ballast was wrought by the crew without the knowledge of Mr. Iselin. This, then, is the secret which has carried for the Earl so much sympathy—the secret that he said before he left America would probably never be disclosed, and which led him to abandon the Cup races.

"The complaint anent the N. Y. Y. C. mode of indicating the measured load line length is fully justified, no doubt, for a more futile way of marking the measurement is hard to conceive, and it appeared so to Lord Dunraven when he had his first information on the N. Y. Y. C. methods in this respect. Yet he was quite complacent enough—he has always been so up till now—in regard to America's Cup races in general, and the '95 matches in particular—to let the matter slide until it has slid too far. One morning he woke up to find that Defender was floating quite 4in. below her measured load line, and instead of pointing out this fact, if such it was, to Mr. Iselin, and asking him to make marks on the vessel's bow and stern, Lord Dunraven put his representative, Mr. Henderson, aboard at 9 A. M., without, it seems, a word of complaint. Mr. Henderson would, no doubt, have had every facility given him had he expressed a wish to make a mark on the stem and stern at that time. At all events, in view of the suspicion which then existed in Lord Dunraven's mind, it would have been well to ask the crew to take their place for measurement, and, whether or no, to have made Valkyrie marks on Defender's load line sufficiently plain to substantiate this accusation brought against her crew. It should be observed here that at least thirteen tons of dead weight would be required to bring Defender 4in. below her designed load line, and thirteen tons are not easily shipped or unshipped without notice, as our readers know.

"'In any case, nothing could be done before the race was started,' Lord Dunraven says. He was 'reluctant,' too, 'to make a formal protest to the Cup committee on a matter which it was, of course, impossible to verify.' If it was impossible, then, to verify the accusation which is now brought against the Defender, we must say that Lord Dunraven and his crew were more wanting in resource than their reputation would lead one to suppose.

"For the rest, Lord Dunraven's justification is a matter of more importance to the R. Y. S. and the N. Y. Y. C. than to us. His challenge for the America's Cup last year brought the R. Y. S. into the very invidious position of having to 'swallow' the 'new deed,' while his pamphlet makes it abundantly clear that the N. Y. Y. C. have not quite grasped the fact that races for the America's Cup should be treated in much the same way as diplomatists treat the oft recurring 'Eastern Question'—with great attention to details. A year ago the name of Lord Dunraven in America was a name to swear by; to-day it seems, alas! to be a name to swear at.

"The members of the New York Y. C. are rightly annoyed at this sudden springing of a mine beneath their feet, but it appears to us that in this case the annoyance should be chiefly felt by the Royal Yacht Squadron. The pamphlet under notice should, we think, have been submitted to the club that so far forgot itself as to father Lord Dunraven's challenge before it was given to the press. Had this course been pursued we feel certain that this manifesto would never have been published. A reference to it will show that Lord Dunraven lays great stress upon his duty to the R. Y. S. as guiding his conduct throughout the late Cup matches, and one can only regret that this keen sense of duty was not carried further.

"In making the above remarks we have no bias against Lord Dunraven, as those who read the *Yachtsman* are very well aware, and it is with the keenest pain that we feel bound to say that in publishing this pamphlet Lord Dunraven has not only acted egotistically, but aimed a grievous blow at the prestige of British yachting."

A report is current that Valkyrie is for sale, and likely to be purchased and kept in this country.

Uncapsizable Light Draft Yachts.

Editor Forest and Stream:

In a paper on "The Centerboard," published in a recent issue of the FOREST AND STREAM, Mr. W. P. Stephens makes the following statement:

"While absolute non-capsizability cannot be obtained on a draft of 30in. or less for a waterline of 25 to 50ft., there is ample practical proof that a reasonably safe and able boat, and one of universal adaptability, may be had from these three classes" (sharpies, Cape cats, etc.).

Now, while having great respect for Mr. Stephens' ability, I cannot allow the above quoted statement to pass unchallenged.

Lying at anchor in front of my window is a yacht 28ft. on waterline 26ft. over all, 9ft. beam, carrying 650sq. ft. of sail, and drawing 26in, with centerboard up, the centerboard being of wood and not weighted. This yacht is a fast, weatherly, sea-going boat with a comfortable cabin, and is not only absolutely uncapsizable, but is also unsinkable.

I can readily understand why men who have devoted the better part of their lives chiefly to a study of the heavy displacement cutter type fail to comprehend the fact that a yacht of very light draft and small displacement can be so shaped and rigged as to be absolutely uncapsizable. But there are, nevertheless, many such craft now in use, and it is certainly of importance that yachting men should not be kept in ignorance of so valuable a fact. THOMAS CLAPHAM.

ROSLYN, L. I., N. Y., Nov. 21.

Atlantic City Corinthian Y. C.

THE Corinthian Y. C., of Atlantic City, N. J., has enjoyed a most prosperous season, which ended with the annual meeting on Nov. 17, at Woolery's Hotel, Atlantic City, Com. W. W. Hollingsworth presiding. The report of Secretary Adams showed an increase of 44 members and 18 yachts within the year, making a membership of 182 and a fleet of 92 yachts, from the 15ft. inosquito boats, so popular in this club, up to yachts of large size. The club has held 17 races, including its ocean race in July, which latter was very successful. The treasurer's report showed a balance of $313, with no debts. The following officers were elected:

Com., Dr. W. W. Hollingsworth; Vice-Com., H. E. Miller; Sec'y, Chester Adams; Treas., Leonard D. Algar; Meas., John Andrews; Fleet Surgeon, Dr. Talbot Reed; Regatta Committee, Lem Wootton, George Gale, E. A. McGuire, H. E. Miller and E. A. White; House Committee, H. E. Miller, J. E. Mehrer, Lem Wootton and Wm. Stimmel; Committee on Models, Lines and Exhibits, F. Sprow, George Gale, Paul Wootton, Sr., E. S. Reed and Lem Wootton; Entertainment Committee, Wm. Burkhard, Wm. Stimmel, W. S. Cochran, Charles Gale and J. E. Mehrer.

After the meeting Com. Hollingsworth entertained the members in the club house.

The Buckley boiler, made by the Rochester Machine Tool Works, is adapted for either coal, wood or oil as fuel. One of the 6 h. p. Buckley marine engines and boiler has been in use for some time in a 32ft. launch owned by E. P. Wheat, of Wheeling, W. Va., making nine to ten miles with 130 to 140lbs. of steam, though 180 to 200lbs. may easily be carried. Another outfit that is doing good work is of 3 h. p. in a launch of the ship Severn, Capt. J. W. Reid; the boiler being fitted for coal, wood or oil, the latter being used in preference.

Displacement as a Factor of Measurement.

WASHINGTON, D. C., Nov. 17.—*Editor Forest and Stream:* If you will kindly afford space for the suggestion, it occurs to me that the consideration would not be out of place at this time of a proposition to modify the existing yacht rating and time allowance rules.

In addition to encouraging a manly and useful sport, the rules should properly be such as to foster the development of powerful and useful craft, which would be desirable property beyond the great honor of winning a race; in that respect the present rules adopted by most clubs do leave something to be desired. They tax waterline length and sail area. Why should the latter be taxed? Other things being equal, the ship that can stand up to the most canvas is the best boat, and both a stout rig and skill in handling sail would be encouraged by a large spread.

It would seem that in the Defender (God bless her) we must have nearly reached the limit of speed in these large racing machines. Their general features are the logical outcome of the present rules, and, while they are in many respects admirable craft, I think that it would be well to introduce (for large ships) the factor of displacement in such a way as to encourage a bigger body on the same main dimensions. A few years ago Mr. Herreshoff proposed that the rating be found by the formula $\frac{L.\sqrt{S.}}{\sqrt[3]{T.} \times \text{constant}}$, and the FOREST AND STREAM suggested, with good reason, the substitution of displacement for tonnage. If we omit sail area (S.) and make the numerator L^2, the quotient would be linear, that is in the American form of corrected length. If we put the fraction simply $R. = \frac{L.^2}{\sqrt[3]{W.}}$, the corrected length obtained would be greatly in excess of the waterline, and so a constant should be incorporated in the divisor, and this will not increase the value of displacement or weight (W.). Assuming the beam to be one-quarter the length, and the draft to be two-thirds the beam, and coefficient of displacement to be .20 or .25, the length would be approximately $15^3\sqrt{W.}$, and thus by using the constant 15 the "corrected length" would be not far from the actual. While the coefficients of Valkyrie III. and Defender are only about .14, the assumed 20 or 25 per cent. will probably not be excessive for craft built under the proposed rule, as the displacements will probably increase; the Vigilant's is nearly 20 under the present rule, I believe.

The proposed rule still leaves beam and draft untrammelled; but the beam will always be controlled by the length, and any great increase of either beam or length will produce the handicap of increased wetted surface. There is no tax on draft now, and the inconvenience and expense and increase of wetted surface due to the fin is put up with for the sake of the power given by the ballast placed so low. A rule of the proposed form would discourage the ballast fin; by giving a bigger, deeper hull proper, an equal stability would be obtained by a heavier lead keel of less depth, and the bigger displacement while furnishing the floatation for the heavier ballast would influence the time allowance favorably. A vessel would be produced in which could be combined success and pleasure in cruising. The general effects would be much the same as the effects of the rule suggested by Mr. Herreshoff, with the exception that the sail area, not being taxed, would grow to the greatest possible limit; and in the interest of sport I see no objection to that. The tendency might be to produce something of a "brute," but not, I think, to an objectionable extent. It may bring a weighted centerboard to the front, unless that be ruled out as shifting ballast.

Let us apply the formula to Valkyrie III., Vigilant and Defender, and assume their lengths and weights to be respectively 88.85ft. and 155 tons, 85.00 and 147, 88.45 and 140; these displacements are probably not quite correct for the corresponding lengths, but relatively, *inter se*, they are probably right enough for an approximate test.

By the formula $R. = \frac{L.^2}{15^3\sqrt{W.}}$ Valkyrie's corrected length becomes 97.98, Vigilant's 91.27, and Defender's 100.44. According to the N. Y. Y. C. time scale, Defender by this rule would give to Valkyrie 66 seconds on a 30-mile course, instead of Valkyrie giving her 29.1 seconds as at present. Defender would have to give Vigilant 4m. 21.9s., which I cannot compare with the allowance under present rules, not knowing what the latter is. If Valkyrie's displacement had been 200, her racing length would have been 90ft., bringing her 5m. .02s. allowance in 30 miles.

Like all rules, the one proposed is not without objections, but these are not necessarily vital. In important and especially international matches, there will be a disinclination and possibly refusal to divulge the plans necessary for the computation of the displacement; but in these cases certainly a displacement scale certified to by the individual club committees would be accepted, or some such arrangement could be made, the draft figures being permanently marked upon stem and stern and likewise certified to, or verified if desired. In the case of small craft, where such work would entail a trouble and expense not in keeping with the results, it is a question if any rating other than the simple one of length is necessary; or ratings could be established, and the contestants built and rigged to come as near the head of their rating as possible, eliminating all time allowance—as in the Seawanhaka contests. As stated above, the rule is proposed only for fairly large craft, or for races to which may attach unusual interest.

In last season's Newport races the advances shown in the performances of Volunteer, Vigilant and Defender were even greater than expected. It is possible that a similar advance may be made on Defender, but it is difficult to believe that now. The concurrence in such nearly identical types by prominent designers on opposite sides of the Atlantic is fair evidence of the type being that best calculated for ships of that size to win under present rules. Superiority of skill associated with experience may be shown in the relations of beam to length, depth of hull proper to beam, sweep of lines, construction, etc., as was apparently the case in the two Cup races of last summer; but I do not look forward to a vessel soon being built which, under present rules and provisions of the deed of gift, will outsail Defender nearly as much as she outsailed Vigilant. For this reason it would seem both timely and interesting to revise the rules so as to favor greater displacement. If this be done, a successful racer may be also a comfortable cruiser; and when several public-spirited gentlemen each build a boat to compete for the honor of defending the Cup (or possibly in the future of challenging for it), it would be with the comfortable assurance that even if not selected as champion, the owner would possess a craft capable of giving great pleasure in other ways. The mental energies of our designers would also be stimulated to determine the new turning point of maximum efficiency.

Incidentally to the above the factor L. should not be length on the actual waterline, but the length between points 2 or 3in. above, or perhaps from the waterline aft to 3in. above forward, the object being to tax the overhang forward. The displacement should, of course, be that corresponding to the actual draft forward and aft. Very truly yours, U. S. N.

The Centerboard.

SCRANTON, Miss., Nov. 16.—*Editor Forest and Stream:* I was very much pleased in perusing yur paper to-day by reading an article entitled "The Centerboard," by W. P. Stephens, which alone is worth more than the subscription price of your paper in value. From my experience in boating in Southern waters the writer is in the main correct. There is really no good reason why the centerboard vessel cannot be made as strong as the keel vessel; as the centerboard case can be made to strengthen the structure or body, the same as a bulkhead running fore and aft. I commenced to build small boats at the age of 14 years, and have continued to the present, excepting the four years of civil war.

Mr. Stephens is correct about the plate centerboard, as I have given it a fair trial and agree with him that it is good in light winds, but in stiff weather the weight depresses the boat and she loses in speed. I have just taken one out of the Teaser, of 450lbs., this being too heavy for 17ft. l.w.l., and replaced it by a wooden one of 100lbs., which proves satisfactory.

In the latter part of the paper I find mention of the one correct position for centerboard. I suggestively offer my experience: in boats of one-third beam to length I place the trunk exactly in center of keel length; of boats over one-third beam to length I place the trunk 2½in. aft for every foot over the third beam, and in boats under the third I extend the case forward in the same ratio; from which I have by practice found good results, having to deal with shallow water all the time in this section.

Some four years ago I bought a boat of 18ft. in length by 8ft. beam. She had to be rebuilt and the trunk was placed 5in. further aft, which has made her a faster boat and more easily managed.

I offer my experience in the hope that it may prove of value to some boat designers and builders, for I design and build my boats and also sail them in races. S. R. THOMPSON.

Model Yachting.

ON Nov. 14 a model yacht club was organized at Fifty-eighth street and Tenth avenue by a number of gentlemen interested in the building and sailing of model yachts.

The club will be known as the New York Miniature Yacht Club.

The distinguishing signal will be a pointed burgee of red with a white diamond in center of field.

Mr. T. J. Sweeney was elected chairman and Mr. W. H. Dixie secretary.

For all information address secretary, No. 342 West Eighteenth street.

A New Restricted Class.

A MEETING of the gentlemen interested in the smaller class of yacht racing was recently held, and resulted in the formation of what will be known as a special 30ft. racing class, the restrictions being:

Length on L. W. L.—Length of waterline between 29 and 30ft. with crew and all racing equipment on board. Boats to be marked on bow and stern by measurer.

Sail Area.—Sail area to be between 950 and 1,000sq. ft.

Allowance.—No time allowance.

Length O. A.—Length over all not to exceed 43ft.

Cockpit and House.—Cockpit and cabin house to cut away deck not more than 14ft., nor less than 13ft. in length, with cabin trunk not less than 6ft. 9in. long. Breadth of cockpit and cabin trunk to be two-thirds beam of yacht. Top of crown of cabin trunk to be not less than 20in. above deck at gunwale for two-thirds of the length of cabin trunk. Cockpit to have a rising around it not less than 7in. high, unless cockpit has floor above waterline and is watertight.

Crew.—Crew limited to four, three of whom may be paid hands. A lady, however, may also be carried.

Ballast.—Ballast to be permanent and all outside of the hull.

Centerboard.—A metallic centerboard or one weighted for the purpose of increasing the stability not allowed.

Draft.—Draft of water, without centerboard, not to exceed 7ft. 2in.

Rig.—Rig to be jib and mainsail, with mainsail not more than eight-tenths of sail area. Sail area to be the area of mainsail when dry and well stretched—boom and gaff to be marked by measurer—plus area of forward triangle. The measurements for forward triangle to be: Base—Distance from tack attachment for jib to forward side of mast. Altitude—Deck to bottom of highest block or sheave used to set jib or spinaker.

Spinaker.—A spinaker may be used, and the length of the spinaker boom, from outhaul attachment to center line of boat, when swung out square must not be more than length of base of forward triangle.

Equipment.—Racing equipment to include: Anchor of not less than 32lbs., 40 fathoms of 1¾in. cable, pump, bucket, boat hook, five life preservers, signal light, compass, fog horn, sounding lead and line, and two cushions not less than 6ft. long, 1½ft. wide and 3in. thick.

The principle adopted in establishing this class has been to encourage the greatest number to join and to have a really fast and useful type of boat, which, after her racing was over, would still be of use for every-day sailing.

The restrictions were adopted for the following reasons: The length is limited to 30ft., as it was considered to combine the maximum of speed with the minimum of trouble and expense.

The sail area is moderate for the waterline, and there being no time allowance would make very much better racing. The general proportions of the boat are the same as those of the 21ft. class of last year, which proved very satisfactory. As the cutting away of the deck for the cabin and cockpit is a structural weakness to be overcome, it is arbitrarily limited that all designers may contend with equal disadvantages.

The limit for the crew being three paid hands may appear unnecessary, but it is intended in the event of the owner not wishing to steer, the helmsman can be used and still have two for available crew, and that a lady may be carried without penalty must surely add to the popularity of the class and the enjoyment of a majority of the owners.

Nine boats have already been ordered by the following gentlemen: H. B. Duryea, G. Kortright, H. P. Whitney, R. N. Ellis, C. Vanderbilt, Jr., Bayard Thayer, W. O'B. Macdonough, E. D. Morgan, and an unknown owner, and others have mentioned the probability of their building.

The price of the boat complete, with everything on board, will be $3,850.

These eight boats have all been ordered from the Herreshoff Mfg. Co., and will be built, and when finished lots will be drawn as to who shall own them. They will all be built on the same mould, and the Herreshoff Mfg. Co. have also agreed in case they should build any others for this class during the season of 1895 that they will build all on this same mould only, so that any one ordering a boat will feel perfectly sure that his boat and equipment will be exactly like the boat and equipment of all his competitors.

Any one wishing any information in regard to the class can obtain it by writing to Mr. H. B. Duryea, Union Club, New York, or to Mr. W. B. Duncan, Jr., 26 Cortlandt street, New York.

Sir George Newnes.

MR. ROSE having withdrawn his hasty challenge, Lord Dunraven being now out of the question, and all attempts to work up a challenge from the Prince of Wales in a new Watson boat built by the Hendersons having failed, the special correspondents and the daily papers have fallen back on Sir George Newnes as a forlorn hope. There seems little prospect that this gentleman will really challenge, but his name is good enough to furnish occasional headlines when feeding the news flags. Before the question of whether he will challenge is the much more important one of whether he should challenge, and whether any British yacht club should indorse him by making a formal challenge in his name. While this is mainly a question for the foreign club, the New York Y. C. has also certain rights in the matter.

The defense of the America's Cup is to-day no light matter, and promises to be a more difficult and expensive task each year. Apart from the cost of building at least one defending yacht, which is both a private and a club matter, the preliminary negotiations, the general arrangements and the direct management of a series of three out of five races calls for not only quite a large expenditure of money, which the New York Y. C. can afford, but for the voluntary services throughout the season of a number of experienced yachtsmen. The arduous and exacting nature of this work and the serious personal responsibility are not realized by most persons. In the old days it was an easy enough matter to shorten all preliminary negotiations by denying all requests, however fair and just, of the challenger, and going into the Upper Bay to sail one or two races, the result of which was never seriously in doubt; but to-day, when a long and complicated agreement as to details of measurement, crew, etc., must be drawn up, and when a number of races must be sailed from a starting point over twenty miles from the city, the task is no sinecure. It requires on the committees a number of men of recognized standing among yachtsmen, with a thorough technical knowledge of match sailing, of sound sense and good judgment, and unlimited leisure. There is no reward for these services, the glory of the event going to those on the winning yacht, and not to those on the committee boat; and even a fair and capable performance of their duties may subject them to blame and abuse from one side or the other. It is always easy enough to get men to serve on the committees, but not to get the right men; and in the future it is likely to be much harder than in the past. In any future races some more elaborate and systematic attempt to control the excursion fleet will be necessary, of itself adding greatly to the work.

Before asking a defending club to assume a task of such magnitude, in addition probably to providing through its members a defending yacht at a heavy cost, a challenging club should consider carefully the obligations on its side, and the yacht owner in whose behalf its services are enlisted. It should make certain that he is qualified, not only by ample financial means, but by a knowledge of yachting and yacht racing, and above all by a thorough knowledge of the terms on which the America's Cup was first offered and those on which it is now held, to represent the club with honor, whether victorious or defeated. If it should appear that he is ignorant of or entirely indifferent to the conditions governing the Cup and under which his challenge must be sent, a club incurs a serious responsibility in vouching for his standing as a properly qualified challenger, and merits the blame which will surely attend any failure through the ignorance of the challenger.

As regards Sir George Newnes, we have very little information, a fact that, so far as it goes, is against him; as we understand, he is not a yachtsman or a member of a yacht club, and is a yacht owner only to the extent of intending to purchase a 500 ton steam yacht; in these respects being very nearly on a par with Mr. Charles Day Rose. The following particulars concerning him are given by the London correspondent of the New York *World;*

Sir George is not now a member of any leading yacht club, but as he said he knows a provision in the deed of gift requires the challenge to be issued by a regular yacht club, it is to be presumed that he is now up for election in some such organization.

He has had a noteworthy career. Twelve years ago he was a traveler—or, as we call it, a drummer—for a great papermaking firm. Being fond of desultory reading, he started a small broadsheet made up of interesting items from books of all descriptions for circulation among his fellow drummers. This proved so successful he issued it to the public under the title *Tit Bits*, which, after five or six years, he sold to a company for half a million pounds ($2,500,000), still retaining a large interest in it himself.

He is also a proprietor of the *Strand Magazine* and other publications, from which he is said to have accumulated a million and a half pounds ($7,500,000).

He sat in Parliament as a supporter of Gladstone from 1885 to 1892, representing the great sporting center of New Market, where he was defeated this year by H. C. McCalmont, owner of the famous race horse Isinglass, and one of the syndicate with Dunraven in Valkyrie III.

It is a peculiar fact, in view of his present intentions, that a crusade was made upon Sir George at the last election for the alleged sympathy of the *Westminster Gazette* with the purpose of the Anti-Sporting League organization, which has been prosecuting in the courts the various racing officials, including the stewards of the Jockey Club, for allowing bookmaking on race tracks. He denied this, pointing out that he himself was an active sporting man in many directions.

He is 44 years old.

The fact that a man is not a yachtsman does not prove that he may not turn out a good one; and we have no desire to impugn motives which may be based only on a patriotic feeling and a love of sport. At the same time we cannot be blind to the fact that a contest for the America's Cup, even though unsuccessful, would be the best possible advertisement of a popular journal or two; and, as modern advertising methods go, might be quite justifiable from a purely business standpoint, in spite of the heavy outlay. On the other hand, there are comparatively few practical yachtsmen who have both the inclination and the means to challenge for the Cup; there are many who might do it in a 70-footer, but very few who can and will build a 90-footer to meet Defender. The enlistment of wealthy men to the ranks of racing is highly desirable provided that they are good sportsmen and not attracted merely by the prospect of cheap fame or profitable advertising.

If the whole matter is more than a piece of cable gossip, and Sir George Newnes is in earnest in his desire to challenge for the Cup, the next question, of his qualifications, rests with the club which may be called on to endorse his challenge; and we hope, whatever club it may be, that it will profit by the unpleasant experience of the Royal Victoria Y. C. in its hasty and inconsiderate endorsement of the hasty and inconsiderate challenge of Mr. Charles Day Rose.

Lake Yacht Racing Association.

THE Lake Yacht Racing Association, of Lake Ontario, composed of both Canadian clubs and those of the United States, is getting well along in years, its twelfth annual meeting taking place at Oswego on Nov. 10. The organization, in spite of many difficulties due to its international character and to the conflicting rules and mixed fleets of its early days, has met with remarkable success, thanks to the energy and good judgment of its leaders, from the outset. It is to-day in a prosperous condition and growing each year. The delegates were as follows: Com. Æmilius Jarvis, A. R. Boswell and Frank Grey, Royal Canadian Y. C., of Toronto; E. H. Ambrose, Royal Canadian Y. C and Victoria Y. C., of Hamilton; J. E. Burroughs, Thomas Prichard and William Wood, Rochester Y. C.; Owen Martin, Queen City Y. C., of Toronto; Com. John T. Mott, J. B. McMurrich and A. H. Ames, Oswego Y. C.

The officers elected for 1896 are: Pres., Æmilius Jarvis; Vice-Pres., J. E. Burroughs, Rochester; Honorary Secretary, E. H. Ambrose, of Hamilton, Ont.; Executive Committee, Com. John T. Mott, of Oswego; Com. Whitcomb, Victoria Y. C., and Com. Tyson, Queen City Club, of Toronto, with the officers of the Association.

The Fisher Cup, now held by the yacht Onward, of Rochester, was intrusted permanently to the L. Y. R. A. under the following conditions:

"This cup is donated on the condition that it shall be a perpetual challenge cup for friendly competition between the sailing yachts which shall exceed 30ft. waterline enrolled in the clubs of Lake Ontario (including the Bay of Quinte) from time to time forming the party of the second part; and should the party of the second part go out of existence, between yachts of the required waterline which shall belong to any club eligible to sign the request for meeting hereafter provided for.

"This cup shall not be held by the winning yacht, but by a club on Lake Ontario, eligible to hold the same according to the provisions of this deed, to which said yacht belongs, designated by the owner thereof; and such club shall be responsible for its safe keeping.

"For the first race the Rochester Y. C. shall be deemed the holder of the cup.

"The club holding the cup shall, on receipt of a challenge duly made, name a yacht belonging to it to defend the same.

"All races must take place under the auspices of and be managed by the club holding the cup.

"The races must be over a course on the open lake and off the home port of the club, except that where the cup shall be held by a club whose home port is not on the open lake, such club shall designate a course to be sailed off the home port of one of the other clubs eligible to hold the same having a lake course, unless some open course can be agreed upon between the challenger and the club holding the cup.

"Should the club holding the cup at any time go out of existence or withdraw from the party of the second part it shall first turn said cup over to such club eligible to hold the same as it may elect.

"Such other rules and regulations, not changing or being in conflict with those herein set forth, in addition thereto shall govern competition for the said cup as may be made by the party of the second part from time to time; or in case said party of the second part should be dissolved and go out of existence, as hereinafter provided.

"If for any reason the said Lake Yacht Racing Association should go out of existence, this cup shall be raced for subject to the conditions herein set forth as supplemented by the rules and regulations made by the said association in force at the time of its dissolution and as the same may be changed as herein provided, except that such rules and regulations made by said association may be changed from time to time as follows:

"The club holding the cup on receipt of a request so to do signed by three clubs having a membership of not less than fifty members, and a fleet of at least two yachts of the required waterline, to challenge for this cup, and having their home ports on Lake Ontario (including the Bay of Quinte), shall at once call a meeting of all the clubs which shall be eligible to sign such a request at its home port for a date not less than thirty and not exceeding sixty days from the date of the receipt of such request. Each of the clubs so notified and the club sending such notice shall have the privilege of sending two delegates or representatives to such meeting, and the delegates at such meetings shall have the power and authority to amend the rules and regulations governing competition for said cup same as the said Lake Yacht Racing Association.

"Any of the provisions and conditions of this deed may be changed with the consent of the parties of the first part at the request of the Lake Yacht Racing Association, or, in case of its dissolution, at the request of a meeting of the delegates hereinbefore referred to; or, in case of the death of all the parties of the first part, by the Lake Yacht Racing Association, and, in case of the dissolution of the association, by a meeting of the said delegates. Except that said cup shall always be a perpetual challenge cup, to be raced for only by sailing yachts over 30ft. waterline belonging to clubs on Lake Ontario (including the Bay of Quinte).

Signed: F. S. TODD, J. R. WHITE, A. T. HAGAN, } Owners of Onward.

A communication from the Cleveland Centennial Commission inviting the association to join in a grand regatta at Cleveland next year was referred to the Executive Committee. A communication from the Royal Hamilton Y. C. inclosing conditions offered by Hiram Walker & Sons for a $500 cup was received and made a matter of record.

After discussion, it was decided that in place of a week's meet at one point, as last year, the old plan of a racing circuit should be resumed for 1896, beginning about July 15, the rendezvous probably being at Charlotte. The meeting was followed by a banquet in the evening.

The New 30ft. Class.

Editor Forest and Stream:

I note that the rules governing the new 30ft. class specify that the load-waterline length must be between 29 and 30ft., and that the sail area is to be from 950 to 1,000sq. ft. It is to be presumed that the boats will be built to the higher limit of the class, namely, 30ft. l.w.l. and 1,000sq. ft. of sail. Now, if they were designed instead for the lower limit, 29ft. l.w.l. and 950sq. ft. of sail, the boats would answer their purpose just as well, and would have the advantage of measuring as per the regular rules under 30ft. racing length. This would allow them to compete in a fixed class as well as in their own special class, and would give the boats a greater salable value when the racing as a special class ends, as it probably will in a season or so. The regular class limits as at present adopted have proved satisfactory, and it seems unfortunate that this new special class should be built without any regard to the existing classification and system of measurement. All special classes have been virtual failures up to now, but this new one-design class gives more promise of success than any class heretofore established, and it is to be regretted that any error should be made in the framing of rules governing it. In fact, the rules could be amended now, as the work of construction has hardly begun.

WEST'ARD.

Valkyrie III. is now moored just west of the Erie Basin dry docks, beside the tramp steamer Bermuda. The watchman in charge, Peter Donnelly, recently fell overboard in boarding the yacht from the steamer, and was so exhausted when rescued that he was sent to the hospital.

Capt. Charles Barr, who recently sailed for England, will be married on Dec. 9 to Miss Emily Smith, of Southampton, and will return to this country, making his home at Marblehead. Young John Barr, now Capt. John, Jr., has just been made an American citizen.

Mr. Brand's Protests.

MR. BRAND, on his return to England, has been interviewed as follows:

In an interview Mr. Brand, the owner of the half-rater Spruce IV., which was defeated by Ethelwynn, said that he received the fairest treatment while he was in America. The racing was properly conducted. The steamers did not interfere in the least, except one by accident, when the owner of the interfering steamer apologized. His only complaint referred to his protest, the refusal to support which lost him the cup.

Ethelwynn, in the sixth race, he says, certainly violated Rule 34 by not keeping clear. The committee threw out his protest because nobody on board the committee boat was able to see any violation of the rules. The committee, he declares, ought to have taken evidence on both sides before deciding the matter. Ethelwynn had just crossed the finishing line in the last race, after the boats had been running with their sheets well eased, when the wind shifted dead ahead, and Spruce IV. was compelled to peg to windward to get to the line. It was this that made the boat's time look so very bad, a fact that the American press had not noticed. Altogether, Ethelwynn, as an all-round craft, especially for American waters, proved to be the better boat.

Mr. Brand added that an unofficial challenge for another contest had already been issued by him. He will issue a formal challenge if the Minima Club gives its consent, but he will not challenge through any other club. He is trying to organize a syndicate to build a boat to make another attempt for the cup. She will be a half-rater, and her waterline and sail area will be the same as those of Spruce IV.

It is to be regretted that Mr. Brand adheres to a statement, already made to American reporters, which is very unfair to the committee and in no way in accordance with the facts.

His double protest of Sept. 27 was thrown out only after the evidence of himself and Mr. Bell had been heard by the committee, and he had been unable to give any proof other than his personal statement that Ethelwynn came so close as to compel him to luff. As this was opposed by an equally positive statement from Mr. Ball that at no time was Ethelwynn near enough to cause any interference with Spruce, and as by yachting usage the burden of proof always rests with the protesting party, the committee could not entertain the protest. We can vouch for the fact that Mr. Brand made a semi-excuse at Oyster Bay for his numerous protests by saying that if he did not win he must at least put in a protest to justify himself before the Minima Y. C.

The FOREST AND STREAM in the report of the last race gave Spruce full credit for the shift of wind, deducting 2m. 41s., and allowing a victory for Ethelwynn of but 8m. instead of 10m. 41s., as the timing showed.

Since the above was written we have received the *Yachtsman* of Nov. 14, in which we find the following:

"Mr. J. A. Brand has been kind enough to give us some of his views on the Spruce IV.-Ethelwynn matches. It appears that both on Sept. 24 and 26 Ethelwynn fouled Spruce IV. in the most flagrant manner, and that it was owing to the apparent laxness on the part of Ethelwynn's crew that Mr. Sturdee on Sept. 24 protested against Ethelwynn on the score of unshipping and reshipping ballast. That protest should, we think, have been upheld; for the committee confess that Ethelwynn was guilty of a breach of their rules, and the cup should now be in the possession of the Minima Y. C."

This statement is distinctly unfair to Mr. Sturdee, who was in no way responsible for Mr. Brand's many and frivolous protests. On Sept. 24 Spruce made no protest, nor did Ethelwynn, though she was clearly fouled by Spruce directly under the eyes of the committee on the line. The fouling did no particular damage, both yachts moving slowly, but Ethelwynn was prevented from setting her spinaker quickly. However, she made no protest, though clearly entitled to do so.

In the race of Sept 26 there was a very close call for a protest at the first mark, when Spruce tacked so close to Ethelwynn as to endanger a collision before she could fairly have claimed the rights of starboard tack; but nothing was said by the other boat. As concerns the "flagrant foul" in the same race, though Mr. Sturdee, with the committee, was watching the two boats approach at a very interesting point in what might have been the deciding race, he was at a loss to understand the cause of the protest flag, as he freely stated as soon as it was shown, and saw nothing which would warrant it. Mr. Brand was on this leg of the course leaning far out of his boat in the effort to hold her up in a strong breeze, and the most tenable assumption is that in looking under his low boom for Ethelwynn she seemed much closer than she really was. The great angle of heel, the low boom and very narrow cockpit, with the crew hiking out full length, as in this race, made it very difficult to keep a lookout to leeward, where Ethelwynn was. On the other boat the crew were lying flat on deck, instead of hiking; and the wide cockpit made it possible to get down in the boat and look under boom. Anyone who saw the two boats in a breeze will understand how much more comfortable the crew of Ethelwynn was. There is no question of Mr. Brand's good faith in making this protest, but he was not forced about, he cannot give any proof that the other boat was so near as to compel him to luff, nor did she appear so to his representative with the committee. After two such decisive defeats as those of Sept. 26-27, and the hollow victory of Sept. 25, we hardly think that the Minima Y. C. would care to hold the cup on the technicality that ballast had been removed for a perfectly valid reason and replaced exactly as before. It is much to be regretted that Mr. Brand has not profited more by the example of Lord Dunraven.

Model Yachting.

Editor Forest and Stream:

I note with pleasure, in Mr. Stephens's paper on "The Centerboard," read before the Society of Naval Architects, Nov. 7-8, he mentions the model yachtsmen. In the last paragraph but one he says:

"In conclusion, while the centerboard has been at times an instrument of evil through the easy way which it opens to bad design and construction, the device, when properly handled by the honest and skillful designer, is of the highest possible utility. Through it is made possible a craft of extreme light draft which, though incapsizable, is still reasonably safe and exceedingly useful in skilled hands; and no other should attempt to use it. With adequate depth and a proper construction, the material being preferably all metal in large craft, it gives a strong, safe and practically non-capsizable sea-going vessel, for either pleasure or trade, on a moderate draft of water. The best possible combination of good qualities—speed, safety, accommodation and convenience of use—are to be had in a yacht in which the greater part of the depth is made up by the hull proper, the keel or appendage being reduced to a minimum (for the sake of light draft) and the main factor of lateral resistance being a centerboard properly proportioned to the hull and placed in the one correct position. Could I say where this position is, I should feel that my work might aspire to a far higher value; but I frankly confess that I know of no rule or formula that covers the case, and there are many more experienced than I, professional designers, who will join in this admission. Some designers do know, but they are very few; some believe that they know, but their boats speak to the contrary; many yachts of excellent proportions and model have been utterly spoiled through the misplacing of the centerboard. As in most of the details of yacht designing, the location of the conterboard is not a matter of exact calculation, but of judgment based on practical experiment and close observation."

He omits to state the possibilities of ascertaining the true position of these elements through the trial of a sailing model of the intended yacht, which can be done and has been done.

A model yacht must be perfectly balanced, otherwise she would not sail by the wind with any satisfaction. We would suggest that the experimenting be done in the model before building the large yacht, thereby saving expense and disappointment.

We congratulate Mr. Stephens on his able paper and hope he will pardon us for this suggestion, but we could not keep our hands off.

A MODEL YACHTSMAN.

YACHTING NEWS NOTES.

Mr. C. D. Rose, who recently broke his leg by a fall from a horse in France, has now a 20-rater of Arthur E. Payne's design on the ways at Summers & Payne's, and a 5-rater of Soper's design at Fay's.

Messrs. Ogden Goelet and Col. Arthur Paget have together ordered a 20-rater of Sibbick, and will race her in the Mediterranean next spring.

The Hull Corinthian Y. C., organized in 1889, and incorporated two years later, has finally disbanded and surrendered its charter.

Mr. Will Fife, Jr., has among other orders one for a 15-ton fast cruiser, for an American yachtsman.

Sapphire, steam yacht, A. L. Barber, is now on her way to the West Indies, having been at Bermuda on Nov. 7.

Jeffreys's Marine Glue, which was comparatively unknown in this country a few years ago, and difficult to obtain, is now in general use as a standard article in ship and yacht building. Messrs. L. W. Ferdinand & Co., of Boston, have recently taken the sole American agency, and are prepared to furnish all qualities and in any quantity. They have the glue in quality as cheap as 10 cents per pound, and from that up to 25 cents per pound for the finest grade, used for yachts decks. The cheaper grade is used on steamboats and coasting vessels

Among the vessels payed with Jeffreys's Glue are the yachts Mayflower, Volunteer, Vigilant and Defender, and the steamers St. Louis and St. Paul, with the war vessels Indiana, Massachusetts, Iowa, Minneapolis and others. A special make of light-colored marine glue has lately been added to the stock.

Mr. Arthur Binney has designed a police boat for the city of Boston. He will also design one or more 15-footers for next season, as the class promises to become popular in Boston as in New York.

The Massachusetts Y. C. has refitted its quarters at Rowe's Wharf, Boston, formerly used only in summer, and will occupy them through the winter instead of the old winter quarters in Hayward Place.

Yampa, schr., R. S. Palmer, will soon fit out for a West Indian cruise.

Starling, steam yacht, W. I. Lockhart, of Boston, is now on her way to the West Indies with her owner and family on board.

Canoeing.

Canoe-Yawl Cruising.

THE LOG OF CHERUB—1895.

AFTER the excitement of last summer, it is most pleasant and restful to read the following record of a sort of sailing in which measurement rules are a dead letter and protest flags unknown.

Such work as Mr. Strange tells of, and which he does every year, has charms of its own which more than compensate for the rewards of match sailing.

July 26.—Arrived at Greenhithe in the evening and found the boat all ready. Slept on board that night.

July 27.—Sailed for Gravesend in the morning, and took part in a handicap race under the flag of the Gravesend Sailing Club in the afternoon. Strong wind, in which we might, as it turned out, have dragged along under whole sail in the turn to windward, but, having a reef down, we did it at that in the turn to Greenhithe, but shook it out on the run back. After a close race, gained second prize, and, considering that our opponents were for the most part full-fledged 0.5-raters or class boats—we being in complete cruising trim—we were well pleased.

July 30.—Got under way at 5 A. M. to sail to London Docks for Southampton steamer, but got no further than North Woolwich that tide. Proceeded in the afternoon, and after much scratching and bumping in the locks were finally hoisted on board the Lady Martin at 7 P. M. Only took part of ballast out.

Aug. 1.—Arrived at Portsmouth after a pleasant passage; got the yawl over after breakfast, and the steamer being in a vast hurry, we were left made fast to a buoy in a state of dire confusion, everything having been lumped on board anyhow. My "deckie," D., an old hand at cruising, being extra smart, we had things right in an hour, and after turning up the harbor for a look at the noble old hulks, reached over to Wootton Creek to the B. C. A. camp, which was in full swing. Here an accident happened that might have been serious if the Cherub had not been a lucky ship. D. had compounded a lovely stew, which we left cooking while we paid a short call on the camp officers. The heat caused a bottle of whisky which was lying too near the stove to burst, resulting in a fine blaze, which was quenched by the dinghy boy before it had done much harm. We made vows never again to leave the ship with the stove going.

The camp was on a very excellent site, and in full swing. Both D. and myself were struck with awe at the magnificent tent arrangements of some of the members, whose palatial residences resembled suburban back drawing-rooms. Camp bedsteads, chests of drawers, flowers, photographs and other luxuries made us feel quite vagabonds, although we were both heartily welcomed to share them. Nothing we had ever seen in our H. Y. C. cruises approached the scale of splendor that was here displayed, and we felt that the accommodation of the Cherub offered but a poor return for the hospitality we received. But we did our best, and many availed themselves of a passage to Cowes, Ryde and other places, as the weather seemed too much for a few of the yawls to care about facing. On no occasion did we miss our daily sail, although the short "slop" (it cannot be called a sea) caused by the strong winds then prevalent did not suit the boat so well as the longer sea for which she was built, and made it a case of "oilers," which would not have been dreamed of in a similar strength of wind in our home waters.

It would be tedious were I to give day by day our log while at the meet, but I hope I may state, without prejudice, my impressions of the various craft called cruising yawls we found there. Some, hailing from a well-known university, having seen their best days as racers, rode securely at their moorings day by day, rarely going outside the creek, while their respective owners patiently bore a large amount of playful chaff concerning "honest cruisers." Others, built for tidal waters, braved the breezes more or less satisfactorily, but afforded no living room to their proprietors, although as tent carriers they were eminently satisfactory. Heron, a Thames-built yawl of homely appearance, turned out a splendid hard-weather craft, seemingly equal to anything. May, a pretty Mersey-built boat, with a moderate sail plan, was both fast and weatherly, took things very comfortably and did a lot of cruising, besides sailing from Lulworth Cove to the meet in excellent time.

The well-known Tavie, very smart and shipshape, made a good passage in company with some of the bigger ships on a breeze day, to Hamble and back, on which occasion the little Vestal also made a fine passage. In fact, all the ballasted craft performed their work as cruisers fairly well; but common opinion conceded that nothing smaller than Cherub was the size for efficient cruising, and, considering that our extra weight, depth and beam gave no extra trouble, nor at any time hindered our coming and going in the narrow waters of the creek, while rendering us quite independent of a shore tent, and, what is far more important, permitted free movement about the boat when under way (capsizing being quite out of the question), one wonders how much longer the advocates of the skimming dish type of yawl will continue to claim the title of cruiser for craft which did no cruising during the meet, when other yawls were sailing about the Solent and in all respects properly fulfilling the purposes for which they were designed. Even the claims for speed, made on their behalf, are not founded on any true basis, as the high speeds at which they are said to sail are only visible when there is not sufficient wind to develop the normal speed of bigger-bodied yawls. When there is breeze enough to stir the placid waters of the Solent into a lop, they are inferior in speed and weatherliness to the "honest cruisers," as the times made in the race for the challenge cup given by the Lough Erne admirers of the B. C. A. prove. On this occasion there was only a nice sailing breeze, for cruising craft could carry whole sail and the Yankee carried 125sq. ft. without capsizing; yet the big-bodied boats finished before the skimmers, although I must admit that, barring the mishap that happened to Yankee, the tiniest of the lot, she would have been in many minutes ahead.

A little racing brightens up the men (even the cruisers) who attend the meet; but it would be, perhaps, more useful if some more definite idea of what constitutes a cruiser could be established. The new regulations made by the B. C. A. go a little in this direction, but rules compelling the man to live on shore for a stated period will naturally have no effect whatever upon the boat he races in. The Yankee, which is a very beautiful little racing machine, and fast withal, is no cruiser; and her owner complied with the stipulated requirements. But what chance had the genuine cruising canoes Lily and Argo in a sailing match with the Transatlantic machine? Yet these two little ships were out and about in all weathers, and in what must have been heavy weather for such little craft on several occasions, while the machine lived under a shed nearly the whole time. I ask with wonder why a race nominally for cruisers should be open to a machine under any conditions, and how much longer a body of sailormen are going to be before they discover the injustice and the harm it does to cruising and canoeing?

The weather improved very much during the latter part of August, and, with a fresh crew, we continued our cruising under very exhilarating conditions. Portsmouth Harbor was very thoroughly explored, and Portchester Castle interested us very much. A pleasant incident was also the meeting with an an old friend—the Viking, once sailed under the burgee of the H. Y. C.—still as staunch and seaworthy as ever, and the comparison of the old and new type of Humber yawl seemed to show that improvement had been the general outcome of increase of beam and overhang and decrease of displacement.

The end of our holiday drawing near, it behooved the Cherub's crew to watch for a chance of running up channel for the Thames, and on Saturday, Aug. 31, we left Ryde for Littlehampton at 6 A. M. There had been a strong breeze the day previous from the S.W., but a light wind from W.N.W. helped us along over the old swell and with the east-going tide very nicely. Shaping our course for the Looe, we sighted the red and white buoy of the Swatchway about an hour after the flood had made. As we drew nearer a small yacht ahead of us made an attempt to go a long way inside, across the Streets, evidently disliking the tidal race, which we could see breaking in a most alarming manner right across the Brake. The nearer we drew the less we liked the look of it, but there was no getting out of it, as we were drawn into the strong rush of tide bursting through the Swatch, making a most uncanny noise, and altogether being very nasty to look upon from the well of a canoe-yawl. Hauling our wind, we found it impossible to avoid going through, the pace of the tide being at least four knots, and so we put the little ship at it again and made a virtue of necessity. She took the first sea like a duck, only a few hundred-weight of water broke over the fore deck at the second and third mad plunges, and then we were swept well into the channel and out of the breakers. Turning to see how our small friend inshore managed, we found he was hard and fast ashore and striking in a most dangerous way. We felt very anxious about him, but could do nothing, and, seeing a large cutter yacht turning through in the slack of the Boulder Bank, we stretched off and hailed him to ask if he saw him and could send a boat to him. We were reassured on hearing that, although no boat could be sent from the cutter, the shipwrecked craft had launched a dinghy, and that assistance would be sent from shore if possible. There was too much swell to allow us to watch his movements very accurately, but we hung about as well as we could, and at last saw the little craft, under the foresail only, gradually draw off the rocks, and, still under that sail, stand away due south until she was lost to sight; a most extraordinary proceeding it seemed to us, the mystery of which we have long pondered over without being able to arrive at any satisfactory conclusion. So we went along again, and on arrival off Littlehampton went in about half flood, and moored alongside a coal wharf ahead of the once famous Pollywog, of Milford Haven fame. Her owner very courteously did everything to make us at home, for which attentions we were very grateful. A strong rush of tide sets across the entrance to Littlehampton, which we were successful in negotiating, but care is necessary in taking this harbor except at slack tide.

Next day being Sunday (a day I have invariably found favorable to making long passages) we left about 5:30 and at 6 were outside, going gently along with a light air W.N.W., which remained light and paltry until nearly to Newhaven. We carried our tide as far as Beachy Head, when a smart breeze from S.W. sprang up, and we went along very fast and comfortably until off Hastings, when, owing to the increasing strength of the wind, the boat began to overrun the sea, which had by now increased, but rean very true, with very little top. Here we hauled down two reefs and proceeded, passing many fishing crafts turning to windward. Going across to Dungeness we had the whole of the W. going tide to bore over, and the sea broke more frequently, but nothing, not even a spray, came aboard aft. The boat was tearing through the water, but seemed to go but slowly by the land, we being well off it, and it was getting toward evening as we rounded Dungeness and reached well into the E. roads to smoothen our water. Here were several craft brought up, and we would have liked to have brought up too. But "a bad barbor is better than a good roadstead," so we plowed along in the dusk for Folkestone, which we reached at 9:30 in pitchy darkness, and at dead low water, not a living soul visible anywhere.

This being a dry harbor, we hung on to a warping buoy and cooked our supper (with much motion, owing to the sea running round the end of the pier, and the backwash from the rocks) until there was water enough for us to enter the port. Finally we made all fast and turned in at midnight, having made a very satisfactory run of about seventy-five nautical miles, and feeling very pleased at having got so far along on our homeward journey.

Monday and Tuesday it blew hard, the south cone being hoisted. The regatta here was postponed, but the sailing match for the big luggers came off, and a fine sight it was to see these powerful craft smashing to windward under double reefed foresails and mizens. Needless to say, we did not continue our voyage, but on Wednesday morning we left early for "as far as we could get," and had a rare old shaking up over the swell left by the previous day's breeze, until we got well into the Downs, where all was quiet, and a large fleet of craft brought up; so we too let go our anchor for an hour, and had a quiet second breakfast.

Folkestone is a fearfully bad harbor; the range is something dreadful, and as the bottom is gravel and rock, as hard as brass, we fully expected to find that our centerplate was jammed, as, before the boat was properly afloat, she ran backward and forward on the gravel, in spite of double ropes fore and aft. However, nothing went wrong, and the plate worked serenely, so we continued our journey, passing Ramsgate, and stretching right off to the Tongue Buoy in order to get the best of the young flood in our turn to windward up to Margate. Here we went ashore for letters and some necessaries, staying nearly an hour, and then went on in the hope of making the East Swale before the ebb. But progress was slow with a dead head wind, and off Herne Bay the tide met us and made progress still slower. We turned on, however, with all sail set until dark, when, being just off the Street Buoy, and finding that to get to windward over the ebb would be too tedious, we let go our anchor, hoisted our riding light, and after taking careful bearings of the Girdler, Whitstable and Herne Bay (in case anything happened), turned in until dawn, after doing another good day's work, and feeling quite at home in the river.

Thursday, Sept. 5.—Up before dawn, and turned to Shellness, letting go again and resting until midday, when we again got under way with double reef sail, and turned through to Queenborough without once touching the ground. The first of the flood is by far the best time to go through, and it may be useful to cruisers to know that we found at least 21ft. under the railway bridge at two hours' flood, and got through without lowering our mast. We remained at Queenborough that evening, and turned to Chatham next day in a very heavy breeze of wind, and were pleased to see how well we held our own with the barges that were turning up with us. After a few days of single-handed work in the Medway (a very favorite river of mine), we again set sail for Greenhithe, and ended a very successful and interesting cruise, and one which I am sorry that professional duties and engagements will not allow me to repeat next summer. CHERUB.

A. C. A. Finances.

THE following report was received too late for publication with the others last week:

REPORT OF SECRETARY-TREASURER A. C. A., 1895.

Receipts.

Balance from Geo. P. Douglass, Secretary-Treasurer, as per report	$609 15
F. L. Dunnell, Purser Atlantic Division	25 80
Central Division, full income	175 75
Atlantic Division, 30%	84 45
Eastern Division, 30%	125 70
Northern Division, 30%	25 20
Year Book	423 40
Postage on Year Book	52 52
Camp dues	173 00
	$1,694 87

Disbursements.

Transferred to Board of Governors	$359 15
Office expenses	47 20
General expenses	11 00
Express charges	3 85
Year Book	232 80
Postage and addressing Year Book	51 04
Camp Site Committee	143 81
Regatta Committee	1 00
Camp expenses paid	80 42
Balance	761 60
	$1,694 87

There are no outstanding bills against the Association.

The following amounts are still due the Association, viz.:

West Shore R. R. (transportation)	$15 00
R., W. & O. R. R. (transportation)	25 00

CHAS. E. CRAGG, Sec'y-Treas.

The undersigned committee, appointed by Commodore W. C. Witherbee to audit the accounts of Secretary-Treasurer Chas. E. Cragg, find them to be correctly kept and properly vouched.

C. A. NEIDE, A. C. A. No. 14.
R. P. HOLDEN.

PORT HENRY, N. Y., Nov. 8, 1895.

No final statement is given, but, as we understand, the balance of $609.15 was turned in by Secretary-Treasurer Douglass on Nov. 1, 1894, and was transferred to the board of governors; the sum of $359.15 being deposited in a Brooklyn trust company under the signatures of the president and secretary of the board, while $250 was advanced to Secretary-Treasurer Cragg to meet current expenses until cash was received from the division pursers. The balance turned over by Secretary-Treasurer Cragg, $761.60, includes this sum of $250, which should be deducted, making the actual balance of the year 1895 $511.60. To this is to be added $40 still due on advertising in Year Book. The sum now in the hands of the board of governors is $1,220.75, from which $250 will be advanced to Secretary-Treasurer Stryker, to be repaid when the returns are made by the division pursers. This is a remarkable showing as compared to the deficit of $500 at the end of 1891. It proves that with a proper system of government and reasonable economy in its expenditures the Association has an ample income, and can afford to buy good prizes and pay all legitimate expenses and yet preserve a permanent balance.

The Eastern Division has sent in a duly audited report, the figures of which agree with those of the statement published last week. The Central Division has as yet sent in no report.

The Limit to the Centerboard.

NEW YORK, Nov. 22.—*Editor Forest and Stream:* According to the FOREST AND STREAM, our executive committee has seen fit to recommend certain changes in the racing rules of the A. C. A. Among others they propose to remove the 18in. limit to the drop of the centerboard. I cannot see how canoeing is to be revived by any such method. Those owning the present type of boat must either go to the great expense of reconstructing their centerboard trunks and purchasing large daggers or sheets of metal, or else they must build entirely new canoes with such appliances.

For years the hull of the canoe and its necessary boards have remained practically unchanged. To propose in a moment, one might say, a reconstruction of this entire fleet is radical legislation, to say the least. Of course some will say, why not use your present boat? It may be as fast as any new type. This is possible, but hardly probable, for obvious reasons. In order to keep up with the procession one must spend a considerable part of his income in experimenting with different types of centerboards and finally choose a supposedly perfect one. I cannot see how this is to bring back to racing the older men who have old types of canoes and are disinclined to spend much time or money in reconstructing their boats. It was difficult enough when a man had to keep improving his sail area in size and quality.

The men with 180ft. sails practically frightened out of racing the men who could not afford or had not the time to improve their sail plans; so last year the racing was confined to a dozen men. Now if men will not go into races because of the time and cost of perfecting rigs, how much more likely are they to if their boats must be reconstructed or new boats built?

The fact is, a man who thinks he has a chance with the present type of canoe would hesitate about racing a new and supposed superior type. He would say he had no chance against such circumstances. The races would probably be confined to a less number than at present.

The rule proposing the limiting of sail spread seems a good one. In fact, I think that the race we had last year, when the sails were limited to 100ft., was the best of all, in spite of the uncertain winds.

I do not see the use of going from an extremely large sail area to an extremely large or deep centerboard. An unlimited drop to the centerboard will have exactly the same effect on racing as an unlimited sail area. There should be a limit to all things. CIMEX.

American Canoe Association.

THE officers of the American Canoe Association for the year ending Oct. 1, 1896, are: Com., William R. Huntington, Rome, N. Y.; Sec'y-Treas., Thomas H. Stryker, Rome, N. Y.; Librarian-Custodian, W. P. Stephens, Bayonne, N. J.

Atlantic Division.—Vice-Com., James K. Hand, New York; Rear-Com., Wm. C. Lawrence, Trenton, N. J.; Purser, Henry M. Dater, 307 Adelphi street, Brooklyn, N. Y.; Executive Committee: Henry H. Smythe, New York; H. Lansing Quick, Yonkers, N. Y.; Percy F. Hogan, New York.

Central Division.—Vice-Com., H. D. McVean, Rochester, N. Y.; Rear-Com., Albert T. Smith, Albany, N. Y.; Purser, Wm. H. Martin, Rochester, N. Y. Executive Committee: Dr. W. J. Nellis, Albany, N. Y.; H. V. Backus, Rochester, N. Y.

Eastern Division.—Vice-Com., James W. Cartwright, Jr., Boston, Mass.; Rear-Com., Howard Frost, Worcester, Mass.; Purser, R. H. Hammond, Worcester, Mass. Executive Committee: Howard Gray, Lowell, Mass.; Louis S. Drake, Auburndale, Mass.; Alfred W. Dodd, Hartford, Conn.

Northern Division.—Vice-Com., A. H. O'Brien, Toronto, Can.; Rear-Com., R. D'Arcy Scott, Ottawa, Can.; Purser, Douglas H. McDougal, Toronto, Can. Executive Committee: F. C. Johnson, Montreal, Can.

Board of Governors.—Atlantic Division, Robert J. Wilkin, president, Brooklyn, N. Y.; Central Division, C. V. Winne, recorder, Albany, N. Y.; Eastern Division, Paul Butler, Lowell, Mass.; Northern Division, E. B. Edwards, Peterboro, Canada.

Camp Site Committee.—J. R. Robertson, chairman; J. S. Wardwell, F. F. Andrews, J. G. Fraser.

Transportation Committee.—J. K. Hand, chairman; C. V. Winne, F. S. Rathbun.

Regatta Committee.—W. C. Witherbee, chairman; E. B. Edwards, Butler Ames.

A. C. A. Membership.

APPLICATIONS for membership may be made to the purser of the division in which the applicant resides on blanks furnished by purser, the applicant becoming a member provided no objection be made within fourteen days after his name has been officially published in the FOREST AND STREAM.

EASTERN DIVISION.

Name.	*Club.*	*City.*
Fred W. White	Tatassit	Worcester.
Wm. C. Pierce	Tatassit	Worcester.
Henry E. Whitcomb	Tatassit	Worcester.
C. H. Vaughan	Tatassit	Worcester.
Frank A. Clark	Tatassit	Worcester.
Chas. K. Fiske	———	Northampton.
Wm. C. Marshall	———	New Haven.
Russell A. Ballou, Jr.	———	Newton.

Rifle Range and Gallery.

Cincinnati Riflemen.

CINCINNATI, O., Nov. 17.—The following scores were made by members of the Cincinnati Rifle Association at their range to-day. Conditions: 200yds., off-hand, 3lbs. trigger pull, rifles under 10lbs, standard target, 7 ring black. A feature of to-day's shoot was a 100-shot match between Payne and Roberts. Payne scored 787, Roberts 751, Payne thus winning by 36 points. Hasenzahl added another clean score to his credit:

Drube	6	9	9	6	9	7	10	7	5	9—77
	8	10	8	7	5	6	8	9	5	10—76

Hudson Rifle Club.

JERSEY CITY, N. J., Nov. 21.—The three days' tournament of the Hudson Rifle Club, of this city, ended last night after a most successful meeting. The number of marksmen who competed for the cash prizes, which amounted to over $500, was extremely large and most gratifying to the management of the tournament.

The winner of first prize on the ring target was Louis Flach, of the Empire Rifle Club, who scored 222 out of a possible 225. L. P. Hansen, of the Excelsior Rifle Club of Jersey City, won first prize on the bullseye target, while A. W. Steuber won the handsome medal which was the first prize in the honor target competitions, this event being open to members only. Following is a list of the winners:

Ring target:

Louis Flach	75 74 73—222	G Worn	72 72 71—215
L Buss	75 73 73—221	H Krauss	73 71 70—214
M Dorrler	74 74 73—221	C Boag	71 71 70—212
W Rosenbaum	74 74 73—221	C Horne	73 72 66—211
H Mahlenbrock	73 73 73—219	G Sneller	73 69 68—210
J Rebban	73 73 72—218	L Vogel	71 70 69—210
L P Hansen	73 72 71—216	B Zettler	71 70 69—210
F C Ross	74 71 70—215	A Muth	72 70 68—210
G Purkess	73 71 71—215	C Malz	70 68 67—205

Bullseye target:

L. P. Hansen, 8 degress; A. Muth 11, John Rebhan 12, A. W. Steuber 14½, H. Oberst 16, W. Rosenbaum 16, H. Mahlenbrock 17, G. Worn 17, G. W. Plaisted 18, H. Hutch 18½.

Honor target:

A W Steuber	71	A Malz	59
H Mahlenbrock	68	Chas Stademan	59
John Rebhan	67	S A Middleton	56
Henry E Badey	65	P Coyle	54
Chas E Bird	62	O Binder	54
Anton Braun, Sr	61	J Buch	53
Chas Hatch	61	B Thiele	51
F Schaefer, Jr	61	J J Evans	43
L Kirchner	41
Wm Schakraft	39
John Smith	38
Wm Connors	38
F W Rapp	34
P J O'Hare	20
E Allaire	19

Zettler Rifle Club.

NEW YORK, Nov. 19.—The regular weekly shoot of the Zettler Rifle Club took place at the club's range, 219 Bowery, this evening. The scores made were as follows, a possible high score being 250:

Louis Flach	249	C G Zettler	244
Dr J A Boyken	247	B Zettler	244
Henry Holges	247	S Buzzini	243
F C Ross	247	Dr I W Furness	243
H D Muller	246	A Kronsberg	242
M B Engel	241
H Muntz	239
G W Downs	238
A Klein	231
R Busse	225

The FOREST AND STREAM *is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.*

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

Dec. 3-4 —HENRY, Ill.—Tournament of the Henry Gun Club; live birds and targets. A. Bacon, Sec'y.

Dec. 4-5.—NEWARK, N. J.—Tournament of the Newark Gun Club; live birds, at Erb's grounds.

Dec. 7.—HOLMESBURG JUNCTION, Pa.—Team race, 25 men to a team, between All-Philadelphia and the Delaware State League; all day shoot on the grounds of the Keystone Shooting League.

Dec. 12-13.—LANCASTER, Pa —Tournament of the Fairview Gun Club; first day, targets; second day, live birds.

Dec. 19, 20.—ELIZABETH, N. J.—Fifth bi-monthly tournament of the Elizabeth Gun Club; first day, targets; second day, live birds.

1896.

Jan. 4.—WILMINGTON, Del.—Second team race between All-Philadelphia and the Delaware State League, 25 men to a team; all day shoot on the grounds of the Wilmington Rod and Gun Club.

Jan. 4-5—PHŒNIX, Ariz —Annual tournament of the Arizona State Sportsmen's Association.

Jan. 7-11.—SAN ANTONIO, Texas.—Grand mid-winter tournament, under the auspices of Texas State Sportsmen's Association and management of J. M. George and O. C. Guessaz (Texas Field). $2,000 added.

Feb 1.— ————.—Third team race between All-Philadelphia and the Delaware State League, 25 men to a team. (Place of shoot not fixed.)

April 1-3 —NEW YORK.—Interstate Association's Fourth Annual Grand American Handicap.

April 14-17.—ATCHISON, Kansas.—Thirteenth annual open to all, and second annual manufacturer's amateur tournament; $1000 added money and manufacturers' prizes. Lou Erhardt, Sec'y.

May 5-8.—NEW YORK —Tournament of the American E. C. Powder Company; $2 000 added money.

April 30—May 2.—NEWBURGH, N. Y.—Annual spring tournament of the West Newburgh Gun and Rifle Association; targets and live birds; added money announced later.

May 12-15 — MEMPHIS, Tenn. — Tournament of the Memphis Gun Club, $2,000 added money.

May 12-14 —DAYTON, O —Annual tournament of the Ohio Trap-Shooters' League. Ed. Taylor, Sec'y.

May 19-22.—CINCINNATI, O.—Tournament of the Hazard Powder Co. R. S. Waddell, Agent.

May 22-24.—KANSAS CITY, Mo.—Nineteenth annual convention and tournament of the Missouri State Fish and Game Protective Association. J. H. Durkee, Sec'y.

May 26-28.—FRANKFORT, Kan.—Annual tournament of the Kansas State Sportsmen's Association.

May 30-June 1 —MILWAUKEE, Wis —Eleventh annual tournament of the South Side Gun Club.

June 1-6.—CHICAGO, Ill.—Twenty-second annual tournament of the Illinois State Sportsmen's Association. H. B. Meyers, Sec'y.

June 8-13.—BUFFALO, N. Y.—Thirty eighth annual tournament of the New York State Association for the Protection of Fish and Game, under the auspices of the Audubon Gun Club. E. W. Smith, Sec'y.

June 17-19.—CLEVELAND, O.—Third annual tournament of the Champion Cartridge and Target Company.

July 30, 31.—GOSHEN, Ind.—Midsummer tournament of the Goshen Gun Club.

Oct. 7-9.—NEWBURGH, N. Y.—Annual fall tournament of the West Newburgh Gun and Rifle Association; targets and live birds; added money announced later.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 318 Broadway, New York.

We have been asked by one or two correspondents to explain once more our suggestion for arriving at a true championship of the world at targets. As our suggestion has been adopted by the American E. C. Powder Company, and will be carried out at its tournament in the first week of May, we gladly give the following explanation: During the four days' shoot there will be a series of 400 targets shot at as follows: 100 unknown angles, 100 expert rules, 100 reversed order and 50 pairs. These 400 targets will be divided into 16 events, 12 of them at 25 targets each, the pairs being divided into two 15-pair events and two 10 pair events. Each of these 16 events will be separate sweepstake events, with an entrance fee of (say) $3 each, probably one event at each style of shooting being shot off each day. From the purse in each of these events, including of course the added money, 5 or 10 per cent. could be deducted to form a fund to be divided as may seem fit by the management of the tournament among the three, four or five men making the highest general averages in the above 400 targets, a cup emblematic of the world's championship at targets being also presented to the man making the highest average in that contest. We claim, and we think our claim is a sound one, that the man who succeeds in making the highest average at the 400 targets shot as suggested is worthy of the title of champion, particularly as he will meet on that occasion the best in the land. Of course, the above is only a rough sketch of the plan, but we understand that the idea will be carried out in the main as we have given it.

Paul R. Litzke, our Little Rock, Ark., correspondent, sends us the following: "The match for the live-bird championship trophy of Kansas, between W. W. McIlhany, of Weir City, and E. W. Hoffman, of Galena, which has been announced to take place at Weir City, Kan., Nov. 21, had to be indefinitely postponed, owing to the fact that Hoffman is critically ill with typhoid pneumonia. As it will be some time before he will be sufficiently recovered to be able to shoot the match, McIlhany has instructed the stakeholder to return to Hoffman his $50 forfeit money. McIlhany is now open to challenges from any shooter residing in Kansas; anyone desiring to wrest the trophy from him has but to send his forfeit ($50) to Dr. King, president of the Business Men's Gun Club, Weir City, Kan., and he will be accommodated. The conditions are 50 live birds per man, American Association rules."

It seems that we made an error last week in our "Wopsononock bear story," locating the death of the bear between the hotel and Lookout Point. It seems that the correct location was "just back of the Wopsononock shooting grounds, a spot familiar to very many trap-shooting readers of FOREST AND STREAM." Although we are well acquainted with that section of the Alleghenies, we are still in the dark as to just where bruin met his death. Anyway, he was killed, and Billy Bell and Kate, his setter, were close up at the killing, which are the main points of the story. Owing to the negligence of some employee of Adams Express Company, the box containing the pelt got sidetracked; when found it was valueless, having been irreparably spoiled, and Billy is now after that company for the value of a hide that was covered with a coat of hair wonderfully long and as black as ebony.

The Endeavor Gun Club, of Jersey City, N. J., has taken a lease of the grounds at Marion, N. J., where the club holds its regular shoots. These grounds, known as "Al. Heritage's grounds," are easy of access, the P. R. R. running frequent trains which stop at Marion, while trolleys from the Jersey City ferries of the P. R. R. run close to the grounds. Parties desiring to obtain the use of these grounds for private matches, team races or tournaments can get all necessary information regarding same by writing to Dr. P. Fletcher, president Endeavor Gun Club, 23 Cottage street, Jersey City, or to J. A. Creveling, secretary, 371 New York avenue, Jersey City.

We have received from John C. Shallcross, secretary of the Keystone Shooting League, a programme for the day's shooting on Dec. 7, when the All-Philadelphia vs. Diamond State team race is shot, which differs slightly from that which we gave last week. The revised edition is as follows: 1, 10 targets, known angles, $1; 2, 10 targets, unknown angles, $1; 3, 15 targets, known angles, $1; 4, 15 targets, unknown angles, $1; 5, 20 targets, known angles, $1.50; 6, 10 targets, unknown angles, $1; 7, 10 targets, known angles, $1; 8, 20 targets, unknown angles, $2; 9, 10 targets, known angles, $1; 10, 10 targets, unknown angles, $1 50. Class shooting; 12 entries and under, 3 moneys; over 12 entries, 4 moneys.

A letter from our Altoona, Pa , correspondent, dated Nov. 21, says: "This week finds nearly everybody out hunting, and if all goes well I expect soon to be there myself. Ferd. Van Dyke joins a party of us next week." The party referred to has leased the sporting rights of a large tract of good hunting country in Fulton county, Pa., and has erected a comfortable cabin in the midst of their shooting territory. Ruffed grouse are generally to be found there in numbers sufficient to make it well worth the trouble experienced in a day's walk after these gamy birds. The section also contains some good deer country, so that Ferd. will probably have an opportunity of finding out what he knows about buck fever.

On Nov. 16 the Marlborough, N. Y., and the Peekskill, N. Y., gun clubs tried conclusions in a six-men team race on the grounds of the Marlborough Club. Each team shot at 150 targets, 25 targets per man, the home team winning by 5 breaks after a very close contest. The scores were: Marlborough—Frost 24, Vail 23, Woolsey 22, Wyatt 22, Bingham 21, Rhodes 20; total 132. Peekskill—H. P. Dain 23, Dr. Mason 23, Raher 22, J. B. Halsted 21, Perry 20, Loder 18; total 127. It was against the Marlborough team that the Peekskill men made their big record about a couple of years ago.

With a very general exodus of Northern shooters to the Southern States for field shooting, there is naturally a lull in both live-bird and inanimate shooting circles just now. From now on until the first week of May in 1896 there will be little to keep our trap columns going, with the exception of the San Antonio mid-winter shoot and the Grand American Handicap, the latter event coming off in the vicinity of New York during the first week of April.

Mr. David Brown, president of the West Newburgh Gun and Rifle Association, of Newburgh, N. Y., writes us that his club claims the following dates in 1896: April 30, May 1-2, spring tournament; Oct. 7-9, fall tournament. At both these tournaments the club will add money to the purses. These semi-annual tournaments of the Newburgh club are always pleasant and sociable gatherings; with the attraction of added money they will become still more popular. The Newburghs can run a shoot too.

The Buffalo, N. Y, *Courier* of Nov. 15 says: "The members of the Audubon Gun Club have decided not to build the contemplated club house at present, believing they can use their money to better advantage during the State shoot, which will be held under their auspices in June next. A small shed for protection from rain and storm is being built at Audubon Park. Large tents will be used at the shoot."

In a personal letter to us, dated Nov. 16, Irby Bennett, writing from the Atlanta Exposition, says: "Our mutual friend, Elmer Shaner, is down here looking after the exhibit of the U. M. C. Co. I can see his bald head shining at me from where I sit." Since the Interstate Association started on its work in the South it seems pretty hard to keep Elmer up North, particularly in the Smoky City.

The two days' tournament of the Newark, N. J., Gun Club, Dec. 4-5, will be held at Erb's grounds. On the second day there will be a special event shot under the following conditions: 25 live birds per man, $10 entrance, birds extra. Events of this class are very popular in New Jersey, consequently a large entry list may be confidently expected.

In regard to the San Antonio shoot, Oscar Guessaz (Texas Field) writes us that the dates have been altered from Jan. 9-11 to Jan. 7-11. With $2,000 added money, this means a big five days' shooting at San Antonio, Tex., just when shooting affairs are at their lowest ebb.

The Fairview Gun Club, of Lancaster, Pa., will hold a two days' tournament, on its grounds, on Dec. 12-13. On the first day (Dec. 12) all events will be at targets; the second day live birds will be used, an attractive programme being arranged for both days.

A tournament will be held at Henry, Ill., on Dec. 3-4, under the auspices of the Henry Gun Club. Both live birds and targets will be used. Further information may be obtained by addressing the secretary of the club, Mr. A. Bacon.

Stanstead's system of dividing purses in trap-shooting contests is given elsewhere with our comments on the same. Send in your systems and criticise those already advanced. That's the only way we can ever hope to successfully cope with this question.

H. B. Meyers, secretary-treasurer of the Illinois State Sportsmen's Association, writes us that the Association will hold its twenty-second annual tournament on the usual dates chosen for those annual affairs —the first week of June.

Fred R. Eaton, of Olean, N. Y., has sent us a notice of the sudden death of Hollis W. Moore, of that city. As a rifleman and as a trap-shot Mr. Moore was well and favorably known in the State of New York.

FOREST AND STREAM'S tournament squad plans are evidently growing in popularity. Managers of tournaments at which they have been used write us that "they are just what we needed."

EDWARD BANKS.

Sudden Death of H. W. Moore, of Olean, N. Y.

OLEAN, N. Y., Nov. 14.—Hollis William Moore, one of our most respected and prominent business men, died suddenly to-day. Deceased was one of the men that organized the Olean Sportsmen's Club about fourteen years ago, and was at the time of his death president of the club. The club has been ably assisted by him in maintaining its position as a first-class club, made up of our best citizens. The club held a live-bird shoot a short time since at which he was present, entering into the sport with his usual zeal.

He was born at North Leverett, Mass., on Nov. 1, 1832, the son of Capt. Lovell Moore, of that place. He came to Olean in April, 1855, and soon after married Rosina L. Smith, of Cuba, N. Y., who survives him. He also leaves a daughter, Ella, their only child.

At the time of his death he was manager of the International Steam Power Co. The company manufactured the high pressure water tube safety boilers, invented and patented by him. He was placing one of them in position on State street, in this city, when he died. He also invented and patented the black giant sheer, punch and upset, that have been sold from California to Russia. He also invented and patented the Hollis ram's horn spring for carriages. He also had other valuable patents. He conducted a large carriage manufactory here for years. He was one of the first members of the Eagle Engine Co. No. 1, our first fire engine, in 1860.

He was a first-class rifle shot and a good trap shot, and one of the best mechanics in the State. I came to Olean the same month that he did, and we have always been close friends and have spent many happy hours together with the gun. He was a constant reader of FOREST AND STREAM.

FRED R EATON.

Buffalo Trap-Shooters.

BUFFALO, N. Y., Nov. 20.—The weather to-day was not what we like for trap-shooting; it was cold and raw, with snow on the ground. Capt. A. C. Anson, of the Chicago Colts, was a visitor at our grounds; he is playing at the Star Theater here. The first bird he drew in No. 1 was a corker that beat him out; his second was lost owing to his neglect of the safety. His next loss was his second bird in No. 2, which fell dead out of bounds. After this piece of bad luck he ran 17 straight, losing the last bird he shot at dead out of bounds; this bird was an incomer that was hit with both barrels, but kept coming. Anson trying to make one of his famous first-base grand-stand catches, jumping 24ft. in the air, but making an error. Harry Kirkover was not shooting as well as usual to-day, as his scores will show. Krotz, who is a beginner, shot well in No. 3, only using his second barrel once. Scores:

	No. 1.	No. 2.
H D Kirkover	11000—2	1200011121— 7
C S Burkhardt	2e102—3	2122112011— 9
A C Anson	00211—3	1e12122211— 9
Warren	11111—5	2112211111—10
J Franklin	10101—3	2210011131— 8
Eishman	00101—2	2110101222— 8

No. 3, 10 live birds, $5: G. Krotz 10, Kirkover, Burkhardt, Anson and Franklin 9, Warren 8.

No. 4, 5 live birds, $2.50 a side and price of the birds: B. F. Smith 5, G. Krotz 3.

No. 1 was at 5 live birds, $2.50 entrance, two high guns; No. 2 was at 10 live birds, $5 entrance, two high guns.

Nov. 23.—Notwithstanding the heavy rain that fell this afternoon, a large number of shooters took part in the poultry shoot at Audubon Park, a fact which goes to prove that the members of the Audubon Gun Club are not merely parlor shooters. The day was a miserable one for target shooting, and a heavy fog made it necessary for the shooters to take a snap shot at the targets before they disappeared from view; this accounts for the poor scores given below, all events being at unknown angles. The first event was at 25 targets, handicap allowance of misses as breaks, the prizes being merchandise of various kinds, from a large turkey and a box of cigars down to a pair of kid gloves and a two months' free shave! Scores:

F. M. D.

Rochester Rod and Gun Club.

ROCHESTER, N. Y., Nov. 19.—The Rochester Rod and Gun Club has inaugurated a new series of semi-weekly shoots for a challenge badge, the shoots taking place every Wednesday and Saturday between the above date and Jan. 15, 1896. To become the personal property of any one member, the badge must be won three times in succession, the winner each time being compelled to defend his title to the badge under penalty of forfeiture. The conditions of the event are: handicap allowance of targets, unknown angles, the handicaps being based upon the form shown by the members in the summer series of shoots just ended. The handicaps are as follows:

38, Glover; 40, Stewart, Hicks, Lane, Meyer; 42, Hadley, Kelsey; 43, Myer, Tassell, Norton, Lowden. F. L. Smith, Koch, Crouch, Hill, Hunt, Ed Andrews, Pope; 44, Griffith, Wride, C. Rissenger, Babcock; 45, Sumner, Brad. Palmer, Redmond, Weller; 46, Gardiner, Van Ostrand, Rickman. Borst, Truesdale, McCarthy, Schmitt, C. S. Smith, Borst, Hooker, Nichols, Wolcott; 47, Quirk McVean, Backus, Maguire, Foley, Judson, Kay, Fulton, Putnam, Rugg, Mann, J. Rissenger; 50, Macomber, L. B. Smith, J. H. Brown, Hutchinson, A. L. Bruff, Mullan, Squires, Bradstreet, S. B. Stuart, James S. Watson, Cleveland, Haggerty, Moore, W. S. Smith, Jr., Selden, Trip, Wilson, Wilbur, I. H. Andrews, George W. Brown, E. P. CHOKE BORE.

On Long Island.

EMERALD GUN CLUB.

Nov. 19.—The attendance at the November shoot of the Emerald Gun Club was scarcely up to the average, only twenty-five shooters putting in an appearance, the usual attendance being over thirty, still twenty-five shooters make a good showing for any club. The birds were a good lot and left Mott's traps in fast time, the result being that Tom Short (28) was the only man to kill 10 straight. Fessenden, the secretary of the club, Gus Nowak and G. Loeble, also 28yds. men, scored 9 each. Full score, showing flight of birds, is as follows:

The following miss-and-outs, $1 entrance, 28yds. rise, were also shot off:

No. 1: Herrington, Wash and La Mair, 3; Schorty, Place, Loeble and Lair, 2; Phister, Lawrence and Walker, 0.

No. 2: Lawrence, La Mair, Schorty and Loeble, 4; Herrington and Wash, 3; Place, 1; Walker, 0.

NEW YORK GERMAN GUN CLUB.

Nov. 20.—The November shoot of the New York German Gun Club was held to-day, twelve members competing in the club event, which is for three gold medals. The championship medal became the property of Louis Schortemeier at the October shoot, he having won it three times in succession. A new medal for the champion class was put up to-day and S. J. Held, the junior member of the club, won it for the first time by killing 11 straight, Dr. Hudson running him to a tight finish with one less kill. The shoot is at 8 live birds, ties shot off at 3 birds. Score:

		Ties.			Ties.
Dr Hudson (25)	11212111—8	101—2	A Schmitt (30)	12●2112●—6	
S J Held (21)	12111111—8	121—3	Silas Edwards (25)	12101010—5	
Schortem'r (30)	2222222●—7	110—2	G A Leutheusser (21)	●211●●11—5	
J Frazer (25)	12101111—7	220—2	Max Klein (21)	10001111—5	
J Wellbrock (25)	12110121—7	121—3	Fred Sauter (25)	●21●0110—4	
A Busch (21)	11110111—7	0 —0	Michael Bandau (21)	10000100—2	

On the shoot off, Held killed three straight, while Dr. Hudson missed his second bird, taking second medal. Wellbrock won third medal. Before the shoot, Peter Garms, Sr., for many years captain of the club, tendered his resignation and was elected an honorary member. Mr. Garms has just passed his 84th birthday, but took part in all club contests up to to-day's shoot.

The following sweeps were also shot off during the afternoon:

	No. 1.	No. 2.	No. 3.
S J Held	01222—4	211—3	122—3
F Sauter	11221—5	221—3	●00—0

Hudson	.....	...	111—3

G. A. LEUTHEUSSER, Sec'y.

FOUNTAIN ROD AND GUN CLUB.

Nov. 21.—Six members of the Fountain Rod and Gun Club took part in the club's regular monthly shoot this afternoon, three of the six being members of the victorious team in the recent team championship match: Dr. William Wynn, Dr. A. Eddy and W. H. Lair. The wind blew so strongly and the birds flew so fast that not a single straight run of 10 was made in the club event. Dr. Wynn and Lair tied for first trophy (the Brixey Cup) on 9 out of 10, the tie being decided by the toss of a coin, Dr. Wynn winning; Lair took the second trophy, the Eddy medal, while Eddy won the third prize with a score of 7. Of the two sweeps which followed, Dr. Wynn won the first, dividing the second with Lair. Scores:

No. 1, club shoot, 10 live birds, modified Hurlingham rules, club handicap: Dr. Wynn (30) 9, W. H. Lair (30) 9, Dr. A. Eddy (29) 7, Hugh McLaughlin (28) 6, Abel Crook (28) 5, Samuel Crook (25) 5.

No. 2, handicap sweep, 10 birds, $2 entrance, birds extra: Dr. Wynn (30) 9, A. Crook (28) 5, W. H. Lair (30) 4.

No. 3, 5 live birds, handicap, $3: Dr. Wynn (30) 4, W. H. Lair (30) 4, Thomas H. Barkley (21) 2, A. Crook (28) 1.

FALCON GUN CLUB.

Nov. 22.—Three members of the Falcon Gun Club took part in the club's regular shoot to-day. These were John Bolling, John Moller and John Vogt. The shoot is at 10 live birds per man, club handicaps, club rules to govern. The club rules are: gun below the elbow, bird to be on the wing when killed, second barrel kills scoring only half a point, the club championship being decided by the greatest total of points at the end of the season. Score of to-day's shoot:

	Points.		Points.
J Bolling (25)	1101111111—9	J Vogt (23)	1201001101—6
J Moller (25)	1221011211—9		5½
	7½		

BERGEN ROD AND GUN CLUB.

Nov. 23.—Two members of the Bergen Rod and Gun Club, J. Hamilton Romaine and Chas. W. Bennett, met this afternoon on the club's grounds at Flatlands to decide a 25-live-bird race for a stake and the price of the birds. A good crowd of the friends of both men was on hand to witness the match. Romaine won by three birds, scoring 20 to his opponent's 17, the winner standing at 28yds., Bennett at 27. The score showed that Romaine used his second barrel 18 times, Bennett 14 times.

After the match a sweepstake was shot off, the conditions being 10 live birds per man, handicap rise. Score:

James W. Blauvelt (28) 9, Robert J. Valentine (26) 9, Henry J. Schaeffer (26) 8, Richard V. Webster (26) 8, Henry W. Carleton (28) 7, James W. Gregory (26) 7, Albert W. Moran (26) 7, Daniel W. Reynolds (28) 6, Richard G. Uris (26) 6, John G. Schaeffer (25) 3.

VERNON ROD AND GUN CLUB.

Nov. 23.—The monthly live-bird club shoot of the Vernon Rod and Gun Club was well attended this afternoon. The birds were a fast lot and were too good for the majority of the competitors, Harry S. Welles being the only one to score his 10 straight; Welles is a representative of A. G. Spalding & Co., and shoots a Burgess gun equally well at either live birds or targets. The scores were:

H S Welles (28)	2222211222—10	H S Lippack (28)	0220●●1122— 6
F W Place (28)	0112212012— 8	J Wright (28)	●011●21●22— 6
L C Emery (28)	1022212012— 8	F A Thompson (28)	2●●2201●22— 6
W H Thompson (28)	●2212●12●1— 7	Dr Baron (27)	0011220020— 5
W A Thornton (27)	2210102022— 7	Dr Allen (25)	0●002100●2— 3

NEW UTRECHT GUN CLUB.

Nov. 23.—The target grounds of the New Utrecht Gun Club at Bay Ridge were well attended this afternoon. The following table shows the scores made, the events being at various systems and of a varied nature:

Events:	1	2	3	4	5	Events:	1	2	3	4	5
Targets:	10	10	5	10	11	Targets:	10	10	5	10	11
A A Hegeman	7	8	4	5	6	D Deacon	5	6	3	7	5
M Van Brunt	6	5	2	7	4	D C Bennett	7	9	3	6	6
Dr Shepard	5	3	1	6	8	R E Gray	6	4	2	5	5
J Gaughan	8	8	2	4	5	W F Sykes	..	4	2	8	6

Nos. 1 and 2 were at known angles; No. 3, 5 unknown traps, shooter standing with his back to the trap when calling "pull"; No. 4, reversed order; No. 5, 5 singles and 3 pairs.

No. 6, 14 singles, known angles, and 3 pairs:

D C Bennett	11111111111011	00 10 00	—14
M Van Brunt	11111100010111	10 11 10	—14

R E Gray	10111111101100	01 00 11	—13
Dr Shepard	10111001101011	10 10 01	—12
J Gaughan	11111000110110	10 00 10	—11
W F Sykes	10110111111000	00 00 10	—10
A A Hegeman	01011000000w		— 3

Trap-Shooting at Doyleston.

DOYLESTON, Pa., Nov. 22.—A very successful live-bird and bluerock tournament was held at this place to-day. The day was a good one for the sport, being bright, still, and not too cold. The birds were a good lot—strong and active. The entries in the various races included some of the best wing shots in Eastern Pennsylvania and New Jersey. Among them were Landis and Thurman, of the Keystone Shooting League; Paddock and Park, of the Riverton Gun Club; and Apgar and Warford, of Frenchtown, N. J.

Following is the result of the day's events; Nos. 2, 4, 5 and 6 were 5 birds, $3—birds extra; Nos. 1 and 3, $1, miss-and-out:

	No. 1:	No. 2:	No. 3:
Thurman	111112112—9	01001—2	0 —0
Paddock	20 —1	22222—5	1121—4
Landis	121112221—9	12122—5	0 —0
J M H	112121110—8	21122—5	20 —1
Peters	20 —1	21122—5	....
Headman	0 —0	.....	....
Curtis	0 —0	.....	10 —1
Arnwine	.....	10101—3	110 —2
Jones	.....	00100—1	1110—3
Ditman	.....	21021—4	1110—3
Holjes	.....	.....	20 —1
Apgar	.....	.....	10 —1
Loper	.....	.....	0 —0
Warford	.....	.....	0 —0

	No. 4.	No. 5.	No. 6.
Arnwine	11111—5	22001—3	12100—3
Apgar	12020—3	12212—5	11101—4
J M H	22201—4	01112—4	....
Headman	20010—2	....	....
Warford	11011—4	01220—3	22211—5
Thurman	....	10022—3	12121—5
Landis	....	10112—4	21221—5
Paddock	....	22112—5	22002—3
Duke	....	12201—4	12022—4
Holjes	....	11200—3	01120—4
Heist	....	01111—4	02001—3
Jones	....	....	20011—3

A live-bird match for $100 a side was also shot, the teams being Warford and Apgar, Heist and Jones. Each man shot at 10 birds, Warford and Apgar winning by three birds, mainly owing to Warford's good work. Score:

Warford	1121111111—10	Heist	0021012201—6
Apgar	1100210000— 4—14	Jones	1000102101—5—11

Three 10-target events, $2 entrance, brought the day's sport to a close; the following were the scores:

No. 1: Warford, 10; Thurman, Peters and Headman, 9; Landis, Curtis, Duke, J. M. H., Holjes, Heist and Apgar, 8; Arnwine, 7; B. Brink and Boileau, 5; C. Brink and Edmunds, 4.

No. 2: Peters, 10; Thurman and Landis, 9; J. M. H., 8; Heist, 7; Duke, 6.

No. 3: Peters, 10; Thurman and Landis, 8; J. M. H., 6.

ABEL MCREYNOLDS.

South Side's Saturday.

NEWARK, N. J., Nov. 23.—A good attendance and pleasant weather is the record for this afternoon's amusement at the grounds of the South Side Gun Club. All events were at unknown angles. Scores:

Events:	1	2	3	4	5	6	7	8	9	10
Shaw	6	4	6	10	9	7	..	..	10	..

SECRETARY.

Another System of Dividing Purses.

UNDER the *nom de plume* of Stanstead a correspondent sends us the following, dated Nov. 18:

"The trap-shooters of the present day are quite as much puzzled over the problem of how to arrange a system of division of purses so as to meet all requirements as our statesmen are in trying to frame a bankrupt law that will not only protect the unfortunate, but prevent them from defrauding their creditors. I am an ex-manufacturer of ammunition and a trap-shooter of bygone days, and I believe that, among the many systems of dividing purses, there is none equal to that which we call the 'N. P. L.' system, which is as follows:

"Divide the purse, less the price of the targets, by the number of targets broken in the event; the amount thus obtained, multiplied by the number of targets broken by an individual, would give his share of the purse. Example: 20 targets, 20 entries, at $2 50, $25 added money; total purse (after deducting price of targets at 3 cents, $12) would be $63. Suppose 310 targets out of the 400 were broken, this would give us 20 cents as the value of each break, with $1 over to go to the club; thus a straight score of 20 would net $4; a 19, $3.80, and so on.

"The objects of trap-shooting tournaments are twofold: First, to promote and increase this sport; second, to increase the consumption of trap-shooting supplies. To successfully accomplish these objects, tournaments must be arranged and conducted so as to bring out every lover of the gun, and then keep them interested in the sport. This can only be done by giving every contestant a slice of the money, instead of letting a few superior shots capture the whole. If managers of tournaments would try this 'N. P. L.' system, and advertise it thoroughly, they would bring out all the local shooters, as well as a crowd from other localities. The great majority of those who take part in the sport, so long as they win a portion of the money, will go away happy, ready and anxious to come again. It will be only the sharks who will growl and kick."

Stanstead is a resident in the State of Vermont, and that's about all we are at liberty to say about him. As regards his system, we would call attention to its similarity to the "Jack Rabbit" and other equitable systems. It is certainly an *equitable* system, as a man receives a due proportion for the breaks he scores. For one-day shoots, small tournaments, or club shoots, we think the idea would be a good one, but the figuring it would require in a tournament the size of the big circuit ones of 1895 would be too much for an ordinary cashier, hampered as he is by so many people always wanting his attention.

In club shoots, and in small sociable tournaments, we believe in minimizing losses as far as possible. Our idea is that by doing so there is always a better feeling in the crowd, and no one goes away with a sensation of being euchred out of his money, but that, on the contrary, he has had his fun, and has paid a fair price for it—just like a matter of purchasing one's theater ticket and enjoying a good show. We think that this is an axiom: That for every one who goes away from a tournament a good winner, there are at least half a dozen others who go away with a slight soreness, feeling that they have not enjoyed their day's sport, having paid for that sport a little too dearly for their fancy.

At large tournaments, however, the matter is somewhat different. There, owing to the amount of added money, there is a far better show for a moderately good shot, *i. e.*, an 85 per cent. man, by making a straight to come out whole on the day's expenses. There are so many in the class named, and in the classes above 85 per cent., that such large tournaments will always be well patronized. We need not consider them when discussing Stanstead's system. This system, like the Rose system, absolutely prevents dropping for place and is therefore entitled to respectful consideration.

We shall be glad to publish further criticisms on these two vexed questions: handicaps and division of purses.

Climax Gun Club.

PLAINFIELD, N. J., Nov. 21.—In cold weather ten members of the Climax Gun Club stood before the traps at Fanwood, N. J., and shot their scores in the regular monthly club shoot with the following result, Grier as usual being away up:

J Grier (33)	1111111111111111101111010111011—29
R Manning (27)	1111011111011111111111111111—25
L Schortemeier (26)	0111111111101111111111111—24
J Swody (31)	0110111011011110110111111101041 —23
N Apgar (25)	1110111111111111110110 —22
D Darby (30)	0111111000110011110001011111 —20
D Terry (26)	1111101111101011110110100 —19
T Brantingham (25)	1111011011110000011111111 —18
T H Keller (25)	1111111000010111101011 —17
J Goodman (32)	1111100000100110010110110100100 —16

The following teams shot a race for the price of the targets, Apgar and Grier choosing sides; Grier's team paid for the targets shot at by Apgar's team, as the score shows:

Apgar's Team.	
N Apgar	1111111111111011111111101—23
L Schortemeier	1111110111011111010111111—21

PUBLISHERS' DEPARTMENT.

Personally Conducted Tours via Pennsylvania Railroad.

THE Pennsylvania Railroad Company announces the following personally conducted tours for the season of 1895-96:

Two tours to California and the Pacific coast will leave New York and Philadelphia Feb 12 and March 11, 1896. Four weeks in California on the first tour, four and a half weeks on the second. Stop will be made at New Orleans for Mardi-Gras festivities on first.

Tours to Washington, D. C., each covering a period of three days, will leave New York and Philadelphia Dec. 26, 1895, Jan. 16, Feb. 6 and 27, March 19, April 2 and 23, and May 14, 1896. Rates, including transportation and two days' accommodation at the best Washington hotels, $14.50 from New York and $11.50 from Philadelphia; $13.50 from New York, not including meals *en route*.

Tours to Jacksonville, Fla., allowing two weeks in the "Land of Flowers," will leave New York and Philadelphia Jan. 23, Feb. 4, 11, 18 and 25, and March 3, 1896. Rates, covering expenses *en route* in both directions, $50 from New York and $48 from Philadelphia.

Tours to Old Point Comfort, Richmond, and Washington will leave New York and Philadelphia Dec. 26, 1895, Jan. 23, Feb. 20 and March 12, 1896.

Detailed itineraries will be sent on application to Tourist Agent, 1196 Broadway, New York, or Room 411 Broad Street Station, Philadelphia.—*Adv.*

Tours to the Golden Gate and Florida via Pennsylvania Railroad.

THAT the public are quick to recognize the advantages of the Pennsylvania Railroad Company's perfect personally conducted tourist system is exemplified by the annual increase in the number of participants in tours organized under that system. Aside from this, the growing desire of Americans to see the wonders of their land is also an important factor in advancing this healthy sentiment in favor of travel.

This season's tours to California will be conducted in all respects as those of preceding years, and will leave New York and Philadelphia Feb. 12 and March 11, 1896. On the first tour a stop will be made at New Orleans for the Mardi-Gras festivities, and four weeks will be allowed in California. On the second tour four and one-half weeks will be allowed in California.

In addition to the tours to the Golden Gate, a series of tours to Jacksonville has been arranged. The tours will leave New York and Philadelphia Jan. 28, Feb. 4, 11, 18 and 25, and March 3, 1896, and allow two weeks' stay in the "Land of Flowers."

Detailed itineraries of these tours will be sent on application to Tourist Agent, 1196 Broadway, New York, or Room 411 Broad Street Station, Philadelphia.—*Adv.*

"She Do Not Even Hesitate."

Raleigh Press-Visitor.

"THE negro of this region can often throw in a word to describe a situation when a scholar who is conversant with many languages would fail. The other day at a station on the Seaboard Air Line this side of Hamlet, a lady approached, and, being a stranger and seeing an old negro man, asked, 'Uncle, does the vestibule train stop here?' 'No, marm,' answered the old coon, 'she do not even hesitate.'"

The old darky's reply will be better appreciated when it is remembered that the Seaboard Air Line Vestibuled Train is the fastest train in the South—leaving New York as it does at 3:20 P. M., via Pennsylvania R. R., and reaching Atlanta at 4:09 P. M. the next day.

Winter Excursion Tickets on the Pennsylvania Railroad.

ON Nov. 1 the Pennsylvania Railroad Company placed on sale at its principal ticket offices excursion tickets to all prominent winter resorts in New Jersey, Virginia, North and South Carolina, Georgia, Florida and Cuba. The tickets are sold at the usual low rates.

The magnificent facilities of the Pennsylvania Railroad, with its many connections, make this the favorite line for winter travel.

An illustrated book, descriptive of winter resorts and giving routes of travel and rates for tickets, will be furnished free on application to ticket agents.—*Adv.*

New Ideal Tool.

THE Ideal Manufacturing Co., of New Haven, Conn., say in answer to numerous inquiries that they can now furnish the Ideal reloading tool No. 6, for the .25-35 Winchester shells; the mould attached will cast the 117gr. bullet. This weight approximates the standard metal patch bullet; the chamber will seat the regular patch bullet correctly, crimping it securely, also the cast bullet, leaving one groove extended beyond the muzzle of shell.

EIGHTY FISH PORTRAITS, painted in oil at the moment of capture and then lithographed in life colors, size 12×18in., can be obtained by subscribing to "The Fishes of North America," an exhaustive work on American fishes and their modes of capture, with nearly 2,000 illustrations of individual fishes. For $1.50 will be mailed Part I., containing two colored plates with introductory chapters of the book. Descriptive booklets free. Address The Harris Publishing Company, 19 Park Place, New York.—*Adv.*

WE HAVE BEEN TOLD that there are some dealers in FISHING TACKLE who do not keep our goods in stock. If you are so unfortunate as to live in a place where our goods are not offered for sale, let us know and we will send you our catalogue.

Imperial "Hygenique" Fluid

Nature's Disinfectant, Deodorizer, Antiseptic and Germicide.
CONTAINS HIGH THERAPEUTIC PROPERTIES. HEALING, CLEANSING, SOOTHING.

The Imperial Hygenique Fluid Co.: 107 West 37th Street, New York, June 3, 1895.
GENTLEMEN: I have used Imperial Hygenique Fluid, and have found it an excellent disinfectant and pleasant deodorizer. THOMAS G. SHERWOOD, M. R. C. V. S.

(From MR. FRANK F. DOLE, Chapel Street, New Haven, Conn.)
DEAR SIR: I have very great pleasure in bearing testimony to the efficacious manner in which your disinfectant does its work. I have used it both in the kennels and the house, and I consider it the most pleasant and most powerful disinfectant I have ever used, and shall recommend it to all my friends.
Yours respectfully, FRANK F. DOLE, President American Bull-Terrier Club.

Used at National Cat Show, Madison Square Garden. To be obtained at all Druggists, Fifty Cents and One Dollar per Bottle, or of
THE IMPERIAL HYGENIQUE FLUID CO., 61 Beekman St., New York.

Standard Works for the Sportsman's Library.

ANY BOOK HERE NOTED WILL BE SENT POSTPAID ON RECEIPT OF PRICE BY THE FOREST AND STREAM PUBLISHING CO., 318 BROADWAY, NEW YORK.

ANGLING.

The American Angler's Book.

Combining the natural history of sporting fish, the art of taking them, with instructions in fly-fishing, fly-making and rod-making, and directions for fish breeding. Description of salmon runs, inland trout fishing, etc. By THAD. NORRIS. 80 illustrations. Cloth. Price, $5.50.

American Fishes.

A popular treatise upon the game and food fishes of North America, with especial reference to habits and methods of capture. By G. BROWN GOODE. With numerous illustrations. Cloth, 496 pages Price, $3.50. This is, by far, the most popular work which has ever been published on the fishes of America, and is the book that no angler who takes pleasure in knowing the fishes which afford him sport, can afford to miss.

Book of the Black Bass.

Comprising its complete scientific and life history, together with a practical treatise on angling and fly-fishing, and a full description of tools, tackle and implements. By JAMES A. HENSHALL, M.D. Illustrated. Cloth, 470 pages. Price, $3.00. Dr. Henshall's monograph is the standard work.

More About the Black Bass.

Being a supplement to the "Book of the Black Bass." By JAMES A. HENSHALL, M.D. Fully illustrated. Cloth, 204 pages. Price, $1.50. This is a supplement or sequel of Dr. Henshall's first volume, in which the author's aim is to bring the subject matter down to date.

Fly-Fishing and Fly-Making for Trout, etc.

By J HARRINGTON KEENE. With plates of the actual material for making flies of every variety. Illustrated. Cloth, 160 pages. Price, $1.50. The matter of the book embraces everything which the fly-fisherman wants to know about the senses of fish, practical fly-fishing, casting and fly-making; with list of standard flies and their dressings; the feathers, silk and other material used in fly-making, there are samples of all, attached to blank sheets like pictures by way of illustration.

Fishing Tackle.

Its Materials and Manufacture. A practical guide to the best modes and methods of making every kind of appliance necessary for taking fresh-water fish and for the equipment of the angler and fly-fisher. With 454 illustrations and explanatory diagrams. By J. HARRINGTON KEENE. Price, $1.50.

With Fly-Rod and Camera.

By EDWARD A. SAMUELS, President of the Massachusetts Fish and Game Protective Association, author of "The Ornithology and Oölogy of New England and Adjacent States and Provinces," "Among the Birds," Associate Editor of "The Living World," etc., etc. Cloth, 480 pages (7×9½in.), 147 illustrations. Price, $5.00. The author is known as one of the most devoted and expert salmon fishermen of America. The volume is likewise noteworthy as an example of the rare possibilities of amateur photography.

Fly-Rods and Fly-Tackle.

Suggestions as to their Manufacture and Use. By HENRY P. WELLS. Illustrated. Cloth, 304 pages. Price, $2.50. The most exhaustive work on the subject in print.

MANUALS.

Game Laws in Brief.

Laws of the United States and Canada Relating to Game and Fish Seasons. For the guidance of sportsmen and anglers. Compiled by CHARLES B. REYNOLDS, Editor of *Forest and Stream*. Paper. Price, 25 cents. Gives all sections relative to game and fish seasons, limit of size or number, non-residents, transportation, etc. All in brief, but full enough for the practical guidance of sportsmen and anglers. Carefully compiled, and shorn of verbiage. Handsomely illustrated with numerous half-tone engravings from *Forest and Stream*.

Woodcraft.

By NESSMUK. Cloth, 160 pages. Illustrated. Price $1.00. A book written for the instruction and guidance of those who go for pleasure to the woods. Its author, having had a great deal of experience in camp life, has succeeded admirably in putting the wisdom so acquired into plain English.

Tricks of Trapping.

Camp Life in the Woods, and the Tricks of Trapping and Trap Making. Containing hints on camp shelter, all the tricks and bait receipts of the trapper, the use of the traps with instructions for the capture of all fur-bearing animals. By W. HAMILTON GIBSON. Illustrated. Cloth, 300 pages. Price, $1.00.

Log Cabins.

How to Build and Furnish Them. By WILLIAM S. WICKS. New and enlarged edition. Price, $1.50. Mr. Wicks might have called his book "Every Man His Own Log Cabin Builder," for he has set out to describe fully and particularly each detail in the process of construction. Plans are given for cabins, large and small, with details of exterior and interior.

Hints and Points for Sportsmen.

Compiled by "SENECA." Cloth. Illustrated, 224 pages. Price, $1.50. This compilation comprises six hundred and odd hints, helps, kinks, wrinkles, points and suggestions for the shooter, the fisherman, the dog owner, the yachtsman, the canoeist, the camper, the outer, in short for the field sportsman in all the varied phases of his activity.

SHOOTING.

Names and Portraits of Birds

Which Interest Gunners, with Descriptions in Language Understanded of the People. By GURDON TRUMBULL. Cloth, 222 pages. Price, $2.50. The average gunner with this work at hand would have little difficulty in identifying the contents of his bag from the text alone. Identification is further facilitated by portraits of the birds.

Antelope and Deer of America.

A comprehensive scientific treatise upon the natural history, including the characteristics, habits, affinities and capacity for domestication, of the Antilocapra and Cervidæ of North America. Second edition. By JOHN DEAN CATON, LL.D. Cloth, 426 pages, 50 illustrations; steel portrait. Price, $2.50.

The Gun and Its Development.

With Notes on Shooting. By W. W. GREENER. Breechloading Rifles, Sporting Rifles, Shotguns, Gunmaking, Choice of Guns, Chokeboring, Gun Trials, Theories and Experiments. Fully illustrated. Cloth, 770 pages. New edition. Price, $2 50.

The Art of Shooting.

An Illustrated Treatise on the Art of Shooting. With Extracts from the Best Authorities. By CHARLES LANCASTER. Illustrated with numerous drawings from instantaneous photographs. Price, $3.00. New edition.

Field, Cover and Trap-Shooting.

By CAPTAIN ADAM H. BOGARDUS, Champion Wing Shot of the World. Embracing Hints for Skilled Marksmen; Instructions for Young Sportsmen; Haunts and Habits of Game Birds; Flight and Resorts of Waterfowl; Breeding and Breaking of Dogs. With an appendix. Cloth, 493 pages. Price, $2.00. There is no other man in this country—or in any other, for that matter—better fitted to teach a novice the art.

The Still-Hunter.

A Practical Treatise on Deer-Stalking. By T. S. VAN DYKE. The information contained in "The Still-Hunter" is as exhaustive as it is possible to make it. 390 pages. Price, $2.

The Breech-Loader and How to Use It.

288 pages. Price, $1.00. A book for that numerous class of sportsmen who delight in a day's shooting, but have neither the time nor the means to make the sport a life's study.

CAMP AND HOME.

Uncle Lisha's Shop.

Life in a Corner of Yankeeland. By ROWLAND E. ROBINSON. Cloth, 187 pages. Price, $1.00. "Uncle Lisha's Shop" is brimful of quaint humor and sentiment, and there is an unmistakable touch of human nature in Uncle Lisha himself and his good old wife, Aunt Jerushy; in Sam Lovel, the hunter, and in fact in all the other characters introduced.

Sam Lovel's Camps.

A sequel to "Uncle Lisha's Shop," by ROWLAND E. ROBINSON. Cloth. Price, $1. When Uncle Lisha went West, Sam Lovel took Antoine as his partner, and the fortunes and misfortunes of the two as trappers are described with all the charm of our author's quaint style, while their friends and enemies, and all with whom they are brought into contact, in the course of the story, step on to the stage real living creatures.

Pawnee Hero Stories and Folk-Tales,

With Notes on the Origin, Customs and Character of the Pawnee People. By GEORGE BIRD GRINNELL. Cloth, 417 pages. Illustrated. Price, $1.75. New edition, revised. Like most Indian tribes, the Pawnees are story tellers. They have a vast fund of folk-tales and traditions, which have been handed down from father to son, and transmitted from generation to generation. Years ago, when the tribe lived in Nebraska, the author of the present volume camped and hunted with them, and joined in their village life. The nights were given up to story telling, and many of the tales told in the lodge and by the flickering camp-fire were carefully translated and written down. When published they excited great interest. They are tales of daring and adventure, weird accounts of magic, mystery and the supernatural; relations of the ways of life in the old, wild days; stories of war and the craft of war parties, the history of the tribe as treasured by the very old men. There is mother-wit in these stories, they are full of humor, sentiment, pathos and human nature.

Blackfoot Lodge Tales.

The Story of a Prairie People. By GEORGE BIRD GRINNELL. Cr. 8vo., $1.75. In this volume the story of the Blackfoot tribe is told by a friend, one who has hunted with them on the prairies, slept in their lodges, lived in their camps, and shared their daily life. The stories which constitute this history have been taken down by the author from the lips of the narrators, and are given without change as told to him. There is a singular and charming freshness about the stories, which give the history of renowned warriors of ancient and modern times, show how ancient customs arose, and explain natural phenomena. The account of the daily life, customs, and history of the Blackfeet presents a series of graphic pictures of savage life in peace and in war.

Our New Alaska;

Or, The Seward Purchase Vindicated. By CHARLES HALLOCK. Cloth, 209 pages, illustrated. Price, $1.50. Mr. Hallock's writings are always vivid and full of life.

THE KENNEL.

Dogs: Their Management and Treatment

IN DISEASE. A Study of the Theory and Practice of Canine Medicine. By ASHMONT. Cloth, 208 pages. Price, $2.00. The *Forest and Stream* says that this is one of the most valuable treatises on canine management and therapeutics that has appeared on this side of the water.

Kennel Record and Account Book.

Boards, $3. An indexed volume of 180 pages, consisting of a series of carefully prepared blank entry forms suited to the registration of all kennel events and transactions.

Dog Points and Standards.

First Lessons in Dog Training, with the Points and Standards of all Breeds of Dogs. Paper, new edition, 106 pages, revised to date. Price, 50 cents.

Training vs. Breaking.

Practical Dog Training; or Training vs. Breaking. By S. T. HAMMOND, Kennel Editor of *Forest and Stream*. Revised and re-written. To which is added a chapter on training pet dogs, by an amateur. Cloth, 165 pages. Price, $1. A book for dog owners, who, by the instructions here plainly given, can successfully train their hunting dogs.

Modern Training;

Handling and Kennel Management. By B. WATERS. Illustrated. Cloth, 373 pages. Price, $2. This treatise is after the modern professional system of training. It combines the excellence of both the suasive and force systems of education, and contains an exhaustive description of the uses and abuses of the spike collar.

House and Pet Dogs;

Their Selection, Care and Training. Paper, price 50 cents.

Lee's Modern Dogs.

History and Description of the Modern Dogs (Sporting Division) of Great Britain and Ireland. By RAWDON B. LEE, kennel editor London *Field*. Illustrated, 584 pages. Price, $6. This is a standard work by an acknowledged authority, and is up to date. It treats all sporting breeds exhaustively. The illustrations are idealized portraits of typical specimens.

Kennel Secrets.

How to breed, exhibit and manage dogs. By ASHMONT. The dog from the time he is conceived to the time he curls himself up for his last long sleep is treated from every standpoint that could possibly occur to a man of wide experience with dogs. Every important subject that has engaged attention has been fully discussed, generalities being held practically valueless and misleading. Illustrated, 344 pages. Price, $3.00.

The Spaniel and Its Training.

By F. H. F. MERCER. To which are added the American and English Spaniel Standards. Cloth. Illustrated. Price, $1.

Scientific Education of Dogs for the Gun.

By H. H. Cloth. Price, $2.50. The instructions are the result of the author's amateur practical experience of 37 years. *Forest and Stream* says: "This work is a very well written treatise upon the subject, containing some new ideas and much that is interesting and instructive to the new beginner as well as not a little that will be beneficial to even old hands to study."

YACHT AND CANOE.

Small Yachts.

Their Design and Construction, Exemplified by the Ruling Types of Modern Practice. With numerous plates and illustrations. By C. P. KUNHARDT. New ed., 470 pp. of type and illustrations and 87 plates. Size of page, 14½×12½. Price, $10. This book is intended to cover the field of small yachts, with special regard to their design, construction, equipment and keep.

Steam Yachts and Launches;

Their Machinery and Management. By C. P. KUNHARDT. With plates and many illustrations. New ed., 267 pp. Price, $3.00. A complete review of the development and present status of the marine engine and boiler as applied to steam yachting.

Canoe and Boat Building.

A Complete Manual for Amateurs. Containing plain and comprehensive directions for the construction of Canoes, Rowing and Sailing Boats and Hunting Craft. By W. P. STEPHENS, Canoeing Editor of *Forest and Stream*. Cloth. Fourth and enlarged edition, 264 pages, numerous illustrations, and fifty plates in envelope. Price, $2 00.

Canoe Handling.

The Canoe: History, Uses, Limitations and Varieties, Practical Management and Care, and Relative Facts. By C. BOWYER VAUX ("Dot"). Illustrated. Cloth, 168 pages. Price, $1.00.

Yacht Architecture.

By DIXON KEMP, Associate of the Institute of Naval Architects and Member of Council. Second edition. Super-royal 8vo., 530 pages, numerous plans and designs. Price, $16.80.

A Manual of Yacht and Boat Sailing.

By DIXON KEMP, Associate Institute of Naval Architects (Member of the Council). 750 pages, with numerous plans and designs. Price, $10.

THE ILLUSTRATED CATALOGUE OF FOREST AND STREAM BOOKS WILL BE SENT FREE.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, DECEMBER 7, 1895.

VOL. XLV.—No. 23. No. 318 BROADWAY NEW YORK.

For Prospectus and Advertising Rates see Page iii.

The FOREST AND STREAM is put to press on Tuesdays. Correspondence intended for publication should reach us by Mondays and as much earlier as may be practicable.

THE YELLOWSTONE PARK REPORT.

THE last report of the Superintendent of the Yellowstone National Park, from which we make copious extracts elsewhere, is an interesting and encouraging document. In most respects it shows a continuance of the improvement in Park matters which has been taking place there since the present Superintendent took charge, and its only discouraging feature is the game killing which takes place in and near the southwest corner of the Park, and which can be prevented only by furnishing to the Superintendent a larger force of men.

To those who recall the frequency with which the forests of the Park were ravaged by fire ten years ago, it is interesting to learn that during the year just passed no fires of any great importance have taken place. This is in large measure due to cautionary warnings given to all travelers by the Superintendent and to a patrol system which he has established, by which his men visit daily during the season all the different camping places and put out any camp-fires that may have been abandoned unextinguished by tourists. It cannot be doubted that this efficient system of patrol has done more than anything to protect the forests of the Park. The greatest danger to them has always been from neglected camp-fires.

As often recommended by FOREST AND STREAM, the control and management of the road work was last year turned over to the Superintendent of the Park. The advantages sure to result from such a change of control had long been evident, and the event has justified our recommendations. Since the change was made roads have been more promptly and cheaply mended, and new roads have been built at an expense considerably less than before. The officer responsible for the work is on the ground and able to watch it from day to day, so that all work is done to the best advantage, and there has been a saving of money and an improvement of the roads.

The few bison remaining within the Park still attract the head-hunter, and the small force at Captain Anderson's disposal makes it most difficult to keep them out of the Park.

We have frequently called attention to the fact that in Idaho there is no law forbidding the killing of buffalo, and to the further fact that, as the western boundary of the National Park is in Idaho, that State has become a gathering ground for lawless characters, who take advantage of this absence of law to kill the buffalo that wander from the reservation into unprotected territory, or even enter the Park and there destroy the animals, which are then at once carried out of the Park and into Idaho, where the depredators feel safe. No longer ago than last July we again urged the recommendation by the Governor to the next Legislature of the passage of a law protecting this species.

It is manifest that the few troops now stationed in the Park—no matter how earnest and energetic they may be—cannot efficiently patrol a boundary line nearly sixty miles in length, and that unless assistance is rendered the Park officials by the State of Idaho, the killing of the few remaining buffalo will be continued until all have been destroyed. Even now dispatches are being published in the newspapers telling of the slaughter of some buffalo in the Park, and of the arrest of one Courtney for the offense. The specific charge against him is the killing of five buffalo within the Park, and Courtney is said to have had companions, for whom the United States officials are now looking. It is stated that there are only ten head of buffalo left in the Park, and, while it is not to be supposed that this is true, there appears to be no doubt that they have been frightfully diminished within the past two or three years, and that unless some action is promptly taken by the Idaho authorities, either more troops must be stationed in the Park or the buffalo must be wholly exterminated. A note from a Utah correspondent, printed in another column, tells something of the practices of the poachers in that region.

We have reason to believe that at the next session of the Legislature Governor McConnell, of Idaho, will recommend the passage of such a law as we have indicated. In the meantime, the only action that can be taken would seem to be the stationing of scouts along the borders of the Park, with instructions to capture poachers found entering the reservation, and to bring them in, alive, if possible, but at all events to bring them.

The condition of things along this Idaho line is an impressive object lesson to those people who have believed that the northeast corner of the Park should be thrown open to settlement, and that the Yellowstone River should form the boundary of the Park. If a segregation bill were to pass and that river were made the Park boundary, it would bring the game butchers close to the winter feeding ground of the elk, and they could cross the stream anywhere along its length with but little difficulty or danger, just as these Idaho butchers now cross the Park line on the west. The herds of elk now wintering along the Yellowstone Valley would exist for a short time only, if exposed to the attacks of such marauders.

The fishing within the National Park has greatly improved, and many streams which in old times were without fish, having now been stocked, afford splendid angling to the tourists. Capt. Anderson's suggestion that no fish under 6in. in length should be taken is a wise one, and such a regulation should at once be put in force.

Too much praise cannot be given to the Superintendent of the Park for the energy, earnestness and good judgment that he has displayed in his administration of its affairs. He took hold of it at the precise time, when it became most difficult to protect; when the lawless element of the adjacent States had come to believe that the regulations established by the Secretary of the Interior were a mere formula, and that an infraction of these regulations carried with it no penalty. He has fought the law breakers with all his strength, and he did much to secure the passage of the law for the protection of the Park and to defeat the project for segregation.

The record of Capt. Anderson's work here will always be an important chapter in the history of the Nation's pleasure ground.

STEELHEADS AS CANNED SALMON.

JUDGE S. H. GREENE, of Portland, sends us a copy of the *Oregonian* of Nov. 20, which has this note:

> Dr. Tarlton H. Bean is being earnestly pushed for the vacant position of president of the United States Fish Commission by the New York *Fishing Gazette*. The doctor contributes an article on salmon to the current issue of the *Gazette*, in which he says of the steelhead: "A few years ago it was scarcely considered fit for use because its bones are hard, and it is consequently not suitable for canning." Columbia River packers, who have been putting up steelheads for years, will be surprised not only to learn that they cannot can the steelhead, but also the reason why they cannot. It is therefore a little illogical that the *Gazette* should say editorially: "The article on the first page by Dr. Tarlton H. Bean is evidence of Dr. Bean's knowledge of the fisheries, and disarms all criticism for the support given him by the *Gazette* for the position of United States Fish Commissioner."

Judge Greene comments: "For my own part, I think Dr. Bean about the best equipped man we have to fill the place made vacant by the death of Marshall McDonald. He may be a little off on the Pacific coast salmon industry, however."

Knowing that Dr. Bean, by many years of devoted study, has become well acquainted with the West coast fish and fisheries, and has always tried by every means in his power to promote the interests of legitimate fishery, we take issue with the *Oregonian* for its criticism of his expressed opinion on the steelhead's merits. It is well known to every one who has access to the statistics that steelheads constituted less than one-twelfth of the pack in 1889, increasing to nearly one-sixth in 1892, the increase being due chiefly to the growing scarcity of Chinook and blueback salmon.

Dr. Bean's statement, however, is that steelheads are unsuitable for canning and should be marketed as fresh fish. That is his individual opinion, and it is shared by Dr. David Starr Jordan, as evidenced by the following remarks on the steelhead in Section I. of "The Fisheries and Fishery Industries of the United States," pages 474–475: "Elsewhere than in the Columbia this species is highly valued as a food fish. When taken in the Columbia in spring little or no use is made of it. Its flesh is pale, and its bones too firm for it to be used in canning, and at that season the old individuals taken are usually spent and worthless."

Again, in Section V. of the same work, Vol. I., page 745, Dr. Jordan and Prof. Gilbert say of the steelhead: "With the salmon in spring a large trout is taken (*Salmo gairdneri*, Rich.), known as the steelhead salmon. * * * It has no value to the canner, as its flesh is pale and its bones are not soft when boiled."

If any further argument be needed on this point it is to be found in the fact that canned steelheads are not quoted under their own name, and are intended only to supply a demand for cheap fish—a demand which has led to the utilization of other pale-fleshed species such as dog salmon and little humpbacks, to the great injury of the trade in prime canned salmon. A fresh steelhead is worth about twice as much as one of equal size when converted into canned salmon.

We are inclined to believe further that Dr. Bean's attempt to discourage the use of the steelhead for canning grows out of his respect for the nobility of that fine trout—for trout it is, although the Oregon law-makers have classed it as a salmon. It belongs to the same race as the rainbow or California mountain trout, the red-throated trout, lake trout or salmon trout of the Columbia River region, the Waha Lake trout, the Lake Tahoe or silver trout, the brown trout introduced from Europe and some others.

SNAP SHOTS.

THE annual meeting of the New York State Association for the Protection of Fish and Game will be held in Syracuse on Thursday, Jan. 9, and President Frank J. Amsden advises us that he anticipates a large attendance and an important business meeting. The amendments of the law desired by various individuals and clubs are already in the hands of the law committee.

We assume that the Association will give first attention to an effort to secure a repeal of the iniquitous Section 249, which is the market men's section, permitting the sale of game in close season. This provision calls for the most determined opposition. So long as it continues in force, New York cannot expect to protect her own game covers, nor can she avoid doing injustice to her sister States. We have seen it intimated in print that the Commissioners of Fisheries and Game have found Section 249 an impediment to the efficient enforcement of the law which forbids the transportation of game to market. If the State Association could have the undivided support of the Commission in its opposition to Section 249, such a combination of influence should prove effective at Albany.

To put it in homely phase, the present New York Fish Commission have not yet been able to make head or tail of the accounts of their predecessors. A special committee charged with an investigation of the books of Secretary Doyle has made a report which is not altogether lucid, and this lack of lucidity is accounted for by the fact that the investigators were unable to find certain books of account. The disclosures show at least one thing very clearly, that it was time for making a radical change in the Commission.

We have no quarrel with M. de Montauban, who recites his individual experience with a market-hunter of harmless sort; if all gunners for gain were as inoffensive, the principle of prohibiting game would not form a platform plank; there would be no necessity of it. But the unhappy reality is that the average market-hunter is not of the idyllic character portrayed by our correspondent. The industrious despoilers of the prairies and swales and deer forests, who have piled up their tons upon tons and carloads upon carloads of game in the markets are of quite a different breed. They are the agents of wholesale game depletion in this country, and their traffic must be suppressed if we are to have any game left.

Oregon has afforded another example of loose wording in game and fish legislation. The law forbidding the sale of mountain trout confines the prohibition to fish taken in fresh water; and as the trout of coast streams resort to the sea, and may there be caught, the dealers are making the most of their opportunities, selling unrestricted lots of mountain trout and claiming, with or without truthfulness, that the fish come from salt water. If Judge Green and his allies are shrewd they may yet make a case against some of the trout sellers. There is one infallible test of these fish as to the source of capture. If the trout have the red spots they come from fresh water, for in salt water the spots are lost.

The Sportsman Tourist.

UNCLE LISHA'S OUTING.

V.—The East Slang.

Sam repeated his mistake with two or three more rising birds, but got two more in a sitting shot at a flock of wood duck discovered in a nook of the marsh, and then to Antoine's great disgust easily knocked over a coot that stupidly permitted them to paddle within short range.

"Dat feller a'n't worse you' paowder, Sam. You see he gat mout' mos' lak' hen was, an' hees foots some lak' hen, some lak' dauk, an' he'll a'n't t'oddur t'ing or one. Ah'll 'spec' prob'ly it was hens try for be dauk, or dauk try for be hens, an' he'll a'n't mek' up very good. He mek' some good fedder for Zhozeff. Hello, Sam, you'll know dis place, a'n't it?" he asked with eager interest as he came to a narrow tributary channel with fishing stakes set on either side.

"Wal, if it hain't the East Slang, sure as guns," said Sam in joyful recognition of their old trapping ground. "I tell ye what, Antoine, we mus' go an' take a look at aour ol' hum'stead," and Antoine turned the canoe's prow into the narrower waterway and followed its lazy meandering among the broad level of the marsh to where the sluggish current creeps between narrower margins of wild rice rushes and sedges flanked by open fields on the east and, at that time, by almost unbroken forest on the west.

At the nearest point of this shore they found an opening to their old landing and pushed the canoe to a berth alongside a clumsy dugout which gave evidence of recent use in a fish-pole and line and a basin of earth in which a few angle worms were crawling and reaching vainly for a way of escape over the edges of rusty tin. A well-worn footpath led away through the bushy border and under the hemlocks.

"Prob'ly some more mah rellashin, Ah guess," said Antoine.

"One o' your brother-in-laws. Mebbe we'll go an' look him up bime by. I b'lieve I've heard you tell o' hevin' one or tew. But le's gwup tu the ol' shanty," and he led the way to the familiar spot.

It was not hard to find, for the moss-grown slabs were lying in a crushed heap upon the broken ridge-pole, and in front a patch of ashes filmed with moss, nourishing fireweed whose silver-winged seeds were now drifting alee on the light breeze, marked the place of the old camp-fire. Beside it was the log seat, softer than it used to be, with decay and a cushion of lichens. They seated themselves upon it, looking around upon the desolation with half melancholy interest while they slowly filled their pipes.

"It looks so as if de folks was all dead gre't many year 'go an' it seem so we was de folks," said Antoine ruefully. "It mek' me feel lonesick."

"Yes, it does make a feller sort er lunsome, a mournin' for the feller that was himself oncte."

"Dat true as you livin', Sam. Bah gosh, seh, it a'n't seem if Ah was me, w'en Ah'll re'mbler dat leetly boy in Canada wid hees fader an' mudder, young folks dat dance all naght, an' Ah'll gat honly one brudder-law, an' de summer las' mos' all de year an' de winter a'n't never too long 'cause Ah'll happy every day. Oh, Ah'll a'n't dat leetly feller. Den w'en Ah'll growed big mans Ah be naow Ah'll a'n't know much an' can' spik Angleesh more as frawg; dat a'n't de sem' feller Ah was naow, for know much anybody an' spik jus' lak' Yankee. Den Ah'll faght in de Papineau war more hugly as dev', naow Ah'll was peaceably mans, honly w'en Ah'll was get mad, den dey want for look aout, everybody but you, Sam. Oh, Ah'll was been great many feller, me."

"We're gen'ally tew folks all the time," said Sam, following a climbing wreath of tobacco smoke with meditative eyes. "One is the feller 'at we know an' t'other's the feller 'at other folks knows, an' most on us is almighty shy o' showin' the one 'at we know tu other folks. By the great horn spoon! I dasn't hardly look at my Sam, myself, he's got so many mean streaks in him. Hello, there's aour ol' squirrel, er one 'at looks jus' like him, a-snickerin' at your Antoine er my Sam this minute." He pointed with his pipe at a red squirrel that was jerking himself into a frenzy of derision on the trunk of a hemlock.

The sun and the breeze had burned and blown the mist away and the day was bright with the beauty of late September, the clear blue sky, the first autumnal tints of the unthinned foliage bordered with the lesser glory of woodside golden-rod and aster, the marshes in the broad masses of bronze and russet and gold unbroken save where the scarlet flame of an outstanding dwarfed maple blazed among the colder tints, with the verdure of the grass lands, looking as green as in June.

Such sounds as were heard were distinctive of the season and some were conspicuously absent. The flute of the hermit and the bells of the wood thrushes were silent. The booming of the bittern and the chorus of the frogs no longer sounded over the expanse of marshes. Birds that rejoiced melodiously over the earth's fresh luxuriance in June uttered now only brief notes of farewell to the kindling glory of her ripeness. Only the bluebird sang, and with a mournful cadence. The crows cawed lazily, jays squalled apart or in united vociferation, chickadees repeated their own name, nuthatches piped their nasal call, woodpeckers hammered with voiceless industry and never a rattling drum-call, these and the squirrels were the only tenants of the woods who gave audible evidence of their presence.

Across the fields from distant farmsteads came the regular thud of flails, and from one barn the clatter and roar of a new-fangled threshing machine; and there was also the rumble and clatter of farm wagons and the bawling of plowmen, shouting as if their oxen were deaf or a mile from their driver. Piercing through these larger sounds there could be heard the shrill voice of cockerels practicing their yet unlearned challenge, and the yelping of wandering flocks of turkeys harvesting the half torpid grasshoppers and gleaning the grain fields.

Every sound that came to the ears of Sam and his companion, as they unconsciously listened, was as indicative of the season as the visible signs of the year's ripening which met their abstracted eyes.

"Wal, Antoine," said Sam, arousing himself and knocking the ashes of his pipe upon the grave of the old camp-fire, "Le's go an' see if you've got a new lot o' relations settled here," and Antoine, nothing loth to undertake such quest, followed with him the path into the shadow of the hemlocks.

ROWLAND E. ROBINSON.

HOW FUR IS CAUGHT.—II.

The Start on the Trapping Trail.

As has been stated earlier, the little town of Mercer is on the Turtle chain of waters. It is a journey of about twenty-five miles from the Northwestern Railroad at this point to the head of the water shed, the voyage being over some pretty rapids in the river, and across some pretty lakes. The Bucks' summer place is on the narrows which practically divide Turtle Lake into two bodies of water, and at this place we were advised that the trappers had their main camp, which consisted of a big wall tent, fitted up with a cook stove and supplies. It was our intention to make this main camp on the first night out, this being easy to do, since the distance by land trail was only about fifteen miles. We took the morning down train from Mercer to Manitowish, a distance of about three miles, and left the latter point a little after noon of a lovely winter day. A good logging road made us easy going for about five miles more, during which time we crossed the trapping line run by "old man" Buck, who had a number of sets for lynx and one for otter, but of course we did not stop to run any of his traps for him. After leaving the logging road we struck out across the lake known as Circle Lily, then a glittering plain of blinding white. Here we made good time, although Fay, Buck and I had to wait for Brandis and Norris. The latter had invented a new kind of snowshoe strap arranged with loops and buckles which he had figured out to be a good thing, but which like a good many other good things did not turn out the way he expected. The straps, instead of being easy on his feet, proved to be very hard, and it was not until Frank Brandis, with good pine-woods ingenuity, had altered the hang of the straps, that Norris was able to get along with any kind of comfort.

Snowshoe Ties.

I was much interested in studying the different snowshoe ties used in the pine country. There are several different ties, each of which has its ardent advocates, but in

HEAVY MARCHING ORDER.
The FOREST AND STREAM Man.

actual use you will hardly see any two sets of straps alike. When you buy your snowshoes you will find a nice set of thongs come with them, and you can tie these into very pretty knots so long as you remain on your office floor, but when you get out in the woods on thawing snow you will find things very different. The thongs get wet and stretch out into thin, biting cords which need continual adjustment. When they are wet they stretch and when they are dry they shrink, so that a tie which is good in the evening will be impossible to negotiate in the morning. The Wisconsin trapper uses a toe strap to his web shoes, and this he never alters after adjusting it so that his toe works just right over the rim and into the foot hole. From the bar running back he has two long loops which pass back of the heel. The lower one of these loops serves to keep the heel from slipping back. The upper loop crosses over the instep, and then passes back of the heel, where it meets the lower loop, both resting on the Achilles tendon. Some snowshoers tie their straps every time they put on the shoes, but our trappers did not do this. Their straps were never touched or "monkeyed with" in any way. When they wished to tighten the straps a little bit they simply rolled the upper and lower loops together at the resting place behind the ankle. When the straps got too tight they loosened them by unrolling the loops at the same place. I speak of their "straps," but really they had very few straps to their snowshoes except the permanent toe strap, as their thongs were mostly made of linen rags, which they said were easier on the feet and less subject to stretching and shrinking. There is a wide difference between theory and practice in many lines of sportsmen's equipment. The snowshoer can only learn by actual experience in the woods. As I have said before, the art of web shoeing is not hard to acquire, the only difficulty being with the straps. The beginner may punish himself for some time by not knowing how the straps ought to feel, but after a time he will learn how to twist, untwist, tie and retie them until he gets a combination which gives his foot perfect play up and down, keeps it from slipping forward or backward, and yet gives him the minimum of suffering on that tender place back of the ankle, which of course is well protected by heavy socks and his moccasins or overshoes. The step itself is not difficult to acquire. It is a long reaching step, and if one is powerful enough to keep it up through all sorts of snow, it is astonishing what a distance he can waddle over in a day. Our trappers used shoes with very little rake-up at the toes and of a very broad oval. Their shoes were 4ft. in length. If it is necessary for a heavy man to have a good big pack, it is necessary for him also to have a good big shoe to hold him up. A pair of shoes last a trapper a little over one season. To-day one of the prized trophies in my collection is the old, worn out pair of shoes which Frank Brandis finished up on our trapping trip in February. They still show the deep sunken mark where the heel was forced into them on wet days when the sinews stretched, and the web is patched with hay wire and raw hide and about everything else a trapper could lay his hands on.

Footwear.

I have already spoken of the footwear proper for winter in this latitude, but as usual the visitors had something to learn. Norris and I wore high top overshoes, such as are very good for *ski* work, but very poor for the webber, where the ankle needs continual freedom in play, and the foot has to be lifted clear every step, in a way quite different from the sliding shuffle of the *ski* step. Inside of my overshoes I wore Indian moccasins, and I learned something about moccasins that day. I had always thought of them as being soft, innocent, easy-going things, incapable of punishing one's foot if they wanted to, but now I know how wrong that supposition was. Repeated wetting and drying had shortened my moccasins until they were just a little short for my foot. When I stood up on the floor they were apparently all right, but after I had shoved my toes into them for a few hours on the trail, I found they were all wrong. They bent the toes back in a way which was very painful, and in consequence I lost the nails from three toes, the result of one afternoon spent with the wrong kind of a footwear in the woods. After that I did not wear them any more, and the next pair I get is going to be about 14in. longer than my foot. I prized those pretty pink toenails of mine very highly. When I came out of the woods I had thrown away my original footgear, and was wearing the heavy socks and sawed-off rubber shoes of the country, and was traveling in perfect comfort.

I have earlier mentioned that I took in for the trip both *skis* and web shoes. Whenever possible I used the *skis*, which offer much better sport and far greater ease of traveling on country suitable to their use. Of course, skating along a trodden logging road is in no sense *ski* work, and away from the lakes, the roads, and the open woods or clear country, the *skis* could not be used to any advantage. I found that no one in that region knew anything about the *skis* or their use, as it is not naturally a *ski* country, but still I was reluctant to give up the use of the shoes which had previously afforded me so much sport and comfort, and so (with assistance of Frank Brandis part of the time) I carried both the *skis* and the webs for about fifteen or twenty miles of the way, as far as the country offered any chance for the *skis* at all.

"Enough Norweglans."

On this first day, as we were going along the logging trail which led out of Manitowish, we came upon a man lying on his back on the snow in the middle of the road. He was motionless, and when I went up to him I thought he was dead, but at length saw he was only paralyzed by pine woods whiskey. He was dressed in the usual Mackinaw clothing, much thanks to which for the fact he was not frozen stiff. After much trouble we got him awake, and found he was only one of the tough "lumber jacks" common to the region. (I think the working population of the pine woods is the lowest, filthiest and most degraded class of men I have ever seen in any part of the United States.)

"I jist set down fur wance in a woy," said this specimen, who proved to be an Irishman. "D' ye moind, I wuz waitin' fer a felly, see?"

We saw that to leave him alone was to allow him to freeze to death, so we dragged and drove him along with us for a couple of miles, till we came to the logging camp, where we left him. As the keen air and exercise of walking (which latter in his case was violent) began to eliminate some of the effect of the awful liquor he had been drinking, he became first apologetic, then explanatory, then talkative, and finally belligerent. North country whisky has a couple of fights in every drink, and its chief characteristic began to show in our newly discovered friend.

"An' pfwhat moight be yer name, ye yeller-headed —— — ——?" he said to me, as I walked ahead. "An' pfwhat is thim t'ings ye're carryin' over yer shou'ther?" (meaning the *skis*.)

"They're my *skis*, you red-headed —— — ——," said I to him, cheerfully.

"Umph—humph," said he, and lapsed into thought for a while, at last resuming: "Skees, it is, is it, eh? Thim is thim skates the Norwaygins uses, eh?"

I told him he was correct, and for quite a while he was silent, but at length broke out with a snort of rage.

"Shore, if I had a gun I'd kill ye, ye yeller-headed —— — ——!" said he. "There's Norwaygins enough in this yer counthry now!" This he said with an air of the deepest conviction, and I could only admit that he, being a resident of the country, must be better acquainted with its condition and requirements than myself.

Fur Sign and Trapper Talk.

We arrived at the further side of Circle Lily Lake about the middle of the afternoon, or rather, Fay and I did, and we could then see Norris and Brandis well out from the shore on their way across. Between this lake and the first one of the Turtle chain there lies a low, swampy bit of ground about three miles or so across, heavily covered with thickets, timber and windfalls, offering hard traveling and good trapping at the same time.

"We have a number of traps set in this swamp," said Fay, "and I should think we ought to have something. Do you see the marten tracks? They often hop along and follow a trail quite a way, sometimes until they find a trap. A fox will not follow a trail that way so much, but will parallel it. I have seen their tracks where they have been going along that way, and all at once I would see where old Mr. Fox had smelled something wrong, or got a notion in his head it wasn't all right, and had made a big jump and lit out clean away from the trail as tight

as he could go. A fox is about the hardest animal we have to catch, though we do catch them right along.

"Now, a lynx is not a very hard animal to trap. Sometimes a lynx is the biggest sort of a fool. He won't try to spring a trap, or to run away from it, but will go right into it. He will follow along a trail for half a mile or so perhaps, and as we always want an animal to do that we sometimes use a drop or two of scent now and then, and we put scent on the bait. Fish oil is a good scent, or fish oil and beaver castor, or fish oil and parts of female animals. We don't rely on the scent altogether and have no secrets about it, but we use it sometimes. A lynx will follow a long way on the trail of scent, and it seems to be full of curiosity. Now, if you wanted to put out a sign over a trap to frighten away a fox, you would hang a red rag over it, wouldn't you? Yet I have often caught lynx by hanging a piece of red flannel over the trap. If a lynx sees a red rag hanging up that way he is about sure to go and see what it is.

"We bait all our traps with just whatever we happen to have handy, mostly pieces of rabbit. We caught some beaver not long ago, and we have used a good deal of chopped beaver for bait.

"When a man is running a line he has to have a good many pounds of bait in his pack if he is going far. I carry my bait in a rubber bag, made by sewing up one end of a rubber boot leg. This keeps it away from your other stuff, in case the warmth of your back thaws it out on the march.

"In 'trappers' guide' books you see pretty pictures about

STARTING FOR THE WINTER CAMP.

TRAPPERS' EXPRESS, STAR LAKE, WIS.

how to build bark or slab houses for the bait, so that an animal is sure to get caught if he goes in. We don't do anything like that, for it's a bad plan. All our sets are just natural sets. We take advantage of natural objects only in laying our traps."

My young giant now pressed ahead over the fallen timber, up and down and around hummocks, over and under prone tree trunks and masses of uptorn roots, walking with ease and swiftness, now and then striking a playful blow with the axe he carried in one hand. His pack of 60lbs. seemed not to distress or encumber him, and he talked to me of the ways of the woods creatures as we went along. We saw plenty of sign as we got into this rough country, most of it marten sign; but at length Fay stopped, and called out:

Hello! Here's that old lynx again." (Of course he called it "link.") "He's been through here two or three times before, and I believe there's more than one of them in this windfall."

He pointed to the tracks, near the trail where it passed through a section of massed and matted down timber, a "windfall" such as the lynx likes for a home. The big, furry paws had left holes in the snow the size of a horse's track. We followed the sign for a way, and I was following along this while Fay went ahead to look at some traps along a side trail. Soon after this Brandis and Norris overtook me, and we three started on down the trail together.

The Lynx in the Trap.

Fay, who was a rapid walker and a hustler on a trail, was nearly a quarter of a mile ahead, when we heard him halloo to us, his voice at first sounding very faint and far away. Knowing that something had turned up, we all crowded ahead as fast as we could, and at last I could distinguish his words.

"Here's your chance for your picture!" he sang out.

It was a chance, sure enough. From under the root of a fallen tree, where a few drooping boughs had aided in making a little den free from the snow, there sprang an animal as large as a setter dog, but with a flat head, close-laid ears and great thick legs and feet. In the dim light in which we first saw it in the deep woods, it looked quite black, but when we came closer, we saw the gray coat of the full furred Canada lynx—a lynx with the steel trap hanging to his forefoot, a lynx full grown and viciously angry all the way through. Our trip was not an empty one!

The lynx tried once more to loosen the clog pole, which was about 8ft. long and which was thrust into the roots of the tree, the ring of the trap chain being driven down tight on its larger end. Failing in this, he swung and whirled over the pole, spat, sniffed and clawed about, and then went back into his hole. He was a migthy mad lynx, if the usual cat signs of anger were any good.

"You get your photograph machine ready, "said Brandis, after I had let the lynx chew the end of my snowshoe pole awhile (the deep marks of his teeth are on the pole yet.) "I'm going to pull him out."

The lynx didn't want to come out at first, when Brandis pulled on the clog pole, but all at once he let loose and came clear out into the trail at one motion, clearing a swath around with a spread foot that looked as big and ugly as a buzz saw. Then, failing to reach any of us, as Brandis crowded the end of the pole down into the deep snow, he lay flat with his ears down, his teeth showing and a most tremendous deep bass growl coming out of his mouth. It was the chance of a lifetime for a photograph, and it would have been worth a good deal to FOREST AND STREAM to print the picture of the beast as it lay there, fairly buffling with rage.

But alas! The same faking fraud of a camera which three times broke down with me out in the Yellowstone Park, and which only by a miracle did the work asked of it, chose this very moment to go wrong again. I got square in front of my lynx, at a distance of about 8ft., set the instrument, got Brandis to poke up the subject until he looked a very demon of wrath, and touched the button! The camera did the rest. (I will say this was not an Eastman machine.) There was a faint, slow, half-way click. I knew, from former experience, what was the matter. The shutter doors, instead of passing free and letting in the light, only threw half way. They paused at just such a point that by no way possible could a ray of light get into the lens! My heart sunk, for I knew it was all over. It was no time to fix a camera, in front of a live lynx, in a dim forest, with the evening light already waning. Later the miserable fraud of a camera closed its career by tearing the film across, twenty miles from the railroad and in the middle of the trip. At great trouble and delay I sent back to Chicago for another camera, and thus in the last half of my trip got some pictures after all.

But I got no picture of my lynx, and I presume I shall never have such another opportunity. Unwilling to admit the truth, I tried several times to get an exposure, and once nearly lost a trouser leg by it. I was only about 6ft. from the lynx, and with my back against a cedar tree, when he made a sudden spring, tore the end of the pole out of the snow, and came at me with a circular sweep of his good foot which didn't miss my leg 6in. We surely had lively times there for a while.

The Lynx is Easily Killed.

This lynx was finally killed by a blow over the back of the head from a snowshoe pole, and I was surprised to see how light a blow sufficed to kill it. "They all talk about the toughness of lynx and wildcat," said Fay, "but they ain't hard to kill at all, if you hit 'em over the head right. But they'll fight all right. If a trapped lynx breaks loose, it's more'n likely he'll come for you. Once last winter I was out on the line, and I had a rifle along. I only had two or three cartridges along, and shot away all but one load. Then I came to one of my traps that had a lynx in it. I thought I'd just shoot him, so I cut away, but somehow he moved, and I hit him in the foot and cut it loose from the trap. You can bet he didn't run. He just came for me a-jumping. It happened that there was a club sticking up in the snow, such as we nearly always leave near a lynx trap, and I just grabbed it and swatted the lynx over the head with it when he jumped at me."

Such was Fay's brief version of an affair that would have been good for two columns in a New York daily, or which would have served many men for a life-long story of their own heroism. I confess that the prowess of these big cats deteriorated in my esteem from that time on.

The Well and the Weary.

Fay now went on ahead to camp, which was still four or five miles away, while we repacked our worthless camera and again took up the march. To my surprise, Brandis did not stop to skin the lynx, but strapped the body on top of his pack, which must already have weighed 50lbs. It seemed to give him not the least trouble, and again I marveled at what custom and habit will do for a man. It would be impossible for one unused to it to carry such a pack even on the best of roads.

When we emerged from the cedar swamp we came to the shore of Turtle Lake, which lay before us a great white plain, perhaps five miles across. Even then, in the distance, the figure of Fay Buck was growing shorter and dimmer in the distance, as he kept up the clipping gait which he had struck. After this distant guide we followed, the trail lying perfectly straight to the point of an island. At the edge of the lake I put on my *skis*, and from there on in it was like flying for me, as the snow was good. The others plodded along, clumpety-clump, Brandis silent, mechanical, tireless, long-haired, blue-eyed and picturesque. At the last two miles Norris, who had been sick not long before, began to weaken and tire very fast. We took his pack, but still he did not freshen, for the step of the web shoe is much harder than the slide of the *ski*, and requires more muscular effort. It was now growing bitterly cold and we felt the wind keenly out on the lake. Three-quarters of a mile from camp Norris walked to a stump on the shore of the lake, which we were skirting, and sat down. This was bad, and I knew he was about played out, so we dug down deep in Brandis's pack and got out the brandy flask, which was kept as a last resort in a case of this kind. I gave him a Billy Hofer drink—what the screw-top of the flask would hold—and then we persuaded him along into camp, which we reached at dusk.

The Main Camp.

We found the central camp of our trapper friends a very comfortable affair, thanks to the transportation facilities afforded by water in the summer season. The camp was located in the heavy timber at the narrows of the Turtle Lakes. It was composed of one big wall tent with a smaller one ended on to it at the rear, the latter being used as a sleeping place. In the big tent there was a table, a good cook stove and a few rough stools. A rope was stretched over the stove for a drying line. There was a good pile of stove wood back of the stove. In the sleeping tent there was a perfect stack of good blankets. Everything was eminently comfortable. When we went in Fay had supper nearly ready. Fay is a fine cook and not a trapper of the shiftless kind. He baked as nice a pan of biscuit as one ever saw. And there was some of that same sausage that we smelled frying when we first found Mrs. Buck getting breakfast. And there were pork and beans, and tea and sugar. By the time we had our wet outer socks drying on the line everything was ready, and we ate as only such folk can. Surely the day had been a busy one, and not one of child's play, but work for men. My first day in trapperdom did not bear out in the least the old tradition of the easy, lazy and shiftless ways of the trapper. If those were ever successful methods they would not do to-day.

But we were almost too comfortable for my notion of the correct thing. The blankets were too abundant and thick and warm, even though in the morning when we awoke they were covered with a thick frosty rime from the congealed breath (the thermometer was 6° below zero). I signified my wish to tackle something tougher.

"You'll get it tough enough if you go the round," said Fay, grinning as he looked at Frank Brandis; and Brandis replied with his slow smile.

E. HOUGH.
909 SECURITY BUILDING, Chicago.

A SPOT ON THE SPECTRUM.

THERE are occasional dark spots on the spectrum of a sporting life—that is, incidents which take all the sport out of a trip and leave only memories that call up unpleasant things. Such a memory haunts my mind to-night. There is a child in this story, and anything that touches children touches all our hearts alike.

In western Nebraska there is a broad strip of country that is only partially settled and the towns are far apart, only little more than trading points for the few people who manage to make some kind of a living out of the soil they cultivate. This country, between the Platte and Republican rivers, is famous for goose hunting; and that was the game we were after when we got off the train one cold night late in the fall of '86.

We had had supper and were sitting around the hotel stove discussing the goose question, when some one rode up to the door and hallooed. We opened the door, and there sat a man on a steaming pony in the full glare of the lamplight. While the white flakes of snow, forerunners of what soon developed into a blizzard, sifted to the ground he addressed us with words about like these: "Say, you fellers, Blodgett's little kid has strayed away from home this afternoon and we're going to organize to hunt it. All that can go better get some kind of a rig and get out there as soon as you can, for we want all we can get and we're going to have a nasty night too. I'm going down and get the boys at Hank's and I'll meet you later at Blodgett's."

That was enough. There was a helpless child, 5 years old, lost on those open prairies in the darkness and storm. Some of us had little ones of our own, and those who didn't were ready to go anywhere on demand.

In ten minutes there was not a man left in the hotel office; and two spring wagons were whirling away through the storm as fast as the sturdy broncho teams could take them.

Men grim and determined, with blanched faces, breathed a silent prayer for that little wanderer as they rode into the storm, that increased and grew colder as they faced it on a mission of help.

Some of us had been lost on those dreary uplands and fear for the child tugged at our hearts as we thought how small was the chance of finding that little form alone there in the darkness, wandering God only knew where.

We were not long in reaching the Blodgett home and soon learned that the child had been playing with others just before dark in a cañon, as they call the draws and gullies in that region, and when called had failed to appear. They had found the track and followed it far enough to know that the child had started out down the cañon, or directly away from the house.

We were soon on the trail with lanterns and followed the sturdy little fellow's footprints until the snow completely covered all traces; then we went on searching

every foot of the country for two or three miles in every direction—searching, calling, listening for the answering cry that never came.

Only the dismal howl of the blast and the singing of the snow crystals answered us.

All night long, hoping against hope, facing the blizzard with a grim determination that did not recognize fatigue or cold, those hard-handed, big-hearted men scoured the hills and cañons. When daylight came they still searched, and noon found them still facing the storm, but at night they said there was no use to look further until the snow cleared away. We all knew that what we had feared had become a dread reality and that the little one was beyond human aid by that time, for no child could stand such a storm; and we knew that when the sunshine came again we should find the little form stiffened and frozen. For two days more the storm lasted and then the sun broke bright and warm from the masses of heavy clouds, and by after dinner the snow was soft and wet on top. All that day we searched and the next day until noon; then one man walked across the hilltop leading his horse and on the horse was bound a little still form.

The search was over.

Tenderly we laid the baby on the bed and did our best to cheer the little mother, who was wild with grief.

More than one rough hand was drawn across an equally rough face, and a tear dashed to the ground by men who had not shed tears for many, many long days. They knew the country, knew the awful feelings one so young must have experienced among those gruesome cañons at night and alone in the storm; yes, they knew and they pitied, and they shed tears when they looked at the still form. So would you have done.

They followed the footprints after the snow was gone and found that the boy had traveled almost twelve miles that stormy night, and he had jumped square off of a bank about 16ft. high and landed square on his feet; then when exhausted he had crawled into a sheltered nook and gone to sleep—the same as grown people have done—had gone to sleep, and sleeping had died, a merciful ending at least.

We could not hunt after that experience, and went home without even taking our guns out of the cases.

Yes, even sportsmen see dark shadows once in a while and have thoughts that haunt them with unpleasant memories. EL COMANCHO.

SPORT IN THE CHANNEL ISLANDS.

THE Island of Jersey, which is the most picturesque and fertile island of the Channel Island group (Jersey, Guernsey, Alderney and Sark), is too well known to require minute description. It is, geographically and geologically speaking, a remarkable island. It occupies, in common with the rest of the group, a position central to two countries of importance among other nations of the world, England and France, and it has been the scene of a history as unique as its situation.

The small island of St. Helier, near the town of the same name, in the Bay of St. Aubin, on the south side of Jersey, took its name from Helier, a holy man who lived here many centuries ago, and was slain by the pagan Normans. His little cell, with the stone bed, is still shown among the rocks, and in memory of him an abbey was founded, on the site of which now stands Elizabeth Castle, with its old fortifications.

Jersey is twelve miles from the French coast, about twelve miles long and six broad.

Its climate is perfection, both in winter and summer (Jersey has the same latitude as Rouen in France). There is no snowfall and the heat of summer is tempered by sea breezes. The interior of the island is undulating and picturesque in the extreme.

Intersected in various directions by "Devon's Nine Lanes"—each lane is a "study" for the lover of pen and pencil. At the time to which I refer the inhabitants were as ignorant of the sound of a railway whistle as they were of the sight of the tall chimneys of a manufacturing town. Indeed, the general character of the island was that of a garden in the most picturesque part of that most picturesque county of Merrie England—Devonshire. Is it to be wondered, therefore, that a British "sub." was exuberant with joy on his regiment receiving marching orders to proceed to Jersey—when considered, moreover, that for forty years previously there had not been a whole regiment in the island; a detachment only—and the "Jersey Lilies" (the term applied to Jersey girls in general, owing to their remarkable beauty) had yet to experience the pleasure of dancing to the music of a regimental band.

Can I, then a young "sub.," ever forget the pride with which I carried the Queen's colors up the hill to barracks to the strains of our fine band on the day of our arrival, when I considered that the eyes of hundreds of pretty girls were turned upon the junior ensign of a marching regiment.

Every man, woman and child in the island seemed to have assembled to welcome the corps, and as each family brought its basket of flowers, our path to the barracks was literally strewn with flowers, a foretaste of the "rose-bed" of gaiety we afterward found in the island.

French families and English families (equally divided in numbers) vied with each other in hospitality; and the physical frame of the warrior, in being educated to endure the strain of round after round of picnics, dinners and dances, was put to frequent practical test.

Then, for a while, as apparently in these notes, the word "sport" found no place. It is true that among regimental officers there are those who cannot possibly or conveniently keep up the constant strain of "pipe and dance." The "Jersey Lily" has shot her arrow with effect, but prudence says, "Beware, your purse is slender; a hut at Aldershot 12×12 for a wife and three brats is not the place for you."

An old bachelor, who had been looking out for a desirable "girl" as partner of his joys and sorrows, and is still, though now a retired general officer, looking out for youth and beauty, said, "I must wait till we move to another station; Jersey beauty is only skin deep."

These and others, in after-dinner reverie, soon sighed for "sport"—sport at any price.

"Come, let us kill something," is said to be John Bull's first thought after breakfast; nor does this love of sport come with declining years. It is our privilege to know a good and true sportsman of 90 years of age who takes his daily long walk often in search of sport.

It is but a day or two ago that he stepped out briskly, followed by his brace of terriers, when he met another old gentleman who asked:

"Where are you going, Tom?" and was given the answer, "I'm going hunting with the terriers. Come along."

Yes, at 90 years of age he takes as great interest in a rat hunt as at 60 he took pleasure and pride in leading his county hounds on his favorite hunts.

Long may it be before the love of sport is "improved" out of the Anglo-Saxon heart of man by luxury or by modern civilization, so called.

The fact remains that even in this civilized age man seeks to "kill something"—with rod and gaff in summer, with shotgun and rifle in winter—horse and gun are but necessary appendages.

It was thus that we cast about for a while in vain for something "to kill."

It was about this time that I was taking my walk abroad in the western portion of the island in an unfrequented place, St. Peter's, when I came upon a small lake, distant from farmhouse or lane, and when going into its placid waters I observed the unmistakable sign of tench feeding, as they sucked the May fly from the surface of the water.

Knowing how highly valued by the epicure are these delicious fish if well cooked, they being in taste like the red mullet, I revealed my secret to but one, a keen sportsman, and we at once formed our plan of campaign in order to secure tench enough for the morrow's mess dinner. We rose before dawn of day, and, armed with a small sack net, proceeded to our happy hunting grounds. The question whether this was real sport never entered our minds.

Our net well placed, the two ardent sportsmen (?) made "flank movements," wading deep the while toward the net and beating the waters violently with thick sticks. By pursuing this plan for some time and changing the net from place to place, we secured an abundant supply of fine fish before the sun rose high in the sky.

The return to barracks of the mud-bespattered youths as the morning 6 o'clock parade was being formed was the source of amusement and wonder to the assembled soldiery.

No less wonder was it to the gourmands at that day's mess dinner when the bill of fare was found to include tench—tench cooked, too, as it should be—each fish gracefully folded in its white paper wrapper. We had given the necessary instructions on this point to our French cook, Pat, from the county of Cork. We had also given instructions to the mess waiters not to give information as to the person or persons who supplied these delicious fish. We kept up the supply daily in this manner to the surprise of the officers. We then, not satisfied with our success, and to improve the flavor of the tench, conceived the idea of giving the fish a few days' bath in a stream flowing into the lake. We made a suitable dam for that purpose, and fished long and wearily to fill the dam. In doing this we nearly emptied the lake of fish. But then our splendidly constructed dam was filled with fish enough to supply our mess for many months—so argued the ardent youths. It proved the old story of "man's proposal." One early morning while working hard at our dam we spied a distant figure, that no doubt of an island farmer, like ourselves an early riser, probably looking after his flocks and herds, but we did not like his appearance on the scene just then. With some misgivings we returned to barracks. We youths, both of us, had horrid dreams that night—dreams of Jersey farmers robbing us of all we valued most, and then knocking us down and chucking us headlong into our lake.

Sorry and sad we wended our way at dawn of day on the morrow to the river dam we had so labored to construct and render safe for the valued tench. What meets our longing gaze? The dam is leveled to the ground, the fish have evidently changed owners—they are gone! and a strong adjective is uttered by at least one of the dejected youths.

Thus ended our first lesson in search of sport in the island of Jersey. Obstacles and difficulties to the sportsman are things to be removed and overcome. Ask the man who has carried a milicete canoe on a four mile "portage," through swamps and morasses, over "crags, knolls and mounds confusedly hurled;" or has on snowshoes, in heavy snow, hauled toboggan from dawn till dewy eve to reach a supposed "terra incognita" near the watershed of a country for caribou hunting; or has skated seventy miles up some grand river with a high wind in his teeth. "Have you had in your experience difficulties to overcome in search of sport?" He will answer, "Yes, many and great." We, knowing this, must have another "try," whatever our reward, for sport in the unpromising island of Jersey.

One or two of us whose education with horse and hound had not been neglected had imported our hunters from England, where they had been "eating their heads off." Could we but use them in this island. Fox hunting was of course out of the question. Could we have a drag hunt? Our first steps must be to pick up a few hounds. We wrote to many a friendly M. F. H. and employed other means, at last we succeeded in procuring a few good-looking hounds. We formed a small club, master and whip, with half a dozen members, and on one memorable day we "dug out" our hunting breeches and top boots, made great display, published the time and place of the "meet" in the local newspapers, and with all the pomp and circumstance of war—war against an imaginary fox—we meet in a remote part of the island near a detached barrack, St. Peter's.

All went well for a while. Joe Price, with the scent, went on ahead, the hounds were laid on, and oh, joy! hill and dale soon resounds with the madrigal of music of the hounds, with the sound of the horn and the "view halloo" of the huntsman. The brief, far too brief, "excitement produced by the emulation of hunting, and the insatiable desire to be nearer and nearer still to that fleeting vision which, like happiness, is always just another stride beyond our reach," take possession of us, when suddenly a shot is fired, a shot too apparently in anger, else why that angry crowd of Jersey farmers, armed with shotgun and pitchfork; and why, moreover, our best hound lying dead at our feet as the smoke curled from the muzzle of the gun of a young farmer—all evidently the result of a jealous determination to put a stop to our hunting. We speedily dismounted without word of command, and such a "cabbage garden" fight took place as has not been seen or heard of since the days of Smith O'Brien in Old Ireland. Suffice it to say that we soon found it difficult to stop the fight, for every man of our grenadier company then on detachment appeared on the scene, and with wild Irish yells these giants flung themselves upon the Jersey farmers, now in the minority, and but for the knowledge of discipline on the part of the grenadiers in obeying the stern orders of their officers the Jersey farmers would have been wiped out, and we should soon have secured, free of cost, "close quarters" in the Jersey jail. As it was, complaint was made to the Governor, and hunting was put a stop to. And thus ended our second lesson in search of sport in the island of Jersey. MIC MAC.

FREDERICTON.

THE DEER HUNT.

AFTER preliminary arrangements and due preparation, George Seamans and myself, accompanied by Albert Nemic—our guide—arrived at our hunting camp. We had written the guide that we wished to camp in some remote spot where deer were plentiful and little disturbed by hunters. He accordingly landed us on the wild and lonely shore of a charming lake, situated in an extensive wilderness. The cabin was rudely constructed, but comfortable, and was situated on the eastern side of the lake, near the water's edge.

We had come for many miles through dense forests of pine and hemlock, along hardwood ridges, and across extensive flats and swampy places. The country was broken and dotted by many small lakes that do not appear on maps. Having arranged our camp outfit and put things in order we prepared supper, enjoyed a hearty meal, and commented on our future success in killing deer. Night had fallen, but the moon was full, and in the flood of silvery light the scenery on the lake and about our camp was weird, charming and beautiful. Our guide is a typical hunter and trapper and an expert in woodcraft. He has killed a score of bears, trapped all species of fur-bearing animals to be found within his beat and has gained a good reputation as an expert rifle shot and all-round hunter. As we sat around the cheerful campfire he entertained us by relating numerous thrilling accounts of exciting and successful exploits in pursuit of various species of game. After the rounds of hunting experiences we rolled in for the night and slept soundly.

When morning came George and myself were soon off for a hunt, leaving Nemic busy at the camp. The early morning air was cool and bracing. We buttoned our warm hunting jackets closely about us and moved slowly on in open places, traveling on high ground as much as possible and keeping a close lookout for game. Our general course was northward, facing the wind, which was only now and then a gentle puff that made but faint sounds in the treetops. We soon reached a position where to the east of us was a small lake, fringed by sedgy spots, abrupt terminal ridges and shaggy pines. We were separated from the lake by a deep ravine or gully and a high, narrow ridge, which extended back from the lake to heavily timbered regions. Glancing to his right, my companion discovered what he took to be a deer standing on the ridge. He quickly fired a shot at the object, but missed. Startled by the shot, three deer—two bucks and a doe—were seen, all running on the ridge in the direction of the heavy timber and thick cover.

Bringing my rifle quickly to my face, I held well ahead of the largest buck and pressed the trigger, but without effect, except to add to the fright of the game, which was making tremendous leaps over brush and fallen timber at long range. A second time my repeater spoke, when down went the buck all in a heap, with a resounding crash. He was hard hit and did not regain his feet. I hastened to him as quickly as possible, over logs and through brush which filled the ravine, and with the greater part of my wearing apparel still clinging to my person. When I reached my prize the struggle was over, and he lay peacefully upon the ground, with a crimson pool at his side, the blood still dropping from a bullet hole behind his left shoulder—the terrific effect of 300grs. of lead propelled by 90grs. of powder. This was one of the supreme and thrilling moments of the hunter. His head was partly doubled under him, and I had to straighten out his neck before cutting the throat.

As I stood over him in silent admiration of his shapely form and enormous proportions, I could not help feeling that I had taken the life of a noble creature. He bore a fine pair of antlers, and was truly a lordly fellow and a "giant of his kind."

I now began to wonder what had become of George, whom I had lost track of in the excitement of my success. I remembered hearing him make several rapid shots with his .45-90, and I wondered what effect his shooting had accomplished.

I accordingly called out to him. A response came from the ridge about thirty rods away in the direction of the timber. I hastened to the spot from whence the reply came, anxious to relate my success. To my surprise and satisfaction, I found him dressing his deer. He had killed the other buck. A stab in the haunch of his deer showed that he had recently been overcome in battle, probably by the buck that I had killed. The doe, over which they had waged war for supremacy, escaped unharmed. In due time both deer were dressed and hung up side by side against a pine with overhanging bows. George had shot his buck at a greater distance than I had killed mine, but my deer was a trifle the larger of the two; so I felt as good as he did, although neither of us said much about the affair at the time. We blazed our way back to camp and informed Nemic, that at the other end of the blazed line he would find two as fine deer as any hunter could wish to see waiting to be brought into camp by him as soon as he found it convenient to go after them.

The next morning we breakfasted by lamp light and started out into the woods early. The air was now warm, but refreshing. The sun finally appeared above the horizon, surrounded by a hazy mist. General conditions forbode a storm in the near future. We had taken a different course than on the previous day, owing to the wind, which had veered to the south. We had no tracking snow to aid us. We were still-hunting and traveled against the wind as much as possible. We finally reached a well-worn game trail, which led between two small lakes. Taking our positions near by, we concluded to wait for a time, hoping that a deer might attempt to pass along the trail, as it was yet early in the day. We waited but a short time, when a fine handsome doe appeared not twelve rods away. She was browsing and constantly on the move—in a nervous sort of way—taking a bite here and there. She was slick and in a fine condition. She would make excellent eating. We concluded that for our pur-

pose she had browsed long enough, and accordingly brought her down with little effort. After my rifle cracked she wheeled and started away; George fearing that she might possibly escape—a wounded deer—drew a bead on her as she started and sent a ball into her carcass, from which the doe not only slackened her pace, but dropped in her tracks. It was afterward learned, however, that with my shot alone she could have made but a few jumps. After dressing and hanging up the doe we moved on again cautiously. We wanted just four deer and thus far we had killed only three.

While crossing a narrow valley and near a small stream we came to a dead lynx, which lay stretched out upon the ground. It had been dead for some time. The earth about it was scratched and dotted with bits of fur. The dead leaves were scattered about, while upon the hide of the animal numerous scratches and other marks of violence could be seen, as if the creature had met its death in mortal combat with some other beast not less powerful and ferocious than itself.

Leaving the lynx we soon came to a swamp, which we decided to cross, as through the dense growth it appeared to be but a short distance to high ground beyond. After passing into the swamp the footprints of a moose met our eyes. The trail was very distinct in places, and the animal had but recently passed.

A moose was larger game than I had expected to be called upon to face, and I began to think of affairs at home that needed my attention. With George the effect was somewhat different. In him the fresh moose tracks seemed to arouse latent powers and to bring forth enthusiasm and all the natural instincts of the true hunter that he is. He had hunted the grizzly bear and was familiar with the bugle call of the stately elk in the Rockies; but he had never seen a moose. The fresh trail of this monarch of the woodland greatly impressed him, and his actions plainly indicated his desire to have a tussle with the brute. We followed the moose trail for some hours, really hoping to get sight of him. We found where the long-legged creature had browsed on twigs of the tops of small trees, and where he had lashed the brush with his horns. Further on he had entered a pond, fed on lily roots and then taken long strides through boggy places.

We followed the trail of this huge beast with increasing care and eagerness until we were finally led into a choked and tangled mass of thick-growing spruce, with dead timber strewn in every direction. It was utterly useless to attempt to make any further headway on the trail, and we decided—under existing conditions—to make no further effort to get sight of the monogamous shovel-horn.

Taking a last lingering look at the enormous hoof prints in the soft earth, we left the trail and began the task of working our way out of the swamp. In our eagerness to get sight of the moose we had paid little attention to our course. The heavens had clouded over and the position of the sun could no longer be observed. We had penetrated deeply into a swamp and now gave our whole attention to getting out of it. On we traveled, using the compass to guide our course over logs, bogs and windfalls of down timber, until it seemed as if there was no end to the tangled mass in which we had become imprisoned, and through which we could make but little headway.

As time passed on we grew fatigued. The overhanging cloudiness and darkness added to the gloom. Night was rapidly approaching. We decided to stop where we were and arrange a temporary camp for the night, as we could do no better. The air was warm, and we could not suffer much from cold; but our surroundings were dismal and lonely. We were in a strange country. We were not lost (?), for each of us carried a pocket compass. The difficulty had been a lack of judgment as to what particular point of the compass to follow. We constructed the best weather shield we could in the time afforded out of such material as we could find. A rabbit was killed and a fire was kindled. Laying in an ample store of wood for the night, we roasted and ate our rabbit for our evening meal, and tried to feel happy before our cheerful, blazing fire, which shone out into the mysterious darkness about us. Rain soon began to fall, and, all things considered, we put in a most enjoyable night—I say enjoyable, for the true hunter enjoys the solitude and impressiveness of the forest primeval, and our location was not lacking in these essentials. The mystic and melancholy scenery about us was less varied than impressive, and the monotony of the night was only broken by the dismal and savage howling of the gaunt and hungry wolf that occasionally greeted our ears, and added to the utter loneliness of our surroundings. At times, as the night wore on, "Tired nature's sweet restorer, balmy sleep," came to our relief, and I dreamed of home and comfort; but was soon awakened by the sweet sighing of the wind through the trees and by the patter of the rain, which I not only heard but distinctly felt.

Morning finally came, but before the darkness and gloom of the night had wholly disappeared signal rifle shots in the distance greeted our ears. Nemic was coming to our rescue. We answered the shots with our own guns and exchanged signals occasionally, until we worked our way out of the swamp and with him in due time arrived at the camp, where we dried our water-soaked clothing, filled up on fried venison and drank hot coffee; not wholly regretting our recent experience, in which we had partaken of some of the "bitter" as well as the "sweet" of the hunter's life. Nemic and George soon went out and brought in the doe which we had killed on the previous morning, while I remained in camp by the fire. The weather was bad and we all stayed at camp during the remainder of the day. By evening the rain had changed to a steady downpour, and the wind howled unmercifully through the forest and about our cabin. In its sweep across the lake the gale sent the waves splashing against the rocky shore, and with the night was dark and hideous, and contrasted strongly with our well-lighted cabin, within which was cheer, warmth and plenty. After supper we cleaned and oiled our rifles, as usual, and exchanged ideas freely on all branches of hunting lore, until our eyes finally grew heavy and we quieted down in slumber for the night. We awoke early to find that the storm had abated. The lake was smooth and scarcely a leaf stirred in the forest about. The sky was clear, the air was warm, and there dawned upon us one of the finest autumn days that ever thrilled a human soul, and it was a pleasure indeed to be in the woods. We hunted perseveringly during the entire day for the fourth deer, but it was too fine a day and the woods were too quiet for successfully still-hunting the wary creatures; and although we caught glimpses of several, we did not succeed in getting a shot at any of them. As our time was limited, we decided to break camp on the following morning, thus ending our deer hunt of 1895. F. D. H.

REEDSBURG, Wis.

Illinois Alligators.

JERSEYVILLE, Ill., Nov. 25.—*Editor Forest and Stream:* Last Wednesday, Nov. 20, William Parker, who is fishing at Hurricane Island, thirty-five miles above Grafton, on the Illinois River, found a 7ft. 'gator stranded on the bank of the river, so benumbed by the cold that it was unable to move. Parker approached the reptile, and finding that the 'gator made no objections, picked him up and took possession. The animal has since warmed up enough to move around, and is at present on exhibition in this city.

Various views as to this animal's origin are held, some thinking that it came up the Mississippi during some high water and has never been able to get back to that "Sunny South" that Mr. Hough writes so charmingly about. Other people think it an escaped captive from some museum; while there are other people who say that they believe it to have sprung spontaneously from Chicago River water under the influence of last summer's heat. What does Mr. Hough think of this theory?

Several years ago, while I was duck hunting with a party about ten miles above Hurricane Island, Moses Collenberger and Doug. Miller came into camp reporting that they had seen two alligators in the backwater, one 10, the other 12ft. long; and when asked why they had not brought them to camp Collenberger laid all the blame upon Miller, saying that he had begged to be excused from any attempt at capturing them. Of course the rest of the party made light of the story and laid it to mental derangement, sunstroke or snakebite. But now we are happy to state that their records as truthful duck hunters are established.

This last 'gator will probably keep all the small boys from swimming in the Illinois—from now until next spring, any way. L. S. HANSELL.

Tennessee Game.

GIBSON WELLS, Tenn.—In this section of west Tennessee I believe the quail crop is fully up to the average. In going over my preserve, which I have increased to something over 5,000 acres, I find signs in all likely places and a good many coveys. In all my experience I have never, as a rule, seen coveys so large as this year. The last time out I found six coveys in a two and a half hours' hunt, and the average would be twenty-five birds. The dry weather has had a great deal to do with not finding birds. A soaking rain here yesterday has fixed the grounds all right for good work from our dogs, and I think, as friend Titus says, sportsmen will find with weather conditions favorable that the crop of '95 and '96 is fully up to the average. R. B. MORGAN.

Natural History.

WOODCOCK, AMERICAN AND EUROPEAN.

OSCEOLA MILLS, Pa., Nov. 25.—*Editor Forest and Stream:* I killed a woodcock this season which was the largest I have ever seen. It weighed 14½ oz. Is this large for any other section of country? I have read the FOREST AND STREAM for ten years. E. C. B.

We believe that there never was an American woodcock (*Philohela minor*) which weighed 14½ ounces, and the one mentioned by our correspondent was unquestionably a European immigrant. The American bird is only about one-half the size of the foreign one, and while, in a general way, the colors are the same, they are very differently applied, as will be seen by an examination of the two cuts herewith presented, which are taken from Elliott's "North American Shore Birds," and for the use of which we have to thank the publisher, Mr. Francis P. Harper, of this city.

Both European and American woodcock have a ground color of rufous, reddish or rusty, and the markings are black and ash, with a little white. The American bird is so familiar to our readers that no description of it is needed, but we may quote from Mr. Elliott a description of the adult of the bird of Europe.

"Anterior portion of crown and forehead, buff gray with narrow central dark brown lines; remainder of crown and nape, black, crossed by four narrow buff or pale rusty lines; a conspicuous dark brown line from nape to eye; chin and throat white, spotted with brown; neck all around buff, crossed with fine dark brown lines; upper parts reddish chestnut, vermiculated with buffy spots and brown lines, and blotched on the back and scapulars with black, the latter as well as the back mixed with light grayish; rump, reddish brown barred narrowly with black; the upper tail coverts tipped with gray or buff; tail black, margined on outer edge with chestnut and tipped with grayish buff on the upper surface, and with silver white on the lower; entire under parts grayish buff, narrowly barred with brown; primaries dark brown, transversely banded with cinnamon on the outer webs; bill flesh color graduating into brown for the terminal third; legs and feet flesh color; iris hazel; length 13½ inches, wing 8, culmen 3½, tarsus 1½."

AMERICAN WOODCOCK.
From Elliot's "American Shore Birds."

EUROPEAN WOODCOCK.
From Elliot's "American Shore Birds."

The European woodcock has a wide distribution in the old world, being found in suitable localities from the Atlantic to the Pacific Ocean, and from the Arctic circle to the Mediterranean. In habits it is not markedly different from its American cousin, but it is said to be inferior to the American species in gastronomic qualities. Many specimens of the bird have been taken in America, and it is desirable that whenever one is taken its capture should be recorded and the skin, if practicable, preserved. Can our correspondent tell us if he noticed anything peculiar about his capture?

A Pennsylvania Wild Pigeon.

PHILADELPHIA, Nov. 30.—*Editor Forest and Stream:* Thinking the following account might be of interest to your readers, although I have delayed sending it until now, I hope it will not prove too late.

While ruffed grouse shooting in Monroe county, Pa., near the Pike county line on Oct. 25, my brother had the good fortune to kill a genuine wild pigeon, a single specimen which he saw in an oak tree, to which it had flown from the ground near the roadway. This bird is the only pigeon I have ever had the good fortune to see that had been recently shot. It was in fine condition and plumage, and has been mounted. The residents of the surrounding country who saw it said that it was the first one that had been seen or heard of in the neighborhood in the past ten or fifteen years. EDWARD NORRIS.

The Linnæan Society of New York.

REGULAR meetings of the Society will be held at the American Museum of Natural History, Seventy-seventh street and Eighth avenue, on Tuesday evenings, Dec. 10 and 24, at 8 o'clock. Dec. 10—L. B. Bishop, "A Day in North Dakota." Herbert Wheaton Congdon, "Random Notes on some Birds seen between Scotland and Iceland during August, 1895." Henry Hales, "Tameness and Domestication." Arthur H. Howell, "Impressions of some of the Birds of the Northwest, with remarks on their Distribution." Dec. 24—Raymond L. Ditmars, "The Snakes found within fifty miles of New York City."

American Museum of Natural History.

MAMMOTH TEETH UNEARTHED.

Mr. Nace Brock has shown us two huge teeth which were dug out of a canal on Mr. Cad Koonce's land near Richlands, Onslow county, at a depth of 6ft. The teeth are adjudged to have belonged either to a mastodon or a megatherium, both of which animals are accounted by scientists to have existed ages before man, the former in highlands, the latter in lowlands. The mastodon was somewhat the larger of the two, but the megatherium had the greatest length. He was about 30ft. long, and by raising himself up and resting his front feet on tree limbs or other support he could graze upon the tops of moderate-sized trees. It is to this latter animal that Prof. Charles Hallock, who has seen skeletons of each, supposes the teeth to have belonged.

Each tooth has two deep indentures on top in one direction, and a cross central one the other way. These give the top of the tooth somewhat the appearance of three rows of saw teeth with two teeth to the row.

They measure about 6in. from the crown to the end of the roots and they measure 6in. across in one direction and 4in. in the other. One tooth is nearly entire—only a small part of the roots having been broken off; the other is simply the upper half; the tooth that is entire weighs 3lbs.

Some bones, seemingly remains of the animal to which the teeth belonged, were found also, but they were too decayed and crumbly to amount to much.

Mr. Hallock informs us that about fifty varieties of animal remains—some of extinct species and some of species still extant—can be found in the great South Carolina phosphate beds. The immense accumulations are accounted for by scientific men in this way: They say there were great floods which drowned out the animals and the currents swept the great proportion of them to the places where the immense deposits are found, while here and there an animal or two would be caught and its remains left elsewhere, as in the case of this solitary animal now found in Onslow county.

Mr. Hallock gives us the following as to the origin of such deposits and the extinction of certain species:

"Historical geology might inform us that once upon a time, during the early part of the Cenozoic age, in the period termed tertiary, a mighty flood from which there was no escape submerged nearly the whole continent, as it now sometimes does portions of the Mississippi Valley, and involved these innumerable creatures in one common destruction. Then did the overwhelming downpour of rain beat the helpless fowls to the earth. It drowned out the amphibious animals and reptiles, the alligators, the turtles, the tapirs, the manatees, the saurians and the megatheria which occupied the low-lying swamps and lagoons. And the mighty current which surged toward the sea bore upon its turbulent tide the dead bodies of the animals which had been drowned in the uplands and carried them coastward until a sudden subsidence of the waters left them floating among the carcasses which already polluted the lagoons and basins along the shore. Meanwhile sharks and other rapacious fishes, which had been attracted to the carnival of decaying flesh, were impounded in the basins by the receding flood, and so also miserably perished.

"Here, in the still and stagnating waters, the processes of decomposition and sedimentary deposit went steadily on. The drift of other partial floods which succeeded gradually covered them. Silt, till, vegetable mold, and all kinds of organic matter accumulated, including the decayed portions of the carcasses, and finally the lagoons filled up, the water evaporated or ran off, the land emerged or rather was raised by alluvial deposits carried from higher regions, plants and trees germinated, grew and matured, and so by natural and intelligible processes the phosphate beds were formed. Portions of the bones and pachyderm did not decay, but became preserved or petrified. In the aggregate no better material for a compost heap could be gotten together.

"These phosphate beds, therefore, are the records of the second great submergence of the continent, the first having taken place during the first glacial period, when there was no animal life. The partial submergences or lesser floods which occurred subsequently added to the depth of the deposits and to the assortment of animal remains, thus accounting for remains of extinct and extant creatures being found together. But it was during the great submergence that many of the now extinct animals disappeared."

Deer Horns, Velvet and Trees.

Editor Forest and Stream:

I fully agree with Mr. Wilmot that the Virginia deer at least do not find it necessary, neither do they get rid of the velvety covering of the antlers by rubbing them on trees and bushes.

Like the leaf on the tree, it will fall when it has fulfilled its function without any effort on the part of the deer. The velvety skin covering the antlers during their period of growth is thin and tender, possessing none of the qualities of the true skin of the animal, but like the epidermis or grain which the tanner scrapes off the skin before tanning. So when it is no longer needed and the circulation ceases it becomes dry, shrinks and as a consequence cracks, becomes loose from the horn and falls off without any rubbing. I have lived among the deer in the Adirondacks all my life and have killed more or less every year for the past fifty years. I have never seen where bucks have marked trees or bushes with their horns until some time after the period for shedding the velvet covering. I have seen no markings before October. This habit is most prevalent as the rutting season approaches, and during the forepart of that period bucks will paw the ground and rub trees with their horns more than at any other time. Musset.

Adirondacks.

Editor Forest and Stream:

Mr. Lew Wilmot still adheres to his theory that deer are not in the habit of getting rid of the so-called velvet on their antlers by rubbing them against brushes and young trees. He further asserts that the velvety covering is never fast to the horns. Again he is in error. I have a pair of antlers mounted in my room which were taken from a stag I shot during the time the antlers were still covered with bast some fifteen years ago. They are today in the same condition as the day the stag was shot and the covering on them shows no signs of "peeling" off. It still sticks fast to the antlers.

Brehm's "Illustrirtes Thierleben"—Illustrated Animal Kingdom—says on the subject here at issue: "As soon as the antlers have attained their full development and regular size the blood ceases to circulate in the velvety covering, and the stag has the desire to get rid of this skin or bast, which now becomes loose by rubbing the antlers against young trees or brushes. As a rule antlers grow 120 days, that is the velvety covering sticks to them for a period of forty days after they have assumed their regular formation, and during this last named time the antlers appear to be very sensitive, since stags are then particularly cautious not to injure their horns. The stag does not commence to 'feg' (the German sportsmen's term for rubbing) until twenty days afterward, or when the covering shows a tendency to peel off. Antlers of the same species of stags vary in color. This is due to the difference in the sap of the particular trees or brushes against which the antlers were rubbed." Armin Tenner.

How a Snake Sheds its Skin.

Dublin, Va., Nov. 20.—The letter in your paper from J. W. Schooley, of East Radford, Va., in reference to his rattlesnake reminds me of one I possessed at the same time. My rattler was very savage, never becoming tractable as with Mr. Schooley's. The general impression with most people is that the shedding process comes on when the skin becomes loose and the snake crawls out and leaves the skin on the ground as it was. This was not the case with my snake. The day before he was apparently as lively and his skin as perfect as usual, but when I saw him the next morning he had only half shed his skin, the rest being turned back, wrong side out, as if a bag was turned. He accomplished it by twisting and turning the body. When he had the skin turned down to his rattles it seemed to hang for some hours, thereby hiding the rattles from view. J. D. S.

Breeding of Wapiti in England.

It may interest some of your readers to learn that one of the wapiti that Sir Peter Walker imported from America two years ago gave birth to a fine calf last week at Osmaston Manor.—*Correspondence London Field, Nov. 23.*

Game Bag and Gun.

A STORY OF DEER HOUNDING.

The scene of this narrative is in the extreme northern part of New Hampshire, among the spurs of the White Mountains. Two beautiful ponds located there are well known to all New England sportsmen and tourists, as they afford excellent trout fishing and are surrounded by woods which are the haunts of deer. During the summer months the place is one of the most peaceful and quiet on the face of the earth and is visited principally by gentlemen and their families who are fond of "the happy practice of angling." At this time also deer hunting is unlawful, and the deer not being molested become quite tame, and are often seen during the day feeding on the lily-pads which grow near the water's edge. Hunting begins Sept. 1 with guns and Sept. 15 with dogs, and in both cases lasts until the end of December.

I was at this place recently on the opening of the "hunting" season, and remained a day or so for partridge shooting, and it was during one of those few days that the events recorded here occurred. This was the first deer hunt I ever saw, though not the first deer.

There are several ways of capturing this noble animal—some lawful, civilly and morally; others decidedly unlawful in every sense of the word. Crust-hunting I hold as unlawful; this consists in following the deer when he can make no progress through the deep snows, while you are aided by snowshoes.

Jacking is better than crust-hunting; still, it is not a very honorable way of killing a deer. The bullseye lantern takes advantage of the curiosity in a deer and holds him spell-bound as long as you do not make a noise and frighten him. In this mode of killing the hunter must be skillful in the management of a canoe, so as to make the least possible noise; he must exercise patience and be on the alert to catch every sound, for it often happens that the deer is in the woods ready to enter the pond to feed, and will come out to view the light if all is still; and finally the hunter must be able to shoot under a jack light, if called upon. This latter is not an easy task, as the dim light is deceptive. A guide—and good authority—once told me that about nine-tenths of the deer shot at under a jack escaped to the woods more or less wounded. The only true, manly, creditable way is to steal upon him in the woods when there is little or no snow upon the ground. This puts hunter and deer upon equal footing. The one depends on his intellect, good judgment and skill to overcome the instinct and acute sense of the other. The manner of hunting described here is termed "hounding," or driving with dogs.

On the day in question the weather was clear and the temperature warm for the latitude. Several parties had arrived in camp the preceding day, among them a party from Lancaster, N. H., who were the institutors of the hunt. The proprietor had secured a trained dog for the occasion. The men had been inquisitively eyeing the weather and were elated with the prospects of a good hunt. They had handled and patted the dog, looked at him, remarked on his build, questioned whether he would follow a deer well, etc. They had cleaned well their firearms, carefully selected their ammunition and one or two were regulating their rifle sights by an occasional shot at a target.

The guide was to take the hound up on a distant mountain and loose him there on a fresh track, while the party were to distribute themselves on the shore of the two ponds. Some remained on the little pond where the camp was situated, but the majority took to the big pond. The hunt happening to take place on that day at the big pond, we will leave those on the little pond full of the hope that the deer would give the big pond the go-by and come in by them.

Some of the hunters at the big pond went over to the cove, some to the upper end, others to outlet or inlet, each of them thinking that the others were fools who knew nothing about deer hunting, and that the deer would certainly come in where he was. In the meantime the deer was still in the woods and undecided as to where he would enter.

An hour passed before the long-drawn bay of the hound was heard, showing that a deer was up and moving, whether toward the pond or up to Connecticut Lake they did not know, but were nevertheless expectant and wishing that the dog would drive him to them. Now the dog can drive the deer and that is all. Whether he will drive him to the pond or not depends on the deer.

As soon as the dog gives bay the deer is up and off; he knows by instinct what that sound means; his ancestors were chased by wolves, a far more tireless and dangerous enemy than the dog, and his nature tells him that he must run for his life. He starts off, relying on his legs for security, and runs for many miles down through valleys or up over mountains, leaping brooks or bays, or whatever obstacles are in his way, but the dog draws nearer, as he knows too well by the occasional bay. The deer is by no means weary yet and keeps on, hoping to tire his pursuer, but he cannot; another bay and another tells him that the dog is gaining. He makes another break and goes at his topmost speed down the mountain side to the pond, where he will run into a new danger. If he can reach the pond and cross before the dog strikes the shore and sees him get out on the other side, the scent will be destroyed and it will be a long time before the dog can take it up again, if he ever does find it, and the deer will gain a good start and perhaps time for a rest.

He is nearing the water, but some of the so-called sportsmen have been over-indulgent with their whisky and are trying their guns on some muskrats. This is enough for the deer; his scheme has failed, so he starts down the outlet of the pond for a new run—he knows not where or for how long. The dog follows the track down the mountain side to the lake; he is thirsty and perhaps a little tired, so he comes into the water for a drink and a moment's rest before starting off again.

The guide starts the dog on a new trail, for he knows full well that that deer will take to other waters. A fresh trail is again successfully struck, and the dog bays aloud. This deer is started near the pond, and it is not probable that he will take to water until he has tested the running and scenting powers of the dog. He starts for the north toward Connecticut Lake and runs for about half an hour, and then returns to the pond, to use the last resort swimming the lake. The hound has been gaining and he must destroy his trail. He pauses in the woods on the edge of the pond and looks over the water. All is still. The hunters are concealed among the bushes eagerly waiting for the appearance of the buck, for the dog's bay has told them that the deer is near the water.

The deer breaks cover and plunges well into the water, dashing up the spray before him; he swims out a short distance and will return to shore again at another point, but he has been discovered, and with the crack of a rifle a bullet passes through his ear. This is shown by the spasmodic shake of the head. Bewildered, he turns for the nearest shore, but another ball from the same rifle breaks his lower jaw, making it drop helpless and useless forever afterward. He rears well up out of the water from the effects of the pain.

By this time the other boats have come up for a share of the "sport," and there is a general fusillade from seven or eight men. The exposed part of the deer's head and neck are the targets. The strife does not last long, however, for a well-directed ball from a Winchester rolls him over dead. His course is run; he obeyed his instincts and did his best, but the odds were against him.

The boats now gather around and he is taken aboard and to shore. The hunters are triumphant. During the excitement they forgot the cruelty of the operation and called it sport. Perhaps it was to those who were intoxicated with the excitement which prevailed, but not to the deer. They were not skilled in the use of firearms and could claim no praise from that source, for they threw aside all caution and reason, and came very near shooting each other. Each one thought only of himself and glory, thus showing a high degree of selfishness. All of them could not lay claim to glory, only one, and his claim was not a creditable one, as it was afterward found that the death-dealing bullet from the Winchester was the last of thirteen shots that had been fired at the deer by the same person.

The dog arrived at the water's edge right in the marks of the deer and gave a long-drawn howl of disappointment. He gladly joins his party, for he is tired, and is surprised to find his quarry slain. When the party returned to camp they were welcomed by the others, who helped to carry the buck. He was laid on the grass to be admired, and well was he worth it, more so than his cruel slayers. If these men had, by some skill or ingenuity on their part, obtained the deer, then give them credit; but they had not. They had sent the dog out to do the work, well knowing that the deer would come into the water and be at their mercy. Instead of waiting in the woods and shooting him on the run, they wait until he gets well out into the water and then row up as close as they please before they shoot.

The men stood around with an air of having accomplished a great feat. Each told of what he had done toward the killing. They bragged and boasted, but in all the tales told over the body of that deer there was not one which showed either gallantry, skill, credit or humanity. One man stated that now as he had killed a deer he felt like going to war.

But how about the dog, to whom they owed all their reason for boasting? Where did his share of the credit come in? He had been running for miles the whole time that they were resting easily in their boats. The marvelous powers and sagacity of the dog had been severely tried and had borne the test. He, in obedience to his instincts, had successfully accomplished the work set before him, and amidst all this triumph and proclamation of glory he modestly takes a back seat, well knowing that he did it and not they. The very expression on his face is one of well-deserved pride for himself and disdain for those around him. C. B. S.

Game Laws in Brief.

The *Game Laws in Brief*, current edition, sold everywhere, has new game and fish laws for more than thirty of the States. It covers the entire country, is carefully prepared, and gives all that shooters and anglers require. See advertisement.

The Forest and Stream is put to press each week on Tuesday Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

NORTHERN MINNESOTA GAME NOTES.

Editor Forest and Stream:

Now that it is the close season on grouse and deer and all foreign hunters have gone home, some elated over their success, others feeling blue over failure, and the woods are quiet, I find time to give brother sportsmen the result of the game campaign in this (Aitkin) county. Visiting sportsmen by the score have made this point their rendezvous, prominent among them being George P. Garred, editor of the Wahpeton (N. D.) *Times;* Charles E. Wolfe, a prominent young lawyer of the same place; George W. Ferris, of Independence, Iowa, and a company of Uncle Sam's boys in blue from Fort Snelling. The latter brought with them the new 30cal. rifle furnished to the army but recently, and expected to do wonderful execution with this terrible new arm. As a perforator of the human anatomy the new Government gun may be a success, but as a gun for deer it is a failure, as the soldiers quickly learned after the first day's use. It is a crime worse than poaching to use such an arm on deer. Perforating them only results in the game getting away without leaving a bloody trail for tracking, and causing internal hemorrhage and the total loss of the animal. These boys finally got possession of .45-70 Winchesters and went home—with some venison as a result.

Minnesota's new game law has worked wonderfully well this fall. But few infractions have come to my personal notice. As it now stands only enough deer are killed for practical use, and there has not been any shipped from Aitkin station except legally, whereas last fall there were tons of saddles shipped. St. Paul and Minneapolis commission men have tried every possible means to dodge the issue and get game shipped to their houses, but they have been met at every turn by the State Game Commission, and next year the people will know exactly what to expect. One trader living at Sandy Lake brought upwards of 500lbs. of saddles to Aitkin Saturday last and endeavored to sell them to local merchants, not being able to induce Agent Rice of the Northern Pacific to aid him in shipping the meat. At last accounts this individual was sputtering around "dot tam law vot prevents him selling his deer." Dear me, but I sympathize with him. It means the loss of twenty-five dollars to the trader—but the knowledge he gained about the State game law will offset this loss and he will never feel it a hundred years hence. One thing more I noticed is the respect the Indians have for the law. The untutored sons of the forest were daily heard to inquire about the game law. They have not been in with any deer to speak of, preferring to keep it for their own needs, as it was only worth seven cents in trade. They have sold considerable quantities of duck and partridge, invariably taking in exchange such commodities as coffee, tobacco and wearing apparel.

Minnesota sportsmen are all keen to learn the result of the controversy between Executive Agent Fullerton and editor E. C. Kiley, of the Grand Rapids *Herald*, who charges Fullerton and his men with "standing in" with law breakers, especially taxidermists at La Prairie. Fullerton has threatened to sue editor Kiley for criminal libel, but so far the tilt has only assumed a miniature bluff. The row is over the moose head found consigned to a prominent New York journalist and captured by a deputy at St. Paul. Mr. B. N. Austin, Asst. Gen. Pass. Agt. of the Northern Pacific Railway, St. Paul, recently returned from an outing in the West, and returned with a fine five prong buck as a trophy of his season's recreation in California. He is having the buck mounted by a noted taxidermist.

Whitefish are beginning to run here in small streams, and though they make fine fish to salt are not taken in any quantity. F. J. SMITH.

AITKIN, Minn.

"STOP THE SALE OF GAME."

AND would you stop the sale of game, Mr. Editor?

What would I and the likes of me do then, Mr. Editor?

Can I never have a taste of a partridge any more because I cannot shoot him myself?

Or any black duck?

Nor a bit of caribou steak?

Why, I should hardly have eaten a bit of game in my life if the sale had been forbidden. Even when I was young and comparatively sprightly I couldn't hit the side of a hill with a double-barreled shotgun.

What kind of a chance would I have had of taking off the head of a partridge with a rifle or of stopping one on the wing with shot? And I know about the hillside business, because I shot at one once and missed it. It was black with wild pigeons, but not a bird did I get. The fellows said one charge of shot went clean over the top of the hill and the other struck the ground about 10ft. ahead of me.

So I don't think I could hit a partridge. And if I couldn't buy any game what would my little man Matte do?

Matte has supplied me with partridges to the extent of one or two couples a week during the season for several years, and as he is about the only sportsman here who makes a specialty of partridges, and as I am his principal purchaser, the non-sale of game would be rough on both of us.

But then, perhaps Matte is not a sportsman at all, but only a pot hunter, not entitled to consideration anyway.

The going shooting he does for sport, but the bringing the game to me he does for economy. For one pound of partridge he can get two pounds of pork, which are four times as useful to him and which he greatly prefers. But he does sell his game and I suppose that settles it.

Personally I shall give him the benefit of any possible doubt. He is a decent, honest fellow, who only hunts at odd times or when his regular work is slack, never shoots out of season or tries to get the last bird in the bush. If he shot altogether for fun we should have to call him a sportsman, and must we speak disrespectfully of him because he can't afford to do it?

He did turn up once as a sportsman. It was last winter, when he tackled and killed his first caribou, all alone. A prouder and happier fellow you never saw. I happened to be near at the time with a couple of young men from Boston, and I think we were as pleased at Matte's success as if it had been our own. Perhaps the fact that we had already secured two made some difference in our feelings, but I hope not too much.

So far as pot-hunted game is concerned, I fare better in the caribou department than I do in the partridge line, I have some fishing camps that I let the boys have for their hunting trips, and as they always insist that I shall go with them I invariably come in for a haunch or a saddle. But the chaps that shoot partridges are not disposed to divvy with me.

I confess I don't like the market shooters who go in to shoot anything and everything they can get sight of, and would clean the last bird or beast out of the woods, but I do like to have one hunter like Matte in the neighborhood, so that I and my family may have a bit of game once in a while. There is another man who brings me a pair of nice ducks occasionally under the same conditions. They are delicious and I enjoy them, although I cannot go and shoot them myself.

We cannot all be young and vigorous sportsmen—nor even millionaires.

But perhaps you have abandoned that war cry that I placed at the head of my letter. I do not remember to have noticed it lately, and I read FOREST AND STREAM through faithfully—except the gun editor's section, which I cannot understand. G. DE MONTAUBAN.

PROVINCE OF QUEBEC, November.

WHY IS IT THUS?

Editor Forest and Stream:

I have often wondered why it is that sportsmen who relate their experiences in the great New York dailies can and do achieve so much more in the line of wonderful deeds by flood and field than the many famous sportsmen who from time to time give to the readers of FOREST AND STREAM details of their modest achievements. True, your paper once in a while gets two deer at a single shot; occasionally one is killed in the pages of FOREST AND STREAM with bird shot, but such occurrences are rare, while on the pages of the aforesaid g. N. Y. ds. they are too common to deserve more than a passing notice. The game animals also that show up on the pages of FOREST AND STREAM are quite as modest and well behaved as the men who hunt them; the moose rarely kill the lumbermen's horses or chase the lumbermen up trees; the deer don't tear down fences, hook sheep or worry the farmers' cattle, don't even destroy cabbage (*vide* FOREST AND STREAM of Nov. 23); even the bears refuse to eat little children, and are positively averse to masticating old and tough yarn spinning hunters. I was most forcibly reminded of this curious state of affairs by reading a two-column article that appeared in a recent issue of one of the g. N. Y. ds. relative to the exploits of a mighty hunter, who while on a short trip to the Maine woods slew one of those ferocious, horse killing, man treeing moose, and sad to relate, doubly sad because the game protector failed to get in his work, eight deer. All this in a few short days in October, and one shudders to think of what such a mighty hunter might have done in a month of long days, say June, for instance, when the poor deer are driven to escape the flies into the lakes and streams. Two pictures accompany the record of this most remarkable "game hog," one of which, from a photograph presumably, is a wonderful revelation of the buoyancy of Maine timbers. Some half a dozen logs about 10ft. long carry, without being half submerged, two men and the monster moose, a monster indeed, "18in. between the eyes," at least so the moose slayer says through the medium of the g. N. Y. d.

The sportsman during the progress of killing his moose tried several experiments. He first shot him through the "fan of the horn," and failing to kill, he next—I use his own language—"began shooting him in the belly" and then pumped lead "into his haunch," and told his men, three or more, to shoot, which they presumably did. Whether the wounds inflicted by "my men" or those in the horn, belly and haunch stopped the earthly career of the moose, the g. N. Y. d. does not inform us, but finally states that the moose was killed.

I trust, however, that the hunter will tell us why he killed, including the two killed at one shot, four times the number of deer allowed under the provisions of the Maine game laws. Possibly he was like the fellow who, when arrested for assault, pleaded that he had such a fair crack at his victim that he "just couldn't help it." Possibly he did not kill any deer. Who knows? We are told, however, through the medium of the g. N. Y. d., that our hunter when he first sighted his moose hesitated to shoot, fearing it might be a cow moose; and as there was a fine of several hundred dollars for killing cows, he "did not care to break the laws that are meant to preserve game." This he tells us after having killed eight deer in less than a week. In the language of Mr. Squeers, "Here's richness for you." Again I ask: Why is it thus? S.

BOSTON MEN NORTH AND SOUTH.

QUAIL shooting in North Carolina and Tennessee is looked forward to as a winter sport with very pleasant anticipation by many of our best Boston sportsmen. Mr. Louis Cabot has an extensive estate in North Carolina which provides good shooting, and he generally spends the early winter months in that interesting region. F. E. Peabody has left for a few weeks of quail shooting in the same State. A Brockton friend (Mr. Shaw) has just returned from Tennessee, and tells me of two days' quail shooting down there during which he bagged sixty-four birds. He calls it an easy country to shoot over, and hopes to repeat the experience soon.

The recent heavy storms along the coast have driven in a large number of birds, principally coot, although a number of sheldrakes and brant are found among them. Mr. J. C. Caswell, of Boston, has gone down to Chatham, having heard from there that the birds are very plentiful. Many are also going down to the Cohasset shore. A letter from a friend states that black ducks and geese are flying near Weymouth. The recent warm weather has made these late flights possible, but the season is practically over, and with the advent of solid winter weather—liable now any day—the shooting will come to a sudden stop.

The smelt are now getting out into the channels in deep water and nearly all the fishing from the shore has come to a stop. The city of Salem has one resident though who keeps on fishing just as long as there is a smelt to take his bait. E. S. Thayer is the man. Most of his fishing is done by lantern light at night from his own wharf. He goes out heavily clad to stand the cold weather and fishes late into the night. Fishing under any circumstances is good sport for Mr. Thayer, and even now he is generally successful in getting a good string.

The country around Chase Pond, six miles in from Eustis, Maine, on the Chain of Ponds road, is said to be of a peculiarly happy formation for the hunting of deer. It abounds in rocky ledges on which are many bare spots, and often the game is found at a decided disadvantage, making it an easy matter to get a good shot. Two parties who returned from there, but a short time ago, each got their full legal allowance of deer, and they all speak

THE BUCK THAT GOT AWAY.

Drawn by Ernest Thompson. Reprinted by request of a correspondent who claims to have lost one just like it.

highly of the region. Fred M. Viles, the popular ex-steward of the Megantic Club, has three snug log cabins there, making quite a camp, where those who have visited the place have been made comfortable indeed. HACKLE.

Nov. 29.—C. P. Stevens and F. H. Stevens, both of Boston, are out of the Maine woods after a deer hunt of seventeen days. They were in the vicinity of Kennebago Stream, at Lowell's camp. They were after deer and both wanted bucks with good heads. They waited ten days for snow. At last snow came on Wednesday night. But it was a peculiar snow. Every twig was loaded with snow and every bough bore roses of snow. Around the branches snow hung in balls. It was next to impossible to move without showering down volumes of damp snow, and though the sight of the woods was beautiful in the extreme, yet one could distinguish objects only a few feet. In such hunting as this they got their deer. Both are of the opinion that still-hunting deer without snow is exceedingly difficult. Not a bit of venison did they have in camp till they had killed it. They took in no fresh meat, fully expecting to kill venison the first day.

Mr. Patterson, of Patterson Brothers, has been down South on a quail shoot. He had his usual good sport. C. P. Jones secured several partridges Thanksgiving in Reading. He says that the birds are remarkably shy.

SPECIAL.

THE YELLOWSTONE PARK.

From the annual report of Capt. George S. Anderson Acting Superintendent.

Protection of Forests.

I have heretofore gone into the subject of protection of forests at such length as to leave but little to say this time. Last season was noted for the frequency of light rains, which no doubt aided in the prevention of fires. I have once more to report that none of any material consequence occurred during the entire year. I have, therefore, but the one serious fire of July, 1893, to report as occurring since my arrival, and that one I find upon careful examination to have been much less extensive than previously reported. The system of daily patrols from my numerous outposts has done much to prevent fires. My rule is to have a man start every morning from each of these stations, carrying with him a bucket and a shovel with which to thoroughly extinguish any smoldering embers that may be found in the abandoned camps of tourists. These patrols continue on their way until they meet similar patrols from the neighboring station, when, after a short halt, they retrace their steps in the afternoon to their own proper home. In this way many serious fires are undoubtedly prevented, and to the thoroughness of the system I feel sure most of the good results are due. Whenever camping parties, by their carelessness, leave fires which endanger the forests, arrests are promptly made and the parties brought into this station, where they are tried by the United States Commissioner for violation of the Park regulations. Convictions had are freely talked of among the tourists, with the result of making subsequent parties more careful. There have already been twelve convictions for violations of the law of May 7, 1894.

Outposts.

The work done by the patrols from the various outposts that I have established has continued to give the greatest satisfaction. The duty is hard, involving much riding in summer, exposure to heat and to cold, much snowshoe work in winter and the incurring of many dangers. I find the freedom and the ease of the life makes this duty very popular with the better class of soldiers, and I have no difficulty in obtaining from the best of men applications for this sort of service.

I have not established any new stations for summer service, but during last winter I added one, which was occupied by a sergeant and three men near the Mud Geyser. The object of this new station was the protection of the bison that winter in the Hayden Valley.

In my last report I noted the death of Private Mathews, of Troop D, Sixth Cavalry, while on detached service from the Riverside Station, going to the Lower Basin for the mail. A most thorough search for his remains was continued for at least six months after his disappearance. His body was found early in June of this year on the south side of the Gibbon River, about three miles from its junction with the Firehole. It was evident that he became lost, and while in that condition became crazed and perished from cold.

For this season's work I have been authorized to expend a portion of the appropriation for Park improvement in the employment of additional scouts. As soon as the poaching season fairly begins I will make such use of this fund as I feel sure will result in important captures, and a few convictions will have a most salutary effect upon game protection.

Roads.

Soon after my last report was rendered, the control and management of the road work were turned over to me by an order from the Secretary of War. It was then too late in the season to inaugurate any extensive system of road building. Repairs, resulting in material betterment, were, however, instituted. The arch bridge near the Upper Falls of the Yellowstone was completed, and the road at that point thus made passable for travel, but not before the end of the tourist season. The road at the foot of the Virginia Cascade, which had entirely washed out in the spring of last year, was put in a condition to withstand any rise in the water that the springtime might bring. About two miles of road in the Gibbon Cañon, which had so washed out as to be almost impassable, were put in a thorough state of repair. A mile of new road was built between here and Gardiner, replacing the old road, which was rendered impassable by the destruction of the bridge over the Gardiner River, about a mile and a half below here. By this new road the heavy grades of the old one are entirely avoided, and the experience of this season has shown that it is a much superior thoroughfare.

With the beginning of this season I began work in earnest on the road system. My first object was to put the roads in a thorough state of repair. To this end I made a liberal use of the road machine, filling up the ruts cut by heavy freight wagons in the wet and softened roadbed. Following these machines was a man who removed from the track all small stones which were found there, thus saving the jolt caused by them. This, in many places, at small expense, converted a very bad road into a good one.

A new road of full width and easy grades has been constructed down the brink of the Grand Cañon from a point over the Lower Falls to Inspiration Point. I have also had protecting rails put on both Point Lookout and Inspiration Point. The trails leading down to the Lower Falls have been improved, and the dangerous places guarded by hand rails. A new road has been finished from a point on the old road just south of the Alum Creek Bridge, passing around Sulphur Mountain, and joining the old road again near Antelope Creek. A roadway has been opened from the Lake Hotel to the Natural Bridge, so that it is now passable for light wagons. A crew has been working for about a week on the road which was projected along the shore of the lake, near the Thumb, but not heretofore completed. As about two miles of this part of the road is very heavy from the covering of loose beach sand, I shall have to surface it with some clayey material, which will not be an inexpensive piece of work. I hope, however, to have it completed within a few days. The road from the Old Faithful to the Upper Crossing of the Firehole has been remade, and a driveway to the Lone Star Geyser opened. I have also made a road passable from the Fountain Hotel around the Constant, or Black Warrior Geyser, and back by way of the Great Fountain. A bridge will soon be completed over the Firehole River just south of the Excelsior Geyser, permitting teams to cross the river at this point and join the direct road in the edge of the woods opposite. A bridge has also been constructed at the old ford near the mouth of the Gibbon Cañon. I have located a new road connecting a point on the old road at the top of the hill beyond the Gibbon Cañon with the same road on the flat about a mile north of the Firehole cottages. This road is already completed for more than half its length, and by Aug. 1 I hope to have it in use. I will also connect this road at its nearest point with the road down the Madison, at the junction of the Gibbon and the Firehole. The balance of this road down the Madison Cañon I shall survey this year, but will leave the construction of it for another season.

In a few days a surveying party will proceed down the Snake River to complete the roadway to Jackson Lake, begun two years ago. As soon as the surveying party can be spared from this last-named work it will be put to work locating the proposed road from the Grand Cañon to Yanceys, over Mt. Washburn.

When some of the crews now engaged in road repairs can be spared from that work I shall place them on the road near Cooke City, to open out and improve the road in that vicinity.

All of this work is done under the direction of the Secretary of War, but I embody a mention of it in this report in order that you may be informed of the progress made. Of one thing I feel certain, and that is, that the transfer of the road work from a non-resident officer to the acting superintendent resulted in a great saving of appropriation and in much improvement to the roads.

Fishing.

I have little to add to my previous reports on the subject of fishing in the Park. The enormous number taken here by all parties who take the time to cast a line surpasses all belief. The plants of trout put by the Fish Commission in the Gardiner and Willow Creek, in the Firehole and the Nez Perces, now furnish the rarest sport to those wishing to try the brook trout, the Loch Leven, or the Von Behr. The plant made by the Fish Commission in Shoshone Creek two years ago has prospered, and the stream is now filled with small ones. The only plant that does not seem to have succeeded is that of the rainbow trout in the Gibbon River, above Virginia Cascade. An occasional fish is seen in this part of the river, but they are nearly all large, indicating that for some cause or other they have not propagated satisfactorily.

The black bass sent out by the Commission in December, 1893, reached here at a time when the thermometer was 22° below zero. By the time they reached Norris they were apparently all dead, but they were thrown into the Gibbon River at that point. I have recent reports from a crew building a bridge over the Gibbon near the mouth of the cañon that several had been seen at that point. I had hoped that they were all dead, as it was not my desire to have them in streams where trout either were or might be planted.

The plant of bass promised for last year was not sent, but about ten days ago 500 were received at Cinnabar one morning at 11 o'clock, and before night I had them distributed in the lakes which were their destination, more than fifty miles distant from the point where they were received from the car. Every one of this number was healthy and in good condition, and I have strong hopes of soon adding bass fishing to the other pleasures of the Park tour

Prof. Jordan, who had already made several trips through the Park under the auspices of the Fish Commission, passed through last month as a tourist. He was much interested in the progress of the plant which he had been instrumental in making. He said that he believed the large number of trout taken in the Yellowstone Lake did no harm, and that those that remained were improved by it. The opinion of this high authority is conclusive as to the fact that there is no need of protection to fish in the lake and the waters of the Yellowstone. It has occurred to me that protection might be needed for those planted in the Gardiner and the Firehole. It is gratifying to note that they were more numerous this year than ever before in both these streams, but, inasmuch as the volume of tourist travel last year was small, perhaps some restrictive measures will be necessary in the future. I do not suggest a closed season, but rather that a regulation be made requiring all fish under a certain length to be returned to the stream. I suggest 6in. as a minimum length for any fish permitted to be taken in the streams so stocked. Of course the plant of bass will be protected until they have sufficiently increased in numbers to permit of their being taken without endangering their numbers.

Poaching.

The act of May 7, 1894, seems to have had a most healthy effect upon the poachers who surround and prey upon the Park. I believe that those of the north, the east and the south sides have nearly or quite ceased troubling it. I can not say as much as this for the Idaho border. There is a section of country beginning at Henry's Lake and extending south for about 25 miles inhabited by a merciless and persistent lot of head and skin hunters. In most civilized countries the occupation of such vandals as these is held in merited contempt, but it is not so in the region of which I have made mention. The laws of Idaho are extremely deficient in game protective measures. I believe it is a fact that the bison, now so nearly extinct, is not protected at all. So long as the only herd of wild bison now existing in the United States is on the border of this State, liable at any time to cross within its dominion, it would seem that the State would pass the laws necessary to protect them with the most vigorous of punishments. Extended inquiry into various rumors of the killing of bison, either in the Park near the Idaho line or across it within that State, has convinced me that this last remaining herd is in danger of extinction by these people of whom I have made mention. I have good evidence of the killing of at least ten less than two years ago near the State line, but probably outside the Park. This was prior to the passage of the protection act, which has nearly put an end to depredations within the Park. I have undoubted evidence of the capture of three calves this spring by a resident of Henry's Lake. He claims that this capture was made outside the Park. There are rumors of a herd of nearly one hundred having been seen in Idaho outside the Park within the last two or three months. The Park act can afford no protection to these animals after they cross its boundary. I trust every influence will be brought to bear to induce the Idaho authorities to pass a protective law, and to this end I will exert my best endeavor.

A single conviction of a poacher under the law of May 7, 1894, will act as a powerful deterrent on these criminals, and I have no donbt will go far toward settling the question of incursions by depredators for all time.

The only other way in which the Park is liable to be troubled by poachers is in the capture of the fur-bearing animals. It is so easy to place poison or set traps where the eye of the most expert scout cannot find them; it is so easy to pack the pelts out of the Park without detection, that it has seemed to me one of the most difficult problems that I have been called upon to handle. Of course the constant system of patrols has done much to enforce the law and the regulations on this subject, and I am pleased to state that the effect has been the best. Evidences multiply on all hands of the constant increase of all of these animals. Four years ago I considered the extinction of the beaver imminent. I now find them multiplied many fold in all of the suitable streams in the Park. Of course some of them fall a victim to the trappers who hang around the borders, but the large central area of the Park is as thoroughly protected as though poachers were non-existent.

The few elk, deer, antelope, bear, etc., that may fall victims to the hunter's rifle within the Park limits will not in any material sense diminish their numbers, and except as a matter of example it would not be worth the trouble of pursuing the poacher who confines his depredations to this kind of game.

Game.

Last winter there was less snow than ever before known within the Park. It was possible for the larger game, such as bison and elk, to pass at will over most parts of it during the entire winter. For that reason, perhaps, the bison that have heretofore wintered in the Hayden Valley were not massed there this year. The most seen there in a single bunch at any one time was about thirty. Small herds of from three or four to ten were seen in widely separated localities where they have not usually wintered. I feel sure that many of them did not leave their summer range along the Idaho line. How many of them may have been killed or captured I cannot determine, but I fear that their number has not increased, although I am still disposed to adhere to my estimate of last year that 200 still remain. There has been placed at my disposal by Prof. Langley, of the Smithsonian Institution, $3,000 with which to build an inclosure and provide food for so many as can be driven within it during the coming winter. If this plan should succeed we will be able to retain a small herd and keep them nearly in a state of nature. I hope to have this inclosure built by the middle of September.

On account of the mildness of the winter and the early disappearance of the snow it was a particularly favorable season for the rearing of young, and all of the wild animals seen this spring are accompanied by an exceptional number of vigorous and healthy offspring.

From reports received from the station on Snake River, it seems that the moose in that region are rapidly increasing. I have no doubt they are thoroughly protected, and in time will form an important element among the game preserved within the Park.

Of the mountain sheep I have nothing new to report. Their summer habitat is not within my observation, but the usual herds wintered on Mount Everts and were seen almost daily by travelers on the road between here and Gardiner.

The elk have quite held their own or increased in numbers, and have been seen almost daily by tourists up to the present date. They exist within the Park in such great numbers that the question of their preservation is not one that causes any concern. A succession of open winters like the last would possibly make them more numerous than the food supply could well support. That they breed and winter within the Park and wander outside of it to furnish sport for hunters is not an evil, and is perhaps one of the very excuses for game protection within its limits.

The antelope have increased very materially. Certainly 800 of them wintered on the flat this side of the town of Gardiner, where this most shy of all wild animals became nearly as tame as domestic cattle.

The deer seem to have increased more rapidly than any other variety of game. I have seen within the last twelve months double the number that I have ever before seen in a similar period. During the winter and the early spring they wander unterrified over the grassy slopes at this point and pass within a few feet of the houses and barracks, exposed to the gaze of the officers and soldiers, without exhibiting the slightest fear.

Bears are as plentiful and tame as ever, visiting most of the hotels nightly, where they are a source of amusement and entertainment to the tourists. Although they have increased notably, I do not think it is desirable to diminish their numbers. They are not dangerous to human life, and the Park can well spare whatever of the other game they may consume for their sustenance.

The only contributions made to the National Zoölogical Park at Washington last year were ten beaver, a few of the smaller animals, and some birds. This was, of course, largely due to the fact that I was uncertain as to whether I would be permitted under the new law to capture and ship them. An affirmative decision on this point came too late in the season to be of any value, for the young were then too large to be captured. I am arranging to make some captures for shipment this autumn.

Geysers.

I have had observations made on the eruptions of the geysers covering only such hours of the day as the men stationed thereat were on duty. Eruptions occurring during the night were, as a rule, not observed or included in the report I append for publication. A list of these observations was made last season and published in my last report with a view of counteracting the prevailing opinion that there is a general law of periodicity in their action. Old Faithful, which years ago was carefully observed during all of its eruptions for nearly a month, was found to have a nearly uniform interval of about sixty-eight minutes. It is probable that this interval has slightly increased, but that it is still measurably uniform from one eruption to the next is quite certain. The Fountain Geyser also has a fairly regular action with an interval of about five hours at the present time. This interval seems to be dependent somewhat upon the water-surface supply, being greater in dry months late in the season than in the spring when the supply of surface water is larger. A fairly regular interval has also been noted for the Great Fountain. At the present time its interval is about eight hours.

ADIRONDACK DEER HOUNDING.

Editor Forest and Stream:

Your correspondent, Mr. Allen, thinks because no starter or dog can steer a deer into any given lake, hounding is no more destructive than other methods of hunting. But how is it when there is a party of hunters at every lake and pond, as is the case during the hounding season? It makes little difference where a deer runs before the hound, in nine cases out of ten the deer is killed. This fall a party, at one little pond containing no more than forty acres, killed over twenty deer—the larger number being driven to the water by dogs belonging to other parties hunting in the vicinity. Another party killed thirteen deer, nine of which were driven by dogs not belonging to the party. And so it is all over the Adirondacks. Having the opportunity to observe the effects of hounding deer in all its phases, I am fully convinced that if hounding could be abolished at the expense of legalizing crusting and the killing of deer in the deep snows of winter, it would be an advanced step toward the protection of our Adirondack deer and the brutality no greater than when butchering them in the water.

MUSSET.

Editor Forest and Stream:

Of course a deer has a chance to escape when run by dogs. I know it and I don't believe that there is a dogger of deer but can tell of at least one deer having escaped. I'm right glad Mr. J. C. Allen has jumped on to those indiscreet writers who talk as if a deer had no chance to escape. Maybe half of them escape. It's possible, but I'd hate like sixty to swear to it. "Stray races are frequent," says Mr. Allen. The blamed deer have a way of going over into the other party's territory that is just fearfully provoking to a man who is after heads or meat.

I can believe Mr. Allen when he says he knew a dozen dogs backed by a dozen men to hunt one whole day without getting a deer to water, but it seems too good to be true. Were the dogs sick or pugs? Tell us all about it. Such instances should be marked with big letters and all the details told. They should be carefully studied and the whys of it understood. Why is it that the parties who hunted "for a week with dogs" and never downed a hoof haven't told of their wonderful experience?

RAYMOND S. SPEARS.

OREGON NOTES.

Ducks.

J. ROBERTS MEAD, F. T. Swift and Frank Hart killed 238 ducks, a Canada goose and a swan on Jewett's Lake, Sauvie's Island, yesterday. I saw them and they were a nice fat lot. At this rate of speed sportsmen will soon reach the other end, where there are no ducks. Truly, it makes my heart ache to view such slaughter; but the boys are cruel enough to suggest that it is a kind of death-bed repentance on my part.

Elk.

Captain W. J. Riley has just returned from his annual elk hunt. Every fall he takes a trip over into the Coast Range for elk and has never yet failed to get meat. This time he killed two magnificent elk, each carrying a fine set of antlers. He thinks that one of the elk was the largest he has ever seen. He also brought back some fine trout, caught in the Nasel River.

Turkeys.

Not wild turkeys, but the good old Thanksgiving kind are plentiful and the boys are having great fun at their shooting matches. And in this connection they tell a good one on H. T. Hudson. It is said that he went out to the turkey shoot at Riverside Inn with his .38-40 Marlin and used .44 S. & W. shells. George Norcross, the gunsmith, says that while the turkeys came out of the ordeal in good shape the gun didn't.

Live Decoys.

Here of late our sportsmen are using a great many live duck decoys. And now some fell disease is carrying them off as if stricken with the plague. The cause of the trouble is not known and the boys are in sore distress. Some think that the mortality may be accounted for in the lack of gravel on the grounds where they are kept. Others claim that it is from eating a kind of newt that abounds in those waters. At any rate the decoys are rapidly dying off and the boys are correspondingly unhappy.

Swans.

Speaking of live decoys reminds me of a little incident that occurred down at the Jewett the other day. The boys were shooting the "little rowdy." Hart was on one side with his live decoys, while Mead and Swift were on the other. A couple of swans came in over the heads of the latter and each picked his swan. Swift's bird was tipped and fell just across the lake among Hart's live decoys. When the decoys saw the monster descending upon them they all made for the shore. But one old hen was too fat to get out of the way and the boys had to send up to Jewett's for a spade with which to resurrect her.

Sirens.

There is considerable human nature about these live decoys. Nothing seems to please them more than luring their wild cousins to destruction. It sounds a little fishy, but it's a fact. After they get thoroughly educated they are very attentive to business, and will call themselves hoarse to get their brethren within range and never wink when the gun goes off.

Use for Carp.

You know that the carp have eaten up all our wapatoos, widgeon grass and other duck food, and ducks are not easily decoyed because they seem to know that there is nothing to eat. So the boys have to resort to all kinds of schemes to get the few ducks within range. An enterprising sportsman of my acquaintance has adopted a novel method. He first anchors his decoys and then takes a good strong hook and snell, inserts the hook through the carp's dorsal fin, ties the loop on the snell to the decoy and turns the business loose. The carp keep the decoys in constant motion, occasionally causing them to dive, and wild ducks seem to imagine that the decoy ducks have struck a fine lot of food. S. H. GREENE.

PORTLAND, Ore., Nov. 25.

QUAIL IN SOUTHERN CALIFORNIA.

NORTH ONTARIO, Cal., Nov. 16.—As our summers are always dry, that would cut but little figure in the matter were it not for the grass fires, which, in my opinion, destroy more nests and very young birds than almost any other cause. The past summer has been very favorable and the crop of birds promised to be one of the best for years, and were the game laws enforced no doubt it would have more than fulfilled our expectations. Bad as matters are in this respect, there are still a goodly number of birds.

The last Legislature made a move in the right direction by shortening the open season, but did not make adequate provision for enforcing the laws. The matter being left to the boards of supervisors of the various counties, but few game wardens were appointed, and the illegal killing of the birds has gone on as before. What we need most in this part of the State is protection in fact. The birds will multiply if given any sort of a chance. I am informed on the best of authority that some parties who had been seen killing quail almost daily from the first of July were reported to our local officer, and nothing whatever was done. The supervisors refused to appoint a game warden, and what are we to do? One man, the superintendent of a large vineyard, makes his boasts that all are free to kill quail on his property whenever they choose. A good, active warden, with the sportsmen of the State at his back, could soon put this matter to the test, and a few heavy fines would do a world of good to those who seem to think they can do as they please. An officer of the State did, I believe, make a couple of alleged arrests in this county; but as nothing further has been heard in the matter, we suppose it will end at that.

There is no place on earth where quail have fewer natural enemies than here in southern California, and never in my experience, which extends from the Atlantic to the Pacific, have I seen or heard of such willful violations of the game laws or such laxity on the part of those whose duty it is to see them enforced. H. M. TONNER.

IMPORTED GAME BIRDS.

BROOKLYN, N. Y.—*Editor Forest and Stream:* As I was one of the speakers at the first meeting of the Maine Game Protective Association, at the Hotel Buckingham, Lewiston, Me., two years ago, I have read with the deepest interest the accounts you have published in FOREST AND STREAM of the experience of those who have been attempting to introduce black game and capercailzie into the State of Maine.

I am familiar with these grand birds and have shot them in Scandinavia, and I of course regret that they have not yet succeeded in Maine—but the result is just what I expected. If a sufficient number of birds were turned down in a suitable locality I am sure they would succeed. As for sharp-tail and pinnated grouse, they are certain to fail in Maine.

My theory is that alien birds or beasts may often be successfully introduced into a region apparently suited to them, and to which they could not have obtained access without the aid of man, but that failure will invariably result by introducing them to a region to which they could have spread naturally had it been suited to their requirements. I may instance the success of the pheasant, transported from the Euphrates to Britain by the Romans; the rabbit, taken by settlers to Australia; the California quail, introduced into Vancouver's Island, the climate of which is mild enough for its welfare, but which is separated from the natural habitat of the bird by many hundred miles of unsuitable country; the introduction of the Mongolian pheasant into the Pacific States; the restocking of Scotch coverts with capercailzie from Scandinavia, and such well-known instances of success.

I possess a good deal of information upon black game and capercailzie which is at the disposal of any person desiring to make use of it. ST. CROIX.

Snow for Foxes in Vermont.

SHELDON, Vt., Nov. 23.—The definition of the term "sportsman" can be given very briefly and fully. A sportsman is a man who indulges in the sports of rod and gun for the sake of the sport itself, and is generally a person who uses as good tools as his means will admit.

The slight snow this morning brought the fox hunters out in full force. The writer shot a large dog fox in front of Whirlwind and Drive. At the time of writing the other hunters have not reported their success.

STANSTEAD.

A New Jersey Vermin Bounty Complication.

UNDER date of Nov. 21 the New York *Sun* had a report from Blairstown, N. J., which ran: "The township committee of Stillwater, Sussex county, met to receive groundhog, skunk and weasel scalps a day or two ago. They were surprised to see several loads come in. One man had all he could haul in a truck wagon. Another came in with a wheelbarrow full. A bicyclist brought almost 300 strung together and tied to his wheel. School children, too, brought in large quantities. When the committeemen came to count up the scalps they found that they had some 10,000 of them, and would have to borrow money to pay for them. Due bills were given, and the hunters will not get the cash until the taxes are collected. The committee has hired two corn cribs to store the scalps in, as hundreds will be brought in nearly every day for the next week or two. The township agrees to pay 10 cents for every scalp, but the committee will cut down the reward one-half."

These figures were only 1,000 more than three times too large. The facts are given in this communication from Town Clerk Driscoll:

"MIDDLEVILLE, N. J., Nov. 28.—*Editor Forest and Stream:* In reply to your request of Nov. 25 in regard to scalps, the township of Stillwater pays 10 cents per scalp for groundhog scalps only. The town committee met Nov. 16 to receive these scalps. About 3,000 were brought in, not 10,000. Cannot say as to how they were brought in, whether in truck wagons, wheelbarrows or on bicycles. No corn cribs were leased to store these scalps; kerosene was thrown over them and then they were burned. There was not sufficient money in hands of treasurer to pay all bills, and a few bills will not be paid until next meeting of committee. W. F. DRISCOLL, Town Clerk."

Miss Milhau's Moose.

AROOSTOOK COUNTY, Me.—Miss Mary Dudley, of New Jersey (formerly of Presque Isle, Me.), Miss Zella Milhau, and Mr. W. H. Penny, of New York, and Miss Tenney, of Houlton, Me., have just returned from Big Fish Lake, where they were unusually successful in securing two moose and a deer. Miss Milhau succeeded in shooting a monster moose with a spread of over 4ft. in the horns. Added to this, she has a record as an angler; she visited the lake in July and caught some fine trout. The party speak in glowing terms of the entire country there, and claim that they have never seen its superior as a model hunting ground.

Mr. Frederick Harding and Henry Garrison, of Paterson, N. J., have just returned from Squaw Pond and Black Water with two caribou and a moose, besides several other smaller specimens of game. This is Mr. Harding's second trip. He was here in the summer and succeeded in capturing three bears.

Mr. A. A. Barker, of Newport, R. I., and Mr. Joe Robinson, of Presque Isle, have just returned from Big Fish Lake and Machias with two moose, one of which is a perfect monster, weighing dressed nearly 1,200lbs., with a spread of 5ft. 1in. between antlers. He has shipped it home complete, and is to have it mounted just as it stood in its native elements. H. H. S.

[We would like to have authentication of the antler measurements.]

Michigan Deer Hounding.

LANSING, Mich., Nov. 28.—Hounding deer seems to have been practiced pretty generally all over northern Michigan. At Bravort Lake the hotel keepers and guides run dogs all the year through. At Gilcrist the hounding was general. At Alpena and all west of there dogs are used constantly. In Clare county dogs are used all the year through. At Roscommon almost every hunter has a dog, and the report there is that the game wardens and prosecuting attorney use dogs for deer. In Jack Pine township I hear that dogs are used constantly, and it is the custom there to muzzle the dogs to prevent their making too much noise. From Raney Lake a party just in state that dogs were used there every day during their stay. At Indian River and all through that section, I am told, almost every deer hunter has his dogs and runs them whenever he wants to hunt. All this I get from hunters who have been on the ground and seem to know what they are talking about. From about McKinley comes the same report. For outside hunters the season has been poor. JULIAN.

Shooting Incidents.

IN reading a recent issue of your valuable paper I read of two incidents of killing foxes with a quail load and a white woodcock.

In the winter of 1867 I was shooting quail in Delaware county, Ohio. My pointer made a point in an open wheat stubble. I walked in ahead of him to flush as I supposed a covey of quail. Instead I started two red foxes, both of which I killed with No. 8 shot. The dog fox was killed dead in his tracks at about 20yds., the vixen ran after being hit say 50yds. and dropped dead.

While shooting summer woodcock at Mogadore, O., eight miles from Akron, O., in August, 1892, I found in a piece of topped corn seventeen woodcock in a three acre piece of ground. Among the lot was one white bird, which was killed. It was a young bird fairly well grown, and was all white with the exception of a few dark spots, some five or six, about the size of a pea. I have it mounted and it was nicely done by H. E. Chubb, of Cleveland, O. R. B. MORGAN.

Pennsylvania Game.

OSCEOLA MILLS, Pa., Nov. 25.—Pheasants are very plenty this fall, but the poor little quail that were around last season are a thing of the past. I think the severe storms in February killed all of them. Rabbits are very plenty. On last Friday we had a fine tracking snow for a few hours in the morning, and there were hundreds of rabbits killed. Some scored as high as thirteen to one gun. My friend C. and myself managed to kill thirteen cotton-tails and six pheasants from 8 A. M. till noon, and, as I heard one hunter say, it was not a good day to hunt either. (It snowed.) No deer have been killed here this season. I have only heard of four being seen, and that was before the season came in. Squirrels are very scarce, very few being bagged. I have been out only five times and have killed twenty-six pheasants and eight cotton-tails. E. C. B

Notes from Washington.

WASHINGTON, D. C., Nov. 30.—We have already reported a scarcity of quail. As to other game it is not so scarce, though our gunners are not having much of a feast of shooting deer and turkeys. Several parties came in Thanksgiving Day morning and their one small deer was very conspicuously lugged along by a porter.

Messrs. Tappan, Laird, Murray and Culliane are back from a few days' shoot in the mountains around Buckingham Court House. They saw deer and have had venison to supply their tables. Mr. Tappan says he was hardly on his stand when he saw a deer coming toward him. The creature stood awhile, scenting the air, moving its head from side to side; the gunner fired a charge of buckshot at it and the deer left for safer quarters. Tappan says there is no use trying to shoot buckshot out of a rifled gun.

Some of our District militiamen recently went down into Prince George's county, Maryland, quail shooting, coon hunting, possum hunting—any kind of hunting—and came back empty-handed. Lieuts. Robbins, Marron, Sergt. Murray and a corporal hunted over three farms, covering 1,000 acres, and saw but six birds. To their credit, these few birds were left for breeding. As for coons and possums, they did not find them.

From the western Maryland side we have good reports of opossum and coon hunting. In Washington county James Hart has a season's record this year of forty opossum and twenty raccoons.

One of the largest flocks of ducks seen for years passed over the city this morning. They were flying high and passing southward, following the river.

Several of our gunners have been on the river the present week, but report no success.

Some wild geese have been killed along the Chesapeake.

BART.

Mongolian Pheasants in Pennsylvania.

POTTSVILLE, Pa., Nov. 25.—*Editor Forest and Stream:* In your issue of Nov. 16 I notice Frank Robinson's note in reference to Mongolian pheasant cock killed in Bucks county, Pa. The Pottsville Game and Fish Protective Association on April 7 last liberated fourteen of these birds in Schuylkill county. Ten of these were females and the other four males. The birds were distributed in four groups in a radius of about twelve miles, and it's just likely that one of these cocks has wandered from Schuylkill county through the intervening county of Lehigh into Bucks.

In 1892 we bought and had shipped three birds, one cock and two females, from Mattison & Mattison, of Turner, Ore. Two of the birds liberated were originally brought from Oregon, the third (a hen) having died some time afterward. We were remarkably successful in hatching the eggs, as high as 90 per cent. hatching; but our efforts at raising the young were failures. These birds stand the Association about $150, and by a majority vote we decided to liberate them and stop the expense. One of our members was presented with a trio of birds and is still trying to raise more.

F. C. PALMER,
Sec'y Pottsville G. and F. Pro. Asso.

Massachusetts Covers.

BOSTON, Mass.—The sportsmen of this State have had a fair amount of shooting this season, considering the scarcity of game and the number of dogs and guns. We depend largely on flight birds for woodcock, as very few breed here compared with former years. The flight is expected usually from the breeding places at the North from Oct. 10 to 22 on their way to the winter homes in the Southern States.

Sometimes, if the weather is mild, they will linger with us a week or more, giving the gunners fine sport. But some seasons we get but a day or two of good shooting, as a hard freeze or a fall of snow will drive them South in a hurry, and then it is good-by till the next season.

Ruffed grouse in some sections of the State have been plenty and some good records have been made.

Quail seem to be rather scarce so far as heard from. Quite a number of black and wood duck have been shot in the ponds and rivers within fifty miles of Boston, but our fast diminishing game birds need much more protection than they have at present.

BAY STATE.

Killing Park Buffalo.

SILVER CITY, Juab County, Utah, Nov. 26.—*Editor Forest and Stream:* I send you slip cut from a newspaper which relates to the killing of Park buffalo, and I would add that I had a chat recently with a man who has been in that portion of Idaho situated east of the Utah Northern Ry., and west of the Yellowstone Park, during the past season, and he told me that the latest way in which those fellows get the buffalo, without fear of detection and fine, is to go into the Park without arm or ammunition of any kind, and finding the band of animals they stampede them out of the Park; and when across the line they get the guns they have cached at some convenient place without the Park, when they slaughter the buffalo with impunity. Those scamps seem determined to get the very last of the buffalo, and haste must be made if the few remaining ones are to be saved. There is no sentiment in those wretches.

C. H. B.

A Curious Deer Horn.

EDGERTON, O., Nov. 26.—L. Gebhard and Jacob Larhman have just returned from a three weeks' trip to the Wisconsin woods. They camped about sixteen miles from Colby. Gebhard killed two deer and Larhman one. They brought two home and ate one in camp. They also brought with them the head of a four-point buck, killed by P. Swan, living near where they camped; one of the antlers extends straight out from the head about 11in. in length, and it has three small points on the end and one close to the head; the other antler is the same as on all deer. Mr. Gebhard, who is a taxidermist, is mounting the head. Rev. E. P. Rankin, of Stevens Point, was in camp with them a week, and reports a jolly time.

L. A. G.

News from the Expedition after Bears.

MEMPHIS, Tenn., Nov. 30.—Party killed ten bears in ten days. I killed one.

E. HOUGH.

The Reporter and the Pipe.

Some writer on the *San Francisco Examiner* prints a story savoring of the "pipe," as the vernacular of the perfesh hath it, in regard to a herd of cattle in Colorado which live in a valley whose edges are so sharp that no man can get down into it. In order that all men may know right where this is, I print the directions:

In the wildest portion of the West, 75 miles northwest of Meeker, where, in 1879, the Utes massacred the Meeker family and every one at the agency, is the most wonderful cattle ranch in the world. Within a space five miles in length and three miles in width roams a herd upon whose sides the branding iron has never been placed, and around whose horns the lariat has never tightened. But a score or even fewer of them have ever seen a man or horse, or other animals of their kind, and in fact their kin, except at a distance of nearly 600ft. high above them. The Ute Indians call them "p'check-up," or red buffalo.

The cattle are in a prison, says the *Examiner*. Out of it there is one method of escape, but to travel that road means death to the adventurous one. There is no way to get in except it be by use of a rope 1,000ft. in length. The herd was started there in 1874, when a herd of cattle belonging to John Wyckliffe was stampeded by thieves. Wyckliffe and his sons tried to stop the stampede, but "instead they and their horses were swept on and driven, in the terror to escape the charge of maddened animals, over the brink of the awful precipice which frowns up from the waters of the Bear. After them plunged the whole fright-crazed herd, and down to the bottom of the fearful fall went horses, riders, and horned creatures. Out of this plunge of life, to what was seemingly certain death, to all, a few of the herd were not killed. Those which had gone ahead formed a cushion of death. Maimed, stunned, but still invested with a spark of life, when the dread storm was over, the living cattle crawled out from the mass beneath them and formed a nucleus for the herd which now roam at will within their rocky confines." There may be a herd of cattle in a mountain park, but if there is any valley in the Rockies that white men haven't been into and out of, it would be a pleasure to hear more of it. Meantime let us have no uneasiness on the matter. As these cattle got down in there by filling up the valley in a violent and rapid manner, so they will after a while get out by a reversal of the same process. In course of time they will have increased and been multiplied until there won't be room in the valley for them any more, and they will spill out over the top, and thus stock the surrounding country. This will afford material for another good story.

E. HOUGH.

Spare the Homing Pigeons.

SOMERVILLE, Mass.—*Editor Forest and Stream:* Having been a reader of your paper for a great many years, I ask permission to use its columns on behalf of the homing pigeon.

Besides being a lover of the dog and gun, I am also a lover of the homer, often called a carrier pigeon, and have spent a good deal of time and money in attaining good stock.

Many sportsmen will think it pretty tame sport, but I assure them, when several fanciers are joined and flying sweepstake races, it is exciting, as a race is often won in seconds; besides they are useful. I often, when going away on pleasure or business, take a few with me and use them as messengers to the people at home.

The great drawback to the sport is that many get shot, it is on that account that I write these few lines.

It is very annoying, to say the least, to have a bird that has worked well in all flies up to 300 miles get shot in the most important race of the season, viz., 500 miles; in that race they become tired and are liable to fly low.

One of our club members had some birds liberated at Flint, Mich., about 650 miles "air line" from home. They were stamped on the wing by the Race Secretary of the Federation. When less than 200 miles from home, they were shot into, the party writing there were five in the lot and he killed two; he must have wounded another, as only two reached home.

I have frequently had birds come home only to die; they are gamy birds, full of grit.

Now I wish to ask my brother sportsmen to refrain from shooting pigeons that may come within reach of them while in the field, feeling satisfied that every thorough sportsman will do so when his attention is called to the fact that they are engaged in a race and are straining every muscle to get home.

I have often had letters from people who have shot my birds, expressing great regret, at the same time assuring me they would be more careful in the future, and in one or two cases they have become fanciers.

J. C. HARRIS.

Sea and River Fishing.

THE OREGON TROUT INDUSTRY.

PORTLAND, Ore., Nov. 21.—Mountain trout fingerlings taken with hook and line in the Pacific in quantities sufficient to supply the demands of our great and hungry city. Shades of Izaak Walton! Who would have thought it?

And what must Dr. David Starr Jordan, president of Leland Stanford University, heretofore regarded throughout the civilized world as the best of all authorities on the trout of the Pacific coast, think of himself now? Has he not written: "This is the last generation of trout fishers. The children will not be able to find any. The trout that the children will know only by legend is the gold-sprinkled living arrow of the white water; able to zigzag up the cataract; able to loiter in the rapids; whose dainty food is the glancing butterfly?" Evidently Dr. Jordan was not aware that the mighty Pacific Ocean was teeming with the prettiest of mountain trout. It took an Oregon legislator to suggest it and a Portland dealer to demonstrate it, while the recorded judgment of a Portland justice of the peace banishes all doubt.

There is one thing for which we who prize our liberties may feel thankful. An Oregon legislative assembly meets at Salem biennially. If it convened oftener doubtless we would have more liberties. But as long as we put our trust in Oregon legislative assemblies our rights will be protected, and we'll eat trout whenever we feel like it.

Certain so-called sportsmen and financial philanthropists are continually bothering these assemblies for laws for the protection of fish and game, seemingly forgetful of the fact that these legislative bodies have all they can do to elect United States Senators, pass appropriation bills and do things of a dignified character. What would one's constituents think of a legislator that would fool his time away about such trifles as little fish and little birds? And besides one's constituents need fish and game in their business and feel abundantly able to take care of such matters themselves, while their representatives at Salem attend to the more important matters of State. Now and then, of course, some fellow that doesn't expect to be re-elected nearly succeeds in his spleenful efforts to undo his constituents by securing the passage of a protective law that would hold water. But the more ambitious ones—those who keep their fences in good repair—have never yet failed to discover the plot in time to knock it into a cocked hat, or at least knock a hog hole in it of sufficient dimensions to satisfy the most exacting of his constituents. Our rights are thus preserved and the stealthy assassin of our liberties is foiled.

Section 14 of our fish and game laws, as published and distributed by our very efficient protector, Mr. H. D. McGuire, reads as follows: "Every person who shall, within the State of Oregon, during the months of November, December, January, February and March of any year, catch, kill or have in possession, sell or offer for sale, any mountain, lake, brook or speckled trout, caught from any fresh water, shall be guilty of a misdemeanor. Every person who shall, within the State of Oregon, take, or attempt to take, or catch with any seine, wire net or other device than hook and line, any mountain or brook trout after the passage of this act, shall be guilty of a misdemeanor."

Last week one of Mr. McGuire's special deputies purchased at one of our markets some bright, lovely trout, which the dealer represented (truthfully) as mountain trout. Mr. McGuire had the dealer arrested at once, as was his bounden duty. The case was tried before Justice Geisler, and his honor took the matter under advisement until this morning. The defense did not question the fact that they were mountain trout, but they produced an affidavit from some man over at Yaquina Bay that he caught them himself with hook and line in salt water. This morning Justice Geisler discharged the defendant, and now, in less than an hour after the decision, every fish dealer in the city of Portland is displaying openly for sale the finest of mountain trout. I am not prepared to say whether they all have their affidavits ready. But the market man is all right. It isn't likely that he is going to sit down with his hands in his pockets and talk to his patrons about close season for trout, etc., when his customer can step around the corner to the dealer's more enterprising competitor and get all the nice black-spotted mountain trout he wants, fresh from the ocean.

And what must these so-called sportsmen think of their own idiotic record; days of toil and hardship among the boulders and rapids and brush of some little stream away back in the mountains for a few dozen measly trout, when, if they had only been members of the Legislature, they would have known that all they need do to secure plenty of mountain trout for themselves, their friends and to pay expenses of the trip, was just to run down to the coast and sail out on the broad Pacific.

The legislator who so thoughtfully and ingeniously knocked the hog hole in our trout law ought to come forward now and claim the credit of establishing a new Oregon industry, the industry of catching bushels of pretty 6in. mountain trout out of the briny deep for the market.

Some fellow (doubtless one of the disgruntled minority) suggested to Warden McGuire the other day the advisability of not having any close season on legislators, and that the rising generation of Oregon boys be supplied with arms and ammunition at the expense of the State, but, thanks to the foresight of the framers of our constitution, that could only be done by legislative act, and so the honorable members of that august body have ample protection even in salt water.

Truly our fish and game "laws" are enough to give Protector McGuire the hysterics. Why, as the law reads, he must even be in doubt whether he can protect us from the cold storage nuisance. He tendered the last Assembly a set of acts bearing upon all the most material points pertaining to salmon, fish and game, but by the time that body got through with them—well, McGuire didn't know whether he was "afoot or horseback."

But never mind, Mr. McGuire, we'll eat trout all the year round if we want to, and you can help yourself as long as our representatives stand manfully by our interests and our appetites. And so far as the rising generation of Oregon boys is concerned, carp and catfish are good enough for them; and by the time we are done with the trout, and some of these boys get into the general Assembly, and begin to stop up these big holes, there'll be little occasion for any marked display of energy in the matter, and the boys would surely entertain too much respect for their forefathers to execrate them of record.
—*S. H. Greene in Portland Oregonian.*

Landlocked Salmon Culture.

ST. PAUL, Minnesota.—*Editor Forest and Stream:* Some two years ago a number of landlocked salmon or winninish were planted in Lake Pulaski, Wright county, this State. I did not see the fish myself, but I believe they were identical with the fish found in Lake St. John and contiguous waters. A few days ago I wrote Mr. H. B. Griffing, who resides at the lake, and who made the experiment, asking the result of the effort to stock the lake, and have the following in answer this morning:

"With regard to the salmon of which you inquire, the planting was not a success. The fish were something over a year old when introduced, and a few of the original fish survived and were caught, but they did not propagate, and I doubt if there are any now left in the lake."

The lake is about a mile long and the same in width. Water is very deep and cold. There are few if any streams emptying into it, the supply of water coming from springs principally, as in many of the Minnesota lakes. I should like some expert in fishculture and re-stocking to say whether it is essential in stocking with these fish that there should be spawning ground in streams, or if the fish will spawn in the lake itself if there be suitable locations therein.

Fly-fishers would doubtless be interested in this direc-

tion, as it might be the means of adding a magnificent fish to the fly-takers in the waters of this State.

W. L. Agnew.

MORE ABOUT THE MARSTON TROUT.

Editor Forest and Stream:

In the description of *Salvelinus marstoni* published in Forest and Stream of this date the printer made me say the fish "pushes" at the fly with a rapid dart, when the word should be "rushes," and thus convey a different sense from that intended, at least to those who may not have guessed at the proper meaning. Very likely the manuscript was indistinct, and this may have accounted too for "Rimouski" being spelled "Rimonski" throughout the article.

Only a few days after having mailed you the article in question, I received by good luck a few more specimens of this beautiful fish (taken of course by special permit). Some of them reached me in most brilliant coloring, and you may hear more of them, for I immediately expressed three specimens each to Mr. A. N. Cheney, New York State Fishculturist, and Professor Garman, of Cambridge, Mass. One I skinned for purposes of future external comparison, and another a young artist friend is endeavoring to reproduce in water colors. He agrees with me that it will be no easy matter to so mix colors as to produce the particular shade upon the sides and belly of his brilliant model. When this fish reached me the reddish shade of orange upon its sides had attained, near the roots of the ventrals, to very nearly the brightness of cardinal red. I much regret that the specimen I retained for a table test was cleaned before I had an opportunity of examining whether it contained spawn. I hope my friends Messrs. Cheney and Garman will be more fortunate in this respect, for at present there is little but guesswork and conjecture respecting the spawning habits of the Marston trout. Mr. Hurley, of this city, to whom I am indebted for my last specimens of the fish, believes that in the waters they inhabit they are now making for their spawning beds. If this be so, it is likely that December is nearer to their spawning season than either January or February.

The flesh of the specimen that was cooked for me retained a pale pink hue after coming upon the table, much more pronounced than salmon. I cannot claim that it was as firm as the flesh of some brook trout that I have eaten, but this may be because of the time that it had been out of its native element. E. T. D. Chambers.

Quebec, Nov. 30.

Alabama Gulf Fishing.

Point Clear, Ala., Nov. 25.—Fishing is simply grand from Oct. 1 to February, for white trout, speckled trout, redfish, croakers, ground mullet, sheepshead and Spanish mackerel. Capt. Joe Rayfield, of Mobile, visits here about once a month and spends a week fishing and hunting. The last time he was here he bagged forty-four quail, twenty teal ducks and three turkeys, and caught an immense number of fish. T. S. B.

Game and Fish Protection.

New York Fish Commission.

The finances and records of the former New York Fish Commission are in a mixed condition, which Messrs. Lyman, Babcock and Davis, as a special committee of the new Commission, have been endeavoring to untangle. We give below the report made on Nov. 26. It is reported that Commissioner Thompson has resigned. At a meeting of the old Commission, called by Secretary Doyle at Albany on last Monday, $1,500 was handed over to the Comptroller, making $3,500 in all paid by Secretary Doyle on the old accounts. The report reads:

This Commission organized April 25, 1895, electing Edward P. Doyle, who had been secretary of the Fish Commission, which we succeeded, as secretary. The books of record, account books, vouchers and official correspondence of the old Fish Commission were at 53 Broadway, New York, and in the custody of Mr. Doyle as secretary, excepting a portion of the papers which related to game protectors' business.

The Forest Commission, which we also succeeded by the Consolidation Act, known as Chapter 395, Laws of 1895, had its office in the Capitol, and upon our organization this Commission occupied its old quarters. Its secretary, before retiring, delivered its books and other property, together with complete files and duplicate vouchers, check books, stubs, official papers and correspondence.

Upon the organization of this Commission we adopted rules for its government and divided the work of the Commission among five committees, assigning to each of the five Commissioners the immediate responsibility of looking after the details of the business of his department. As is well known to this board, it must be made the duty of this committee, in addition to the duties of auditing accounts and the special care of the finances of the Commission, to examine and check all books and accounts, and report the result of such examination to the board as often as once a month.

The outgoing Commissions made no statement or formal transfer of funds or property on hand, an omission which was perhaps as much our fault as theirs, as good business principles and common sense require that we should have demanded this formal transfer and an exhibit of the assets and liabilities of the boards, which, by the Consolidation Act, we were to succeed as legal representatives, before attempting to go on with the business, which, among other things, required, as we now have found, the settlement and liquidation of thousands of dollars of debts owing by our predecessors, and the collection and adjustment of thousands of dollars due the State from various sources, but principally on account of fines and penalties and judgments therefor, and on account of sales and leases of oyster franchises.

The only excuse your committee has to offer for failing to make this demand for an early accounting and delivery of property and funds is that this Commission had retained in its service the chief executive officer of the Forest Commission and the secretary and engineer of the Fish and Game Commission, who was also its disbursing officer and accountant and manager; also the chief game protector and his clerk, besides having upon this board two members, one each from the Consolidated Commissions.

The secretary on May 20 made to us and entered on our minutes the following reports, viz.: "The secretary informed the Commission that the Comptroller had paid the pay roll of the old Commission, and that the secretary had paid personally all outstanding accounts of the late Fish and Forest Commission."

This statement we very soon found to be a mistake, by the scores of bills and claims which were presented for payment, some running back as far as 1890. Your committee then began a thorough examination of the office and found that they had no books of accounts, vouchers, canceled checks or stubs of the late Fish and Game Commission. Inquiry developed the fact that all books and papers relating to financial transactions, as well as all official correspondence, were kept at 53 Broadway, New York, which had had been used as a branch office. Requests were made for their production, but same was ignored, and thereupon, June 7, the following resolution, offered by Commissioner Babcock of this committee, was adopted, viz.:

Resolved, That all the books, papers and receipts pertaining to the Commission in the New York office be removed to this office and turned over to the auditing and pay clerk at once within ten days.

Within a few days a box containing some old books, duplicate hatchery accounts, letters, obsolete blanks and other papers, many of which did not relate to the public business, was received, but found not to include the account books and fines and penalties, oyster franchises and general expense or any of the accounts or duplicate vouchers needed to enable us to liquidate claims against the Fish Commission or collect outstanding accounts due this Commission.

The most serious difficulties were met with in the department of fines and penalties, where hundreds of people, including justices, protectors, peace officers, lawyers, printers and others, were interested in moieties of recoveries which could only intelligently be adjusted from the accounts contained in the books and papers withheld, and can only be paid from the funds collected from fines and judgments recovered for violation of the game laws. We had no official knowledge of the serious condition of things until personal complaints began coming to members of the committee. A personal request for the books and vouchers met with no better success than the written direction of the Commission and the existence of the missing books and vouchers was denied.

In October, with the consent and by the courtesy of the honorable Comptroller, we employed an expert accountant to go to his office and make copies of all vouchers paid within the last fiscal year, and get such memorandum from his books and files as would enable us to make up our accounts for settlement with claimants, and for the purpose of ascertaining how much our funds had been impaired, and to enable us to make the financial report to the coming Legislature required by law.

This gentleman has already made his preliminary report to this board, dated Oct. 8, which showed that several thousand dollars of advances made, which was applicable to and supposed to have been used in liquidation of the indebtedness of this Commission, had not been so applied, and that several thousand dollars in vouchers returned had not been credited up because of imperfections therein or a misunderstanding of the particular appropriations to which chargeable.

These discrepancies are being adjusted and balances collected, and later on the expert will make a supplementary report.

The late secretary resigned July 9, and soon after, by resolution of this board, a letter was addressed to each of the ex-Fish Commissioners respectfully asking them for such information as they possessed in reference to the missing books and documents. Information was promptly received from ex-Commissioners Bowman and Huntington stating that the books and duplicate vouchers were left by them in the New York office, and volunteering to go with your committee and examine the office and confer with the late secretary as to what had become of the same.

We met Nov. 11 at the former branch office as agreed upon, and succeeded in finding there a quantity of duplicate vouchers, which we placed in a box for shipment to Albany. We also found several hundred official letters of this Commission which had been mailed to, or at least brought up in, the office at 53 Broadway, and had never been seen by this Commission. Many of them were of the nature of complaints as to the negligence of this board as to unpaid overdue bills, in some instances imputing to us dishonesty and crookedness, and others containing matters of more or less importance, which should have been considered and answered. These were also packed up for shipment to this office. It may be asked how our official correspondence was thus missent. The explanation is simple.

First.—The old Commission had their branch office there, and nearly all their business was transacted through their secretary and general manager for many years. Again, this Commission allowed its letter heads, vouchers, envelopes, applications for fry, etc., to be printed and go broadcast with the statement that 53 Broadway was a branch office still, thereby misleading the public and sending much of our correspondence there, especially that pertaining to bills which had been contracted there, as the public had been educated to look to the secretary personally for their pay. Upon inquiry we were told by Commissioner Thompson that the account books which we were looking for had been sent to the Comptroller's office, as he had been informed by Mr. Doyle on the previous day.

Communicating with the Comptroller's office, this was found not to be so. Mr. Leslie furnished us with an extract from the general account book, which he had made, showing the franchise account. We requested an inventory of the public property of the men in and about the office, but were informed that they could not give it to us without the consent of Mr. Doyle, who had personally employed them. When asked if he had not received notice that his services were dispensed with by this Commission, Mr. Wyeth said he had not, and said that there was due him $474, beyond some advances, the amount of which he declined to state without Mr. Doyle's consent. Mr. Leslie informed us that Doyle had charge of the correspondence, and that at times there would be as many as 200 letters awaiting his coming to be opened.

Your committee on the following day called at the office and met Mr. Doyle and requested the delivery of the books and documents. He told us we could not have the books and vouchers, as they were the property of the old Commission, which, counsel had informed him, was legally dead, and that this Commission had no jurisdiction or control of its official books or papers; that he had sent the oyster franchise account book, which also contained miscellaneous expenses and some other accounts, to Mr. Huntington, upon Mr. Thompson's orders, and the fines and penalties books to Mr. Bowman, and the duplicate vouchers to the Comptroller's office. When informed that the matter, so far as your committee was concerned, was ended, except to refer it to the Attorney-General's office or other proper authority, he reconsidered and agreed to produce the books at Albany the next day, which he did, at the same time informing the chairman of the committee that he had been a regular employee of the Commission since July 9, under an agreement with Commissioner Thompson that he should take the entire charge and management of the Shell-Fish Department at a salary of $100 per month, but had not claimed any pay so far.

A casual inspection of the fines and penalties account showed a shortage, as admitted by Mr. Doyle, of $1,195, for which he gave a check to the chairman of the executive committee, subject to a re-examination and further adjustment of the accounts, which, with $356 before returned, as per report of the chairman of the executive committee, Nov. 7, makes $1,551 repaid upon this account.

Your committee deem it their duty also to report that the books known as the shell-fish accounts and records are very incomplete. They also indicate there has been a neglect to collect moneys due, and unless better methods are at once adopted this Commission will have difficulty in making a proper detailed statement of its receipts from that source, and the State will be a loser thereby.

The maps of the whole oyster territory sold and leased by the State are none of them on file in the office of the Secretary of State or Comptroller. To produce these maps has taken years of time and cost the State thousands of dollars, and, together with the field books and other important data, showing title to and location of the hundreds of irregular parcels of land sold or leased by the State, should be on file in the office of the Secretary of State, and become public records in fact as well as in theory. As it now is, they are subject to loss or destruction. In this connection we desire to say that, in our opinion, the legitimate surveying and mapping of these grounds chargeable to the State should be done by and under the direction of the State Engineer and at the expense of that department, and that the advertising for the application of leases should be at the expense of the purchaser.

There has been an expense incurred by this Commission since April 25 of about $2,500 in advertising applications to lease lots for oyster cultivation, and nearly or quite as much more in various kinds of engineering and other expenses connected therewith.

The lots are in parcels from one-half acre to eight or ten acres. There is no real competitive bidding, all sales for good, bad and indifferent lands being for 25 cents an acre, the minimum price allowed by law. It is claimed that the theory is to give the present occupant a better title and insure him quiet and peaceable possession. It would seem, if this is the only end to be served, that it could be done by act of the Legislature at much less expense to the State and less annoyance and uncertainty to the occupant and owners of the equities therein. Be that as it may, the funds of this Commission will not admit of further wholesale depletion in this direction unless we close some of our hatcheries and withdraw a large part of our protectors from the forests. It is expected that when the shortages found by our expert have been returned to the Comptroller and the Commission it will help the condition of our finances somewhat, unless the Comptroller holds that moneys so returned must be credited to the general State fund. We find that several judgments for costs have been entered against the State and certified to us for payment because of indifference of attorneys in charge growing out of the neglect to answer their communications or settle their bills, and many others are threatening to let cases go by default if no attention is paid to their claims for services and disbursements heretofore made.

These complications become very serious for this Commission, especially in view of the fact, as reported by this committee at your last meeting, that of the $92,750.82 appropriated May 10, 1895, for the maintenance and work of the Commission for the fiscal year ending Oct. 31, 1895, we had, outside of funds specially appropriated for the purchase of lands, but $34,019.31 left Oct. 31, about one-fifth of which is required at once to liquidate debts incurred by ourselves, without considering the obligations contracted by our predecessors. We believe that this board should decide at once whether they will, from the funds on hand, pay any more accounts of the old Commission, and if they conclude not to do so, inform every creditor of the fact, and why they cannot settle their claim, and when they might reasonably expect relief.

And further, that measures should be taken at once to reduce expenses by cutting down the number of our employees and general retrenchment to meet the exigency. Otherwise we will have no funds left to hatch and distribute or protect forest and game.

We may add that a casual inspection of the oyster franchise book shows a discrepancy on the face of it of about $1,200. The late secretary admitted that he expected that account to be found short, but as yet all books and data for checking the account are in New York. Our expert accountant reports informally that he finds that duplicate vouchers have been used to considerable extent in settlements of shortages, which, as your committee thinks, explains the determined effort to keep all vouchers from the possession or inspection of this board.

Camp-Fire Flickerings.

"That reminds me."

AN IMPARTIAL FEMALE.

Yaas, sir, my wife Keturah, in one pertic'lar way,
Is an abserlute fernomenon in this here present day.
She's an imparshul female, without no prejudice,
An' always hollers for fair play, and gives the best advice
To both sides in a quarr'l, in her imparshul style;
And sez, "Jist let the best man whip, after an honest tryle!"
Now, a woman like that thar, sir, as wimmen folks do go,
Is about as common in this world as is a milk white crow.

Set down by that thar hemlock log, down by the runway thar,
An' I'll tell ye a short tale about Ketury an' a b'ar.
Me an' Ketury, late last fall, was coming home one night,
Down the trail to our old shanty (it was jest about twilight),
Ketury knittin' as she walked and singin' Sankey's hymns,
An' me a-goin' on in front an' holdin' back the limbs,
When jest by the old berry patch upriz a big he b'ar,
Showin' his teeth, ez if to say, "Jest tetch me if you dar'!"
I hadn't got no rifle, nor nothin' but my knife,
So thort I'd gin the b'ar the road, and lead a Christian life.
But Ketury—waal, she up an' sez, "Now, Peter Jones!" says she,
"Ef you're the style of hunter I've hearn you claim to be,
You'll sorter draw your toothpick, an' show that sassy brute
You're somethin' on the bowie knife ez well ez on the shoot."
So I perdooced my weppin, an' breathin' a short pra'ar,
I wrapped my coat erbout my arm an' started fer that b'ar.
I found I'd met my ekils, an' p'raps a leetle more,
'Twas slash an' stab, an' cussin an' chew, an' growl an' roar!
Ketury she sot on a log a-knittin' calm an' slow,
Quite easy an' imparshul like, umpirin' that thar show,
An' every singil word she said was perffick fa'r an' squar'.
Sometimes 'twas "Go it, hubby!" an' sometimes "Go it, b'ar!"
At last my foot ketched on a root, an' down I cum, kerflop!
The b'ar he fell on top of me, an' sorter had the drop.
So I hollers out, "Ketury! my preshus angil pet,
Git a pole an' whack the b'ar, or else yer husband 'll be et!"
Then she spoke up so scornful, "No, Peter, 'tain't my style
To take a mean advantage of a pore dumb annimile!"

Them nobil words inspired me; I gin a savage thrust,
The knife it found the heart an' the b'ar he bit the dust.
Now, but for that thar savage thrust the b'ar, with rav'nin' fury,
Would most assuredly have et fust me an' then Ketury.
But that consideration couldn't move her in the least
To play the least unfair like on a pore dumb struggl'n' beast.
But what I liked most, stranger, and thort so kinder nice,
Was her imparshul conduck, so free from prejudice.
But hark! I know the meanin' of them thar baying sounds,
Thar's a deer a-comin' toward us, in front of our two hounds.
Jump right behind that birch tree, an' keep as still as mice,
An' you'll git a daisy shot, if you foller my advice.

Reginald Gourlay.

The Bluebird's Pipe.

THIS morning I was walking down my street smoking a favorite brier wood pipe. I was in a somewhat meditative mood and as I sauntered along I was conscious of a sweet bird note titillating my drowsy ear. Gradually it aroused me to a realizing sense of my surroundings and I said to myself, "Hello, a bluebird's note." I had seen and heard just one bluebird this year, on Easter Sunday, so it was with bated breath that I took my pipe from my mouth and stopped short to listen for the repetition of the dulcet note, but it failed to come and I started in only to hear it again before I had gone ten steps. Another pause, no sound; on again, the sound repeated, and so it went until I located the music in the stem of my pipe as I drew the air through the orifice. It was a great disappointment. Let us hope another year they will be with us again. H. W. D. L.

BENCH SHOWS.

1896.

Feb. 19 to 22.—Westminster Kennel Club's twentieth annual dog show, Madison Square Garden, New York. James Mortimer, Supt.
March 10 to 13.—Chicago.—Mascoutah Kennel Club's bench show. John L. Lincoln, Sec'y.
March 17 to 20.—St. Louis Kennel Club's show, St. Louis. W. Hutchinson, Sec'y.

FIELD TRIALS.

1896.

Jan. 20.—Bakersfield, Cal.—Pacific Coast Field Trial Club. J. M. Kilgarif, Sec'y.
Jan. 20.—West Point, Miss.—U. S. F. T. C. trials. W. B. Stafford, Sec'y.
Feb. 3.—West Point, Miss.—Southern F. T. C. seventh annual trials. T. M. Brumby, Sec'y.
Sept. 2.—Morris, Man.—Manitoba Field Trials Club. John Wootton, Sec'y.

UNITED STATES FIELD TRIALS CLUB'S TRIALS.

THE club's trials began on Nov. 25, and were favored with extremely pleasant weather throughout the week. Owing to the constant disturbance of the birds during so long a time, the last days were marked by meager and unsatisfactory competition.

Messrs. W. S. Bell, Pittsburg, and J. King Jackson, Tennessee, judged throughout, while Mr. J. L. Adams was the third judge in the Setter Stakes. Mr. A. M. Young, Manchester, Tenn., the third judge of Pointer Stakes, was absent.

With the ending of the Eastern trials the greater part of the spectators left, so that the following of the running was much decreased. Trials held on the same ground cannot hold equal interest, as the last trial comes after the novelty has ceased or the visitor's time is expired. It goes to show that it is better for each club to have its own grounds, and to have a small interval of time—a week or so—between events.

The Pointer Derby.

THERE were nine starters in this stake as follows:

H. K. Devereux's l. and w. bitch Virginia, Geo. E. Gray, handler, with J. H. Johnson's (Agt.) b. and w. dog Rip Saw, J. H. Johnson, handler.

J. L. Adams's l. and w. dog Blithely, J. H. Johnson, handler, with N. T. DePauw's l. and w. bitch Sister Sue, N. B. Nesbitt, handler.

Adams & Thompson's l. and w. dog Cracker Jack, J. H. Johnson, handler, with Geo. A. Castleman's l. and w. dog Leo, Mr. Fly, handler.

O. Totten's l. and w. bitch Sappho, Geo. E. Gray, handler, with T. T. Ashford's l. and w. bitch Hessie D., J. H. Johson, handler.

Avent & Thayer's l. and w. dog Ridgeview Cash, a bye. J. M. Avent, handler.

The work was decidedly inferior, the best of it being but ordinary.

Mr. Muss-Arnolt constituted the spectators, aside from those directly interested in the competition.

Virginia did some fairly good common work, and of the others it may be said that they won because their work was not quite so poor as the ones cast out. Cracker Jack won second, Rip Saw third, Ridgeview Cash fourth, Leo fifth.

The trials began on Nov. 25. Mr. J. King, of Jackson, Tenn., and Mr. W. S. Bell, of Pittsburg, judged this stake. The third judge, Mr. A. M. Young, was absent.

Prizes: $150 to first, $125 to second, $100 to third, $75 to fourth and $50 to fifth. For pointers whelped on or after Jan. 1, 1894.

Monday.

The weather was foggy till the middle of the forenoon when the fog cleared away, and although the sky was lightly overcast, the temperature was uncomfortably warm. Birds seemed to be hard to find.

VIRGINIA AND RIP SAW started at 9:03. Rip secured a point on a bevy, next pointed a single, next flushed one. Virginia backed. Virginia pointed a bevy, Rip backed. Sent on Rip made three flushes. Rip pointed one and Virginia flushed a single. Up at 9:50. Their range was but middling and their point work lacked finish, although the first was one of the best heats run.

BLITHELY AND SISTER SUE started at 9:56. Blithe flushed a bevy and Sue flushed a single and was unsteady. Two bevies were flushed by men in the open field, where the dogs were ranging about. Among the scattered birds Sue flushed a single. Up at 10:40. Sue was in season. Blithely was not sufficiently experienced, and was entered more to fill out the stake than for any other purpose. The heat was very sloppy.

CRACKER JACK AND LEO began at 10:46. Jack pointed a bevy and Leo stole the point; Jack chased. Each made a flush; Leo unsteady. 11:32. Their range close and there was a lack of finish in their point work.

RIDGEVIEW CASH had a bye. Cynosure, a setter, was cast off with him, a wholly unwarranted proceeding, as she was not in the stake and was far superior to Cash. The only point work Cash secured in the stake was the result of Cynosure's find of a bevy. Cynosure pointed a bevy, Cash backed, moved up and stole the point. Cash flushed a single; next he pointed the scattered birds. At 12:02 Cynosure was ordered up and Cash ran alone seven minutes, during which time he loafed and pottered.

SAPPHO AND HESSIE D. were next run, they being run out of their order to favor Mr. Johnson, who had had several heats to run consecutively, and therefore had had some very hard walking. They started at 12:12 and ran till 12:45. Nothing found. Other qualties poor.

Second Round.

Five dogs were kept in.

VIRGINIA AND CRACKER JACK began at 1:20. Virginia pointed a bevy and was backed. On the scattered birds Virginia made three points. Jack made a point on scattered birds. Up at 1:59. Virginia was much the better, and well ahead of all competitors.

RIDGEVIEW CASH AND RIP SAW started about 2:00. Cash made a slobbery flush on a bevy. Up at 2:27.

This ended the running. The judges then announced the winners.

The Setter Derby.

There were seven starters in this stake. They were drawn to run as follows:

Blue Ridge Kennels' b., w. and t. dog Domino, D. E. Rose, handler, with P. Lorillard, Jr.'s, b., w. and t. dog Arapahoe, C. Tucker, handler.

H. B. Ledbetter's b., w. and t. dog Marie's Sport, Geo. E. Gray, handler, with F. R. Hitchcock's b. and w. dog Tory Fashion, J. M. Avent, handler.

T. H. Gibbe's b., w. and t. dog Mazeppa, Jos. H. Wilson, handler, with Manchester Kennel Co.'s b., w. and t. bitch Gleam's Ruth, N. B. Nesbitt, handler.

Avent & Thayer Kennels' b., w. and t. bitch Feu Follet, a bye, J. M. Avent, handler.

The work on birds was so extremely meager that it was difficult to make accurate estimates of the dogs' relative merits. The judges awarded the prizes as definitely as the conditions warranted.

The winners are as follows: First, Marie's Sport; second, Tory Fashion; third, Gleam's Ruth; fourth, Domino; fifth, Feu Follet.

This stake was for setters whelped on or after Jan. 1, 1894. Prizes—First $150, second $125, third $100, fourth $75, fifth $50. First forfeit $10, additional forfeit $10, $10 to start.

Tuesday.

The morning of the 26th was muddy, a dark sky and every indication that the heavy rainfall of the previous night was not ended. About 9 o'clock, however, the sun shone forth. A start for the Gibson place was made at 11:30. A stiff wind blew throughout the afternoon.

First Round.

DOMINO AND ARAPAHOE started at 11:54. Arapahoe made three points; nothing found. He flushed a single bird of a bevy which Domino had pointed. Up at 12:37. Domino was much the better.

MARIE'S SPORT AND TORY FASHION started at 12:42. Tory flushed two birds. Sport made a good point on a single, Tory backed. Sport pointed a single. Up at 1:12. Tory had a shade the advantage in range, but on birds his work was very faulty.

MAZEPPA AND GLEAM'S RUTH ran from 1:17 to 2:54 without finding, though they worked diligently. Ruth the superior in range and judgment.

FEU FOLLET, the bye, ran about a half hour, ending at 3:31. She pointed a bevy nicely in a cornfield and was steady to shot. On scattered birds she was coached a great deal. She made two points on them and one point on which nothing was found, and one flush. Her range was not conducted with judgment.

Second Round.

Six were retained in the second round and ran in the following order:

DOMINO AND MARIE'S SPORT were cast off at 3:40. Sport had much the better of the heat. He pointed a single and Domino backed. Next he pointed a bevy and Domino backed or pointed—presumably the former, as he was up wind of the bevy. Domino made two points on scattered birds. Sport made one. 4:13.

TORY FASHION AND GLEAM'S RUTH started at 4:17. Tory at the edge of woods pointed and Ruth backed; Tory pointed on a footscent presumably, as the bevy was flushed about 30yds. down wind of him in the open. Ruth pointed, lost scent and moved on; two birds afterward were flushed close by her point. Tory pointed scattered birds. A bevy was followed to woods. Tory flushed. He pointed in open; nothing found. Ruth made a point on a single; Tory a flush. Up at 4:39.

MAZEPPA AND FEU FOLLET ran from 4:41 to 5:18. Feu fiddled on the scent of small birds, but no quail were found. Mazeppa part of the time ranged well. Feu was frivolous in her work.

This ended the stake. It was most difficult to decide on the competition presented.

All-Age Pointers.

The quality of the work in this stake improved a great deal over that exhibited by the Derbys. Some of the competitors exhibited very superior capabilities. It was by far the best stake of the week.

There were eleven starters drawn in the followiug order:

C. Coolidge's l. and w. dog Rex Fast (Rex—Mosy), M. A. Fry, handler, with F. A. Hodgeman's l. and w. dog Ridgeview Regent (Beppo III.—Bloomo II.), J. M. Avent, handler.

Ashford & Odrun's l. and w. dog Von Gull (Kent Elgin—Fanny V. Croxteth), D. E. Rose, handler, with P. Lorillard, Jr.'s, l. and w. bitch Rancocas Belle (Rip Rap—Maud), Jos. H. Wilson, handler.

Kidwell & Stoddard's b. and w. dog Tick Boy (King of Kent—Bloom), J. B. Stoddard, handler, with N. T. De Pauw's l. and w. dog Jingo (Mainspring—Queen II.), N. B. Nesbitt, handler.

G. Chisholm's l. and w. dog Komus (Clip Graphic—Mack's Juno), D. E. Rose, handler, with F. W. Dunham's lem. and w. dog Elgin's Dash (Kent Elgin—Mack's Juno), N. B. Nesbitt, handler.

L. W. Blankenbaker's l. and w. bitch Lad's Lady (Lad of Rush—Lady Margaret), J. H. Johnson, handler, with H. K. Devereux's l. and w. dog Tamarack, Jr. (Tamarack—Maud Graphic), Geo. E. Gray, handler.

Thos. Hitchcock's l. and w. dog Tony Baron (Duke of Hessen—Westminster Ina), J. M. Avent, handler.

This stake was for pointers which had never won first in any All-Age Stake in any recognized field trial in America. The prizes were $150, $125 $100, $75 and $50.

Tick Boy, first, ran a superior race, and defeated his competitors with something to spare. He carries a high nose, is a good finder and works with good judgment.

Jingo was not running in his best form, though he ran an excellent race and was easily second.

Rancocas Belle, third, ran but fairly well. I thought Von Gull the better dog for third, as his judgment is good and he showed superior hunting qualities. He won fourth. Tamarack, Jr., on ordinary work won fifth.

First Round.

REX FAST AND RIDGEVIEW REGENT were cast off at 8:42. In the open Regent got close to a bevy, caught scent as it flushed, then ran away about 15 or 20ft., returning timorously but steadily to where the bird flushed. It was a very bad piece of work from a very bad fault, birdshyness. Rex, in woods, pointed a single; Regent refused to back and flushed the bird and was unsteady. Each flushed. Rex pointed a single. Up at 9:12. Rex was the better in every respect.

VON GULL AND RANCOCAS BELLE began at 9:19. The judges flushed a bevy which was not far from the course taken by the dogs. Von pointed a single, Belle pointed twice, both doing clean work. Up at 10:11. Both had fair speed and range. Von's style of hunting was superior, he carrying a high nose and attending to business. Belle also showed superior merit.

TICK BOY AND JINGO were cast off at 10:14. This heat excited great interest, as both were conceded to be great dogs. Tick pointed a bevy; Jingo coming in pointed same bevy; both steady to wing and shot; the credit was Tick's. Tick pointed a single; Jingo backed. Sent on, Jingo pointed a single. Next Jingo pointed; Tick backed; nothing found. After this the dogs separated and worked on different grounds. Tick took wide casts, beat out his grounds with dash and judgment. Jingo in woods roaded, but at last gave up the search; seemingly he was on the trail of a bevy which had flushed. 10:59. Both dogs showed superior ability. The advantage was with Tick Boy.

KOMUS AND ELGIN'S DASH started at 11:05. Of the two bevies pointed by Komus, Dash flushed the first after refusing to back, and among scattered birds he showed inability and carelessness, flushing repeatedly. Komus was the superior in every respect save speed; up at 11:34.

LAD'S LADY AND TAMARACK, JR., started at 11:47. Two birds were seen to flush in the open; Lady was found on point near the place; Tamarack backed—footscent probably. Both side by side pointed a bevy. Lady made two points on singles; Tamarack a flush. This on birds lying close together in cover on a side hill. Tamarack flushed a bevy. Tamarack made two points and a flush. Both had middling range, and were rather wiggly and indecisive in taking advantage of the opportunities offered.

TORY BARON started at 1. Up at 1:40. The exhibition was extremely inferior. He loafed and seemed shy.

Second Round.

Eight were retained in the competition.

VON GULL AND JINGO were started at 1:50. Jingo made a very pretty exhibition of galloping about 100yds. straight up wind to a point on a bevy which he had scented. Von backed. Von made a point and a flush. Jingo made a point on a single and Von stopped at the same time to a point on the same bird. 2:25. Jingo the better workman.

KOMUS AND BELLE started at 2:28. Both ranged well. Belle pointed a bevy on a side hill and Komus backed. Komus made two points, one on a wounded bird. Belle pointed a bird well, and made a point at the same time the bird flushed. The heat was a fairly good one in range, speed, judgment, etc. 2:56.

REX FAST AND TAMARACK, JR., began at 3 and ran nineteen minutes. Both pointed close together on a bevy. Sent on, Tamarack pointed a bevy at the edge of woods, moved on a piece and located it accurately. 3:19. Both ranged well.

TICK BOY AND LAD'S LADY began at 3:25. Tick found and pointed a bevy, but the birds were flushed about 30yds. to one side of his point by horsemen. Tick made three sharp points on single birds. In woods he made a good point on a single. 3:41. Tick showed very superior qualities in every respect, outworking Lady on all points.

Final.

JINGO AND TICK BOY were started to more definitely determine the matter of range and speed, although this heat was not necessary. Both dogs ranged well and beat out the ground with judgment, though not up to their best form. Ordered to work back in a certain direction, Tick was turned back while Jingo worked on in forbidden ground and pointed a bevy, locating it in a rather laborious manner. Having the advantage in seeing the flushed birds and getting into the woods first after them, he got one point on a single, and he and Tick divided a point on some scattered birds. 4:27. The heat really determined nothing which could not have been determined before.

One heat was run in the Setter All-Age Stake, which ended the day's competition.

The All-Age Setter Stake.

The starters in this stake made a very feeble competition as a whole. It rated much inferior to the corresponding stake for the pointers. It may be said, however, that the birds from being constantly pursued had become wild and were in hiding. The grounds had been diligently worked for two weeks, to and fro, the same route being in general constantly followed. Even with this plead as an excuse, the competition was feeble and wearisome, one of the dullest days of trial by no means filled with excitement. There were ten starters, drawn as follows:

Fox & Seiler's b., w. and t. dog Tony Gale (Antonio—Nellie G.), J. H. Johnson, handler, with F. R. Hitchcock's b., w. and t. bitch Tory Dotlet (Count Gladstone IV.—Tory Della), J. M. Avent, handler.

C. N. Powers's b., w. and t. dog Revenue (Antonio—Nellie Hope), W. W. Titus, handler, with Manchester Kennel Co.'s b., w. and t. dog Gleam's Pink (Van Guard—Georgia Belle), N. B. Nesbitt, handler.

W. H. Beazell's b., w. and t. dog Harold Skimpole (Whyte B.—Nettie Bevan), Geo. E. Gray, handler, with N. T. Harris's b., w. and t. dog Tony Boy (Antonio—Laundress), D. E. Rose, handler.

W. W. Titus's b., w. and t. bitch Minnie T. (Dick Bondhu—Betty B.), owner, handler, with N. T. Harris's b., w. and t. bitch Cynosure (Roderigo—Norah II.), J. M. Avent, handler.

Phil M. Essig's b., w. and t. dog Rod's Top (Roderigo—Topsy Avent), J. M. Avent, handler, with Whyte Bed-

ford's b., w. and t. dog Joe Bowers (De Sota— ——), W. W. Titus, handler.

Minnie T., the winner, is too well known now to need extended description. She won first fairly in a poor competition, not running in her best form.

Cynosure, winner of second, was a close competitor for first, and after that of these two there was very little definite work on which to make judgments.

Tory Dotlet, third, did a little sharp work, and some that was frivolous.

Rod's Top, winner of fourth, ran a very poor race, in my opinion much inferior to Tony Boy's.

Gleam's Pink, fifth, made a fair, ordinary performance, with little of a really competitive character in his work.

Thursday.

A white frost still clung insistently in the shady places when the dogs were started and the morning was uncomfortably raw. As in the preceding days of the trials, as the sun mounted higher the temperature rose, and after the morning hours the day was uncomfortably warm. Birds were not easily found. Nearly the same route had been followed day after day till the birds were drawn out of their haunts or had become wild to a high degree. The competition dragged at times, and was at best meager and faulty. The placing of the winners was necessarily on very narrow margins, for it seemed impossible to establish the necessary data for definite judgment. It was demonstrated that when two clubs hold their trials on the same grounds, the one which runs last has much the worst of the bargain. If the U. S. F. T. C. and the E. F. T. C. run at Newton next year they need much more grounds, or each, better yet, should have grounds of its own.

The first heat of this stake was run on Wednesday evening.

TONY GALE AND TORY DOTLET were cast off at 4:40. Both ran riot on a bevy. On scattered birds Dot pointed a single, then broke in quickly and flushed. Dot next pointed a single nicely. Gale flushed a single. Each pointed next, nothing found. They ran about 30 minutes. The heat was a poor one.

GLEAM'S PINK AND REVENUE ran 39 minutes, beginning at 8:50. Revenue appeared to be off his nose entirely, he making two inexcusable flushes on bevies. Pink pointed a single bird. His range was middling good.

HAROLD SKIMPOLE AND TONY BOY were cast off at 9:37. Harold's work was a disappointment, for while he ran well as a mere matter of running he had no success in finding. Tony made a flush and two points, the bird to the last one being close-lying and was flushed after the dog was sent on. He made a point to which nothing was found. Tony's judgment in beating out the ground and working on birds was far the better. 10:36.

MINNIE T. AND CYNOSURE ran the best heat of the day, beginning at 10:38. Minnie soon found and pointed a bevy nicely. The birds were marked down on a steep side hill in dense cover, where work was most difficult. Several times the dogs pointed, but no bird was found, though no doubt many of these points were true, as the birds had run and scattered. Minnie flushed once and made three points, two of which were made on the side hill, where they could be plainly seen by spectators in the bottom, but it is doubtful if the judges saw them, as the birds flushed wild. Cynosure made three points, pegging her birds accurately and with confidence, doing some very good work. Minnie at times seemed over cautious and too painstaking in avoiding errors. Both ranged well and were steady to shot, point and back. Up at 11:07.

ROD'S TOP AND JOE BOWERS began at 11:14. Rod made a good point up wind of a bevy, jumping a fence to locate it the better. Next he pointed; nothing found. Both ranged well. Up at 11:48.

Second Round.

Nine were retained in the running.

TORY DOTLET AND GLEAM'S PINK ran 53 minutes, beginning at 12:25. Dotlet pointed a bevy and nicely pointed a single and flushed one. Pink laboriously located a single. He made two flushes. His work on birds was labored and he pointed often on footscent. Dotlet was much sharper in her work. Up at 1:18.

TONY GALE AND MINNIE T. began at 1:22. Minnie pointed a bevy. Tony pointed in corn; nothing found. Minnie dropped at the same moment a bird flushed. Minnie again dropped in dry leaves at the moment a bird flushed. Of these points it was difficult to determine exactly the merit, but as Minnie is very honest and accurate there probably was no fault. Up at 2:11.

HAROLD SKIMPOLE AND CYNOSURE began at 2:28 and ran 28 minutes. A bevy was seen to flush, but it was not known which dog was guilty. Cynosure made two good points on singles. Harold ran well, but accomplished nothing as a finder. Cynosure had every advantage in the heat save that of speed.

TONY BOY AND JOE BOWERS were cast off at 3:02. Down 45 minutes. The work was very ragged on birds. Both dogs ran well, covering much ground.

ROD'S TOP, the bye, began at 3:50. Down 15 minutes. He passed close by a bevy in the open which was flushed by his handler a moment later. He made two points on the scattered birds, and was heady and hard to manage.

The Irish Setter Club's Trials.

A STANCH band of the admirers of the Irish setter met at High Point, N. C., to hold their field trials, beginning on Monday, Dec. 2. Still, with all their enthusiasm, the field trial party had a feeling of disappointment at the number which, for various reasons, could not start, thus lowering the number in the competition.

Monday morning was rainy and raw, the sky a mass of solid black cloud, and underfoot was muddy. About the middle of the forenoon there were signs of clearing up and the party weathered forth to the contest.

Mr. W. S. Bell judged. Owing to the scarcity of birds it was impossible to give the dogs a thorough test on them, and therefore the judge could decide only upon such qualities as he could test.

The Derby.

There were two starters in this stake, both rather puppyish in their manner of working and both about average in merit. They were run as follows:

Alfred Von Cotzhausen's bitch Lady Finglas (Finglas—Lady May Swiveller). W. Tallman, handler, with F. E. White's bitch Mollie Gibson (Dakin—Jessie Freemont), W. G. Smith, handler.

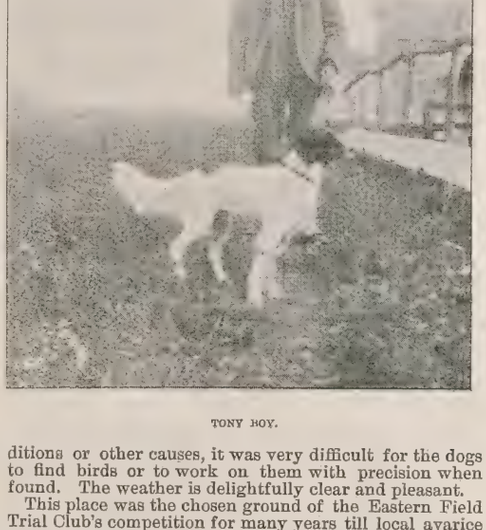
LADY FINGLAS AND MOLLIE GIBSON ran 56 minutes, beginning at 10:31. The weather was damp, part of the time rain fell and it was a most unpromising morning for birds. Nothing found. Range and pace moderate.

Lady Finglas, first; Mollie Gibson, second.

The All-Age Stake.

There were three starters in this stake drawn in the following order:

Dr. G. G. Davis's bitch Currer Maud (Finglas—Currer Belle IV.), E. O. Whittle, handler, with Lady Finglas.



Dr. G. G. Davis's bitch Loo (Finglas—Currer Belle IV.), a bye, E. O. Whittle, handler.

LOO was run first to give Lady Finglas a rest, she having run in the Derby. She ran 31 minutes. Nothing found.

CURRER MAUD AND LADY FINGLAS began at 11:23. The weather then was clearing up and the temperature was growing warmer. A bevy of birds was seen to flush. Their course could not be noted accurately. A diligent search was made for them without success. Up at 2:07. Currer Maud ranged fairly well.

LOO AND MAUD ran from 12:08 to 12:30. Nothing found. First, Loo; second, Currer Maud; third, Lady Finglas.

HIGH POINT, N. C.—On the morning of Dec. 2 there arrived a plucky band of Irish setter fanciers, enthusiastic in promoting their cause and neither deterred nor disheartened by the meager entries. With but ten entries all told, the expense of the trials and the scarcity of birds were no obstacles to carrying to a conclusion what they had advertised to begin. The party consisted of five members of the Irish Setter Club and Philadelphia Kennel Club, namely, Dr. G. G. Davis, whose faith, industry and enthusiasm in the interests of the Irish setter never lessen, and Messrs. Francis G. Taylor, J. H. Ogden, S. Murray Mitchell, and George H. Thompson, Secretary of the Irish Setter Club. Professor Edm. H. Osthaus and Major J. M. Taylor are here also. From all reports, birds are not plentiful nor easy to find. Mr. P. Lorillard, Jr., who has a preserve at this place, and who was shooting on it last week, stated that, owing to atmospheric con-

TONY BOY.

ditions or other causes, it was very difficult for the dogs to find birds or to work on them with precision when found. The weather is delightfully clear and pleasant.

This place was the chosen ground of the Eastern Field Trial Club's competition for many years till local avarice grew apace and extortion increased year by year till it became an evil. With the arrival of the field trial supporters, the value of everything instantly increased to an extraordinary degree. Hotel rates, which ordinarily were offered at $1.50 per day with few takers, jumped from that in all degrees of the scale up to $3.50 per day, and no weekly rate so long as a man owned a dog or gun. This in no wise implied that a guest was well served. He must do his own still-hunting for the porter, and fee him to an extent which attained the dignity of a bribe—otherwise no wood, no fire, no anything. Eternal vigilance was necessary for comfort and security in retaining one's own, else the small pile of green wood placed with unctuous demonstration by the ebony-hued porter, whose every movement had ulterior designs on the guest's generosity, was in danger of being taken to some other more easily gulled guest, by the same porter who brought it in or by some other porter who had made a scientific study of the economy of forces. I remember once devoting special time to the task of interviewing the landlord concerning wood for a fire. The order was turned over with true official, though irresponsible, dignity to the porter after he was laboriously sought and brought into communication, and by diligent supervision enough wood was secured at once for an evening's supply instead of being doled out stick by stick, as was the custom. The ease with which a bill grew to rotundity was in striking contrast to the difficulty of getting anything in return for it. Well, in regard to the wood. I went into the office for a few moments, and when I returned the wood was gone. The porter had received a larger bribe or had been terrorized into rapid action by a guest who would not submit to any imposition. The meals were largely served in a manner which would cause the guest to deceive himself into believing that he was fed reasonably well, for there were a number of small dishes with a dab of something or other in each—a spoonful of cheap canned tomatoes, a spoonful of rice, a spoonful of hominy, etc., a lot of decoy dishes which, being uneaten, always would serve consecutive meals for many weeks—the whole suggesting color and substance to the eye, yet on trial illusive to the stomach—and all this mockery of keeping a hotel was charged for at famine prices. The stablemen were neither slow nor backward in availing themselves of their opportunities. The value of some rough-haired aggregation of blemishes, an uncanny brute of a horse, which was fed on washed-out corn fodder and water all his life, rose from anything they could get before the trials to an even $1.50 per day during the trials. The difficulty of finding a porter to attend to his duties during the guest's stay was only equaled by the astonishing squad which awaited to intercept him at the moment of his departure, each and all claiming most importunately that they had done material service, and all with a hollow obsequiousness and reckless lying which gained more or less reward according to the degree of the infliction on the guest's credulity.

But now there are lamentations that the club is gone and regrets for the insatiable hunger which led to the death of the goose which laid the golden egg.

The Bellevue Hotel has undergone great changes. It is now run on lines of equity, and the guest's privilege is to eat a genuine meal, honestly made and served, as well as to pay his bill; in the old days his only certain privilege was the latter.

The celebrated Irish setter Henmore Shamrock (Muskerry—Avoca), owned by Muckross Kennels, died of pneumonia at Thomasville, N. C., where he was in training for the Irish setter trials. His loss is great to the Irish setter interests of America, as he was strong in the Muskerry blood which has won so much favor with many breeders.

B. WATERS.

The Philadelphia Kennel Club's Trials.

IMMEDIATELY after the Irish Setter Club's trials were ended the party partook of lunch and the Philadelphia Club's trials began. The drawing had taken place the night before and there were nine starters. The club decided to make this an All-Age Stake. Several new arrivals on Monday occasioned another drawing, which resulted in twelve starters, run as follows:

S. Murray Mitchell's o. and w. setter dog Sandy Gladstone (Breeze Gladstone—Belle of Delaware), John Lewis, handler, with Frank M. Fleer's liv. and w. pointer dog Gamester (Duke of Hessen—Woolton Game), owner, handler.

Dr. G. G. Davis's Irish setter bitch Currer Maud with S. Murray Mitchell's setter dog Popillon (Antonio—Lilly Burgess), J. Lewis, handler.

S. Murray Mitchell's setter dog Clarke (Antonio—Gladstone's Norah), J. Lewis, handler, with Francis G. Taylor's b., w. and t. setter dog Ben Hur of Riverview (Ben Hill—Zoe W.), owner, handler.

Frank M. Fleer's b. and w. setter bitch Flora (Roi d'Or—Diamond), J. Cassidy, handler, with J. H. Winslow's b., w. and t. setter dog Breeze Bolton (Breeze Gladstone—Nellie Belton), W. Tallman, handler.

J. B. Baker's b., w. and t. setter bitch Lou with Geo. H. Thompson's setter bitch Frills (Edgemark—Lucy II.).

Dr. G. G. Davis's setter bitch Loo, E. O. Whittle, handler, with J. B. Baker's liv. and w. pointer bitch Westminster Zoe (King of Kent—Westminster Ina), J. Lewis, handler.

Mr. W. S. Bell judged this stake and made the phenomenal record of judging two field trials in one day.

SANDY GLADSTONE AND GAMESTER began at 1:07. Down about 30 minutes. Gamester flushed a bevy. On the scattered birds he showed a good nose and capabilities of finding and pointing, but he was headstrong and unsteady to shot and wing. He made three points on singles; Sandy made one. Sandy was careless and sloppy in his point work. Neither ranged wide.

CURRER MAUD AND POPILLON ran 41 minutes, beginning at 1:38. The latter was the wider ranger. He pointed at the edge of woods, left his point—presumably to get a better scent of the birds—and his handler walking into the woods flushed the birds. He showed good judgment in beating out his ground. Maud ranged well, though not wide.

CLARKE AND BEN HUR OF RIVERVIEW started at 2:23. Ben was laboriously making game when Clarke, passing in front, flushed the bevy. Both were moderate rangers.

FLORA AND BREEZE BELTON were cast off at 3:05. Both made game. Nothing found. Breeze made an indecisive point on a single, flushed one and made a point which proved worthless. His speed was commonplace. Flora ranged wide and fast, but as was proved in a later heat, her work on birds was lawless. Down 36 minutes.

LOU AND FRILLS started at 3:45. Lou showed fairly good speed and range. Frills made but an ordinary showing.

LOO AND ZOE started at 4:02. Zoe pointed a bevy in the edge of woods. Loo backed prettily. In moving up to locate Loo joined in the work, but the credit of the find was Zoe's. Up at 4:23. Both ranged well.

Second Round.

Six were retained in the running.

POPILLON AND BEN HUR were started at 4:27. On scattered birds Ben pointed and Popillon pressed by and forward to a flush. Each pointed a single. Up at 4:32. There was no ranging, all the work being in woods on scattered birds. Ben Hur had the better bird work. Popillon was headstrong and lacking very much in stanchness.

FLORA AND ZOE began at 4:35. Down 6 minutes. Zoe pointed a bevy in the open. Flora flushed it and was riotous. In woods Flora flushed a single. Zoe pointed a single. Flora backed. Zoe had much to spare in beating Flora.

LOU AND LOO began at 4:45. Loo pointed a bevy nicely; Lou backed. Lou a bit unsteady to shot. Up at 5:06.

ZOE AND POPILLON ran a few minutes, more to obey the law, which requires that first and second winners have run together, than to make a competition.

The judge announced the winners as follows: First, Westminster Zoe; second, Popillon; third divided between Ben Hur of Riverview, Loo and Lou.

On Monday evening the club held a meeting and decided to run a members' stake on Tuesday. Prof. Edm. H. Osthaus consented to judge it.

U. S. F. T. C. Meeting.

AT a special meeting of the U. S. F. T. Club, on Wednesday night, Nov. 27, it was the sense of the meeting that the U. S. F. T. Club hold its trials at Newton, N. C., in November, after the E. F. T. C. holds its meeting. A committee was appointed to act in conjunction with a similiar committee of the E. F. T. C. in regard to protecting the birds on the grounds between trials. The following applicants were admitted to membership: Messrs. Hobart Ames, North Easton, Mass.; S. C. Cummings, Pittsburgh; W. W. Titus, Waverly, Miss.; J. C. Bradley, Greenfield, Conn. A resolution was passed thanking and complimenting the judges. Finances reported in good condition.

The Bridgeport Dog Show.

THE first annual bench show of the Bridgeport Kennel Club was held in the old Baptist church building of that city from the 26th to 29th inst., inclusive. The support given by outside and local fanciers was most encouraging to its promoters, and augurs well for Bridgeport from now on having an annual dog show. Already many of the prominent local fanciers are working to found a permanent club, and a meeting for the purposes of organization is called for this week. The total entry was 300, which beats Danbury, with a larger premium list and an A. K. C. show, by about 80. Had it not been for the bad storm on the opening day there is no doubt the show would have been more of a financial success; as it was, the attendance was fair, although it was not until the two last days that the public really commenced to look with favor on the venture. With a larger building next year there is no doubt the attendance will be better. Much praise is due to Dr. James E. Hair, president of the club, for his untiring efforts to make visitors comfortable. E. M. Oldham was superintendent and Spratts Patent benched and fed.

The judges were: Dr. James E. Hair, Bridgeport, Conn., pointers, English, Irish and Gordon setters, beagles; German Hopkins, Esq., Hempstead, L. I., all terriers, foxhounds, greyhounds and whippets; R. K. Armstrong, Esq., Highland Falls, N. Y., bulldogs and collies; James Watson, Esq., New York, all other classes.

The following is a complete list of the awards:

MASTIFFS.—*Dogs:* 1st, withheld; 2d, J. H. Fromm's Prince.

ST. BERNARDS.—CHALLENGE—1st, McCarl & Cattaneo's Fernwood Bruce.—ROUGH-COATED—OPEN—*Dogs:* 1st, T. M. Burke's Pontiff II.; 2d, M. Grace's Osmonde. Vhc., F. W. Foley's Lord Melrose, Jr. Hc., L. G. Wallace's Duke of Bridgeport. C., E. McCall's Dash. *Bitches:* 1st and vhc, McCarl & Cattaneo's Spec Lomond and Minnie C.; 2d, F. W. Foley's Reina F.—SMOOTH-COATED—*Dogs:* 1st, T. M. Burke's Carmot. *Bitches:* 1st, W. Warwick's Lady Warwick; 2d, T. M. Burke's Seibeba. Vhc., Mrs. T. M. Burke's Donna Marie. Hc., Mrs. E. C Ribero's Hope. *Puppies:* 1st, T. M. Burke's Carmot; 2d, vhc. and hc., Mrs. W. Warwick's Grand Duke, Earl Warwick and Grand Duchess.

GREAT DANES.—1st and vhc., E. Knieriem's Major McKinley II. and Caleb.

RUSSIAN WOLFHOUNDS.—1st, M. S. Tyson's Colonel's Own.

GREYHOUNDS.—CHALLENGE—1st, Toon & Thomas's Bestwood Daisy. Res., Dr. J. H. Lyke's Wild Lily.—OPEN—1st, Toon & Thomas's Southern Belle; 2d, P. Schoenfeld's Sport. Res., H. Jarrett's Archbishop. Vhc., R. Cunningham, Jr.'s, Drab. Hc., J. Owens's Sailor and C. A. Wintzer's Schooner.

POINTERS.—CHALLENGE—*Bitches:* 1st, G. W. Lovell's Wild Lily.—OPEN—*Dogs:* 1st, Rinada Pointer Kennels' Spendthrift; 2d, J. French's Brown; 3d, J. C. Chamberlain's Chief. Res., G. W. Lovell's Prince of Pontiac. Vhc., C. Gradher's & P. W. Seery's Trinket, W. Flynn's Litchfield and W. H. Chapin's Duke. C, J. A. Wilson's Don. *Bitches:* 1st, 2d and 3d, Rinada Pointer Kennels' Brackette, Lady Reveller and Hempstead Kit. C., W. H. West's Jersey Lily.

ENGLISH SETTERS.—OPEN—*Dogs:* 1st, J. Lewis's Larkspur; 2d, G. W. Neal's Robert Kent; 3d, J. Carver's Bald Rock. Vhc., E. E. Beach's Partang II. Hc, E. R. Ives's Max and H. Blansfield's Dash. Res., E. J. Bell, Jr.'s Young Howard. *Bitches:* 1st, Oak Grove Kennels' Furness Maid; 2d, J. M. Sterling's Hoosier Nell; 3d, E. K. Sperry's Daisy Gale. Vhc., E. W. Cornwall's Nelly Bly of the Pequots. Hc., C. Gradher and P. W. Seery's Della and Wm. Knott's Nelly Bondlin.

IRISH SETTERS.—CHALLENGE—*Dogs:* 1st and res., Oak Grove Kennels' Ch. Kildare and Kildare Glenmore. *Bitches:* 1st and res., Oak Grove Kennels' Ch. Queen Vic and Ch. Norna.—OPEN—*Dogs:* 1st and 2d, J. B. Blossom's Katonah and Londonderry; 3d, T. B. Bradley's Roe. *Bitches:* 1st, Oak Grove Kennels' Duchess; 2d, H. Jarrett's Seminole Fly; 3d and res., J. B. Blossom's Squaw and Nuggett II. Hc., G. W. Dayton's Judy II.

GORDON SETTERS.—CHALLENGE—*Dogs:* 1st, Dr. S. G. Dixon's Leo B. Res., J. B. Blossom's Ch. Heather York. *Bitches:* 1st, J. B. Blossom's Ch. Flomont. Res., Dr. S. G. Dixon's Princess Louise.—OPEN—*Dogs:* 1st, G. Schaefer's Wang Ivanhoe; 2d and 3d, J. B. Blossom's Beaumont, Jr., and Comus. *Bitches:* 1st, 2d and res., Dr. S. G. Dixon's Princess Bonnie, Lady Ivanhoe and Santa Marie; 3d and vhc., J. B. Blossom's Venus and Sally Beaumont. *Puppies:* 1st, Dr. S. G. Dixon's Lady Ivanhoe; 2d, Dr. G. C. Eighme's Marc Antonio; 3d and hc., Dr. W. C. Bowers's Rameses and Totmes. Res., C. M. Calhoun's Taffy.

CLUMBER SPANIELS.—OPEN—1st, Toon & Thomas's Endcliffe Fairy.

FIELD SPANIELS.—OPEN—*Dogs:* 1st, M. A. Viti's Wardance. *Bitches:* 1st, Toon & Thomas's Endcliffe Myrtle; 2d, H. Jarrett's Nellie.

COCKER SPANIELS.—CHALLENGE—1st, Swiss Mountain Kennels' champion Middy. Vhc., G. Greer's Bambo.—OPEN—BLACK OR LIVER—*Dogs:* 1st and 3d, E. W. Fiske's Billy and Chief; 2d, Swiss Mountain Kennels' Josephus. Vhc., J. G. Struss's Royal. *Bitches:* 1st, Swiss Mountain Kennels' Dart; 2d, G. Greer's Corrie; 3d, E. W. Fiske's Floss Obo. Hc., Mrs. A. J. Cattaneo's Baby Ruth II., F. W. Kitchel's Susanna Herrick.—ANY OTHER COLOR—1st and c., F. W. Kitchel's Mr. J. Jinks and Jasper; 2d, Dr. J. H. Lyke's Commotion; 3d, F. F. Dole's Edgewood Hebe. Vhc., E. W. Fiske's Muldoon. Hc., Swiss Mountain Kennels' Cherry Punch and Marguerite, E. W. Fiske's Red Niobe, F. F. Dole's Sport.

FOXHOUNDS.—CHALLENGE—1st, N. Money's Songster.—OPEN—*Dogs:* 1st, H. Jarrett's Mainstay; 2d and res., W. H. Wilson's Sport and Sam. Hc., J. Ellis's Sport. *Bitches:* 1st, N. Money's Friendly; 2d, H. Jarrett's Larceny. Res., J. Ellis's Cap.

CHESAPEAKE BAY DOGS.—1st, Oak Grove Kennels' Deacon.

COLLIES.—*Dogs:* 1st and 2d, S. L. Stewart's Dr. David and Clyde Alexander; 3d, L. Fackler's Milford II. Res., J. C. Thornton's Guy. Vhc., Rev. P. Fox's Grover. Hc., G. Hall's Bruce Derby. *Bitches:* 1st and 3d, R. Buckle's Lady Morgan and Victoria; 2d, S. L. Stewart's Newburgh Queen.

POODLES.—*Dogs:* 2d, J. C. Cochrane's Bud. *Bitches:* 2d, C. E. Knott's Prinnie.

BULLDOGS.—CHALLENGE—1st, Imperial Kennels' Juno II.—OPEN—*Dogs:* 1st, J. B. Miller's Duke II.; 2d, A. B. Graves's Handsome Dan; 3d, G. W. Campbell's Robin Roy. *Bitches:* 1st, J. B. Miller's Venus VII.

BULL-TERRIERS.—CHALLENGE—1st, F. F. Dole's champion Starlight.—OPEN—*Dogs:* 1st and 2d, F. F. Dole's Victor and Edgewood Roger. Res., Smith Penfield's Ben Bolt. *Bitches:* 1st and vhc., F. F. Dole's My Queen and Edgewood Fancy III.; 2d, Dr. George Darby's Lansdowne Thelma. Res., Smith Penfield's Alice.

BOSTON TERRIERS.—CHALLENGE—1st and res., Bayonne Kennels' Prince Walnut and Nankin.—OPEN—*Dogs:* 1st and 2d, Bayonne Kennels' Mack and Hector. Res., Mrs. C. D. Woodward's Nick. Hc., W. Gillespie's Brandy. *Bitches:* 1st and 2d, Bayonne Kennels' Maggie and Trixey. Res., F. L. Cheney's Clytie.

DACHSHUNDS.—1st, Mrs. Wallace M. Bulkeley's Pretzel.

BEAGLES.—CHALLENGE—1st and 2d, Joe Lewis's champion Ringleader and champion Lonely.—OPEN—*Dogs:* 1st, Joe Lewis's Rattler; 2d and vhc., Glenwood Beagle Kennels' Glenwood Boy and Clipper. Res., C. O. Smith's Tariff. *Bitches:* 1st and res., Glenwood Beagle Kennels' Lady Glenwood and Frances; 2d, E. L. Stine's Rose of Hornell.

FOX-TERRIERS.—SMOOTH—CHALLENGE—1st and 2d, L. & W. Rutherfurd's Warren Capture and Warren Safeguard.—OPEN—*Dogs:* 1st, L. & W. Rutherfurd's Warren Sage; 2d, Geo. Raper's Baby Rival. Res. and vhc., Mere Kennels' Charlton Nigger and Mere Dominie. Vhc., Dr. J. F. Belt's Wawaset Royal. C., Chas. Cavanagh's Halo. *Bitches:* 1st and 2d, L. & W. Rutherfurd's Warren Sentence and Warren Dusky. Res., Toon & Thomas's Spinster. Vhc. and hc., Mere Kennels' Mere Tansy and Dudley Nettie. Vhc., Dr. J. F. Belt's Wawaset Lucy.—WIRE-HAIRED—CHALLENGE—1st, Toon & Thomas's Endcliffe Fidget.—OPEN—*Dogs:* 1st, Toon & Thomas's Endcliffe Brick; 2d, Dr. H. T. Foote's Brittle Boy. *Bitches:* 1st, Dr. H. T. Foote's Brittle Bee; 2d and res., Dr. J. F. Belt's Wawaset Vixen and Hillhurst Pansy.

IRISH TERRIERS.—CHALLENGE—1st, Toon & Thomas's Briggs's Best; 2d, G. Gordon Hammill's Hilltop Surprise.—OPEN—*Dogs:* 1st, S. D. Parker's Endcliffe Barney; 2d, G. Gordon Hammill's Hilltop Jackanapes. *Bitches:* 1st, Dr. Ed. Kirk's Kathleen; 2d, Toon & Thomas's Endcliffe Biddy.

SCOTTISH TERRIERS.—*Bitches:* 1st, Toon & Thomas's Endcliffe Tibby.

BEDLINGTON TERRIERS.—1st, M. James's Hard Tack; 2d and res., J. Hopkinson's Beachgrove Bluebelle and Beachgrove King.

SKYE TERRIERS.—1st and 2d, C. A. Shinn's Endcliffe Maggie and Elphinstone. Vhc., hc. and c., G. Heritage's Maud, Mary and George.

DANDIE DINMONT TERRIERS.—1st, Toon & Thomas's Endcliffe Mary.

BLACK AND TAN TERRIERS.—CHALLENGE—1st, Dr. H. T. Foote's champion Broomfield Sultan.—OPEN—1st and 2d, J. B. Hefter's Silk and Olata. Res., E. Mack's Dandy. Vhc., Dr. H. T. Foote's Rochelle Catnip.

YORKSHIRE TERRIERS.—1st, H. Jarrett's Dixie; 2d, C. H. Hinkley's Trixy. Vhc., Miss J. Hair's Bradford Doc.

PUGS.—CHALLENGE—1st, Miss E. Cryer's Bob Ivy.—OPEN—1st, W. G. Brittain's Bradford Marvel; 2d, C. Y. Ford's Otterburn Treasure Vhc., J. Lewis's Pearl H. Hc. and c., Mrs. G. Copeland's Jack and Jill.

ITALIAN GREYHOUNDS.—1st, 2d and vhc., J. Lewis's Tinnie II., Sprite and Spring.

WHIPPETS.—1st, Toon & Thomas's Spot; 2d and res., C. E. Knott's Nellie and Prince.

MISCELLANEOUS.—1st, J. Carver's Ben; 2d, M. S. Tyson's Draymau. Vhc. and hc., F. Pfau's Jumbo and Baby.

The Monmouth County Hounds.

THE Monmouth County Hunt Club came off with flying colors at the Live Stock Show held last week in Madison Square Garden. The New York *Sun* of Nov. 28, in its report of the previous day's work at the show, said:

"One of the best features of the show thus far was furnished in the evening, when the Monmouth County Hunt and the Westchester Hunting clubs came out with their horses and hounds to compete for a prize of $250. The conditions in this class required each club to show five couples of foxhounds and three hunters, with the huntsmen in appropriate costume, appointments being considered by the judges in making the award. The Monmouth County Hunt showed the three noted fencers, Ascetic, ridden by P. F. Collier, M. F. H.; The Dutchman, with Jimmy Blute up, and Ascetic II., ridden by Caffrin. All of their horses were big, powerful, well-formed fellows, up to carrying almost any weight, and the riders wore showy, bright-red coats, making a handsome display with the well-broken hounds at the horses' heels.

"The Westchester Hunting Club's representatives were The Tartar, with Robert E. Tod, M. F. H., in the saddle; The Turk, ridden by Louis Hayt, and Rameses II., ridden by Callaghan. The hounds were judged first, and then came the jumping competition over six fences. Here the Monmouth Club outpointed the Westchester hunters, Ascetic, The Dutchman and Ascetic II. taking the jumps in very clever fashion and scarcely touching a stick. The Turk and The Tartar of the Westchester trio did well, clearing the fences nicely, but Callaghan's brute made a mess of it, bolting, refusing, and tearing down the rails instead of topping them. Messrs. Foxhall Keene and H. L. Herbert did not hesitate long about making the award, the Monmouth Hunt getting the prize."

Henmore Shamrock.

SPRINGFIELD, Vt., Nov. 29.—Our imported Irish setter dog challenge Henmore Shamrock died of acute catarrhal pneumonia at Thomasville, N. C., where he was in the hands of Mr. Wm. Tallman, being handled preparatory to being run in the coming Irish Setter field trials. The dog was going well and Mr. Tallman expected to have him well to the front, and he would have undoubtedly made a good showing. I inclose his pedigree and list of his winnings. He was, back of his head, as fine a show dog as stands to-day, and was a grand field dog, a good sire, and, in fact, one of the best of his breed on this side. All we have to console us is that we have got a most promising pup sired by him out of Rosamond. This pup bids fair to make a worthy successor of his noble sire.

MUCKROSS KENNELS.

POINTS AND FLUSHES.

Both Prof. Edm. H. Osthaus and G. Muss-Arnolt were much of the time busily engaged in making portraits of many of the noted dogs which competed in the trials. The portraits are so spirited and realistic that they are marvelous. Their finished attempts are in pleasing contrast to the crude attempts of years gone by.

Mr. Fred A. Hodgeman, New York, intends to spend the winter in the South, where he will enjoy the shooting and the balmy climate.

Owing to the scarcity of birds in North Carolina, many of the trainers will go to Mississippi to continue the training of their dogs.

Mr. W. H. Hammond, trainer of the Eldred Kennels, left for Mississippi on the 29th ult.

Tick Boy had quite an ovation after his win, and his popular owners mixed a bucket of milk and knock-out drops for the delectation of their crowd of friends with results that will live in memory.

The Members' Stake of the Philadelphia Kennel Club will be run at High Point, N. C., after the Irish Setter Club's trials are concluded.

ANSWERS TO CORRESPONDENTS.

There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will also receive careful attention.

W. E. R., Reading, Pa.—Please inform me through your paper what is the matter with my pointer bitch, 7 years old. Whenever I take her out for a long run she commences to hang her head, and before I get her home she becomes so weak she can hardly get along. I thought she might have some trouble with her heart. When she is home awhile she seems to get better. She has some trouble with her skin; the hair comes out in her front part, but the skin does not get sore nor any worse. She has also trouble with her eyes; they are always full of matter. She has a good appetite. Please prescribe for her. Ans.—Without an examination we cannot say exactly what is the matter. She must have some internal trouble. Why not have her examined by a veterinarian?

O. B. M., New York City.—Please prescribe for my Irish setter dog, 3yrs. old. He has very weak eyes and discharges freely, hair coming off around the eyes. Shakes his head and scratches his ears continually. Good appetite and cool nose. Ans. Treat dog for worms. Give two compound sulphur tablets twice a day. Into the ears pour a little of the following lotion twice a day; also apply this lotion to the eyelids three or four times a day: Goulard's extract of lead 4drs., water 6oz. Mix.

Champion Field Trial Association.

SOME changes were made in the prizes at a recent meeting of the Association. The prize is fixed at $250 and a cup to be given by the club. Other cups have been promised. All winners in any public field trial are eligible to enter. Committee on judges will announce judges at an early date. Public announcement of conditions of stake, etc., will be published as soon as the secretary can prepare the matter.

New England Kennel Club.

BOSTON, Mass., Nov. 29.—*Editor Forest and Stream:* Our bench show committee has decided to claim the dates of April 20, 21, 22 and 23, 1896, for our twelfth annual show. D E. LOVELAND, Sec'y.

Yachting.

Practical Yacht Designing.

IT can hardly be said that any pressing need exists of treatises on naval architecture and of its application to the designing of yachts and boats; any deficiency in this direction has long since been made good by the standard works of several well-known writers. For those who can afford the expense of several rather costly works, and the time necessary to their careful study, there is no lack of practical and reliable information; but the inquiries which we constantly receive from the readers of the FOREST AND STREAM prove that there are many to whom, for one reason or another, the existing works, extensive and thorough as they are, must be practically sealed books. There has been for some years a growing demand for a simple treatise on practical yacht designing, presenting the subject in a way that may be readily understood by anyone of ordinary intelligence and possessing a desire to learn and a knowledge of arithmetic.

With the first number of the coming year the FOREST AND STREAM will begin the publication of a series of articles designed to meet this demand, the author being Mr. W. P. Stephens, for the past twelve years in charge of the Yachting and Canoeing Departments of the paper. Mr. Stephens is specially qualified for this task by his long experience as an amateur designer and builder, and as a critical and technical writer on yachting; and by his close intercourse through the FOREST AND STREAM with those for whom the work is specially intended. His personal experience as an amateur designer and builder, dating back to a time when text-books on these subjects were unknown, have shown him what the amateur and the tyro want to know; and his later work at building, designing and writing has fully qualified him to teach what he has learned. His book on "Canoe and Boat Building for Amateurs," though written in 1883, is still recognized as the standard work on small craft; and within its limited scope a thorough text-book of the subject.

The new work will cover a much wider field: the designing of pleasure craft, from canoes and boats up to such sizes of yachts proper as would be likely to engage the attention of the amateur. The same methods will be followed as have proved so successful in "Canoe and Boat Building," the thorough presentation of the leading principles, and the elaborate attention to those details, apparently trivial, which are essential to success in any mechanical work.

The opening chapters will deal first with the object of designing—the production of some sort of floating vessel—the means to this end, from the first consideration of the conditions of the particular case to the turning over to the builder of the drawings, specifications and tables of offsets. The many intermediate steps will be treated of in detail, the first considerations, the selection of the class, the principal dimensions and the elements of the design, the tools, materials and work of drawing, the calculations and the specifications. The articles will be fully illustrated, and will continue through the year to such a length as the subject demands.

SOME of the yachtsmen who are hurrying to the defense of Lord Dunraven in the British papers display an ignorance which completely disqualifies them as incompetent to discuss fairly the question. One correspondent of the *Field* assumes that if Defender had a "tug" alongside through the night the whole question is decided against her; and another, in the *Yachtsman*, wants to know why Defender should have a tender alongside every night. These gentlemen are very evidently not up in modern racing methods, or they would know that both Valkyrie and Defender had in constant and close attendance, night and day, not a tug, but a good-sized steamboat, that of Valkyrie in particular being quite a large craft, with staterooms on the upper deck. On board these tenders were duplicate spars, mainsails, chains, anchors, hatches, ladders, boats, in fact about everything movable that was not actually needed in a race. Hammock berths and such stuff were shifted back and forth each day, and the entire crew was fed on the tender. As far as mechanical appliances are concerned, it would be an easy matter for either crew to shift lead from the tender to the yacht. The *Yachtsman*'s correspondent, after all that has appeared this year about Defender's Deer Island Yankee crew, accuses them of shifting ballast in Vigilant in 1894, in ignorance of the fact that they are fishermen, and never in a yacht until last season. Unfortunately he offers nothing but his signature in support of the charge of foul sailing on the part of Vigilant in 1894; it might be well if he would specify the instances and offer some proof.

A Cruise in Flatfish.

IN connection with the lines of the racing 5-rater Flatfish in the present issue, we republish from the *Field* of Aug. 24, 1895, the log of the yacht on a cruise from the Isle of Wight to the Welsh coast. While the log proves what such craft may be made to do, it does not prove that they are in any way desirable for other than the special racing work for which they are designed and built; we can readily sympathize with the crew who wanted to go back when they saw daylight through the planking of the bow and felt the water coming in freely.

Editor of the Field:

To prove how incorrect are those "knowing ones" who assert the "present day smaller class yacht racing machines" are unable to go to sea, lack all seaworthy qualities, etc., I think the inclosed log of 5-rater Flatfish during her voyage from Southampton to Port Dinorwic, under the charge of Capt. Elias, may be of interest to some of your readers. Methinks, had some of the "knowing ones" been aboard Flatfish in the very heavy sea and strong gale of Aug. 11, they would admit a present day racing machine can, when obliged to and if well built and ably handled, face nasty seas and gales. H. H. VIVIAN.

Friday, July 3.—At 9:30 A. M. launched from slip at Messrs. Fay's yard. Got all gear, provisions, etc., on board; set sail and proceeded out of Itchen River. Passed Calshot Castle at 11 A. M.; stiff breeze and cloudy. At 11:15 steam tug towing Lassie yacht, also belonging to the owner of Flatfish, came by, took our rope, and towed us to Yarmouth, where we anchored about 12:30, wind being S.W., hard. Wind and weather in the evening very strong and rough.

Saturday, Aug. 3.—Strong S.W. wind and heavy rain during the night and part of the day. At noon went on board the 1-rater Soper to race; started at 1:30. After rounding the first mark another boat ran into Soper's quarter and made a hole. Kept on to finish the first round, which we did about 20s. behind Gallia, the first boat, when we gave up race owing to the possibility of a protest from the fouling boat. Six P. M., asked pilot cutter No. 2 what kind of weather it was

outside; he reported strong wind and rough sea. Heavy showers with squalls during the evening; decided to stay in till morning.

At 3 A. M. Sunday, Aug. 4, a few minutes after turn of tide, found that the large cable had been caught by the fin while she was turning on the flood. Got the hands up and tried to pull up the hitch where it was bridled to the small anchor rope; but before we could get at this the sharp edge of the fin cut the 4in. rope and left us with only the small rope and small anchor to ride to. At 8 A. M., just before the turn of the tide, got under way with trysail and third jib. We tried to grapple for the lost rope with our small anchor, towing over the bow, and made several tacks across where we had been riding, but failed to catch it. After the turn of the tide gave it up and sailed close to the steam yacht Assegai, belonging to Col. Crozier, and asked the captain if he would lend us a kedge and rope. They immediately got them up and put them in their boat and brought them to us, with which we anchored.

At 10 A. M. Sunday, the 4th, got away under trysail and reefed third jib; blowing hard from the westward, but I was anxious to leave Yarmouth, as the tides were strong and we were liable to lose another anchor; so I left with the intention of beating to Portland. Passed the Needles at 11 A. M. Very strong wind and heavy sea. The Flatfish laboring and plunging heavily. Crew frightened, saying they could see daylight through her bow, water coming in freely, otherwise everything all right. Crew wished to go back, saying they could not keep her free of water. I said I had come out to reach Portland, and if nothing worse happened she would have to go there. Stood out for about thirty minutes, when we tacked, at about noon, to the N.W., heading up for Poole, intending to anchor under "Old Harry" if weather got worse. At 3 P. M. passed "Old Harry," wind having hauled to the N.W. by W. with a shower, and more moderate, and there being a good westerly going tide I decided to go on for Portland; the crew by this time having gained confidence, seeing our little craft was not going to break to pieces, and I also realizing her good qualities. At 4 P. M. off Swanage. Wind more moderate, and sea going down; set double-reefed lugsail, took trysail down; also shook out reef from staysail, when we made much better headway, Flatfish steering much better. At 4:30 passed Durleston Head. At 5:10 abreast of St. Albans; flood tide commencing to make and heavy sea in the

- XANIA.

Designed by owner, G. H. Duggan. Built by J. St. Onge. L.W.L. 20ft. 8in., beam 8ft. 5in.

race. While about here several large yachts passed us; asked one of them to report us; they promised to do so. At 8:30 passed schooner Maid Marion close to. At 9:30 got past St. Albans, and, the tide having slackened inshore, beat along the shore. At 12:30 A. M. passed Portland Breakwater and beat up the harbor, where we anchored at 1 A. M., wind blowing strong at W. N. W.; made sails fast, and made all snug; got a cup of hot tea, and hung riding light up. Turned in with everything wet after fifteen hours' hard fight, and fourteen hours at the tiller myself.

Aug. 5.—At 5:30 had a look at the weather; found it blowing hard from W., decided not to start until it moderated. At 7:30 got up again; saw the schooner Phantom's boat going ashore; asked the man if he would take a wire for me to owner and wife, which he kindly did. Noon 5th, strong wind at W.S.W., with showers and thick weather. 4 P. M. Wind S.W., with wild looking sky, barometer falling. Very fortunate to be in a safe anchorage. 8 P. M. Strong westerly winds and heavy rains at intervals. Barometer falling. Midnight. Gale and occasional heavy showers.

Aug. 6.—4 A. M. Gale continued. 8 A. M. Strong winds at W.N.W., with heavy rain at intervals. Noon. More moderate, with showers; wind backing to W.S.W., barometer rising. 1:30 P. M. The schooner Sarah Jane's boat came alongside. One man went ashore with water breaker to refill, also to get some bread, etc. 4 P. M. Still blowing hard, but weather improving slightly; barometer rising. At 6 P. M. weather still improving. Went on shore to have a look at the sea from the hilltop; returned at 8 P. M. At 9 P. M. decided to sail. Set double-reefed lug and reefed third jib. Passed out between the breakwater at 9:30. At 10 P. M. passed the Bill of Portland, with stiff breeze and very heavy sea; had to nurse her through it; got to the westward of the Bill when the sea was much more smooth and wind steadier.

Midnight, Aug. 7.—Off Exmouth. Less wind. Shook out the reefs from lugsail and beat down to Berry Head. The cooking apparatus having got out of order, put into Brixham to repair. At noon picked up moorings inside breakwater. Went ashore with lamp, but found that no one in the place could repair it. Had to buy another lamp (to burn paraffin) for cooking purposes. At 5 P. M. left the harbor and set sail to the westward. When off Berry Head the wind died away from west and sprung up at E. for about half an hour. 8 P. M. off Berry Head. Dead calm. Drifting to the N. E. Midnight. Light, variable airs. Drifting toward Start Point.

Aug. 8.—4 A. M. Off start; dead calm. 8 A. M. Off Salcombe; light airs and calms inclined to spring up at S.E. 9 A.M. Light breeze sprung up set spinaker. At noon. Off Eddystone, about five miles, breeze springing up, and inclined to rain. 4 P. M. Strong breeze and rain, with very thick weather; took in balloon jib and set third jib, also reefed mainsail; very heavy sea off Lizard. Flatfish driving into it very heavily. Decided to go into Falmouth for the night for the rain and mist to clear up. Spoke cutter-yacht Achilles, R. M. Y. C., bound for Holyhead; both bore up for Falmouth, where we anchored close together. At 7 P. M. Put up riding light.

Aug. 9.—5 A. M. Strong wind W. S. W.; thick rain. Decided to stop in; several schooners putting in for shelter. Noon. Strong wind, and showery. 6 P. M. Stiff breeze and heavy rain. 8 P. M. Moderating; weather inclined to clear up; good prospect for a start in the morning. Put up riding light. 9 A. M. Decided to get under way; wind increasing gradually. At 9:30 passed out of the harbor; wind at S.S.W.; inclined to be thick. At midnight passed Lizard. Very thick fog and rain. Wind slightly increasing.

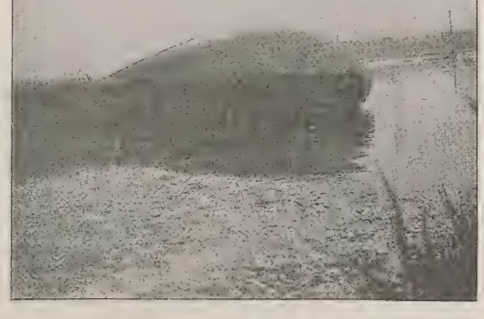
Aug. 10.—Light breeze and very thick fog; several steamer's whistles about. 8 A. M. Wind and weather as above; fog very thick. 10:30. Passed Longships very close; heard reports of the fog gun. Cleared up for a few minutes, when we saw the lightship abeam; shaped course for the Smalls and set spinaker. Noon. Weather clearing up; fine breeze, the Flatfish skimming along at a good pace; passed several coasters, some asking us for a tow. 4 P. M. Nice breeze and fair weather. 8 P. M. Weather inclined to be squally; wind increasing; took in spinaker. 9 P. M. Strong wind, and rather a wild appearance; decided to shorten sail as we were approaching a dangerous piece of navigation, viz., Smalls and Hats and Barrels; put three reefs in lugsail and proceeded; wind suddenly increasing to a moderate gale; very glad I had three reefs in.

Aug 11.—Midnight; passed Small's light bearing E., log showing 102 miles from Longships, true distance 104. 4 A. M. Brisk gale and thunder and lightning; very wild wintry appearance; the little yacht stepping out in grand style, doing little less than 10 knots, a large steamer steaming the same way could not get away from us until we were forced to heave to take in the lug, which we did with some trouble at 6:30 A. M.; gale having increased and sea running very high, the Flatfish behaving splendidly through it; inclined to leak slightly; no water of any account coming in overall. Stowed lug and covered it; crutched the boom and set trysail, when she started on her course again in good shape, steering much better than with the lug.

ETHELWYNN ON THE BEACH.

8 A. M. Wild and stormy, heavy squalls with rain; very heavy seas running. At 10 A. M. sighted Bardsey Island, one point off starboard bow. Squalls inclined to clear away. 11 A. M. Abreast of Bardsey when the sea became slightly less rough. Noon. Off Port Dinllaen with spinaker set, hurrying for the Bar. At 1:30 crossed Carnarvon Bar with very rough seas, but got over it nicely, twenty-seven hours from Land's End, and two and a half hours from Bardsey with tide against us part of the way. Passed Carnarvon at 2:15 P. M. Arrived at moorings Port Dinorwic at 2:40, after a passage of one week from Yarmouth, Isle of Wight. Made all snug and went ashore.

D. ELIAS.



The Morning Toilet.

THE accompanying pictures, for which we are indebted to Mr. B. C Ball, show the 15-footer Ethelwynn on the beach just before a race. The boat was left afloat during the races, but about every other day she was beached and carried up on the sand, her lead ballast removed and the hull turned over on edge until the masthead touched the ground. When in this position she was rubbed down and coated with a preparation of black lead or some similar material, her rudder and centerboard were polished and the entire exterior surface gone over. An hour or so before the start she was righted, her ballast replaced and lashed, and she was carried down and again floated. Spruce, it will be remembered, was slung in a pair of heavy canvas straps and hoisted out of water on davits every night.

A Painful Tale.

A SHORT time since an Eastern yachtsman was entertaining a friend, a landsman, over Sunday, and as the day was particularly rough and stormy a drive inland instead of a sail occupied the morning. The friend was greatly disappointed and did not conceal the fact that he did not think it too rough for a sail, if others did; so in the afternoon the host took a boat and treated his friend to what proved a very wet trip, making profuse apologies whenever a sea unavoidably came aboard. A few days later he received the following poem:

I was sailing, of a Sunday,
Just inside of Minot's Ledge;
There were hummocks on the water,
And the boat was on her edge;
But whenever some big billow
For a moment on me sat,
It was pitiful to notice
The distress of Skipper Pratt.

ETHELWYNN ON THE BEACH.

Oh! he proffered his excuses
With so pained a look at me,
That I quite forgave the fellow—
Till he shipped another sea.
And when I asked, severely,
What in —— he meant by that,
'Twould have made a porpoise blubber,
The distress of Skipper Pratt.

I have heard great Paderewski,
Seen Sir Henry Irving play;
And I went to Keith's new theater
For an hour the other day;
I have studied the "new woman,"
Looked at "Kelly at the Bat,"
But I've nothing seen to equal
The distress of Skipper Pratt.

He apologized so sweetly
When a wave upon me broke,
And he turned her head so neatly,
Just to give me one more soak!
He supposed that I believed him,
As he chattered through his hat
But some day I'll give occasion
For distress to Skipper Pratt.

A New "One-Design" Class.

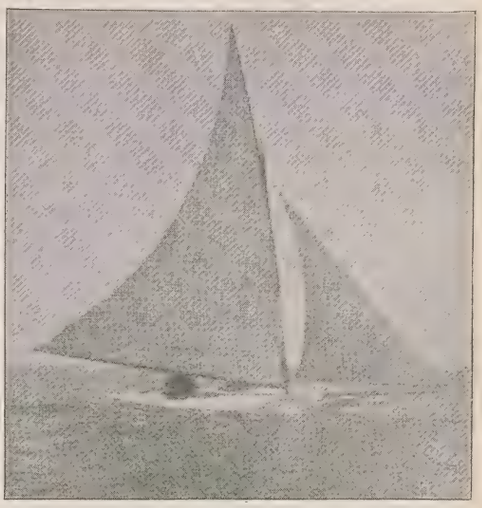
THE Cohasset Y. C. has now on the stocks a dozen new boats for a "one-design" class for next season, the boats to be drawn by lot among the members of the class. The design chosen is that of the Scarecrow, as published in the FOREST AND STREAM, and the boats, which will be of 15ft. racing length, are building by James McIntyre, late of McIntyre & Kirk, Quincy Point. The rig will be a leg-o'-mutton mainsail and a jib tacked to the stemhead; the boats will be fitted with iron centerboards or weighted wooden boards in place of the fin, on account of the bar off Cohasset. The class is an experiment, and if successful will probably lead to a larger "one-design" class.

Mr. Brand's Protests.

A British yachtsman writes as follows to the *Yachtsman:*

Editor of the Yachtsman:

With reference to your editorial notes re Spruce and Ethelwynn in this week's *Yachtsman*, surely you do not mean to suggest for a moment that the Minima Club would accept charge of a cup won on such a quibbling protest as that made against Ethelwynn, viz., for shifting ballast, *i. e.*, taking out a pig or two of lead while the boat was on the ground scrubbing. I don't care whether Spruce's other protests should have been decided in her favor or not, but I feel sure no sportsman would have liked her to win on this one, and I am sorry it was ever made.



J. F. JELLICO.

The *Yachtsman* says in reply: "We join heartily with our correspondent in regretting that such a protest was ever made. But that we regret it cannot alter the fact that it was made; and, this being, Ethelwynn should have been disqualified according to the strict letter of the law. As we said some weeks since, it is a very dangerous precedent for an international sailing committee to attempt to go beyond the letter of their written rules."

The above is very true, and technically correct, but there has never before arisen the occasion to apply the Seawanhaka racing rules to such very small boats, and many small points came up which could not be covered by the rules as they stood. Most of these were the subject of a special agreement between Mr. Brand and the committee. Had the rules been enforced to the letter the committee would have had no alternative, under one of Mr. Brand's protests, but to have disqualified both boats in every race and have recalled the entire series, as neither carried two life buoys on deck. Even Mr. Brand does not claim that the races were not managed in a spirit of fair play and the utmost liberality to the challenger, and that Spruce was not fairly outsailed by Ethelwynn.

YACHTING NEWS NOTES.

Under the title, "Elements of Navigation," Messrs. Harper & Bros. have recently published a small volume by W. J. Henderson, the well-known writer. Mr. Henderson, who at one time was in charge of the yachting news on the New York *Times*, and is now an ensign in the First Battalion of the New York Naval Reserve, has devoted much of his spare time to yachting and navigation, and his thorough familiarity with the latter subject, added to his recognized ability as a writer, has enabled him to put a great deal of old matter into an entirely new and

TOMBOLA.

Designed by Thos. Clapham. Built by owners, F. W. Molson and W. Arthur C. Hamilton. Racing length 16.36ft.; overall, 22ft. 6in.; beam, 6ft. 4in.; l.w.l., 13ft. 9in.; draft, 5in.

practical shape, in which it cannot fail to be of value to beginners, or as a handy and reliable reference book. The selection of the matter, its arrangement and presentation, are all good, and while the book is simple enough to be easily understood by all, it is at the same time complete and comprehensive enough to fill all the requirements of actual navigation without recourse to the larger works. It is particularly adapted to young yachtsmen and to professional seamen who desire to post themselves without outside aid.

Star of the Sea, steam yacht, arrived in Philadelphia on Nov. 10 after a voyage of forty-six days from Southampton, in charge of Capt. Norman Ferguson and a crew of fifteen. This yacht was designed by Alfred H. Brown in 1882 and built by Ramage & Ferguson, being named Saide. She is of composite construction, iron frames, 142.8ft. length, 24ft. 7in. beam and 13ft. 4in. depth of hold, with engines 17 and 34x32in. Her tonnage is 383 and she is barkentine rigged. In 1883 she was renamed Star of the Sea. She was originally one of the finest yachts of her day, her interior being specially elaborate and she is still a very fine vessel. Her last owners were Major A. Finley and David Faber, who disposed of her to Mr. Cassatt for £7,350. On the voyage she encountered very severe weather and in a gale on Oct. 24–25 she was hove to under a drag improvised out of oars and canvas by Capt. Ferguson.

There is quite a show of activity about the Erie Basin dry docks, where a number of steam yachts, Valiant, Corsair, Sultana, Atalanta, Sagamore and Conqueror, are laid up. In one dock is the big Sound steamer Puritan, with her bottom partly torn out by the rocks of Little Gull Island. A very large portion of the bottom is destroyed. The repairs are being made by the Erie Basin Dry Dock Co. A big shed has been erected for the new twin screw steam yacht which the firm will build for M. C. D. Borden, from designs by J. Beavor Webb, on the site where Sultana was built. The yacht will be 250ft. 6in. over all, 212ft. l.w.l.; beam, moulded, 28ft.; depth, moulded, 18ft 3in.; depth of hold, 16ft. 8in. The yacht has been laid down and some of the steel is on the ground, and the keel blocks are now waiting for the keel.

The new yacht designed by Mr. Watson for A. J. Drexel, and building at Troon, will be 239ft. 9in. l.w.l., 33ft. 6in. beam, of 1,250 tons. She will have twin screws, with a guaranteed speed of 16 knots. The yacht for Mr. Higgins, also designed by Mr. Watson and building by A. & J. Inglis, will be 260ft. l.w.l., 35ft. beam, twin screw, with a speed of 16½ knots; and with bunker space to take her across the Atlantic at a speed of 15 knots. Her interior arrangements will be on a novel plan and very elaborate. Still another large steamer is for N. B. Stewart, Maria II., to replace the Watson yacht Maria I. She will be 216ft. l.w.l. and 27ft. 6in. beam.

At Mumm's old shop, in the Atlantic Y. C. grounds, for some years occupied by Samuel Ayers, H. Manley Crosby and his brother Joseph have started in, having lately moved from Cape Cod. They propose to build the Cape Cod catboats for which the Crosby family is noted.

Mr. A. S. Chesebrough has designed a 30ft. cruiser of shoal draft, 2ft. 9in., for Barnegat Bay, the owner being Dr. E. H. Williams, of Philadelphia. She will be built by Lawley and named Hermitage. She will have a double skin, with planksheer and deck fittings of mahogany.

Harlequin, the curious keel nondescript that has ornamented the basins of South Brooklyn since she was first built five or six years ago, has been sold, and rigged as a schooner at Abrams's yard, Twenty-sixth street, South Brooklyn.

The interesting log of the canoe yawl Cherub, which appeared last week, should have been credited to the *Field*, in which it was first published a few weeks since.

Wallin & Gorman have just finished a handsome open catboat, 22ft. over all, for the St. Lawrence River, and also an 18ft. boat of the same style.

Satanita, cutter, C. D. Rose, is fitting out at Fay's yard, Southampton, and both she and Ailsa will race in the Mediterranean.

Judge, steam yacht, formerly Marietta I., has been renamed Albatross by Col. Jacob Ruppert, Jr., her new owner.

At the Herreshoff shops a fin-keel 15-footer has been completed for A. S. Van Winkle, of Hazleton, Pa.

Royal St. Lawrence Y. C.—1895.

SINCE its incorporation, four years back, though organized in 1888, the Royal St. Lawrence Y. C., of Montreal, has become quite an important factor in the yachting world. With its club house, storage and building sheds, marine railway, pier, breakwater, basin, tennis courts, etc., etc., it employs quite a staff, and is in a much better position to satisfy the yachtsman's wants than many a club of greater prominence. It is continually improving and enlarging its properties, and with the work of its energetic committees may within the coming year do greater things than even its most ardent members might imagine. The club now musters some 70 sailing and 30 steam yachts, and nearly 500 members, with a regular annual increase.

If the racing of the past season was not quite as keen as it might have been, more especially in the larger classes, it is chiefly due to the prevailing light airs attendant on last summer's racing days. Though fortunately all classes have finished within the time limit, many of the slower boats were disgusted and preferred not to start unless a finish at least looked fairly sure.

Last spring a committee was elected for the purpose of looking into the advisability of promoting a smaller two-man craft than the existing 18-footers. A less expensive and more easily handled boat, offering about the same accommodation and speed as the club's present smallest craft, was what this committee sought for. The capital racing and service afforded by what the English termed ½-raters—before their change of measurement came into force—was well known, and the racing of the 15-footers about New York was keenly watched. Consequently the 15ft. class was promptly formed, and next season will see numerous and valuable prizes for this small type of yacht, which at present seems to be all the rage among the most important yachting nations.

It becomes no yachtsman to say an unkind word of anything that floats, and it is not in a detrimental sense that the following remarks are made. With scarcely a kick that swift and uncomfortable—when over-canvased, as it usually is—toy, the St Lawrence sailing skiff, has as a racer died a natural death. Those left boatless by this disaster, it is hoped, will take up the cause of the 15-footer. They will be trusty little ships, compared to the late and lamented, on the sharp gunwale of which you may repose, but are not compelled to sit or sink.

Mr. Duggan's challenge for the Seawanhaka Corinthian Y. C. international trophy, through the Roy. St. L. Y. C., being accepted, will doubtless give quite an impetus to building and racing during the coming year. At least six 15ft. boats should appear, by what can be learned at present.

THE SEASON'S RACING.

On Saturday, June 1, the racing season of the Royal St. Lawrence Y. C. was opened, when the 15ft. class had its first contest. It was fine and warm, no wind being detected for more than an hour after the start; then a pleasant southwesterly breeze sprang up. Meanwhile Pirate, followed by Lassie, drifted about three-quarters of a mile up the lake toward the first mark. Tombola, less fortunate, grounded within a stone's throw of the starting buoy, to which she afterward moored, recommencing on feeling the breeze that her companions were first to enjoy.

The course, a distance of five miles, was twice around a triangle, Rear-Com. Jackson acting as officer of the day. Pirate showed the way during the first round, but was overhauled by Lassie in the windward work of the second. Tombola turned first mark over fifteen minutes astern, but gaining six minutes in the remaining four miles, clearly showed her superiority in a true wind. Start, 3:55:

	Elapsed.
1. Lassie	2 09 47
2. Pirate	2 13 38
Tombola	2 18 50
Vixen	Did not start.

Saturday, June 8, brought a cruisinx race, for all classes, to Laloude's Bay, a distance of eight miles, which turned out to be a drifting match to windward in the prevailing light southerly air, which at times fell completely. Time allowances were made at the start, Mr. J. C. C. Almon being officer of the day. Dream crossed the line before her gun, and did not return to recross properly, while Rita and Frolic started too late to do as well as they might. Rita's modern bow and Frolic's double headsails puzzled some of their '94 acquaintances. Xania, the smallest starter, was first away, and led to the finish. Start 3:55:

	Corrected.
1. Xania	3 36 00
2. Chaperon	4 23 12
3. Rita	4 58 08
Frolic	5 42 00
Dream	Not timed.

The fleet, under command of Rear-Com. Jackson, aboard Dream, was joined by other yachts, and early the following morning started, in a light breeze, for Beauharnois. All reported at the club that evening, feeling lucky at reaching home in the scarcely perceptible air.

Saturday, June 15, brought out the 18-footers for their second race, Vice-Com. Smith being in charge.

The flighty quartet was sent three times around the triangle, 7½ miles, in a moderate, flawy northeasterly breezer; it being clear and warm, many witnessed a remarkably pretty contest.

Vixen, a new boat by Cuthbert, of Toronto, and the Clapham yearling Tombola went at it hammer and tongs around the entire course, never getting beyond "secret-telling" distance of each other. Vixen's best point, down the wind, was quite equaled by Tombola's windward and reaching, which kept the smaller boat well within her time allowance.

It was disappointing, however, to see the gritty little newcomer cheated out of a sure second place by being needlessly made to bear down and foul Tombola while on the port tack.

Lassie found Pirate pretty hard game, but at the end of second round established a lead which was gradually lengthened to the finish. Start 3:35:

	Elapsed.
1. Tombola	1 51 55
2. Lassie	1 54 21
3. Pirate	1 57 37
Vixen (allows Tombola 42s. (1:51:45)	Disqualified.

Saturday, June 22, was cloudy and not exactly a day to test the relative speeds of the different starters on account of the fickle S E. wind, which freshening veered to the east for the home run.

The A, 30 and 25ft. classes, were to sail the regular club 10-mile course; the Valois Bay triangular 5-mile course being left to the 21-footers. Mr. David A. Poe, officer of the day, started all at 3:30.

Valda, the only 25-footer entered, would not take a sailover, while the measuring of Ellida after the race spoiled the fun for both; with her new canvas the latter easily went into the 25ft. class. Ellida was awarded a prize, however, for making so good a showing, winning handily from Folly (a modern Cuthbert boat) and giving Elsie a drubbing, probably not having forgotten the turnabout contests of 1892 she had with the latter.

2 Elsie	2 33 47
Jubilant	Did not start.

Saturday, June 29, the fairest racing day of the season, was clear and warm, the steady westerly breeze with a "bone in it" had made the lake a bit lumpy.

Mr. Robt. Fitz-Gibbon, the officer of the day, sent the small fry twice around the triangle, 5 miles.

This race was an object lesson, and added much weight to the fact that an over-canvased yacht affords no better results than an over-charged gun.

Pirate and Lassie struggled and labored along under full sail, probably holding their own running, but making wretched windward work of it. The latter, however, capped the climax by capsizing, when trying to carry a spinaker on a beam reach. Vixen with a reef down made but a poor showing, her headsail was too large for the short-ened mainsail. Tombola led over the line, never looking back, having one tuck turned in and No. 2 jib. She seemed to leave her classmates on every leg. Besides being well trimmed she was well sailed, and with the exception of Aug. 17, when under full sail, Tombola's was this day the fastest time around the course. Start 3:45:

	Elapsed.
1. Tombola	1 12 40
2. Pirate	1 21 50
3. Vixen	1 28 40
Lassie	Capsized.

Monday, July 1, our national holiday (Dominion Day), had every promise of a thunderstorm or nothing. The morning called for the fourth annual contest for Honorary Commodore Sir Donald A. Smith's challenge cup, classes A, 30 and 25-footers being eligible. A threatening sky, a southerly patchy air at the start, then from all quarters, steadying down for an hour's stiff southwesterly wind, seasoned up with an ugly rain squall from a directly opposite quarter, necessitated a beat home. Rear-Com. Jackson got the fleet off at 11 A. M. over the 10-mile club course. Xania, the smallest finisher, cleverly handled throughout, easily repeated her performance of '94 and so retains the cup for another year.

1. Xania	2 57 00
Chaperon	3 12 30
Coquette	3 14 18
Rita	3 15 10
Frolic	Did not complete course.
Valda	Did not complete course.

At 3:45 Mr. Robert Fitz-Gibbon got the little ones out for their fourth attempt to down each other; one was indeed downed and for a repetition of an error so plainly demonstrated on June 29. The noon squall had failed to clear the air to any marked extent. Twice around the triangle, 5 miles, was the order of the day, a nice start being made in a full sail southerly breeze. Lassie led Pirate and Tolombola over the line, Vixen bringing up the rear. In the windward work Tombola went up head. All, well bunched, arrived at Mark No. 2 the same time as a rain squall and steamer, but not a hair was turned, only the buoy. Away they went before the now stiff wind, Tombola, with poor execution of a good idea, reefing, down the wind, to be ready on the turn to windward, was so long at it that Lassie, who was bravely staggering against some hard puffs, got too far ahead to have her claim for first place harmed. All sail was used for the finish, the wind softening considerably. Vixen's shortening canvas on a turn to windward cost her dearly, and Pirate threw away a sure place by not leaving well alone.

	Elapsed.
1. Lassie	1 22 05
2. Tombola	1 32 40
Vixen	Did not finish
Pirate	Capsized.

Saturday, July 6, witnessed the first annual race for Com. Hamilton's Cup—open to yachts measuring over 21ft. It was cloudy and warm, and in a light variable southeasterly air, the starters, well bunched, crossed the line; finishing in a puffy easterly breeze. Xania won easily, and even had Chaperon not grounded within a gunshot of the finish, Rita would have been second on time allowance; Valda, however, crept up to third position, on account of Mr. Clouston's black cutter hugging the well-known shoal too closely.

Mr. David A Poe was officer of the day and at 3:30 sent the starters off around the 10-mile club course.

	Corrected.
Xania	2 44 37
Rita	3 06 00
Valda	3 18 40
Chaperon	3 21 50
Coquette	3 26 00

Saturday, July 13, the second cruising race for all classes took place, time allowances being made at the start. The course to Laloude's Bay, a distance of about eight miles, in the fresh northwesterly wind was a close reach. Mr. J. C. C. Almon gave the first signal at 3.30 and before the smoke had disappeared the smallest starter, Tombola, was over the line and away. Vixen did not start and Elsie was late in getting off. Rita easily drew away from Coquette and gradually overhauled Valda, but the speedy 18-footer could not be caught and won handily—carrying full mainsail and small jib, setting the large jib for the last mile to finish in style suitable to a winner. Off Valois Bay, Rita and Valda catching some hot puffs struck their topsails, resetting them however on nearing Lynch's Island. Coquette becoming disabled and returning home robbed the fleet of its commanding officer; the yachts accordingly separated; Valda and Rita remaining away over night, while Elsie followed Tombola home.‖

This was a most enjoyable race, the hard squalls lending life to the cool and gray afternoon.

	Corrected.
1. Tombola	1 29 00
2. Rita	1 31 15
3. Valda	1 33 57
Elsie	1 42 15
Coquette	Disabled.
Vixen	Did not start.

Saturday, July 20, turned out fine and warm, but very disappointing as a race day. Rear-Commodore Jackson delaying the start, trusting a breeze might spring up, at 4 o'clock, in a patchy S.W. air, sent all hands around the 10-mile club course; the 21-footers covering but 8 miles by omitting one leg.

Jubilant, nicely timed, led the fleet across the line, but was soon passed by Elsie and Flatiron. At the first mark the tail-enders were favored with a nice breeze which enabled them to accompany some of the leaders around Buoy No. 2. After this the wind petered out and only Rita with her sky-scraping topsail, and Flatiron with some secret power, managed to move onward. The manner in which the latter craft hung on to her larger mate was truly remarkable. Waterwitch and Elsie followed them around the third mark, where the balance of the fleet hovered about for over an hour whistling for the favoring puff that would lift them around the buoy.

Three gave up and drifted home. The time limit being 4h. 30m., Waterwitch saved her class from resailing the race by 16s.

A AND 30FT. CLASS COMBINED

1. Rita	3 58 10
Coquette	5 01 00
25FT. CLASS.	
1. Waterwitch	4 29 45
2. Okieha	5 31 00
Valda	Did not finish.
Ellida	Did not finish.
Marjorie	Did not finish.
21FT. CLASS.	
1. Flatiron	2 56 15
2. Elsie	4 02 22
3. Folly	4 17 52
Jubilant	4 18 08
Soubrette	4 23 32

Saturday, Aug. 17, the 21 and 18-footers donned their war paint and feathers to settle which would hold the Hamilton challenge trophy through the coming winter. Flatiron and her smaller companion, Tombola (respectively the most likely boats of the above classes), had not yet met, and all believed barring accidents one of these two would win. In spite of the small amount of windward work Tombola started a hot favorite.

Mr. Robert Fitz-Gibbon started them off at 3:35, three times around the triangular course, 7½ miles.

A dull, threatening sky with a moderate east wind, gradually blowing up to half a gale from the south at the finish, were the prevailing weather conditions.

Flatiron led Tombola in the reach to first mark, but was overhauled in the windward work. They would have arrived at Buoy No. 2 together, but unfortunately the 21-footer passed the mark and had to return to round it. Tombola, with a lead of fully a minute on the first round, seemed to gain on every leg of the course from this out. Vixen made a plucky fight, but could not hold the older boats. Pirate did well, but was within an ace of being caught by Jubilant, who, starting some three minutes late, put Elsie back one place. The latter two had quite a tussle, but whether or not Elsie's jovial owner preferred taking the leather medal to letting the donor of the cup, who was at Jubilant's helm, capture it, will never be known; suffice it to say Elsie's jib got in trouble at the most exciting moment.

1. Tombola	1 37 44
Flatiron	1 42 55
Vixen	1 46 15
Pirate	1 51 55
Jubilant	1 52 15
Elsie	2 02 40
Wideawake	Did not start.
Folly	Did not star
Soubrette	Did not finis

The first annual race for the Judge Girouard Cup, open, the club 25-footers, was sailed the same day, around the club 10-mile course. This class having done practically no racing, it was hard to pick the winner, but many looked to Valda for first place, and had she been driven down the home stretch, as in days of yore, perhaps the good little sloop would have saved her time on Undine. Okieha was well sailed and deserved the prize, which the club's largest cat would have won had she not wasted so much time by making her first trial at setting a spinaker. Waterwitch's behavior was odd, and, as in the fury of the breeze she crossed the line with mainsail on deck, no one wondered at her being last.

	Corrected.
1. Okieha	2 00 24
Undine	2 00 45
Valda	2 03 32
Ellida	2 09 29
Waterwitch	2 16 05
Marjorie	Did not start.

The club anchorage presented a lively scene—the competitors in both races arriving just as the gale was at its jolliest, some in a more or less confused state. Happily all was made snug and no damage sustained.

Saturday, Sept. 14.—A race for cat-rigged yachts was sailed twice around the triangular course, 5 miles.

Mr. Fred P. Shearwood, acting as officer of the day, started the yachts at 3:47 in rather a fluky westerly breeze.

Undine had the race well in hand after the first round, but Waterwitch, by working along shore in a better breeze, came right upon its larger companion, finishing but 1s. after it. The small number of entries for this race is accounted for by the fact of other yacht owners attending the steamboat parade outside Sandy Hook.

	Corrected.
1. Waterwitch	1 28 40
2. Undine	1 29 25
Marjorie	Did not finish.
Wideawake	Did not start.

Saturday, Sept. 28, the last of the club's 1895 racing days, proved to be cool and bright, with a moderate northeasterly breeze. The Rear-Commodore, after trying in vain to have an 18ft. sweepstake race, arranged a match between his Vixen and the club's wee champion.

Mr. David A. Poe held the ribbons, and on account of the late start ordered the yachts once around the triangle (3 miles).

Whether or not he remember was wet will never be known, but to this day the starting gun has not been heard. The respective owners, rowing up to make the westerly mark, have yet to make their first protest. They thought nothing of a "little thing like that."

Tombola nicely timed, with her larger chum close up (thinking it too soon), turned back to reapproach the line; Vixen, perceiving an agitated state of affairs on the pier end, grasped the situation, broke out her spinaker, and made for Buoy No. 1, 15s. in the lead.

On the run Tombola lost nothing, though she set no spinaker, and picked up 10s. on the reach to the skiff, in which were comfortably seated Messrs. Jackson and Hamilton.

There was little to choose between them at this point; the one-mile beat back, however, settled the race, Mr. Hamilton's boat romping home in a canter, not requiring her time allowance, which on this special occasion had been withdrawn.

	Elapsed.
1. Tombola	0 33 05
2. Vixen	0 34 25

If the racing fever strikes in next season the club can turn out half a dozen yachts in each of the two larger classes and some ten in each of the 25, 21 and 18-ft. classes, any of which could give a fair account of herself by the fall.

Both Xania and Tombola are probably a little too strong for some of the less modern boats; nevertheless, if handled and tuned up as well as these two were, if results were not exactly reversed, the finishes might be much closer.

The most interest was undoubtedly taken in the contests of the smaller yachts, and without hurting the larger classes it should be greater next season.

The Dunraven Charges.

THOUGH the special committee of the New York Y. C. began its work immediately after its appointment, nothing has yet been made public. It is surmised that a letter has been sent by the committee to the Royal Yacht Squadron, but even this is not definitely known. Following the editorial which we reprinted last week, the *Yachtsman* speaks as follows in its issue of Nov. 21.

We have been called to account by divers correspondents for having ventured to express an opinion last week in disparagement of Lord Dunraven's action of publishing his now famous Cup fiasco pamphlet. However, while fully appreciating the fact that all our readers are entitled to cherish their own sentiments on such international matters, we must take leave to say that the man at the *Yachtsman's* wheel has always made a point of saying what he thinks, and not what he thinks other people think. In this case of the accusation of foul play brought by Lord Dunraven against the crew of the Defender, we feel as yet unconvinced that the Valkyrie manifesto will serve to do aught but lower the prestige of British yachting in the eyes of impartial readers—and these are to be found on both sides of the Atlantic in large numbers, while Continental nations are obviously dispassionate in this instance.

Leaving aside, as we well may, the first outbreak of natural indignation and indecorous language which found its way into the New York press when the gist of Lord Dunraven's pamphlet became known, we would ask our readers to carefully peruse the *Times* telegram, which we publish elsewhere. Mr. Iselin's letter to the abnormally large general meeting of the N. Y. Y. C., held on Monday last, puts the case, from the Yankee point of view, with great clearness, and we confess that Mr. Iselin has only accentuated our own views regarding this most unfortunate lapse of dignity on the part of Lord Dunraven.

We must not, however, be understood to think that this pamphlet has in any way whitewashed the Cup committee of the N. Y. Y. C. Lord Dunraven's complaints are not confined to shipping and unshipping ballast aboard Defender; though that, indeed, is by far the gravest accusation, inasmuch as Mr. Iselin is directly responsible for such cheating, if it occurred. We fancy that it was a pretty well accepted belief among British yachtsmen before the publication of Lord Dunraven's pamphlet that Valkyrie had not received the fair and square treatment that her owners would expect in British waters. But does that fact in the slightest degree justify the publication of Lord Dunraven's pamphlet the week before last? Surely no men in England knew better than the head of the Valkyrie syndicate and Mr. G. L. Watson what conditions and treatment would probably have to be faced in the Cup races.

In the number of the *Yachtsman* which appeared on Sept. 5—two days before the first match—we clearly pointed out the annoyance of what we have since been pleased to call the New York "floating rabble," and yet we have had the delight of witnessing an America Cup race. It therefore seems to us that Lord Dunraven's complaint on this score, though fully justified by facts, is rather feeble. However, Lord Dunraven's enthusiasm has more than once led him to abandon demands which his experience should have taught him were essential, and leaving aside the great personal influence which he exerted to get the Royal Yacht Squadron to accept the new deed as a valid document, he was content to forego his request that the matches should be sailed off Marblehead.

We are glad to see that the New York Yacht Club intends to thoroughly investigate the grave charge brought against Defender's crew, and the impeachment of its own conduct contained in this pamphlet, and that Lord Dunraven himself has signified his willingness to face the storm that he has too tardily created by going to New York and formulating his accusations in *propria persona*. This, perhaps, is the only course open to him now, and the fact that he feels called upon to follow it is surely sufficient proof that the Cup pamphlet should never have been published; and, indeed, by the same cablegram to Mr. Edward Kersey, Lord Dunraven is reported to have expressed the opinion that it is now too late for an investigation.

This matter should be settled, we emphatically say, by the Royal Yacht Squadron—through Lord Dunraven, perhaps—and the New York Yacht Club. The honor of the one club is now no less at stake than that of the other, and the Royal Yacht Squadron, having made one *faux pas* at the start, should see to it that it disclaims any share in the needless and, we may say, childish stirring of muddy water which Lord Dunraven has found consistent with his dignity.

Rifle Range and Gallery.

School of Instruction for New York Patrolmen.

THE patrolmen of New York city are to be taught how to handle the revolvers with which they are armed, so that those weapons of defense and offense may be used with more safety to their owners and the general public, and with increased danger to evildoers.

FOREST AND STREAM has long advocated some such "school of in

struction" as will be opened on Dec. 9 in the basement of the 8th Regiment armory, Ninety-fifth street and Park avenue. With the advent of a new régime in the Police Department the scheme has matured, and now, with Sergt. W. E. Petty of the police force, who is probably the best revolver shot in this country, in charge of the school of instruction, patrolmen will have every opportunity of learning how to shoot. The Sergeant, with a detail of four patrolmen, runs the whole school and has the planning of the arrangements.

There are four ranges for practice, so that it will be possible to handle the men quickly, at the same time giving them needed advice, such as how to hold the pistol, etc. As a matter of fact, patrolmen in this city will now have to qualify as marksmen, just as national guardsmen do. They will be required to shoot a string of 15 shots under the following conditions: Off-hand, .38cal. Smith & Wesson revolver, 30ft. range; the target will be like the army target, so that a highest possible will be 75 points for the 15 shots. It will require a score of from 45 to 55 to qualify. The target has a 4in. bull and is in all 2½ft. square. In firing the 15 shots the police will not be subject to a time limit, the object being to give them instruction and to teach them how to handle their guns.

Sergeant Petty has mastered all the details necessary for keeping a complete record of the scores; as the work progresses, it will be possible with a very small amount of figuring to note whether a man, or whether a whole precinct, has improved or deteriorated in pistol practice. Each man's score will be filed away in such a manner that the authorities can lay their hands on it at once and satisfy themselves as to the quality of the work he is doing.

There is something very ingenious about the manner in which the targets themselves are fixed: They are stencilled on stout manilla paper and a number of them are rolled or a continuous strip around a roller; this roller is at the bottom of the space in which the paper target will appear, and is protected from wild shots by a piece of sheet iron; the first target is unrolled and pasted upward and fastened to another roll at the top of the target space; this roll is protected from wild shots in a manner similar to the lower one. A rope attachment which passes to the front of the range enables the attendent to roll up the target when the fifteen shots have been fired, at the same time bringing into view the next target. This idea is Sergeant Petty's own, and he is to be complimented on its completeness.

The shots are scored as made by the attendant in charge of the range. The target outside of the bull is, of course, white, so that each shot in that part can be readily seen and scored; the difficulty of seeing just where a bullet strikes in the black is overcome by means of a lamp with a reflector in rear of and below the target; when a bullet pierces the bull a gleam of light shines through the hole and betrays the whereabouts of the bullet-hole.

Sergeant Petty seemed very confident that by the time all the patrolmen had fired their first trial of fifteen shots he would be able to pick out a team of revolver shots that would puzzle any team to beat them. He seemed satisfied that there was a number of good shots in the ranks of the patrolmen of this city, but said that the majority knew very little about the handling of their revolvers. This fault, he said, the school of instruction was created to rectify, and it would do it.

As there is no appropriation for this work, the department is doing it on its own hook, and naturally has to be very careful of every dollar of expenditure. Sergeant Petty hopes by loading and reloading all the ammunition used to reduce very largely the expense attached to the school of instruction. The school has a big task ahead of it, but there is absolutely no reason why it should not prove an entire success. On the contrary, having been started in the right manner and with a capable staff, its future ought not to remain long in doubt.

Ross and Martin Won the Match.

BROOKLYN, N. Y., Nov. 28.—Champion F. C. Ross and Ignatz Martin, of this city, won their match to-day with M. J. Dorrier and G. W. Plaisted, both of New Jersey. The match was for $100 a side, 100 shots per man in series of 10, 200yds range, Zettler Rifle Club rules governing, all four men being members of that club; Bernard Walther was referee, Charles G. Zettler scorer. The scene of the contest was Banzer & Bookman's Cypress Hills Park.

As the four contestants are among the crack riflemen of this part of the country there was a good attendance of spectators to witness the trial of skill. This is the second time these four men have met in a four-handed match; the first match was won by Ross and Martin by 39 points; to-day the difference was much less, only 15 points separating their totals at the end of the match. That the Brooklyn men won at all is probably owing to Plaisted's unfortunate break in the fourth series when he only scored 187. Ross was not up to his usual form, but Martin kept things going and held up his end most successfully. Dorrier did excellent work, and tried hard for victory; his best totals were: 231, 229, 227, 225, 222 and 223; Ross's best were: 224, 222, 222 and 221; Martin scored a 223 and a 220, while Plaisted's best was a single 225.

The different stages of the match were as follows: At the end of the first string of 10 shots New Jersey led by 14 points, having scored 436 to 422. In the next 10 shots Brooklyn cut this lead down to 12 points, making 439 against 427. The third series saw a still further reduction in the lead of the Jerseymen, the Brooklyn men scoring 433 against 430. This left Dorrier and Plaisted only 9 points ahead, with less than one-third of the match gone. In the fourth series, Plaisted, as above stated, scored but 187, the Brooklyn men piling up 434 against 414, a gain of 20 points for them, this landing them in first place with a total score of 1718 against 1707—11 ahead. At the half-way house the scores showed: Ross and Martin 2151 against 2134—17 ahead, a gain in the fifth series of 8 points. The sixth series was also disastrous for the men from New Jersey, as their opponents gained 12 more points, scoring 441 against 429—29 ahead; 3 points was the sum of the gain made by Ross and Martin in the seventh series—441 against 438, Dorrier and Plaisted each making 219. The total scores were now 3033 against 3001—32 ahead. Still the Brooklynites marched ahead, scoring 445 against 437 in the eighth series, their lead now being exactly 40 points over their adversaries, with only 20 shots each yet to fire. The totals stood: Ross and Martin 3478, Dorrier and Plaisted 3438.

The ninth series saw the New Jerseymen take a big brace; they cut down their opponent's lead exactly one-half, scoring 443 to 423, the totals standing 3901 against 3881. The tenth and last series saw that lead cut down by 5 more points, Dorrier and Plaisted scoring 440 against 435, the totals showing at the end of the match 4336 against 4331. It was a really tight finish all things considered. The scores:

Ross	213	219	219	222	216	221	224	222	216	216—2188
Martin	209	210	214	212	217	220	217	223	207	219—2148—4336
Dorrier	221	216	229	227	222	222	219	225	218	231—2230
Plaisted	215	211	201	187	205	207	219	212	225	209—2091—4321

Revolver Shooting in England.

THE report for the year's shooting at the North London Rifle Club is now published. It says: "Upward of 6,000 entries have been made during the season and the receipts are in every particular in excess of any previous season. The policy of throwing open revolver shooting to every member of the club, and of giving allowances to the less expert shots, has had the effect of inducing many members to try their skill with that weapon. Your committee will recommend next year classification instead of handicapping. The score made by Mr. Winans for the championship is simply marvelous, showing that his hand has lost none of its cunning, and though winning by a large margin, yet his runners up have shown good form. Winners of revolver spoons: Winans 20, Knapp 15, B. Comber and Munday 14 each, Carter 13, Earle, Luff and Richardson 12 each, A. J. Comber 11, Chitty 10, Howe and Howard 7 each, Evans and Gould 6 each, Bashford, Clement-Smith, Denyer and Franzmann 5 each, Allman, Frost, Macdonald and MacCormack 4 each, H. J. Andrews Chicken, Clemence, Diggins, Garaud, Lowe and Treadwell 3 each, Andrews, Baxter, Brading, Britton, Glanville, Howell, Peters and Ricketts 2 each, Atherton, Cowan, F. Evans Gill, Gibbons, Hare, Hore, Jones, Skilton, Stillibrass, Tillie, Varley, Ward and Heath 1 each. Total 262.

"Best range scores and total, 1895, revolver:

"Series 1, 20yds., stationary target; Mr. W. Winans 42 points (highest possible), six times; Major Palmer once.

"Series 2, 20yds., alternate hands: Lieut. Chitty, and Messrs. Knapp and Winans, 41 points, each once.

"Series 3, 30yds, disappearing target: Mr. W. Winans 42 (highest possible) once.

"Series 4, 50yds.: Mr. Winans 39 points."

Turtle Bay Rifle Club.

NEW YORK, Nov. 24.—The second outdoor shoot of the Turtle Bay Rifle Club took place to-day at Woodside, L. I., the following scores being made:

25 ring target, 100 shots per man, 22 cal. rifle, 125ft. range:

H Walter	221	220	197	216	206	202	215	194	210	223—2104
G E Jantzer	216	227	224	196	213	216	208	198	200	197—2095
O G Fuchs	204	192	214	184	206	188	214	176	187	202—1967
C H Plate	199	196	205	215	187	201	208	167	179	169—1926
Harry Jantzer	196	197	193	204	110	200	200	160	170	168—1884

A special 30-shot match for the club medal was won by H. Walter, who scored 639, the scores being as follows:

H Walter	210	223	206—639	O G Fuchs	185	202 190—577
J Ochs Jr.	214	197	210—621	C H Plate	170	178 180—547
G E Jantzer	200	201	211—612	Harry Jantzer	179	176 192—547

J. OCHS, JR., Sec'y.

Mr. William Lyman in Europe.

BERLIN, Schöneberg, Nov. 20.—Mr. William Lyman is at present sojourning in Berlin for the purpose of acquainting the German gunmakers and dealers with his well-known rifle sights. He brings one of the new .25cal. Winchester take-down rifles, and intends to demonstrate this beautiful and useful weapon to the German Emperor, who is one of the best and most passionate rifle shots in Europe. Mr. Lyman has made a business trip through England, France and Belgium, and expects to visit Suhl and other gunmaking centers before his return home.

He is very favorably impressed with the progressive spirit prevailing throughout Germany, and especially with the remarkable growth of Berlin, which city he has not seen for a period of six years.

ARMIN TENNER.

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

Dec. 7.—HOLMESBURG JUNCTION, Pa.—Team race, 25 men to a team, between All-Philadelphia and the Delaware State League; all day shoot on the grounds of the Keystone Shooting League.

Dec. 12-13.—LANCASTER, Pa.—Tournament of the Fairview Gun Club; first day, targets; second day, live birds.

Dec. 19, 20.—ELIZABETH, N. J.—Fifth bi-monthly tournament of the Elizabeth Gun Club; first day, targets; second day, live birds.

1896.

Jan. 1.—NEWARK, N. J.—Fifteenth annual New Year's Day reception and tournament of the South Side Gun Club; targets. Shooting commences at 9:30 A. M. W. R. Hobart, Sec'y.

Jan. 4.—WILMINGTON, Del.—Second team race between All-Philadelphia and the Delaware State League, 25 men to a team; all day shoot on the grounds of the Wilmington Rod and Gun Club.

Jan. 4-5.—PHOENIX, Ariz.—Annual tournament of the Arizona State Sportsmen's Association.

Jan. 7-11.—SAN ANTONIO, Texas.—Grand mid-winter tournament, under the auspices of Texas State Sportsmen's Association and management of J. M. George and O. C. Guessaz (Texas Field), $2,000 added.

Feb 1—————————.—Third team race between All-Philadelphia and the Delaware State League, 26 men to a team. (Place of shoot not fixed.)

April 1-3.—NEW YORK.—Interstate Association's Fourth Annual Grand American Handicap.

April 14-17.—ATCHISON, Kansas.—Thirteenth annual open to all, and second annual manufacturer's amateur tournament; $1000 added money and manufacturers' prizes. Lou Erhardt, Sec'y.

April 22-24.—WELLINGTON, Mass.—Tournament of the Boston Shooting Association; targets. P. R. Dickey, Manager.

April 30-May 2.—NEWBURGH, N. Y.—Annual spring tournament of the West Newburgh Gun and Rifle Association; targets and live birds; added money announced later.

May 5-8.—NEW YORK.—Tournament of the American E. C. Powder Company; $2,000 added money.

May 12-15.—MEMPHIS, Tenn.—Tournament of the Memphis Gun Club, $2,000 added money.

May 13-14.—DAYTON, O.—Annual tournament of the Ohio Trap-Shooters' League. Ed. Taylor, Sec'y.

May 19-22.—CINCINNATI, O.—Tournament of the Hazard Powder Co. R. S. Waddell, Agent.

May 20-24.—KANSAS CITY, Mo.—Nineteenth annual convention and tournament of the Missouri State Fish and Game Protective Association. J. H. Durkee, Sec'y.

May 26-28.—FRANKFORT, Kan.—Annual tournament of the Kansas State Sportsmen's Association.

May 30-June 1.—MILWAUKEE, Wis.—Eleventh annual tournament of the South Side Gun Club.

June 1-5.—CHICAGO, Ill.—Twenty-second annual tournament of the Illinois State Sportsmen's Association. H. B. Meyers, Sec'y.

June 8-13.—BUFFALO, N. Y.—Thirty-eighth annual tournament of the New York State Association for the Protection of Fish and Game, under the auspices of the Audubon Gun Club. E. W. Smith, Sec'y.

June 17-19.—CLEVELAND, O.—Third annual tournament of the Chamberlin Cartridge and Target Company.

July 30, 31.—GOSHEN, Ind.—Midsummer tournament of the Goshen Gun Club.

Oct. 7-9.—NEWBURGH, N. Y.—Annual fall tournament of the West Newburgh Gun and Rifle Association; targets and live birds; added money announced later.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 318 Broadway, New York.

When that heavy gale struck Detroit, Mich., the beginning of last week, it very nearly put an end to Jack Parker's duck shooting, and to the career of the Iolanthe. The following clipping from the Detroit *Free Press* tells the story: "Jack Parker, the well-known sportsman who lives on Junction avenue, had an experience early yesterday morning he will not soon forget. He was out on his fall crusade against the migratory ducks and had gone down below the mouth of the river in his boat. He had a large flat-bottomed schooner with a commodious cabin on it and was occupying it with two men and a boy. The day's shooting had been good, owing to the storm driving the ducks in, and they had about 250 wildfowl in the boat, together with 135 decoys they had taken aboard for the night and five duck boats tied to the schooner or on her cabin. The boat was anchored and about 4 o'clock she parted her chain and nothing could stop her in the drifting match. The wind and current sent her across the lake and she finally ran high and dry on shore near Amherstberg. The ducks, decoys and duck boats were lost, and water poured in through the windows, which were dashed out by things falling against them. Parker came home last evening and says he never had a worse experience—not excepting the time when he was caught out in the moving ice a couple of years ago. He saved the schooner and the guns, but says he would have considered himself lucky to get away with his life."

The programme for the tournament of the Fairview Gun Club, of Lancaster, Pa., is to hand. The first day's programme is confined to target events; the list of events is as follows: No. 1, 10 targets, $1; No. 2, 15 targets, $1.50; No. 3, 25 targets, $2.50; No. 4, 20 targets, $2; No. 5, 10 targets, $1; No. 6, 30 targets, $3; No. 7, 20 targets, $2; No. 8, 15 targets, $1.50; No. 9, 7 targets, $1; No. 10, 20 targets, $3; the total is 172 targets with an entrance of $18. Targets will be charged for at the rate of two cents each; under 12 entries, 3 moneys; over 12, 4 moneys. The second day's programme contains 5 live-bird events: No. 1, 10 birds, $5; No. 2, same; No. 3, 15 birds, $10; No. 4, 7 birds, $4; No. 5, $1 miss and out. No. 1 commences at 9 A. M. sharp, and is open to amateurs of Lancaster county only. There will be three three moneys in events 1, 2 and 4; No. 3 will be divided into four moneys; birds extra. The management reserves the right to alter the programme on the first day, and on the second day it reserves the right to handicap any shooter. Messrs. A. H. Hershey, J. B. Kready and L. A. Brenner compose the tournament committee.

A special car will be chartered to carry Northern shooters from this city to the midwinter shoot at San Antonio, Texas, Jan 7-11. Those already booked are: Noel E. Money, Ferd. Van Dyke, Fred Quimby, T. H. Keller, Neaf Apgar, C. E. Willard, J. A. R. Elliott and O. R. Dickey. The car will go via Washington, Atlanta and New Orleans. At Atlanta B. H. Worthen, of Charleston, S. C., will join the party, while Colonel Anthony is expected to step on board at Charlotte, N. C. Philadelphia, Baltimore and Washington may also be expected to furnish a shooter or two, as a low rate has been secured for the round trip. The car leaves New York on New Year's Day. Any shooter who desires further information, or who intends joining the party, should address T. H. Keller, Box 92, New York.

George Mosher and his Hollenbeck gun are coming to this city to take Keller's scalp in a live-bird match. Some time ago these two men shot a race at live birds for the price of the birds, Keller winning; on that occasion Mosher had to borrow a gun and shells. Ever since that time George has been quiet, merely biding his time—which has come. Last week Harvey McMurchy was in New York and he went back to Syracuse, N. Y., carrying Keller's gun along with him, as it needed some little work at the factory. Mosher, who also of course lives at Syracuse, heard of the arrival of McMurchy and that gun; he at once notified his opponent that he was coming to New York for revenge. Tom's hustling for a gun now.

Charlie Hebbard arrived in this city from Atlanta, Ga., on Monday last. He was brimful of Exposition talk, and of the manner in which Guy Mitchell, of the Kirkpatrick Hardware Company, managed the shoot. That the company was well satisfied with Hebbard's work may be judged from the following extract from a personal letter from the Kirkpatrick Company to W. Fred Quimby: "We regret very much that you could not have been with us during the shoot. It was fairly successful, not as good a crowd as we expected. The targets and traps, under the very efficient management of Mr. Hebbard, were all that we could expect and gave universal satisfaction."

The South Side's fifteenth annual New Year's tournament is one of the new announcements in our "Fixtures" column this week. The South Side Gun Club, of Newark, N. J., always makes these annual gatherings most enjoyable ones, keeping open house and providing a solid New Year's dinner for its guests. The secretary, Billy Hobart, promises to make the coming tournament one of the most successful ever given by the club; he has the club back of him too, so that Billy's promises may be looked upon as certainties. Shooters in the vicinity of New York should not forget the fifteenth annual of the South Side Club; it will be worth attending.

At the sixteenth contest for the president's cup at the Carteret Club, shot on Nov. 20, there were only five shooters present. A heat for the cup was won by W. H. Mead, the club's secretary, who now has two wins to his credit. The scores were: Mead 19, George Work 18, J. Seaver Page 17, J. P. Knapp and W. H. Stafford each 12 out of 15. The wins stand now: Knapp and L. T. Duryea 4 each, Work 3, Mead 2, Seaver Page, Fred Hoey and W. H. Stafford 1 each. The cup, which by the way is a Purdy gun to be made to order, must be won five times before becoming the property of an individual.

Jim Elliott is in the city once more, and promises to spend the winter with us. Jim's headquarters while in the East are, of course, at the Winchester Repeating Arms Company's store, 312 Broadway. Although Elliott might like to get on a match or two while with us, it is hardly worth while figuring on such a possibility, as one cannot see who would want to stack up against him. Brewer is out of the question, as Jim will not meet him, and for good reasons too. We shall, no doubt, often meet Elliott at sweepstake shoots in the vicinity of New York. At all such shoots Jim is always welcome. He is a great favorite in this section of the East.

While *en route* for Long Branch, N. J., on Thanksgiving Day, on the 9:10 train for Jersey City over the N. Y. & Long Branch R. R., we could readily see the main cause for the scarcity of game in New Jersey. Scarcely a field that was rough enough to hide a field mouse was without its hunter and yellow dog. Returning the same way after sundown we noticed two bags of game, the one a solitary hunter with two rabbits; the other, two men with the following varied bag: Four rabbits, three tame pigeons and a "fly-up-the-creek." Schortemeier diagnosed this bag as "a regular sauerkraut bag."

At the date of this writing Ferd Van Dyke is deep in the wilds of Fulton county, Pa., a guest of a hunting club composed of members of the Altoona Gun Club. It is safe to predict that before his return he will have been made intimately acquainted with Pennsylvania ruffed grouse and venison, and with Killits and Kotty to teach him, will have become an adept at the tear dance around the camp-fire.

There are few places better adapted for holding live bird or target tournaments than Elkwood Park. The inclosure between the tracks is all that could be desired for either kind of sport, while the grounds themselves are supplied with up-to-date fixtures. Blackbird shoots next fall will be a specialty at this place, live blackbirds being readily obtained, owing to the immense flocks that roost in the marshes along the Shrewsbury River.

Harvey McMurchy was in the city last week and put in Thanksgiving Day at Elkwood Park. Harvey was in good form, breaking 95 out of 100 targets, and 15 straight at live birds in a sweep shot after a good regulation turkey dinner had been served. In talking about the championship event at the E. C. tournament next May, McMurchy said that he was satisfied to hail as champion the man who made the highest score in the 400 targets, thrown as suggested by FOREST AND STREAM.

On Nov. 29 Capt. A. H. Bogardus defeated W. T. Irwin, of Peoria, Ill., in the third match of the series between these two shooters. The contest took place at Springfield, Ill., Bogardus winning by 47 to 44. Of the three matches Bogardus won two, the Captain thus winning the rubber. Bogardus's rules—a 10yds. circle around the trap and each bird to be killed outside the circle or a lost bird to be scored, gun below the elbow, 15yds. rise, use of one barrel only—governed the contest.

After we left the Carteret Club's grounds on Wednesday afternoon, Nov. 27, a few more sweeps were indulged in with the "light of moon" to shoot by. Notwithstanding the uncertain light, both McAlpin and Wright kept up their good work, each killing 12 straight in the four miss-and-outs. These figures should be added to those given in another column, making McAlpin's score for the afternoon 44 out of 46, and Wright's score 52 out of 55, three dead out of bounds.

Thanksgiving Day in the East was a perfect day for the purposes of trap-shooting; it was particularly favorable for target-shooting, a little more wind being desirable perhaps when it comes to live birds. All the club shoots in this vicinity were well attended, but the open shoots once more demonstrated forcibly the fact that holidays are as a rule poor days to choose for giving open shoots.

Another addition to the shooting fraternity of New York city is Bill Clark, late of Altoona, Pa., who has come, with his *lares* and *penates*, to the Empire City, and taken a flat in the immediate neighborhood of Goatville. Bill's defection will be a sad loss to the Altoona Gun Club, but the shooters of this section will gladly welcome him among them. What is Altoona's loss is our gain.

Neaf Apgar, Capt. Cramer and Jake Blenderman have just returned from a hunting trip in North Carolina. They had a most successful hunt and found plenty of game to interest them, quail and turkeys being their principal meat. Blenderman, however, was lucky enough to get a chance at an 18-months-old buck; he made good use of his chance, the deer falling to his gun. They were located at Lewiston, N. C.

The amateur championship will be shot on the grounds on the Westminster Kennel Club early in January. The shoot is at 100 live birds per man, $100 entrance, $25 forfeit. There are twelve entries up to date, so that a good shoot is assured, while good birds are a certainty, as the event is to be shot on the above grounds, where Superintendent Mott always has good and fast birds.

The Endeavor Gun Club's Thanksgiving Day shoot was a good one and was highly satisfactory to the management. The fact that the home club were beaten once more by the Union Gun Club, of Springfield, N. J., does not bother Secretary Creveling at all.

The programme for the coming season at Monte Carlo will be studied with interest. It will be found elsewhere in these columns.

The Boston Shooting Association claims April 22-24, 1896, as the dates for its annual spring tournament.

EDWARD BANKS.

In Favor of the Straight-Out System.

BINGHAMTON, N. Y., Dec. 2.—*Editor Forest and Stream:* While discussing the question of handicaps and divisions of purses at tournaments, we would like to ask what objections have ever been raised to the "straight-out system" with which most shooters are somewhat familiar. We have not tried it here, but we saw it used at the Sherburne shoot last summer, and everybody present was more than pleased with it. It is certainly most simple; nothing can be more easily figured unless it be class shooting. I would send you an example, but am sure you are entirely familiar with the system. It absolutely does away with the worst evil in trap-shooting—dropping for place. With that one thing corrected what else have we to do in order to place the sport above reproach? There are plenty of amateurs in this country who are ready to gamble that they can break 12 out of 15, which would let them in for part of the money, but they know that the more skillful ones, under class shooting, can manage to get nearly all the money. I would like to know of one single objection to this system. H. W. BROWN.

The above communication from Mr. Brown, who is well known to the trap-shooters of this State, is just the sort of letter we like to receive. It is the letter pre-eminently of a sportsman, and not of one who attends tournaments for the sake of "the money there is in it."

The "straight-out" system which Mr. Brown advocates is precisely the same as the Rose system, to which we referred in our issue of Nov. 16. Some eight months ago, before we were aware that Mr. Rose had placed his system before the public on his score sheets, we received a suggestion from a New England shooter, who was also unaware of the existence of the Rose system, urging the claims of a system which we then called "straight-out" from the fact that it paid a man better to shoot out straight than to drop for a place. On our publishing this system and its workings in FOREST AND STREAM, we received from Mr. Rose some of his score sheets showing that he had elaborated the system and had had it in working order in Colorado for a year or two. We presume this is the "straight-out" system referred to by Mr. Brown.

If there seems to be any need of further examples of the working of this excellent system, FOREST AND STREAM will be only too glad to open its columns for that purpose. As Mr. Brown says: The system absolutely does away with all dropping for place, one of the very worst features of the trap-shooting of to-day. It also pays a man according to his work; another feature that is worth something. The last sentence of the above letter is one that we would like to see answered: "I would like to know of one single objection to this system?" Who can enlighten us on this point?

The Monte Carlo Programme.

CINCINNATI, O., Nov. 30.—*Editor Forest and Stream:* By the kindness of Mon A. Blondin, Secretary at Monte Carlo, who has just forwarded the programme for 1895-6, I have the pleasure of sending a description of the general features to FOREST AND STREAM.

Pigeon shooting at Monte Carlo is to be on a more extensive scale this season than it was last year, and will include what is termed "free handicap," translated means "equal handicap." When more than one pigeon is mentioned in these lines, the usual sweeps for 30 and 20 per cent. obtains, also sweeps for 30 and 20 per cent. will obtain in purse events of one pigeon. There will be more cups this year and altogether the programme will present a magnificent entertainment. The matches will be continuous, but the programme is divided into a series of five parts: The first is known as "*Tir Hebdomadaire*" beginning December 16. Nearly every other day there will be three events: first, a miss and out, one pigeon; second, an event for a $100 purse, miss and out, six pigeons; third, a handicap miss and out, one pigeon.

Second part, known as *Concours Preparatoirés*, beginning Jan. 20, with two events every other day; 1st, for a purse of $200, miss-and-out, one pigeon; 2d, a handicap miss-and-out, one pigeon.

Third part, known as *Concours International*, beginning Feb. 1, one event each day, with purses ranging from 2,000 to 3,000 francs and *objets d' art*. The *Grand Prix*, with its beautiful cup, is to be shot for on Feb. 5, 6; there will be three prizes, the first being $4,000. This event will be at 24 pigeons, allowing three for a miss-and-out.

Fourth part, known as *Concours de Feuzieme Serie*, beginning Feb. 12, with two events nearly every other day; 1st, for a $200 purse, miss-and-out, one pigeon; 2d, a handicap miss-and-out, one pigeon.

Fifth part, known as *Troisieme Serie*, beginning February 26 with three events nearly every other day: 1st, a handicap miss-and-out, one pigeon; 2nd, an event with purses from $100 to $200 each, miss-and-out, six pigeons; closing the season with an event on March 14 for a $200 purse and *objet d'art*.

The new rules on all events, with the exception of the *Grand Prix*, are that, beginning at 26 yards, winners of $100 are handicapped one-half yard; winners of $200 are handicapped one yard; every time a winner scores a purse he is handicapped additionally, the extra distance being 31 yards. Events will be shot at Nice, which is a half-hour by rail from Monte Carlo, once or twice a week, these events not conflicting with the Monte Carlo programme.

For the benefit of pigeon shooters who contemplate visiting this tournament and carrying their own gun, I would state that the gun must not weigh over 8lbs. and must not be larger than a 12-gauge. All sizes of cartridges and all kinds of smokeless and several black powders can be had at reasonable prices, and with guaranteed loading on the grounds from the club's armorer, the well-known Mon. Guyot, of Paris. In addition, however, there are, to my knowledge, three reliable gun stores at Nice and three at Marsailles, and many, both French and English, at Paris. There is no duty charged to import one shotgun, so shooters will have no trouble. Shooters will have great trouble in trying to import cartridges; the same will be confiscated and probably a fine imposed. It is my suggestion that you do not try importation.

For further particulars and programme, address Mon. A. Blondin, secretary Tir aux Pigeons, Monte Carlo, France.

LIEUT. PETER GIBSON.

The Rule for Shooting Double Birds.

ON Nov. 29, at Morristown (N. J.) Driving Park, Aaron Woodruff, of Elizabeth, N. J., shot at a pair of pigeons which were both liberated from No. 4 trap. The birds flew from the trap almost instantaneously, one being a right-quartering driver, the other a right-quartering incomer. He shot at the incomer, killing it, the remainder of the load hitting the outgoing bird and killing it also. The shot was especially peculiar from the fact that both birds were killed instantly.

In discussing this occurrence, the question of a referee's decision in such matters came up. The A. S. A. double-bird rules say (Rule No. 7): "If both birds are killed with one barrel it shall be declared 'no birds,' and the shooter shall shoot at another pair of birds." That is a rule with which, of course, all trap shooters are familiar. We, however, have always had our doubts as to the equity of the rule, and certain clubs in this country have adopted a club rule that scores one bird for two killed at one shot; a pair thus killed would be called "one dead, one lost." We are not, therefore, alone in our ideas as to the propriety of following the A. S. A. rule on this point. To score one for a pair thus killed of course penalizes a shooter, but it makes him all the more careful not to "bunch" his hits.

Rule No. 6 of the same rules is one that we have always taken issue with. "If a shooter fires both barrels at one bird intentionally, it shall be scored 'lost bird.'" Our first claim is that the rule is wrong on the score of humanity; it prevents a man from putting a wounded bird out of its misery, penalizing him if he dares to do it; it also compels him to shoot at another bird, with a chance of sending them both away badly wounded. Our next claim is that the rule nullifies the sporting element of trap-shooting which it was framed to foster. In "doubles" trap-shooting is brought as nearly to covey-shooting as we can bring it; but imagine a rule that would prevent a man in the field from firing his second barrel at a badly wounded quail. We have always thought it far better to cut down with the second barrel a bird that had been "tailored" with the first, rather than to put the second barrel into another bird and trust to one's dog to find the wounded one. Aside from the humanitarian aspect of the question, is there any valid reason why a shooter should not be scored a dead bird for a pigeon killed with a second barrel after it has been wounded (or even missed) with the first?

We are strongly in favor of changing the rule in regard to the pulling of two traps. From what we have seen, both birds are far more likely to fly at the same time, or very nearly so, when they are both liberated from the same trap. Since an effort is being made to revise the shooting rules for both inanimate and live-bird shooting, it would be well if there was some discussion on these points. We have stated our views. What are yours?

Trap at Watson's Park.

CHICAGO, Ill., Nov. 20.—There has not been much live-bird shooting here to report of late. To-day several members of the Audubon Gun Club shot a match at live birds for a cut glass decanter, 15 birds per man, club allowance handicap of misses as kills. Score:

I L Parker	020012001222221—13
C E Felton	220201011112221—14
C S Wilcox	220110210222002—13

RAVELRIGG.

Clark and Willey Matched.

ON Tuesday of this week W. G. Clark, late of Altoona, Pa., and Allen Willey, of Hadlyme, Conn., came to this office and signed articles of agreement to shoot a series of three 100-bird matches on Thursday, Friday and Saturday of next week, Dec. 12, 13 and 14. Each match is to be for $100 a side, the loser of each match paying for the birds; 30yds. rise, 50yds. boundary, Hurlingham rules to govern. The first match will be shot at Elizabeth, N. J., on Dec. 12; the second at Zwirlein's grounds, Yardville, N. J., on Dec. 13, and the third at Dexter Park, L. I., on Dec. 14.

The other conditions of the match are somewhat curious: If Willey beats Clark in the first match they shoot even-up again in the second; if he beats him in the second they shoot even-up in the third. If, however, Clark beats Willey in the first match the second is shot with Clark allowing Willey three misses as kills; if he beats him in that match he again allows him three misses as kills in the third match.

All the money has been placed in the hands of Mr. J. A. H. Dressel, of the U. M. C. Co. The position of scorer and of referee will be filled most probably by Mr. Jacob Pentz and Edward Banks, who will be asked to serve alternately. Both the shooters being well known in this neighborhood, a great deal of interest is being taken in these sporting matches.

Allen Willey, of Hadlyme, Conn., has taken up his abode in this city and will remain with us until spring has set in. Mr. Willey's face will be a familiar one at the shoots in this vicinity until the time when "the robins nest again."

On Long Island.

INVITATION SHOOT AT DEXTER PARK.

Nov. 27.—The invitation shoot to-day was poorly attended, there being only five shooters present, among them Billy Mills, the trapper, one of the best retrievers of wounded birds in the country. As will be seen from the following scores, Billy won two out of the three sweeps, taking second money alone in the other:

	No. 1.	No. 2.	No. 3.
W Mills	22222—5	12022—4	12022—4
S J Held	11021—4	12122—5	12002—3
Brown	12021—4	12001—3	21001—3
H S Lippack	22220—4	11200—3	10102—3
Stellman	10101—3	10101—3	10110—3

Before the sweeps were started Held tried his hand against 20 picked birds, backing himself to kill 15 of them. This he accomplished with one to spare, scoring 16 out of 20.

FREEPORT GUN CLUB.

Nov. 27.—The Freeport Gun Club, of Freeport, L. I., held its monthly shoot to-day on its grounds at Freeport. The club shoot is at 25 targets, the trophy being a gold medal emblematic of the championship of the club. The scores were: Dr. T. D. Carman 17, Charles T. Sprague and Dr. Edwin F. Carman 13, Edward A. Dorlon 12. Dr. Carman won the medal as above.

NEW UTRECHT GUN CLUB.

Nov. 28.—The tournament of the New Utrecht Gun Club at Woodlawn Park was a meager one, 7 being the total number of shooters who took part in the events, while only 4 put in an appearance when the Holiday Cup contest was called. This was won by Charley Floyd with a total of 11 straight, Coulston having tied him with 10 straight, but failing on his first bird in the ties. A few small sweeps were also shot, the different events being as follows:

Holiday cup, club handicap, 10 birds, ties shot off, miss-and-out:

	No 1:	No. 2:	No. 3:
Ties:			
C W Floyd (28)	2222221122—10,,,,1	H P Fessenden (28)	,,2222202222—9
G Coulston (29)	1221222222—10,,,,0	J N Meyer (28)	1221210220—8
Coulston	21111—5	221222—6	1e111—4
Meyer	02222—4	122110—5	,,,,,
Floyd	02022—3	112122—6	22122—5
Fessenden	0e301—2	,,,,,	,,,,,
Otten (28)	,,,,,	2210 —3	,,,,,
C Fergueson	,,,,,	,,,,,	22222—5
E Lohman	,,,,,	,,,,,	21020—3

Nov. 30.—Eleven members of the New Utrecht Gun Club met at the club's target grounds at Bay Ridge this afternoon. The main event was the club handicap shoot; in this event Class A men shoot at 50 targets—20 known, 20 reversed and 5 pairs; Class B men at 55 targets—25 known, 20 reversed and 5 pairs; Class C men at 60 targets—30

PAUL LITZKE.

known, 20 reversed and 5 pairs. There were two cash prizes and two merchandise prizes, which were won respectively as follows: J. Gaughen, first; H. P. Fessenden, second; P. Adams, third; D. Deacon, fourth. A summary of the scores show as follows, those not having a chance for the prizes not shooting their allowances:

	Known.	Reversed.	Pairs.	Allowance.	Total.
Class A.					
P Adams	14	16	7	..	37
A A Hegeman	10	8	5	..	23
D Deacon	14	13	9	..	36
M Van Brunt	10	9	4	..	23
Class B (allowed 5 extra targets).					
Dr Shepard	11	8	4	w	23
R E Gray	13	8	4	w	25
H P Fessenden	13	13	7	5	38
J Gaughen	18	13	6	5	42
Dr Pool	6	8	w	w	14
D C Bennett	10	15	5	3	33
Class C (allowed 10 extra targets).					
P A Hegeman	13	10	4	7	34

Wells, who shot as a guest of the club, broke 12 out of 20 known, 10 out of the 20 reversed, and 5 out of his pairs; total 27.

A couple of 15-target races, nominal entrance, were also shot, as follows:

No. 1: A. A. Hegeman 12, Adams and Deacon 10, Thornton and Van Brunt 8, Gray 6.

No. 2: Van Brunt 13, Adams 11, Gaughen 10, Thornton 9, Hegeman 6.

UNION GUN CLUB.

Nov. 28.—The Union Gun Club held its first shoot of the season to day (Thanksgiving Day) at its grounds at Long Beach. Nine members took part in the club shoot, which is at 15 targets, the prize being a gold medal presented to the club by Robert J. Cameron. The scores made were as follows:

Club shoot, 15 targets, for the Cameron medal:

R J Cameron	111111111111111—15	F J Murray	011100110010110— 8
C Hart	111110111111111—14	A Porter	100010100010001— 5
J O'Brien	101110011111111—12	T W Murphy	000000100000011— 3
W H Grady	110111011010011—10	J J Morgan	100010000000000— 2
Dr Holmes	111011100110100— 9		

Two other sweeps were shot as follows:

O'Brien	1111111111—10	1001111111—8
Murray	0111111111— 9	0011101001—5
Hart	1010111111— 8	1010011110—6
Cameron	1100011111— 7	1111011111—9
Holmes	1101011111— 7	1111011111—9
Porter	0101011110— 6	1001001010—4
Grady	1111100100— 6	1110110118—8
Murphy	0110100010— 4	0000100002—2
Morgan	0000100110— 3	0000000000—0

VERNON GUN CLUB.

Nov. 28.—Thanksgiving Day saw a poor turnout at the grounds of the Vernon Gun Club, only four of the members showing up. These four shot a series of four 10-target events with the following results:

Events:	1	2	3	4	Events:	1	2	3	4
R Phister	3	8	6	7	J Wright	7	5	6	4
C Osterhout	5	5	3	3	L Bishop	5	3	7	8

EMPIRE GUN CLUB.

Nov. 29.—A baker's dozen of the Empire Gun Club, of Brooklyn, took part in the club's regular shoot at Vanderveer's farm, Flatlands, this afternoon. The club shoot is only at 5 live birds per man, but so good were the birds that only one of the thirteen shooters had a clean score at the end of the second round; this man was John Metzenbacher, and he succeeded in accounting for his 5 birds, winning the shoot without a tie. The following are the scores, showing the handicaps of the shooters:

J Metzenbacher (25)	11111—5	O Bogart (25)	e1e2—2
J Skidmore (25)	10211—4	J Geary (25)	1ee00—1
T Gott (25)	e0111—3	P Heiss (25)	e1000—1
H Meyer (25)	0e111—3	W Schenck (25)	0200e—1
G Fassnacht (25)	0102e—2	F May (25)	0e0e0—0
J Woolley (25)	1e20e—2	S Bennison (25)	00e0e—0
C Gerken (25)	0101,0—2		

A team race at 5 targets per man brought out sixteen shooters, sides being chosen by Gerken and Woolley. Both teams made very low scores, but Gerken's team won easily, scoring 17 to 13. Scores:

Gerken's team: Metzenbacher 5, Brundage 3, Schenck, Skidd and Gerken 2; Hein, Geary and May 1; total, 17.

Wooley's team: Woolley, Orr, Skidmore and Geary 3; Meyer 1, Bogart, Fassnacht and Bennison 0; total, 13.

The Eureka's Thanksgiving.

CHICAGO, Ills., Nov. 28.—The all-day shoot advertised for to-day (Thanksgiving Day) came off as announced. Snow covered the grounds, but paths were shoveled through it by the indefatigable Reddy, who has become a fixture at these grounds and who knows so well how to make our traps do their best work. The shooters were few in numbers, but numerous enough in enthusiasm; their total number was only 12, and only 1,200 targets were thrown during the shoot, ordinarily a small amount for an afternoon's work at their grounds.

In considering the scores, remember that nowhere are targets thrown any harder than on the Eureka Gun Club's grounds; it's no boy's game to average 90% over its traps. Stannard shot an L. C. Smith; De Wolf, a Lefever Pigeon gun and Schultze powder; Glover, a Lefever and Schultze; Plum, a Lefever, and J. L. Jones a Greener. I was unable to ascertain the make of the other guns used. After a few practice shoots the following programme was disposed of:

Events:	1	2	3	4	5	6	7	8	9	10
Targets:	25	10	25	15	20	10	25	15	15	15
Stannard	21	9	19	..	..	8	23	..	13	..

W. F. D., Sec'y.

Thanksgiving Day at Baychester.

BAYCHESTER, N. Y., Nov. 28.—There was a good attendance to-day at Miller & Zorn's shooting grounds. A total of 385 live birds were trapped during the day, while a series of target events were also shot off. The best shooting was done by Elliott, who killed 48 out of 52; Pilkington scored 82 out of 102; Nicholls 44 out of 52; Loonie 43 out of 54, and Hendricks 26 out of 33. Of the 12 sweepstake events, all except Nos 9 and 12 were $3 entrance; Nos. 9 and 12 were $10 entrance. The scores in the various events were as follows:

	No. 1:	No. 2:	No. 3:	No. 4:	No. 5:

E. P. MILLER.

The Cobweb's Field Day.

BAYCHESTER, N. Y., Nov. 26.—The Cobweb Gun Club, of New York, held a field day to-day at the grounds at Baychester, N. Y., lately opened by Messrs. Miller & Zorn. There was a good attendance notwithstanding the heavy downpour of rain that fell almost the whole day. George Nichols did the best shooting, scoring 20 out of 22 birds shot at; Pilkington scored 27 out of 32; McKeon 22 out of 28. Scores:

The Interstate's Annual Review.

WE look forward at the close of each year to the receipt of the annual review of the Interstate Association's work during the season that has passed. Branching out, as the Association does, into districts where trap-shooting needs booming, and into sections where lovers of the gun are unaware of the pleasures to be obtained from a few days' sociable tournament life, its work is probably of far more value than it was when it followed the beaten tracks up here in the North.

For two years the Interstate has practically abandoned the North, going South instead, into a comparatively virgin country, teaching the old and the young ideas how to shoot, and showing the gun clubs of the Southern States what can be done in the way of holding tournaments, and *how to do it*. This year the report is very interesting. The

Introduction

runs as follows:

"Be sure you're right, then go ahead."

"The foregoing adage is one of long standing, and of the many truisms handed down by public characters of the past and present none excel in point of wisdom and philosophy the words of Davy Crockett, the American pioneer, hunter and frontiersman, whose worldly career is noted on history's pages. At the inception and during the life of our organization, his time-honored maxim, 'Be sure you're right, then go ahead,' has ever been prominently before us. Five years of its existence have elapsed, and to-day, as a result of the indomitable will power and progressiveness of zealous and active workers devoted to its success and welfare, the Interstate Association presents a permanent testimonial of what pluck, energy and enterprise will attain when made use of earnestly and judiciously. The advancement and impetus given to target and live-bird shooting in all parts of the country in consequence of its guiding power cannot be overestimated. Although the statistics of 1895, as given in the following pages, have been clearly and correctly outlined, nevertheless they convey but a slight conception of the incalculable good accomplished by the Association.

"The Association for four years confined its operations mainly to the North. At the annual meeting, held last December, it was suggested that the Association for the then coming season limit its work to the South. It was looked upon by some as a costly experiment, and wise-acres predicted that owing to the fact that there were but few regularly organized gun clubs in that territory, our venture would end in failure. But the projectors of the movement, understanding the nature of the people, did not hesitate, and proceeded on the lines laid down. Southern hospitality asserted itself on every side, and now, at the close of the season, as we contemplate the work accomplished, we look with approval on the course taken during the year just closed. We are really more than encouraged, and it is decidedly gratifying to chronicle the fact that the stimulus trap-shooting has received, and the organization and growth of the many gun clubs beyond Mason & Dixon's Line, is of that stability and permanency of character for which the Southerners are so justly celebrated in anything they may undertake.

"The progress and development of the Interstate has more than fulfilled the aims and desire of those responsible for its inception, and if the past may be accepted as a criterion, the future will continue to further strengthen the bonds of unity and good-fellowship and cement those interests that are so necessary for the perpetuation of a particular line of sport that is second to none in the country."

Then follows an exhaustive review of the work done by the Association during the season of 1895:

The Grand American Handicap.

The inaugural tournament for 1895 was the third annual Grand American Handicap at live birds, which was decided at Willard Park, Paterson, N. J., April 3, 4 and 5. The Interstate Association guaranteed $1,000 (and all surplus added) in the main event, which was shot under the following conditions, viz.: 25 live birds, $25 entrance, 50yds. boundary with a dead line at the 33yds. mark, and handicaps ranging from 25 to 33yds.

There were fifty-eight entries and three forfeits, making the total purse amount to $1,520.

John G Messner, 25yds., won first money.....$760 00
J A R Elliott, 33yds., won second money..... 456 00
Frank Class, 32yds., won third money..... 304 00

J. G. Messner on the 25yds. mark, J. A. R. Elliott on the 33yds. mark and Frank Class on the 32yds. mark, each killed 25 straight. They shot off for first, second and third places at 10 birds each with the following result:

J G Messner (28yds).....2 2 2 2 2 2 2 2 2 2—10
J A R Elliott (33yds).....2 1 2 2 • 2 1 2 2 1— 9
Frank Class (32yds).....2 2 2 2 2 2 • 0 0 2— 7

Seven of the contestants killed 24 birds each and five killed 23. Eighty-six shooters took part in the tournament and $3,924 50 was divided in different purses. The total number of live birds trapped was 3,627.

The Greater Pittsburg.

The second tournament was given at Pittsburg, Pa., April 16, 17 and 18, under the auspices of the Pittsburg Gun Club.

The first day was devoted to the shooting of a handicap target race under the following conditions: 100 to 125 targets, entrance $5 and price of targets, 16yds. rise, known trap, unknown angles, four moneys. There were 33 entries, making the total purse amount to $165.

Norman Pruitt (115 targets) scored 96 and won first money.....$66 00
W J McKeldon (120 targets) scored 95 and won second money... 49 50
J A Flick (113 targets) scored 91 and won third money..... 33 00
A H Donnally (115 targets) scored 88 and and won fourth money 16 50

BEST AVERAGES SECOND DAY.

J A Flick, first.....83 9-17 per cent.
E D Rike, second.....82 6-17 " "
C W Raymond, third.....79 7-17 " "

BEST AVERAGES THIRD DAY.

E D Rike, first.....85 15-17 per cent.
J P Easton, U M C Thomas, } second.....83 9-17 " "
J A Flick, third.....82 6 17 " "

The total number of shooters taking part in the tournament was 89. Average entry first day, 33; average entry second day, 36½; average entry third day, 29 4-5 The total amount of money divided in purses was $1,921.20; 21,312 targets were trapped during the tournament; $200 was added to the purses by the Pittsburg Gun Club.

On the Atlantic Coast.

The third tournament was given at Wilmington, N. C., May 9 and 10, under the auspices of the Eastern Dog and Game Protective Association.

BEST AVERAGES FIRST DAY.

E L Gilmer, first.....66 per cent.
J L Fonda, second.....64½ " "
U M C Thomas, third.....64 " "

BEST AVERAGES SECOND DAY.

H C Bridgers, first.....65½ per cent.
E L Gilmer, second.....62 " "
Aug Schmidt, third.....61½ " "

The total number of shooters taking part in the tournament was 21. Average entry first day, 10 1-5; average entry second day, 11½ The total amount of money divided in purses was $537 50. 4,965 targets were trapped during the tournament. $100 was added to the purses by the Eastern Dog and Game Protective Association.

In the Old Dominion.

The fourth tournament was given at Lynchburg, Va., May 17 and 18, under the auspices of the Lynchburg Gun Club.

BEST AVERAGES FIRST DAY.

Wm Wagner, first.....78 4-17 per cent.
Geo McAlpin, second.....76 8-17 " "
W Tell Mitchell, third.....75 5-17 " "

BEST AVERAGES SECOND DAY.

Col J T Anthony, W Tell Mitchell, } first.....81 3-17 per cent.
J L Jordan, second.....80 10-17 " "
Norman Pruitt, third.....75 14-17 " "

The total number of shooters taking part in the tournament was 31. Average entry first day, 21 1-5; average entry second day, 19 3-10. The total amount of money divided in purses was $1,030. 8,300 targets were trapped during the tournament. $200 was added to the purses by the Lynchburg Gun Club.

On the Mississippi.

The fifth tournament was given at Vicksburg, Miss., June 26 and 27, under the auspices of the Vicksburg Gun Club.

BEST AVERAGES FIRST DAY.

H L Foote, first.....77½ per cent.
U M C Thomas, second.....76 " "
A W du Bray, third.....72 " "

BEST AVERAGES SECOND DAY.

H L Foote, first.....80 per cent.
J Pinkston, second.....77 " "
A W du Bray, third.....76 " "

The total number of shooters taking part in the tournament was 27. Average entry first day, 16 3-5; average entry second day, 11. Total amount of money divided in purses was $966. 7,680 targets were trapped during the tournament. $200 was added to the purses by the Vicksburg Gun Club.

During the Peach Carnival.

The sixth tournament was given at Macon, Ga., July 17 and 18, under the auspices of the Macon Gun Club.

BEST AVERAGES FIRST DAY.

F C Etheridge, first.....81¼ per cent.
D M Porterfield, second.....79⅜ " "
Harry Troutman, third.....78¾ " "

BEST AVERAGES SECOND DAY.

Geo Peterman, first.....82½ per cent.
Geo Swan, second.....81¼ " "
C Holt, third.....79⅜ " "

The total number of shooters taking part was 37. Average entry first day, 23 1-10; average entry second day, 21 4-5. The total amount of money divided in purses was $989 50. 7,930 targets were trapped during the tournament. $200 was added to the purses by the Macon Gun Club.

At the Crescent City.

The seventh tournament was given at New Orleans, La., Aug. 9 and 10, under the auspices of the Louisiana Gun Club.

BEST AVERAGES FIRST DAY.

Noel E Money, first.....79 11-31 per cent.
T A Divine, F P Poston, } second.....77 13-31 " "
H E Duncan, Abe Frank, } third.....76 24-31 " "

BEST AVERAGES SECOND DAY.

S C Thornhill, first.....76 4-31 per cent.
H E Duncan, H L Foote } second.....74 26-31 " "
D M Porterfield, A B Allen, F P Poston, } third.....73 17-31 " "

The total number of shooters taking part in the tournament was 40. Average entry first day, 25 3-5; average entry second day, 24 1-5. The total amount of money divided in purses was $1,381. 9,110 targets were trapped during the tournament. $200 was added to the purses by the Louisiana Gun Club.

In the Hornet's Nest.

The eighth tournament was given at Charlotte, N. C., Aug. 27, 28 and 29, under the auspices of the Charlotte Gun Club.

BEST AVERAGES FIRST DAY.

John W Connor, W W Dornin, F V Van Dyke, R O Heikes, } first.....88 per cent.
second.....86 6-7 " "
third.....86 2-7 " "

BEST AVERAGES SECOND DAY.

R O Heikes, first.....90 6-7 per cent.
B W Claridge, second.....89 5-7 " "
J W Connor, George Swan, } third.....86 6-7 " "

BEST AVERAGES THIRD DAY.

George Swan, first.....90 6-7 per cent.
R O Heikes, B W Claridge, } second.....88 4-7 " "
B H Worthen, third.....86 2-7 " "

The total number of shooters taking part in the tournament was 28. Average entry first day, 19 9-10; average entry second day, 22 3-5; average entry third day, 19 3-5. The total amount of money divided in purses was $2,023. 11,980 targets were trapped during the tournament. $400 was added to the purses by the Charlotte Gun Club.

At the County Fair.

The ninth tournament was given at Shepherdstown, W. Va., September 4 and 5, under the auspices of the Morgan's Grove Fair Association.

BEST AVERAGES FIRST DAY.

S J Fort, M. D., first.....86⅜ per cent.
J M Hawkins, second.....85⅛ " "
D M Porterfield, third.....84⅜ " "

BEST AVERAGES SECOND DAY.

J M Hawkins, first.....88⅜ per cent.
B W Claridge, second.....83⅛ " "
U M C Thomas, third.....81⅛ " "

The total number of shooters taking part in the tournament was 24. Average entry first day, 11; average entry second day, 10 4-5. The total amount of money divided in purses was $383.50. 5,163 targets were trapped during the tournament.

RECAPITULATION.

In the table will be found, in the aggregate, the leading details of the work of 1895. Considering the fact that our Southern season was largely of an experimental nature, and in a hitherto untried field, the results cannot fail to be exceedingly gratifying.

Shooters taking part	383
Live birds trapped	3,627
Targets trapped	76,420
Money divided in purses	$13 216 50

That time-honored event, the Grand American Handicap at live birds, will open the season of 1896. It will take place at New York, April 1, 2 and 3. The target season will commence about April 15 and end about Oct. 1. It is requested that clubs desiring tournaments make an early application for the same. J. A. H. DRESSEL,
Secretary-Treasurer, 313 Broadway, New York.

The following is a list of the members of the Interstate Association: Tatham & Bros., 82 Beekman street, New York; LeRoy Shot and Lead Works, 261-263 Water street, New York; Union Metallic Cartridge Co., Bridgeport, Conn.; Wiebusch & Hilger (Limited), 84-86 Chambers street, New York; American E. C. Powder Co. (Limited), Oakland, N. J.; Cleveland Target Co., Cleveland, O.; Von Lengerke & Detmold, 8 Murray street, New York; Winchester Repeating Arms Co., New Haven, Conn.; Parker Bros., Meriden, Conn.; The Hazard Powder Co., 44, 46 and 48 Cedar street, New York.

Trap Around Pittsburg.

PITTSBURG, Pa., Nov. 21.—A capital shoot was held to-day at Brunot's Island, fifteen members of the Herron Hill Gun Club taking part in a 25 live-bird sweepstake. Messner, who was on the 30yds. mark, won first money alone by killing 24 out of 25. Bessemer and T. F Wall tied for second with 23 each, McWhorter taking third alone with 22. The score:

Messner (30)	2222222222222222222222222—24
Bessemer (29)	2212221220212022222222223—23

A C Lewis (26)	0111022120122000202000100—12

A $2 miss-and-out was the last event; this had 12 entries, among them being W. G. Clark, of Altoona, Pa., who dropped in on the boys on his way home from a rabbit hunt in the western part of the State. As the following score shows, he divided the money with Old Sport and T. F. Wall; the latter scored 33 out of his 35 birds in both events. Score:

W G Clark	2111121222—10	McPherson	22122220 — 7
T F Wall	2212222212—10	A H King	21122220 — 7

The FOREST AND STREAM *is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable*

Kirkpatrick Hardware Company's Tournament.

ATLANTA, Ga., Nov. 27.—The tournament of the Kirkpatrick Hardware Company closed to-day after a couple of days of good sport. The weather was clear and delightful, perhaps a trifle cool in the early morning.

The shoot was held at Lakewood, a kind of summer resort and picnic grounds, reached in thirty minutes by trolley cars from the center of the city. The traps were located on a hill overlooking a lake, the targets being thrown against a clear sky background. Two sets of Empire traps, with Hebbard's new electric pull attachment, were used, and, under the personal supervision of C. C. Hebbard, of the Empire Target Company, neither traps, pulls nor targets were found wanting. Guy Mitchell, of the Kirkpatrick Hardware Company, assisted by Hebbard and by Irby Bennett, of the Winchester Repeating Arms Company, kept things moving along steadily, and although late in getting started, the programme was shot through by 4 P. M.

The Atlanta boys did not show up as strongly as was expected, many who had promised to attend if the professionals were barred being conspicuous by their absence. From out of town came: T. F. Nelson, W. W. Dornin, R. B. Nelson and C. W. Scott, Lynchburg, Va.; G. H. Peterman, Capt. George Swan, W. E. Post and T. P. Costello, Charleston, S. C.; D. M. Porterfield, Vicksburg, Miss.; F. C. Etheridge, C. C. Holt, A. L. Butts, Chas. Moore and Thos. Green, Macon, Ga.; J. H. Polhill, Brunswick, Ga.

The rules were changed so that any person winning the whole or a portion of first money shot in the next event he shot in under expert rules. Professionals and manufacturers' agents being barred from participating in the purses, the four who were present shot along in a squad by themselves. The scores of the first day were as follows, the tables telling the story of the shoot:

First Day.

Events:	1	2	3	4	5	6	7	8	9	10			Per
Targets:	15	15	15	15	20	15	15	15	15	20	Shot at.	Broke.	ct.

W C Rawson	..	..	..	..	..	..	..	10	12	..		30	22	73.3

As stated above, winners of first money in any event shot in the next event under expert rules; the following are the scores made, Alston and Costello withdrawing after scoring 4 out of 10 and 3 out of 9 respectively; Nelson's 19 out of 20 in No. 10 is worthy of special note:

Events:	1	2	3	4	5	6	7	8	9	10
Targets:	15	15	15	15	20	15	15	15	15	20
W W Dornin	..	11	..	..	..	..	..	..	..	..
B W Bizzell	..	..	..	10	..	14	..	..	..	..
C C Holt	..	..	..	..	10	..	..	..	..	12
G Peterman	..	..	..	..	..	..	10	..	..	..
G H Swan	..	..	..	..	..	..	11	..	..	..
L J Alston	..	..	..	..	..	..	..	w	..	..
T P Costello	..	..	..	..	..	..	..	w	..	..
T F Nelson	..	..	..	..	..	..	..	..	..	19

The scores made by the manufacturers' agents, who shot at unknown angles throughout the programme, were as follows:

Events:	1	2	3	4	5	6	7	8	9	10			Per
Targets:	15	15	15	15	20	15	15	15	15	20	Shot at.	Broke.	ct.
C C Hebbard	12	12	14	14	18	13	13	15	13	19	160	143	89.3
D M Poterfield	13	13	11	14	13	11	13	13	..	17	145	118	81.3
Irby Bennett	12	12	12	13	17	13	13	15	12	18	160	140	87.5
W N Drake	..	11	11	8	2	..	..	12	6	14	115	64	55.6

In event No. 6 Dornin shot along with the manufacturers' agents, scoring 12 out of 15; in No. 7 Peterman shot with them, scoring 14 out out of 15; in No. 9 Waldo, under the same conditions, scored 13 out of 15.

The averages of those who made 80 per cent. or better at unknown angles during this day's shoot were as follows (manufacturers' agents included):

	Shot at.	Broke.	Per cent.		Shot at.	Broke.	Per cent.
B W Bizzell	110	101	91.8	G Peterman	145	126	86.8
C C Hebbard*	160	143	89.3	W W Dornin	145	123	84.8
G H Swan	145	129	88.9	T F Nelson	140	118	84.2
C C Holt	130	115	88.4	T P Costello	145	122	84.1
F C Etheridge	160	141	88.1	D M Porterfield*	145	118	81.3
Irby Bennett*	160	140	87.5	Thos Green	160	129	80.6

* Manufacturers' agents

The programme for each day consisted of ten events, eight at 15 targets and two at 20 targets. The Kirkpatrick Hardware Co. added $10 to every purse, a total of $200 for the two days' shoot. All events were at unknown angles, a modification of the Interstate Association's handicap being adopted by the company for this shoot, as stated above.

Second Day.

The weather to-day was again most delightful, but the attendance at the shoot was lighter than yesterday's owing to it being an important day at the Exposition (Atlanta day). The scores made at unknown angles were as follows:

Events:	1	2	3	4	5	6	7	8	9	10			Per
Targets:	15	15	15	15	20	15	15	15	15	20	Shot at.	Broke.	ct.
Porter	13	12	12	11	15	12	14	11	11	13	160	124	77.5
Etheridge	13	11	12	15	..	13	11	11	15	..	120	101	84.1
Peterman	12	14	..	12	19	..	..	13	..	17	100	87	87
J L Baker	10	12	13	13	13	15	..	11	13	14	145	119	82
C W Scott	13	14	..	13	15	13	14	11	13	20	145	126	86.8
Costello	12	11	15	..	13	13	14	9	..	..	110	87	79
Swan	11	11	10	13	19	..	12	11	13	17	145	117	80.6
Dr Holland	10	10	12	8	18	11	9	8	11	12	160	109	68.1
Tignor	12	10	12	..	..	..	..	..	..	..	45	34	75.5
Nelson	12	13	11	12	19	..	13	10	14	14	145	118	81.3
Chas Reif	10	9	12	12	18	9	12	11	9	13	160	115	71.8
Everett	7	11	12	22	17	9	8	10	9	14	160	109	68.1
Bizzell	14	..	14	14	14	11	12	12	12	17	145	122	84.1
Dornin	..	11	13	11	18	14	15	..	15	..	110	97	88.1
Elliott	..	9	11	12	14	..	9	6	12	13	130	86	66.1
Hebbard	..	..	13	10	16	13	12	12	13	18	130	107	82.3
Alston	..	..	11	12	16	13	11	13	13	..	110	88	80
Rawson	..	..	..	..	..	..	..	12	11	13	50	36	72

The scores made by the shooters when shooting as experts are given in the following table; it will be noticed that Peterman shot in four events as an expert, thus spoiling his general average. Dornin also spoiled his general average by losing 12 out of 35 targets which he shot at as an expert:

Events:	1	2	3	4	5	6	7	8	9	10
Targets:	15	15	15	15	20	15	15	15	15	20
B W Bizzell	..	8	..	..	..	..	..	..	..	..
G Peterman	..	..	..	10	..	..	14	10	..	6
C W Scott	..	..	..	12	..	..	..	..	..	..
T P Costello	..	..	..	..	10	..	..	..	..	..
F C Etheridge	..	..	..	..	..	..	..	..	..	..
G H Swan	..	..	..	..	..	..	14	..	..	..

J L Baker	..	..	..	..	..	..	..	12	..	..
W W Dornin	..	..	..	..	..	..	..	..	9	..

15

The averages of those who made 80 per cent. or better were as follows:

	Shot at.	Broke.	Per Cent		Shot at.	Broke.	Per Cent
W W Dornin	110	97	88.1	C C Hebbard	130	107	82.3
G Peterman	100	87	87.	J L Baker	145	119	82
C W Scott	145	126	86.8	T F Nelson	145	118	81.3
B W Bizzell	145	122	84.1	G H Swan	145	117	80.6
F C Etheridge	120	101	84.1	L J Alston	110	88	80

In New Jersey.

AT THE CARTERET CLUB.

Nov. 27.—The attendance at the Carteret Club's shooting grounds, Bayonne, N. J., this afternoon was not up to the average. This, however, may be easily accounted for, as there was a strong counter attraction at the grounds of the Westminster Kennel, Babylon, L. I., in the shape of a 100-bird race between J. P. Knapp and George Work. Louis Duryea was also still out West in the wilds of Michigan. As there were only five shooters present, each man had all the shooting he needed for one afternoon. Up to 4:15, the hour at which we left, 239 birds had been trapped in two hours and a quarter; of that number 50 were trapped in the event at 5 pairs.

Both Wright and McAlpin did some excellent work, the former scoring 40 out of 43, the three lost birds falling dead out of bounds. McAlpin scored 32 out of 34, one dead out of bounds, while the other bird, which got away, was one that it was no disgrace to miss. Capt. Money was trying a new single-trigger Lancaster that is far too crooked for him; his work, therefore, was nothing like as clean as usual. E. F. Thomas, of Denver, Col., a member of the Carteret Club, was on hand and faced live-bird traps for the first time since he made his 24 out of 25 in the Grand American Handicap at Willard Park last April. His shooting showed a lack of practice as a natural consequence, but at times he made some brilliant kills. Butler, except in the pairs, was not in form, and let several birds get away from him that on other occasions he would have stopped.

In the event at five pairs, as the club rules prescribe, two birds were placed in each trap and all the shooters stood at the 25-yards mark; it must be stated also that under the Carteret rules it is not necessary for both birds to be on the wing at the same time; the only thing necessary to constitute a dead bird is, that a bird to be so scored must be on the wing when killed. McAlpin easily carried off the honors in this event with a total of 9 out of 10, one dead out of bounds—a piece of very hard luck had it been necessary for him to have scored the bird. Butler shot very well, too, in this event and made some rattling good doubles; bad luck pursued him, however, as he lost two dead out of bounds; in his second pair he knocked a right-quartering driver down to the ground, apparently stone dead, but it got up of its own accord and went over the boundary; the first bird of his fourth pair fell dead inside the clubhouse. Wright finished strongly, but Capt. Money, after making a good start, fell all to pieces, but his third pair were a couple of good flyers that would have been bad enough if trapped singly.

Taken as a whole, the birds trapped during the afternoon were a rattling good lot of strong flyers and quick starters, particularly during the first hour and a half; after that they seemed to be a trifle slower, but could still be classed as good birds. Had the wind been behind the birds, instead of blowing gently from No. 5 to the man at the score, there would have been more goose eggs to record in all probability.

The fall of the traps is a matter that is often of interest, more especially when, as in this case, an automatic pulling apparatus is used. The following table shows how the traps fell:

	No. 1.	No. 2.	No. 3.	No. 4.	No. 5.
Capt Money	6	9	17	3	10
H G Wright	5	12	15	9	7
E F Thomas	5	10	10	8	10
H A Butler	10	10	6	6	7
G S McAlpin	9	7	9	10	4
	35	48	57	36	38

As the traps were pulled 214 times, an average for each trap would be a fraction less than 43 times. It will be noticed that Nos. 2 and 3 were away above the average, No. 3 being a notable transgressor; Captain Money drew that trap 17 times out of his total of 45, *i. e.*, more than one-third of his birds were from No. 3 trap; Wright drew No. 3 15 times out of 48. The full detailed scores in all the events were as follows:

THANKSGIVING AT ELKWOOD PARK.

Nov. 28.—The attendance at Elkwood Park on the morning of Thanksgiving Day was very small, the attraction of a 100-target race, $10 entrance, not being sufficient to draw shooters from their Thanksgiving dinners. The consequence was that but three shooters put down their names for the event, among the number being Harvey McMurchy, of the L. C. Smith gun (Hunter Arms Co.), of Syracuse, N. Y. Harvey did not want to shoot for anything but the targets, but they persuaded him to pay in $10, the result being that he walked off with the money, breaking 95 in capital style. M. Herrington, of the W-A powder, did not get his grip until he had shot at 25 targets and lost 11 of them; then he pulled himself together and broke 20, 22 and 23 respectively out of his three remaining series of 25 targets. With the aid of 15 handicap he reached 93, scoring 14 out of the 15. J. S. Shaw, comparatively a novice at this sort of shooting, but who has been doing some good work lately, had a handicap of 10 extra targets, but only reached 80 out of his 110. Held and Edwards, the latter borrowing a Smith gun belonging to a brother of S. J. Held, shot along at 100 targets to keep warm; Edwards broke 72, Held 56. Held is a new hand at targets, this being his second attempt at the inanimates; live birds are his forte, and he showed later in the day that he could shoot them all right.

At 1 P. M. an adjournment was made to the Elkwood Inn, where a Thanksgiving dinner of ample proportions was ready for the shooters. While they were discussing the good things target traps and screens were being cleared away and everything made ready for the live birds. The event on the programme was at 15 live birds, $7.50 entrance, birds extra. This had ten entries, among the number being some of the best shots in New Jersey: Fred Hoey, A. L. Ivins, Leander Campbell, of Little Silver, 'Lisha Price, of Branchport, and a coming man of the name of W. H. Conklin. Postmaster Van Dyke, of Long Branch, also a good live-bird shot, was one of those who got a place.

Fred Hoey was a little off with his first barrel at the start, but after his fourth bird he settled down and centered them every time. Ivins was not shooting well. The boys said, "He's hunting matches." McMurchy shot—as usual; it's not necessary to say any more, except to state that not one of his second barrels was apparently needed, the first one doing the work every time with a clockwork regularity. Held shot well; being close up to the traps, he used his cartridges with judgment and centered most of his birds well. On his fifth bird he made a bad error with his second barrel, shooting away behind a bird that turned into a right-quarterer after being hit very hard with the first. Ordinary care would have scored the bird. Of the other shooters, Postmaster Van Dyke shot well after severely handicapping himself by dropping his third and fourth birds. Price and Conklin, although both out of the money, made some brilliant kills at times, the latter in particular showing very good form. M. Herrington, L. Campbell and J. Applegate were all clear out of form, retiring "with a privilege" quite early in the race.

As usual at Elkwood Park, the birds were a capital lot, duffers, according to the usual acceptance of the term, being conspicuous by their absence. The retrieving was done by dogs—two of them. The best performer was Paddy, Phil Daly, Jr.'s, little liver-colored spaniel. This little fellow has only lately been taught to retrieve by Mrs. Phil Daly, Jr., who has taught him to fetch gloves, etc., when thrown for him to bring back to her. Although his avoirdupois was a little too much for his small body, his spirit was willing and his little legs fairly twinkled as he chased himself in his efforts to retrieve the birds. The other dog was a brown setter belonging to Conklin; this dog, but for an intense desire to consume the "innards" of each bird he gathered (he succeeded, too, once or twice) was fast and quick when he attended strictly to business. The weather was as perfect a day as any fall day could be; for a live-bird shooter it perhaps lacked in wind; otherwise the conditions were delightful, being of the made-to-order sort. Henry S. Chanfrau, who is managing the Elkwood Inn and the shooting grounds, looked after everybody's comfort and made all feel at home.

The scores made during the day were:

One hundred targets, handicap, $10:

H McMurchy, 111111111111111011111111011111111111111111101111—47
(100) .....1111111111111111111111111111111111111111111111111—48—95
M Herrington, 10110000110100111010110111111111011010101101111100—34
(115) .....1111111111101111011110111111101111111111111111111—45
11111111111101 —14—93
J S Shaw (110).1111111100011101111110101111101011111100101010—37
11101101111001111010010111011010111101010111—35
1111110110 — 8 - 80

E. Edwards and S. J. Held shot at 100 targets, each man paying for his targets; Edwards scored 17, 18, 19 and 18—72; Held, 12, 15, 17 and 12—56.

A match at 5 pairs was shot to pass away the time, the result in this and in two 10-target three-cornered matches being as follows:

	No. 1, 5 pairs:	No. 2, 10 singles:
McMurchy	10 10 11 11 11—8	.....
Edwards	10 10 11 11 10—7	1111011111—9
Held	10 10 11 01 11—6	.....

THE ENDEAVORS' THANKSGIVING SHOOT.

Nov. 28.—The Endeavor Gun Club, of Jersey City, N. J., held an all-day shoot to-day at its grounds, Marion, N. J. The weather was perfect for target-shooting and a good attendance was the natural result, 25 shooters taking part in the day's fun. The main event was a team race between 7-men teams of the home club and the Union Gun Club, of Springfield, N. J.; the visitors won after an exciting match by the narrow margin of 4 targets. About 2,300 targets were thrown during the day, shooting not commencing very early. Following are the scores made:

Events:	1	2	3	4	5	6	7	8	9	10	11
Targets:	15	10	10	10	10	10	10	20	10	15

J. A. CREVELING, Sec'y.

AT ERB'S GROUNDS.

Nov. 28.—Some good shooting at live birds was done at Erb's grounds, Newark, N. J., the attendance being very fair when we consider the number of attractions offered elsewhere. The scores were as follows:

	No. 1.	No. 2	No. 3.
J Duston	11012—4	11111—5	12121—5
J Erb	02112—4	12212—5	10111—4
W Hollis	12202—4	12112—5	●1012—3
S Castle	●1203—3	10●12—3	201●1—3
E A Geoffroy	....	.....	2●1●2—3
Castle, Jr.	....	.....	01002 - 2
Ruddin	....	.....	00103—2
	No. 4.	No 5.	No. 6.
Duston	10001—2	11122—5	.....
Erb	11111—5	10121—4	12●12—4
Hollis	11110—4	11111—5	11222—5
Castle	11111 -5	11111—5	22120—4
Geoffroy	12122—5	11222 5	22222- 5
Castle, Jr.	1●000—1	.....	.....
Ruddin	....	01111—4	.....
Leddy	....	10111—4	12●32—3

No. 7 was a similar event with three entries: Geoffroy and Erb, 5; Hollis 4.

W. R. H.

MORRISTOWN DRIVING PARK.

Nov. 29.—Frank Class, the proprietor of the Morristown, N. J., Driving Park, issued a card calling for two days at live birds, on Nov. 28-29. The attendance on both days was very small, yesterday's being composed of three shooters, Class and Timmons, of Morristown, and Allen Willey, of East Hadlyme, Conn. Timmons did some remarkably good shooting, scoring 60 out of 65, three of his lost birds falling dead out of bounds. Willey was out of form, but shot well in the 20-bird race, missing his first and then killing his remaining 19 straight. The scores:

First Day.

	No. 1.	No. 2.
James Timmons	11110●1111—8	112●11●111—8
Frank Class	01●11●1222—7	11122212 11—10
Allen Willey	11●12202●2—7	11121212 12—10

Both the above were at 10 live birds, $4 entrance; a 5-bird sweep, $2.50 entrance, resulted as follows: Class and Timmons 5, Willey 4.

Three more 10-bird races were shot:

	No. 4.	No. 5.
Willey	1211021112—9	1220120●20— 6
Timmons	1011211111—9	1122112111—10
Class	022212●●2w	2212111111—10

No. 6 was a similar race, Class and Timmons scoring 8 each, Willey killing 7.

No. 7 was at 20 birds, $10 entrance:

Timmons	1111121122121111122—20
Willey	0112211112121112222l—19
Class	1122121202112●●121●2—16

Second Day.

The second day saw three additional shooters on the grounds: Jas. A. R. Elliott, of Kansas City, Mo., and Aaron Woodruff and Nate Astfalk, of Elizabeth, N. J. A 20-bird race, $10 entrance (birds included), three moneys, was shot off:

Jas Timmons (28)	1221111111112012111—19
A Woodruff (29)	122●12221212222l112—19
Jim Elliott (30)	2201022111222222l2●2—17
A Willey (29)	02222212●●2221102212—16

N Astfalk (26)	1101000220211221210l—14

Proceedings were brought to a close with a 10-bird race, $5 entry, three moneys; the results were as follows:

Elliott	2222212222—10	Woodruff	2212120211— 9
Timmons	1111l1●122— 9	Class	●2●2121●●2— 7
Willey	1121●22120— 8	Astfalk	1●12011●11— 7

SOUTH SIDE'S SATURDAY.

Nov. 30.—As usual there was a good attendance at the South Side Gun Club's ground this afternoon. About 1,000 targets were thrown between 2:30 and 4:30 P. M., the short days making it hard to throw many targets at an afternoon shoot. As usual L. Thomas was unlucky enough to choose a losing team, as the scores below will show:

Events:	1	2	3	4	5	6	7	8	9
Breintnall	8	10	9	7	9	..	7	..	..
Folsom	5	7	9	8	5	7	2	9	16

THANKSGIVING DAY AT FANWOOD.

Nov. 28.—A few live-bird sweeps were shot here to-day, a couple of 10-bird sweeps being among the number. The first had six entries at $5 each, and resulted as follows:

Aaron Woodruff 10, P. Jay and Blodgett 9; H. Folsom, D. Darby and J. Benner scored 6 out of 8, withdrawing with a privilege of re-entry if they had a chance of a part of the purse.

No. 2, 10 birds, $5: P. Jay 9, T. H. Keller and Dutchy Smith 8; Folsom and Bennet 6, Singer 5.

(An unpleasant occurrence marred the sport of the day, Blodgett deliberately missing his last bird in the first race, the case being a most palpable one of dropping for place. Such cases, as long as class shooting with the present system of dividing purses prevails, are bound to occur now and then. The remedy, however, is not far to seek and should be patent to every shooter.)

BRUNSWICK GUN CLUB.

Nov. 30.—The Brunswick Gun Club, of New Brunswick, N. J., held its regular monthly shoot this afternoon. The club shoot is at 25 targets, unknown angles; in that event the following scores were made:

J Fisher	1101011110110101011110011—17
W E Sperling	1101111111011111101011110—20

H. H. STEVENS, Sec'y.

Trap at Columbus, Wis.

COLUMBUS, Wis., Nov. 28.—Several members of the Columbus Gun Club took part in a handicap event at live birds on Thanksgiving Day. The birds were a good lot, only four being killed at the traps for refusing to fly. The handicaps ranged from 24 to 28yds., and the conditions were: Gun below the shoulder until the bird was on the wing. Under these conditions the shooting was really better than the scores show. A strong wind blew from the shooter toward the traps, and the way some of the birds went off down wind made stopping them within bounds a matter of uncertainty. F. A. Chadbourne, the winner, is a new hand at trap shooting, and, indeed, at any kind of shooting, having owned a gun only a year. The manner in which he stood at the score and killed bird after bird stone dead showed him to be possessed of a veteran's nerve. His first slip was on his 15th, a light, chocolate-colored bird, that left the trap with a snap and crack of its wings and zigzagged out to the left, carrying both loads just barely over the line. This seemed to make him a trifle anxious and he clearly shot behind the next one, a slow incomer to the left. His nerve did not forsake him, however, for his next nine birds were killed without a skip. Mr. Chadbourne used a Colt gun and his load was 3¼drs. Du Pont Smokeless in U. M. C. cases.

BLUEWING.

Hudson Gun Club.

NEW YORK, Nov. 30.—The Hudson Gun Club, of New York city, held its initial shoot at the shooting grounds at New Dorp, Staten Island, this afternoon. The club shoots at targets, the club championship medal shoot being at 15 targets per man. This event was won to-day by Dr. Philip G. Renry with a score of 14 breaks. The following were the scores made:

No. 1, club medal shoot, 15 targets per man: Dr. Philip G. Henry 14, T. W. Vincent 12, Fred. G. Henry 11, E. F. Schaeffer and G. W. O'Brien 9, B. V. O'Rourke 8, Dan. R. Thomas 6, P. H. George 5, Andrew G. Frazer 4.

No. 2, 10 targets: Dr. Henry 9, F. G. Henry 7, Schaeffer and O'Rourke 6, Vincent and Frazer 5, O'Brien and Thomas 3, George 2.

No. 3, same: O'Brien 8, Dr. Henry and O'Rourke 7, Vincent and George 6, F. G. Henry, Thomas and Frazer 5, Schaeffer 3.

A new gun club with a charter membership of twenty has been organized at Lockport, N. Y.; Dr. Moyer was elected president of the club, with Irving Atwater as secretary.

CHRONICLES OF SPORTSMEN AND OTHER HUMAN BEINGS.

Uncle Lisha's Shop.

LIFE IN A CORNER OF YANKEELAND.

The shop itself, the place of business of Uncle Lisha Peggs, bootmaker and repairer, was a sort of sportsman's exchange, where, as one of the fraternity expressed it, the hunters and fishermen of the widely scattered neighborhood used to meet of evenings and dull outdoor days, "to swap lies." The talk naturally ran much on hunting stories and wood lore, but although the stories told were generally good, their truthfulness was not always accepted without question, and the volume abounds as much in dialogue as in narrative. "Uncle Lisha's Shop" is brimful of quaint humor and sentiment, and there is an unmistakable touch of human nature in Uncle Lisha himself, and his good old wife, Aunt Jerushy; in Sam Lovel, the hunter, and in fact n all the other characters introduced.

Sam Lovel's Camps.

UNCLE LISHA'S FRIENDS UNDER BARK AND CANVAS.

When Uncle Lisha went West, Sam Lovel took Antoine as his partner, and the fortunes and misfortunes of the two as trappers are described with all the charm of our author's quaint style, while their friends and enemies, and all with whom they are brought into contact, in the course of the story, step on to the stage real living flesh and blood creatures drawn with such fidelity to life that the reader never doubts that he would recognize any one of them from the description, should it ever be his good or ill fortune to run against him.

Danvis Folks.

A SEQUEL TO THE SHOP AND THE CAMPS.

This volume is a collection into book form of the "Danvi Folks" chapters published in FOREST AND STREAM. I relates the further fortunes of Uncle Lisha, Sam Lovel, Granther Hill and other personages of the story whom we know so well. Mr. Robinson avers that his characters were of the old times and have passed away. That surely is a mistake. They are living to-day here in these three books, and the Vermont author has endowed them with qualities which will give them long life to come. If you already have on your shelves the Shop and the Camps, you have a place there for this third volume.

Sent postpaid, the Shop and the Camps, $1.00 each, the Danvis Folks, $1.25.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, DECEMBER 14, 1895.

VOL. XLV.—No. 24. No. 318 BROADWAY NEW YORK.

For Prospectus and Advertising Rates see Page iii.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

SEE REDUCED HALF-TONES IN OUR ADVT. COLUMNS.

The plates are for frames 14x19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream *one year and the set of four pictures,* **$5.**
Forest and Stream *6 months and any two of the pictures,* **$3.**
Price of the pictures alone, $1.50 each; $5 for the set.

Remit by express money order or postal money order. Make orders payable to

FOREST AND STREAM PUB. CO., New York.

CONCERNING SOMETHING HARD TO ENDURE.

THERE are degrees and varieties of boredom in the world, as there are degrees in everything. The different varieties, however, never could be accurately classified. Very few men are bores at all times, though some men maintain quite a uniform standard in their capabilities of killing interest and evoking weariness.

The cause of borish propensities in the greater number of every-day instances may safely be ascribed to the combined selfishness and thoughtlessness of the borish individual whose desire is to have his own preferences of time, place, conversation and company paramount to all others. He considers himself, not others.

While there is a vast field of common interest in life, every age, station and occupation has its own special interests. Even the days, often the hours, are so subdivided to meet the cares of duty or business that any obstruction to the routine is an annoyance or hindrance, or possibly a loss. There are times when one's company or speech is out of place, and this generally when there is an annoying lack of common interest.

Any man who fails to recognize these facts, and to regulate tactfully his actions accordingly, will unfailingly achieve more or less of a reputation as a bore. Thereafter he will be looked upon more as an affliction which cannot be cured than as a desirable companion, or one at least who could be pleasantly tolerated. Nearly all bores have a common failing of talking too long and too much.

In a general way the bores of every-day life may be divided into two classes—he of the first class may be agreeable and worthy of esteem; his conversation may be both instructive and edifying, but he may be heedless of the length of time he exacts while visiting his friends in the midst of their business or other cares, and also heedless of whether or not time can be spared to him. The man who is occupying the time of another, which should be devoted to the serious duties or interests of life, cannot justly feel hurt if his friend betrays preoccupation or lack of interest in him.

Thus a man may be a most interesting companion in himself and still be a bore by encroaching on the time of a friend who is engrossed in other matters.

The bores of the second class are much greater in numbers and are found everywhere. He may be an interminable prattler, whose vapid nothings neither please nor instruct; he may, on the contrary, talk well, but only on a subject which interests no one but himself; his supreme vanity and self-confidence blind him to the annoyance and discomfort he causes to others.

And where do the bores congregate? Everywhere. On the suburban trains he drops into a seat occupied by a passenger busily engaged in reading. He immediately makes a trial at a conversation regardless of his rude interruption. The slightest encouragement starts him under full way, and the victim may thereafter hold his paper ever so suggestively in an attitude ready to resume his reading and it will avail naught. The bore is fond of talking and talk he will.

At the banquet he flourishes always. Though he talk on a dead flat of inanity, he imagines he is in astonishing flights of witty or entertaining oratory, and generally the poorer talker he is, the greater avidity he displays in seizing every opportunity to talk in season and out of season, regardless of the visible fatigue of his listeners He is one of the kind which consumes both the time and patience of his audience—a double bore.

At the theater he can be heard while the play is in action explaining the plot to his companion and all that is to occur in the following scenes, with such frank criticisms added as he can invent. His eagerness to display his knowledge overshadows the fact that he is spoiling the effect of the play to his companion and making himself an irritating infliction to everyone within hearing.

There is no one who has not met the bore, and will meet him again. He may have a mission in inculcating a greater patience in his victims, though that is doubtful and hard to believe; it is much easier to comprehend how he could utterly destroy it. And yet the victim is not without his defense, for by having a long and tiresome story to tell in return, with much circumlocution, repetition and particularity every time the bore appears, he will soon be checked from the similar feelings in himself which he inflicts on others. The borer is always a poor boree.

But while there are habitual bores—made such by nature, education and favorable opportunity—there are others who are unjustly accused of being bores, and of those are the men who "talk dog," or "talk gun," or "talk fish," etc. Sportsmen who are holding a mutually pleasant conversation over the merits of dogs, guns or rods, or of sport on land or water, are not boring each other. If a sportsman talks on his favorite theme in a company which has no interest in it—and such lack of interest is indeed rare at the present time—it is simply enthusiasm out of place. The instance is a very exceptional one when a sportsman will descant on the pleasures to be enjoyed in his favorite sport, or when he will recount the incidents of former pleasures with dog and gun or rod and reel, if his audience shows a lack of interest. There may be an extremely exceptional instance in which there are bores in respect to their favorite sport, but even then they are such in a good cause.

The bore sometimes creeps into literature, but there he fares less happily, for while it is frequently a difficulty or impossibility to refuse to listen to his oral efforts, it is not difficult to refuse to read his writings.

FOREST AND STREAM'S pages are free from him, for in it are ever writings of common interest, crisp, instructive, well written, the best of their kind in knowledge and scope of subjects covered, and their sources are bounded only by the geographical ranges of the game, large and small, of the world. Nowhere is there more freedom from the annoying, the uninteresting, the wearisome.

FEDERAL FOREST PROTECTION.

VERY slowly, but none the less surely, the public interest in forest protection is increasing. Secretary Noble showed his appreciation of its importance when he caused to be set apart the forest reservations made possible by the act of March 3, 1891, and now Secretary Smith recognizes the needs of these reservations by asking from Congress legislation which shall give reality to these reservations, which as yet exist only on paper.

This subject is one to which frequent attention has been called, and we have often pointed out the absurdity of proclaiming that a certain tract of land is a forest reservation and yet doing nothing to make it one in fact. We had twenty-two years' experience of this mode of caring for the public rights in the Yellowstone National Park, and how it worked there is well known. A proclamation or the establishment of regulations by authorized officers of the Government are good just in so far as they are backed up by the power of the Government to enforce them and no further. No legislation looking to the preservation of our forest reserves has ever been enacted by Congress. No law exists by which offenses against the public can be punished. While most of the national parks are protected by troops, even these guardians have—or until very recently had—no power to do more than expel from the reservation an individual guilty of violating the regulations established by the Secretary of the Interior. It is surely time that an end were made of this farce. The forest reservations should have the protection which they so greatly need and without further delay.

The ridiculous inadequacy of the means now at the disposition of the Interior Department is shown when it is stated that there are only thirty special agents who can be employed for this purpose, and when it is remembered that the forest reservations aggregate many millions of acres, lying in widely separated portions of the continent, in Alaska, on the Pacific coast and all through the Rocky Mountains.

Secretary Smith recommends the passage of Mr. McRae's Bill to protect public forest reservations. He believes that the enactment of the measure would enable the Government actually to accomplish something toward protecting the public possessions. Under present conditions it can do nothing. The bill ought to pass, for the reason that it authorizes the Secretary of War to detail troops to guard the reservations, just as they are now detailed to look after the Yosemite, Yellowstone, Grant and Sequoia parks. If Congress shall authorize the employment of troops for this purpose some temporary relief may be had from the ravages of the timber cutters, sheep herders and forest burners, who are now destroying the forests of these reservations. Aside from this one point the bill, it must be said, has little to recommend it. It is loosely drawn, contains no provision for the punishment of offenders against the regulations established by the Secretary of the Interior, nor any process for their arrest, trial and punishment. It contains provisions permitting the cutting of timber under restrictions which may easily be evaded.

It would seem that when Mr. McRae introduces his bill its form might be so changed that it will at least provide some form of government for these forest reservations—some method by which law can be enforced within their borders.

SNAP SHOTS.

The "fake" mills are still grinding. First it was a yarn about Alaska duck-egg destruction; then about Long Island cabbage beds ravaged by deer; and now it is about carp—500 tons of them taken out of a New Jersey pond. A New York paper reported the other day that when Vreeland Pond, in Passaic, was drained Poles and Hungarians flocked to the muddy fish preserve and carried away 500 tons of German carp. There was a roundness about this 500-ton carp "fake" which struck the fancy of the FOREST AND STREAM'S statistician, and two minutes with a piece of paper and a lead pencil evolved an interesting computation. Now 500 tons equal 1,000,000 pounds; the market price of carp is 6 cents a pound; 1,000,000 pounds at 6 cents would make $60,000, quite a snug little value for the Poles and Hungarians to bear off. Again, allowing to each one of these fortunate recipients of the harvest of the New Jersey mud-pond fertility a horse and wagon to cart his plunder home in, and reckoning a half ton to a load, 1,000 wagons would be required; and reckoning that each wagon would require 20 feet of space in the procession, there would be a train of carp-laden vehicles 20,000 feet or four miles long. Altogether it was a big haul of fish, the biggest ever known in these parts, and almost as wonderful as the great Kekoskee bullhead harvest. But, unfortunately, unlike the Kekoskee bullhead story, this one was not true, not by 490 odd tons of carp. What did take place at Vreeland Pond Warden Shiner tells in another column, and it is an interesting story too.

The New York Fish Commission financial muddle appears to be growing more serious as new developments are made. At a meeting last week the Commissioners announced that they had been compelled by shortage of funds to dismiss fifteen of the thirty-three game and fish protectors, and with them Clerk John Liberty, who has so long done valuable and efficient service in the office of the Chief Protector. This is the pretty state of affairs that has resulted from the happy-go-lucky regime of the former Commission; it is precisely what might have been expected when the Fish Commission of New York was prostituted by Governor Hill to political purposes, and men were put into the board whose sense of responsibility was so slight that they treated the office as a choicely humorous affair and their own connection with it as a huge joke. Ex-Secretary Doyle, whose accounts have given the new Commission so much trouble, has been getting the blame for the financial complications the old board left behind it; but the pertinent question is: What were the Commissioners doing that their accounts got into such a condition?

The Sportsman Tourist.

UNCLE LISHA'S OUTING.

VI.—A Way Station.

TANGLES of hobble bush sprawled over the russet carpet of hemlock leaves, gaily flecked with variegated rattlesnake plantain, overtopped by yellowing sarsaparilla, and here a crowded cluster of scarlet berries, still upheld on their withered stalk, marked the place where the fiery bulb of the Indian turnip was hidden. There were moss-covered cradle-knolls and moldering trunks of the old trees whose uprooting had formed them, with trees already old growing upon them. Great mats of sphagnum were in the hollows between and all were the characteristics of the undisturbed floor of the ancient forest.

For all these Sam had a keen eye, noting the difference of forest growth here from that of his own hill country and speaking of it to his companion, but never of the beauties of nature, for, with the deep and tender feeling of the true lover, he could not prate of the charms of his mistress to the common ear.

Antoine enjoyed them with an undefined touch of the same feeling, but more than the symmetry or majesty of a tree he saw the axe helves in the hickory, the baskets in the ash, the plank in the hemlock and pine, and the medicinal virtues of the prettiest plant were more to him than its beauty.

Ten minutes' leisurely walking brought them to a clearing of a few acres where some young cattle were pastured. They left off grazing on the approach of the strangers, whom they curiously regarded for a moment and then scampered into the woods in a flurry of alarm. A small log house stood in the middle of the clearing with a pole-fenced garden patch in front wherein some cabbages flourished in the virgin soil in spite of poor tending. A few bean stalks drooped their frost-bitten leaves over the clattering remnant of dry pods, and the withered cucumber vines, linking together the dropsical overlooked fruit, showed with what rampant growth and how riotously they had gadded abroad under the summer sun and showers.

A thin wreath of smoke trailed upward from the low chimney, diffusing a pitchy, pungent odor even to windward in the light breeze, and the merry notes of a fiddle, accompanied by the sound of jigging feet, came through the open door.

"Bah gosh, de smell an' de nowse was kan' o' Frenchy, don't it?" Antoine remarked as they drew nearer; but he started backward with an exclamation of astonishment when, still unperceived by the inmates, he cautiously peered in at the door. "Oh, dey was too da'ks color mos' for mah rellashin," he whispered as he fell back to Sam's side, "Dey was nigger!"

Sam stole forward and looked inside. Sitting with his back toward the door was a lithe figured and very black negro, energetically playing a fiddle, which divided his attention with a taller and more strongly built man of the same race, who was putting his whole soul into the elaborate execution of a jig, occasionally exhaling his breath in a gusty puff that was almost a deep-toned whistle, while the fiddler expressed his delight in the performance by frequent squawks of laughter.

Presently the dancer finished with a grand flourish and a final bump of his quivering heels and slouched across the room to refresh himself with a draught of water from a pail that stood in the corner, while his comrade hugged his instrument under his arm and rocked to and fro in a spasm of delighted laughter.

"Oh, ah, oh, Lord,'" he gasped, "if that don't knock the spots out'n all the dancin' ever I ever did see. Oh, oh, yah, yah! oh, Lord."

"Wal, yas, honey," said the other modestly, as he dropped heavily into a creaking splint-bottomed old chair, "'at's er de way dey wu'ks de heel an' toe down in ol' Firginny. Now, I'se gwine fus' to sing ye dat' ar' li'l' song ag'in, so's you can ketch de chune wid you wiolin," and he began to sing in a deep sonorous voice, beating time with his palms upon his knees, while the other felt for the air with uncertain touches of the fiddle strings.

"De coon fas' 'sleep in de holler ob be gum,
Who dar? Who dar?
Brer Fox come a-scratchin' 'roun' de do' ob his home,
Who dar knockin' at de do'?
De coon cock he eye an' he listen wid he ear,
Who dar? Who dar?
Who dat a-wantin' ob somebody byar?
Who dar? who dar a-knockin' at de do'?
Dat's me, Brer Coon, so prepar' for to die,
Who dar? Who dar?
Coon squirt 'bacca juice plum in he eye,
Who dar? Who dar, knockin' at de do'?
'Taters in de ashes, cawn b'ilin' hot,
Who dar? Who dar?
Come ter yer supper, table all sot,
Who dar? Who dar, knockin' at de do'?
Brer Fox run' blin', smash he head 'g'in' de tree,
Who dar? Who dar?
O, you ain't de man I'se wantin' for to see,
'Tain't me, 'tain't me, knockin' at de do'."

"Yas, sah," the tall negro remarked, when the song was ended and cordially applauded by his friend, "w'en dey is 'bout fawty niggahs jes' a-shoutin' dat ar, yer could jes' set an' listen at 'em all night."

Unwilling longer to play the eaves-dropper, and loth to leave such entertaining company, Sam stepped forward and knocked on the door post.

"Good mornin'," he said. "'Scuse me for interruptin', but me an' my friend stopped tu see 'f we c'ld git a drink o' water. This 'ere crik water 's p'isen, I b'lieve."

Both negroes had arisen suddenly when Sam knocked, the taller with an alarmed, alert look, as if in quick consideration of a way of escape, the other with an abashed yet half defiant air. The first seemed assured of no evil intention by a glance at the visitor's quiet, good-humored face, and stepped backward with a questioning smile on his own no less good-humored visage.

"Water? Course you can hev' some water. My stars! haow you did scare me," said the violinist, emphasizing each sentence with a chuckle. "Didn't s'pose anybody was in a mild o' here. No, sir. An' me an' my cousin was sort o' keepin' hyouse whilst the ol' woman an' the coon 's gone. My brother hain't been tu see me afore, I do' know the time when, an' we allus hev' to hev' a little fun when he does come. O, I forgot you wanted some water. 'Tain't the best water in the world," he apologized, as he brought a brimming dipper of milky-looking water, "but it's some wet."

Sam sipped with gingerly lips, but found it better than the clearer, weedy-tasting creek water, and gave it as cordial approval as one could who had been accustomed to the crystal springs of the mountains.

"Ha' some, Antwine? It's pooty good water fer the time o' year," but Antoine would not be prevailed on to help him with this excuse for their call.

"This feller an' mee," Sam explained, indicating his companion by a sidewise nod, "come up the Slang a duck huntin,' an' he kinder wanted tu see the haouse where he faound his father, so we come over. He didn't know but what he'd find some more relations here."

"Wal," said the negro, chuckling as he cast a quick quizzical glance at Antoine and jerking his head emphatically, "he is kind o' dark complected, but he don't look like any o' aour folks 'at I remember. I don't claim no relationship, but mebby he does."

"Oh Sa-cree, cochon noir!" Antoine growled explosively.

"The' hain't nothin' stuck up 'bout me, an' if he c'n prove it I'll own it," continued the negro, giving no evidence if he comprehended that he was called a holy black pig.

Another person now quietly appeared at the door, a placid faced middle-aged man in red flannel shirt sleeves that contrasted oddly with his broad-brimmed hat and sober-hued waistcoat of unmistakable Quaker cut. His sudden appearance did not seem to surprise the negroes, whom he accosted pleasantly, while he saluted Sam and his companion with more reserve, regarding them with some wonder.

"Well, James," he said to the master of the house, "so thee's got company, has thee? And who might thy friends be?"

"That's more'n I c'n tell ye, Mr. Bartlett. Only one on em's arter a drink o' water an' t' other 's lookin' for his relations."

"I guess you don't remember us, Mr. Bartlett," Sam said, rising from his broken-backed chair and extending his hand as he smiled on the puzzled face of the Quaker. "Me an' this man shantied an your land here one spring, four, five year ago. We was a trappin' mushrat. Peltier Gove come tu see us an' hired aout tu you. My name's Samwil Lovel an' this 'ere's Antwine."

"Why, dear me, yes," said Friend Bartlett, his face brightening with recognition as he shook Sam's hand. "I thought I'd seen thee somewhere. And this man too. Why, his father and mother lived in this very house a whole year."

"Oh, yas, yas," cried Antoine. "Ah'll fan' it here, an' Ah'll ant 'spec' more Ah'll was for fin' it in mah soup, me. He live 'long to me naow, an' he smaat lak boy, an' so was mah mudder."

"That's clever," said Friend Bartlett, and then to Sam, "And Peltier, how's he? He an' Lowizy are married, I s'pose."

"Wal, Peltier's abaout so," Sam answered soberly, "but he hain't merried. Lowizy's dead."

"Thee don't say. Wal, that's sad, to be sure," Friend Bartlett said in a grieved voice. "Poor child, poor child. It will grieve my wife to hear it, for she set great store by Lowizy. And Peltier was a stiddy, clever young man, poor boy. He must be greatly cast down."

After some further conversation with Sam he turned to the negroes and his eyes fell upon the fiddle. "Well, James, thee has been entertaining thy visitors with music, has thee?" He bent over the instrument curiously and touched the strings with one cautious finger, withdrawing it with a start and an abashed face as they gave forth a resonant chord. "Well, it's rather a pleasant sound to worldly ears, I dare say," he remarked, and then in a low voice to the man whom he called James, but who was Jim to the world's people, "thee should be careful about attracting strangers to thy house, James, while Robert is with thee."

"I hadn't no idee the' was a livin' soul within a mild o' here, Mr. Bartlett; no, sir, I hadn't," Jim protested, with many an emphatic jerk of the head. "They popped right on tu us as if they'd riz right aout o' the airth. I hain't none afeard o' the tall feller, but I do' know 'bout that gabbin' Frenchman," and he cast a suspicious glance at Antoine, who, unconscious of unfriendly scrutiny, was leisurely whittling a charge of tobacco for the waiting pipe between his teeth.

"I come down to fix up the fence a little and look at the young cattle," Friend Bartlett explained to the company, as he went to the door and picked up his axe which he had set down there.

"Friend Samwell, I'd like to speak with thee a little about Peltier," hesitating over the untruth of the pretext. "I feel clear to trust thee," he said in a guarded voice when Sam had followed him apart to a comfortable leaning place on the fence, "but I ain't quite so clear in my mind about thy companion." He paused a little, abstractedly hewing the withered leaves off a sunflower stalk. "The fact is, that tall colored man is a fugitive from slavery, and might be in danger if some folks knew he was here."

"I 'spected where the critter come from," said Sam, "but ye needn't be afeared o' me tellin' on him, Mr. Bartlett, an' I don't b'lieve Antwine would either, not tu mean no harm. All 'at ails him is he's tew full o' his gab."

"Well, Samwel, thee must caution him. It would be sad if anything should happen to hinder this poor man's getting to Canada."

"I guess the' hain't no danger o' that," Mr. Bartlett.

"More than thee thinks, perhaps." Friend Bartlett glanced cautiously toward the house before he added, "I feel free to tell thee that strangers have been seen not many miles off that we mistrust are looking for him."

"Du you b'lieve it?" Sam asked in surprise. The Quaker nodded. "Wal," Sam drawled out, "I ruther guess they won't ketch none o' their stray black sheep up this way—not if I c'n help it."

"Thank thee, Samwel; but I think if nobody lets out the secret they won't be apt to discover his hiding place. Try to keep thy companion's tongue bridled for a few days. Now, I won't hinder thee any longer," and the Quaker moved slowly toward the house.

"Come, Antwine," Sam called, "le's be a-moggin'," and Antoine coming forth, the two began to retrace their way to the landing.

"Farewell," Friend Bartlett called after them, "thee tell Peltier what I told thee and remember me in kindness to him, will thee?" ROWLAND E. ROBINSON.

THE LOST MAN.

IN looking over a collection of photographs taken last summer while on a New Brunswick fishing trip, I have come upon one that revives queer memories. I am going to send the photograph and the story to FOREST AND STREAM, so that its readers may puzzle over the matter as I have done.

The thing happened in a corner of the wide, little known wilderness which forms the larger part of the province of New Brunswick. Under the pilotage of that greatest of all New Brunswick guides, Mr. Henry Braithwaite, of Stanley, three of us had started from Boiestown on our way to Little Sou'west Lake, a good sixty mile walk. We were accompanied the first thirty miles by a portage team, drawing our outfit on a sled with broad wooden runners. That is the only vehicle which, in the summer time, can stand the terrible vicissitudes of the Dungarvon portage. Even that stanch craft is often in danger of shipwreck. Some of you know what a thirty mile portage is, over a very old and long unused lumber road, full of fallen trees, up steep hillsides, across quaking bogs, where the horses frequently break through, leg-deep. Well, there had been no team in ahead of us before that season. We knew of just two men who had gone ahead of us, and they were an Indian from Rivier du Loup and Mr. Dave Douglass, two assistants of our guide. We could plainly see where they had branched off the road at a certain point for a short cut through the mountains. It was a wilderness so little disturbed that we knew the pedigree of every footprint we saw.

When we crossed the Dungarvon, on the afternoon of the second day out, the team went ahead while the three fishermen caught a few trout, and Risteen and Atherton each gathered in a frisky grilse. These were merely incidental, however, and in an hour we followed the team, catching up with it where the road ended entirely, at an old lumber camp, the last outpost of even that barbaric relative of civilization. Beyond, away up to the Restigouche on the north and across to St. John waters on the west, stretched the grim and unmapped wilderness, while to the east the settlements on the Intercolonial Railway were nearly 100 miles away.

Douglass, who was to meet us at this camp, did so. The Indian was building a canoe on a lake twelve miles north. In the morning the teamsters were to retrace their profane steps out to the settlement thirty miles south of us. The accomplished Braithwaite cooked a special supper. Seven pounds of grilse and uncounted potatoes, as well as other edible things, disappeared in the manner customary on such occasions. Fifty yards away was a little tinkling stream. The day died slowly, as it always does in latitude 47 early in July. It was nearly 9 o'clock before it got too dark to see to read. An argument as to whether it was yet too dark to see to shoot was settled by Risteen, New Brunswick's medal-winning rifleman, who fired at a distant stub and hit it. As the teamsters wished to start back early in the morning, we turned in as soon as it was dark, occupying the long-deserted bunks of the lumbermen of other days. The fire outside flickered and fizzed. In two minutes after I lay down I was asleep.

Some time in the night, I do not know when—it was after the moon rose, and that happened at 10:30—I was awakened by Risteen, who crept back into the bunk, saying that a lost man had come into camp, that he had eaten a big supper and that neither the men nor himself could make anything out of him. I was too sleepy to take much interest in the matter, but the next morning we all took a hand at trying to help the unexpected visitor find out where he was at—and we all got left. He was a grizzled, skinny old chap, who might have been 70, and was more likely 60. He had a two weeks' growth of beard. He was tall and bony, and strong considering his age. "How had he stumbled on us?" "O, he heered the gun go off just as he was layin' down beside the run." "Where was he going?" "To Grand Falls, and thought he must be about there." "But, great goodness, man, Grand Falls is on the St. John River, seventy miles in a straight line, and a hundred from here, the way you'll have to go."

This information did not seem to disturb the man much, and in fact nothing else did. How long had he been out? He did not remember, but he had been in the American war. He had with him no matches, no compass, no blankets, no food. He was not hunting, or prospecting, or cruising. If he could get to Grand Rapids he had friends there. He had refused to come into the camp, but slept all night on the ground by the fire. He did not seem specially hungry. He ate his breakfast without comment, but took off his hat and said grace by himself. His sole earthly possession was a rusty axe, which he said he had picked up in some stream he had crossed, and it was plain that the axe had lain in the water a long time. What had he had to eat yesterday? A quail. Now there is not a quail in that region. He spoke with an uncertainty of utterance which made it difficult for him to pronounce his own name intelligibly. It sounded like Dorns or Torrance. He was not sociable, and the only wish he expressed was that the teamster would not swear. He was utterly wrong on the points of the compass, but did not seem to care much about that. The fact of being far astray in an absolutely unpeopled wilderness did not arouse a word of alarm or regret. While breakfast was being cooked I took his photograph—a thing he did not like. He sits in the foreground with his hat off. He went away with the teamsters on their return journey, and as he left us he turned and looked us all over. He did not express a word of thanks or interest. He seemed to be all the time in a sort of trance. As he stood looking at us he said, as though talking to himself, "Is there any man here that knows me, or do I know any man here?" Then he turned and swung off down the portage at a good gait.

Afterward we learned that the poor old fellow went out to the settlement with the steamer, where no one knew him, and where the keenly-observant inhabitants insisted he had never been before. He tendered his rusty axe as part payment for lodging and breakfast at a settler's house. Reaching the settlement on Sunday, he went to the little church and nearly created a row by occupying the whole time in an interminable, incoherent address and prayer. The next morning he started off up the bank of the Southwest Miramichi River all alone,

barefoot, with his boots in his hand, and without means of sustenance, bound, he said, for Grand Falls, 100 miles of wilderness between him and his destination.

I have often wondered what happened to him. His manner, his incoherent replies, his indifference to the perils of his position, his peculiar religious tendencies, indicated that he was not in his right mind. If Risteen had not fired his rifle the poor old man, lying there without a fire, blanket, food or knowledge of his whereabouts, was in a fair way to starve. That vast tract of mountain and forest is an extremely bad place for a man who has neither food nor fire. Yet somehow our lost man had worried along through this world for more years than

THE LOST MAN.

had any of us who had pitied him. He was not afraid of the big woods. And perhaps he came out all right. Perhaps he did not; in that case, he found a cemetery without troubling anybody very much. Mr. Braithwaite dismissed him from his mind by saying: "Well, I've been in these woods all my life, and he beats me." I have presented his picture and so much of the story as I know to the readers of FOREST AND STREAM. What do you suppose became of him? FREDERIC IRLAND.

WHAT THE SIGNS DID.

THE haze of Indian summer was in the air and the rays of sunshine filtered down, bronzing the dried buffalo grass and the buttes, making all one color, tinting, toning softly down, until the rugged outlines were lost in the blue distance.

A dreamy, contented air seemed to have settled on all things in this great lone wilderness as they silently waited for the passing of the summer and the coming of the blizzards which would soon be sweeping across the country, born of the north wind.

At such times all nature reminds one of an old, old man, white-haired, withered and palsied, a man who has had good days, but who has passed them and is slowly wasting away, dying from the mere lack of vital force to keep him going, dying as the white-bearded milkweed dies, from a want of heat and moisture. Such an old man is nature, basking in the sun and waiting for the winter of death to strike him down; old, very old, and with seams and wrinkles on his face, basking in the sun for warmth.

So thought I as I rode along, with rifle across the saddle pommel and eyes and ears alert for any indication of game, for I knew the fat blacktail deer were basking in this same sunshine, lazy enough so long as they were safe. I also knew that the blue haze did not dim the ever watchful eye of the old buck, whose antlers were like a plum thicket for branches and whose nose was ever pointing in the wind for the first sniff of danger. I knew that old fellow, knew I was in his country and out of meat. I wanted a deer, and that old buck was the one deer above all others.

Wasn't his track nearly as big as those of the last year's mavericks that mingled with it in the mud around the spring? Didn't he look lordly as he bounded up the mountain side last week? Wouldn't that set of horns make a first-class hat rack in the hall down in the States? I wanted that set of horns and I was going to have them, there was no doubt about that.

On I went, letting the wiry little cayuse pick his own way over the rough ground, until I reached the spring, where a few pines stood shoulder to shoulder around the damp spot—a mark to be seen for miles, crying in a dumb way, "Here is water, good water; let him who thirsts drink."

I had quaffed the treasure that they guarded and had thanked the pines for showing me the place. They had whispered and pointed to a huge track in the mud, and the mountain breeze had sung, "Here is the spot. Here the big buck drinks too, for he knows that this is the best water for miles around, and his taste is only for the best."

While the horse drank I walked about and saw his track again, big and fresh and close together. It sunk deep in the mud where he had loitered in the water, while the sun rose until the level beams had shone into his big brown eyes. He had paced back and forth this last morning, nipped a killikinick bush here, a tender shoot of tule there from the only bunch at the spring, and taken a taste of bunch grass from the hillside; at peace with himself and the glowing morning as he watched the sun come up from behind the Bearlodge range for the last time.

At least so said the signs, and they have only a true tongue.

When the sun was up the old buck stalked away along the hillside, over the ridge and toward the cedars that fought with the winter wind for life. These cedars stand close together, that the living may support those who die and turn gray like dead men's bones when the north wind chills their hearts and the snow weaves a winding sheet for them.

All the wild things are friends, and the old buck went to the cedars and they hid him when he slept. They wove their dead bones against his antlers until both were one, and they painted their tufty leaves with blue until you could look at the buck and see only cedar trees, or look at the cedars and every one was a blue buck, so cunning are they.

Yet the signs know and tell tales to all who know them, and I listened to the signs.

They knew where the buck went and they made it all so plain that soon the cedars whispered in the old buck's ear and said, "Fly."

Then the buck stood up and looked about and smelled the air. The air gave him nothing, for it was traveling the wrong way. The cedars blinded his eyes, for they could not move and show him danger, they could only whisper. Then the signs pointed him out as he stood there big and grand, and I knew he was mine.

Silently the rifle looked at him—and spoke.

The lead found his side, but he did not fall, only bounded away, hurt to death, yet he would strive to live.

In his flight he bounded with full, strong leaps along the mountain side. Then the rifle looked again and sung to him, twice more it sung and the big buck went down. My long knife ripped his skin and drank his good red blood, and so he died. Soon he was bound on the horse and carried away from the cedars, away from the spring and down the mountain side, and made meat for the ranch, and good moccasins were made from his skin. See you that head? That was his.

Thus it was he died, betrayed by the signs when the blue haze was on the mountains and the world was like an old man sitting in the sun. EL COMANCHO.

HOW FUR IS CAUGHT.—III.

Snowed In.

WHEN we awoke on the morning of our first day at the camp on Turtle Lake we found a heavy, damp snow falling, covering all the woods with great flaky fleeces, and lying light and deep upon the ground. We were afraid to start out on the trail in so wet a snow, as the stringing of the shoes was certain to wet through and stretch—a condition of affairs much to be dreaded by the web shoe man. Moreover, Norris was not sure of his inclination or ability to finish the journey over the line, the hardest of which was on ahead, including two nights or more out in very rough shelter. We therefore lay in camp, and spent the day in talking. Some of the things which our trapper friends told us may be of interest.

Elk, Moose and Turkeys in Wisconsin.

I asked Brandis if he knew of any instance where elk or moose had ever been seen in Wisconsin. He said that some years ago on the Ripley Richards farm, near Antigo (some ninety miles south of where we were), three pairs of elk horns had been found under water in a lake.

In Forest county, Wis., in 1893, both Frank Brandis and Fay Buck more than once saw a "great big animal, black, with no horns," which was living in a swamp, and which "wouldn't run, but trotted fast." They both shot at it, but never knew what it was.

In 1892 a timber cruiser killed a moose between Hurley and Ashland, Wis. (about forty miles from where we were). A homesteader by name of Tommy Ryan had this moose located and was waiting for it to get fat. He was much incensed when he learned it had been killed.

Old man Buck spent his youth trapping in the Michigan South Peninsula. He says that thirty years ago there were wild turkeys below Grand Rapids, Mich. At Cadillac, further north, there never had been any so far as he could hear. He could tell of no proof of elk or moose in the South Peninsula. He thought the buffalo once lived in the South Peninsula, and later in Wisconsin, as well as the wild turkey.

(O. W. Sayner, of Plum Lake, Wis., told me that there is a steep bluff or hill about eight miles from Eau Claire, Wis., which is known to-day as "Elk Mound." Tradition says that forty years ago an elk was seen standing on top of this mound. Joe Blair, a trapper of Big St. Germaine Lake, said that years ago his father found one elk horn in a marsh in Fond du Lac county, Wis. I have heard of other horns found in this same county.)

More Curious Game Stories.

Brandis told me that in 1893 he saw quail (Bob Whites) in Forest county, Wis. This is most singular, though I do not doubt it. Forest county (where the moose was also seen) is away up in the pine country. In the lower part of Wisconsin, in the farming and hardwood region, the quail run wild. (Who would look for quail in North Dakota? Yet Ed. Bowers, of Fargo, in the Red River Valley, saw a small bird fly into a plum thicket a few years ago, not far south of Fargo, and on putting the bird up and killing it found it to be a Bob White quail, the only one ever seen in that country.)

Panthers.

Our trappers said that twelve years ago, in Altegamme county, two panthers were killed between Bear and Maple creeks. The fall after that one panther was seen near Clintonville. Neither of these had ever personally run across any panther sign in their years of trapping.

Wolves, Lynx, Otter and Marten.

Our trappers said that the gray wolves of upper Wisconsin were the largest of the United States. They drove the deer a great deal. A pack of seven wolves had twice crossed their lines that winter and they had poison out for them. Wolves swept across a great deal of country, thirty, forty, fifty miles or more, and did not remain local. The lynx also traveled a great deal. A lynx usually came around again in about seven days, and the wolves once in two or three weeks, though not so regular as the lynx. The otter also traveled a great deal, but was irregular. It would sometimes leave the water courses, and travel miles across dry divides to entirely new country. The best place to trap marten was along the high ridges between waterways, and that was best also for fisher. They quite often caught fisher, but never had a wolverine.

How to Trap the Shyest Animals.

Our trappers rated the fox the hardest animal to trap, the wolf next, and the otter third. To catch a fox they often made a bed of chaff and got him to lying in it or fooling around it, the trap being set under the chaff. Or a trap was set at a place where several foxes seemed to stop for a certain purpose. Or a fox could be caught sometimes by putting a bait a little way out in the water, and then putting a pad of moss between the bait and the shore, with the trap hid under the moss. The fox, not liking to wet his feet, would step on the moss and be caught.

For wolves the usual way was to put out poison (strychnine). Often they would not touch the poisoned meat.

For otter it was necessary to use great care, not leaving any chips or litter around. Our trappers usually caught them either on a slide or at a place where they came out of the water (not where they went in, as the otter slides with his feet doubled under and would be apt to spring the trap with his body). It was a good way to drop a limb or stick on the side of the slide, cutting it down and letting it fall naturally, so that the otter could not so easily escape the trap. The trap should never be set in the middle of the slide, but at one side, as the otter's feet are so wide apart, and he would not be caught should he spring the trap with his body.

For otter and beaver, if they were trapped near deep water, a sliding pole was usually used, arranged with the

A BLANKET CAMP.

small end stuck down into the deep water. The animal when trapped plunges into the water, and the ring of the trap chain slips down along the pole. The little stubs of the trimmed-off boughs prevent the ring from slipping back up again, and the animal is drowned. An otter should not be left in the water over nine days or the fur will slip. A few days makes no difference. All traps should be visited about once in six to eight days.

Beaver.

Our trappers said there were very few beaver left. (Protected absolutely by law in Wisconsin.) The beaver was an easy animal to trap. A good way was to find where he came out of the water and to put a dead stick (not a green one) across his path. If the stick were green the beaver would pick it up and carry it into the water; but he will always stoop down and crawl under a dead stick. Then he steps into the trap. Our trappers had caught seven beaver that season. The Indians watched the beaver very closely, and if they located a family always got them all.

"Black-tail" and Other Deer.

Having heard it said that there were some strange deer seen in Wisconsin at times, I asked my friends about it. Brandis said he had noticed a difference in the horns of

the deer, there being two sorts: one was flat-horned, with "narrow, white horns;" the other "round-horned, with dark, round horns." The latter sort always had shorter legs than the other. Dave Cochran, between Eagle River and Buckatabon Lake, killed a deer said to have been a black-tail. Joe Blair, a trapper, said: "I think it was a black-tail."

Our trappers thought the deer were gradually working West along Lake Superior, away from the cut woods.

The mice and porcupines eat up the shed deer horns very fast.

The Indians killed the deer at any season. So did about anyone who wanted meat.

In October, 1894, in one month, over one road, from one region of Wisconsin (that in which we were trapping), there had been shipped 3,650lbs. of short saddles of venison.

The horns of deer do not depend for size so much on the age of the deer as on its condition. If a deer has had a good winter its horns are good, and *vice versa*.

Indians.

Our friends said they had often found arrowheads and the like in their travels. I asked them about the chain of signal mounds, said once to have extended from Lake Superior south to lower Illinois. They were unanimous in the belief that, no matter what other Indians may have done, the Chippewas were too lazy to build any signal fires.

The Chippewa method of catching bass is with a 5ft. rod and a 2½ft. line, with a big frog for bait. The squaw does the fishing, the buck paddling the canoe softly along the lilypads. The bass jump at the frog and are jerked into the boat before they know what has happened.

Ginseng.

Ginseng, or "ginshang" root, is one of the staples in the trappers' world. He traps fur in the winter and "hunts ginshang" in the summer. Nearly all fur buyers handle ginseng also. It sometimes brings $30 a pound. The root when dry is light and pithy, yellow-white, of flat, insipid taste to the beginner of its use, though the trappers say that one can get in the habit of chewing it all the time. The roots are long and slender, and do not yield much to the plant, and the plant is scattered, a "patch" of it being held a lucky find. Brandis, who is one of the best of ginseng gatherers, had some at the camp, and we saw and tasted it. He says that often in getting this plant in the hot, close woods, the mosquitoes are so bad that the hunter has to keep a bit of lighted punk in his hand while he is working. Of course, he has to stoop over, with his face to the leaves, and the mosquitoes are too much for most men. Ginseng is sold nearly altogether for the China trade. Some dealers are dishonest and cheat the trappers who send in ginseng. One trapper "plugged" a lot of ginseng with shot once and made a good thing of it.

Trout.

Brandis had fished brook trout for market. He said the Evergreen had been the best stream he had fished in late years, but the catches were made by wading the stream down through the swamps, which was cold, hard work. The fly could not be used.

Muscallonge.

I was told that thousands of pounds of muscallonge had been annually speared and shipped in the winter from the Manitowish chain. This had not been done so much on the Turtle Chain (which is Chippewa water, lying to the north of Manitowish chain), except near the railroad, where the lakes were entirely cleaned out by the market men and Indians.

The feed of the big muscallonge is largely the "red horse," of which sucker the Turtle waters contain great numbers, they coming up in thousands in the spring.

Fay Buck told me that when they first went into some of the Turtle waters the 'lunge were very bold. On three different times he has had them strike at a metal-bound oar which flashed in the water. Once the teeth of the 'lunge marked the blade of the oar. This fish (or one taken near there soon after) weighed 29½lbs., and was caught by J. W. Donnell, of 254 Wabash avenue, Chicago. On No Man's Lake Fay had a 'lunge strike at a tin cup which he was trailing in his hand over the boat side. Mr. Donnell and Mr. Chas. Jarnegan, of 12 Sherman street, Chicago, saw this. The same thing happened on Rainbow Lake, in the presence of Dr. Smith. The latter wanted a drink, and Fay thrust the tin cup into the water, when a muscallonge struck it.

A 6lbs. muscallonge was found by Fay Buck with a 6lbs. sucker fast in its mouth. Both were dead.

Sea Serpent.

Our guides had heard tell of the famous sea serpent which once infested the Madison lakes, and which Mr. Norris called to mind. This creature used to chase the loons which lived in those lakes, according to Mr. Norris.

Flapjacks.

Fay was very expert at cooking flapjacks. He declared that he once threw a flapjack through a hole in the roof of a tent, and then went outside and caught it in the skillet, other side up, as it came down. This, it must be admitted, is thirty-third degree work.

Cedar Bark.

We learned that dry cedar bark makes the best kind of insoles for rubbers or overshoes, keeping the feet warm and dry and not chafing them.

Unknown Country.

We were told that we would in our trip cross lakes which are unmapped and unnamed, some of which have never had a boat on them, and have not had 200lbs. of fish taken from them. This more especially of the bass lake or the Presque Isle Chain, which are Lake Superior waters. We were on the head of the divide between Lake Superior and Mississippi waters, and between the Wisconsin and Chippewa River systems. The latter streams both flow into the Mississippi, and so their tributary waters carry muscallonge. Only Mississippi waters carry 'lunge, and north of the divide that fish is not found. Winding in and around the little known country lying at the very head of these water systems, in the highest part of Wisconsin and probably in the best fur country of the State, we now had 120 miles of traps to run on the total of the lines. To cover this each week in the depth of a Wisconsin winter (where the thermometer had been 30° below that month) was no light task for three men.

The Season's Catch.

The total product of the lines up to the time of our arrival (about Feb. 15) had been 7 lynx, 5 otter, 65 marten, 7 fox, 4 fisher, 40 mink, 700 muskrats (the latter taken in the earlier fall by boat trapping). Our trappers thought the season was nearly over, but believed they would clean up about $500 on their winter's work. I must say I thought they had earned it. In following chapters we shall perhaps see further into the life and methods of the modern fur trapper by continuing the actual story of our trip. E. HOUGH.

909 SECURITY BUILDING, Chicago.

Natural History.

WHY ARE THERE SO FEW BLUEBIRDS?

BY MRS. LOUISE M. STEPHENSON, HELENA, ARK.

[A paper read before the American Ornithologists' Union.]

THROUGH nine years' observation of birds in this region—Helena, Ark.—it is safe to say there have been few sunny days, even in winter, in which one or more bluebirds have not been seen in my neighborhood. The year 1894–95 was no exception to the rule, and all went well with them until Jan. 28. That morning, while the snow was falling fast, four bluebirds were seen taking shelter in a martin house close to our windows. As the storm did not continue long and the sun shone at intervals next day, it was believed they had flown further south as soon as it ceased snowing. The weather, which was continuously cold for twenty-three days (a very unusual period here), moderated greatly after that, and as the owners of the little house might be looked for at any moment, it was taken down Feb. 28 for some needed repairs, and there were the four bluebirds, frozen to death.

With such evidence at hand, inquiry as to the number of dead birds found after the storm was instituted, and the answers though few were alarming, inasmuch as they showed what the effect had been on much hardier species than *Sialia sialis*. These, with replies to questioning letters sent later, and other material of the same character, form, when collected together, interesting though melancholy data. Feeling certain of this, and that my correspondents would not object to so proper a use of their reports, I take the liberty of submitting them in full; all were written in 1895.

LAGRANGE, Ark., April 1.—In answer to the inquiry about dead birds, I have to report the death of a great many bluebirds, and I would like to say that in my opinion the lessening number every year is from two causes, the severity of our recent winters and the ceaseless war made upon them by the English sparrows.—MOSES BURKE.

HELENA, Ark., March 15.—In answer to the request of March 12, I would say that one of my neighbors found a dead yellowhammer and two sparrows; another a robin, and still another two bluejays and two unknown gray birds, all evidently frozen to death.

OLD ORCHARD, Mo., March 22.—With the exception of ducks and blackbirds, birds generally are still scarce. The most extraordinary feature is the almost total absence of bluebirds and robins from their breeding places. There are some troops of robins present, and once in a while we hear the carol of a bluebird; but they seem to be strangers, and only here in transit. Our robins and bluebirds are not with us yet, and the question arises, will they come or are they all dead? Did they get killed or only chilled? It is most unusual for them to stay away so long. The weather here is not unusually cold. It is not forward, like last year, but we cannot yet call it unusually backward.—OTTO WIDMANN.

OLD ORCHARD, Mo., April 3.—Unfortunately our bluebirds have not yet come. The carol of this loveliest of early spring birds used to be heard everywhere. This year it is a rare treat. On the 27th ult. I went to Dardenne, forty-three miles north of St. Louis, and came back on the 29th. On this trip I did not see or hear a single one. On the 30th I went to Creve Cœur Lake and heard one during the whole afternoon, and in a region where I used to hear a dozen. It may be some will come yet, but I doubt it.

May 7.—Bluebirds are still scare in the neighborhood of Old Orchard.—OTTO WIDWANN.

MEXICO, Mo, April 20.—I am impressed with the almost total absence of the bluebird from my region this spring. I have seen none and heard of only a few. This absence extends well over my county, as I have heard from inquiry. Have written North, and now ask you about them.—J. N. BASKETT.

ROCKFORD, Ill., April 21.—I have not seen or heard a single specimen of the bluebird since the middle of January (previous to our extreme cold). To-day I took a long tramp afield on purpose to find one, but was disappointed. I can hardly think that it was the extreme weather that destroyed them, as they are quite hardy little fellows. It is not uncommon to see one or two here off and on through the winter.—J. E. DICKINSON.

WEST CHESTER, Pa., April 22.—I have not noticed any unusual diminution in the number of bluebirds in this immediate vicinity. At best they cannot be called a *common* bird here of late years, and we do not often see them during the winter months, unless the weather be mild. This winter, though severe in parts, was not an abnormally cold one with us, and I don't think our winter residents suffered from it to an unusual extent.—THOMAS JACKSON.

STANFORDVILLE, N. Y., April 25.—The bluebirds do not winter here, as I presume you know. I have never seen them really abundant in my vicinity, but this spring they certainly are scarcer. The first one arrived March 11, and since then I have occasionally seen a few stragglers, or heard their voices in the distance; little companies of four or five taking the place of the flocks of eight or ten of previous years.—MARY HYATT.

MANCHESTER, Iowa, April 27.—One pair of bluebirds only, as far as heard from, has been seen in this vicinity—I have seen none—where pairs other years have come with the robins. Our birds came late this year. How account for the missing bluebirds?—MRS. MARY L. RANN.

ORANGEVILLE, Mich., June 6.—Due inquiry has been made in regard to the bluebird, and all are positive that they have decreased sadly. Mr. Townsend, who is out in the woods and about his farm continually, says he has looked for them the past ten days, and has not seen one. I saw one pair here a month or six weeks ago. The robins are not as plentiful as formerly either.—ELI NICHOLS.

LACON, Ill., June 6.—This spring I doubt if there is a bluebird in our country. They were very plentiful here in years gone by. Do not know why they are not here now, unless the English sparrows have driven them away.—MRS. MARY I. BARNES.

EASTHAMPTON, Mass., June, 11.—I am sorry to say that we too have missed nearly all our bluebirds this spring. I know of but one pair nesting here, and have seen very few. In fact all our birds, with one or two exceptions, have fallen off in numbers this year. The bluebirds do not winter here, but the cold weather extended so far south this winter that many species must have suffered. We have some faint idea this season what spring would be without birds.—MARY E. BRUCE.

SAN ANTONIO, Texas, June 10.—I have been looking up my notes and those of my acquaintances in regard to the bluebird. The species is a common spring and fall migrant and breeds north and east of here. Contrary to the bulk of the notes I have lately noticed, I have found the bluebird fully as common this year as any other. I have found them breeding in March in the heavily timbered country east of San Antonio, and have reliable information that they were as numerous as usual in the hills northwest of here. From what I have noted it seems to me that more bluebirds than usual remained to breed in this part of Texas this year.

The snow of Feb. 14–16 did not affect any of the birds of this locality, as far as I was able to judge, although snow is itself a rare winter visitant. I trust the bluebirds will be found before long. I cannot imagine how a species so numerous could be utterly blotted out. One unusual occurrence this year was the late leave-taking of the robins, which were here in countless thousands throughout the winter. My last note reads: "April 20, six robins seen in San Pedro Springs—will any remain to breed?" Whether this was due to the very cold weather I am not prepared to say.—ARTHUR H. W. NORTON.

KALAMAZOO, Mich., Oct. 26.—In latter part of March, 1895, observed one bluebird; only one was seen or heard during spring of 1895, and they are very abundant here generally. In late May took a fifty-nine miles buggy ride through a territory just suited to them and where they are generally common, and did not see one. In the first week in October, 1895, a friend (reliable) reported a flock of forty bluebirds. Could hardly believe him. I rode out with him about the middle of month and saw nine old and immature bluebirds at side of road. About Oct. 20 I saw a dozen old and immature bluebirds. These flocks were all migrants.—*From Notes made by Dr. Morris Gibbs.*

OLD ORCHARD, Mo., Oct. 30.—As regards our friend Blueback I have good news. From about the middle of September to the middle of October I had the great pleasure of meeting small troops of six to twelve bluebirds, families probably in different parts of St. Louis county and in St. Charles county, and the dear old call of wandering bluebirds was almost daily in the air. This shows that not all hope is gone, though it may take many years before they become as plentiful as before. In traveling through the country I used to see numbers of bluebirds along the railroad lines, but this year all the way from St. Louis to Boston, via Cleveland, Buffalo and Albany, I did not see a single one, either going (in August) or returning (in September).—OTTO WIDMANN.

This closes the correspondence. What follows has been clipped, as indicated, from different newspapers:

Not a bluebird has been seen in Taliaferro county this year, according to the *Savannah Press*. Possibly they have been ousted by the jaybirds, who mistook this county for their regular Friday assembling place.—*Rome Tribune.*

A gentleman from London, Canada, visiting Boston, reports that there, too, the bluebirds have entirely failed to appear this spring. It would be comforting to know for certain if it is the cold that has killed these shy, delicate little companions of man. Undoubtedly this is so. The gentleman just mentioned says his grounds were full of half-frozen crows one week, so torpid and miserable that they could be taken up by the hand.—*Boston Transcript.*

One of the curators of the Smithsonian Institution, who makes special provision for birds on his suburban place, picked up seven dead bluebirds on his grounds after the blizzard last February, and found fourteen more dead in a bird house. He has not seen a living bluebird this year. The shooting of birds this season will nearly amount to extermination.—*St. Louis Globe-Democrat, June 5.*

Rev. T. F. Cargill, of Fulton county, Arkansas, cut down a hollow tree one day last week and found a number of dead bluebirds in it. He thinks they froze to death.—*Stuttgart (Ark.) Free Press.*

I write, and with regret, to record the fact not generally known, that in consequence of the protracted cold winter the beautiful little bluebirds were exterminated. Being insectivorous, their natural food was not to be had during the long cold spell and starvation was their sad fate. Not one is left in all this country to propagate the species. The habits of birds, like those of man, are marked by zones; hence I fear we will never know the beautiful little bird again.—*W. T. Hollis in Pine Bluff (Ark.) Commercial.*

I have not done as much collecting this season as in former ones, but have been around the country considerably and have failed to see a single pair of bluebirds nesting—something very unusual for these parts, as they are one of our most common birds, or at least have been in former years. I am in hopes our good ôölogists will spare what few are left for a few years until they can be heard again in the latter part of March, singing their mournful chirp high up in the air when the ground is covered with snow.—*Almon E. Kibbe, Mayville, N. Y., Aug. 2, in the Nideologist.*

Returning to my own district. Two pairs of bluebirds nested within two miles of the city this season, but of more than that the most diligent inquiry has brought no evidence. The morning of Oct. 28 a friend telephoned: "Six bluebirds in my neighborhood.' Since his observation has been the same as my own up to the present, and these remained near him only a few moments, they were

beyond doubt migrants, which it is hoped will go this time beyond the danger line.

And now I may be pardoned for changing Mr. Kibbe's "spare the bluebirds for a few years" into "forever," and for asking if it is necessary that every man and boy who fancies for a few months he has a taste for science to murder such birds as bluebirds, robins and many other as well-known species?

If it is, then every house in the land may become the workshop of the amateur taxidermist, and knowledge gained at such cost by Audubon, Wilson and other self-sacrificing scientests might as well have died with them.

Game Bag and Gun.

OHIO QUAIL AND HOSPITALITY.

MASSILLON, O., Dec. 3.—*Editor, Forest and Stream:* Anticipation is a wonderful thing; realization is glorious. But how often do we experience both in relation to the same event? In the event which I am writing about I can truthfully say almost always. My friend Bill and I have for several years taken our annual quail hunt among the hills of Coshocton county, and from the time the cool breezes of fall begin to appear until the date of our departure anticipation gets in its work. You know how it is. We talk over the prospects, get our traps in order, take our dogs out for regular exercise in order to harden them for the four or five days of hard work which is before them—and it is hard work, as Coshocton county is one of the hilliest in the State. Oh, anticipation is a wonderful thing. When we are finally landed at our destination realization comes to the front "with both feet;" of course we do not always realize quite what we anticipate—who does? But we always have a glorious time and have never yet failed to bring home at least a fair bag.

In the neighborhood of our shooting grounds the farmers are nearly all Germans, good old-stock Germans, who are chock full of genuine hospitality, who treat you with the utmost kindness during your stay—the kind that will drop farm work in order to accompany you and point out the best grounds, and who seem to consider it an act of condescension on your part for honoring them with a visit. Bill has been hunting in this locality for eight or ten years, and is so popular with our German friends that his yearly visit is looked forward to with pleasure, and nothing is too rich for him in their estimation. The first time he invited me to accompany him on this trip we arrived at Chili station on the C. C. & S. R. R. about noon, and started to hunt across country about three miles to the farm of Valdine Huprich, away up among the hills, one of Bill's old standbys.

When we arrived it was about 2:30 and Huprich and his sons were in the field husking corn, but good old Mrs. Huprich welcomed us with genuine German hospitality, and going into the yard let out a peculiar yell which echoed from hill to hill. It was immediately answered by another which had a deep, masculine tone and seemed to come out of the clouds. This was the signal from wife to husband that he was wanted at the house, and in a few moments I beheld a very tall form stalking down the hill through the fields, and was soon introduced to the proprietor of the farm. "Vell, poys, haf you had your dinner?" said he. "Come, mutter, hurry up dot dinner for Pill und his frient." We were soon doing full justice to a square country meal, after which Pap, as Bill called him, said, "Vell, poys, got dem goons retty und I go mit you. Hay, Jake!" he yelled to his eldest son, a strapping young fellow of 25, "Pill's here. Youst led dot husking go und go oud mit him after dem guails."

As soon as Jake arrived we started up the hill back of the barn, Jake and I in front, Pap and Bill behind. As we were about to enter a stubble field on top of the hill the old man remarked, "Say, dot's petter you led Pill got in front."

I "caught on" at once, for Bill had told me previously that the old man imagined that there was only one man on earth that could slay quail, and his name was Bill, so I stepped aside with Jake and allowed Bill and Pap to set the pace. We soon became separated after entering the field, and while Bill and his backer were at one end of it, Jake and I took the center, and before I knew it I stumbled into a small covey of birds. I luckily knocked two down—one with each barrel. Jake opened his eyes in astonishment, but said nothing. Calling Bill, he came up to us and I told him where I had marked them down on a hillside in the woods. We started after them, and to my intense delight Bill missed his first three clear, while I added two more to my string. All this in plain sight of Pap. About this time Pap remembered that he had something to do at the house, and left us.

That night when we came in we had nine birds, and as we took them from our pockets preparatory to hanging them in the spring house, Pap came down and asked Jake, "How many pirds vas you got?" Jake replied: "Nine." "Who kilt dem?" "Pill kilt two und dis feller kilt sefen." Pap looked at me, and in a voice which plainly showed that he was disappointed that his idol was ruthlessly shattered, but still betokened admiration for the victor, said: "Say, by Chimminy! you can shoot a liddle, can'd you?"

This is where I wiped Bill's eye, and while I felt that I had ingratiated myself into the heart of the honest old German, I knew that Bill was the pre-eminent individual who held the admiration of Pap Huprich, and fully realized that he had strong hopes of his favorite redeeming himself on the morrow; nor was he disappointed, for while my chum did not have a majority of 7 to 2, he had a slight one which was sufficient to please the old man. But I have been just conceited enough to imagine that Pap has since divided his stock of admiration about equally between Bill and I.

This year we have been listening to the reports of brother sportsmen who have hunted in other directions with many misgivings. They have all reported bad luck, few birds and hard hunting, but as Bill said, "It's a mighty cold winter that will freeze them all out among the hills and rocks of old Coshocton county," and we have found it so. The birds suffered last winter without doubt. Farmers tell of birds frozen on the ground; but there was seed left, and we found enough to give us three days of fair shooting; and if this winter is not too severe we will have enough birds next season to give us plenty of fun, for we are not game hogs, and are satisfied with a moderate number of birds. On our last trip, which is just ended, we killed forty-six quail, two pheasants and twelve rabbits. Not a big bag, it is true, but enough to satisfy us. For my part I never could see the sense in killing forty or fifty birds a day for several days when they are not needed particularly. As for rabbits, if we had taken a rabbit dog or two we could have killed a cartload, as they are very numerous in that section this year. Pheasants are unusually scarce, only four being seen on the entire trip, although we hunted some excellent grounds, where in former years Bill has bagged large numbers. But the real pleasure of a trip of this kind to a man who is "chained to business" and can only get away once a year lies in the anticipation, the genuine hospitality of his farmer friends, the entire absence of the cares of business and the realization of his hopes of a moderate bag of brown beauties, and last, but not least, the gratification he feels when he is able to present a few of his trophies to his non-hunting friends.

ALMAS.

AN AROOSTOOK MOOSE.

I HAD been encamped on the shore of Grand Lake Sebois, in Aroostook county, Maine, for some days, and my guide and I had heard moose at intervals sounding their calls and challenges to each other from the neighboring ridges and across the waters of the lake. But, though we had ourselves on several occasions sounded the cow's call to the monarch of the woods, both at sunset and at dawn, we had not succeeded in obtaining a sight of the animal with which I so earnestly desired a short interview.

Finally Alvah (my guide) and I decided to penetrate a little further into the woods, and, after an early breakfast the next morning, we packed our blankets, extra clothing and sufficient provisions for several days into our canoe and started. Our intention was to ascend Wadleigh Brook, one of the tributaries of Grand Lake, look for signs and call at such places as seemed to promise a successful result.

My rifle was a new one, a half magazine .45-90 Winchester repeater which I had purchased especially for this trip in deference to the wishes of Maine guides, whom I have frequently heard state that they preferred to have sportsmen carry rifles of large caliber when hunting moose. Alvah carried no rifle, for I did not mean to let anyone share with me the honor of shooting my first moose. The sequel showed that the caliber of my rifle was none too large.

We paddled up the lake for about a mile and then entered the mouth of Wadleigh Brook. We ascended the brook for two miles, and while I kept a lookout for any stray bull that might be crossing the stream or the bogs through which the brook wound its way, I cast a piece of pork rind with a light rod here and there among the lily-pads in an unsuccessful search for pickerel, with which the stream abounds in summer, but which seemed to have sought the deeper waters of the lake at the approach of cold weather.

At the end of the two miles we found a barrier where the stream found its way over a rocky bed and where the water was too low for the canoe. Exploration resulted in finding a carry of about one-quarter of a mile in length, and after having lunched we transported the canoe and impedimenta, noticing fresh moose tracks on the carry, and re-embarked. At this place the banks showed many large hoof prints in the mud, and making a mental note of one promising place at least, for a "call," we continued our voyage of investigation, observing that there were low wooded ridges on both sides of the stream, from which they were separated by wide bogs—ideal conditions for moose.

About 100yds. above the carry the brook divided, and we had time before sundown to ascend both branches. We saw no more fresh moose tracks, although the lily-pads had been so completely cropped that the projecting stems resembled a stubble field. Their ends were shriveled, however, and their height above the water level showed that the cropping had occurred some weeks before, when the water was higher.

By this time the sun was getting low and we hurriedly paddled back to the "fork" in the brook above the carry where we had noticed the tracks, and took up our station, backing the canoe up against the bank. The sun by this time had set in an uncloudy sky, and it was growing cold. There was no wind, and there was no sound to disturb the impressive stillness that intensifies the solemnity of the woods as night approaches. Alvah took up his birch bark horn and sounded the call.

Low as the notes were given, since a bull might be so near as to readily detect any false tone or cadence, the sound of the two preliminary deep grunts, with the following long-drawn "low," slowly increasing and swelling in volume to its height, and then gradually dying away without any lowering of the pitch, was so far-reaching that it aroused the echoes of the hills, which repeated the call in softened tones. The echo had hardly died away when there came back to us from the opposite ridge the sound of a deep thump, but so faintly that I could just barely hear it, and Alvah told me, in a low, excited whisper, that a bull moose had answered and was coming. A whispered conversation informed me that the moose was not far off, probably not more than three-quarters of a mile, and that he would be with us presently—the conversation being interrupted by a frequent "Hush, do you hear that grunt?" from Alvah, and a confession from me that I did not, but an anxious inquiry whether the moose was approaching. I was assured that he was.

Presently I felt the canoe shake as if it had a chill, and as the shaking recurred at intervals, I found that Alvah was shivering with cold, not excitement; so I hastily made him don my sweater, for a violent shiver of the canoeman was not conducive to a steady aim by the sportsman. Then we waited, withdrawing the canoe still further under the cover of the bank, and I wished that a life in the city did not have a tendency to dull the sense of hearing.

After about thirty minutes from the time of the bull's first answer had elapsed, during which twilight had rapidly changed into dusk, the grunts ceased and Alvah told me that the moose was crossing the bog.

Fifteen minutes more of the nervous tension of waiting and rapidly growing darkness passed, and then we both heard the sound made by a heavy animal in crossing the brook below us, splashing the water and striking the rocks with his hoofs. With an excited exclamation, Alvah shoved the canoe out into the stream and paddled down, stopping at a point where I could faintly distinguish about 60yds. below us two large black objects standing out in relief between the two banks.

"Shoot that moose!" from Alvah in a feverishly excited low whisper.

"Where is he?" from me.

"Shoot that moose!" was the only reply.

Afraid to wait any longer, I raised my rifle and three successive cannon-shots broke the stillness,* the bullets being fired at what I found the next morning to be a large bush surrounding a small tree standing where the stream made a bend.

There was no resulting sound to indicate any effect of my shot and the two black objects were motionless.

Again, "*Shoot that moose!*" from Alvah, this time in hoarser and more excited tones.

"Where is he?" was my reply.

"The canoe is pointed at him, can't you see him? He is standing right there, looking at us, shoot!" was Alvah's responsive rejoinder.

I overlooked the tone of command because of his evident excitement; but as the canoe was pointed at both objects indifferently, I was tempted to laugh at the indefiniteness of the information. Still, as I had fired three times at one of the objects without any result, I decided to try the other one. This time my shot was followed by a commotion, and then, as I could plainly see, the moose turned and, splashing the water at every step, recrossed the brook in the direction whence he had come. I hastily fired two more shots at him while he was crossing, and then I could hear him crash into the alders on the opposite bank and force his way into them.

"Did I hit him?"

"Hush!"

After an interval, during which I could hear nothing, I was told that the moose was wounded, and we decided to leave the place and return in the morning, as we could not track him in the darkness, while any noise that we made would result only in either causing the moose to run further or provoke an attack which would be dangerous.

Accordingly we left the place, and passed the night lying wrapped up in our blankets in a clump of cedars on the bank of the stream about three-quarters of a mile away.

With the first appearance of light in the east we paddled back to the spot where the moose left the brook and entered the alders. We could see new tracks in the mud on the bank, but could find no blood and no signs to indicate the direction which he took. With many doubts of ever seeing our quarry again, we began to make circles through the alders in hope of discovering something to guide us.

In making one of my circles, one wider than that which Alvah was following, I happened to look out over a small open spot in the bog beyond the alders, and saw between the trunks of the low cedar trees which dotted the bog what seemed to me to be the antler of a moose. Closer inspection convinced me that it was, and I saw it move. I called to Alvah, and we both approached the spot. We found the moose lying down and we cautiously advanced toward him.

He turned his head and looked at us, but although we were not more than 20ft. away he made no demonstration. He was lying in such a position that there was no vulnerable point exposed except his head, which of course I did not wish to injure.

Concluding that he was unable to rise to his feet, we approached still closer. But we were in error. When we were about 12ft. from him the bristles on his back became erect, a dangerous gleam appeared in his eyes, and he began to scramble to his feet. With a shout to me to run, Alvah, who was unarmed, himself ran like a deer, and dodged behind a cedar some yards off. I followed him a short distance and then turned, with the one idea that the moose was on his feet and would escape. But I found that he had no intention of escaping, but was charging upon me, hampered, however, as I subsequently discovered by a broken leg, the result of one of my shots of the night before. I saw nothing at the time that he was charging, however, but a huge black breast, at which I fired as fast as I could work the lever and pull the trigger.

My fourth shot (my seventh in all, for my last three shots of the preceding evening and these four had all been effective) proved fatal, and the moose fell heavily on his side. He was lifeless.

With the blood coursing rapidly through my veins and my heart thumping, I gazed upon my first moose.

His antlers proved to have a spread of 4ft., and, estimated from the number of points, he was about 8 years old.

J. E. HINDON HYDE.

OCT. 20.

* The silence of the woods can be appreciated from the fact that I subsequently learned that my shots were heard and correctly counted by men working on a dam five miles distant.

Mr. Baird has Luck.

WHILE Mr. Evins Baird, one of the employees at Mt Orford Lodge, was passing along the base of the mountain last Saturday morning, he had the fortune to see the largest deer that these woods produce. As good luck would have it Mr. Baird had his Winchester with him and with one shot the beauty was his. Mr. Baird had to leave his prize in the woods and go out for help to convey the deer home. The dressed meat weighed 200lbs. The antlers measure 32in. from tip to tip and are as fine a pair as this country produces, and can be seen at the residence of Mr. Miron Gould. Messrs. Harry Hobbs and Butler Aldrich had the good fortune to run on to Mt. Orford Lodge last Friday night at bed-time, where they were welcome to a hot pot of pork and beans and other dainties such as a lumber camp contains. They eased their sore feet and told of deer that they came near getting, then piled into bed feeling more comfortable than they would had they not found the Lodge and roosted under a bush.—*Magog (Quebec) Enterprise.*

Mr. Burnham gets a Moose.

318 BROADWAY, NEW YORK CITY, Dec. 8.—*Special to Forest and Stream:* Jock Darling and self have been out in the Maine forests after moose. I got one

J. B. BURNHAM.

The FOREST AND STREAM is put to press each week on Tuesday Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

INDIANA QUAIL SHOOTING.

FOR the last twenty years nearly every opening day and sundry following days have found me in the stubbles and cornfields after quail, and this year was no exception. Opening day this year was drawn blank for the forenoon, but in the afternoon two bevies were found, from one of which seven birds were bagged and two from the other, and on the way home four more were secured from a scattered bevy that had made lots of fun for a couple of shooters during most of the day. They told me afterward that they bagged eight of them and would have got more only the ammunition gave out, as they only had twenty shells apiece.

Old Joe is still my partner in these quail hunts; he is 8 years old and there are plenty of gray hairs among the black about his muzzle, and he whines about the high fences, but he knows more about quail than most men and is as enthusiastic as ever he was. Give him plenty of raw beef every night and he will do all the hunting that one man will care to follow. One day in each season Joe and I go to Economy to have a day with George Cook. George is a blacksmith and always too busy to hunt much, but when he does go he enjoys it. Joe and enjoy going with him too, for he seldom misses a fair shot and don't want to do all the shooting either. It is one of our rules that we shoot in turn at single birds, and under no circumstances do we both shoot at a bird the dog points. If the man shooting in his turn fails to kill it the bird goes free. Of course some birds get away that the other man might kill, but the shooter, knowing that it all depends on himself, and that a miss will be derided, does his very best; so after all the bag is probably as large as if we both shot at every bird. In thick brush our birds don't lie well to the dog and one cannot know whether his partner has any show for a shot, so then our rule is, "shoot whenever you see a bird."

One morning last week Joe and I drove up to George's shop and dared him to go after quail with us. George said he "wouldn't take no sech a dare," untied his apron, put the horse in the stable and said, "Now we'll get a few before dinner." We went to some big cornfields down in the creek bottom and walked up a bevy, while Joe was making a wide cast ahead of us. George got one and I failed to score. We thought we had them pretty well marked down, but after hunting half an hour and finding but one concluded we did not know so well about it and gave them up; but away up the "branch," while hunting for another bevy, we came on to them closely hid in thick grass and weeds. They got up "promiscuous like" all round us. We got in three shots apiece, George killing two and I none. It did not seem to be my day for shooting, for I had shot four times and had four misses, while George had four shots and four birds. We followed after some of the scattered birds and Joe pointed one. It being my turn to shoot, I had the luck to kill it. Soon afterward I walked up another and cut a lot of feathers out of it. George downed it as it flew past him, but neither we nor the dog could find it.

We then started to the house for dinner. About halfway to the house we missed Joe, and after twenty minutes of fruitless looking and whistling for him he backed out from under a nearby brush heap and looked at us with a why-don't-you-come-and-kill-this-rabbit expression on his face. I kicked the rabbit out and George killed it. Now I thought the way was clear to dinner, but Joe pointed another rabbit in the roadside hedge right in the edge of town. George shot at it, but it ran across the field and got under the meeting house, and George got a small dog and put it under the house *à la* ferret, and in about ten minutes he brought it out. This made us a little late to dinner, but the sausage and the sweet potatoes and the mince pie and coffee were all hot, and ample justice was done to them and all the other good things that George's wife always gets up.

After dinner we went leisurely down the hill and along the east road. A quarter of a mile from the house seven quail flushed from the edge of a cornfield, flew across the road through a strip of willow bushes and dropped in the short grass of the meadow. Joe pointed every one of them singly. George and I shot by turns. Four of the birds dropped dead, two to each of us. Each of us let one go away badly hurt, both of which Joe found afterward, one dead and the other unable to fly. The last one of the seven flushed unexpectedly, flying between us, confusing George so he did not shoot, so I fired both barrels at it, but too late to stop it. Half a mile further on Joe was trailing a bevy around a clump of thicket, and I, walking round the thicket to meet him, flushed them before he got within 50yds. of them. I got one, but George being on the opposite side, got no shot. There were twenty to twenty-five birds in this lot. They went into thick beech woods full of undergrowth. It was an abominable place to shoot, and as we approached the birds they began to get up wild from in front, from right and left, and a number flew out of the trees. For a few minutes there seemed to be flying quail everywhere, and our guns were being used as fast as we could handle them, but all the quail except three got away. We followed the scattered ones and got two more, making six bagged from this bevy.

After this we spent an hour working out an old field of weeds and briars and two more cornfields, but found nothing. We were half-way back to town when Joe pointed at the edge of a strip of weeds covering a hillside. I told George to go down and put them up, while I stayed on the hill to mark them. He got one when they rose, and I marked part of them in weeds thirty rods up the valley and close to the road, while some others went just across the road, dropping into short grass. Joe pointed in the weeds. Two birds flew, two guns discharged at once; there were two little clouds of feathers in the air and two quail fluttering in the middle of the road. After getting these birds Joe got into the field across the road, pointed, and again two birds got up and fell dead in the road. Knowing these birds were safe I did not let Joe go after them, because there were others in the grass close to us. Joe did not agree with me about this and had to be spoken to quite sharply. Before he had gone two rods he pointed again, and for the third time two birds rose, two guns cracked again, but (love for the truth compels me to say it) this time two birds flew right on over the hills and out of sight. Joe looked for a moment after the flying birds, turned and ran for the road. Jumping the fence, he picked up one of the dead birds, brought it and went right back for the other one. George said, "Aren't you glad I missed my bird?" "I'm just that mean," said I, "but rather than acknowledge it I put it t'other end foremost." "How's that?" asked George. "Why, so long as you missed your bird I'm glad I missed too," said I. "Yes, I see," said George. "That way of viewing it makes a man believe he is big, while the other way makes him feel small."

Joe pointed four more and we got two of them, and both missed another that flushed while we were both climbing the fence. "How many have we got, George?" "Don't know; let's count." So the pockets were emptied on the grass. "Nineteen, and five before dinner are twenty-four. That is enough, George. Let's go home;" and we went. George said, "Stay till morning;" but it was only seven miles to drive over a good road, and an hour later I was at my own supper table satisfying a great big appetite, while Joe lay in the yard tearing chunks of meat from a beef bone. Altogether it was one of the days that doesn't need to be written down to be remembered.

This is only one of a number of tramps after quail this season. Birds are not very plenty, but always get some. My note book shows that I have been out ten times this season with the following numbers bagged each trip: 14, 5, 5, 11, 3, 2, 12, 5, 12, 4. None of the trips except two were over five hours. I am using a full choke gun, and think the bags would have been one-fourth larger with an open patterned gun.

My note book shows that with a gun that makes a pattern of 150 the average of birds killed was 70 per cent. The gun used this season makes a pattern of 310, and the average of kills is 50 per cent. Why not continue using the open gun? Well, for two reasons. One is that it is rather too destructive on the birds when as scare as they are now, but the chief reason is that the close-shooting gun requires greater skill and more careful aim, and when it kills the shooter knows he did it about right and feels good over it. So soon as a man masters any weapon or tool he wants to try one more difficult. He is built that way. I felt that I had mastered the open-shooting gun, and wanted something that would further tax my skill and add more interest to the sport, and the close-shooting gun did it. I find that with the close gun fewer birds go away wounded, and there are fewer winged ones to chase through the weeds or dig out of brush piles. It is usually a clear miss or a clean kill.

Some critic says, "If you are so anxious to test your skill, better use a rifle." Now there are two extremes to this question: One is to use a gun that will carry enough shot and spread them wide enough to kill all the birds without the need of any skill, and the other extreme is to use one so close that the shooter can do no good with it. In the first case, he would soon feel that he was complete master of the situation, and lose interest in it. On the other hand, the skill of the shooter must be sufficient to produce fair results or there will be no satisfaction in it. A young friend became so enamored of quail shooting from seeing others shoot them that he has bought a dog and gun and hunted until he had fired 400 shots without bagging a bird, except three that he got by firing into the bevies as they rose. Here was a man born with the shooting instinct in him, but after persistent effort, finding he could not acquire the skill, it did not interest him and he gave it up. It was not because his instinctive love of the sport had failed; for after he had entirely given up shooting he used to follow me in the field, saying he liked to see the sport, if he could not do it himself.

The elements of pleasure in shooting are sufficient skill in getting shots and shooting to produce reasonable results, but there must remain the knowledge that there is more skill to be acquired and confidence in the ability to acquire at least some more of it. Besides this, there is the pleasure of getting wild creatures in our power. It is this desire to control or capture, and not the desire to kill, which sends us afield with the gun. If it was simply a desire to kill, it would answer the purpose and be cheaper to have the birds delivered alive in the back yard and shoot them whenever the killing mania attacked us. Many of us have eagerly pursued game, and after capturing it alive turned it loose, though we pursued it with full intention of killing it. So soon as we got it in our power we lost all desire to hurt it and would have fought in its defense. I once (without dog or gun) chased a rabbit four solid hours, and at last picked it up; during the last half hour of the chase I threw perhaps fifty clubs at it, each one of which I hoped would kill it, but after it was in my hands never thought of killing it; but after holding it a few minutes put it down, and did not even note which way it went. These finer feelings, of course, do not apply to the meat hunter, the man with a killing mania, nor does he ever enjoy the highest and best things in field sports.

O. H. HAMPTON.

Shipped in October and November, 1894	479	24	10	345	8	13	824	32	23

During October, November and December, 1894, there were shipped from the line of this road 1,001 deer, 45 moose and 50 caribou.

The FOREST AND STREAM *is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.*

TWO WEEKS ON LITTLE PRAIRIE.

Reprinted from the Minneapolis *Journal* by suggestion of Mr. W. B. Mershon, who thinks the FOREST AND STREAM readers should see it.

AITKIN, Nov. 22.—Just as soon as the game law of the good State of Minnesota made the deer thereof a legal target we started out in search of a good time primarily, and incidentally such venison as we could accumulate. We were R. H. Hartford, W. C. Palley, Stephen Stearns, Scott Way and "a literary cuss, who writes himself as we and us" in the columns of the Aitkin *Age*. Hartford, commonly called "Rube," is an old sailor, a thorough woodsman, a first-class cook, and as good a rifle shot as can be met in a day's travel anywhere. Palley is a veteran of the 36th Wisconsin, also an old woodsman and a past master in woodcraft, a fine shot and an excellent conversationalist. Stearns is a typical pioneer, at home anywhere, and able to make himself comfortable under any circumstances. Way is a young lumberman, and can work a Winchester like a bell punch, and the L. C. had his hands full to size up to his company, I can assure you.

Well, we started, taking Stearns's team, plenty of blankets, a sack of flour, some butter, sugar, tea, coffee, salt, baking powder, potatoes, onions and beans. As to meat, we took a round of salt pork. We had five rifles and two shotguns in the party, and only took the pork for use in baking beans, or in case of a "ground hog" necessity, which we did not fear. We also took a sheet iron camp stove, and of course ammunition galore, and off we went. Before we were three miles out of town we saw a flock of geese in an oatfield near the road, and Scott and I executed a flank movement on them, which resulted in eight fine, fat birds to start on. Of course we took enough cooked rations to last on our two days' journey to our hunting grounds, and only stopped to feed the horses and when night overtook us. When passing Sandy Lake we discovered lots of ducks, and made six of them our own. We could not tarry long, though duck shooting there was fine, but pushed straight on for our destination, which we reached at 8 o'clock the second night after leaving home. Our lodge in the wilderness was an abandoned logging camp in a fair state of preservation, and half a day's work of all hands sufficed to make it very comfortable. We had to build a temporary barn for the horses, but we had plenty of axes and knew how to use them, and the job was soon finished. A kindly lumberman, who was not aware of our coming, had stacked a lot of hay in a neighboring meadow, and as we had brought plenty of oats, our four-footed allies were in as good care as reasonable horses could ask while we stayed.

After our house was put in order we proceeded to build a fireplace outside, taking as large green logs as we could handle to build it with, and digging a hole about 2ft. square and as many deep in the center. As the object of the hole may not be apparent to such as are not hunters, I will explain its use. First you dig the hole, then you build a fire in and over it and keep the fire going till you have the hole filled with live coals. We had a sheet of sheet iron, with a ring in the center to lift it by, and whenever we were through cooking for the nonce we clapped the iron over the coals and we always had fire, and plenty of it, at our command. Before we fired a shot we provided wood enough for two weeks' consumption, cutting dry tamarack and poplar and green white birch, all of which are easily accessible at any logging camp, and which make a splendid combination for cooking and camp-warming purposes, and right here I'll let city men who go camping and only too often get more vexation than enjoyment out of it, into a secret. First of all do as we did and institute a fair division of labor at the start, and he who will not adhere to it don't let him eat. Second, get the best baking powder in the market for your bread, put in lots of it and bake only before a fire of dry poplar wood.

Of course you will have a tin "baker" along, and be sure to take two or more baker sheets. Keep your coal hole ever full of live coals, and all you have to do is to parboil a pot full of beans at night, cover them up in the coals and you have as appetizing a dish for breakfast as hungry hunter could ask, and one that will support you in the long, hard tramping you needs must do, if you ever hope to crimson your hand with deer's blood; and if you have a soul capable of rising above the pitiful conventionalities of society, you can enjoy the rarest dish ever mortal man set tooth in by the aid of that same coal hole, and due hearkening to the wisdom of the sage who speaketh. Take, therefore, such grouse, partridge or duck as you may kill, making the proportion one for each man, wrap each bird, unset and undrawn, in clay enough to thoroughly cover it and place it tenderly in your pit, cover it with live coals and over it build a fire, wherewith you cook your potatoes, boil your tea or coffee, or what not. When the rest of your cooking is complete shovel out the coals, and carefully taking out your clay-covered birds you will find them enveloped in a substance somewhat like potters' ware, breaking which ware to pieces, in the process stripping your bird completely of feathers and skin, you will find underneath what no *chef* on earth can serve up, *i. e.*, a game bird cooked to perfection, without the loss of one jot of its natural flavor or one tittle of its natural juices. Follow the hunters' rule; don't commit the sacrilege of putting a knife into it; just take it into your fingers, sprinkle on salt and pepper as you like, eat it down to the bones, and if its savor, flavor and all-round exquisite goodness don't make you "thank God for the room that was inside you" before you took the first bite—there'll be none before you take the last—you were born without either soul or palate, and are past praying for. Such was the bill of fare of the first dinner we took at Camp Hartford, as we named our habitation.

And then we made a "booyaw"—that's the way it's pronounced hereabouts anyhow, and any one hypercritical enough to find fault with the spelling can alter it to suit his pleasure. Now, there are booyaws and booyaws, of course, as there are cooks and cooks, but of such a booyaw as Rube Hartford makes there is only one. Our first day's hunt yielded a young doe, half a dozen partridges and sundry rabbits and squirrels. Rube had brought along his big kettle, and in that he concocted the divinest mess of venison, partridge, rabbit and squirrel, mixed with potatoes and onions, that ever fulfilled to hungry man's stomach the promise it gave to his nostrils. And from the first day the booyaw pot was never empty. We kept it always full, and every morning, on starting to hunt, set it on the iron slab over the live coals, and every time a man was hungry he'd only take the lid off the pot fork out what he wanted to eat and fill in. And just re

member that our meals, toothsome as they were, were seasoned with Spartan sauce, and you will readily conceive that we had no trouble in reaching the state of beatitude where a man is thankful that he is alive, and wouldn't change places with the Czar of Russia or any other potentate on earth.

As to our other domestic arrangements, they were of the simplest, and in simplicity lies perfection. We made a pen, seven feet long, across one end of the camp, filled it full of hay and fir boughs, and spread our blankets on top of both. A softer, warmer bed no man desires, and if a man wishes to experience the deep, dreamless sleep of boyhood, just let him take a couple of weeks' vacation next November, go hunting in the Minnesota pine woods, follow our example as here set forth, and if he don't get his wish his conscience and digestion are beyond repair. As become good woodsmen, we used our tussacks for pillows. A "tussack" is simply a grain sack, into which extra clothing, tobacco and such can be packed, and which can be carried across the back by means of a stout cord. As to dishes, knives, forks and so forth, of course, we had them, but used them as little as might be. Each man had his own and looked after them. Some washed them after each meal, while others gave them "a lick and a promise"—that is, licked them as clean as possible and then polished them cleaner and brighter on his trousers. I know that may sound horrifying to ears polite, but it is wonderful how soon even the ultra fastidious yield to the charm of free, untrammeled woods life and become as "rowdyish and bully" as the most unregenerate lumber jack.

The hunting was excellent; it always is, but the quarry was not near as abundant as it would have been had we a little snow. The woods were as dry as a chip, and to get through them without making noise enough to scare all the game within a mile would have puzzled an Indian. But the deer were thick, and we were hunting for pleasure, not for profit, and so bore our first poor luck with good grace. We easily got all we could eat, and let scarce a day go by that we did not hang up a deer somewhere in the woods. And right here let me tell you that the man who goes deer hunting must remember that he has to match his craft against the instinct of the wariest creature that breathes; that he must exercise the utmost patience, fortitude and judgment before he gets a shot, and must have and conquer the "buck ague" before he kills. We did no hunting in the morning. Only the Indian and the most expert of white hunters ever accomplish anything at that. The reason is that the deer are all hidden from about daylight till the middle of the afternoon in swamps and thickets, and the only specimen of their kind abroad are bucks on amatory errands, who are as wary on such occasions as a cat on a cream stealing expedition, and as hard to get a good sight of. I did try watching for one of the antlered gentry on a runway, where the sign told me he was in the daily practice of traveling, but my object was defeated by the deer's natural ally, the little red squirrel. I had found good cover under a stump commanding the runway, and was watching it both ways, with my soul in my eyes, when bunny showed up. Bunny promptly ascended a tree and set up a chattering which could be heard for half a mile. I tried throwing sticks at him, but he only ran up the tree and went into wilder paroxysms of wrath at my presence. I tried going away, and stayed away an hour, but the little red fiend was on hand again on my return, and set up his infernal chatter at a greater rate than ever. He was too insignificant to kill, and so I left him pounding the termination of his spinal column against the tree and chattering as wrathfully as ever; and so time wore on until our first week was nearly up, and we had eaten two deer and had three hung up. It may sound like a Gargantuan feat to say we had eaten three deer, but if you had ever eaten such booyaw as Rube made, and such venison steaks as we broiled over the coals—of course we brought a broiler along—you would wonder at the moderation we exercised in the face of the opportunities we had.

But one night the snow came, and in the next three days we hung up fourteen, including two of as pretty bucks as you ever looked at. Our mode of hunting was each man for himself. Each started out and worked over the ridges, eyes all over him, and ears ever on the alert. Each practiced the cardinal principles of successful deer hunting, which is, never have a cartridge in your rifle chamber until you are ready to shoot; never shoot till you plainly see what you are shooting at, and never jerk your trigger; always press it; and it paid us a hundred fold. Only one deer fairly hit got away from us, and had we not been too far from camp at the time to follow him I think we would have added him to our collection. Out of the twenty victims of our skill but two had fallen to my rifle up to our last day's hunting—and I began to think that the laugh was on me, both being does—when a wonderful piece of luck came to me that put me well with the party—who didn't see the elegant snap I had—and which I will briefly describe. I was walking campward about 4 o'clock in the afternoon after a long and vain trudge after a shot, and had the good luck to be traveling against the wind—which is the one way to travel if you want to find a deer at your journey's end—and had sat down against a stump for a few moments' rest, when I suddenly caught sight of a fine deer some forty rods away from me. I rested my rifle on the stump and held fairly in the middle of her forehead. My aim was sure as death, and I was slowly pressing the trigger when she began to cut up in a way that was never meant for my edification, but which put an idea into my head which secured her a reprieve. Have you ever seen a pretty girl on the street who is willing to commence a flirtation with a good-looking young fellow on the opposite side of the street, but wants him to take the initiative? Of course you have, if you are familiar with city streets, and equally of course you can form a good idea of that doe's actions without being told. I tumbled at once. There was a king of bucks at hand, and I risked losing the doe at hand to get him. I knelt there, like a very homely model of a statue of patience on a monument, for I don't know how long—it seemed two hours at least—when the doe suddenly threw up her head and ran off, yet slowly, and as one not unwilling to be overtaken, and the next moment the antlered monarch of the woods came in sight—a perfect picture of virile strength and beauty—perfectly oblivious to everything but the relenting fair so coyly, yet slowly, retiring before his ardent pursuit, and giving me the chance of a lifetime. I saw he would pass within 30yds. of me, and let him come on unmolested till his flank was fairly opposite the stump, when I sent two shots into him as fast as I could pull. He ran on for 88 paces—I paced the distance afterward—but he fell, and I found both balls had gone through his heart. When I cut his throat not a teaspoonful of blood fell on the knife, every drop of blood had been pumped out of his body before he fell. I disemboweled him, made a sled Indian fashion out of basswood saplings, bound with their own bark, put my prize on it and with labor as hard as ever man knew, but as sweet as sweet could be in view of what I was dragging, dragged him to camp. I had him weighed when we got back to Aitkin, and he tipped the scales at 225lbs. His antlers were as fine a pair as ever I saw, and will soon ornament the home of one of Minnesota's ablest jurists. When I got into camp Rube gravely proposed to hoop me, to avert danger of bursting, and to tell the truth I was shooting mammoth bucks all night. The next day we broke camp, and in three days' travel we reached home, tired, dirty and ragged, but happy beyond compare. KELL.

MERELY SQUIRRELS.

UNTIL a man has had his annual outing in which his favorite tastes have been gratified everything else seems tame and insignificant. He has dreamed of Maine, of the Adirondacks, of the great West; he has been there or elsewhere, had his adventures and misadventures, and come back and told about them. Then he begins to realize that no more trips of that sort will be vouchsafed to him in 1895, and he looks about him for some of the lesser sports within his reach. The elk, the moose and the deer are no longer accessible; but there are the quail, the grouse, the rabbits and the squirrels, and they are all within a very few hours' ride from the city. Yes, he will have a try at them, take the edge off from his yearning, and at least have the satisfacfion of smelling powder once again. Some such train of thought as this prompted me to get out my Parker last month, pack my faded and disreputable looking corduroys and take the afternoon train for a little town on the N. J. & N. Y. road. I had heard a well authenticated rumor that there were gray squirrels there. Now gray squirrels are the game on which I was brought up, and I have never gotten over a sneaking fondness for hunting them, although I am sometimes derided therefor by certain friends, who would rather thrash about in a blackberry patch all day for a single quail than to shoot a string of squirrels.

I am prepared to defend my position and give logical reasons for a fondness for the sport. In the first place, it takes you into the big, clean woods, which is better than brush and briars and swamp. It is still-hunting too, and surely, from the sportsman's standpoint, that is all right. Both the eye and the ear are called into play, and a considerable knowledge of the squirrel's habits and tricks is necessary to insure success. Then there are easier things to shoot than a squirrel on the run, and I have seen very good field shots make some unaccountable misses when they attempted to stop him in his erratic course.

Be that as it may, I got back to first principles and went squirrel hunting. Everything was favorable, including the weather and the applejack at the little hotel where I stopped. I was in the woods before it was fairly light, and it was not long before the familiar squawk of a squirrel came from a bunch of oaks near by. Careful investigation revealed two, and the full-choked 12-gauge landed them both.

I do not propose to follow out the details of the day's sport which made a boy of me again, but merely to "obey orders and report my luck to FOREST AND STREAM." I saw ten squirrels, and bagged seven of them and a rabbit. Had a snap shot at a partridge and missed it clean. I couldn't lay it to the gun either, for it killed everything it was properly pointed at that day.

Just a day's squirrel hunt, that was all; but it was good to be there. The hazy autumn air was full of tonic, the pungent scent of the ripened leaves was a wholesome delight, and the woodland sights and sounds were a rest and a relief. And these are the little things which help to make life endurable. ARTHUR F. RICE.

SPORTSMANSHIP.

Editor Forest and Stream:

I have been taking great interest in all the different letters on the above that have appeared week by week in your paper, and now that it seems all can air their opinions on the subject (and that is as it should be), may I have the privilege of also saying a few words on the matter?

In your week's issue dated Nov. 30, 1895, I see a letter by a gentleman signing himself Orin Belknap, in which he expresses himself on the above subject, which I suppose will never reach solution while all people make a world, yet I can assure him of two things that I think are rather mistaken ideas in his letter on this subject, viz., the aspirations of the English language, and also his amusement at the ideas of the way in which a bird's condition should be to taste good to the poor deluded Britisher! To deal with these two points separately—firstly, I can assure your correspondent that the majority of educated Englishmen speak as good grammar, and aspirate the H as generally, as does the equally well educated American, and also one meets in America as uneducated men as in any other part of the world, England included.

In what condition game should be eaten is simply a matter of taste, and I think that if Mr. Orin Belknap has traveled to any extent over this continent he will have observed that there are numbers of his own countrymen who like a bird kept in moderation, and without being "Anglo-maniacs" at that.

To get to the point that is, however, now drawing our attention, viz., "What constitutes sportsmanship?"

In my humble opinion it is giving the quarry a chance for its life, and pitting your brains against the natural sagacity and cunning of the animal, bird or fish.

Take hunting with foxhounds, for instance, in a prairie or open country. Which constitutes in your readers' minds the higher ideal of true sport: to find a wolf or a fox and lay hounds on either of their respective trails, to have checks (on account of the cunning of the quarry or climatic causes) and then hit off the line again, and eventually, after a good gallop, with your hounds working out the puzzle in front of them, to mark to ground (and then to leave it there for another day); or to run in in the open after possibly an hour's work, and to ride home and ponder on the individual work of this hound here or how that puppy took up the trail there, and with only possibly one mask at your saddle; or to go out with the hounds, put up your quarry and gallop like a maniac, whooping and hallooing, ride over the poor brute, hitting it over the head with a stick, or shooting it about a mile or two from the start, and then ride home with possibly several pelts gained this way dangling at your saddle, your hounds trudging along behind wondering where their sport came in?

Also take greyhounds on the flat prairies; what greater murder than to put up a jack rabbit and chase it with eight or ten fast greyhounds, giving it no chance to double and picking it up in 20 rods or less, instead of running two hounds in a leash and giving the quarry a legitimate chance for its life?

Again, which is the better: to shoot a bevy of quail on the ground or a bunch of ducks on the water, or to get a smart right and left at the rise and know there are some birds left for another day?

Which is the better: to land a 1lb. trout with light tackle after a good bit of play, or to heave out over your head half a dozen 2lb. pickerel with a bamboo stick and a thin rope?

Also allow me to say that there are good sportsmen in America as well as in every nation in every part of the world, and also there are first-class poachers. As far as I can see, if the question comes in that the game is to be taken for food, then the idea throughout this letter is absurd; because who in his senses, when absolutely needing the wherewithal to live, would frighten a jack rabbit from its form to have the pleasure of shooting it running (with the possible chance of a miss) when he could quietly *pot* it when sitting; or scare up a bunch of mallards, to also possibly fail to get one, when he could rake into them on the water and get several?

To prove that there are grand sportsmen in America, take for instance a pioneer or big game hunter, even if he does pot hunt to replenish his larder, which is only reasonable, and he then takes his rifle, and meeting a grizzly bear (and has the chance to retrace his steps) deliberately opens fire against the brute, knowing if he misses he is a dead man in all probability, then I think we can consider him a sportsman.

But allowing that the poor man here or elsewhere is simply out for what he calls a day's sport; then my idea is that, as I have said before, let him give every being a chance for its life.

Also possibly some of your readers will say, "It's easy enough to be a sportsman if you are rich." Yet living, as I have here for ten years, I find the worst enemies the young hardly fledged birds have to contend against before the opening day are the rich men from the cities with their "Hinglish himported setters" and magazine guns.

Before concluding this I must say I should decidedly like to take a few lessons in the American language from the "dear lady friend" of Mr. Orin Belknap, who evidently thinks "it's real smart" to say "jes turribul" or else doesn't know any better. A "SIDE-TRACKED" ENGLISHMAN.

BOSTON HUNTERS OF BIG GAME.

BOSTON, Dec. 7.—H. H. Moses, a prominent sportsman of Exeter, N. H., has just returned from the Katahdin region. He made his headquarters at the Iron Works, tramping about from there to the different camps in search of game. The weather conditions during his stay were about as bad as possible, there being no snow, but very frosty, making still-hunting almost an impossibility. In spite of this he killed two small deer. Pleasant River camps and Jack Coughlin's place at B. pond north of the Katahdin Iron Works were both visited by Mr. Moses during his stay, and he comes back with a fine opinion of the whole region as a hunting country. Rev. I. J. Lansing, of Boston, has just returned from the Iron Works, and was fortunate enough to kill a fine buck within five minutes' walk of the hotel.

C. A. Taft, J. M. Lasell and C. V. Dudley, of Whitinsville, Mass., have lately reached home from an eleven days' visit to Mr. Taft's camps near Flagstaff, Maine. Mr. Dudley killed a large buck with an exceptionally fine head, and Mr. Taft also got a buck. The party saw deer every day, but they had poor hunting conditions. They estimate that they saw three times as many deer on this trip as were seen on a trip made to the same region last year, and consider themselves unfortunate in not having snow to make the hunting better.

John Weber, of Wrentham, and Edgar Belcher, of South Easton, returned a short time ago from a trip north of Moosehead Lake. They had as guide that expert canoeman, Wm. Hildreth, of Greenville, who has guided Mayor Curtis, of Boston, on several trips. They made their principal camp on the Moosehorn dead-water, and found the game very plenty, each of the sportsmen getting two. While paddling down the West Branch of the Penobscot they came within a few rods of a cow and calf moose drinking in the river. The animals were quite companionable and did not seem in the least disturbed by the talking going on in the canoe. Finally they walked off in the woods very leisurely. Partridges were plenty and very tame, and both gentlemen are satisfied that the region selected for their outing is as good as they could have found.

Geo. Heywood, of Gardner, Mass., has been up in the Aroostook country four weeks. Most of this time was spent at Will Atkins's camps, near Millinocket Lake, and Mr. Heywood was successful in getting a large bull moose and two buck deer. HACKLE.

Anticipation and Realization.

CHATTANOOGA, Tenn., Oct. 27.—I am now working fifteen hours a day endeavoring to get my business affairs in shape for a three weeks' hunt in the Cumberland Mountains. Our Chickamauga Rifle Club, which is a sporting club as well as a shooting club, starts on the yearly deer hunt on Nov. 9, and as I occupy the honorable position of historian for the club my presence is necessary.

Nov. 27.—I am just back from our deer hunt on Cumberland Mountain and had very poor luck. Only killed four wild turkeys and forty squirrels and one pheasant in a two weeks' trip. The game feature of the trip was almost a failure; but we had a jolly band of fellows and lots of fun. A. B. WINGFIELD.

MAINE MOOSE MEASUREMENTS.

PHILLIPS, Me., Dec. 7.—In reading a communication from H. H. S.,of Aroostook county, headed "Miss Milhau's Moose," in FOREST AND STREAM, I notice that you desire the authentication of the statement that the antlers on the moose killed by Mr. A. A. Barker,of Newport, R. I., had a spread of 5ft. 1in. H. H. S. has certainly fallen into a habit of exaggeration which is so common among writers of sporting news for the papers this year. His statement is not quite as bad as that made by the Bangor *News* recently that the antlers of a certain moose had a spread of 9ft., but he is just a foot out of the way. The antlers were measured by the postmaster at Presque Isle and found to have a spread of 49in.

Dressed the animal weighed, including the hide and a bob sled on which it was hauled, 1,360lbs., and it is doubtless the largest ever killed in the State. The horns are 38in. long, the web being 12in. wide, with 15 prongs on one side and 13 on the other. He measured from the tip of his nose to a point between the horns 2ft., and from that point to his tail 9ft. The animal has been presented to a historical society in Newport and is being mounted whole.

It may be interesting to your readers to know a little more about this really wonderful animal. Col. Barker was accompanied by Mr. Jos. D. Robinson, of Presque Isle, and the two spent two weeks on and near Greenlaw Mountain, near Machais, with Leon Orcutt and Roscoe Flint as guides. They had remarkable good fortune, taking out with them two moose, two caribou and one deer. It required eight horses to haul the game.

There was nothing especially remarkable about the game aside from Col. Barker's moose. It was an awful job to get him out whole, but the Colonel was bound to do it and afterward said that he would have spent $1,000 rather than to have failed in doing it. The animal was shot in the densest part of the forest and had to be hauled many miles over the worst kind of a road. A crib or sack was made and the moose put in it in a kneeling posture and then secured. The crib was then placed on a sled and hauled to Ashland, where the sled was exchanged for a cart. The moose was shipped by rail from Presque Isle to Newport. WINCHESTER.

[The moose killed by Dr. T. D. M. Cardeza, of Philadelphia, near Chesuncook Lake, had antlers which measured from tip to tip 62in.]

IN OLE VIRGINNY.

THE Old Dominion has been famous for its game and hunting and fishing grounds ever since the days of Capt. John Smith and Pocahontas. It is no less famous for its hospitable people, and your correspondent was especially struck by this on a recent morning when, feeling a yanking to fraternize, he mounted his silent steed and rode to Alexandria.

Arriving at that once very flourishing city, recently reawakened after a long period of quietude not enjoyed by her enterprising business men, but now in company with most of our cities quietly waiting for the present depression to pass away, I saw on one of the prominent corners a handsome Irish setter, through which I introduced myself to its owner, Mr. M. J. Page, who told me that game is scarce, especially partridges. For information such as I wanted Mr. Page referred me to Creighton's store, headquarters for Alexandria's sportsmen. At the store I found the proprietor, Dr. William F. Creighton. Having introduced myself and stating that the object of my visit was to become acquainted with the hunters of Alexandria and report to FOREST AND STREAM some of their recent experiences, the Doctor said, "Why, yes, there sits Harry Simpson now reading your paper, and let me introduce you to Lieut. James Smith, and this is Mr. Lucas, and here is my son Frank."

The Doctor went on, "Among our other sportsmen mention George Ayres, Walter Nalls and Henry Schlicting."

Alexandria's nimrods, like all of their brethren of the Eastern United States north of the Carolinas, feel greatly the loss of the quail shooting. These birds were found frozen by the dozens after the severe weather of last February. It is hard for the fraternity to lose its quail shooting even for a season. The only sport now in that line is to take the dogs, of which Alexandria boasts a goodly number of well bred and trained, out for practice. The sportsmen are refraining from killing off what few quail are left, so that one of the most entertaining features in the shooting line in the Old Dominion is off the boards for the present season. As to the vicinity of Alexandria, her sportsmen are now negotiating for birds to stock up with from North Carolina.

At Mt. Vernon, the tomb of George Washington, Supt. Dodge is raising some Mongolian pheasants. A few of these birds have been seen outside of the preserves. It is to be hoped that they will to some extent at least stock the surrounding country.

Some of the most successful shooting done during the season is that of Harry Simpson, who is the champion woodcock huntsman of the place. The other day he went out and secured nine of the largest, plumpest birds seen for some time. The highest number killed in one day this year was thirteen—just a baker's dozen. Two years ago the highest record was made when twenty-eight woodcock were shot. Mr. Simpson says he has killed in all about 300 woodcock this season. The season in Alexandria and Fairfax counties is from July 1 to Jan. 1. "Chip" gives a great deal of credit to his dog, a small Irish setter, without which it would be impossible to find the birds in the lowlands thick with vegetation. Very good grounds are readily accessible to hunters from Alexandria, but Simpson says it takes hard work in some of the marshes. Many a time a man flounders around and wishes himself well out of it all; but a little firmer footing and an easy shot which is rewarded by a good plump bird revives his spirits, so that he keeps working all day and at its close, though very tired in body, is the happier for it.

There is very good rail and snipe shooting in the big marshes below Alexandria, and in what are known as the Double Ditches, six miles below the city, very good shooting is to be had in season.

As an example of what has been done in the rail shooting line, we give the following: In the month of September, 1888, 1,300 rail were killed by one gunner in the marshes near Alexandria. Besides the rail, quite a number of reed birds and blackbirds were shot. From 116 shots 115 rail were picked up.

Dr. Creighton may be styled the nestor of sportsmen in Alexandria, having taken a great interest in dogs and gun for the past forty-five years. His first experience was a visit to Uncle Jim's down in Maryland, where he shot his first rabbit. Shooting the rabbit and wounding it, he says he dropped the gun and ran for the game, chasing it up and down, over ditches and brush rows, till finally he secured his prize. Uncle Jim watched the sport, shouting, "Where's the gun," but the boy didn't stop for man or gun until the game was captured, and then they had quite a time finding the old weapon among the high weeds.

Not long since there passed away to the happy hunting grounds old Shot, 17 years old when death overtook him, one of the best dogs ever shot over. A picture of his boy and old Shot is highly prized by the Doctor. I send you a photo of Harry Simpson and dog Flirt, a noble animal and excellent hunter. She carries but one eye in the picture, the other having been accidentally shot out.

Dr. Creighton has a curiosity in the way of an old horse pistol fitted with a gun stock. He says the boys and he have had lots of fun with this firearm. It is good on singing cats late at night.

The counties around Alexandria abound with rabbits. Some turkeys are found down around the big dike, but just now we are sighing for the good old quail shooting as of yore. BART.

GAUCHO AND SAM'S DUCKS.

SHREVEPORT, La.—*Editor Forest and Stream*: I have just had one of the greatest day's duck shooting of my life. Numerically I could have done more, as I left my blind and we took up the decoys at about 3 P. M. But quantity is not quality, and when a fellow bags seventy-seven ducks from 9 A. M. to say 3 P. M. he ought to be satisfied.

I wish it distinctly understood that I claim no credit whatever for having killed these ducks—not a bit of it. They came up to see my decoys—not so much to see me, I presume—and I was there all ready to receive them, and with my little 20-gauge Parker I simply killed as many as I could, finding it a most excellent fowling piece on any duck when inside of 35yds. I had in my blind a spare gun—a 7¾lbs. Parker, in which I shot 48grs. of E. C. and 1⅛oz. chilled No. 5 shot, loaded in U. M. C. 2¾in. smokeless cases. This gun and load is hard on a duck, very; it is only a question of getting the load and duck to connect, and anywhere inside of 50yds. the duck is taking a great many more chances than the shooter, see? So I shot both guns and missed about as many with one as the other. I found I had to lead my cross shots further with the 20, but was surprised at the way it closed them up when under 40yds.; beyond that distance it could not be compared in effectiveness to the heavy 12 bore with its crushing load.

And all this is in very bad form, for I should have commenced talking about my host and not starting off at break-neck pace howling about my guns—but *que voulez vous?* I like a gun awfully much, especially a good honest make of gun; so—well, you all know the gun I prefer and I won't say another word about it.

Now I'll tell you something of real live interest, and it's true, and that's the strong part of it. Dead earnest every word, and if any one doubts me let him come here and verify my statements.

There lives in this town of Shreveport, La., a man whose name is Sam Enders, and Sam was reared and educated among the ducks. He was always first in his class; stood head, gave the ducks general instruction, so now they come his way from force of habit, or perhaps through hypnotism—*quien sabe?* But they come, and that's what other fellows try to accomplish, and you all know how they succeed; perhaps you know better if you have tried it yourself. I for my part speak from experience.

When Sam was a little boy he went to school and the first word he learned to spell was "duck"; when he got a little bigger the uppermost thought in his mind was to circumvent "duck"; so he roamed the marshes over, learned what a duck's palate most craved, imbibed all he could from books relative to ducks, studied their habits and idiosyncrasies, and ever since has been slaying ducks. It is not recorded anywhere that even a single duck or drake has ever harmed Sam. Nothing of the kind; only being of a playful turn of mind he just likes to fool ducks. The more sagacious the duck the more keen becomes Sam, and the surer the demise of the said duck. We all have our playful moods; Sam is having most fun when decoying ducks. Some are saddest when they sing; Sam is gladdest when the wing of the mallard sweeps overhead. Alas! poor duck, now so stone dead! What made you fool with Sam's decoys? That's it, you see. Sam's decoys are simply irresistible; they are magnets around which the duck family revolves; they attract a duck from miles away, and he cannot resist their silent but eloquent appeal to come in their midst and be one of them—*i. e.*, one of the dead ones lying around, with a wire stuck through their throat; so that even after death Sam makes a duck lie to his living mates, and causes the unsuspecting to voluntarily court their own destruction.

And then again, in the way of deep-laid schemes Sam has a folding jack-in-the-box sort of blind that just fools a duck every time. There are sagacious, wise and learned ducks that have, through a varied stage of experience, accumulated much wisdom. These are "high flyers;" tall, circling chaps, ducks that disdain to be allured by ordinary mortals and give them a wide berth. These lofty, cloud-cleaving ducks simply glance from their exalted position, and, having soul-searching eyes, they perceive that down in the depths below their lies concealed a biped called man, who, though still and silent as a statue, clad to resemble his close surroundings—a veritable tramp in appearance—yet there he is; and that shining thing he holds in both hands is veritably a most dangerous trick. So, all in all, the brainy duck, wise in his generation—perhaps riddled on a former occasion—hies him hence, and goes to some other bunch of ducks where there is no fagot of willows in the vicinity, circles about, quacks in satisfaction, and proceeds to guzzle sweet grasses, seeds and dainty snails, flaps his wings, and were he a rooster would crow, to show his contempt at all such fools who are inveigled by simple, plain decoys.

But look here—what of this? Sam's decoys are principally live ducks—nice big fat fellows, who air themselves gracefully swimming about—real live ducks, who can talk to the aforesaid high flyer—and his blind is fitted with hinged sides that enfold him so completely that the eagle glance sees nothing but a bunch of willows. So who can blame even a full-fledged, decorated, self-taught and college-graduated duck for descending from his elevated plane and flying square into a load of shot—proceeding as it does from the bunch of willows that opens up without warning? Really, it is too bad—so bad indeed that few ducks get away, and as none refuse to come in, you, my gentle reader, can plainly see that what I said about Sam to start with is about correct, and no exaggeration at all. But then, you see, when other infants were playing in their cradles Sam was sucking at a duck's wing; when, later on, other boys were playing marbles Sam was studying pictures of ducks; when, after this, lads were courting lasses, Sam was skirting duck marshes, gun in hand, not so much depending on his weapon, but bent on learning the habits of all the duck family, and that's where his head was level; for, as I said before, it is easy enough to kill ducks, but awfully hard to get there at the killing. So what with his folding blinds, persuasive, alluring decoys, unerring aim and great duck sense Sam gets all the ducks he wants and so do all his friends; for, after the fun of killing them comes the pleasure of giving them away. So you see just what an awfully nice thing it is to know such a fellow as Sam Enders.

And now they are forming a club—a ducking club—the members of which will have about as good duck shooting as any one on earth. So if any of my readers would join, let him write to Mr. Sam Enders at Shreveport, La., and he will give him full particulars—and believe me, there are very few such places in America or out of it.

"'Nuff said," a word to the wise, etc. GAUCHO.

DR. BISHOP'S MOOSE.

BOSTON, Dec. 6, 1895.—The big game hunters continue to complain of bad weather. There has been a remarkable lack of snow in Maine, the ground being bare nearly all of November, and for several days into December. For this reason the moose, deer and caribou have escaped a good deal of destruction, for the hunters have been most remarkably numerous. Not so the partridges. As near as I can learn these birds have suffered severely at the hands of the hunters in the woods this season. In the first place there have been more hunters to the square mile than ever before, and more square miles of the backwoods have been thoroughly hunted over. All the hunters I have talked with admit of having taken a great many partridges. In the absence of snow and good deer hunting they have been obliged to content themselves with partridge hunting. Can the birds stand this extra hunting, is the question.

Novel ideas enter the brain of the deer hunters, as well as the stay-at-homes. Mr. R. P. Woodman, who has returned from a rather unsuccessful deer hunt at Parlin Pond, in Maine, tells me of a novel hunting outfit he came across while there. Mr. Woodman's health did not admit of his doing his usual amount of hunting himself, and so he had to be contented with listening to the exploits of others. A brother of Gov. Buswell, Mr. Woodman understands, with a friend, landed at Parlin Pond, via Canadian Pacific, with a camp on wheels. It was also provided with runners, so that it could be used on snow. It came by rail easily, but it took a number of horses to haul it over an old logging road to where the hunters wished to camp. It was provided with cold storage and cooking apparatus. The hunters have left it and will occupy it another season, moving it to whatever location they wish to hunt. It seems that at first the hunters owning the movable cabin were looked upon as rather "new" and inexperienced, and it was considered that the big game was generally safe where they would be hunting. But when one of them came upon a flock of partridges and really shot the heads off from five of them in rapid succession, opinions began to change. He at least was conceded to be a good rifle shot. On the morning of the first snow the other one was advised to follow down the old logging road, the person suggesting this direction not having the least idea that he would come upon big game. But he had scarcely covered a mile when three deer passed across the road—a doe and two bucks. The hunter brought down the first buck and quickly turned and shot the other. This exploit raised him considerably in the estimation of the guides and campers at Parlin Pond.

The Morrisons, of Bar Harbor, seem to have been successful hunters this year. Six deer and a moose are reported to have been killed by them in the region around Ox Bow. Their load of game passed through Bangor recently, and that was where my informant saw it. Their names are Dr. C. C. Morrison, Dr. E. J. Morrison and M. C. Morrison.

Dr. Heber Bishop, of Boston, is certainly the champion moose hunter of the present day. He came out of the woods yesterday with two handsome buck deer and another moose. This moose makes the third one within a year, and eleven in all that have fallen to his rifle since he began to hunt. He has killed three within a year, in fact. One he killed on the 31st day of December last—the one that showed fight, and described at the time—one taken in Nova Scotia in September last and the one mentioned above. The Doctor this time hunted in the Allegash region, 42 miles from Presque Isle, the end of the Bangor & Aroostook Railway, though a branch is building to Ashland, 18 miles from the camp occupied by the Bishop party. Mr. C. C. Williams came out with the Doctor with a deer to his credit. Dr. G. A. McAleer, of Worcester, was also of the party, and Mr. W. T. Farley. Both of these gentlemen were still in the woods at this writing, both having located moose. Mr. Farley had already taken a handsome buck deer, but was not satisfied. Mr. Bishop says that he has no doubt but what Mr. Farley and his guide, who were hunting near, started the moose he shot, which was following a cow at the time. The Doctor's guide, Herb Neal, of the Megantic region, was out with that gentleman looking for moose when a cow moose came "thundering through the woods," Both were sure that another was following, and they allowed the cow to pass, when quickly a spikehorn bull hove in sight. He paused, threw up his head, giving the Doctor a fine shot, side on. At one crack he fell in his tracks. The deer shot by the Doctor were both handsome bucks, one with a 22in. spread of antlers and the other with a spread of 21in. and a most remarkably symmetrical form. The skin of this deer the Doctor is to hav mounted whole. Very peculiar weather was experience

by the party, the principal lack being light snow. No sooner did a snow come than it would be followed by rain and crust. Four times the mercury went below zero, and on Wednesday morning last it was 12 below.

Dr. Bishop thinks that moose are increasing in Maine, "but they are not increasing as rapidly as moose hunters are. There are certainly more moose this year than last." His experience in moose hunting should entitle him to a good deal of credence. Caribou, he thinks, are doomed unless something is done. Still he thinks that their migrations may bring them back again. Deer he believes to be able to stand up against even the present great rate of slaughter if crusting and early summer shooting is taken care of. SPECIAL

NOTES FROM WASHINGTON.

DR. GEORGE HENDERSON, surgeon of the District militia, has returned from a week's trip to Virginia. The Doctor made Alleghany his headquarters, and had the pleasure of shooting a magnificent buck, one of the finest deer he has ever seen. The buck had a fine pair of antlers, being five-pronged, with a lateral horn. The saddles weighed 80lbs. The Doctor shot him on the go, the deer being about 140 strides off.

Reports of success with deer hunting in West Virginia and Pennsylvania are coming in. In the mountains of the former State deer are reported to be in fair numbers, while in Pennsylvania, on the South Mountain, hunters are having some sport.

Messrs. Green and Gulick have returned from South Carolina, whither they went for quail. Of course they bagged some birds, but the shooting is not to be compared with former years. While a couple of years ago twenty coveys would be scared up in a day, this year but three or four could be found.

Mr. Jos. H. Hunter is visiting the old home in Indiana. He is banging away at birds, if there are any; if none, at something else. For Joseph is a great lover of the gun.

The authorities of Prince George's county, Maryland, are up in arms against some of our misfit hunters. This county lies to the east of Washington and used to contain quail and rabbit, besides other small game, and to a small extent still contains game. The law of the county requires non-residents to secure a permit from the Clerk of the Court before hunting in the county. This requirement, it is claimed, is pretty generally disregarded, so steps are being taken to exclude outside gunners. Many of the farms are posted.

All the same, if a man goes to Upper Marlborough, Prince George's county seat, sees the Clerk of the Court and then starts out with the boys, he will have a good time, whether it be coon hunt, possum hunt, ducking on the Patuxent or swapping yarns. BART.

MASSACHUSETTS SOUTH SHORE.

Editor Forest and Stream:

As an enthusiast in the many local advantages for sport in shooting and fishing in this vicinity, I have been not a little chagrined to find no reference to it in FOREST AND STREAM except what scattering reference is made to catching smelts by Hackle or a stray mention of some name familiar to the habitues of Hingham or Cohasset by Special. So I made a mental resolution, and am following it out on paper, that unless you prohibited it this locality of ours should occasionally be represented.

There is no better all-round fishing and gunning county in Massachusetts than Plymouth county, in which are most of the South Shore towns.

But I won't digress into a description of the country, as all I intend to do is merely to give a few facts in relation to sports and sportsmen.

The smelting season is practically over. Never has it been better in and around Hull and in Hingham Harbor than this year. Beginning with the 1st of June, the catches were phenomenal for warm weather. The highest catch in one day that I have heard of was 70lbs.

Mr. T. O. Edmonds, the veteran bandmaster, is an ardent disciple of the rod, and it is his intention to secure an appropriation from both Hingham and Hull to be used in apprehending the seiners who annually infest these harbors.

I visited the Stony Beach House at Nantasket Beach a while ago, and was amused to find the exterior of this little hostelry decorated from chimney to foundation, piazza and all, with coot, hung up in strings. Genial George Hatch, the proprietor, is high line for the season with 542. His best day's work was seventy-seven.

Mr. Carl Place, proprietor of the Gun Rock House, has just returned from a hunting trip in the vicinity of Mt. Katahdin, Me., and the two deer he brought out have furnished venison steaks for his friends.

Geese shooting in Hingham Harbor and at Accord Pond has been as nothing compared with last year, but the gunners are all hoping for a late flight. The birds seem to pass more to the east and west of us.

At State Island, where Mr. Edwin Clapp, the well-known shoe manufacturer, has a stand, twenty-six have been shot. At Accord Pond, where there are three stands—Wilder's, Chubbuck's and Poole's—the entire kill has been but seventeen. At Whitman Pond in Weymouth I hear they have done better, while at Jacob's Pond in Norwell it has been light gunning.

I don't think quail shooting was ever better than it has been here this season. Of course the prime condition which made it so was the close law in 1894, but in Hingham particularly the gunning fraternity are profiting by the stocking of private estates. The Brewer estate, Mr. Chas. B. Barnes, Mr. Wm. L. Bradley's estate, Mr. Francis W. Brewer, Mr. J. D. Scudder on the Downer property, have all put out quail and the birds will escape their confines to the benefit of the gunners. Six to ten is a frequent bag.

Partridges, too, have been brought to bag in good numbers.

Elisha Burr, the veteran dog trainer and proprietor of Burr's kennels, is kept busy most of the time in making it pleasant for his many visitors. Dr. Langmaid is a frequent visitor and so is Mr. Peabody, of Kidder, Peabody & Co. Somehow or other they always manage to return to Boston with the pockets of their gunning coats well filled. But then, 'Lish' has got pretty nearly every bird tagged in these parts, and when he puts up his gun—well (no reflection intended on the other fellows' marksmanship, either).

Fred. Farrar, of Norwell, exhibited a woodcock which he shot a few days ago. Pretty late for woodcock. I guess he was "the only one that's left of all the family." Speaking of woodcock, this same Farrar and a friend, Herb Hersey, also a well-known local sport, bagged thirteen woodcock and six quail for one forenoon's sport, one day in October. Pretty good sport, wasn't it, you fellows who think you've got to go out West to get gunning?

A light snow is all the fox hunters are waiting for up in the Norwell country, and then the hounds may be heard. Twenty-five foxes were shot last year in that region.

Among those to try their luck here this fall I have noticed Mr. Charles F. Danforth, a well-known insurance agent of Boston; Mr. E. L. Bremer, Harvard, '96; Mr. Dick Jenness, the well-known wool teamster of Boston, besides more whose names I don't know.

More anon. PABLO.

ADIRONDACK LANDS.

TROY, N. Y., Dec. 7.—*Editor Forest and Stream:* I send you herewith clippings from the Albany papers relative to lands purchased by the Land Board and the Fish and Game Commission yesterday:

"The State Commissioners of the land office yesterday approved of the recommendation of the State Fish, Game and Forest Commission, that the State purchase 75,000 acres of land in Herkimer and Hamilton counties within the boundaries of the Adirondack State Park. The price to be paid is $8 an acre, or $600 000. The land belongs to Dr. W. Seward Webb and a small portion is inundated by back water caused by the construction of the Beaver River and Moose River dams. Dr. Webb has now pending against the State claims for damages to this land amounting to about $400,000, and these claims are extinguished by the State purchasing the land. The damages arise to his land and valuable lodge and camping sites, but the large proportion of the claim for damages is based on the fact that the construction of the dams destroys the natural outlet of the rivers by which the logs cut from the lands were to be marketed.

"This is the largest addition that has been made to the lands owned by the State within the boundaries of the Adirondack Park in many years. There are 2,807,760 acres in the area set apart for the State park, a good portion of which the State expects to acquire gradually. The State now owns about 600,000 acres within the Adirondack Park boundaries, and the Webb purchase will give the State title to about one-quarter of the total acreage in the Adirondack region within the State preserve."

For the sum named, $600,000, four or five times the quantity of land purchased could have been bought in more desirable portions of the Adirondack woods. The statement that "some of the lands" cost Dr. Webb more than the price now asked is misleading. It is a fact that after Dr. Webb had secured the bulk of the property he was obliged to pay rather steep prices for small, isolated parcels located within the limits of territory acquired by him. The claim for damages was a most exorbitant one, and would not have been allowed by the Court of Claims, at least no large portion of it.

The Stillwater dam was raised 8ft. in 1893 under my supervision, and I am quite familiar with existing conditions, and have no hesitancy in saying that for purposes of lumbering, with the exception of the comparatively small portion flooded, the value of the lands purchased yesterday has been actually enhanced. M. SCHENCK.

ABOUT NON-RESIDENTS AND DEER.

PORTLAND, Ind., Dec. 2.—*Editor Forest and Stream:* I am not a little surprised at the remarks of your Mr. Hough, under date of Nov. 2, relative to hunters in Wisconsin and Michigan. I am reminded of the old saying about men in glass houses. Speaking of hunters from Ohio and Indiana, he says: "Many of these men will revile the game laws which prohibit hounding and all the easy ways of destroying deer." He refers to men being killed and says, "Nearly always they are the wrong ones." Now, by what authority does Mr. Hough sit in judgment on the non-resident hunters in Wisconsin? And where does he get evidence that justifies him, on Nov. 2, in saying that during the first twenty days of that month "many of these men will revile the game laws?" And what prompts him to state that "nearly always they are the wrong ones" that get killed? Only a couple of months ago he told us of what a fine time he had had trouting in Wisconsin. Did he revile the fish laws? Did the right man get killed while he was up there fishing? How is it down in Mississippi, where he is now? We extract from his language the understanding that if the right man gets killed he will be a non-resident.

There were too many hunters in Wisconsin this season, I admit; yet I am not sure the deer suffered any the more on that account. A forest full of hunters is in a measure dangerous to the hunters, but the deer, finding themselves chased at every point, in a few days leave that section until the hunters withdraw, then they return.

Besides many business and professional men take advantage of the cheap rates and opportunity for recreation who never go far from camp. They may be sportsmen in the strictest sense. They enjoy the outing, though they never kill a deer. I have killed twenty-two deer in eight outings, but I have had with me on several of these trips a county school superintendent, a prominent physician and a merchant whose Saturday sales average $1,500, neither of whom has killed a deer. I have met many hunters in the forest and on the way, and feel safe in saying that fully four-fifths of them were respectable citizens in their community and of more than average intelligence. There are exceptions is this case, as in all others, but I protest against the hunters from Ohio and Indiana being stigmatized as a motley crowd.

As to hounding deer or other violations of law Mr. Saynor, whose portrait in the garb of a representative woodsman appears in your last week's paper, and who is proprietor of Plumb Lake Hotel, near where we were camped this season, could bear evidence that no Ohio nor Indiana hunter was guilty in that section this season. Thirty-five men from Ohio and Indiana were camped at Plumb Creek. Our camp got three large bucks, another got two deer and one bear, another one deer, while two camps got nothing but small game. A native camp with two dogs got, I think, eight deer. The dogs, of course, ran foxes only.

There may have been violations of law by non-resident hunters in other parts of the State, and I would not for a moment condone these offenses; but the sweeping charges made by Mr. H. are an injustice to law-abiding sportsmen, and should be withdrawn.

We were advised while in camp that a license law would be agitated, and to a man up a tree it looks as if this was the beginning of it. He says a traveling passenger agent reported that thirty-five hunters got off at Abbotsford in one day. Abbotsford is where Wisconsin Central passengers change cars on to the Ashland Division, and is near the center of the State and 203 miles from Duluth. I hunted last year sixty-eight miles north of Abbotsford, on the Wisconsin Central road, and know that the entire division runs through good deer range, furnishing hunting ground for several hundred hunters. The towns are few and population small, while the railroads run parallel and some thirty miles apart. We camped last year sixteen miles from the railroad, in order to get good bass fishing, the hunting season being in October; and we saw no other hunters except a tent of Indians. Five hundred hunters might scatter themselves over the northern half of Wisconsin and there would not be more than one hunter on each thirty-five square miles. This would not seem to threaten the extermination of the deer very soon, when it is known that a camp of still-hunters rarely cover more than nine square miles, be they one or a dozen in number.

If deer were killed only by still-hunting, and that during an open season of three or four weeks, the forests of Wisconsin and Michigan would furnish good sport with the rifle until they go up in smoke to make room for the settler's potato patch. G. W. CUNNINGHAM.

The Port Huron, Mich., *Times* of Dec. 2 reports that the Turtle Hunting Club, of Alpena, recently returned from a hunt with twenty-eight deer. Nine of the members were from outside the State, notwithstanding only one non-resident license had been issued.

Chincoteague Ducks.

STOCKTON, Worcester County, Md., Nov. 6.—This year the redheads and bluebills are unusually late to arrive here in Chincoteague Bay. Last year at this time they were on the shoals in great numbers. The fact of our having no heavy storms, I think, will account for their late arrival. To-day the wind is blowing hard from the N.E. with snow and rain, and it looks as if we were about to have an old-fashioned gale. This will bring the ducks down from the upper waters.

There are plenty of small ducks and any number of cubheads, whistler or golden-eyes or jinglers—it is astonishing what a number of names each duck has to go by. From any point or blind on the bay you can get a dozen or so before 9 o'clock any morning. They are very nice and fat and make better shooting than redheads or bluebills, as they fly singly or in pairs, never bunching, and are remarkably swift on the wing, requiring much more skill than bunch shooting. But when you are informed that there is nothing in the house and you had better not come home without a dinner it makes some difference—at least it does to me.

There are a good many geese and some few swan, but no brant yet. The shooting is all done from shore or from blinds stuck out on the shoals. There are no sink-boxes here; a good battery well covered with decoys would do great work. Late in the winter there are parties here who shoot the geese and brant with lanterns and big guns. This is to be deplored, but it seems we either have no law here or no one willing to apprehend the culprits.

The quail have been very plentiful in this county; last year they were protected, and the result was fine shooting when birds have been scarce everywhere else. Our cover is very heavy here, and notwithstanding the enormous amount of shooting that has been done we still have plenty of birds, but it takes lots of work, a good dog and a good shot to make a good bag. O. D. FOULKS.

Tennessee Deer and Quail.

CHATTANOOGA, Tenn.—The Cumberland Mountain range has been almost entirely depleted of its stock of deer. Would you believe it if I were to tell you that last year there were 248 carcasses of deer shipped from the small town of Crossville in Cumberland county, East Tennessee? Is not that an infernal shame? And then some people have not got sense enough to advocate stringent game laws. We are cursed in this particular section of the country with "pot hunters." There is one man named Bud Holmes who kills all the quail within ten miles of Chattanooga and sells them at $1 per dozen or about 8c. each.

I am glad to report that the last Tennessee Legislature passed a law forbidding the killing of deer in five of our mountain counties for a period of five years. This is a godsend to sportsmen, as this section would soon have been like some other parts of the country entirely cleaned out of deer. The names of the counties that the new law is enacted upon are Cumberland, Claibon, Scott, Morgan and Anderson. All of these counties are mountain counties and have more or less deer. The penalty for killing or hounding a deer is $50, half of which goes to the informant. Please publish this, as there are *scores* of Kentuckians who make an annual hunt into the Cumberland Mountains of East Tennessee and that is where a great many of our deer go. I do not think the law is generally known, as it was passed and recorded at the last meeting of the Legislature.

Quail are fairly plentiful if one goes fifteen or twenty miles out from Chattanooga. I was out not long since with my hunting chum Wm. Cooke and we raised nine coveys with one dog and it was very dry. I am sorry to say we did very poor shooting, as we only bagged twenty birds. Several of the coveys we let go without shooting at them on account of their being in thickets and bad places.

A. B. WINGFIELD.

Colorado Deer Law Violation.

THE DENVER CLUB, Nov. 25.—*Editor Forest and Stream:* In your paper of Nov. 23 I notice an article by Mr. Edw. W. Ball recounting how he killed a doe, and tried to kill a fawn in this State. As this is absolutely against the law in Colorado I am surprised that such an article should find its way into FOREST AND STREAM even if the writer was unsportsmanlike enough to violate the law and shoot does and fawns. JOHN A. PORTER.

The FOREST AND STREAM *is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable*

IN AN INDIANA QUAIL COUNTRY.

Editor Forest and Stream:

With the opening of the quail season came an urgent invitation from my friend Mr. Thorpe, of the Pennsylvania Company's offices at Fort Wayne, Ind., to come and have a couple of days shooting with him over one of the best dogs in the State; and not having had an opportunity to enjoy this rare sport for many a day, I sent word that I would be on hand at the appointed time.

Leaving Pittsburg Saturday night, Nov. 9, I reached Fort Wayne early Sunday morning, where I spent the day very pleasantly, talking over the proposed trip which we had planned for Monday morning, and partaking of the hospitality of my friend and his good wife.

Leaving Fort Wayne next morning at 3:30 we reached Columbia City, twenty miles further west, about 4:15 A. M., where a conveyance awaited us, and where we also expected to get our dog, but much to our discomfiture, that very necessary part of the outfit was not in condition to play his part, having taken sick the previous day, and the owner did not consider him in fit shape to travel, so we had to rely upon our own ingenuity to find game.

We accordingly drove ten miles north to the home of Mr. Irwin, a farmer and an ardent sportsman, where an elegant breakfast awaited us. Our long drive through the frosty air of the early morning gave us keen appetites, and to say that we enjoyed the meal does not half express it.

Breakfast over, we donned our shooting clothes, and upon learning that fox squirrels were fairly plentiful in that locality, decided to try for some of them, and leave the quail shooting for another time, when we might have a dog to find them for us.

We spent Monday and Tuesday with the squirrels, and upon counting the string preparatory to our return found that we had eighteen red, one gray and eleven very large fox squirrels; the latter being the finest I have ever seen. Some of them were as large as a half-grown woodchuck, and as I had the honor of killing them, I had abundant opportunity to judge of their size while carrying them nearly two miles to the house after the "slaughter" was over.

To any one fond of this sport that portion of Indiana offers a good opportunity. The country is tolerably level and the woods are comparatively free from underbrush, making it an ideal place for the fox squirrels.

Our short outing was very much enjoyed, and we were royally treated by our friend Mr. Irwin and his charming wife and daughter, who did everything possible for our comfort. We have been invited to come again next spring and have some sport with the bass, which are very plentiful in the numerous lakes within easy distance of Mr. Irwin's home.

I have long been a devoted friend of FOREST AND STREAM, and find so much pleasure in reading the weekly contributions of my brother sportsmen that I take the liberty of sending the above, trusting that it be of interest to the readers of your splendid paper.

L. H. HULL.

PITTSBURG, Pa.

Shooting Pictures.

"ENGLISH SNIPE" and "Prairie Chickens" are the titles of two more of the series of "Shooting Pictures," by Mr. A. B. Frost, which are now ready for subscribers. "English Snipe" portrays a scene so familiar to lovers of that kind of shooting—a broad marshy flat, with its patchy growths of swamp vegetation, wet ground and chains of water, and hills and woods in the distance. Two handsome orange and white setters in the foreground are pointing and backing, a snipe has just flushed from the point and the sportsman is in the act of shooting. "Prairie Chickens" contains much that is pretty and much to admire; but in a shooting sense it has some faults which it may not be hypercritical to mention. The scene is in a cornfield, and shooter, dogs, birds and shocks of corn are massed together in a most artificial manner. Shooting chickens in corn in the chicken country is mostly in uncut corn. In the picture the shooter and dogs are too close to the birds, and the dogs are still pointing with the birds directly over their heads, and which they entirely ignore. The shooter has killed one bird closer to him than any shooter would deem permissible; indeed so close is it that instead of being neatly killed it would be blown into atoms. The dogs are excellently portrayed, and their position on point is spirited and correct. The shooter also is correctly portrayed. The chickens are good chickens, but faultily placed with reference to man and dogs, and their wings are all spread in unison in a manner rarely observed in the flight of a bevy.

Havre de Grace Ducks.

HAVRE DE GRACE, Md., Dec. 8.—I am truly sorry to be compelled to say that up to this time our sports and pothunters have done the poorest business that I ever knew, with no prospects of any improvement. The waterfowl that have been coming every fall for hundreds of years to see us, and to spend their winters in the waters of our Southern States, have either found other countries where they can spend their winters, or else they have nearly all been exterminated—more than likely the latter. Therefore I can't give a favorable report. I have been somewhat interested in gunning and fishing in Maryland for sixty years, but up to the present time I have never seen game and fish of all kinds so scarce.

CAPT. E. B. GALLUP.

How Many Deer are there in the Adirondacks?

CITY ENGINEER'S OFFICE, Troy, N. Y., Dec. 5.—*Editor Forest and Stream:* I send you herewith statement received by the Forest and Game Commission relative to the number of deer killed this season in the Adirondacks and an estimate of the number remaining in the woods:

"A short time since the Fisheries, Game and Forest Commission sent out circulars to reliable persons in the Adirondacks asking for information regarding the number of deer killed during the past open season. Replies have been received from four-fifths of the persons asked and the result is that 3,551 deer are reported to have been killed. President Davis, of the Commission, believes the total number of deer killed will exceed 4,000. The territory embraced is 3,000,000 acres. The largest deer killed weighed 293lbs. There are about 35,000 deer in the Adirondacks, it is estimated."

The estimate of deer in the woods at this time, nearly eight to the square mile, I believe to be excessive. Since the early sixties I have averaged, summer and fall, at least one trip per year to the Adirondacks, and from a knowledge thus obtained am satisfied that in limited districts only would anything like eight to the square mile be found.

M. SCHENCK.

Capercailzie and Black Game.

CANTON, S. D., Dec. 3.—*Editor Forest and Stream:* Having read the articles respecting the importation of game birds from Sweden I would like to say a few words regarding this, as I was born and raised in the middle part of Sweden and have seen and hunted these glorious birds from childhood till I was 20 years old.

I know their habits well. The capercailzie is a very hardy bird and will stand almost any kind of climate. They are always found in heavy timber where there are blueberries and juniper; they grow to be very old and cunning; I have had several in captivity and they always did well. I fed them on oats and barley, giving them plenty of blueberry vines and juniper berries, and never had any trouble to keep them as long as I wanted to.

The black game are somewhat different in their habits, being found more in open glades and around peat bogs, where they congregate in large numbers in the springtime, a good deal like our prairie chickens. They prefer places where there is birch, as they feed on the buds. If the Maine woods are like that I don't think there would be much difficulty in raising the birds there; and I hope to see the experiment carried on.

WM. BLOMSTRAND.

Game and Fish Protection.

New York Fish Commission.

THE New York Fish Commission, because of want of funds, has dropped from service Mark C. Finlay, of Wayne county, the special agent for the detection of fraud; John Ferguson, an oyster protector of Suffolk county, and John Liberty, clerk in the office of the Chief Protector, together with fifteen of the thirty-three game and fish protectors, who get $500 a year and $450 for expenses. These are J. L. Ackerly, of Yates; Thomas Donnelly, of Warsaw; Ira Elmendorf, of Ulster; A. B. Klock, of Herkimer; J. H. Lamphere, of Cayuga; James D. Lawrence, of Delaware; B. S. Morrill, of Clinton; C. M. Prouty, of Washington; Riley M. Rush, of Oneida; William A. Ten Eyck, of Saratoga; George B. Smith, of Chemung; T. J. Brooks, of Monroe; D. G. Helmes, of Hamilton, and O. S. Potter, of Oswego. Several special game protectors, whose services are paid for by clubs, were appointed.

Oregon Trout Law.

IN our comment on the Oregon trout law last week we referred to the red-spotted fish losing its color in the salt water, having in mind the Dollie Varden trout, and forgetting for the moment that Judge Greene's letter concerned the black-spotted fish, rainbow or Gardiner's trout or steelhead salmon. We may add that while the probability of taking any of these fish in salt water for a market supply does not appeal to one's credence, there is nevertheless just enough possibility of it to make the law a pernicious one.

Sea and River Fishing.

NEPIGON AND SAGUENAY RIVERS.

A Five Minutes' Comparison.

THE Nepigon River has for its source a great spring which presses against more than ninety miles of encircling rocks in seeking for a chance to escape, and then pours its bounty of bright waters pell mell through a forty mile chute straight into diaphanic Lake Superior. If the river stops a bit wherever there is need to touch up the landscape with a lake, or if it runs slowly past engaging scenery, no one cares very much, because it makes up for lost time in a headlong chase over the rocks all of the rest of the way.

The Saguenay River with its forty miles of peat stained water debouching into a dark sullen estuary is the result of a conference of long rivers which meet at Lake St. John and require ninety miles of sandy circumference for the assembly. If you would know which St. John the lake is named after, try to cross it in a birch bark canoe when a question of north wind is before the conference. The Nepigon River as a strong individual character retains its original motives and carries into Lake Superior the same volume of clearest cold water with which it started, —water that makes such white foam and spray in the rapids that the Indians could not help calling the river the Nepi-gon or river-that-is-like-snow. Such a river is not very susceptible to passing influences and during the whole year it may not rise or fall more than twenty-five inches, while the Saguenay responding to many influential constituents rises and falls as many feet in the course of two months, and not only that, but it is warm or cold at the dictation of the season.

The Nepigon is not afraid to show its true nature at the outset of its career, and it gives honest warning that it is powerful. The Saguenay, on the other hand, leaves the St. John conference with murder in its heart. Stealthily as a leopard it noiselessly glides past the Isle d'Alma, then it mutters and growls for awhile, and suddenly bursts out with demoniacal ferocity upon the rocks in its path. If you are a master of rivers and fear none of them, go to the Nepigon and to the Saguenay and see how grandly nature is displayed along these two great tributaries of the St. Lawrence which are so much alike upon the map and so different in their characters. Leave behind the pleasures of the city that are dependent upon arts which stimulate the mind without nourishing the soul; where the gardener makes the rose more and more beautiful as he gradually forces its stems to become petals, until, as the queen of flowers, it has lost the power to continue its varieties; where the arts of civilization stimulate the mind until it flames up in genius and a degenerate body falls back. Go to the Nepigon and to the Saguenay and see what substantial things can be found there in nature.

On the Nepigon, igneous cliffs of trap rock tower in stern grandeur over the river-that-is-like-snow. The dark forest growth of fir and tamarack, toned by poplar, birch and roundwood, becomes thinned and sparse on the mountains, just as though the Oreads had planned their forest before violent upheavals of the earth made ten miles out of one mile and thereby upset their calculations. On the Saguenay—the corrupted name for the Shagahneu-hi or ice-hole river—so named because the seals used to keep many air holes open in the ice of the estuary, the Laurentian rocks in somber piles lift up their covering of coniferous and deciduous trees, which are much like those of the Nepigon, but here and there a fine yellow pine holds monarchial possession of a jagged island, and the trunks of the northern white birch light up the forest aisles. An area of fossiliferous limestone on Lake St. John has come to the surface, bearing evidence of the abundance of life in silurian days. A devout clergyman remarked that these fossils were never alive, but were placed there in their present form to test our faith, and they have done it. Moose and caribou sometimes leave tracks in the moss along the banks of both the Nepigon and Saguenay rivers, and one need not go very far away to find an abundance of such game. Black bears swim the rivers at safe crossing places, and the voice of a gray wolf may be heard above the sound of rushing waters when all else under the stars is still. Along both rivers the northern hares furnish the principal food supply for predacious animals and birds, just as the ciscoes furnish the principal food supply for the predatory fishes of the region. Spruce grouse and ruffed grouse fly into the bushes near the fisherman and look at him in wonderment, and the cinereous owl catches ptarmigans on the hills in winter. In the Nepigon River brook trout find such an abundance of food and such agreeably cold water that they grow to an enormous size and are ready to spring after the fly at almost any time of day after 10 o'clock in the morning. Like fish in the other very cold streams they do not rise readily in the early morning, and the best sport may be had with them in the middle of the sunshiniest day. The big 6-pounders jump at the fly almost as eagerly as the youngsters do, and the very largest trout are so sleek and fat that they are delicious for the camp table—quite different from the mill-pond trout of warmer waters, which lose flavor and activity as soon as they have passed the ounces period in their lives. Side by side with the trout are swarms of monstrous pike (*Esox lucius*), and sometimes one of these will take a silver-doctor fly. So will the salmon trout which lurk in the tail water of deep rapids, and so will the pike-perch if one is casting the fly at night. The Nepigon looks like good bass water from the fisherman's point of view, but the bass themselves say that it is too cold, and I know of only two that have been caught there.

If we leave the best trout water to itself for awhile and toss the fly over still deep reaches where the water is ever so many fathoms deep, a surprise may come to the surface in the form of a pale trout with translucent nose and fins, who shows by his colors that he lives away down in the profound bottom caverns. We must not expect to catch one of these trout, but once in a while there comes an hour when they are all at the surface.

Whitefish take the fly readily if one is knowing enough to tempt them in a politic way, and they certainly belong to the game fishes of America. They cannot chase and capture an ordinary artificial fly, but if we put half a dozen flies, tied on No. 14 hooks on a single leader, and drop this affair lightly among the fins that are circling about at the surface in the evening, and keep it perfectly still, pretty soon the whitefish will move up to it and try to pick off the small flies as daintily as a red deer nips a lily bud.

Although there are half a dozen species of fish that will rise to the fly in the Nepigon, the chief game fish of the river is first and last the red-spotted square-tailed brook trout. In the Saguenay the chief game fish is the ouananiche, or salmon-that-is-little. This is the landlocked salmon that is found in many lake streams from Maine to Labrador, if the streams contain smelts. Ichthyologists find the landlocked salmon anatomically the same as the salmon that goes to the sea, but the ouananiche are content to remain with the food supply that is in sight in fresh water; just as certain people who might be most important in the town prefer to remain small in the village, because they are satisfied with the opportunity in sight, though anatomically they are the same folks. It is principally a question of size of opportunity.

In the Saguenay we find the same monstrous pike and the same pike-perch and whitefish as in the Nepigon, but the trout are absent. There are plenty of trout in the tributary streams which are not inhabited by the ouananiche, but the two fish cannot bear to live together because they are such close rivals. Both are magnificent, but they cannot see it in each other.

The guides of the Nepigon are for the most part Chippewa Indians or half-breeds, who are willing enough to have visitors enter their domain, but who are not very amiable. Such is their nature. They do not even make friends of their dogs, who would gladly love them and forgive all of their failings. A stray Indian dog of the most pathetic yellow color came to our camp one day, and when we tried to pat his head the poor little fellow spread his legs apart and braced himself, thinking that we were trying to push him over. He did not know that there was any such thing as affection in the whole wide world; but we developed that latent trait for him, and glad indeed was he to find at the end of a week that his tail had a use and that it could wag.

On the Saguenay the guides are hardy, polite French-Canadians, simple in their ways, and delighted to have a chance to show their hospitality if we visit their humble homes. In their relations with each other every man stands on his real merits and accepts the position that is given him in the estimation of his *confrères*. Monsieur E. R. Duton cannot block up a shaky reputation by signing himself Eelvo Reanne Duton. He cannot elevate the neighborhood by forcing his name under society in the form of a wedge as E. Reanne Duton; nor can he send the chain shot name of Eelvo Reanne-Duton hurtling through a startled public if he is personally deficient in powder.

The Nepigon has completed its duty when the tribute of waters is freely paid to Lake Superior, but the Saguenay holds back and makes its current pass through a long estuary before delivering its property to the sea. The estuary is full of weird interest. The somber current, the beetling mountains and the cold northern air

are all in keeping. White whales gleam out of the dark flood in striking contrasts of color. A beluga is not "sort of white," but is one of the most beautiful of white animals, the quality of his coloring reminding one of the soft, supple white of a pure white stallion.

At Tadonsac, with its lofty terraces and shifting dunes, the Saguenay joins the St. Lawrence grudgingly, and the reddish waters push far out into those of the greater river before their moroseness is tamed.

ROBERT T. MORRIS.

DOG AND DOG SALMON.

YOU probably remember that a year or two ago Judge Greene wrote of Billy Newman's catching salmon with a bulldog and a club—or, perhaps, Billy wrote over his own signature of the fact. I do not remember now, but the fact remains clearly impressed, and the more so that now I have been having the same sort of unique and entertaining experience. I remember that the judge drew the inference from some jesting remark of mine that I harbored a little dubiosity (permit me to coin a word, or, if not coined, unused in my hearing) concerning the alleged transaction. I was somewhat pained at the attitude of the judge in this matter, for he well knows that anything in his epistolary menu, from the soup of his appetizing and introductory paragraphs to the palate-tickling and refreshing coffee of the beautifully rounded and concluding sentences of his literary repast, goes with me, and goes smoothly, quickly and pleasurably. I am truly sorry that anything I said aroused suspicions in his mind that his veracity was doubted by me in the smallest particular. We are governed by faith considerably, and also no little by ocular evidence. Anent the salmon-dog-club-hunting I have the benefit of both. But it was not a bulldog this time, but just a sort of common Irish water spaniel setter cross of a canine that furnished the amusement. Some duck hunters camped near where I am staying a week or two ago, and when they left, after some very profitless experience, among the camp wreckage was this dog, who wandered around a day or two disconsolately and evidently very empty, and finally was adopted by the major domo of the ranch. Why the men left the dog was apparent recently, when the owner came alongshore in search of him. He (the dog) was a fine duck retriever, as I had reason to know when he brought out duck after duck for me in fine style. But he was in his element in more senses than one when we took him down to the creek where the dog salmon, running up from the salt water, were fairly swarming in the pools and dashing the water into spray with their powerful propellers as they forced their difficult way up the boulder stream rapids.

We have been told in the columns of FOREST AND STREAM of the wonderful numbers of salmon as they run up fresh water to spawn; how they fill the stream from bank to bank, even so that one might walk dry shod upon their backs. I have never essayed that feat, and, knowing the slipperiness of a salmon, I haven't any ambition in that line, and even had I, I have not seen the fish quite so thickly packed as to warrant the trial; but I have stood upon the banks of a stream not over ten or twelve feet wide, and not straight enough to afford a lengthy view either way, and seen hundreds of fish of 5 to 10 pounds in weight lying in the shallow pools so close as almost to touch each other, with their backs and tails to the median line, often out of water, or rushing, splashing, dashing, hissing through the shallow water of the rapids, struggling over the shallower parts, and resting occasionally for breath where there was a little more water, until they finally made the pool above, or, tired and disheartened for the nonce, slipping, weakly struggling, into the pool from which they started, to try it again when the impelling force asserted itself.

Near the rapids the dog would take his stand, and when the big fish had fairly started upward, dashed in and, seizing it by the back, endeavored to take it ashore. Then the fun began. The powerful fish flopped, floundered and desperately struggled, throwing the water in sheets, while the dog, with vise-like jaws, endeavored to maintain his hold and back out with his prey. Seldom did he succeed without a break away, once, twice, thrice, but he was about as quick as the fish and immediately hitched on again, drifting down stream a little each time, when he succeeded in getting the salmon ashore, always taking it away from the water, even up quite a steep bank or into the brush, sufficiently far to insure its not flopping back again. The care he took in this respect was remarkable. Or it might be that the fish, breaking away, turned and made an arrowy flight for the pool below. Then there was an aquatic race worth seeing. Terror lent wings to the fins, while the dog, with unstable footing among the smooth stones, rushed through the flying water vainly endeavoring, with savage lunges, to get a tail hold, or any hold, until dog and fish plunged, kersouse! into the pool among scores of waiting salmon that, suddenly crazed with fright at this awful irruption, dashed this way, that way, any way, up stream, down stream, making the water literally boil with the mad whirl of dog and dog salmon, while the former, wild with excitement, plunged his head under water and came up snorting in repeated, but not always vain, endeavor to fasten to the slippery and elusive fish.

It was an enjoyable and exciting experience for the spectators, and very evidently for the dog, whatever it might have been for the fish. After some experience, the favorite hold of the dog was the back fin, and notwithstanding the severe struggles of an 8 or 10-pound fish, I have repeatedly seen the dog maintain his hold, dragging the fish to safety. I should dislike to have that dog fasten to a fin of mine with that grip—I should have to go along, too.

Concerning the club part of the dog salmon performance, that's easy. There's no affidavit necessary.

These salmon gradually turn white after being in fresh water, at least hundreds of them do, and the streams are lined with their dead bodies. Whether all such die before spawning I know not—large numbers do. It may be that the majority of the dead are males. I suspect that this is so. They have ugly hooked teeth at the end of each jaw, and if a person's finger came into contact with these teeth there will ensue a sorrowful remembrance for many days. But there's a heap about salmon that I don't know. When I learn more perhaps I'll talk. The dog and club story is all right. O. O. S.

WASHINGTON, November.

OUT OF A NEW JERSEY POND.

PERSONS interested in angling and fish life generally who happened to be present at the drawing off of Vreeland's Pond on Wednesday and Thursday last were treated to a sight well worth witnessing. Vreeland's Pond lies in a section of Passaic which is rapidly building up. It belonged to the Vreeland estate, but was some time ago purchased by a Mr. Kingsland, who with his two sons compose the Yantacaw Ice Company. This company has cut ice from the pond for a number of years and up to last year there was little complaint concerning the quality of the ice. The pond is fed by a brook which supplies several other ponds, and was inhabited by black bass and a number of small fish. These fish, together with what current the flowing stream contributed, kept the water in good condition. For many years it has been the almost daily resort of the angling fraternity of Passaic, and many good catches of fish have been made there. Two years ago it was noticed that the quality of the ice had deteriorated, and last year the complaints were more pronounced. At times the ice seemed to have a decided fishy flavor. This was attributed to the existence in the water of a large quantity of German carp, which had come down a few years ago from a pond further up the stream. The carp were of both the scale and the leather-back variety. The pond was a considerable body of water and the owners did not care about undertaking the project of draining it, although they thought that such a process, with the removal of the fish and the cleaning of the bottom, would result in a better quality of ice. Two enterprising individuals, who thought they could make some money out of the sale of the fish, made an agreement with the owners of the pond to do the work necessary for the draining in return for the fish. The work was begun on Monday, and on Tuesday the water in the pond began to go down. On Wednesday it was pretty well down and it was apparent that there were plenty of fish to be had.

The outlet of the pond flows under one of the public streets of Passaic, and for the purpose of preserving the fish for the market a screen of fine mesh was erected under the arch. The latter was separated from the gate of the pond by a space of about a hundred feet and connected with it by a 3ft. pipe. As the water receded the fish soon found their way through this pipe in large numbers, and consequently were imprisoned between the dam of the pond and the arch. In order to protect as far as possible the game fish, the State Fish and Game Protector took a hand in the work of removing the fish. He ascertained that all the water was to be drawn off, and his first intention was to erect a coffer dam in the pond and place in the inclosure all the game fish, in order that they might be liberated as soon as the pond began to fill again. But he soon ascertained that it was the intention of the owners to drain the pond again in the spring of the year, and that there was every likelihood that the territory formerly covered with water would be turned into dry land. It was consequently useless to talk about saving the fish for the pond itself, and consequently the protector concluded to remove all the fish he could get hold of to some other ponds, where they would be of use to the angler.

The sight on Wednesday was one affording a great deal of amusement. The residents of the Dundee section of Passaic, principally Poles and Hungarians, assembled in large numbers and proceeded to help themselves to the fish. The men to whom the fish really belonged had their hands full in keeping the crowds off, but could not succeed. There were about 3ft. of mud and about a hundred men were engaged in spearing carp or raking them ashore with rakes. Every once in a while one of these men took a tumble and found himself imbedded in soft mud and ooze to the great delight of the onlookers and frequently to the discomfiture of the principal actors in the scene. But on most occasions the men who met with these accidents paid little attention to them and proceeded in their quest after fish as if nothing had happened. It was a matter of comparative ease to capture the carp, on account of the sluggish movement of these fish, and there was little danger of any bass being captured with any such crude contrivances as rakes or spears. When the carp had disappeared either in baskets or barrels or through the pipe into the inclosure between the dam and the arch of the street the fishermen turned their attention to the eels, which were found in considerable numbers in the mud. Digging the squirming eels out of the mud and securing them by persons standing in 3ft. of mud resulted in more fun for the large audience which watched the operations from the dry land.

As no bass were being taken the work of the protector was easy enough on Wednesday, but he apprehended trouble on the following day, when the fish were to be removed from the inclosure above referred to. He accordingly secured such assistance as was immediately necessary, and telegraphed for Wardens Riley and Tooker, who put in an appearance shortly afterward. It was evident that the Hungarians would make a raid on the inclosure during the night and for the purpose of preventing the taking of bass the protector had the place watched all night.

The work of removing the fish from the inclosure was begun on Thursday morning, but it was soon interfered with on account of the continual flow of water. The gate in the dam had been removed, as it was badly broken, and so this place was filled with bags of sand. This stopped the flow of water and the bottom of the inclosure soon presented a lively sight, being literally covered with a large number of fish all endeavoring to get away. Unfortunately the splashing in the mud done by men looking for carp in the pond above, which could not be stopped, forced large quantities of mud and sand into the inclosure and the fish were in an exhausted condition, which precluded the possibility of their being removed to any great distance. It was only by the use of fresh water and the greatest care that they were preserved. This was attended by further difficulties caused by the cold weather, the nets used for taking out the fish being frequently covered with ice.

Some of the angling fraternity of Passaic requested the protector to place the fish where they would be of the most use to the people living in Passaic, and in order to comply with their wishes the protector decided to stock Westervelt's Pond, a sheet of water of some eight acres, lying near Clifton. The first lot of bass removed consisted of ten cans. These were taken to Westervelt's Pond. As the water had almost drained off, there was little difficulty in securing the rest. Ten cans, each holding from thirty to fifty fish, were then removed and taken to Pompton Lake, where they will be a welcome addition, as the lake had been run down on account of the great amount of fishing done there. A large hogshead had been secured, and in this were placed such bass as could not very well be transported as far as Pompton on account of their size. About twenty bass, weighing anywhere from 2 to 4lbs., were placed in this tank and removed to Westervelt's Pond.

It was impossible to keep an accurate account of the bass removed, but their weight is estimated at nearly 1,000lbs., and of these only three were lost, and these were in a moribund condition when taken out of the water, having been jammed against the screen.

On Wednesday 1,800lbs. of carp were removed by the men who were entitled to them, and about a similar if not larger quantity by the poachers. On Thursday at least four tons of carp were removed and 500lbs. of silversides and eels. Silversides are not supposed to be good eating, but they found a ready market in Dundee.

One important fact was definitely established by the draining of the pond, and that is that the presence of carp is destructive to the life of black bass. It has frequently been argued that carp would annihilate the bass on account of the carp eating the spawn of the bass, but this is perhaps the first case in which this was proven beyond the shadow of doubt. Vreeland Pond has always been a good pond for black bass of the large-mouthed variety. The absence of rocks and the little sand to be found made the pond unsuitable to the small-mouthed bass, but it was just what was wanted by the big-mouthed fish. They thrived year after year, and although frequently the shores of the pond were almost lined with anglers the supply continued. The bass taken on Thursday were all 2 years old and not one was less than 10in. in length. There were no bass of last year's or this year's spawning, showing conclusively that the carp had eaten up every particle of bass spawn during the past two years. The bass stands no show with the carp, as the lumbering carp grovels in the mud and crawls into the nest, where he is secure from the bass, whose weapon is situated on his back, being the sharp fin so frequently used for disemboweling fish at which the bass gets a chance.

The carp taken were nearly all of the variety known as the scale carp, there being comparatively few leather-backs. Their number was enormous, but their size was smaller than might have been expected, there being very few specimens weighing 15 or 20lbs., although there were hundreds weighing over 10lbs. Only one goldfish was taken and one perch, and there was no sign of any pickerel or pike.—*Charles A. Shriner in Paterson Chronicle, Dec. 8.*

ADIRONDACK OTTERS.

Editor Forest and Stream:

In the summer of 1892, while I was at Number Town, Lewis county, in a discussion on the subject of Adirondack fur bearing animals, Mr. Fenton, proprietor of the Fenton House, an old time woodsman of more than a half century's experience, expressed an opinion that otters in many portions of the Adirondacks were as "plentiful as they ever were," which statement I received with several grains of allowance. The experience of many years in the Adirondack woods had led me to believe that the otter had become a somewhat rare animal in the lakes and streams of even the more remote portions of the woods.

In the fall of 1894, however, I became convinced that the views of Mr. Fenton were not far from correct. That season I spent ten days at Hutchins's camp (Bonney's old place) on the Chain Lakes, located in townships 17 and 18, Hamilton and Essex counties, during which time our party saw five otters, two of which were shot at, but neither was secured. The day following my arrival at the camp a gentleman stopping there called my attention to two animals that were swimming near an island in Third Lake, and a glance through a field glass showed them to be otters, one of them a very large one.

Early the following morning when paddling through Second Lake I saw an otter swimming within 30yds. of the boat, and as it rose in the water to get a good look at us I sent a shot after it, which the guide thought struck it. The water where the otter disappeared was very deep, and we were unable to see bottom, so could not tell whether or not the otter was killed, at all events we saw nothing more of it. On the afternoon of the same day game protector Isaac Kenwell, who came in the woods with us, saw an otter eating a trout on a partly submerged log on the shore of Grassy Pond, a small pond connected with the Chain Lakes. Kenwell shot at this one, and a trail of blood on the log and in the water showed that the shot took effect, but he was unable to find the game. The trout was a 2lbs. female, laden with spawn nearly ripe. Two days later on Jackson Pond, another small sheet of water connected with the Chain Lakes, guide Carlos Hutchins and I saw an otter swimming quite near the shore and disappear under some overhanging black alders. We waited some time for it to show up, but it did not, and we were unable to get a shot. As the places where these animals were seen were quite long distances apart it is not probable that we saw the same otter several times. The fact of our having seen five otters in broad daylight in less than one week in one locality is sufficient evidence to me that they must be quite abundant in that part of the Adirondacks, too abundant by far for the welfare of the trout in the Chain Lakes. S.

TROY, N. Y., Nov. 30.

News for the Lake George Trout Fishers.

THE following will be good news for those who like to indulge in the lake trout fishing in Lake George: The Lake George Steamboat Co., realizing the necessity of more adequate facilities for early and late transportation on the lake, purchased this year the steamer Mohican. With the idea of accommodating the early trout fishers, as well as for other purposes, the Mohican will commence her season of 1896 shortly after the month of May has opened; she will run from Caldwell to Baldwin and return twice daily, calling at all landings on signal.

Game Laws in Brief.

THE *Game Laws in Brief*, current edition, sold everywhere, has new game and fish laws for more than thirty of the States. It covers the entire country, is carefully prepared, and gives all that shooters and anglers require. See advertisement.

THE BLIND ANGLER OF HADLEY.

MR. CLARENCE E. HAWKS, who is popularly known as the "blind poet of New England," and whose verses are current in leading magazines and journals, has just issued a volume of collated poems, under the title of "Pebbles and Shells," which has hit the public taste exactly, the first edition being sold before it came off the press.

Its contents are presented in six parts, devoted respectively and first to nature, second to war and patriotism, (including that graphically heroic poem entitled "The Last Charge at Gettysburg"), the third to love, the fourth to thoughts of childhood, the fifth to idyls of New England, and the sixth to miscellaneous effusions. The volume is delightfully original all through, and its title is in touch with the proclivities of those who love nature.

Sportsmen in particular will read it with keen sympathy and at once become eager purchasers as soon as ever they understand that the interesting young author is not only an expert angler, but that the deprivation of his eyesight came from a charge of shot in the face while he was afield with a companion, and that this calamity followed the amputation of a leg which had been injured by jumping a fence.

Although so seriously handicapped, his ardor is not at all abated, and he sings and recites again with cheery voice the active parts he has enacted; and all the time his sunny pictures seem the more vivid for being physiologically developed in the dark! One thing is certain, and no less remarkable, that few habitues of the mountain streams which thread his native hills in northwestern Massachusetts are more deft in casting the fly or worm, or handling a captive fish and bringing it to creel. We can conceive it to be simple enough for a blind man to sit in a punt and fish over the side with a hand line, but trout fishing enlists more active faculties. This marvelous gift of young Hawks, which seems to centralize and stimulate all the remaining senses to supply the ones destroyed, is certainly inexplicable; and it applies to all his walks and pursuits in life. The loss of his eyesight seems rather to enhance and intensify the pleasure which the other perceptive faculties afford. A psychological analysis of this rare gift is given in a preliminary chapter of the book, as well as a biographical sketch of the author, whose life history is phenomenal and intensely interesting.

The volume is illustrated by Elbridge Kingsley, one of the most eminent artists of his guild, and the introductory chapter is by Charles Hallock, the pioneer editor of FOREST AND STREAM.

Altogether it is the most attractive book of poems that has been issued in many a year, and would be a fitting associate in the library for Isaac McLellan's "Poems of the Rod and Gun," It is being circulated in æsthetic literary circles, and the author has already received an autograph congratulation from ex-Secretary Robert P. Lincoln. It is published by the Picturesque Pub. Co., Northampton, Mass. Price $1.50. H.

Fisheulture.

California's New Salmon Station.

BAIRD, Cal., Nov. 30.—An event has occurred this season in California which will probably revolutionize the work of salmon breeding on the Pacific coast. It is the establishment by the State Fish Commission of their station on Battle Creek near Ball's Ferry, and the phenomenal success which has attended their operations at that point during the last month. Salmon eggs have never been taken before in this country so quickly, so easily and with so little expense as they have just been taken by the State at Battle Creek. A comparatively very small force of men took 10,000,000 eggs in eighteen days and within a period of twenty-one days in all. The creek below the rack was a moving mass of ripe fish. It took but three men to haul the seine, and they caught enough fish the first haul to keep the force at work the rest of the day taking their eggs. Such expeditious and inexpensive salmon spawning was never known in this country, and probably not in the world.

The discovery of this extraordinary place for taking salmon eggs and the turning of it to practical use is due to Mr. John P. Babcock, the chief deputy of the California Fish Commission, who recommended it to the Commission, who in their turn showed their wisdom and foresight by adopting Mr. Babcock's recommendation and building the station this last summer.

This station will doubtless be able in future to stock both the Sacramento and the Columbia with fall run eggs, but it must not be forgotten in this connection that it is the summer fish that support most of the great canneries of the Sacramento and the Columbia, so that however great the success of the Battle Creek Station may be, the United States Station at Baird on the McCloud River, which is the only station on the Pacific slope which turns out any large number of eggs from the summer run of Quinnat or Chinook salmon, will still have an excuse for its existence.

LIVINGSTON STONE.

The Kennel.

FIXTURES.

BENCH SHOWS.

1896.

Feb. 19 to 22.—Westminster Kennel Club's twentieth annual dog show, Madison Square Garden, New York. James Mortimer, Supt.

March 10 to 13.—Chicago.—Mascoutah Kennel Club's bench show. John L. Lincoln, Sec'y.

March 17 to 20.—St. Louis Kennel Club's show, St. Louis. W. Hutchinson, Sec'y.

April 20 to 23.—New England Kennel Club's twelfth annual show. D. E. Loveland, Sec'y.

FIELD TRIALS.

1896.

Jan. 20.—Bakersfield, Cal.—Pacific Coast Field Trial Club. J. M. Kilgarif, Sec'y.

Jan. 20.—West Point, Miss.—U. S. F. T. C. trials. W. B. Stafford, Sec'y.

Feb. 3.—West Point, Miss.—Southern F. T. C. seventh annual trials. T. M. Brumby, Sec'y.

Feb. 10 or later.—West Point, Miss.—The Field Trial Champion Association's first trial. W. B. Stafford, Sec'y.

Sept. 2.—Morris, Man.—Manitoba Field Trials Club. John Wootton, Sec'y.

Business.

I SOLD the two dogs advertised in FOREST AND STREAM, namely, Molleen (Henmore Shamrock—Daisy), winner, divided third I. S trials, 1892, and Alice Kent (Inchiquin—Onota Belle), winner of many prizes, to Mr. Bernon Ogden, of Chicago. F. L. CHENEY,

COON HUNTING IN CONNECTICUT.

IN those days, back in the 50s, I was but a lad in my teens, living in that rugged section of the State adjacent the Naugatuck River where I became acquainted with that whole-souled, genial old gentleman, Squire Calvin L., who delighted in chasing to bag those ever alert little animals, coons, and with whom I experienced my first knocks and bruises, together with sundry contusions incident to an all night among fallen timbers, tangled myrtles and jagged boulders, not to mention the many surprises from hidden burrows, which occasionally would swallow a leg, often threaten the whole boy, and seldom failed to test the strength of my vertebra.

It was only in these rustic surroundings that I found coons holding their entertainments, or if they ventured far from home it was only for a short vacation of pleasure—maybe on a trip to some neighboring creek to indulge in a little recreation at frogging, or perchance to some nearby cornfield to sample the succulent ears in the general interest of coondom and their own; at all events, whatever fancy stirred their brains, they always kept an eye on things at home in their mountain fastness, seemingly that in case of failure in their outside speculation they could have the satisfaction of being the possessors of a home to return to, and thus avoid being left out in the world, subject to its cold charities, of which their appreciation for seemed but small in its most magnified presentments; but, like the higher order of animals, they did sometimes make a mistake in calculation, and it was such an occurrence that Squire Calvin and myself, in the new combine, were permitted to appear upon the scene.

The Squire had often talked about a coon hunt, and had put about as much coon into my head as it could well hold. I was fairly aroused with the idea by his faithful description of how Tiger could tree them and then kill them when they were shaken to the ground; and what an easy thing for a lad like me, "so fond of climbing," to go into the tree and shake them off, and then to get down and see Tiger finish them, sometimes two or three in one evening.

That settled it, I must go a-coon hunting and see my intimate friend old Tiger in his glory. Only a few weeks more when on some suitable night we were to go and I was to be informed in time to be on hand.

Now, my friend Tiger was a good dog, worthy of the name of friend. He was good every way, and his sense of propriety and duty was never questioned by any boy in the village. He would mind his own business and be contented with so doing; but if set upon by dogs of less sense he always came out best. It is told to his credit he saved the house of his master from being burned to the ground by pulling the clothes from his master's bed and escorting him to a fire well under way in the kitchen, where in a few moments more it would have been beyond control. On another occasion he aroused his master in a similar way and stealthily led him to a stable in time to save the horses from thieves, who fled from the unlocked door without having secured their booty.

To him coon hunting seemed to be conducted upon principles instinctively and peculiarly his own, as I never heard that any one ever trained Tiger; but that he had no peer in all New England for this sport all who knew him will willingly vouch. Then here was to be the new combine—the Squire, myself and Tiger. After waiting a full moon or more the time seemed favorable—corn was big enough to tempt coons, and report was that one field had received their visits, as the ears plainly showed their work. And the damp night so long waited for had arrived, and the Squire had located a field of corn, one lying well upon the side of the bluff back of the present village of B. F., a field which looked well advanced, with adjacent large timber upon the one side, the home of coons—so reported—with a good growth of small trees below and on the opposite side of the cornfield. This would afford excellent retreat and they could be easily climbed whenever a coon should be silly enough to venture there in our presence.

Ten o'clock, the hour of starting, was announced by the Squire. Supper being over, the Squire and myself busied ourselves cleaning up an old single-barrel muzzle-loader, looking up ammunition, getting candles for the old tin lantern, putting up luncheon and a bottle of hard cider, walking to and fro waiting for the hour of 10 to be rung out on the gong within the 7ft. clock standing in the corner of the kitchen—did time ever move so slowly or hang half so heavily?

At length the little gray horse was brought out all saddled and bridled, as the first move; then Tiger caught the fever and begged and coaxed for us to wait no longer, and as the night was quite dark and a fog was settled over the lowlands, we concluded to make the start without waiting the full time of 10 o'clock, and thus we departed at 9:45, the horse carrying the Squire, the lantern (not lighted), the gun, ammunition and luncheon, while myself and Tiger ran along together beside the horse—all in the highest glee, with a clear mile and three-quarters before us. After the usual stumbling and interruptions to be found on a country road on a dark night, we at length reached the turn and left the main river road, following one bearing toward the woods, with knolls and hills rapidly succeeding one another, until at length we reached the bars on S.'s farm which stood guard to an ancient cart path leading off across the lots into denser darkness. Here the Squire called a halt and gave me his load; then, dismounting, hitched the little gray; then calling Tiger to him he caressed the dog and talked to him for a moment, telling him "he was a good dog, and must show up a good lot of coons." Turning to me he said: "You take the lantern and keep the door closed so as not to lose the candles. I will carry the gun. The luncheon we will leave right here. All ready? Now move carefully and still." And as we, a procession of three, moved to the timber line above the cornfield, the quiet was almost painful. At length, reaching a knoll above the cornfield, which was faintly outlined below us, Tiger was bid to "Go look 'em," and the Squire and myself took seats near to each other and awaited further developments. Ten, fifteen, twenty minutes passed, and no report, not a sound; but as the Squire and myself were whispering our disappointment the faithful Tiger returned and begged us to go up the hill toward the timber, in all probability recollecting some former experience thereabouts. We unhesitatingly did as indicated, as we must have a coon near that place, although disappointment met us where we had pictured so much success. We were out for coons, and we must go to where they were.

The dog was let go again, and we followed among the trees into the woods where darkness was made darker, over roots and broken limbs of trees, with no pack to guide us. Moving on until well up the bluff, halting a few moments here and there, we moved as silently as possible. When the dog returned he was again dispatched further up the bluff. The Squire and myself took seats on a fallen tree and awaited the sound of a start with expectant ears, the Squire whispering, "This beats all; this is good ground for 'em; they are always here. But if they get started for the big ledge there will be no use of spending much time with 'em, for every coon that gets in there is a safe coon sure. I suppose just to our left for a hundred rods or so I have run in a dozen under that ledge and never got one out up to this day. Hark! Hear that? Mark the sound! That is Tige and a coon, but only a track yet. There he goes! Now he sees him and is close on to him! But ain't he hazing him! Tige never barks like that unless he has had a sight of the animal. He understands that if he rushes him he won't run far before he trees. But it will suit me just as well if he turns a little further down the hill, for if he gets into one of those big chestnuts up there he is about as good as lost to us unless we camp till morning, as they are too big for you to climb and thick enough at the top to shelter any amount of coons such a night as this."

I felt a little anxious to be a-moving, but the Squire said, "No, just wait; I'll tell you when to start, Tige will give the signal when to come, let him alone for that. Only last fall I had one up that big shingle oak just over there (pointing close across my nose) in the gully, and I got him, a big dog coon, the darkest colored one I ever saw. I maneuvered all night around that tree, but no go, I had to wait till daylight. Then!—we must be going now."

And go we did, with the Squire chatting on: "And then I shot him. It took three charges to knock him out, but I did it. The rascal got away out on the largest limb he could find, one that runs out on the down-hill side, as far away from the ground as he could well do, and the nearest I could get to him left me to shoot straight up in the air, and the limb was a good shield for him, but the second shot made him hitch along a little, and I got the next charge in all right, and down he came."

Tiger was now barking in good earnest, doubling his former efforts, and at a much higher key, the Squire urging "more speed" and puffing loudly, "He is either in a tree or under that ledge, and I am afraid under that ledge, for Tige don't bark right. Now you follow close to me. I know the ground and can go straight to him."

"But why not light up the lantern," I suggested, which only brought forth the reply: "That won't do, for if Tige sees the light he will stop barking before we get to him."

And so we stumbled and hurried, and I took my first genuine "header" over a rolling stone and laid low listening to the rattle of the old gun as it fetched up against an oak sapling, and heard the Squire grunt as a fallen limb doubled him with a blow below the belt; but I was up and to the rescue just in time to hear again the fierce bark of Tiger, which sounded just a little to the left, only a few rods further on, when Squire Calvin ordered "less haste," the wind being much taken out of him climbing the steep and rough bluff covered with stones innumerable.

I willingly adopted the new and better tactics, as I too was getting a little short of breath and much heated, the sweat starting freely; but we did not stop, only let up a little; and here we were close to Tiger, as he whined not a rod away. The Squire with saddened words said, "I fear it is all up. That blasted coon has played it on us. He is in that ledge sure." And so it was. There we were standing under its overhanging side and there was Tiger throwing the dirt and gravel over the leaves at a rate that would have done credit to a steam digger. We lighted the lantern and by its dim rays explored the situation. There was the rock, as big as a meeting-house, with a cavern under one side of it which I easily crawled into for several feet; and there were burrows extending from its several sides with no visible means of finding the other end of either of them. After spending a full half hour punching sticks into the one which Tiger claimed contained the coon, and with no better result, we determined to let that coon remain.

The Squire coaxed the dog to follow, and after taking a good look with the aid of the lantern at the big specter-like figures and shadows before us, we blew out the light in the lantern and took steps on our course to the smaller timber below, where we hunted without results for nearly an hour when we concluded to retrace our steps homeward, believing we had scared all the coons out of the woods for the time being, but agreeing to come again at no distant date; and so journeyed on to the horse at the bars, where we had left him.

The Squire being hungry and dry proposed a lunch, which was quickly agreed to and as quickly consummated, thus doing away with that much of the load. Luncheon being over the bars were let down and the Squire mounted the gray and took possession of the lantern and gun, and leading the way started on the road homeward with saddening thoughts that the new combine had utterly failed in their first expedition.

Moving on in sad procession, we had not gone to exceed a quarter of a mile when Tiger quickly left my side where he had been trotting along and bounded over the low, half tumbled down stone wall topped up with a few rails *à la* Virginia, he gave voice which was fast crossing the pasture. The Squire reined up with true military precision, and we both listened with hopes rising to catch the sound of conflict.

"Coon, sure," came from the Squire.

"Ours, sure," said I.

"There!" says the Squire, "that is something like it. That is our coon. No ledges there. Just you trot to the bars at the foot of the next rise and let me through and we will cooper that fellow." My part was quickly done even at the trot.

On the opposite side of this pasture not forty rods from us was a fair-sized brook, which led into a small pond some 200 rods below, but which from long neglect showed only a tumbled down heap of an old stone dam, but it sufficiently stopped the water course to cause 2 or 3ft. of water to cover nearly a quarter of an acre of poor land. In front, and as our course lay, across this brook was a high bank as steep as the roofs of the houses hereabouts, and this bank was covered for a few rods with a thick growth of very tall hemlocks with branches from the ground up-

ward, woven and interwoven to an apparent impenetrable thicket. Into this thicket Tiger had made his way, and was loudly sounding the news at high key; and across the pasture by a footpath we were hurrying along straight to the brook, which we heard murmuring in front of us. Here we hitched the gray and prepared for active service. The campaign had actually opened. The dog, hearing us so near, stopped barking, and we had to wait in silence for several minutes, when again the sound came forth just in front of us and only a short distance in the thicket. Having taken a careful bearing we made a bee line across the brook, and climbed the bank on our hands and knees over the slippery, spongy soil, to where we found Tiger in high spirits, his head pointed up the body of the largest tree near us, his forefeet resting on a limb and his body supported by his hindfeet, which rested in the mud. In this position Tiger exhausted his knowledge of climbing, and the only thing which prevented him from going to the top of that tree before we arrived was the fact that it was a race impossibility, he not being "built that way."

What seemed to us on the road as being dark had suddenly changed to greater darkness among the hemlocks, and a more uncomfortable night for discerning objects could scarcely be selected.

After vain effort to gain any point of observation from the ground, it was decided for me to climb the tree, which I found to be but the work of a few moments, as the limbs were thick on every side of the tree. After getting well up toward the top, where the limbs were surprisingly slender, the Squire concluded to interview me, and lead off with "Hadn't you best cut you a gad to punch him off with? Do you see him? Where is he? Where will he fall?" etc., without giving me breath or time to answer, when by mistake I missed a limb and caused the slender top of the tree to wave, which revealed to my gaze the coveted animal just above my head, and then for the first time I attempted to forward my answers to the Squire's interrogatories.

This being all satisfactory, the Squire said "All right, come down, and we will make a little preparation, and I will provide you with a gad." I did so and received the gad from the Squire, sharpened at one end in the most approved style, together with a fist full of gravel to be dropped at the point where the coon was to land after being punched to my satisfaction with the gad, that Tiger and his master might be in an advantageous position to make his short stay very uncomfortable upon landing on our shore.

With the parting salute from the Squire, "Look well to your footing and don't touch him until you have located Tige and me, and then give it to him," I left the Squire and wound myself and the gad spirally among the branches to my first position near the top of the tree; but not being able to see the animal as before, I ventured a few limbs above, when I managed to get another and a better view of the big black bunch above me and only 8 or 10ft. away, but where the size of the limbs decreased fast.

Upon examination of my footing, I dropped my first pebble to let the Squire know I was all right, and followed it up with a second and third, after which I received assurance all was "in readiness," and I began to critically examine the object above as to what part of his anatomy I should bestow my efforts on, when it suddenly occurred to me that there were several pairs of eyes, and upon further examination I located four eyes, which seemed too many for one coon; and that tail, that is a coon's tail; and now it seems I can see better—yes, there are two tails! Oh yes, that accounts for it—two tails, four eyes; those are two coons. Having unraveled this much I reported to the Squire (after retreating a limb or two to a more secure place), who advised "a careful inspection before beginning, and then if one can be knocked out and leave the other there send him down."

I carefully moved upward to my former position to carry out the wishes of the Squire and if possible secure the two coons; so, selecting the best position at my command, I sought out the weakest point for attack, and to my surprise the number of tails had increased to three, plainly visible with the aid of a very uncertain light. This was "a poser." Having made this discovery, I hesitated about opening so large a pot to one dog, and quietly descended to the ground for further parley with the Squire, who seemed not a little impatient at the slow way I was doing business; but after the situation was fully understood the Squire proposed that we light up the lantern and make ourselves as comfortable as possible and await the coming of daylight, which he calculated would be due in about two to two and one-half hours—if the fog lifted.

"It is like this," he said, "if we should knock two or three coons to the ground at once we would loose some if not all of them; but if we wait until light then we can shoot 'em with prospects of getting all of 'em. At any rate, we can better attend to their cases. Now you just get a dry place and I will hang the lamp on a twig, and Tige and me will put in for a little rest right here."

This counsel prevailed, and after a half hour of rest on a rough stone near the foot of the tree I concluded to make another ascent and see how things were getting on during my absence, as Tiger had already taken his seat at the body of the tree and showed considerable anxiety about things above, and without doubt thinking we were taking things too easy; so, smoothing his noble head, I crawled partly over him and commenced my winding ascent, but when only about one-half way up I heard something scratching along on the darkened side of the tree just above me, and soon by the aid of the reflected light below I was able to see the retreating forms of coons going my way toward the top of the tree, and being able to confirm my previous estimate as to number, and in this order the procession proceeded until we reached about our former position, but finding the limbs quite too small for a comfortable seat, I returned a short distance and perched upon the first respectable-sized limb, and from here reported to the Squire the condition of things, but I did not receive any response. Here, then, I determined to await the coming of light.

To describe either my mental anxiety or my physical suffering as I sat there alone would fill several pages. The only sound that greeted my ears as I was there roosting between coons and earth was the occasional crowing of some comfortable rooster at his home, the barking of some pet dog and the deep and regular snoring of the Squire, who had sprawled himself on as many boughs of the hemlocks as were available to serve as couch to his tired limbs, where sleep had claimed him for a time.

But here my duties were multiplying with my reveries. The family above were anxious to go down, and it became my duty to escort them back to the top of the tree several times, and the intervals of these trips were growing shorter and shorter, until I found it necessary to roost a peg higher, but where the comforts of a good limb had to be dispensed with. At length by presuming a little I fancied it growing a little lighter, and the cocks and the dogs were being heard from in many directions, which, after mature thought and considerable deliberation, induced me to return to the ground and attempt the rather difficult task of awaking the Squire. It was a job—he held on to his part well, but I succeeded in arousing him and gave him my latest experience, which I concluded with a request that we shoot those animals as early as convenient.

The Squire moved but slowly at first, but after hearing about one-half I had said guessed it was best, and proceeded to rub his eyes and kick out sundry cross-cut kinks in his nearly benumbed limbs, when suddenly coming to he revealed the truth, "I declare, I think I fell asleep." Then consulting the bull's-eye watch in his hand by the dim light of the nearly extinct lantern, he declared "it ought to be getting a little light, and we must be on the sharp lookout for our game."

Just here Tiger got excited and tried all sides of the tree and growled, while the Squire put in a fresh candle and opened the door of the lantern, throwing the full rays of one candle power of light up the tree and closely squinting up after it; when for the first time he got a view of the family I had stood guard over for so many anxious moments.

As soon as the light struck them they had hastily commenced an upward movement which was quite familiar to me, and possibly expecting that the Squire would follow them as I had been doing, or possibly somewhat confused, they had mistaken the Squire for me and were afraid of the transformation scene below. At this new experience the Squire continued to kick out the remaining portion of kinks first from one leg and then from the other, remarking by way of accompaniment, "Now you had better go up after that lot, and if light enough you had better take the gun with you, a part of the way at least, and stay by those fellows, for it looks to me as though they wanted to come down (a fact long before known to me), and if you can't keep 'em up, let 'em have it from the gun all in a bunch, and between you, the gun and Tige and me, we stand a good show for some coon meat, but understand, it is only if you fail to keep them up to the top."

This I thought well of, as it would be a prize shot for an amateur to kill three coons at once, and with this idea in my mind I took the run and climbed the tree again, with a firm determination to empty that gun at them if they proved in the least disobedient to my orders to keep quiet; and I speculated as to about the probable distance that charge would land me should I lose my grip on the hemlock, but at no place could I see the animals in good position to carry out my plans under circumstances that would permit me to trust that gun to my shoulder. The limbs were small, the footing bad, the gun too long for the brush; so after due consideration I secured the gun among the limbs, where I left it and climbed above on a tour of inspection, when I found the family safely collected about as high up as it was safe to venture, and while I stood there examining them and speculating on the light and prospects of seeing them from the ground with a view to shooting, one more daring than the rest sprang over my head and went tumbling from limb to limb, while I hallooed to the Squire to look out for him, and speculating if he would knock the old gun out of the tree and who would get killed by it.

Tiger and his master were near where the coon landed, and for a time it was riotous doing; things were mixed up with man, dog and coon, which was revealed to me by sounds of "take 'em," crash, snap, a growl, and a splash in the water of the brook, first of the coon and dog as one, and the man on top.

Taking in the whole situation, my comments were that it was a piece of good generalship on the part of the coon to get to the brook, while I could hear that "take 'em, Tige," growing fainter and further away.

I wanted to be there myself, but this was not my part; I was a home guard and the combine was for a time broken up. Fearing further loss from above, I got the gun and laid low for the remainder of the family; with one arm around the tree and with the gun resting on my shoulder, with one hand only to work the gun, I awaited their coming in fear. I did not have long to wait. They were restless and kept a continuous moving about, and the light had now got strong enough to be able to keep a fair record of their doings, when seeing them both together with heads well up, I calculated it would be my last chance and I poked, instead of being able to sight, the gun as near at them as I could guess. It was not a good fair shot, but it was now or never, so I let it go—fully thirty feet of fire, which for an instant lighted up the top of that tree in royal style, producing a sound that might have been mistaken for a powder mill explosion, and as for me I was busy. I had the biggest job of my life. I had all I could take care of to keep in that tree and not lose the gun; in fact, it become a matter of quick calculation about going along with those coons. I saw them as they passed by me and quite too close for comfort, but my hope rose as I believed I had killed two coons anyway.

I hastened down as quickly as possible to gather them in, which happy event did not come off just then, for after a search of every nook and cover there were no dead coons to be found, and I laid the gun in sadness by the side of the old tin lantern and pronounced them a happy pair, and then slid down the track taken by the Squire to the brook below; then followed the brook to the pond further below, where Tiger and the coon had just landed; the coon in his last agonies and poor Tige about tired out and partially drowned.

Looking around I espied the Squire on the opposite side of the pond hole, where he was emptying his boots and wringing his stockings. Espying me at about the same instant, he invited me to cross the stream below and "bring the coon," all of which directions I carried out. As soon as within talking distance, "What did you kill?" was asked by the Squire, who avowed he saw forty feet of fire come out of the top of the coon tree, and continued, "Tige had a hard time, and he had it all alone most of the time. I could not get to him or be of any service to him, as the coon kept to the brook, where the stones were slippery and where the brook in places was quite deep, and that —— coon was always in the wrong place, and they traveled too fast for me to keep up with them; but when they struck deeper water at the pond that coon did his best to drown Tige"—and turning to the dog (who had just stretched himself at his master's feet) he says to poor, tired Tiger, "He wa'n't coon enough—not that fellow, was he, Tige? No, you good old fellow, I'll bet ten dollars, at odds of two to one, that there ain't a dog except Tige in the township that could have saved that coon." Then, picking up the coon, he proposed to "go back and try for the others," and back we went, leaving one coon in company with the horse, but no other coon could be found; and as we were all well tired it was thought best to go home; but Tiger, who had been nosing around, suddenly started off and was soon at the end of the old dam, where he began barking. I ran down there, to find him trying to get in among a mass of old rocks and logs, which at some time had formed a portion of the old dam. Calling Tiger off from the unpromising venture the combine were soon all gathered about the horse, packing traps for home.

It was now daylight, and with gun, lantern and one coon, the Squire and myself on the little gray, we moved on. A more dilapidated, dirty and mud-covered pair of hunters never set themselves up for public gaze; and it so happened that we were just in time to see all the early risers along the highway, and to be by them seen as well, and it was a great relief to arrive at the Squire's barn, where we felt the exhibition was over.

If I am to be pardoned for telling so much about my first coon hunt I may at some future time tell of subsequent hunts along with the Squire and his faithful Tiger.

SID BROMLEY.

The St. Louis Kennel Club.

THE organization of the St. Louis Kennel Club should give an added impetus to canine interests in the West in particular and to the same interests in general. About fifteen years ago St. Louis was the center of action of the canine interests in the West, and in certain respects it was inferior to none notably in the length and breadth of its practical sportsmanship, it geographically being within easy reach of the great natural game preserves of America. Missouri possessed its own abundance of game and fish, and it was but a few hours' ride to the great chicken grounds of the North, the quail grounds of the South, the wildfowl shooting in every direction. No city is more favorably situated for the healthy enjoyment of sport with rod, dog and gun. While the practical side of sportsmanship had not lessened, there was an apathy concerning the competitive features of the dog world, and the educational advancement of the public at large which comes from public exhibitions and competitions.

The new club is formed on specially sound financial lines, ones worthy of the consideration of other organizations of a similar character. The stock of the club is capitalized at $3,000, divided into 300 shares at $10 each. Ownership of one or more shares constitutes membership, and as the shares are non-forfeitable and non-assessable, it is a much more desirable and satisfactory arrangement than any system of initiation fee and quarterly dues that could have been devised. But a few shares remain untaken. In the membership are the names of gentlemen famous in the financial, social and political world and in the affairs of sportsmanship. Mr. John A. Long, the president, is well known as a breeder and fancier of collies, and many times has been an active participant in bench show matters. Mr. John F. Shepley, vice-president, was more active and conspicuous in promoting the advancement of kennel interests a few years ago than he is at present, business interests requiring his attention, but he is none the less enthusiastic in the cause and an admirer of a good dog. Of the treasurer, the following in a communication to the *St. Louis* gives but a fair presentation of the worth and esteem in which he is held. It says: "The treasurer, J. B. C. Lucas, is the right man in the right place, and his name has done more to inspire confidence than any other that could have been proposed. A friend of the dog in the broadest sense of the term, a sportsman from the top of his head to the soles of his feet, he has done more to increase the membership and further the movement than any man in it. Mr. Lucas has been prominently connected with every association connected with such matters in many years, and his name is a synonym for all that is upright, straightforward and honorable." Loving the sports with rod, dog and gun for their own sake, there never was anything selfish in his enjoyment, for he was ever ready to promote the general good and enjoyment of others. The secretary, Mr. Wm. Hutchison, enthusiastic and capable, has proven himself a hard-working and indefatigable officer in carrying out the ideas of the controlling board. One of the projectors of the movement, he has seen it prosper beyond his most ardent expectations, and no one is better pleased or more in his element than when doing something for his pet project—the St. Louis Kennel Club. The club has not confined its share of action to the mere field of canine improvement and the development of a greater public interest in canine matters. It has been an active factor in game preservation, and by its material and moral aid has done much to make the game warden, Mr. Jesse W. Henry, an active officer instead of a passive one, there being an inadequacy of funds to meet the demands of his office, or in fact to meet even a small fraction of the necessary expenses. The club has been active in securing funds for the necessary expense of the office and courts of prosecution, besides liberal subscriptions by its own membership.

Spaying.

RUTLAND, Vt.—*Editor Forest and Stream:* I shall be very glad if some of your thousand and one correspondents will give in your columns their experience in spaying bitches that have had one or more litters of puppies, and have grown to be four or five years old. I have an exceptionally fine pointer bitch of that age, highly bred (Robert le Diablo—Pomp), well broken and a very good bitch. If it will not destroy her ambition and render her useless, I wish to have her spayed.

Please ask your readers to give their experience, if they have had any in similar cases. If spaying is out of the question, what can be done to shrink the teats to natural size? In this case the teats have been abnormally large since she had her last litter, a year or more ago, and are very unsightly. VERDE MONT.

[In FOREST AND STREAM of July 20 Verde Mont will find several authorities quoted on this subject.]

The Bright and Dark Side.

Mr. S. C. Bradley, secretary of E. F. T. C., is thoroughly in earnest in promoting the success of his club and he has a keen sense of the field trial situation. In a personal letter he touches on field trial matters as follows: "I feel confident that there are many good men in this country who will be glad to join our forces, if they could but realize the pleasures to be derived from a field trial outing. I believe that articles should be published in the sporting press which would present the true sport to be enjoyed at our annual trials, to the end that the public may comprehend the true status of field trial club meetings. So much has been written in the way of spiteful controversy or to air the prejudicial feeling of some cranks that a part of the uninformed public is disposed to believe that the clubs are more or less mismanaged. I hope the time may come when field trials, one of the most innocent and enjoyable of all field sports, will be presented in their true light by the sporting press and also by all who are interested in the work of setters and pointers and in a good outing, so that the public may realize the fact that the clubs are managed and conducted by gentlemen who are of the truest type of sportsmen."

This letter has the right ring of faith and good purpose. It makes public a fault, for nearly all the personal writings concerning field trials have been of the wrangling or denunciatory character, implying that field trials were largely made up of squabbles and bitterness of feeling. Nothing in that respect could be more erroneous. No gathering has so many sincere and cordial greetings, hearty handshakings and genuine welcomes as has the members of a field trial party. No stranger is a stranger long if it be known that he loves a dog, and if he love a dog in a genuine sense he is made much of, for he is introduced and made welcome, and to him is "talked dog" till exhaustion comes. Then there are the horseback rides in the fields and woods; the constant stimulus to interest as heat after heat is begun and ended; famous dogs beating newcomers or newcomers beating famous dogs; the ever varied scenes and combinations; the excitement of competition; the abundance of varying incident to sustain interest—all in a setting of nature's own handiwork, in the luxuriance of the earth's vegetation and rich autumn colors which come but once a year, beautiful and pleasing, and all an adornment to man's more serious diversions afield.

Look at the list of gentlemen whose names recur year after year in connection with field trials, and that of itself will be an assurance of the genuine interest and worth of the field trials. Among such men any real discord would not be tolerated for a moment.

But after the trials are ended there is commonly one or two malcontents whose minds—in their own estimation—contain all the principles of equity and knowledge, all of which, strange to say, are a part of their own selfish personality and have but one interpretation: that is, their own selfish interests. They are no more a part of field trials than a pebble in one's shoe is a part of one's person, though both may be annoying.

New Jersey Kennel League.

At the last meeting of the executive of this club there were present Miles A. Hanchett, president, in the chair; Walter Brown, vice-president (by proxy); Dr. W. F. Seidler, Frank Linck, Carl Brandt and Edwin H. Morris.

The committee on a building for another show for Thanksgiving week reported that, after an attempt to secure every building deemed suitable by the executive, located at Newark or Orange, had to state its inability to secure one.

The meeting was called to consider proposals from members located at Jersey City for a show there, following that of New York next spring.

It was the sense of the meeting that such a show, given by a local committee, should have the support of the club, and the aid of those who gave their time and service in making the Newark event successful was promised.

Communications were received from those interested in great Danes asking the League to use its influence against any attempt to stop cropping in an arbitrary and summary manner.

The following resolution, offered by Frank Linck and seconded by Carl Brandt, was unanimously adopted:

"*Whereas*, This committee, partly composed of German-Americans, representing a large German element, desires to express its sympathy with great Dane breeders and owners, it considers that such radical measures as those proposed will work serious injury to the breed as well as to vested interests. That the initiative in such cases should be taken by the specialty clubs representing the breed and not by any American Kennel Club committee. That the delegate of the club be asked to consider these points and to cast his vote to the best of his judgment."

New members were elected. The treasurer reported a balance in favor of the League.

Edwin H. Morris, Sec'y.

P. K. C. Members' Stake.

The Members' Stake of the Philadelphia Kennel Club was run Dec. 3. Weather was fine, frosty in the morning, warm and pleasant during the day. Birds—same story as everywhere else in North Carolina this winter. Only 4 coveys were found. The dogs were drawn on the ground as follows:

Dr. G. G. Davis's Loo with Murray S. Mitchell's Duly.

J. F. Fleer's Gamester with Mr. G. H. Thomson's Frills.

Murray S. Mitchell's Sandy Gladstone with Francis G. Taylor's Ben Hur, of Riverview.

Mr. Baker's Lou, a bye.

Loo and Duly were cast off at 9:10. Mr. Mitchell had purchased Duly the night before and the dog refused to hunt for him. He would not go out, but ran back to the wagons to find his old master. After ten minutes of unsuccessful attempts to make the dog hunt, Mr. Mitchell asked permission to withdraw him, which was granted. Loo was hunted on alone. She showed good pace and range, very excellent style, and improved very much on her good showing of the day before. After a long hunt for birds she was finally successful, being discovered on a covey point in the edge of pines. She was a trifle unsteady to shot, but stopped readily to command. Up in pines, she pointed three singles well; a bit unsteady again on one of them. She is easily handled, obedient at all times and hunts her ground with judgment. Up at 10:05.

Mr. Fleer, the owner of Gamester, had not yet arrived on the grounds, and to give him time the bye dog was hunted next.

Lou was put down at 10:10. She did not show any very wide range, cutting back a good deal, and waiting to be prompted by her owner. Up in stubbles she pointed where according to report a darky had flushed a covey. Ordered on into woods she pointed; three birds found which she had located badly. She was unsteady to shot. Further on she pointed another single and behaved well. Up at 10:59.

Sandy Gladstone and Ben Hur were the next brace called up, as Mr. Fleer was still absent and remained so. Put down at 11. Both dogs were not in condition to hunt, being altogether too fat. They showed willingness to go and stayed out well, but their pace was inferior. A covey was seen to flush; Sandy out of sight and turned up suspiciously near them. They were marked down further up in pines and the dogs were worked toward them. Ben Hur pointed indifferently, and Sandy, ordered to back, went ahead and sat down among the birds, which had bunched again. They flushed. Nothing further done. Ordered up at 11:40.

Frills was started at 11:43; hunted over a lot of ground without finding birds. She was only moderate in speed and range. Worked toward ground where covey had been found on previous day and no results. Up at 12:25.

The party now went to lunch, after which the judge called up Lou and Loo to run together. A long drive to other grounds and the dogs were put down at 1:30. It was soon evident that the Irish setter had the best of it in every respect. No birds found; ordered up at 1:40. The decision was promptly given declaring Dr. Davis's Loo the winner. Everybody present indorsed the decision.

Dr. Davis is to be congratulated upon having an Irish setter of such first-class quality, and we hope that he may be successful in breeding more like her. This is a great step ahead in Irish setter interests.

Edmund H. Osthaus judged the stake.

Aged Dogs.

Washington.—*Editor Forest and Stream:* Kindly permit a constant reader of Forest and Stream to register a gentle kick against some statements recently made in a New York paper relative to canine longevity. The paper referred to contains the picture of a pampered poodle of Russian origin, and claims for him that "he is the oldest dog in the world." His age is stated at 25 years. That is a venerable age, sure enough; but Washington, the land of huge fish and enormous trees, can equal, if not exceed, the example. Don M. Hewit, of Yelm, Thurston county, this State, has a half hound, alive and well, which was whelped in June, 1870. He was reared by Mr. Walker, an early settler, and has dragged down scores of deer in his eventful life. Eleven unwounded and twenty-six disabled wildcats have fallen victims to his ferocity, and he is carved and seamed by numerous battles with cougar and bear. His feet are deformed and tender from age and rough usage, and he is very deaf. I have mislaid the paper giving the exact age of the antique poodle, and so cannot say positively that he is not older than the veteran Yelm prairie; but my recollection is that there are months at least in favor of the rugged old warrior out on the Nisqually. I found the old hero last month while grouse hunting, and took dinner with the family of his owner. I regret now that a camera did not form part of my *impedimenta*.

Dr. J. A. Beebe.

A. C. B. Stud Book.

Vol. I. of the American Coursing Board Stud Book is an invaluable work to all who are directly or indirectly interested in the greyhound. It contains the names, colors, ages and pedigrees of greyhounds registered therein up to July 1, 1895, and a list of members of the American Coursing Board, constitution and by-laws of the latter, code of running rules, list and officers of coursing clubs; reports of meetings containing list of winners, dividers and runners-up; registrations, re-registrations and changes of ownership; list of owners, breeders and coursers; registration of partnerships and kennels, and names of official judges and slippers. In its mechanical and artistic features the work is most skilfully completed. Address Roger D. Williams, Lexington, Ky.

Gunshyness and Shooting.

Dallas, Tex.—*Editor Forest and Stream:* I have just returned from my annual quail hunt, and must say that I never found birds so plentiful. After getting a bevy scattered, and while working on the singles, I would very often find a new bevy. The birds were well grown and the bevies large, showing that they had been molested but little during their raising. The birds seem to be feeding on small acorns, and I found but few in the farms.

I have a most excellent place to board, about five miles from the railroad, with no small children to annoy me; the cooking was of the very best; as to quail I soon tired of them.

I killed 136 and the neighbors had all they wanted. I expect to go again in January. I had three dogs with me, an English setter of royal blood and two pointers, great-grandsons of Meteor. The setter and one of the pointers were trained and did me good service, but the other pointer was gunshy, and no one but a handler of bird dogs can begin to know how provoking this fault is.

Mr. Editor, did you ever once think how utterly worthless a gunshy dog is? If you have one that will break shot, chase and do other devilment you can manage to have a little shooting and some fun with him, but if he is shy of the gun you are emphatically powerless until he is cured of this the very worst fault a dog can have. I did say once that life was too short and dogs too numerous for one to waste with such a dog and advocated a load of No. 8 shot at short range, but this fellow has so much hunt and energy in him I have concluded to try and break him, provided I can control my temper.

Muzzleloader.

DOGS OF WAR IN THE FRENCH ARMY.

Brunswick Fur Club.

Roxbury, Mass., Dec. 5.—The seventh annual winter meet of the Brunswick Fur Club will be held at Brunswick, Me., during the week of Jan. 13, 1896.

The club headquarters will be at the Tontine Hotel, where a special rate of $1.50 per day will be made to visiting sportsmen.

The annual meeting for the election of officers for the ensuing year and for the transaction of other business will be held on Monday evening.

This is to be a rousing hunting meet, and all fox hunters are cordially invited to be present and to bring their hounds.

Bradford S. Turpin, Sec'y.

National Fox Hunters' Association.

A cold day with a snowstorm threatening was Dec. 2, at Owingsville, Ky., the scene of the National Fox Hunters' Association second meet. The Derby was started notwithstanding the unfavorable weather, a large party of ladies and gentlemen braving the uncomfortable temperature and displaying much enthusiasm. The competition dragged owing to bad weather. Spencer Brothers' Kit (Clark county, Ky.) was one of the winners. Judge J. A. Perry, of Lexington, Ky., was expelled for a violation of the rules, consisting of hunting on forbidden ground, concerning which he avers that the charges are unfounded.

Henmore Shamrock.

Pittsfield, Mass.—*Editor Forest and Stream:* I read with regret the death of my old companion, Henmore Shamrock, in your issue of Dec. 7. Shamrock was imported by me in 1890 and I exhibited him at the principal shows for a number of years, and shot over him on snipe, woodcock and grouse until the fall of '94, when I sold him to Mr. Brown. He was a perfect companion and one of the best all-round fielders I ever saw.

F. L. Cheney.

Information Wanted.

Bay City, Mich.—Will some one who possesses the information please give me, through the columns of Forest and Stream, the address of Mr. C. F. Waterhouse, a dog breaker, who at one time lived in western Massachusetts.

F. J. G.

Setters and Connecticut Shooting.

HARTFORD, Conn.—*Editor Forest and Stream:* One moment, please, and let me tell you that, as I could look ahead and see a day or two of leisure, and always having the inclination, I wrote and made a date with Mr. Pearle, of the Hampton Kennels, for a few days' shooting, and a most enjoyable time was the result. Mr. Pearle, with his accustomed politeness, met me at the depot and with his reliable Pegassus took me quickly to his hospitable home, where the celebrated kennels are located, and after looking over some of the gamest-looking young setters that it has been my fortune to see for a long time, and taking a hasty lunch, started for the field in search of partridge—my favorite bird. Mr. Pearle let out of the kennel a blue belton and a Llewellyn, which, I can assure you, made a splendid showing. They were very industrious, quick and snappy, working apparently for each other and each always backing the other. I never expect to see a prettier working brace. We had a nice tramp over hills and through swales, of which this locality particularly abounds, being on what is known as Hampton Hills, which are said to be the highest hills of the State, and quite noted as a summer resort. Six partridges fell to our guns, and we were fully satisfied with our success; and not the least enjoyable part was to see under what perfect control Mr. Pearle has his dogs. You can hardly hear his orders, they are given so quietly. Mr. E. K. Sperry has been much interested in this kennel from its origin. This year he has put out nearly one hundred northern Missouri quail on a preserve about a mile square which has always been a natural feeding ground for these birds, but the shooters that have stopped at the Hill House had completely destroyed the original stock. Mr. Sperry says that he has tried to restock with the Southern birds, but it has always been a total failure. Mr. Pearle has not shot any of these birds, hoping to get the town restocked again, and at one time this fall he thought that he could start thirty bevies on this preserve. Feed has been kept constantly by them, and the success attained has fully paid all cost and trouble of Messrs. Sperry and Pearle. If there were a few more in the State that would go and do likewise the work of game wardens would fall into insignificance; and I'm not sure but this alone does it. Our tramp the next day was still more enjoyable and eight partridges were bagged. My trip was a very enjoyable one, and I shall not soon forget Mr. Pearle and his six beautiful setters on Hampton's thousand hills, which must have been full of the drumming bird at the opening of the season, for nearly 175 game birds fell to Mr. Pearle's gun alone in the month of October. NIMROD.

New England Beagle Club Futurity Stake.

LINDEN, Mass.—*Editor Forest and Stream:* The following stake will be run in connection with the regular classes at the fourth annual field trials of the New England Beagle Club, 1896:

A futurity stake, open to all beagles, dogs and bitches, 15in. and under in height, whelped on or after Jan. 1, 1895. Conditions are as follows: 50 cents to be paid when 3 months old, 75 cents when 6 months old, $1 when 12 months old, $1.25 when 15 months old, $1.50 when 18 months old and $5 to be paid at the trials the night before the class is run.

The prize money will be divided as follows: 40 per cent. of the entire entry fee to the winner of 1st prize; 25 per cent. of the entire entry fee to the winner of 2d prize; 15 per cent. of the entire entry fee to the winner of 3d prize; 10 per cent. of the entire entry fee to the breeder of the winner. The remaining 10 per cent. to go to the club.

Any nomination sold at any time before the trials the new owner has the privilege of continuing the payments and starting his entry in the trials, the same as if he had made the original entry. All nominations close Jan. 15, 1896. Entry blanks will be mailed to all known beagle breeders and fanciers, but should any be overlooked please address the secretary and same will be forwarded at once. Any information in regard to the above stake will be given with pleasure.

W. S. CLARK, Sec'y N. E. B. C.

POINTS AND FLUSHES.

Mr. W. B. Stafford, the secretary of the Field Trial Champion Association, intended to prepare the conditions of the stake and advertise them soon after his return from the field trials at Newton. This stake will prove a safety valve to the enormous pressure which has been directed toward proving which dogs were really champions during two or three years past in a manner more colloquially known as "the challenge business." Besides determining definitely, so far as a competition can accomplish the result in determining which dog is champion, it will also determine how much good faith there was in the numerous columns of challenges, and cheap circumlocution and streamers of advertising attached to a challenge stuffed with wind and commercial intention.

The second edition of Dr. Wesley Mills's well-known work, "The Dog in Health and in Disease," is recently from the press in a revised and enlarged form. Many new illustrations have been added. The work is divided into two parts, the first entitled "The Dog in Health," which treats of the origin, history and zoölogical position of the dog, classes and uses of the different breeds, and the management and care of the dog in health. The second part, "The Dog in Disease," as the name implies, treats of the different diseases to which the dog is subject and their remedies. The work is neatly bound in cloth and contains 408 pages. Price, $2.25.

It is a pleasure to note that the intermittent spasms of the kennel world, caused by the sayings of Mr. Taylor, "the English judge at New York," are showing signs of ending. Now that the medals, after a delay, have been sent to the Messrs. Woodiwiss, let us hope that the wearisome matter may end. Individuals, the press and America's highest kennel body have thundered because Mr. Taylor spoke. The American Kennel Club appointed a committee "to expose the malicious statements which were made without warrant," and they were officially and officiously exposed some months after the matter had been thoroughly exposed and discussed and in part forgotten. As to what would "warrant" a "malicious statement" is not quite apparent. Moreover, after all the words expended it seems that there are now decided differences of opinion as to whether Mr. Taylor was right or wrong in the main points of his criticisms. As to the more personal features of the discussion, Mr. Taylor was quite as free to express his criticism or disapproval of American men and manners as Americans were free to criticise him or others, and to a certainty Mr. Taylor did not surpass his critics in unfriendly frankness.

We are indebted to Mr. J. L. Winchell for a photograph of Beaufort's Black Prince, of which he says: "It is the last picture taken of him before he sailed for England to his new owner, Mr. W. Norman Higgs, of London. He probably brought a higher price than any mastiff sold in America. He is probably the first American bred dog that England has bought in America for the show bench. He has been shown at the largest shows here for the past five years and was never beaten. He has won the American Mastiff Club's cups and medals nineteen times and besides has won the special as the best non-sporting dog. He has proved himself the greatest sire, and is without doubt the best mastiff ever bred in America or shown on the bench here."

Manager Corrigan, of the Meadowmere Kennels, reports that he has a grand lot of puppies which he intends to exhibit at the coming W. K. C. show next February. Also that last year prize winners are in excellent condition, as are also some recent importations which will make their first appearance at said exhibition. This kennel always makes the W. K. C. exhibition its specialty, and Manager Corrigan informs us he will make a larger number of entries than ever before. As announced last fall the Meadowmere Kennels intend to exhibit at this show only.

In our business columns this week, Mr. H. N. Howell, Lancaster, Pa., offers broken pointer. Mr. E. K. Sperry, New Haven, Conn., offers broken setter. Box 3, Rocky Ridge, Md., offers setter in exchange for spaniels. Fieles & Bro., Christiana, Pa., offer coon, fox and rabbit hounds, and setters and pointers. Oak Grove Kennels, Moodus, Conn., offers setters. Frank Forester Kennels, Warwick, N. Y., will board dogs and offers Chesapeake bitch. Mr. J. W. Churchill, Salem, Mass., offers St. Bernard puppies.

It is a fault in story telling to use so much circumlocution that the point is marred or lost. It is a demerit in a dog to potter and waste time in feeble attempts to point. It is a merit in story telling, as well as in the work of a field dog, to come to the point.

Mr. A. J. Gleason, the well-known field trial handler, formerly of Alma, Kan., is now manager of the Kinloch Kennels, Kinloch, St. Louis county, Mo. He reports the kennels in a flourishing condition, and his own satisfaction at the change from breeding and training as a public business to breeding and training for the pleasure derived in actual sport afield. All Mr. Gleason's many friends will rejoice at his success.

On Nov. 16 the pointer dog Naso of Upton died in England. He was a famous winner in England and at one time attracted the interest of American pointer admirers. Mr. C. H. Beck, his owner, refused to sell him, though having good offers, and he remained in Mr. Beck's possession while he lived.

Yachting.

Practical Yacht Designing.

IT can hardly be said that any pressing need exists of treatises on naval architecture and of its application to the designing of yachts and boats; any deficiency in this direction has long since been made good by the standard works of several well-known writers. For those who can afford the expense of several rather costly works, and the time necessary to their careful study, there is no lack of practical and reliable information; but the inquiries which we constantly receive from the readers of the FOREST AND STREAM prove that there are many to whom, for one reason or another, the existing works, extensive and thorough as they are, must be practically sealed books. There has been for some years a growing demand for a simple treatise on practical yacht designing, presenting the subject in a way that may be readily understood by anyone of ordinary intelligence and possessing a desire to learn and a knowledge of arithmetic.

With the first number of the coming year the FOREST AND STREAM will begin the publication of a series of articles designed to meet this demand, the author being Mr. W. P. Stephens, for the past twelve years in charge of the Yachting and Canoeing Departments of the paper. Mr. Stephens is specially qualified for this task by his long experience as an amateur designer and builder, and as a critical and technical writer on yachting; and by his close intercourse through the FOREST AND STREAM with those for whom the work is specially intended. His personal experience as an amateur designer and builder, dating back to a time when text-books on these subjects were unknown, have shown him what the amateur and the tyro want to know; and his later work at building, designing and writing has fully qualified him to teach what he has learned. His book on "Canoe and Boat Building for Amateurs," though written in 1883, is still recognized as the standard work on small craft; and within its limited scope a thorough text-book of the subject.

The new work will cover a much wider field: the designing of pleasure craft, from canoes and boats up to such sizes of yachts proper as would be likely to engage the attention of the amateur. The same methods will be followed as have proved so successful in "Canoe and Boat Building," the thorough presentation of the leading principles and the elaborate attention to these details, apparently trivial, which are essential to success in any mechanical work.

The opening chapters will deal first with the object of designing—the production of some sort of floating vessel—the means to this end, from the first consideration of the conditions of the particular case to the turning over to the builder of the drawings, specifications and tables of offsets. The many intermediate steps will be treated of in detail, the first considerations, the selection of the class, the principal dimensions and the elements of the design, the tools, materials and work of drawing, the calculations and the specifications. The articles will be fully illustrated, and will continue through the year to such a length as the subject demands.

THE work of the special committee thus far is most satisfactory, as it has enlisted the services of two capable and impartial men outside of the club, making a committee of five; and has taken active steps toward an investigation which promises to be thorough and convincing. The exact nature of Lord Dunraven's original complaint on the morning of Sept. 7, and of its treatment by the committee, will certainly be disclosed; and, so far as the defense goes, it is not yet too late to produce the testimony of everyone connected with Defender and Hattie Palmer. What evidence Lord Dunraven will present cannot yet be conjectured. It would have been a most difficult matter even on the instant to have proved other than by actual measurement that Defender was below her lines, and it will be still more difficult at this length of time. But all this has doubtless been considered by him, or should have been, in reopening the matter.

Whether Lord Dunraven's presentation of his case be strong or weak, and whether or no he may be able to show that his original complaint was not properly acted on by the Cup committee, we have no doubt that the defense will be able to present proof that from its very volume must be conclusive to all fair and impartial yachtsmen that no changes were made in Defender's ballast.

NOT a few of the American papers have been unjust to Lord Dunraven in decrying his offer to visit New York as a piece of bluff, and announcing that he had from the first no intention of placing himself on the wrong side of the Atlantic to reiterate his charges. It now appears that this imputation of cowardice was undeserved, and that in spite of bluster and threats of horsewhipping and similar condign punishment, Lord Dunraven will sail this week for New York.

Lord Dunraven's Charges.

THE special committee of the New York Y. C., appointed to investigate the charges made by Lord Dunraven, have made public a statement of their work thus far, as follows:

At the meeting of the New York Y. C., held on Monday evening, Nov. 18, a special committee was appointed, consisting of Messrs. J. Pierpont Morgan, William C. Whitney and George L. Rives, to whom was referred the matter of Lord Dunraven's charges. The following letter from Mr. H. Maitland Kersey to the commodore of the New York Y. C. was read at the meeting:

"NEW YORK, Oct. 18.

"*Dear Commodore Brown:*

"I understand that a motion may be made at the meeting of the N. Y. Y. C. this evening to appoint a committee of the club to look into the matter of measurement referred to by Lord Dunraven in his letter to the Cup committee of Sept. 7 last, and subsequently.

"I have a cable from Lord Dunraven to-day saying that while he thinks it is now too late to investigate, if the desire exists among the members of the club to do so, he will come over here and place himself at the disposal of the club or its committee. He says that he would not be able to get away before the 4th prox.

"Will you kindly inform either the club or the committee as you may think desirable, and oblige, yours sincerely,

"H. MAITLAND KERSEY."

The committee, upon careful consideration of the subject referred to them, decided to send the following communications to Mr. Kersey and to the secretary of the Royal Yacht Squadron:

"NEW YORK, Nov. 23.

"*H. Maitland Kersey, Esq.:*

"DEAR SIR—Your letter of the 18th inst., addressed to Com. Brown, was laid by him before the meeting of the New York Y. C. held the same evening. At the same meeting the undersigned were appointed a committee to represent the club in the matter of the charges purporting to have been made by the Earl of Dunraven.

"We have to request that, in accordance with the offer contained in your letter, you will communicate with Lord Dunraven and inform him that it is the desire of the N. Y. Y. C. and our intention to begin immediately an investigation of the facts connected with the race of Sept. 7 and the charges made against the representatives of the yacht club.

"We will be prepared to enter upon this investigation immediately upon the arrival of Lord Dunraven, of the probable date of which we would be glad to be advised. Faithfully yours,

"J. PIERPONT MORGAN,
"W. C. WHITNEY,
"G. L. RIVES."

"NEW YORK, Nov. 23.

"*Richard Grant, Esq., Sec'y Royal Yacht Squadron, Cowes:*

"SIR—At a special meeting of the New York Y. C., held on Monday, Nov. 18, the undersigned were appointed a committee to represent the club in the matter of certain charges made by the Earl of Dunraven in reference to the recent America's Cup races, and published in the London *Field* of Nov. 9, 1895. The resolution appointing us is as follows:

"*Whereas*, The London *Field* has lately made public certain charges purporting to have been made by the Earl of Dunraven in reference to the recent America Cup races, sailed under the challenge of the Royal Yacht Squadron, and

"*Whereas*, This club is of opinion that notwithstanding the extraordinary conduct of the Earl of Dunraven in respect to the time and manner of making such charges, it is due to its honor and dignity that suitable action should be taken in relation thereto;

"*Resolved*, That Messrs. J. Pierpont Morgan, William C. Whitney and George L. Rives are hereby appointed a committee, with power, in their discretion, to add to their number, to whom the matter of said charges is hereby referred; and that said committee shall have full power to represent this club in reference to the matter, and to take, on behalf of the club, and in its name, any action which may seem to them proper in the premises.

"The article in question expressly charges that after being measured for the Cup races in September last, the yacht Defender was surreptitiously loaded so as to sink her 4in. deeper in the water; that she sailed in this condition on the first day's race, and that immediately after that race the ballast so loaded was secretly removed, so that when measured the next day—Sunday—no discrepency was found to exist between the two measurements. While Lord Dunraven intimates that the owners of the yacht were not personally cognizant of the fraud, the charge is none the less explicit.

"It appears from Lord Dunraven's article that this statement, as published in the *Field*, is 'mainly extracted' from a letter which he sent to the secretary of the Royal Yacht Squadron on Sept. 24 last. We therefore beg to inquire whether the charges last mentioned have been laid before the Royal Yacht Squadron, and whether any and what action has been taken by the squadron upon the subject.

"In view of the grave imputations thus made by the representative of the Royal Yacht Squadron in an international race between the two great yacht clubs, the New York Yacht Club feels that the most searching and complete investigation of the facts and of the charges against the representatives of the New York Yacht Club should be promptly begun. It is our purpose to conduct such investigation so as to satisfy every fair minded man on either side of the Atlantic, and to that end we have already communicated with the Earl of Dunraven and requested his presence in accordance with the offer made by him.

"The result of the investigation, with all testimony taken, will be transmitted to you.

"J. PIERPONT MORGAN,
"W. C. WHITNEY,
"G. L. RIVES."

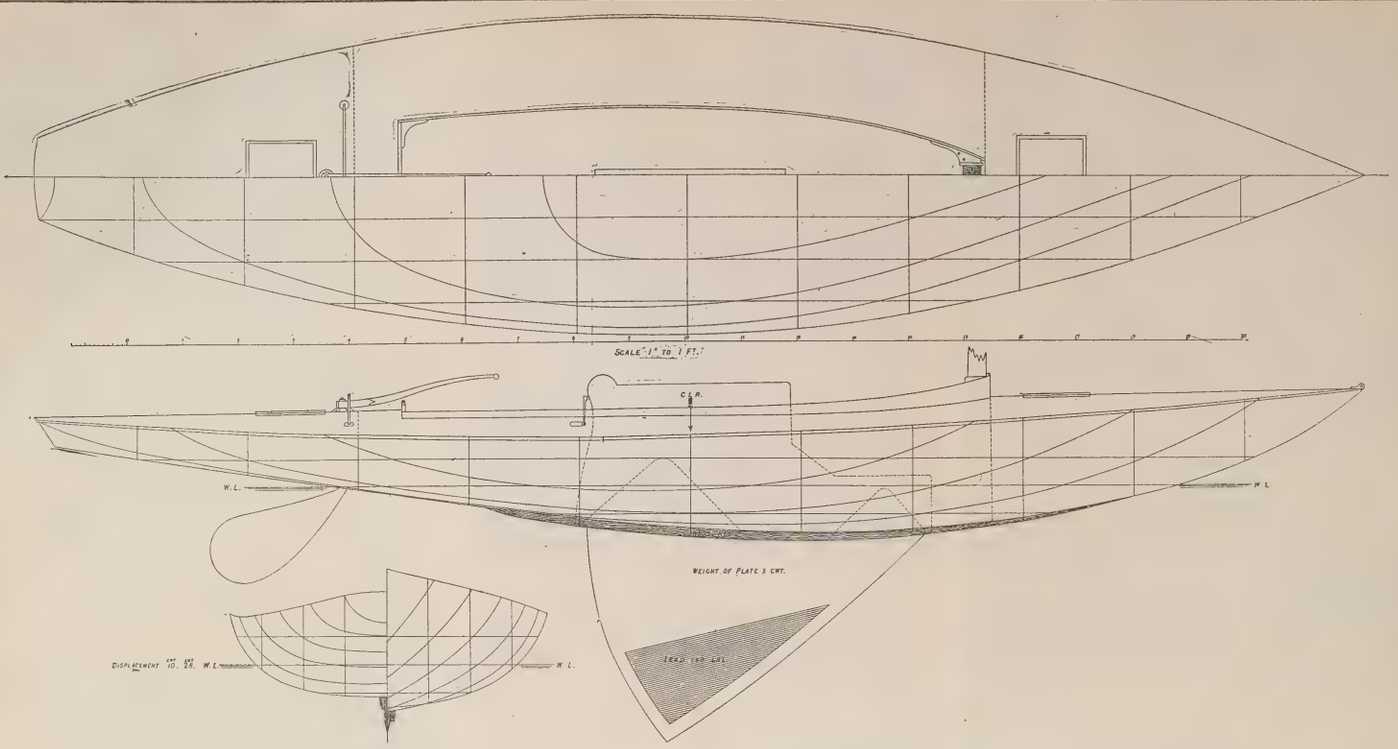
On Tuesday, Dec. 3, the committee received the following cable from Mr. Grant:

"LONDON, Dec. 3.

"Committee thank you for your cable. Squadron has taken and can take no action, it being purely a personal matter. Lord Dunraven does not request the Squadron to interfere. Am writing. GRANT."

On the following day the committee received through Mr. Kersey two messages from Lord Dunraven, sent by cable, and dated respectively Dec. 3 and 4.

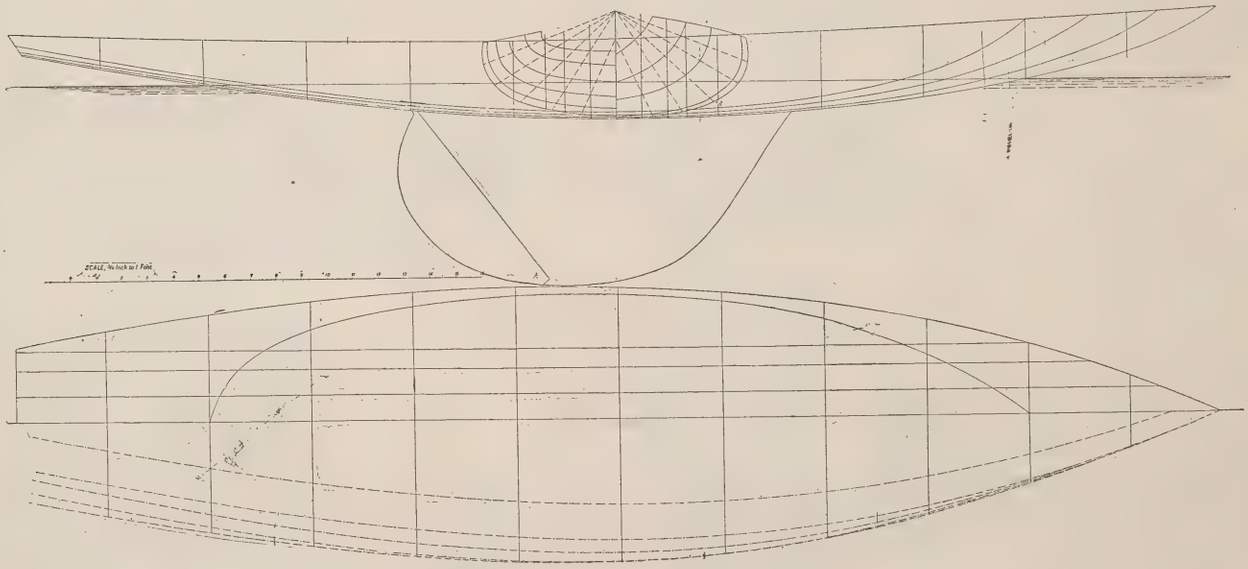
The first of these messages was as follows:



"Kindly inform committee I will sail at the earliest possible moment—7th or 8th, probably former. Regret delay, but must have statements of skippers, etc., now scattered."

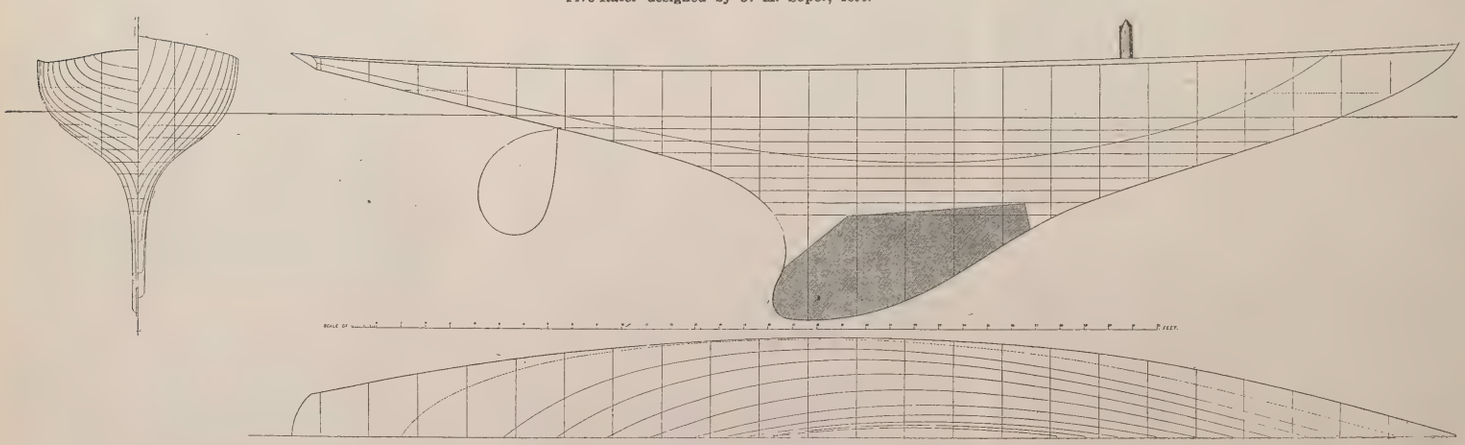
The second message read thus:

"Shall come by Germanic 11th certain. Kindly inform committees."



The committee, after receiving the foregoing replies from Lord Dunraven and the secretary of the Royal Yacht Squadron, decided to add to their number, as they had power to do, and they have accordingly invited Hon. E. J. Phelps, late United States Minister in England, and Capt. A. T. Mahan, U. S. N., to act with them. Both of these gentlemen have consented to serve.

The two members of the committee, though not yachtsmen, are valuable additions in that they are men of high standing and both particularly well known and esteemed abroad. Mr. Phelps, a man of about 70 years of age, has been Minister to England and one of the United States Commissioners on the Behring Sea Arbitration; and is Professor of International Law at Yale College. Capt. Mahan, of the United States Navy, has recently won a very high position as an expert in naval matters through his book "Sea Power in History" and other writings.



RAGAMUFFIN III.

Half-Rater designed and built by H. C. Smith, 1894.

FLATFISH.

Five-Rater designed by J. M. Soper, 1894.

DACIA.

Five-Rater designed by Chas. E. Nicholson, 1892.

Yacht and Boat Sailing.

EIGHTH EDITION.

Mr. Dixon Kemp's standard work, "Yacht and Boat Sailing," has been so long before the yachting public that its merits are known to all, and in reviewing the eighth edition, just published, it is necessary only to mention the numerous additions to the collection of designs. The general text of the book, though revised and amended in places, is practically the same as in the later of the preceding editions; in fact, the chapters on the selection, examination, building and equipment of a yacht, the management of open boats and decked yachts, the rules of racing and the practical work of yacht racing, have long since reached a point where little further improvement was possible. The number of plates (in addition to the numerous illustrations in the text) has been increased from 100 in the last edition to 124; and as many of the older plates have of necessity been omitted, there is a large and valuable addition of new material. The book is particularly interesting at the present time as showing the latest developments of yacht racing under the rating rule which has just expired (1887 to 1895); large drawings of some of the most noted of the smaller racers being given. Among the many new designs are the Thames 1-raters Sorceress, Mirage, Challenge and Holly; Mona, .85-rating; and the ½-raters Ragamuffin III. and Baby; the Watson boat Vida and the Fife boat Hatasoo; the Clyde and Thames "one-design" boats by Linton Hope; and the Solent yachts Dacia, Flatfish, Papoose, Maharanee, Gaiety Girl and Worry-Worry. The single-hand cruisers are well represented by Scourge, Capt. H. E. Bayly; Dorothy, Linton Hope; and Aere Perennius, designed by John C. Enberg, the winner of the first prize at the model competition of the London Sailing Club competition of 1895. Among the bulb fins is Virginia, 2½-rater, designed by Mr. Kemp last spring. The chapters on steam yachting and canoeing have been extended and brought down to date; though as a matter of fact canoeing presents little that is at all new.

We reproduce on a greatly reduced scale three of the more interesting of the plates—Ragamuffin III., a successful ½-rater and opponent of the different Spruces; Dacia, Mr. Charles Nicholson's very successful 5-rater, and Flatfish, the curious craft designed by Mr. Soper for the same class.

The one criticism that suggests itself is that the book, owing to the large size and great number of the plates, is very unwieldy and difficult to handle, especially in consulting and studying the larger plates.

The earlier editions of "Yacht and Boat Sailing," of ten or twelve years since, treated largely of types of yachts little known or used in this country; the recent changes in design, however, have brought the yachts of the two nations so closely together that nearly all of the examples in the latest edition are of immediate interest to American readers, who will find much to repay them in a study of the book.

New York Y. C. Prizes.

THE list of winners in the 1895 cruise of the New York Y. C. is as follows:

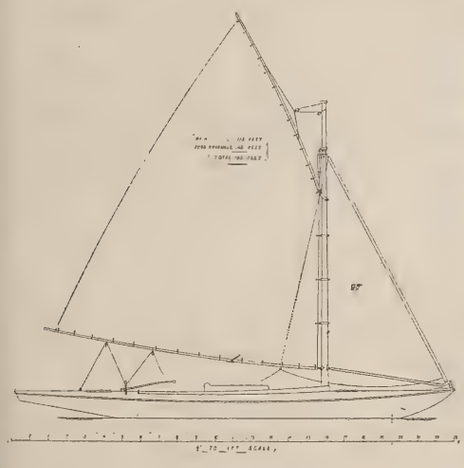
There were six squadron runs during the cruise, and prizes were given in each class of schooners and cutters:

SCHOONERS.

	First.	Second.	Value.
Constellation	5	1	$1.000
Ariel	5	5	1,000
Nesera	4	9	800
Lasca	3	1	700
Alcma	2	2	600
Ramona	1	3	500
Volunteer	1	0	200
Shamrock	0	1	300
Fortuna	0	1	100
Dauntless	0	1	100
Atlantic	0	1	100
Emerald	0	1	100
Mayflower	0	1	100
Dagmar	0	1	100

CUTTERS.

Queen Mab	5	0	1,000
Wasp	4	1	900
Huron	3	3	800
Katrina	3	1	700
Vigilant	2	0	400
Eclipse	2	0	400
Harpoon	1	0	200
Jessica	1	0	200
Hildegarde	1	0	200
Mariquita	1	0	200
Uvira	0	2	200
Total			$11,100



Practically Non-Capsizable?

Editor Forest and Stream:

Some time since I had occasion in the columns of the *Rudder* to hold a friendly dispute with Mr. Clapham concerning the merits of the cutter type of yacht as against the shallow centerboard boat, which he advocates and uses. In your issue of Nov. 30 is an article contributed by Mr. Clapham on the one particular point of argument between us at that time—the ability of the shallow boat to avoid capsize.

In his article in the *Rudder*, if my recollection serves me, he claimed that his boats were practically non-capsizable. He now claims absolute safety on that score.

It is not my intention to quibble over words, but to learn, if possible, exactly what is meant when the word absolute is used. For instance, a cutter may be laid flat on the water by a sudden squall, but she will right herself immediately she is relieved of the pressure of the

RAGAMUFFIN II.

wind; in other words, she is, I consider, absolutely safe from capsize, and all owing to her form and the disposition of her ballast, peculiar to the cutter or deep keel type of yacht.

Not many years ago a catboat capsized in Newport Harbor, drowning a lady passenger. The boat, it was stated at the time, was in the hands of an experienced boatman, and, like most Eastern cats, was considered an able and practically safe boat; but she capsized.

The schooner Sarah Craig, a typical centerboard coasting schooner, was capsized in New York Bay and a party of ladies lost.

A properly designed and ballasted cutter cannot be capsized by the motion of wind or wave. Can Mr. Clapham claim as much for his boat? If so, how does he do it? W. D. STRYKER.

The Boston Knockabouts.

THE following rule for measuring sail has just been adopted by the Knockabout Association, of Boston:

"The actual sail area shall be not over 500sq. ft., 400sq. ft. of which shall be in the mainsail. The inspector shall be provided with a correct sail plan of any boat to be measured, and previous to measurement the owner shall cause distinguishing marks satisfactory to the inspector to be placed on the spars, as follows:

"On the mast at the tack and at the throat of the mainsail, on the boom at the clew of the mainsail, on the gaff at the peak of the mainsail. No part of the mainsail shall be allowed to extend beyond these marks.

"The marks shall be black bands painted around the spars in a manner satisfactory to the inspector. The lower and inner edges of the bands shall be the limits of the sail (mainsail). The area of the jib shall be considered to be the area of the forward triangle, viz., the product of one-half the distance from the attachment of the tack on the stem or stay to the forward side of mast, multiplied by the distance from the deck to the throat mark.

"Knockabout boats already launched, and whose sail plans comply with the old rule, shall not be obliged to change their sail plans to conform to the new rule."

This rule apparently removes the cause of complaint noted by a correspondent in the FOREST AND STREAM of July 20, and is much more equitable than the old. The Association will henceforth admit as members owners of knockabouts which do not conform to the rule.

American Model Y. C.

AT the regular meeting of the American Model Y. C., held Dec. 6 at 227 Fulton st., Brooklyn, considerable important business was transacted, Com. J. H. Lane presiding.

The prizes won by Lizzie, schooner, Katie S., first-class sloop, and Dolphin, third-class sloop, in the races of Nov. 5, were presented to their respective owners.

The fact that the club will have a permanent salt-water station next season, and the building of a model house, has proved a factor in augmenting the membership. No less than nine applicants were admitted at the previous meeting in November and three at this meeting, including one honorary member, making a membership to date of sixty-one, all told, with sixty-two model yachts on the list.

Yacht designer A. Cary Smith was proposed by Frank Nichols and seconded by the Commodore, and was elected unanimously an honorary member amid great enthusiasm.

Mr. Smith is a believer in model yachting on a scientific basis and has always upheld the sport, a fact which has been duly appreciated by all model yachtsmen.

Mr. Geo. W. Townley was instructed by the club to complete the plans and specifications for the new house at the salt-water station at once.

The opening of next season will mark an era in the history of the club.

"One Design" 15-Footers.

From the Boston Globe.

INTERESTING racing is promised in the half-rater or 15ft. sailing length class in and around Boston next season. The Cohasset Club's lead in building a dozen boats for the class has stirred up several other clubs, and the Winthrop is already in line for a number of boats on the same general plan as that adopted by the South Shore Club. The boats will be built from one design, and will be selected by lot when completed, so that no owner will have any advantage at the start over another. The Winthrop members who have agreed to build are: Com. George T. Leighton, ex-Com. E. A. Cook, ex-Com. Charles A. Hovey, W. H. Stimpson, W. A. Mirick and A. W. Chesterton. Other members are expected to join them, and they are also hoping that other clubs will follow in the same line.

Although the boats are small ones they hold possibilities of skill in handling and excitement in sailing which many a larger class fails to present, and as they are comparatively inexpensive to build, a yachtsman can have one without disposing of a boat which he may have on hand. In fact, the Cohasset Club members going into the class will retain all their present boats, but will do their racing in the new ones. The present boats in the club are of such different types and sizes as to make racing decidedly uninteresting, and the new class has been adopted mainly to secure sport which would otherwise be lacking. If the "one design" idea proves a success it may be that a larger class will follow it in a season or two.

If enough boats are built in several clubs to give promise of general sport in the class the Massachusetts Yacht Racing Association will undoubtedly take the matter in hand and add a special class to its present list, so that a uniform measurement may be had. The rule under which the boats are "half-raters" is the English rule of multiplying the waterline by the sail area and dividing the product by 6,000. With 15ft. waterline and 200sq.ft. of sail the result is .5, or half of one of the "sail tons," in which the measurement or rating of the larger boats is expressed.

The Cohasset boats are from a design by W. P. Stephens, and are 15ft. 4in. waterline, 21ft. 4in. over all, 4ft. 9in. beam and 8ft. draft of hull. They will have a "dagger" centerboard 5ft. long and 21in. wide, which can be dropped perpendicularly, so as to utilize practically all its length. The board will be a galvanized steel plate, one-quarter of an inch thick and weighing about 110lbs. It can be easily and quickly raised by a tackle leading from its forward upper corner to just abaft the mast, and back into the cockpit, while the rounding off of the after upper corner gives more room in the cockpit itself.

The cockpit is watertight, with solid bulkheads fore and aft, and a floor 3in. above the waterline. The top of the centerboard box is flush with floor of the cockpit, so that water which may be shipped will readily drain off through the slot. With watertight compartments fore and aft, the boats are practically non-sinkable, and may be easily righted if capsized. Only about 350lbs. of inside ballast will be carried.

The sail area will be 200sq. ft., of which 160ft. will be in the mainsail and 40 in the jib. It was originally intended to use a "leg-of-mutton" sail, but because of difficulties in balance and reefing the ordinary gaffsail has finally been adopted. The sail will be 15ft. on the boom and 9 on the head, and will have 10ft. hoist. The jib will be 6½ft. on the foot

A balanced metal rudder without a "skag" will be used and the steering will be so easy that only a short tiller is required.

Strength and lightness will be combined in the construction, as special study in this direction has been made by the designer. The keel and keelson are of oak, and the frames are of the same wood, ¾×¾in., except at the mast partners, where they are ¾×1¼. The planking is ⅝in. cedar and the deck is of pine of the same thickness, finished bright. The covering boards are of bard pine and the washboards of oak. Brass screws are used for most of the fastenings.

The cockpit is 6ft. long between the bulkheads, but the washboards extend forward and aft on the deck to a total length of 8½ft., and this gives a chance for small hatches to both the forward and aft compartments inside the washboards.

James McIntyre is building the boats in his new shop in Neponset, and has adopted a method which insures absolute uniformity. Each boat is built bottom upward on a form, with moulds fixed firmly to the shop floor. The bulkheads and a couple of frames forward and aft preserve the shape when the boat is taken from the form, and the remaining frames are then put in place, the fastening completed and the deck and cockpit fittings put on.

A saving of time and labor is effected by this method of building, and two dozen boats can be turned out just as readily as one. One of the boats is already off the form and is being framed, while the bulkheads and keel of a second one are in place.

In model the boats show a round yet easy bilge, with some dead rise in the floor and very easy lines in both the bow and run. The bow frames are more on the V than the U shape, and give a fine entrance and an even sweep aft to the body. The bow is suggestive of that of the Pilgrim, which was confessedly a handsome and useful one in spite of the non-success of the design as a whole.

The boats will be sailed without time allowance, and can carry a crew of two men.

These boats are building from the designs and specifications of the "Scarecrow," as published in the FOREST AND STREAM.

YACHTING NEWS NOTES.

To those who, now that the sailing season is over, wish to renew their memories of past cruises as they sit beside a cheery fire, we can recommend a little book entitled "By Ocean, Firth and Channel," published by *The Yachtsman*, London. The author, Diagonal White, tells in a pleasing vein of various cruises in a 21ft. (afterward lengthened to 23ft.) cutter on the Scotch and Irish coasts. Beside the story of the cruises, which is in itself very interesting, the writer discusses many points relating to small yachts, their fittings, and single-hand or two-man sailing. The book is well illustrated with numerous photo-gravures and engravings. In one of the photos is shown the catboat Una (not Truant), built in 1852 by Capt. Bob Fish, at Pamrapo, N. J., and taken to England in the following year by the late Lord Conyngham. The boat is still afloat at Lord de Ros's country seat, Strangford Lough, Ireland.

"Boat Sailing in Fair Weather and Foul," is the title of a neat little volume by Capt. A. J. Kenealy, published by the Outing Pub. Co., New York. The book is largely a compilation from larger works, and we recognize many old acquaintances among the illustrations, but it is well written and likely to be of considerable service to the young boat sailor. It is thoroghly practical, and the advice which it gives is good.

The large steam yacht designed by Lewis Nixon for P. A. Widener, of Philadelphia, is now well advanced at the Crescent Shipyard, Elizabethport, the frames being all up except at the fore end, the stem not being ready, while about half of the plating is on. The yacht will be 225ft. over all, 183ft. l.w.l., 28ft. beam, 16ft. depth of hold and 11ft. 6in. draft. She will have a single screw, with engines by John Sullivan, of New York, cylinders 18, 28 and 42 by 28in. There will be a house 137ft. long, from the foremast aft. She will be schooner-rigged. The keel has been laid on the adjoining ways for a large double-deck ferry boat for the Pennsylvania R. R., and the keel blocks are in place for the gunboat which Mr. Nixon will build for the Government.

The Racine Boat Co., of Racine, Wis., is now at work on a steam yacht of novel design for F. W. Morgan, of Chicago. She will be 130ft. over all, 140ft. l.w.l., 18ft. 3in. beam at deck, 17ft. 4in. beam at waterline. As the dimensions indicate, she will have a ram bow and a stern like a torpedo boat; in fact, she is designed, in model and construction, so as to be convertible in a very little time into a war vessel. Her engines will be 13, 19, 20 and 20 by 15in., with a wheel 5ft. 6in. in diameter, and a speed of 18 miles. The firm has lately secured the services of T. S. Poekel, for some years head draftsman for the Hereshoff Mfg. Co.

White Ladye, steam yacht, has been re-chartered for the winter by Ogden Goelet, and is in dock at White's yard, Cowes, for a half time survey. She and Queen Mab, J. F. Lord, will visit the Mediterranean.

Mr. Charles Francis Adams, 2d, owner, with his brother, of Pappoose, Baboon, Gossoon, Harpoon and Rooster, has just been elected Mayor of Quincy, Mass. Messrs. Adams will sail next year a 15-footer designed by Arthur Binney.

Capt. Irving R. Titus, in the employ of H. M. Flagler, left New York on Oct. 30 with the naphtha launch Wake and the catboat Madeline, reaching St. Augustine on Nov. 27, and off the port was caught in a N. E. storm, the catboat losing her mast and going ashore on North Beach, whence she was finally hauled, with little damage. The naphtha launch was anchored outside the breakers, the captain and crew swimming ashore, but during the night the launch was swamped and wrecked.

Alice, yawl, has been sold by Conyers C. Converse to W. M. Wilson, of New York, who will spend the winter on her in Florida with his family.

Coronet, schr., has lately been completely overhauled and has sailed from New York to San Francisco, where she will take on board a party and proceed to the Island of Yezo, Japan, the purpose being to observe the total eclipse of the sun on Aug. 9, 1896. Capt. Crosby is still in command.

On Dec. 1 Mr. W. E. Elsworth and his two companions were compelled to abandon the yawl Mary at sea, 27 miles southeast of Georgetown, S. C., being taken off by the coasting schooner Nellie W. Howett, Capt. Steelman, from Charleston for Norfolk, and landed at the latter port.

Canoeing.

The Limit of Drop to the Centerboard.

WE were in hopes that the letter of Cimex, in the FOREST AND STREAM of Nov. 30, might bring out some expression of opinion, pro or con, from the many canoeists who are presumably interested in all important changes of the rules; but thus far we have heard nothing. In our opinion the proposed change is an excellent one, and should have been made long ago. That it is proposed now is not so much in the hopes that it will revive an interest in racing as in that it will remove an obvious incongruity from the rules and permit canoeists to use a form of centerboard that is peculiarly applicable to the canoe.

The limit of 18in. drop is the sole survivor of several wholesome restrictions on the centerboard devised many years ago by the Royal C. C. with the idea of preserving living and sleeping room within the canoe for her crew, and a shipshape and sailorlike arrangement of fittings. Under these limits the centerboard was made to house above the keel and below the deck; it was of not over 60lbs. weight and it dropped but 18in. below the keel. These restrictions were used as the basis of the racing rules of the American Canoe Association in 1881, their framers having the same old-fashioned and—as has since been proved—entirely erroneous ideas of what a canoe should be.

At first the centerboard restrictions were selected by all canoeists, but as racing became keener and men gave up the general use of their canoes for canoeing, the centerboard was moved to the middle of the well, leaving no room for sleeping or even for sitting below in paddling, and then the "circular saw" centerboard, projecting 1ft. or more above the coaming when raised, was introduced about 1888. Next came the very long centerboard, caused by the retention of the limit of drop, with the trunk occupying and cutting through the whole middle portion of the canoe, as in the present craft

As soon as the centerboard was allowed to extend above the deck when raised, so far in some cases that the boom would not swing over it, the necessity for the limit of drop disappeared, and this restriction might well have been dropped from the rules in 1890. As long as the centerboard was allowed to dominate the entire design, to monopolize all the useful space in the canoe, to be heavy, unwieldy to handle and transport, and of expensive construction, as has long been the case, it might with perfect propriety have been allowed, when racing in deep water, to drop to its full extent.

The policy of the American Canoe Association has for many years been to let bad enough alone in order to see how much worse it may become, by which time "vested interests" are too strong to admit of a change. Even yet this policy in a measure prevails, as instanced in the proposal to limit sail within placing some minimum limit on the hull. It requires no special keenness of discernment to understand that the natural result of limiting sail alone on the present canoes will be to produce a new class of "Peewsie," of still smaller body, and quite as cranky and uncomfortable to sail with 130ft., still a large limit, as the present Vesper canoes, of big body, with 180ft. It is unlikely, in the present state of canoe racing, that any new canoes will be built for the reduced sail plan, but if they are, they will probably be so cut away as to be no better suited for the novice and non-athlete than the old craft with 180ft.

We have for many years advocated a complete revision of the portion of the rules relating to the centerboard, with a view to keeping the trunk in a position where it would still leave some room in the well; and of limiting it to a reasonable size and weight, both for convenience of transportation and to keep the canoe what we believe it should be—a wholesome and shipshape craft, with the board completely housed when not in use. Had canoeists been willing to accept such restrictions and to develop the canoe on these lines, the racer, with its bucket well and long slide, would still have kept close company with the all-round canoe instead of being of a totally different type; and the great gulf that now separates the two would never have existed. It is quite possible that the forward position of the board and the form of rig which it would have called for would have resulted in a small loss of absolute speed; but the total separation of racing canoes and cruising or all-round canoes, and of racing men and general canoeists, would never have taken place. We believe that there is ample ingenuity and invention among canoeists to produce a centerboard that shall leave a good part of the well unobstructed and shall house completely within the trunk, and yet be effective to windward. The problem, important as it was to the healthy growth of canoeing, was deliberately shirked by canoeists, who preferred the easier way of placing a big centerboard directly in the center of the well. Such abominations as a centerboard that could not be raised after the sliding seat was once fastened in place, thus making it virtually a fixed keel, should long ago have been suppressed by regatta committes or by alteration of the rules.

The arguments of our correspondent are hardly convincing. For years racing men, whether they wished or not, have been compelled to go to fresh expense each year for larger sails, larger boards, longer deck seats, and various complicated and expensive fittings; and yet no objection has been made to this course of more than doubtful improvement that has killed canoe racing. The expense involved by the removal of the limit of drop is by no means heavy: in many cases the old centerboards can be used, the gear being slightly changed to allow them to drop deeper; in fact, cases have been known under the rule where boards were fitted to drop far beyond the limit and were used so except in races under A. C. A. rules. An entirely new centerboard of Tobin bronze, the favorite material, is a matter of $10 to $15 at most, and it is more than likely that the effectiveness of the canoes to windward will be greatly increased. There are certain limitations, for instance, to length, breadth and weight, which might with advantage be placed upon the centerboard when the limit of drop is finally removed, as we hope it will be; but we have little expectation that the matter will be considered, as it should be, by all who are interested in canoeing; or that it will be handled as deliberately and intelligently as it deserves.

CANOEING NEWS NOTES.

The year book of the Humber Yawl Club for 1895 is rather larger than the preceding numbers, and quite as liberally illustrated. Among the designs is one for a genuine centerboard canoe-yawl, designed by Albert Strange for Henry Hayes, and built by James Frank, of Scarborough. She is 19ft. 3in. over all, 18ft. 6in. l.w.l., 5ft. 9in. beam, 1ft. 7in. draft without board, iron keel 675lbs., iron centerboard 90lbs., mainsail 185sq. ft., mizen 35sq. ft. The centerboard is well forward and there is a wide sliding hatch, forming a small cabin or cuddy. The boat has a very nice form, by no means as tubby as many canoe-yawls. We notice with regret that even this club of cruisers is wavering in the faith, as shown in the design of a steam launch, which certainly cannot be called a canoe-yawl; and also of Arline, a racing nondescript by H. C. Smith, builder of Spruce IV., a racing craft that has nothing in common with such yawls as Cherub. The club has now a membership of fifty-four and a fleet of fifty-six canoe-yawls, canoes and other small craft.

The New York C. C. has nominated the following officers for 1896 the election being on Dec. 12: Pres., C. Bowyer Vaux; Sec'y, John C Mowbray; Purser, Woolsey Carmalt; Captain, H. C. Ward; Mate, John E. Plummer; Trustees, Louis L. Coudert, Frank C. Moore, L. J. Boury. The club is now discussing a one-design class of 15ft. racing length, the boats to be of inexpensive construction, somewhat after the skipjack model. If arrangements can be made to build at a moderate price some ten or a dozen boats will be ordered in the club. The past season has been a very successful one in that the club has found satisfactory quarters and kept its members together; and it starts the new year with good prospects of permanent recovery from the serious losses incurred by the damage to its floating house.

Chas. H. Wilbur, formerly with the St. Lawrence River S. C. & S. L. Co., and in charge of their repair shop at Croton Point meet, has started a shop at Clayton, and will build canoes and boats.

Rifle Range and Gallery.

Zettler Rifle Club Elects its Officers.

NEW YORK, Dec. 3.—The Zettler Rifle Club held its annual meeting to-night at headquarters, 219 Bowery. The following officers were elected for the ensuing twelve months: President, Bernhard Walthers; Vice-President, Henry D. Miller; Treasurer, Charles G. Zettler; Financial Secretary, Max B. Engen; Corresponding Secretary, Fred C. Ross; Shooting Master, Bernard Zettler.

The following are the scores made at the weekly shoot held at the same time as the annual meeting:

R Busse	241	237	246	240	243	A Kronsberg	230	233	232	245	233
Dr J A Boyken	243	241	243	247	244	H B Muller	230	241	243	238	239
S Buzzini	231	232	241	237	237	H Muentz	229	219	233	237	242

H Holjes	241	242	244	243	239						

Cincinnati Riflemen.

CINCINNATI, O., Dec. 1.—The following scores were made by members of the Cincinnati Rifle Association at their range to-day. Conditions: 200yds., off-hand, 30s. trigger pull, at the standard target, 7 ring black. To-day begins the contest for gold medal under handicap rules, which must be won five times to be entitled to ownership; Hasenzahl won to-day:

Gindele	9	10	10	9	9	6	9	7	8	9—86
	9	8	9	9	9	7	7	10	7	9—84
	7	8	7	8	7	8	9	8	10	7—79

Miller Rifle Club.

HOBOKEN, N. J., Nov. 27.—The members of the Miller Rifle Club held their regular weekly shoot at headquarters, 423 Washington street, this evening. Meyns made the best total of the evening, coming within nine points of a highest possible. The following are the scores made:

Meyns 241, Rogers 235, Miller 234, Scott 233, Vanderheyden 228, Kerrigan 227, Dewey 223, T. Wolter 211, Messenkopf 218, Bischoff 215, Becker 210, Nelson 208, Deetjen 207, Kneisel 201, Kraft 191.

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

Dec. 19, 20.—ELIZABETH, N. J.—Fifth bi-monthly tournament of the Elizabeth Gun Club; first day, targets; second day, live birds.

1896.

Jan. 1.—NEWARK, N. J.—Fifteenth annual New Year's Day reception and tournament of the South Side Gun Club; targets. Shooting commences at 9:30 A. M. W. R. Hobart, Sec'y.

Jan. 4.—WILMINGTON, Del.—Second team race between All-Philadelphia and the Delaware State League, 25 men to a team; all day shoot on the grounds of the Wilmington Rod and Gun Club.

Jan. 4-5—PHŒNIX, Ariz.—Annual tournament of the Arizona State Sportsmen's Association.

Jan. 7-11.—SAN ANTONIO, Texas.—Grand mid-winter tournament, under the auspices of Texas State Sportsmen's Association and management of J. M. George and O. C. Guessaz (Texas Field), $2,000 added.

Feb. 1.—————.—Third team race between All-Philadelphia and the Delaware State League, 26 men to a team. (Place of shoot not fixed.)

April 1-3.—NEW YORK.—Interstate Association's Fourth Annual Grand American Handicap.

April 14-17.—ATCHISON, Kansas.—Thirteenth annual open to all, and second annual manufacturer's amateur tournament; $1000 added money and manufacturers' prizes. Lou Erhardt, Sec'y.

April 22-24.—WELLINGTON, Mass.—Tournament of the Boston Shooting Association; targets. P. R. Dickey, Manager.

April 30-May 2.—NEWBURGH, N. Y.—Annual spring tournament of the West Newburgh Gun and Rifle Association; targets and live birds; added money announced later.

May 5-8.—NEW YORK.—Tournament of the American E. C. Powder Company; $2,000 added money.

May 12-15 — MEMPHIS, Tenn. — Tournament of the Memphis Gun Club, $2,000 added money.

May 12 14.—DAYTON, O.—Annual tournament of the Ohio Trap-Shooters' League. Ed. Taylor, Sec'y.

May 19-22.—CINCINNATI, O.—Tournament of the Hazard Powder Co. R. S. Waddell, Agent.

May 20-24.—KANSAS CITY, Mo.—Nineteenth annual convention and tournament of the Missouri State Fish and Game Protective Association. H. Deuc, Sec'y.

May 26-28.—FRANKFORT, Kan.—Annual tournament of the Kansas State Sportsmen's Association.

May 30-June 1.—MILWAUKEE, Wis.—Eleventh annual tournament of the South Side Gun Club.

June 1-6.—CHICAGO, Ill.—Twenty-second annual tournament of the Illinois State Sportsmen's Association. H. B. Meyers, Sec'y.

June 8-13.—BUFFALO, N. Y.—Thirty eighth annual tournament of the New York State Association for the Protection of Fish and Game, under the auspices of the Audubon Gun Club. E. W. Smith, Sec'y.

June 17-19.—CLEVELAND, O.—Third annual tournament of the Chamberlin Cartridge and Target Company.

July 30, 31.—GOSHEN, Ind.—Midsummer tournament of the Goshen Gun Club.

Oct. 7-9.—NEWBURGH, N. Y.—Annual fall tournament of the West Newburgh Gun and Rifle Association; targets and live birds; added money announced later.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 318 Broadway, New York.

The death of Dr. Gideon Lee Knapp, of this city, on Saturday, Dec 7, was a heavy blow to his numerous friends, many of whom were scarcely aware of his serious condition. His death resulted primarily from a severe cold which he caught while attending one of the race meetings at Morris Park last October; he had not entirely recovered from this attack when he went down to Hampton, L. I., to shoot ducks. While there, on Oct. 31, he was taken ill with typhoid fever, being brought to the house of his brother, H. K. Knapp, in this city as soon as possible. Pneumonia followed the fever and, in spite of the best of medical aid, his death resulted as above. As a sportsman Dr. Knapp was well and favorably known, his efforts, in connection with those of August Belmont and others, having done much to purify the race course during the past year or two. As a pigeon shooter Dr. Knapp has not done much of late years, but his judgment on disputed points in pigeon shooting was always highly thought of. Less than a year ago a knotty point regarding a pigeon match that could not be finished owing to darkness, the Page-Brokaw match at the Country Club, Westchester, N. Y., was referred to him and another for decision. His famous match for a very large stake with Charles Mac-Alester, then of Philadelphia, but now of Baltimore, which took place at the Westminster Kennel Club's grounds, Babylon, L. I., is always a favorite topic when the conversation turns on pigeon shooting. The position in the Jockey Club held by Dr. Knapp will be a hard one to fill, his death leaving a big gap in the ranks of those who are fond of sport for sport's sake.

W. G. Clark, who will shoot a race at live birds at Dexter Park this afternoon with Allen Willey, of Hadlyme, Conn., shot a few live birds for practice last Saturday afternoon at Dexter Park. The birds were trapped from the Mott disappearing traps lately installed at those grounds, and were as fast as anybody could wish to see. Every bird was a specially selected one, Billy Mills having done his best to choose strong ones, an effort in which he succeeded admirably. When the trap was sprung each bird cracked his wings and made for the boundary in a manner seldom equalled, and very rarely, if ever, excelled. Taken as a whole, they were as good birds as we ever wish to see, and Clark's total of 19 out of his first 25 is not so poor as it looks, considering that he was at the 30yds. mark. His total in his next 15 was much improved; having mislaid the score we cannot give the exact figures. It is safe to say that if Mr. Lippack supplies the same class of birds for to-day's match (Dec. 14), anything over 85 will be very good work indeed.

The programme of the midwinter shoot at San Antonio, Tex., was not ready for publication until the beginning of this week, but we have received an advance sheet which gives the following general idea of its make-up: There will be eight 20-target events each day, $50 added to each purse; targets charged for at 3 cents each; purses divided 30, 25, 20, 15 and 10 per cent. Among the special features will be a 50-target race for the E. C. Powder Company's trophy, also an interstate team race, four-men teams, any State to enter as many teams as it chooses. The following additional information will be of interest: Ship your shells to either C. Hummel & Son or to Victor Cortines. The Menger Hotel will be headquarters during the shoot; nobody barred and no dropping for place. The management adds: "When the added money is all gone we will scatter out for geese, ducks and quail, to say nothing of deer and turkey." Anybody desiring hotel accommodation should write to O. C. Guessaz at San Antonio.

The annual meeting of the Cook County Trap-Shooters' League, of Chicago, Ill., set for Monday evening, Dec. 2, had only a moderate attendance, owing to the inclemency of the weather. It was thought better, therefore, to adjourn until Jan. 6, 1896, at 8 P. M. During the intervening four weeks a committee of 7 will visit each club's annual meeting as held, and will explain the league's objects, plans and expectations with the result, it is hoped, that the coming season's events will all be very large ones. W. P. Mussey has offered a $100 or $150 trophy for competition, while two other parties have come forward and promised two prizes, thus making a No. 1, No. 2 and No. 3 trophy for the three classes, A, B and C, to be competed for by teams from each club. In addition to the above there will be five or six individual trophies for high averages.

The All Philadelphia vs. Delaware State team race, shot on Saturday last, Dec. 7, on the grounds of the Keystone Shooting League of Philadelphia, was a grand success. The match was one for 25 men teams, 25 targets per man, the scores appearing elsewhere. The Keystone team won, but not easily. The return match comes off at Wilmington, Del., on Jan. 4, 1896, when the home team hopes to turn the tables. Such team races as the above one are the best methods of increasing interest in trap-shooting among club members, and do the cause far more good than a dozen tournaments.

Charlie Zwirlein, of Yardville, N. J., has gotten up his name as a purveyor of first-class live birds. There is no question that he deserves credit for the quality of the pigeons trapped on his grounds; his birds always fly well, but why they should do so is past our comprehension, as there is apparently every inducement for them to turn into tucomers, there being nothing to draw them away from the buildings back of the traps. Zwirlein's birds prove that there is one in the way you keep your pigeons than in the location of your grounds.

Elmer E. Shaner, manager of the Interstate Association, will be in this city last week. Mr. Shaner's business in New York is to attend the annual meeting of the association, and to choose some place for holding the Grand American Handicap. Notwithstanding all reports to the contrary, no decision has as yet been arrived at as to where the Grand American Handicap of 1895 will be held.

W. G. Clark and Allen Willey shoot their third match this afternoon, commencing at 1 P. M., at Dexter Park, L. I.; the match is: 100 birds each, $100 a side. The Dexter Park management has promised to provide the best birds possible; the match, therefore, will be worth looking at, if only to see good birds fly.

Our Rochester, N. Y., correspondent writes us anent the Rochester Gun Club's Thanksgiving shoot. "Mr. Glover has just received his new 12-gauge Parker; he used it at our Thanksgiving tournament and broke 99 out of 100 targets. It has been said that Glover could not shoot a 12-gauge gun, but Sim says he will fool some of the boys next spring."

Alex. King beat J. G. Messner in the third match of their series of three 100-bird races. The first, shot Nov. 8, was a tie on 88 each; the second, Nov. 15, resulted in a victory for King by a score of 79 to 75. The last, shot on Friday, Dec. 6, was for $200 a side, and was won by King, who killed 91 to 88.

"Guacho and Sam's Ducks," which appears elsewhere, shows that Critzer and others who use 20-gauge guns at the trap and in the field are handling weapons and not toys. Guacho tells us that his little gun caused no little trouble to the ducks, but the ducks had to come in pretty close.

The Shenandoah Valley route offers big inducements to those who intend being present at the San Antonio midwinter shoot to go South by its line. Its scale of figures to points in the South and the Southwest are worth considering by any sportsman who thinks of taking a hunting trip this winter.

The Elizabeth, N. J., Gun Club's bi-monthly tournament takes place next Thursday and Friday, Dec. 19, 20. The first day is at targets, the second at live birds. They generally have good birds at Elizabeth and a good programme; as there is nothing to clash with this meeting, there should be also a good attendance.

The Naromake Gun Club of Norwalk, Conn., held an all-day shoot at its inclosed grounds on Saturday last, Dec. 7. This club has conveniently located grounds, electric cars running direct to the grounds from the city.

EDWARD BANKS.

Thanksgiving Day at Watson's Park.

CHICAGO, Ill., Nov. 28.—The following scores were shot to-day at Watson's Park:

	No. 1.	No. 2.	No. 3.
S Palmer	0222002101— 6	20121—4	21121—5

Thanksgiving Day at Rochester.

ROCHESTER, N. Y., Nov. 28.—The attendance to-day at the grounds of the Rochester Rod and Gun Club was very large for an occasion of this sort. It is true that there were several special events calculated to bring out the shooters; that's the case in lots of places, but here they came out and shot, as the list of scores given below will show.

There were several noteworthy features in to-day's scores: First, the large team total of the Rochester men, who defeated their opponents, the Hulberton team, by the score of 224 to 201. Had the Rochester team scored one single break more than the above number, its team average would have been exactly 90 per cent.

The second feature was the high scoring in the Walsrode Powder Company's prize badge contest; in this event all the shooters were compelled to use Walsrode powder, and fifteen men shot a 90 per cent. gait, including the ties.

The third feature was the great shooting of Sim Glover, one of the very best shots in the country. Sim and his 10-gauge have been such constant and prominent factors in the averages at the big tournaments of the past few years that it got to be a saying that Sim could not shoot a 12-gauge. The boys cannot say that any more, as to-day he gave us a sample of what he could do with a 12-gauge. Sim has just received his new 12-gauge Parker, and used it for practically the first time at to-day's shoot. He "didn't do a thing" to the targets with it, did he? Look at these scores: Team race, 23 out of 25; Walsrode powder contest (including ties), 49 out of 50; sweeps, 99 out of 100. Total, 171 out of 175; an average of 97.7 per cent. And all this he did with a 12-gauge!

The fourth feature of the day's shoot was the work of McClintock, a new member of the club, whose scores surprised his friends. In the team race he broke 23 out of 25, and in the Walsrode powder contest (including ties) he broke 48 out of 50, winning the badge, as he was given an allowance of 8 targets out of every 25. A Rochester paper in giving a report of the shoot says: "The first time McClintock ever shot was a few weeks ago on the club grounds, when he borrowed a gun and fired at five of the clay targets, missing all but one. This beginning instead of discouraging him gave him a liking for the sport, and he straightway purchased a gun for himself. In each of the first four shoots in which he took part he showed marked improvement, but no one was looking for such a record as he made for himself to-day. In the team shoot he broke 23 out of his 25 targets, while in the badge shoot he made first a straight string of 25 and then another one of 23 out of 25."

The scores made to-day were as follows:

Rochester.

W C Hadley	1111111111101111111111—24
J Borst	1111111101101111111111—23

Nov. 30.—To-day on the grounds of the Rochester Rod and Gun Club, Perry and Meyer again met defeat at the hands of J. Rissinger and E. D. Hicks. The match was shot at 25 targets per man, 50 targets to a team. Hicks broke 24 and his partner 23, making their total 47; Meyer did more than his share by breaking 25 straight, but his partner let him down by scoring only 20 out of his 26, their total being 45. The score in detail is as follows:

Hicks	1111111101111111111111111—24
J Rissinger	1111110111111111111111011—23—47

DR WITT.

Oxford Gun Club.

OXFORD, Pa., Nov. 28.—The annual Thanksgiving tournament of the Oxford Gun Club was held to-day on the club grounds. A half dozen target matches were shot and also three live-bird sweeps, all the latter miss-and-out events, 30yds. rise, 50yds. boundary. The birds trapped were strong and good flyers. W. T. Jackson, of Havre de Grace, Md., made the best record of the day, shooting at 23 birds and killing 22, the lost bird, a hard one, falling dead out of bounds; he used his second barrel but three times during the shooting at live birds. Miller, Alexander and Walls also did good work, the former killing 18 straight. The following are the scores:

	No. 1.	No. 2.	No. 3.

THE BOILING SPRINGS THANKSGIVING.

Nov. 28.—There was a good attendance to-day at the grounds of the Boiling Springs Gun Club, Rutherford, N. J., the occasion being the annual turkey and sweepstake shoot of the club. Some excellent shooting was done by McAlpin, Jeanneret, Frank and Huck, McAlpin's work being especially noticeable for his score of 73 out of his last 75, the last event being at 5 pairs, in which Mac made a clean score. Hall, who only shot in the last two events, made a 10 straight and 8 out of 10 in the pairs. The weather was all that one could wish for target shooting. Scores:

	Ties.		Ties.
Proctor	1111011111—9	101111*	P Carver	1101101110—7	10
Shell	1110111111—9	101110	Pearson	1111100110—7	0

FORESTERS' GUN CLUB.

Nov. 28.—The regular monthly shoot of the Foresters' Gun Club, of Newark, N. J., was held to-day on the club's grounds, foot of Peddie street. Hayes, F. Sinnock and J. Flemming made the best scores, C. Smith scoring 17 out of 20 in the ninth event. Scores as follows, all events except No. 9 being at 10 targets:

Events:	1	2	3	4	5	6	7	8	Events:	1	2	3	4	5	6	7	8

AT THE CARTERET CLUB.

Dec. 4.—The 17th and last competition for the "President's cup," at the Carteret Club's grounds, Bayonne, N. J., took place this afternoon. The "cup," which, as previously stated in FOREST AND STREAM, was an order for a Purdey gun—price not to exceed $400—is now the property of J. P. Knapp, who scored his 5th win this afternoon.

The attendance to-day was an old-time one, 14 shooters taking part in the sweep which was shot in connection with the cup contest. Of the 14 there were 8 in for the cup, and this 8 included the strongest amateurs in this part of the country: George Work, Fred Hoey, J. P. Knapp, L T Duryea, J. Seaver Page, L. H. Thompson, W. H. Mead and W. H. Stafford; the first 6 would make a strong team against any similar number of shooters from any section. Thompson made his first appearance at the Carteret, or for the matter of that at any Eastern grounds, since he left for Colorado; his position at the traps—one of the easiest we have ever seen—has not altered in the slightest, while his execution is as it always was, equal to the best of them.

The birds this afternoon seemed to be better than usual, and that's saying a good deal, because Carteret birds now are a pretty warm lot. Fred Hoey was able to tell something about the quality of the birds before he had gotten through shooting; every bird he drew but one—his 7th—seemed to know that Hoey was at the score, and every mother's son of them when liberated hustled its wings as fast as it could. Duryea also drew a hard lot of birds, the 32yds. mark handicapping him on his 1st and 3d birds, both of which fell dead out of bounds. The fact that only 33 out of the 229 shot at in the cup contest showed any incoming tendencies speaks volumes for the birds; add to this a slight breeze that was by no means favorable to the birds, and it will be readily seen that the birds were far above ordinary ones. John S. Hoey acted as referee throughout, but his work was, barring the cold, almost a sinecure.

With fourteen entries, that included the men mentioned above as shooting for the cup, it was a matter of considerable surprise to find only one straight, George Work, at the end of the fifth round. He ran straight up to the tenth round, when he lost a fast driver from No. 1 dead out of bounds. Knapp lost his 3d and 4th birds, both hard ones from the 32yds. mark; he lost his 14th, also a good bird, that clearly beat him. When he had lost three birds it looked as if he was out of the race for the cup, as Work and Thompson at the close of the fourteenth round had each of them missed but two birds, Thompson's work on his 14th being a poor piece of shooting. Work lost his 18th, a driver from No. 3. This left Thompson alone for the cup, with only two misses when he killed his 18th bird and had but two more to shoot at. He fell down, however, on his very next bird, letting in both Work and Knapp. These three then killed out, closing their scores with 17 each. The conditions of the contest call for ties to be shot off miss-and-out. Thompson dropped his 3d tie bird, leaving the cup between Work (3 wins) and Knapp (4 wins). If there was to be another contest for the cup Work must win this heat. As matters stood, Work was defending $400, the value of the gun which he was giving as the "cup," while Knapp was shooting to win the $400 order. It was a $400 miss-and-out! Work drew a right-quartering driver from No. 4 for his 4th bird; it did not seem so very fast, but he failed to center it and the bird, hit hard, went over the boundary, falling dead outside. Then Knapp had to kill to win; everybody left the club house and went out to watch the result of the shot. He killed his bird easily, and was for a few minutes afterward kept busy shaking hands with those who crowded up to congratulate him.

With all this account of the cup contest, the shooting of H. A. Butler and G. S. McAlpin must not be overlooked. Butler shot very well indeed, killing some remarkably hard birds, his 12th being a streak of black that was cleverly centered with the second after being clean missed with the first. He won first money alone in the sweep with 18 out of 20, his 18th bird falling dead out of bounds. McAlpin handicapped himself by being a little careless over his 1st bird, that was perhaps a trifle faster than he judged it to be. He then killed 13 straight, several of them really good birds, and it began to look like Mac for part of first money, but his 15th shot was an unaccountable miss, while his 18th, like Butler's, went over the fence to die. He went out with 17, tieing Work, Knapp and Thompson for second money, dividing with Knapp on the shoot-off miss-and-out at the end of the fourth round; in his tie birds McAlpin was very fortunate, drawing four easy incoming birds in succession.

The way the traps fell to each shooter was as follows, 46 being about an average. It will be noticed that there was only one transgressor, No. 5:

	No. 1.	No. 2.	No. 3.	No. 4.	No. 5.	Total.
Butler	3	4	4	7	2	20
Knapp	4	5	5	3	7	24
McAlpin	7	3	3	7	4	24
Work	6	1	5	6	6	24
Thompson	3	6	7	4	3	24
Duryea	4	6	3	2	3	18
Stafford	3	2	3	3	5	16
Page	4	3	4	2	3	16

EDWARD BANKS.

THE NEWARK GUN CLUB'S TOURNAMENT.

Dec. 5.—The two days' tournament of the Newark Gun Club was brought to a close this evening. The list of entries was very satisfactory throughout the entire shoot, while the birds supplied by John Erb, at whose grounds the shoot was held, were good flyers, particularly in the main event this afternoon.

Among those present on the first day (Dec. 4) were: Allen Willey, of Hadlyme, Conn.; W. G. Clark, late of Altoona, Pa., but now of New York city; Chris. Wright, Paterson, N. J.; M. Herrington, of New York city, the representative of the W. A Powder Co.; Jim Elliott, of Kansas City, Mo.; Gus Greiff, of New York, shooting Schultze and a Francotte gun; Eddie Collins, with King's Smokeless; S. J. Held, of New York city, a new addition to the ranks of live-bird shooters in this section, etc.; the locals were out in force, Geoffroy, John Erb and Sam Castle worthily upholding the honor of the Newark Gun Club. Jim Elliott shot well, killing 13 out of 14 from the 32yds. mark in the last event, and scoring altogether 33 out of 35 shot at during the day; Jim is now shooting a pump at live birds and is showing the boys what he can do with the combination of E. C. and a pump.

The first four events were all $5 entrance, but the fifth event was at 15 birds, $15 entrance, birds included. Owing to darkness it was impossible to finish this event, the referee calling a halt at the close of the fourteenth round. It will be noticed that Geoffroy is the only one credited with a straight score out of the twelve shooters, but Sam Castle, who had killed 13 straight, refused to shoot at his 14th bird, claiming that it was too dark to see. The referee warned him that he would score him a lost bird if he wouldn't shoot, and as he parsisted in his determination not to go to the score, a cypher was credited to him, as shown in the following scores:

	No. 1.	No. 2.

A Bunn (26) ..... 2201022212112 1—12

The second day's scores were all well earned, on account of the quality of the birds. In event No. 1, with 6 entries, there was no 10 straight; in No. 2, with 10 entries, there were two straight scores. Event No. 3 was at 20 birds and had 12 entries, yet 19 was high with such men shooting as Jim Elliott, Brewer, Clark, Woodruff, Geoffroy, Erb, Morfey, etc. Morfey, by the way, arrived late and brought no gun or shells, borrowing Elliott's Winchester and ammunition.

Geoffroy, who has been shooting very well lately, was placed on the 32yds. mark and placed 19 to his credit, taking first money alone. This he would hardly have done had not Duston let two birds get away under peculiar and interesting conditions: His first loss was his 6th bird; this flipped up and lit again close to the trap, Duston pulling his gun right off the bird when he fired his first barrel; his effort to kill it with the second as it sat on the ground was not successful, the bird rising and flying out of bounds. His second loss was his 20th bird, he having killed 18 out of 19 with a chance of 19 out of 20 if he killed straight. His work on this last bird of the string looked very much as if he did not want the bird to be scored to him, thus making more friends for high gun shooting as against class shooting.

Capt George Swan, of the Palmetto Gun Club, of Charleston, S. C., was present, and shot live birds from traps for the first time in his life. For a first attempt he did remarkably well, killing 16 out of 20, some of them hard birds indeed, and losing one bird through inexperience when he might very properly have claimed a balk. Elliott and Brewer both shot well, the latter doing good work with his pump. Clark was in poor form in the first two sweeps, and experienced some hard luck in the big race, losing 3 dead out of bounds, his 5th and 13th being rattling good birds.

The scores were:

	No. 1.	No. 2.

AT TRENTON.

Dec. 6.—C. H. Allen and Dr. Woolsey shot a race to-day with G. N. Thomas and William Taylor, on the Trenton, N. J., Gun Club's grounds. The wind was blowing about 25 miles an hour, making the shooting extremely hard; this accounts for the comparatively poor scores made. Conditions: 50 empire targets per man, 25 known angles and 25 unknown angles. Score:

ONLOOKER.

SOUTH SIDE'S SATURDAY.

Dec. 7.—A dozen shooters put in an appearance at the South Side Gun Club's grounds, Newark, N. J., this afternoon. All sweepstake events were at 10 targets, with the exception of No. 6, which was at 20 targets. The team race, shot at known angles, was won by Breintnall's team, Asa Whitehead leading the procession with 25 straight. Scores:

Clinton Rod and Gun Club.

NEW DORP S. I., Dec. 4.—Fourteen members took part in the monthly shoot of the Clinton Rod and Gun Club at New Dorp this afternoon. Harry Williamson was the only one to kill 7 straight, thus winning the shoot without a tie. Score:

H K Williamson (27)	2222222—7	L J Williamson (27)	1200201—4
Dr E Schrader (27)	0111111—6	J Henderson (26)	1001011—4
T Longrief (27)	1120101—5	T P Lee (26)	1010020—3
G Kingsland (27)	2100112—5	S Porter (25)	0100101—3
A W Barton (26)	1201110—5	G G Schneider (25)	1022000—3
E W Schrader (28)	1102002—4	R Morgan (26)	0021000—2
L Wilson (28)	2000111—4	W H Smith (26)	1001000—2

The following live-bird and target events were also decided:

No. 2, handicap sweepstakes, 5 live birds: George J. Kingsland (26yds.) 3, Dr. Emil Schrader (28yds.) 4, Thomas P. Lee (26yds.) 2, Richard D. Morgan (26yds.) 5, Wm. H. Smith (26yds.) 2, Thomas P. Longrief (26yds.) 3, Samuel G. Porter (27yds.) 2.

No. 3, same: Henry K. Schræder (26yds.) 5, George J. Kingsland (26yds.) 4, David G. Schneider (26yds.) 3, Dr. Emil Schræder (28yds.) 3, Samuel G. Porter (26yds.) 3, Richard D. Morgan (26yds.) 3, Thomas P. Lee (26yds.) 2.

No. 4, 10 targets, everything known: Henry K. Williamson (16yds.) 9, Louis G. Wilson (16yds.) 9, Richard D. Morgan (16yds.) 6, Thomas P. Lee (16yds.) 7, Dr. Emil Schræder (16yds.) 7, David G. Schneider (16yds.) 6, Thomas P. Longrief (16yds.) 5, Andrew W. Barton (16yds.) 4, Wm. H. Smith (16yds.) 4.

No. 5, same: Louis G. Wilson (16yds.) 10, Richard J. Williamson (16yds.) 9, Dr. Emil Schræder (16yds.) 8, Richard D. Morgan (16yds.) 7, Samuel G. Porter (16yds.) 5, Henry K. Williamson (16yds.) 7, George J. Kingsland (16yds.) 6, Wm. H. Smith (16yds.) 5, Thomas P. Lee (16yds.) 4.

Central Gun Club, of Duluth.

DULUTH, Minn., Nov. 28.—The annual turkey shoot of the Central Gun Club was held to-day on the ice at the foot of Twenty-first avenue, west. The ice where the shoot was held was only about 6in. thick, and several times the spectators had to be driven back to prevent a general breaking up of the ice field. The number of entries was quite large, and several ties had to be shot off, making the competition of great interest. The totals for the four 10-target events were: Bonehill 33, Shell 32, Wojeck 32, Brooks 31, Proctor 30, Moore 30, Sachem 30. The ties for these averages were shot off, Shell, Brooks and Moork winning the second, third and fourth prizes respectively. Scores in the events were as follows:

Events:	1	2	3	4	5	6	7	8	9	10	11		Per

All-Philadelphia Won.

PHILADELPHIA, Pa., Dec. 7.—The first of a series of three 25-men team races arranged between Philadelphia shooters and trap shots from the State of Maryland took place to-day on the grounds of the Keystone Shooting League, of Philadelphia, Pa., at Holmesburg Junction.

Two teams of 25 men each makes a large number of shooters for an all-day shoot, and as a natural result, with two sets of traps, a large number of targets were thrown—the scores showing that about 3,500 were shot at. The sweepstake events were well filled, but, of course, the team race was the main thing after all.

The two teams were captained respectively by Harry Thurman, of the Keystone Shooting League, and Charlie Fehrenbach (Bilderbach), of the Wilmington, Del., Rod and Gun Club. The Blue Hen State team was a strong one, but the boys did not seem to be able to gauge the speed of the empires, which were thrown hard and fast, as successfully as did the Philadelphians, the result being a win for the latter by a comparatively small margin of 27 breaks. As a proof of the difficult nature of the shooting it is only necessary to point out that only one man out of 50, R. Miller, of the Delaware contingent, accomplished the feat of breaking 25 straight. There were two 24s, both Philadelphians (Blondin and J. Peterman), while there were also one three 23s. The shooting must have been hard. The scores were as follows:

Philadelphia Team.

H Blondin	1011111111111111111111111—24
J Peterman	1111111011111111111111111—24

King again Defeats Messner.

PITTSBURG, Pa., Dec. 6.—The third and final match of the King-Messner series was decided to-day, King winning by the score of 91 to 88. There was a good wind that blew strongly at times, but the birds were only an average good lot of flyers. The attendance was small owing to the difficulties that met those on their way to Brunot's Island, the river being on a boom and full of floating ice, while the ferry was represented by a solitary skiff.

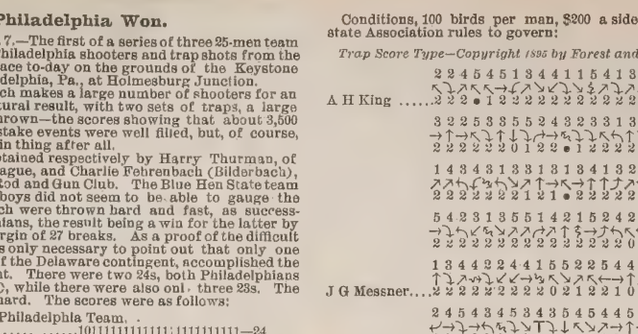
It will be noticed that the race was a close one throughout. Both tied on 22 out of their first 25, Messner going ahead on the 46th round, when King's bird fell dead out of bounds. At the end of the 50th round Messner led by 1—44 to 43. In the third string of 25 King killed 24 to Messner's 23, the score at the end of the 75th round being 67 all. The last 25 was where Messner lost the match, as he had three birds drop dead out of bounds and slipped up on his 83d, a driver from No. 2 trap. King scored 24 out of his last 25—48 out of his last 50. The longest runs were: King 29, 14 and 13; Messner 19, 19 and 11.

The traps fell to each shooter as follows:

	No. 1.	No. 2.	No. 3.	No. 4.	No. 5.
King	19	19	25	16	21
Messner	18	15	20	29	18
	—	—	—	—	—
	37	34	45	45	39

In describing the match the Pittsburg *Dispatch* says: "Alex. King yesterday defeated Messner for the second time this autumn in a very close match, the score being 91 to 88. It was a rattling good race from start to finish, so closely contested that the backers of each were on pins and needles until almost the very last. Not until the shooters were pretty well along on the last 25 birds did the King men begin to feel as if they were on "easy street." Messner certainly made a good run for the money. He took the lead at the start, and though he was tied at the 25th bird he soon led again and retained the advantage until the 66th bird, when King again caught him. Messner's 77th bird died out of bounds, and this gave King a lead which he never lost. Messner seemed to lose his nerve slightly, and that settled it, for King never weakened for an instant. He was shooting stronger at the finish than at any other time, and his record of 48 birds out of the last 50 is one that is hard to beat.

"The match itself was for $200 a side. The first match between these two occurred at Brunot's Island about a month ago, and was for $100 a side. As it resulted in a tie—88 birds each—it was decided that the second match should also decide the first, and should consequently net the victor $200. This race was shot at the Country Club and went to King by a score of 79 to 75. Yesterday's event was under the same conditions.



"There is little to be said about the details of the match. The birds were fairly good—probably better than the average around here—though not so strong by a good deal as those in the previous match. King thought the first 50 were not as good as the last 50, though his record on the latter was the best.

"Each man lost 4 birds which died out of bounds, 3 of Messner's being in the last 25, and it was these 3 misses that lost him the match.

"Elmer Shaner was referee and Wm. McCrickart trap puller. At the conclusion of the match Shaner announced that he was authorized by W. G. Clark, of Altoona, to challenge the winner for from $250 to $500 a side. King did not accept the challenge, and probably will not do so. It is generally conceded that Clark is a little bit too good for any of the men about here."

Conditions, 100 birds per man, $200 a side, 30yds. boundary, Interstate Association rules to govern:

On Long Island.

CONEY ISLAND ROD AND GUN CLUB.

Dec. 4.—The monthly shoot of the Coney Island Rod and Gun Club, which was held this afternoon, was well attended, twelve members taking part in the shoot for the Hughes diamond badge. Hugh McLaughlin, the veteran of the club, won the badge without a tie, being the only one to kill his 7 birds. The club shoot is at 7 live birds per man, handicap rise, gun in any position (except at the shoulder) until the bird is on the wing. Score:

H McLaughlin (27)	1111211—7	Wm Rial (30)	0012112—5
H Knebel, Jr (28)	0111211—6	J B Voorhies (28)	1011022—5
F McLaughlin (27)	1210122—6	J E Lake (28)	0112120—5
H Muller (25)	0121211—6	Dr Parker (25)	0022212—5
Dr Raynor (25)	1011112—6	Dr Van Ord (30)	1002101—4
Dr Sherwell (25)	2211102—6	F Ibert (25)	0112001—4

The tie for third money was shot off at 3 birds; Lair being the only one to kill his 3, he took the money.

A 3-bird sweep was won by J. E. Lake, who killed his birds; the scores were: Lake 3, Lair, Muller, Ibert, Van Ord and McLaughlin 2.

PARKWAY ROD AND GUN CLUB.

Dec. 4.—Several members of the Parkway Rod and Gun Club met at the Old Mill, near Jamaica, this afternoon. These members were divided into two teams, the teams being composed respectively of the Class A and Class B men of the club. Each man shot at 10, the result being a tie with 46 kills for each team; on a shoot-off at 2 birds per man the Class A men won, Class B paying for the birds, dinners for the crowd and all expenses of the excursion. Following is the score:

Helgans's Team—Class A (28yds.).	Tie:
E Helgans	2222222•22—9	22—2
J Bennett	1111220212—9	10—1
H J Bookman	•2212112112—8	11—2
Van Wyckoff	1222122022—9	21—2
A Andrews	•1220111110—7	11—2
J Mehl	0220000001—3—46	00—0—9
Selover's Team—Class B (28yds.).	**Tie:**
W R Selover	1101211120—9	10—1
D S Van Wicklen	2222120210—8	2•—1

E Frost	1201122100—7	11—2
H J Selover	1020102012—6—46	01—1—7

CRESCENT GUN CLUB.

Dec. 5.—The Crescent Gun Club, of Brooklyn, was but poorly represented at its regular shoot at Dexter Park this afternoon, Capt. G. W. Coulston, L. C. Hopkins and W. D. Gilman being the only members present. The club shoot was at 7 live birds, and this was won by Coulston with a straight score. Nine sweeps were shot off, honors being about even up. The club shoot score was as follows:

G W Coulston (30)	2221111—7 W D Gilman (28)	2121101—6
L C Hopkins (28)	1211120—6	

PHŒNIX GUN CLUB.

Dec. 6.—The Phœnix Gun Club's monthly shoot was fairly well attended, eight members putting in an appearance this afternoon and shooting their string of 15 live birds in the club event. All stood at the 25yds. mark, Botty and Gardner tieing for first place with 12 out of 15. Scores:

A Botty	120111002312121—12	J Smith	1101010111002121—11
P Gardner	201220211111112—12	E H Madison	1102111210101213—11

ROCKAWAY PARK ROD AND GUN CLUB.

Dec. 7.—The Rockaway Park Rod and Gun Club held its monthly shoot on its grounds at Rockaway Park this afternoon. There was a good attendance at the traps, everybody getting all the shooting they wanted. The nine events shot outside of the team race included events at expert rules (Nos. 3, 8 and 9), pairs (No. 6), walking match (No. 7), unknown angles (Nos. 2, 4, 5 and 10), known angles (No. 1). The team race was at 10 known and 15 unknown angles. Schorty's side winning by the narrow margin of one target. The day was cold and raw, with a strong wind in the face of the shooters. Scores:

Eddie Bourke, the south-paw expert of the club, brought the day's sport to a close with two 10-target matches. The first was against Held, Bourke winning with 7 to 6; in the second Wash was his opponent, and again was Bourke the victor, winning by 7 to 5. It should be mentioned that both of his opponents gave him a handicap of two misses as breaks; but in neither match did he need his handicap allowance, winning without any trouble.

NEW UTRECHT GUN CLUB.

Dec. 7.—Several members of the New Utrecht Gun Club met at the Bay Ridge grounds this afternoon. The main event was a match between Capt. Money and Dr. Shepard for the Challenge plate, Dr. Shepard being the holder. Capt. Money as a Class A man shot at 30 targets, known angles, and 10 pairs; Dr. Shepard, of Class B, shot at 33 targets, known angles, and 11 pairs; Capt. Money scored 24 out of his 30 singles and 10 out of his 10 pairs, while Dr. Shepard only totaled 22 out of 33 singles and 10 out of his 11 pairs. Scores:

Capt A W Money (A)	111111101011111000101111111101—24
	10 00 10 10 10 10 10 01 10 10 11—10—34

Trap Around Buffalo.

BUFFALO, N. Y., Nov. 27.—To-day was the regular weekly afternoon shoot at Smith's grounds, Buffalo Plains, open to all. The main event was quite a sporting affair: 25 live birds per man, $25 entrance, three moneys, class shooting, all at 28yds. rise. For this event there were nine entries, quite a good number for this class of sweepstake. Among the shooters were some of the best shots in the city.

The winner proved to be C. S. Burkhardt, who scored 24 out of his 25 birds, after losing his first bird dead out of bounds. His brother (E. C. Burkhardt), Kelsey and Kirkover were all three close after him with 21 each, E. C. Burkhardt being unlucky enough to lose three of his birds dead out of bounds. Kelsey knocked down his 13th bird with his first barrel, and thinking that the bird was stone dead, broke his gun and went into the club house; when the man went to retrieve the bird it rose and flew out of bounds, when it was gathered. The full scores were as follows:

No. 1, open sweep, 25 birds, $25, 28yds. rise, three moneys, class shooting:

C S Burkhardt	•1102211222211121212021—22
E C Burkhardt	1•22112121•2210223212221•—21

Krotz	2101110021020002220210000—14

No. 2, 7 birds, $5, 2 moneys: E. W. Smith 7, Andrews, Besser, Kirkover and Warren 6, C. S Burkhardt 5, E. C. Burkhardt 4. Smith shot only for the birds, first money being divided among the four men with 6, C. S. Burkhardt taking second alone with 5.

Nov. 28.—The Thanksgiving Day shoot at Audubon Park did not draw many shooters. Seven sweepstake events at targets were shot, the entrance fees being nominal. The scores made were as follows:

Events:	1	2	3	4	5	6	7	Events:	1	2	3	4	5	6	7
Targets:	*10*	*10*	*15*	*20*	*20*	*15*	*15*	Targets:	*10*	*10*	*15*	*20*	*20*	*15*	*15*

Bronx River Gun Club.

BAYCHESTER, N. Y., Nov. 30.—A half dozen members of the Bronx River Gun Club met this afternoon at Miller's grounds, Baychester, N. Y., the occasion being the monthly shoot of the club. In the club shoot, which is at 25 targets, all the contestants used W-A powder. M. Herrington won the medal with a score of 22 out of 25. Scores:

Club shoot, 25 targets:

Herrington	1111111111101110011111111—22
Catheart	1010110011011011110000111—15

E. P. MILLER.

PUBLISHERS' DEPARTMENT.

Ducks, Quail and the Sunny South.

THE picturesque Shenandoah Valley route, a railroad that carries its passengers through the finest scenery and the best hunting grounds of the sunny South, offers this winter special attractions to the sportsman-tourist. Among the points mentioned in its list of itineraries are the following places in Texas: San Antonio, Rockport, Houston, Galveston, El Paso, Eagle Pass, Austin and Corpus Christi (who hasn't heard of "The man from Corpus Christi?").

The list of California tours, going and returning same route, or returning by another way, with San Diego, Los Angeles and San Francisco as objective points, is one that cannot be passed over. The rates for "same route" are $135; for "another route" $138.

Winter excursion tickets to points in the Land of Flowers, via the Shenandoah Valley route, are another specialty of this railroad's business.

Full particulars and all details can be obtained by addressing W. B. Bevill, Gen. Pass. Agt., Roanoke, Va.; or J. E. Prindle, N. Y. Pass. Agt., 317a Broadway, New York City.

Low Excursion Rates South and Pacific Coast.

THE Southern Railway (Piedmont Air Line) have just issued a circular announcing low excursion rates to Southern cities and winter resorts. The new points to which excursion tickets are sold this winter include many prominent Southern cities. This great system penetrates every Southern State over its own rails; operates solid trains, vestibuled sleeping and dining cars, from New York to New Orleans, Jacksonville, Tampa, Atlanta, Augusta, Asheville, Chattanooga, Birmingham, Memphis. This is the route that forms the great California Limited via New Orleans in connection with the Sunset Limited, the most elegant appointed train service between the Atlantic and Pacific. For rates, schedules, etc., call on or address R. D. Carpenter, General Agent. Alex. S. Thweatt, Eastern Passenger Agent, 271 Broadway, New York.—*Adv.*

"Forest Runes."

THERE are in this office a few—not many—copies of Nessmuk's book of poems. Handsomely printed, with autobiographical sketch and an artotype portrait. Price postpaid $1.50.

Sportsman's Cabinet.

HENRY C. SQUIRES & SON have put upon the market a very complete sportsman's cabinet, particulars of which will be found in our advertising columns.

Sunday Trips Discontinued.

SUNDAY trips of the Fall River Line steamers have been discontinued for the winter months. The Plymouth and Pilgrim are in commission and week day trips will continue without interruption.—*Adv.*

WE HAVE BEEN TOLD that there are some dealers in FISHING TACKLE who do not keep our goods in stock. If you are so unfortunate as to live in a place where our goods are not offered for sale, let us know and we will send you our catalogue.

ANGLING.

The American Angler's Book.

Combining the natural history of sporting fish, the art of taking them, with instructions in fly-fishing, fly-making and rod-making, and directions for fish breeding. Description of salmon runs, inland trout fishing, etc. By THAD. NORRIS. 80 illustrations. Cloth. Price, $5.50.

American Fishes.

A popular treatise upon the game and food fishes of North America, with especial reference to habits and methods of capture. By G. BROWN GOODE. With numerous illustrations. Cloth, 496 pages Price, $3.50. This is, by far, the most popular work which has ever been published on the fishes of America, and is the book that no angler who takes pleasure in knowing the fishes which afford him sport, can afford to miss.

Book of the Black Bass.

Comprising its complete scientific and life history, together with a practical treatise on angling and fly-fishing, and a full description of tools, tackle and implements. By JAMES A. HENSHALL, M.D. Illustrated. Cloth, 470 pages. Price, $3.00. Dr. Henshall's monograph is the standard work.

More About the Black Bass.

Being a supplement to the "Book of the Black Bass." By JAMES A HENSHALL, M.D. Fully illustrated. Cloth, 204 pages. Price, $1.50. This is a supplement or sequel of Dr. Henshall's first volume, in which the author's aim is to bring the subject matter down to date.

Fly-Fishing and Fly-Making for Trout, etc.

By J HARRINGTON KEENE. With plates of the actual material for making flies of every variety. Illustrated. Cloth, 160 pages. Price, $1.50. The matter of the book embraces everything which the fly-fisherman wants to know about the senses of fish, practical fly-fishing, casting and fly-making; with list of standard flies and their dressings; the feathers, silk and other material used in fly-making, there are samples of all, attached to blank sheets like pictures by way of illustration.

Fishing Tackle.

Its Materials and Manufacture. A practical guide to the best modes and methods of making every kind of appliance necessary for taking fresh-water fish and for the equipment of the angler and fly-fisher. With 454 illustrations and explanatory diagrams. By J. HARRINGTON KEENE. Price, $1.50.

With Fly-Rod and Camera.

By EDWARD A. SAMUELS, President of the Massachusetts Fish and Game Protective Association, author of "The Ornithology and Oölogy of New England and Adjacent States and Provinces," "Among the Birds," Associate Editor of "The Living World," etc, etc. Cloth, 480 pages (7×9½in.), 147 illustrations. Price, $5.00. The author is known as one of the most devoted and expert salmon fishermen of America. The volume is likewise noteworthy as an example of the rare possibilities of amateur photography.

Favorite Flies and Their Histories.

By MARY ORVIS MARBURY. 522 pages, 46 illustrations. Price $5.00. The colored plates depict 17 hackles, 18 salmon flies, 48 lake flies, 185 trout flies and 58 bass flies.

MANUALS.

Game Laws in Brief.

Laws of the United States and Canada Relating to Game and Fish Seasons. For the guidance of sportsmen and anglers. Compiled by CHARLES B. REYNOLDS, Editor of *Forest and Stream*. Paper. Price, 25 cents. Gives all sections relative to game and fish seasons, limit of size or number, non-residents, transportation, etc. All in brief, but full enough for the practical guidance of sportsmen and anglers. Carefully compiled, and shorn of verbiage. Handsomely illustrated with numerous half-tone engravings from *Forest and Stream*.

Woodcraft.

By NESSMUK. Cloth, 160 pages. Illustrated. Price $1.00. A book written for the instruction and guidance of those who go for pleasure to the woods. Its author, having had a great deal of experience in camp life, has succeeded admirably in putting the wisdom so acquired into plain English.

Tricks of Trapping.

Camp Life in the Woods, and the Tricks of Trapping and Trap Making. Containing hints on camp shelter, all the tricks and bait receipts of the trapper, the use of the traps with instructions for the capture of all fur-bearing animals. By W. HAMILTON GIBSON. Illustrated. Cloth, 300 pages. Price, $1.00.

Log Cabins.

How to Build and Furnish Them. By WILLIAM S. WICKS. New and enlarged edition. Price, $1.50. Mr. Wicks might have called his book "Every Man His Own Log Cabin Builder," for he has set out to describe fully and particularly each detail in the process of construction. Plans are given for cabins, large and small, with details of exterior and interior.

Hints and Points for Sportsmen.

Compiled by "SENECA." Cloth. Illustrated, 224 pages. Price, $1.50. This compilation comprises six hundred and odd hints, helps, kinks, wrinkles, points and suggestions for the shooter, the fisherman, the dog owner, the yachtsman, the canoeist, the camper, the outer, in short for the field sportsman in all the varied phases of his activity.

SHOOTING.

Names and Portraits of Birds

Which Interest Gunners, with Descriptions in Language Understanded of the People. By GURDON TRUMBULL. Cloth, 222 pages. Price, $2.50. The average gunner with this work at hand would have little difficulty in identifying the contents of his bag from the text alone. Identification is further facilitated by portraits of the birds.

Antelope and Deer of America.

A comprehensive scientific treatise upon the natural history, including the characteristics, habits, affinities and capacity for domestication, of the Antilocapra and Cervidæ of North America. Second edition. By JOHN DEAN CATON, LL.D. Cloth, 426 pages, 50 illustrations; steel portrait. Price, $2.50.

The Gun and Its Development.

With Notes on Shooting. By W. W. GREENER. Breechloading Rifles, Sporting Rifles, Shotguns, Gunmaking, Choice of Guns, Chokeboring, Gun Trials, Theories and Experiments. Fully illustrated. Cloth, 770 pages. New edition. Price, $2.50.

The Art of Shooting.

An Illustrated Treatise on the Art of Shooting. With Extracts from the Best Authorities. By CHARLES LANCASTER. Illustrated with numerous drawings from instantaneous photographs. Price, $3.00. New edition.

Field, Cover and Trap-Shooting.

By CAPTAIN ADAM H. BOGARDUS, Champion Wing Shot of the World. Embracing Hints for Skilled Marksmen; Instructions for Young Sportsmen; Haunts and Habits of Game Birds; Flight and Resorts of Waterfowl; Breeding and Breaking of Dogs. With an appendix. Cloth, 493 pages. Price, $2.00. There is no other man in this country—or in any other, for that matter—better fitted to teach a novice the art.

The Still-Hunter.

A Practical Treatise on Deer-Stalking. By T. S. VAN DYKE. The information contained in "The Still-Hunter" is as exhaustive as it is possible to make it. 390 pages. Price, $2.

The Breech-Loader and How to Use It.

288 pages. Price, $1.00. A book for that numerous class of sportsmen who delight in a day's shooting, but have neither the time nor the means to make the sport a life's study.

CAMP AND HOME.

Uncle Lisha's Shop.

Life in a Corner of Yankeeland. By ROWLAND E. ROBINSON. Cloth, 187 pages. Price, $1.00. "Uncle Lisha's Shop" is brimful of quaint humor and sentiment, and there is an unmistakable touch of human nature in Uncle Lisha himself and his good old wife, Aunt Jerushy; in Sam Lovel, the hunter, and in fact in all the other characters introduced.

Sam Lovel's Camps.

A sequel to "Uncle Lisha's Shop," by ROWLAND E. ROBINSON. Cloth. Price, $1. When Uncle Lisha went West, Sam Lovel took Antoine as his partner, and the fortunes and misfortunes of the two as trappers are described with all the charm of our author's quaint style, while their friends and enemies, and all with whom they are brought into contact, in the course of the story, step on to the stage real living creatures.

Pawnee Hero Stories and Folk-Tales,

With Notes on the Origin, Customs and Character of the Pawnee People. By GEORGE BIRD GRINNELL. Cloth, 417 pages. Illustrated. Price, $1.75. New edition, revised. Like most Indian tribes, the Pawnees are story tellers. They have a vast fund of folk-tales and traditions, which have been handed down from father to son, and transmitted from generation to generation. Years ago, when the tribe lived in Nebraska, the author of the present volume camped and hunted with them, and joined in their village life. The nights were given up to story telling, and many of the tales told in the lodge and by the flickering camp-fire were carefully translated and written down. When published they excited great interest. They are tales of daring and adventure, weird accounts of magic, mystery and the supernatural; relations of the ways of life in the old, wild days; stories of war and the craft of war parties, the history of the tribe as treasured by the very old men. There is mother-wit in these stories, they are full of humor, sentiment, pathos and human nature.

Blackfoot Lodge Tales.

The Story of a Prairie People. By GEORGE BIRD GRINNELL. Cr. 8vo., $1.75. In this volume the story of the Blackfoot tribe is told by a friend, one who has hunted with them on the prairies, slept in their lodges, lived in their camps, and shared their daily life. The stories which constitute this history have been taken down by the author from the lips of the narrators, and are given without change as told to him. There is a singular and charming freshness about the stories, which give the history of renowned warriors of ancient and modern times, show how ancient customs arose, and explain natural phenomena. The account of the daily life, customs, and history of the Blackfeet presents a series of graphic pictures of savage life in peace and in war.

Our New Alaska;

Or, The Seward Purchase Vindicated. By CHARLES HALLOCK. Cloth, 209 pages, illustrated. Price, $1.50. Mr. Hallock's writings are always vivid and full of life.

THE KENNEL.

Dogs: Their Management and Treatment

IN DISEASE. A Study of the Theory and Practice of Canine Medicine. By ASHMONT. Cloth, 208 pages. Price, $2.00. The *Forest and Stream* says that this is one of the most valuable treatises on canine management and therapeutics that has appeared on this side of the water.

Kennel Record and Account Book.

Boards, $3. An indexed volume of 180 pages, consisting of a series of carefully prepared blank entry forms suited to the registration of all kennel events and transactions.

Dog Points and Standards.

First Lessons in Dog Training, with the Points and Standards of all Breeds of Dogs. Paper, new edition, 106 pages, revised to date. Price, 50 cents.

Training vs. Breaking.

Practical Dog Training; or Training vs. Breaking. By S. T. HAMMOND, Kennel Editor of *Forest and Stream*. Revised and re-written. To which is added a chapter on training pet dogs, by an amateur. Cloth, 165 pages. Price, $1. A book for dog owners, who, by the instructions here plainly given, can successfully train their hunting dogs.

Modern Training;

Handling and Kennel Management. By B. WATERS. Illustrated. Cloth, 373 pages. Price, $2. This treatise is after the modern professional system of training. It combines the excellence of both the suasive and force systems of education, and contains an exhaustive description of the uses and abuses of the spike collar.

House and Pet Dogs;

Their Selection, Care and Training. Paper, price 50 cents.

Lee's Modern Dogs.

History and Description of the Modern Dogs (Sporting Division) of Great Britain and Ireland. By RAWDON B. LEE, kennel editor London *Field*. Illustrated, 584 pages. Price, $6. This is a standard work by an acknowledged authority, and is up to date. It treats all sporting breeds exhaustively. The illustrations are idealized portraits of typical specimens.

Kennel Secrets.

How to breed, exhibit and manage dogs. By ASHMONT. The dog from the time he is conceived to the time he curls himself up for his last long sleep is treated from every standpoint that could possibly occur to a man of wide experience with dogs. Every important subject that has engaged attention has been fully discussed, generalities being held practically valueless and misleading. Illustrated, 344 pages. Price, $3.00.

The Spaniel and Its Training.

By F. H. F. MERCER. To which are added the American and English Spaniel Standards. Cloth. Illustrated. Price, $1.

Scientific Education of Dogs for the Gun.

By H. H. Cloth. Price, $2.50. The instructions are the result of the author's amateur practical experience of 37 years. *Forest and Stream* says: "This work is a very well written treatise upon the subject, containing some new ideas and much that is interesting and instructive to the new beginner as well as not a little that will be beneficial to even old hands to study."

YACHT AND CANOE.

Small Yachts.

Their Design and Construction, Exemplified by the Ruling Types of Modern Practice. With numerous plates and illustrations. By C. P. KUNHARDT. New ed., 470 pp. of type and illustrations and 87 plates. Size of page, 14½×12½. Price, $10. This book is intended to cover the field of small yachts, with special regard to their design, construction, equipment and keep.

Steam Yachts and Launches;

Their Machinery and Management. By C. P. KUNHARDT. With plates and many illustrations. New ed., 267 pp. Price, $3.00. A complete review of the development and present status of the marine engine and boiler as applied to steam yachting.

Canoe and Boat Building.

A Complete Manual for Amateurs. Containing plain and comprehensive directions for the construction of Canoes, Rowing and Sailing Boats and Hunting Craft. By W. P. STEPHENS, Canoeing Editor of *Forest and Stream*. Cloth. Fourth and enlarged edition, 264 pages, numerous illustrations, and fifty plates in envelope. Price, $2 00.

Canoe Handling.

The Canoe: History, Uses, Limitations and Varieties, Practical Management and Care, and Relative Facts. By C. BOWYER VAUX ("Dot"). Illustrated. Cloth, 168 pages. Price, $1.00.

Yacht Architecture.

By DIXON KEMP, Associate of the Institute of Naval Architects and Member of Council. Second edition. Super-royal 8vo., 530 pages, numerous plans and designs. Price, $16.80.

A Manual of Yacht and Boat Sailing.

By DIXON KEMP, Associate Institute of Naval Architects (Member of the Council). 750 pages, with numerous plans and designs. New edition. Price $12.00.

THE ILLUSTRATED CATALOGUE OF FOREST AND STREAM BOOKS WILL BE SENT FREE.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2. | NEW YORK, SATURDAY, DECEMBER 21, 1895. | VOL. XLV.—No. 25. No. 318 BROADWAY NEW YORK.

For Prospectus and Advertising Rates see Page iii.

The FOREST AND STREAM is put to press on Tuesdays. Correspondence intended for publication should reach us by Mondays and as much earlier as may be practicable.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

SEE REDUCED HALF-TONES IN OUR ADVT. COLUMNS.

The plates are for frames 14x19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream *one year and the set of four pictures*, **$5.**
Forest and Stream *6 months and any two of the pictures*, **$3.**
Price of the pictures alone, $1.50 each; $5 for the set.

Remit by express money order or postal money order. Make orders payable to

FOREST AND STREAM PUB. CO., New York.

SPRING SHOOTERS AND "BUTCHERS."

THE self-assurance with which one individual will sometimes adjudge another individual or group of individuals as this or that, and devoid of claims to sportsmanship, is well exemplified by a recent ruling of a contemporary that President Cleveland and ex-President Harrison were shooters, not sportsmen; and specifically that "both are spring butchers pure and simple, that and nothing more."

The question of sportsmanship stripped of the fallacy and intolerance with which it is invested by different men who have different personal hobbies is one determined by the ethical standards and usages of the best sportsmen in the land, and not by the oracular utterances of any self-constituted authority.

Confounding a question in game-supply economics with ethical matters of sportsmanship does not show a true perception of the question.

It is safe to assume that gentlemen who have graduated in the highest schools of life and who move in the highest circles of the business and ethical world know what is correct and proper in their business or their pleasure. And it is certain that the usages of a large class of gentlemen throughout the land, more particularly when the usages clash with a thin scattering of isolated and individual opinion, determine the status of what is proper and what is not. Individual hobby is not usage.

Surely a standard of sportsmanship, measured by the notions or dicta of one person, is not a sufficiently broad ground from which to denounce a class of sportsmen throughout the length and breadth of the land, of which class the President is singled out with invidious spitefulness.

There is no universal sentiment nor statutory law against spring shooting. As to the possibilities or desirability of abolishing it, there are differences of opinion. Common consent, however, has never established it as a test of sportsmanship, the dicta of any individual to the contrary notwithstanding.

Spring shooting has long been in the realm of debatable questions in the economy of the shooting interests of America. It is an important question for the consideration of sportsmen, merely as it relates to a restricted killing of the ducks with a view to a future supply. There is a general sentiment which disapproves of the making of large bags, of killing for the sake of making a large count, or killing after the manner of the pot-hunter; but the question of the season, spring or fall, has never yet been definitely determined as a subject of expediency, much less as one of ethical rule. The wrong of spring shooting must be recognized by common usage or by statutory law before it can be cited as occasion for denouncing any one as a butcher.

One may feel that spring shooting is wrong; he may make a resolve that he himself will not indulge in spring shooting; he may cherish a belief that he has the true ethical principles of sportsmanship within himself; and so long as he makes his own beliefs his own rule of action no one can say nay to him; but when he uses his own creations as measures by which to rule the actions of others, contrary to established usage, he then enters into the realm of fanaticism.

Spring shooting is destructive to the duck supply, and if persisted in will eventually result in still greater depletion of their numbers. To shoot or not to shoot them in the spring is a material question for the consideration of the sportsmen of the land, not an ethical question which makes butchers of all those who advocate and practice spring shooting, and sportsmen of all those who shoot ducks in the fall.

FOREST AND STREAM has been and is opposed to spring shooting for material reasons, reasons which have a solid foundation in the economy of the sport, which appeal to the sportsmen of the land as sportsmen in general in moving for the general good, and not confounding with ethical principles with which it never has been conceded a part.

SNAP SHOTS.

Here are three shooting scores to be noted, those of Emperor William II., President Cleveland and Mr. Edwin Thorne, of Long Island. The German Emperor went to the boar park of Hanover last week for his annual pig and deer hunt in the forests of Springe and Landenau. The programme of the royal hunt called for the killing of at least 350 pigs and of red deer in proportion, the trophies to be laid out in rows after the hunt for the admiration of the participants in the sport and of the public. Affairs of state, however, intervened and required the Emperor's return to Berlin before the hunt was half over. Most of the 350 pigs which were condemned to slaughter are still foraging for the acorns of Springe. For the very interesting photographs of the game killed on a former hunt in the same preserves we are indebted to Mr. W. Hesse, Head Forester of the royal game parks. The pictures hint of the ceremonial character of a royal hunt, this in such striking contrast to the simplicity and absence of display which mark the shooting excursions of a President Harrison or a President Cleveland.

Mr. Cleveland got back to Washington last Sunday from his ducking trip to North Carolina waters. The game which he brought back as the fruits of the expedition was not laid out in rows on the White House lawn for public inspection and admiration, but the newspaper men were on hand when the party came ashore, and they have recorded as the spoils of the trip a bag of fifty-two ducks, five geese, four brant and thirty-two quail.

But when it comes to making a bag of game that is a bag, William II. and President Cleveland are insignificant sportsmen. Mr. Edwin Thorne, of Long Island, is a "biger man than old Grant," and no Kaiser or President on earth can compete with him in duck butchering. Mr. Thorne appears to be a combination of sportsman and market-hunter, and when a favorable opportunity offers he does what he can to insure the modest and moderate gratification of both of these personalities. On Nov. 23 there came to Mr. Thorne the chance of a lifetime; he improved it by killing 264 birds, which were afterward photographed, and are reproduced for illustration in our shooting columns this week. The score was an extraordinary one for Long Island, and if mere bigness is to be considered, is one which will probably long remain unsurpassed. The good fortune which came to the Babylon gunner will be noted with envy by many a duck shooter. Moralize as we may, there is no use in attempting to deny that fact. Probably as human nature goes, nine men out of ten who had the opportunity to kill 264 birds in a day would do so, provided they had a gun that would stand the test and shells enough to do the work; and it is very likely too that they would have their harvest of ducks photograpaed, and would pat themselves on the back and expect others to pat them on the back for having achieved a great feat of sportsmanship. Whether any one has a moral right to perpetrate such a slaughter in this year of grace and of duck scarcity 1895 is quite another question. We have been hearing much of late in condemnation of the record killers. Experienced sportsmen like Didymus, who have lived long enough to get beyond that early stage of sporting life in which success is likely to be gauged by the bulk and the dead weight of the day's shooting, would have us believe that to kill without stint is to transgress the laws of consideration for others, restrictions which it is a sportsman's first duty to remember and regard for his own self-control. Such considerations are likely to be applied to this bag of 264 ducks made by a Long Island gunner, and it might be perfectly just so to apply them if we had to do with a case which was to be classed exclusively under the designation of sport. As a matter of fact Mr. Thorne sent his birds to market, and we presume that he would resent any discussion of his achievement which took the narrow ground that the feat was a sportsman's only. He might very well claim the greater privilege of the market hunter, a privilege which is unrestricted by any foolish notions of consideration for others. The one rule which the market hunter knows is to kill as many birds as can be disposed of to the consumers. Tested by such a law Mr. Thorne's duck score was a very creditable performance.

The name of Patrick Mullen is known but to a few of the present generation of sportsmen, but it was familiar enough to the older school of wildfowl gunners of New York, and indeed of the country at large. From his little shop in Maiden Lane, in this city, Mullen sent out guns which had a deserved reputation, for he put into their making honesty, skill and pride. The duck shooter who had in his blind a Patrick Mullen gun was accustomed to feel the utmost confidence in it as an "old reliable," and the products of the Mullen shop were considered the most perfect weapons one could count in his armament; a very high measure of esteem was accorded the maker for the lofty principles which controlled his life; and no man might ask for a kinder remembrance after he had passed from earth than that which is expressed in this tribute contributed by Mr. James C. Carter to the *Evening Post* of last Saturday:

> He was a plain mechanic of the old-fashioned type, working for himself, with no journeyman to assist him, and with no ambition except to make his work perfect and to give it that finish and beauty which come from perfect adaptation to the purpose designed. No money could tempt him to turn out a poor piece of work, or to ask or accept anything more than a fair and reasonable price for the best. Honest in every fiber of his nature, with a self-respect that shone out with dignity and pride, though never with ostentation, industrious every day and hour, he lived his eighty years of life in a manner to command the admiration of every man who knew him.
>
> All his old friends will pay in thought a silent tribute to his memory. I ask you for a place in which to utter mine aloud.

A distressing story comes from Quebec that tons of deer meat are shipped from the Province into Maine wilds, to be transported thence by sportsmen under the pretense that their prowess brought down the game, or to be shipped directly to the Boston market. The Canadians are lifting up a great cry that they are being despoiled of their venison. Now, it is known perfectly well that hunters do bring out from Maine wilds deer by the thousands, and it is also understood that many tons of venison are shipped to Boston every season; but Maine has always claimed and has been given credit for the game; and we believe that the State deserves it, every bit of it.

The Quebec Legislature has adopted resolutions providing for the leasing of unsettled parts of country to clubs for hunting and fishing preserves. The parts so leased may not exceed 400 square miles, and the annual rental is to be not less than a dollar a mile. Vast areas of Canadian wilderness have already been taken up for hunting tracts, and there is a well defined tendency toward the preserve system on a still larger scale. We even hear talk of deer preserves and trespass signs in the heart of Newfoundland.

The Sportsmen's Exposition to be held in Madison Square Garden next March gives promise of excelling in magnitude and interest the first affair. Spaces have already been taken by the leading firms, and we hear of previous exhibitors who are doubling their spaces for March. Remember the dates, March 16 to 21.

The New York State Association for the Protection of Fish and Game will hold its regular annual winter convention in Syracuse Jan. 9, and one of the important topics then to be considered will be the section, No. 247, of the game law, which permits the sale of game all the year around. On this subject there should be such an united and emphatic expression of opinion as to leave no room to question the public in condemnation of the law.

The Sportsman Tourist.

UNCLE LISHA'S OUTING.

VII.—Visitors in Camp.

At the edge of the woods Sam turned and took a careful observation of the clearing.

"I s'pose the's a landin' daown there on the crik 'baout as nigh as the one on the Slang, hain't the'?" he asked.

"Wal, Ah do' know prob'ly. Yas, Ah guess yas. What you wan' know, hein?" Antoine answered and asked.

"O, nothin', on'y I was a-thinkin' if the canew was there we c'ld git tu camp quicker. My stomerk's cryin' cupberd if that feller's water is victuals an' drink. Haow is 't wi' your'n, Antoine? You hain't hed even water tu stay it."

"Bah gosh!" cried the Canadian with hungry zest, "Ah'll can heat one of dat dauk raw an' hees fedder."

"That 'ould hurt Joe's feelin's, he wants all the feathers for a peace offerin' tu M'ri'," said Sam, lengthening his strides till a glimpse of the open sky beyond the landing was seen, when he slackened his pace and peered cautiously out upon the open marsh.

"Hsssh," he whispered, drawing back and slowly sinking upon his haunches, "the's a hull snag o' ducks a squddlin' 'raound not four rod f'm the canew. We c'n crawl up an' git a crack at 'em."

Crawling side by side they wormed their way within short range of at least a dozen wood ducks that were swimming, diving and bickering over choice morsels in the narrow pathway of water that made from the channel to the landing. Then taking deliberate aim at the thick of the flock they fired at the word given by Sam. Above the rolling cloud of smoke they saw but five terrified survivors scurrying away in scattered flight, and beneath it when it lifted seven dead and wounded unto death, all of which they speedily secured, even to one poor cripple that skulked among the weeds and was mercifully dispatched by a stroke of a paddle.

"There, Antoine," said Sam, as the canoe floated out upon the channel, "you set for'ad, I done all the shootin' I want tu-day."

Thus disposed they paddled down the Slang. As they passed the trim newly built muskrat houses, almost every one of them had a tally stick stuck beside it marked rather conspicuously by a bit of birch bark inserted in a cleft at the top.

"Dat was Injin fashi'n," Antoine commented, "an' Ah bet you head dere was some of it trappin 'raoun' here."

"Jest their shifflin' way, ketchin' lots o' half-growed ones. But the's plenty o' white folks 'at's jest as bad. I wonder where the creatur's is campin'. I sh'd like tu run on tu 'em."

"Oh, Sam, you'll want great many t'ing, a'n't it? You'll fan' two nigger an' one Quakers to-day already, an' naow you'll want Injin. Say, Sam, what kan' o' nigger you call dat beeg one, hein?"

"I do' know 's anything more'n a tol'lable black one. Why?"

"Wal, seh, he'll gat diff'nt of aour kan' o' nigger. He'll a'n't spick Angleesh sem' lak' you was, an' me an' dat odder nigger. Oh, Ah tol' you, Sam," he said impressively, and looking over his shoulder at his companion, "Ah'll b'lieved he was slave runaways nigger from Souse 'Mericay."

"Sho', Antoine, you du git cur'u's ideas int' your noddle."

"Wal, Ah'll b'lieved dat, me," said Antoine decidedly.

"Wal, s'posin' he is," said Sam, carelessly, "let him run; I sha'n't stop him."

"Prob'ly de mans dat hown it was willin' for give feefteen, prob'ly twanty-fav' dollar. Haow many you s'pose, prob'ly?"

"I s'pose," said Sam with impressive earnestness, "if a man was mean 'nough tu du sech a sneakin' job he'd ortu be sunk in this 'ere crik, an' I cal'late that's as mis'able a death as a fellow could die. If you want tu keep friends wi' me, Antwine, don't you tell nob'dy 'at we seen sech a man—not nob'dy."

"No, no—no, Ah'll won't tol' mah waf', no, sah," adding after some reflection, "honly Onc' Lasha an' Zhozeff, prob'ly."

"Wal, if you must tell someb'dy er b'ust I s'pose they'd be as safe as anyb'dy. But don't ye open your head tu no strangers. Naow, remember."

"Dat all Ah want. But Ah'll tol' you, Sam, it mek me felt kan o' mean for keep all Ah'll know for mahsef."

"Hol' on," said Sam, steering the canoe close to the marsh where a muskrat house stood in a narrow environment of open water, "there's a poor leetle mushrat not so big as a haouse rat, all wopsed up in a mess o' weeds where he can't draown ner git away."

As the canoe ran alongside, he reached out and carefully disengaged the trap and its struggling captive from the entanglement of marsh weeds, and after a brief inspection pressed the spring till the jaws opened. When the little prisoner found himself free he made off with scrambling splash into the marsh as Sam gave him a parting admonition.

"There, you poor little devil, go your ways an' grow bigger. Naow, Antwine, wouldn't a feller be meaner 'n pusley tu put that leetle chap back int' the trap ag'in?"

"Yas, prob'ly," said Antoine; "but Ah'll an' spec' de Injin t'ank you much, prob'ly, a'n't it?"

"Wal, I wa'n' ezackly considerin' the Injin's feelin's."

Their way down the Slang and creek was unmarked by even an unsuccessful shot, for the few ducks they saw arose too far out of range to tempt them to the trial of the uncertain chance. Now and then they were startled by the sudden uprising of a heron beating upward with labored strokes of his broad vans in a long slant to level flight over the marshes, or the frightened squawk of a bittern jerking himself into the air and stumbling through it on awkward wings to a safer retreat. A countless dusky swarm of blackbirds rose up from their busy feeding among the rice in a sudden cloud and with a dull roar of innumerable wings, as if a mine had exploded beneath the flock.

When they rounded the last great bend and came in sight of the bay, they saw a large craft with a single square sail coming in toward the mouth of Lewis Creek.

"Hurra' for Canada," cried Antoine, joyfully, after regarding it intently for a moment. "Look, Sam, dat was Canada boats."

"What makes you think so?"

"O, Ah'll know it by hees sail jes' easy as you can tol' nigger by hees skin. Yankee boat a'n't got square sail lak' dat more as he wore botte sauvage or heat pea soup. Prob'ly he brought some salt for sol' it or come for bought some happle, prob'ly, bose of it, Ah do' know 'f he a'n't. Ah'll gat brudder-law was be captain for one of it. Mebby dat was be mah brudder-law, mos' likel'. Ah'll go see to-naght 'f Ah'll a'n't in de morny, me."

"Wal, I'll go with ye. It's turrible interestin' tu look at furrin shippin' an' that looks like an ol' buster, nigh 's big 's a canawl boat."

"O, dey was beauty boats," said Antoine proudly. "Ah'll tol' you, dey was mek de water roar lak' Onc' Lasha w'en he sleep."

Presently they were at the landing among the willows under the bluff, a place made familiar to them in their summer fishing trip of a previous year. Thence, laden with guns and game, they climbed the steep to the camp, where they were loudly welcomed by Uncle Lisha and Joseph, who generously congratulated them on their success, though it abated the pride of their own achievements.

"Wal done, boys." Uncle Lisha slowly counted the ducks, carefully inspecting and observing each and inquiring its kind. "You did du fust rate, sartain. But what sort o' critter's this 'ere?" he asked, picking up the coot and minutely examining it. "Antwine, hev you be'n a-robbin' someb'dy er nuther's henrwust?"

"No, Onc' Lasha," said the Canadian, one hand busy with the potato kettle and frying-pan, while from the other he snatched hasty mouthfuls of bread to appease the cravings of his fasting stomach, "dat was you good boy Sam, an' Ah'll tol' it he don't ought for do so weeked. But he want for pracsit for shoot, so he'll shot de folkses hen. What you t'ink for dat, hein?"

"No, 'tain't a hen nuther," the old man decided, "but it looks more like one 'an some o' these 'ere patent new-fashion Chinee faowls does. Clapham's got a rwuster 'at come f'm Boston 'at he calls a High-shang er hang-shy er some sech a name, 'at don't look no more like a civilized barndoor faowl 'an you du, Ann Twine, an' when he does what Clapham calls crowin', it scares child'en. I never heard sech a' on'arthly yollopin'."

"Wal, Onc' Lisha, dis t'ing was kan' o' fool dauk. Dat hees nem of it. We jus' brought it home for de fedders for Zhozeff."

"Wal, me and Jozeff hes picked 'em all off'm them leetle baby ducks 'at we got, an' don't you b'lieve both on ye 'at he was so savin' 'at he pulled the pin-feathers aout with his teeth, an' we got pooty nigh a piller case full an' the ducks is dressed complete. Haow be ye goin' tu cook 'em, Antwine? Rwust 'em, er bile 'em, er fry 'em? I'm kinder hankerin' for some hot victuals."

"Wal, Ah'll b'lieve Ah'll goin' for fry it, for be quickes' way for our hongry," said Antoine, laying the split teal in the frying-pan with a generous lump of Danvis butter from the Lovel dairy. "Come, Sam, ponch de fire. Zhozeff, pull up you stump an' chaup off some hwood. Hoorah."

The fire was properly replenished, the potatoes boiled merrily, the frying-pan screeched, and Antoine pranced around them fully impressed with the importance of his office, while the others sat on the fireside log hungrily watching him with their backs to the world.

"I do' know as ary one on us told ye 'at we hed comp'ny whilst you was gone," Joseph said. Antoine held an attentive ear above the crackling of the fire and the turmoil of cookery, upon which he kept his intent eyes, shielded by one protecting hand, while the other, armed with a fork, urged the process of cooking with frequent prods and shakes of the contents of the pan.

"Wal, sorter comp'ny er vis'ters er callers, mebby you you might call 'em. Tew fellers they was 'at come a saunderin' up an' sod daown an' smoked a spell an' 'peared turrible sociable. Hed guns, they did, kinder huntin', but was inquirin' if the' was colored man livin' anywher's 'raound here, o' the name o' Jeems suthin' er nuther. What was 't, Uncle Lisher?"

"I do' know," Uncle Lisha replied, "I tol' 'em 'at we hedn't had time tu git 'quainted wi' the white folks, let alone the niggers."

"Color' man," cried Antoine, lifting his voice above the roar and crackle of the fire, the walloping of the pot and the sizzle of the pan, and making it very audible though his back was turned to his hearers. "Bah gash, me an' Sam was visit some black color' mans an' hear of some red color' mans. An', seh, de black color' mans leeve raght over dere behin' de hwood, pooty clos' neighbor of us, seh. We gat for stay wid heem one slave nigger dat was run 'way wid hese'f all de ways from Sous 'Meriky an' oh, he would dance you never see to beat it w'en t'udder nigger was fi'le more better as dat leetly humpy Palmer feller. An' dat beeg slave run'way nigger was sing jus' lak' black yallerbird sem' as de gros riche lady gat in leetly wire coop. Oh, Ah'll tol' you 'f Ah'll hown dat nigger. Ah'll a'n't took more's fee'ty dollar for it, no, seh."

As Antoine ceased Joseph slowly turned in his seat to reach a stick of wood and was confronted by two men standing close behind the unconscious group.

"Sam Hill!" he ejaculated. "Here they be naow! Where in tunket did you come from? Dumbed if you didn't skeer me, anyway!"

The other members of the camp household were as much surprised as Joseph, but Sam was most disturbed, for he felt almost certain that much of Antoine's disclosures must have been overheard by the intruders, whom he suspected were hunting larger game than ducks.

"Beg pardon, gentlemen," said one of the newcomers, a brisk, wiry little man with a sharp face and a business-like, official air. "Don't wanter intrude, but we'd jes' like to light aour pipes 't your fire. Can't scare up a match betwixt us. Got a flint an' steel, but lost aour punk," and without waiting for permission he stepped to the fire and thrust a dry twig of cedar into it, wherewith when ablaze he lit his pipe and then offered it to his companion, a tall, sallow man, all of whose movements were deliberate if not indolent, except those of his restless, searching eyes.

"Here, Clark, light up. This 'ere's better 'n punk or a match."

But Clark had just begun to whittle a charge from a huge plug of peculiar light-colored tobacco, very different as Sam noticed from the black nail rod and twist to which he was accustomed, and he also noticed that the stranger's pronunciation of the few words he spoke bore a marked similitude to that of Jim's guest. When he had generously offered his "raal ol' Ferginny leaf" to each and lighted his own pipeful, so fragrant that those who refused regretted having done so, the visitors seemed in a hurry to go, but he who was the spokesman returned after they had gone a little way to ask in Yankee fashion for the loan of the scow.

"I s'pose you couldn't let us take your scaow boat a spell to go aout an' see 'f we couldn't git tew three ducks, could ye? We hate to go hum 'thaout a feather. They'll make fun on us so. "We can n't git a thing huntin' 'long the shore."

Sam shook his head. "I'm turrible sorry, but we got tu use aour boat jest as soon as we git some grub."

"We'd fetch it back in a couple o' hours," urged the man whom his comrade called Baker. "Guess you c'n let us have it as long as that, can't you?"

"No, got tu use it right off," said Sam. "Come, Antwine, hain't ye got the victuals 'most ready? We want tu be off tu rights."

Reluctantly relinquishing the design of borrowing the boat, Baker and his comrade hurried away up the bank of the creek. Sam watched them with unfriendly eyes till they disappeared among the trees beyond the landing, saying to himself as much as to his companions:

"Consarn 'em! They won't git no boat o' aourn tu hunt niggers."

Uncle Lisha and Joseph stared at him in puzzled inquiry, and Antoine, with an abashed face, devoted himself to his cookery.

"What is 't, Samwel?" the old shoemaker asked at last. "I can't make head nor tail on 't."

"Why, you know what they ast you, an' you heard what Antwine said 'baout the darkies an' so did they, a-sneaking up behind of us at just that onlucky minute; heard all they wanted tu er they'd ha' ast me some questions. They're arter that 'ere runaway chap, an' I don't cal'late we're a-goin' tu help 'em much, be we?"

Uncle Lisha snorted a contemptuous negative and Joseph Hill said,

"It don't seem's 'ough that was what we come here for, not ezac'ly."

"Prob'ly Ah'll s'pose, Sam, you blem me all up, but Ah tol' you seh, Ah'll a'n't to blem. Ah'll a'n't s'pose dere was anybody but wese'f goin' for heard me tol' Onc' Lasha an' Zhozeff de new, an' Ah mus' tol' dat," Antoine said in deep dejection, as he set the dinner on the table and the hungry crew gathered about it.

"O, I do' know 's I blame you none. The' hain't no use in cryin' over spilt milk, an' we'll jest tend tu aour business an' let other folks tend tu their'n if it hain't the pootiest 'at ever was. Say," he continued as if dismissing the subject, "when we git done eatin' le's take the scaow boat an' all go over an' see that 'ere boat f'm Canady."

ROWLAND E. ROBINSON.

ON THE BANKS OF THE NOBLE SEVERN.

After a hard and vexatious winter's work I was possessed of that luckless malady known as "that tired feeling." I think I must have felt like the poet when he wrote: "Prone to wander, Lord, I feel it." I called upon my good friend Tom Myler, who is nothing if he isn't the "prince of good fellows."

From him I learned that of all the pleasant summer regions Canada was the most desirable. Few places in the world possess greater attractions than do the lakes and woodlands of the Muskoka district. They have the bracing atmosphere in which almost every essential will be found for the "setting up" of the ever increasing army of "run downs."

For those who seek mental and physical health, rest and seclusion from the busy cares of city life, this Muskoka Lake region is indeed a "land flowing with milk and honey."

Tuesday morning, Aug. 7, we boarded the Lake Erie train at Pittsburg, arriving at Niagara at 8 P. M. The ride down the banks of the old Ohio was indeed splendid, very picturesque and beautiful. From the Ohio to Niagara one sees a magnificent farming and fruit-growing region. In my travels I have nowhere seen such energy and enterprise among the farmers. Their clean cropped farms, trim fences, fine buildings and luxuriant crops were fair to look upon. Hereafter I shall eat the "Chautauqua grape" with greater relish, for from the beauty of the country I would expect something fine.

Our ride to Severn was pleasant, but uneventful; arriving too late to take Staunton's launch, a boat that makes daily trips from Severn Bridge to Sparrow Lake.

Just at dark we heard the whistle blow, which was a signal that the launch was making a second trip. When the boat landed it proved to be a launch belonging to Mr. John Massey, of Massey, Harris & Co., Toronto.

After considerable trouble we persuaded him to take us to Sparrow Lake.

It was now pitch dark, and the way that boat shot down the narrow gorges of the Severn River was a caution. Several times, to avoid logs and rocks, the helmsman shot us around so suddenly as to almost overturn us. We put up at Bennett's, where we found the boarding excellent, the rooms airy and the beds clean. Next morning found us up with the sun, fishing off the barge at the boat landing.

In a short time we had quite a string of fish that we thought were bass, and you can imagine our disappointment when told they were perch, and too bony to be eaten. As we had not the slightest knowledge of the habits or feeding places of the fish, we fished in hard luck.

In the meantime it was our rare good pleasure to meet a fine Scotch gentleman by the name of Brimer, who resides in Toronto.

He directed us: "Go down to the mouth of the Severn, hitch your boat to the second pole and don't move, and you'll catch fish." We did as directed, and caught fish. In a little while I noticed my brother's reel fairly sing; he reeled it in and again the line paid out.

After a hard battle he landed a 4½lbs. bass. My! the excitement and pleasure as the fish cuts through the water, darting hither and thither. Three times he threw himself far up out of the water, his yellow sides dripping in the sunlight. Once he vaulted clear over the stern of the boat.

Several times he came to the surface and tried to throw the hook from his mouth, shaking it as a dog shakes a rat. Not until he was flopping around in the bottom of

the boat did we have the assurance that he was the crown jewel of our finny treasures.

I got a vicious bite, and in another instant I was struggling with a 3lbs. beauty. We were advised to hitch our boat to the second stake, for at this second stake the Severn suddenly veers to the right coming down stream, and the waters are whirled around in pretty eddies.

In these eddies lie the noblest, the strongest and the bravest of all creatures that swim—the bass. At this shrine every angler bows his knee, and in the glowing light of thousands of camp-fires the tourist chants his praise. In these eddies come the noble bass to feed, for

THE ARRIVAL OF WILLIAM II. AT THE BOAR PARK.

to this point the river bears its burden of worms and insects. The fish come in schools, and the day Dave and I were there we caught the whole school, urchins, truants, teachers, janitor, principal and all; at least so we considered it. In a couple of hours we had all the fish our family could use and slowly rowed homeward, arriving in time to see Mr. Skinner, our host, one of the oldest residents in the whole country side, land a 25½lbs. channel cat. My! the fight he had to land him. Three times the fish towed the old man in his little boat across the river before he would consent to be rudely dragged ashore. We immediately called our crowd together, and in due

form elected this old patriarch of the rod and reel chairman of the next "Channel Cat Convention." In the afternoon and evening my Scotch friend rowed me down to Sparrow Lake to troll for 'lunge. Up here they do not say muskinonge or muskalonge, but simple, emphatic, trenchant lunge.

No other word implies so well the splendid pluck and prowess of this kingly fish.

We trolled up and down past the mouth of the lovely Koschee River, and although our luck was not good the glorious scenery of this romantic Koschee with its craggy dells was abundant reward.

My friend Brimer keeps jollying me along by saying, "Don't get uneasy; we are not yet at the proper place. Wait until we strike the lunge weed then we'll have fun." Presently I saw down in the deep waters of the lake a tall green fern-like weed that undulated backward and forward, keeping time to the rhythmic motions of the boat. In the soft, pithy stock of this weed there burrows a worm which becomes a large juicy grub that is as fine as tenderloin to the hungry lunge.

The fish breaks the weeds to pieces to get this delicious morsel.

"Now we'll have some fine fun," says Brimer, but nevertheless we don't, and as the hours roll around even the over-enthusiastic Brimer begins to look as though he had that "tired feeling."

We thus toil "until the evening sun descending set the clouds on fire with redness, burned the broad sky like a prairie, left upon the level water one long track and trail of splendor."

Our stock of disgust increases as we view the result of our toil:

Two measly little pickerel.

Sadly we start homeward, but we had not gone far when I felt the loose line jerk and tighten, felt its vicious lurches. "It's a lunge, and a good one," says Brimer; but mind you give him no slack line. We play him for several minutes. I conclude to draw him into the boat, when to my amazement he shot fully 4ft. from the water, the pearly drops flash from his blue and silvery sides, and he came down with a crash into the water and shot crosswise under our boat, almost overturning it.

As the fish leaps from the water and thrashes its surface to a foam, even the sage Brimer, a veteran of many similar wars, grows excited and exhorts to be careful and not overturn the boat.

He finally tires of his mad rushes and we yank this princely 15lbs. muskinonge into the boat.

When we arrive home grandfather Skinner, the patriarch of this region, remarks by way of encouragement? "He's a nice little fellow, but not half as big as I have seen 'em. Why, I speared one in the spring of '72 that weighed 43½lbs."

Monday morning we hitched up the Democrat, a four-wheeled vehicle, and in true Republican style rode out to visit a number of the small lakes in the vicinity. We visited Bear, Buck, Grass and St. John's lakes, finally pulling up at Orilla, one of the prettiest towns of Ontario. It is prettily nestled on the banks of the romantic Couchiching (lake of many winds). It is prominently associated with the massacre of the Huron Indians, and the merciless massacre of the early Catholic wilderness missionaries. It being the base of missionary operations earned the fierce wrath of the relentless Iroquois, and its sad fate is too tragic to relate. No history is more sublime in its record of suffering, self-sacrifice, peril and death than is the history of those pioneer Catholic missionaries. Though 200 years have elapsed, their tragic end seems still to taint the region with sadness and the somber pine tree to chant their funeral dirges.

On our return to Bennett's we heard marvelous tales of the region known as the Lower Severn. Capt. Woods, a millionaire of Pittsburg, had been a member of the party just returned, and his graphic descriptions of the wonders seen "down below" were awe-inspiring.

Then the awful sounds at night were, to hear the captain in his unique and entertaining way tell it, most thrillingly. There was the howling of wolves, screaming of lynx, and the ominous call of the moose.

Oh, my! how could we refrain from going "down below?"

Wednesday morning, having packed three days' provisions, hired guides to paddle us, we glided out of the handsome Sparrow Lake with our hearts all aglow with bright anticipations of the wonders "down below," as the genial captain had put it.

"Take a good look at that house," said Archie, my guide, "that's the last house you will see for three days," and we saw with feelings akin to sadness the outlines of this rude house fade away in the distance.

We knew that although we were on the bosom of a mighty waterway, destined some day to be one of the commercial highways, yet we should probably see no human faces save our own for three days.

We swept down past the lovely camp of the Iron City Club, of Pittsburg, a coterie of the finest ladies and gentlemen of that city.

At McDonald's Chute we were compelled to portage our boats, which to me was one of the most novel of my experiences in Canada. The guides dextrously threw the boats over their heads and bore them like the tortoise bears his shell. The others carried the guns, rations and camp utensils.

Oh! the reckless and light-hearted abandon with which we trudged over that portage. Once over the portage we again launch our birch bark canoes and lazily paddle down the noble Severn. Another portage is made and

RED DEER IN THE ROYAL PRESERVE.

we all make a dash to see who will be first to view the far-famed Ragged Rapids. Here we carry our boats a mile or more. This tiresome trudge knocks the romance of the portage into a cocked hat; but the sight that greets your eye as you peer over the crags to the foaming depths below helps the hurt that toil has made. Here the waters of the Severn are forced through a gorge, scant 50ft. wide, and so precipitous that the waters fairly fly. When the floods pass through this rapid must be one of the world's wonders.

No sort of craft could for an instant live in the awful fury of the beating, rushing waters which are ground out at the foot of the rapids in giant waves, as from the paddle of some immense steamer.

The waters, as if tired out after their perilous journey, flow sluggishly away, and as we slowly paddle away on its calm surface, the guide stops and remarks: "You are now in the fisherman's paradise."

We anchor at the head of Flat Rapids; baiting our hooks with live frogs, we begin our work.

All around us we see the bass jump up and snap a big brown fly of the mosquito type, called the bass fly.

My bait hardly struck water until the reel began to sing and the rod to bend. In my over-anxiety to land him I broke my rod and had to drag him upon the beach. I soon cut a pole from an alder thicket. In trying to drop my bait into a fine eddy a bass jumped at it before it touched water. It had scarcely sunk out of sight when I felt the energetic snap of the bass. Eager to land him, I dashed him far upon the bank, from where he flopped down into a tangle of brush and weeds, and I lost much valuable time in getting him out.

For an hour or more we were kept busy baiting hooks

WILLIAM II. INSPECTING THE GAME.

The Emperor stands between the second and third window to the right of the door.

and landing fish, fifty or sixty bass and pickerel being the catch.

So engrossed were we watching the bass springing from the water after the bass flies that a fawn swam almost to our fishing lines before we saw him. He was not 25ft. away. Several shots were fired in quick succession at him; but for my part, I was glad to see the deer reach the shore and bound unharmed into the forest.

Now comes the most thrilling of all our experiences in Canada.

Just below where we anchored to fish, the river bends abruptly downward, causing a rapid. Long before you come to it you may hear the rush and roar of the water. Our canoe glides toward this tumbling mass of spray and foam, but our guide seems undismayed. All his life has been spent on turbulent waters. This boiling rapid is nothing to him.

In a moment more we are in the whirlpool of the rapids, where no eye is quick enough to take in the import of the maddened waters. You feel as though you were in a descending elevator. All around you the waters are rushing along in whirling eddies. The rocks beat them into a spray that is as white as the driven snow.

In an instant a side current caught our boat and hurled us on toward an angry rock, and it seemed no human power could save us; but the angry waters split upon the rock and we are hurled from its smooth sides with redoubled speed, and in another instant we shot out into the calm waters below. All this is wildly romantic and exciting; but how insipid and bare the telling compared to the actual realization in the swanlike birch bark canoe. The danger over, we set out for the Cherry Creek lumber camp, some four miles below the rapids.

As we lazily paddle down I drop my trolling spoon into the dark waters of the river and paddle off shore, and was soon wrestling with a maskinonge that could not have weighed less than 25lbs. You may imagine my chagrin to see him unhook himself just as I had him almost within the boat. Presently I struck another. I thought I had snagged a small log that was floating to our left, but soon discovered I was battling with a 15lbs. pike, which I succeeded in landing. Three other large ones were hooked within a mile. Further down we met a party of Kama Indians who greatly outnumbered us; yet we were not alarmed, for as Longfellow in his "Hiawatha" says:

"Buried is the bloody hatchet,
Buried are all the warlike weapons,
And the war cry is forgotten.
There is peace among the nations.
Unmolested rove the hunters,
Build the birch canoe for sailing,
Caught the fish in lake and river,
Shot the deer and trapped the beaver;
Unmolested worked the women,
Made the sugar from the maple,
Gathered wild rice in the meadow."

To me there were deep traces of sadness in the countenances of those Indians. Their faces seem to be turned backward to the not far distant times of a most glorious past. They have no future that gives promises of any better days to come. They are being carried

"Down the pathway of the dead men;
On the swinging bridge they cross it.
To the island of the blessed.
To the land of ghosts and shadows,
Unseen hands do seem to beckon them."

Wednesday we stayed at the Cherry Creek Lumber Camp. The "wood ranger" and the camp cook regaled us with many strange stories of the region. Shortly prior to our sojourn there a big black bear had paid a visit to their pig-sty with sundry intentions on fresh pork.

This unwelcome guest started the porkers on a run. They made a bee line for the camp. Bang up against the door came pigs and bear. The wooden door latch broke. The lone lumberman had made his bed just by the door, and in came pigs and bear in one promiscuous heap on top of the startled sleeper. Unless very angry or hungry, the bear is a very timid animal, and when the scream of a human voice was heard the shaggy form of that bear was seen ambling off to the forest. In the morning the keeper took us out and showed us the porkers. They were considerably the worse for the wear. One showed a broken leg and the other came up minus a few pounds of flesh from his left shoulder.

In the evening we went out and stood upon the shoulder of an immense rock that overhangs the waters of the bay, and as we bathe our spirits in the lovely starlight of this northern latitude a long low howl arose over the lapping of the waters.

"It is the wolves," said the wood ranger. The weird melancholy of that howling brought a sense of utter loneliness and desolation as the sounds reverberate backward and forward over the bay until they die away in silence. The loneliness of your isolation becomes deep enough to feel. However, "tired nature's sweet restorer," sleep, soon takes hold, and our rest at Cherry Creek Lumber Camp is "the sleep of the just."

Next morning finds us on our way down to view the chief wonder of the Severn, "The Big Chute." On our way we halt at Cape Rock to fish. We push our boats over the boom chains, stretched across the bay to prevent the logs set afloat by the lumbermen from entering, and row nearly to the head of the bay. We cast our lines from a ponderous rock that had, in bygone days, fallen from the cliffs above.

Here the jocularity began. Channel cats in multitudes, and biting like mad dogs, pickerel plenty and bass abundant. In a couple of hours forty-eight channel cats, and an abundance of pike, pickerel, bass and red finned suckers were taken.

All were thrown back but the bass and pickerel, and as they had not been caught long they lazily swam away.

On down the river we paddle. The region down below Cherry Creek is wildly picturesque and grand. The shore is a succession of rocky crags of granite and gneiss.

The river alternately widens to a bay and narrows to a gorge, and when these gorges precipitously take the water from a higher to a lower level they call them chutes, and past these all boats must be portaged.

When the big floods come it must be a grand sight to see the waters dash themselves down these chutes.

We reach the big chute by noon, finding it a repetition of the others, only longer and steeper, its rocks more craggy and its waters more foamy. At the Big Chute Lumber Camp we had dinner. On our return we pass a very pretty island in the Lower Severn, and it becomes clothed with a new beauty when the guide explains that it is the property and camping site of the Buckskin Club, of Pittsburg, an organization of well-known and wealthy gentlemen, many of whom I recall with pride as among my acquaintances.

At sunset we again reach Cherry Creek Camp on our return.

The genial Harry Hopkins, who presides over the affairs of the camp, gives us a royal welcome. We relish beyond measure his splendid blackberry pie and sweet biscuits. Early next morning we are on our way home. As we pass one of the many bays a large bald eagle takes fright and slowly flapping his ponderous pinions he bears southward a large bird in his talons for his waiting children down the Lower Severn.

The last five miles of our journey we made in a blinding rainstorm, reaching home at 7 P. M. We were soaked to the hide; but this was not our saddest thought. It was this: On the morrow we were to leave the land that had afforded us a very prodigality of pleasure, and come home to the daily treadmill of toil.

At 7:30 A. M. next day finds us aboard the Toronto express hurrying homeward. We sweep down past the pretty Lake Couchiching, and on to the pretty cities of Allandale and Barrie, the latter named in honor of the illustrious Commodore Barrie, so conspicuous in the war of 1812.

The view from Allandale down to Barrie is splendid.

The long reach of the circular Kempfield Bay, the wooded shores on either side, softly receding into the bosom of old "Father Sincoe," the biggest lake of the region, is one of the most perfect pieces of scenery I saw in the province.

Of the pleasures of the trip across Lake Ontario on the steamer Chicora and the conspicuous grandeur of the Brock monument we need hardly speak, for we hasten on to the glories of Niagara.

Driving up on the Canadian side, it was glorious to watch the waters in their first bend over the rocks. They came down green and beautiful as a bank of emeralds, but with a fitful landing showing the white feather as conscious that in a moment more they would be dashed into spray, and rise into the air white and pale as the driven snow. Although viewing God's greatest wonders and hearing the very thunder of his voice, my mind instinctively went back to the scenes on the noble Severn. I heard above the dash of the mighty waters the plunk of the falling sinker and the sharp hum of the reel as the line paid out.

My sojourn in Canada is ended, but I daily live over in fancy the pleasures I there experienced. Its delights still linger around me like the memory of a pleasant dream.

HOW FUR IS CAUGHT.—IV.

Soft Shoeing.

On the morning of our second day at the trappers' main camp, on Turtle Lake, the weather remained soft, thawing. The snow hung heavy in the trees and lay deep and soft on the levels. It was not a prospect to make glad the hearts of men who had in view a long snowshoe tramp with heavy packs, for a thaw was imminent, and a thawing snow and softened webbing are the dread of the web shoe man. To cover the trail around to the main camp meant fifty miles or so of travel and two nights lying out, with only such food and blankets as we could pack along. Norris shrunk from this prospect, and wished to be left alone at the main camp, or allowed to find his way back alone to the railroad. It was only by alternated ridicule and bullying that we got his promise to finish the trip, for his first day's experience had frightened him. He did go, however, and got through all right, hardening up and finishing in good shape and without any difficulty after the first day's tramp, although he carried no pack, thanks to Frank Brandis's broad shoulders. After making our decision and arranging our packs with such scanty necessities by way of blankets and provisions as we deemed indispensable, we started late in the morning for our journey across the watershed, our trail leading directly across the divide separating Turtle and Presque Isle waters, and making the natural division line between the States of Wisconsin and Michigan.

As we had about two or three miles of lake trail at the start, I clung to the *skis*, and slid along easily, while my companions were clumping away laboriously in soft snow which let them down a foot and a half at every step. I was sorry to reach the place where the *skis* had to be left behind for the remainder of the trip. We *cached* them by sticking them up straight in a snow drift, so the porcupines could not get at the straps. Then I put on my webs, and followed after in a style which I soon found far more difficult in snow such as we were having.

"If you can make it in to-night, you're all right," said Brandis, "for you won't often find worse snow than this. In half an hour more the stringing of the shoes will be soft as paper."

It was as he said. By the time we had reached the little lake which was the last of the Turtle chain the shoeing was awful. Balls of ice formed under the heel and under the ball of the foot, so that the position of the foot was unnatural and strained. The webbing, softened by the moist snow, allowed the foot to sink down deep into the snow, leaving a deep, pointed hole instead of an oval shoe print. Each step was made by sheer muscular strength, and to hold the gait meant something of an effort. Fay, restless and silent as usual, pushed on ahead and broke most of the trail. It being his branch of the trapping line, Fay attended and baited the traps. The trail led over ridges, over valleys, through willow thickets, tamarack swamps and tall pine woods. There were hills, but they were not high. All that pine woods country is monotonous in the regularity of its low, rolling hills, covered with blackened or dark green pines.

The Trapper's Line.

To the novice two questions might arise. First, he might wish to know how many traps were set on the line, and second, he might wonder how the trapper found them all. Answering the first question, I would say that the trapper does not have any regular rule for putting out traps, but sets them where he sees sign or where he thinks the locality exceptionally favorable. When he once has his line laid, he does not change it capriciously whenever he happens to see a few tracks of fur elsewhere, for he knows his game will travel and may find his traps. Once having located his traps, he must be woodsman enough to remember the stump, the hollow log, the old windfall or other landmark which he notes for each. On this day's run, which was only about twelve miles or so, I hardly think the line averaged a trap to each three-quarters of a mile. Fay found each trap without hesitation, though once, on a little lake where a pile of beaver carcasses had been poisoned and put out for our pack of wolves, we all hunted for a long time trying to find the bait, which was buried deep under the heavy mask of newly fallen snow.

A Beaver Dam.

We crossed a beaver meadow and a beaver dam about 150yds. long, lying in a little hollow hid deep in the heart of the pine forest, where one would think the cunning animals should have been safe even from remorseless man. But the dam was white and silent, and the houses were tenantless now. This family of beaver had been taken some weeks earlier. A beaver has small chance in those woods now. I brought home with me the skull of one of the inhabitants of this forest village. Their skins have long since gone their way into the whirling marts for which the silent and sinewy trappers labor in the wild, cold country of the pines.

The Divide.

This beaver meadow, I think, must have been near the head of the divide. All around it lay the wildest part of our Northern wilderness. We crossed over some beautiful lakes, flowing into both of the water systems. Many of these have never been fished, and many have no name to-day and are not known on any map. To reach them in the summer time would be harder even than in the winter, for a boat is harder to portage than a pack, and cedar roots are worse in bareness than when covered under 3ft. of snow. As to the "divide" itself, it was nothing, being crossed without one's knowing it. All at once Brandis told me we were on Presque Isle waters. After that the pines were thicker and the hills were a little sharper, and I thought the country looked better for game. We saw a great deal of deer sign, and crossed two great yards, where one could have killed (illegal) deer to any extent he liked. Our trail was now blazed through the thick forest, and the thought of this gave one a good, wildish feeling. All around the woods were very white and silent. The air was like a tonic in its sweet freshness. It was a rare and keen pleasure for a city dweller to be amid such surroundings.

The Trapper's Luck.

Fay worked hard and faithfully over his traps, going on ahead of the rest of us, who went more at ease. Luck was not brilliantly favorable. A few jaybirds, a rabbit or two and a weasel—this was discouraging enough. To offset this, however, two pine marten were taken, one a rusty yellowish one, worth only about a dollar and a half, but the other a prime dark one, worth at least $3.50, Fay thought, as prices then were. So at least we did not come in empty-handed. The marten is a long, slim creature, heavier and larger than a mink, but reminding one of that animal. The head, ears and feet are delicate and beautiful, the teeth very long, fine and needle-like. The cleaned skull of the marten has the outline of an otter skull, but is more slender. The bones seem thin as paper, and the effect is of a savage but delicate little creature, warlike, but easily preyed upon.

How to Set a Steel Trap.

The traps put out for the marten were the same "natural sets" mentioned earlier. Usually the trap was set under a root or in the mouth of a hollow log, where it would be protected from the snow. Sometimes a piece of bark was leaned up to guide the animal over the trap. The bait was usually a piece of rabbit (or beaver) and was thrown carelessly into the hollow back of the trap (never on or near the pan of the trap). The trap was covered up carefully by the powder of rotten wood. A handful of this was thrown over the trap and smoothed by a stroke or two of a bough. Fay would set and bait a trap quicker than any one I ever saw. Expedition is necessary when one has to cover twenty miles a day. The trap was not troublesome to set in his powerful and skillful hands. He never put his foot on a spring, but simply compressed the springs with the grip of his left hand, and arranged the jaws with his right. Sometimes his fingers were caught. "You have to get used to that," he said.

In the Jaws of a Bear Trap.

I asked Fay what he would do if he should be caught in a bear trap, which accident may happen in the woods. He said that once he was caught by the wrist in a bear trap he was setting, but only one end spring was on, and the teeth did not strike his wrist, but met and did not pass, the jaws being rolled with burlap. His wrist was not injured. Both he and Brandis agreed that it might be possible to break the spring of a bear trap by shooting it with a rifle at the bend of the spring on the end. They had heard of an Arkansas trapper who once freed himself in this way.

Along the Blazed Trail.

At an hour and a half before dark we were still following along the blazed trail. The novice often reads of the blazing of a trail. Perhaps he would think it plain and broad, with every other tree showing the mark of an axe. This is not the case. The blazes of the trapper's trail occur only at such intervals as are naturally covered by the eye as one travels along. Sometimes there may be no mark for 100yds., if the country be such that the trapper knows where the trail naturally ought to go by virtue of the lay of the land. Then a white chip may be seen, taken from a sapling by a careless swing of the axe as the bearer walked on. Then on ahead, just at the place where one is on the point of losing the trail, there appears a white spot, or a yellow spot, or a nearly faded spot on some tree trunk which tells him where the pathmaker went. Very often the trapper leaves the main trail with side trails out to some point where he has thought it best to put out a trap. These side trails are blazed also if the country be difficult. In some conditions of weather it is not difficult for ever a woodsman to go astray in the monotonous pine woods.

The Porcupine Camp.

We traveled that day in all about ten or twelve miles, but the going was so bad that I should rather have

walked thirty miles on good roads. Fay, with his heavy pack, kept on ahead, his trail leaving a succession of holes 2ft. deep in the soft snow. Brandis's shoes got wet and soft, and let him down deep at every step. The last mile, over an old logging trail, was almost too much for all of us, Norris stopping several times for rest. At last we desperately plunged through the heavy snow into a little open spot and came upon the habitation which was to give us shelter for the night, an old abandoned camp once used by the loggers, and now left bare except for a couple of bunks half filled with hay and boughs. This place our trappers used as one of their night camps, and they called it the "Porcupine Camp."

By the time we got up to the camp Fay was already in and had cut a pile of wood for the night's supply. The trapper who runs a line in winter has small time for rest. He must be a beast of burden on the trail all day, and at night must work for a place to eat and sleep. He does not come into a warm room at the end of his day's work, but must get his own fuel and cook his own supper. I know of no calling asking more difficult or continuous exertion of a man.

Our little log house was cold and cheerless when we went in, but we soon had a fire and before long a tin pail of beans and a cup of tea made us forget most of our miseries. Then we dried our socks and also dried out, as slowly as we could, the webbing of the snowshoes, which was soft and stretched on all our shoes. Our trappers said they had rarely had worse shoeing. After that Fay skinned out his two marten, "casing" the skin and stripping out the tail bone fearlessly between his thumb nail and finger. Both he and Brandis accepted the luck of the day philosophically, and no one grumbled over the food or the beds, we may be sure, although it was necessary to put on all one's extra clothing to piece out the blankets we had been able to carry.

"This is a good camp, and you're all right here," said Fay, "but you wait till to-morrow night. The trail is longer and harder, and you'll have to sleep without any roof."

This, however, did not frighten us, for we all had reached that happy stage of philosophy which does not fret much about to-morrow so long as the beans and tea hold out to-day.

Deep In the Wilderness.

Our journey for the next day was to be admittedly at least fifteen miles (I think it was at least twenty); so we got an early start. The temperature had dropped and the snow had settled, so that the shoeing was not so bad. The country, however, was worse, being for much of the way a succession of sharp hog-backs, with about four miles of a nearly impenetrable cedar swamp, where we stumbled over logs and roots, and crawled under low brush and had a generally awful time of it with the shoes and packs. This swamp was worse than twice the distance of forest trail, and we were heartily glad to get through it. It was a grand place for fur, but it happened we caught nothing in it. Indeed, up to noon we found nothing except one marten. This marten was alive, and as Fay came up it made a jump and broke away from the trap. Fay struck at it with the axe and luckily hit it, or it would have escaped. Usually the small animals are frozen to death when found. We found one marten curled up in a little round ball about the trap as if asleep. It was frozen solid, and was carried so into camp. I could never get over the cruel features of trapping, and cannot say I like the idea of it on general principles. But the trapper cannot think of that, of course.

Lunch and an Otter.

Fay had a side trail of about two miles and back to a spring hole where he had set a trap for an otter. He left his pack at the point where he left the main trail. "I ought to get an otter," he said, "but I expected to show you a fisher before this, and we haven't got any, so may be we won't have any otter. You'd better not go along, for you may have the walk for nothing." The rest of us accordingly stayed on the main trail, hunted up a warm hollow, smashed down a dead cedar tree, and tramping down a place in the snow, went into camp for the purpose of making tea.

We had finished our lunch, and had a vessel of tea waiting for Fay when that vigorous youngster appeared, rocking along at a good clip over the snow. Under his arm he carried a long, black, round and slippery-looking object, which he cast down in the snow near us.

"There's your otter," said he. "Gimme some tea."

So here he was, a very beautiful, wild-looking creature, with round, flat head, short legs, and sinewy, graceful body. In coat he was dark and prime, worth between $7 and $10, Fay thought, at the current prices.

An otter weighs, I should think, between 15 and 20lbs., being about as heavy as lead for its size. I expected, therefore, to see Fay stop and skin the otter, so as to avoid carrying so much weight. He said, however, that it was too cold to do a good job at skinning, and so slung the beast on top of his pack and carried it eight miles into camp. We all had a hard day of it that day, and we were all tired, even Fay, when we reached camp, just before dusk.

Wigwam Camp No. 3.

This camp was the one called by our trappers the "Wigwam Camp No. 3," being one of temporary shelter used by them when running the trail. I imagine that if one should show this structure to a man in the city at the close of a hard day's work, with the thermometer getting down toward zero, and tell him that he had to spend the night there, he would faint away at the prospect. As we came up our house seemed to be merely a conical pile of snow. Examination proved the cone to be hollow and without any top. As I pushed aside the slabs which served as a door to this hollow cone, I found the inside filled with snow. The temperature was precisely that of a good refrigerator. The wind was now blowing very cold, and I confess the prospect of a night for four men in such close quarters seemed at first a bit cheerless. It was a part of the play, however, so we set to work shoveling snow and cutting firewood.

This "wigwam" camp was unlike any I have ever seen in the woods. Fay and Frank made it one day in the fall when they were setting their line of traps, and they thought it a pretty good house. There was a circular lodge with an open top, made by setting together small trees, logs, slabs and bark. In the center of this was the place for the fire. At one side of the lodge was a little hole in the wall, going back into a little log lean-to about 4ft. square, with its front about 4ft. high, opening on the fire, and its roof running back to about 3ft. in the rear. This little lean-to was built by driving stakes into the ground (before the frost came) and laying up logs for sides and roof. Then the whole had bark thrown over it and a covering of dirt. The walls of the wigwam took in this little cove, which was only large enough for one man to lie in comfortably. Of course he would have to keep the fire going all night, but by this means he could doze through the night after a fashion. Fay usually ran this trail alone, and the "house" was built for him alone. It was looked upon as a very ambitious structure.

Here I really felt badly for imposing on our trapping friends. Our joining them meant extra work, and here it meant extra discomfort. The two generous fellows insisted that Norris and I should occupy the lean-to, while they bunked back under the shelter of the lodge roof. Norris and I made a very uncomfortable night of it in our cramped quarters, and slept but little (though I went to sleep long enough to burn the toe out of my heavy German sock). Whenever I awoke out of the troubled and shivering doze which made the nearest approach to rest, I could see Brandis sitting on the boughs across the wigwam, his head just inside of the steady drip, drip of the melting snow which leaked down from the edge of the roof, his hat pulled over his eyes, his arms on his knees, and his pipe going in slow, deliberate puffs. He may have smoked in his sleep, sitting up, but I am sure he smoked all night. Fay, poor boy, was very tired, and slept at least part of the time. Before he lay down under the lodge poles he skinned his otter, hanging him up by a hay fire, and working by firelight. The skin was cased, the tail being deftly slipped out by clamping a bent stick each side of the bone.

It came on bitterly cold that night, and the wind rose, so that it was very hard to keep warm enough, even in

JOE BLAIR—TRAPPER AND GUIDE.

the lean-to, which evinced many cold cracks as soon as the fire went down. We all turned out smoky, grimy and not very brilliant in the morning after our indifferent night of it, but a cup of tea put a better look on things. We found our snowshoes and socks dry enough, and by the time the sun was an hour high we were on the trail again.

Along the Presque Isle.

Our camp was upon the banks of the Presque Isle River, and our trail for a few miles lay directly along the river, where we had to look for air holes and rapids. Near the camp was a bit of open water, but we found no sign of otter at that time.

We were now headed back for the main camp on Turtle Lake, a distance of over twenty miles. About six miles of the trail was over lakes (we crossed four lakes, I believe), and when we got to this open country we made fast time. On the lakes the wind struck us, and this made all the difference in the world. It was so much colder that we were willing to travel at top speed to get across. In the woods the snow was fluffy and not first-class for shoeing. On Harris Lake we missed striking the blazed trail on the opposite side, as the snow had drifted over the old snowshoe trail. The lake shore all looked alike in its regular edge of black pines. Here a tenderfoot would have been lost. Indeed we all enjoyed, for about thirty minutes, the sensation of being lost in the wilderness, for we missed the trail about a quarter of a mile. At length we found it, however, and so forged on again. We made tea at noon in a warm valley, and by 4 o'clock were at the edge of Turtle Lake. A detour of a quarter of a mile took me to where I had left my *skis* two days before. This was the same as being in camp for me, as I now slid along on top of the snow instead of sinking into it, and made the couple of miles in comfort. "I must make me a pair of them things for traveling on the lakes," said Brandis.

We reveled that night in the luxuries of the main camp: abundant food, good beds and plenty of warmth. But before bed-time came much had to be done. There was wood to be cut, bread to be baked, and a lot of other "chores." After supper Fay carefully fleshed his otter skin, putting it over a round beam kept for that purpose, and rubbing it carefully with the back of a drawing knife. The part of the skin over the shoulders is especially hard to flesh out, the membranes and fat clinging to the hide in the most obstinate manner. Care must be taken not to leave any flesh on, yet not to scrape the hide too thin, so that the hairs will pull through. No skin is so difficult as that of the otter to care for properly. It took Fay, skillful as he was, over an hour of hard work before he was satisfied the skin was all right. The last thing done was to mount the skin on a "spreader." The "spreader" or "stretcher" is made of two tapering strips of inch board, beveled to an edge outside and curved at the smaller end. A thinner strip, wedge shaped, travels between these two in a groove. The skin is turned inside out and the lips tacked with small nails to the ends of the boards pushed down into the head. The wedge is then driven in, and the skin is stretched tightly. It must not be stretched too tightly, or the fur will show too thin. The skin is nailed to the board at the other end also, and the tail is split out and carefully nailed out flat all along its edge. No salt or anything whatever is put on the skin, and it is not allowed near a fire, as that would start grease into the hair. It is simply allowed to dry in the air. All fur is treated this way. Marten skins are stretched the same way. An otter board is about 5ft. long, and the skin when stretched is much longer and wider than when on the animal.

The Luck of the Day.

Our last day on the wilderness trail was not one of the lucky ones, and even Fay lost his temper over the fate that seemed to haunt the line. We caught one owl, one squirrel, three birds, two weasels, several rabbits and one rabbit's foot, with only one marten to vary the monotony of the hard luck. I suppose our total catch on the round trip was worth $20 or $25. The two Bucks, father and son, and Brandis, who was in partnership with them, would probably clear up $500 for their winter's work. The best of the catch was over when we were there. The snow was getting so bad that the trappers thought they would soon take up most of the traps. Marten fur gets "rusty" so late as April, but it did not pay to run the line far into March.

Fast Travel Home.

Brandis had a twenty-mile line over to the Black River region, and it was now time for him to run this line. We therefore left him alone at the main camp, it being thought best for the rest of us to return to the railroad. I said good-bye to Brandis with regret. He is much of a character and a fine fellow to be out with. I do not know of any better muscallonge or better deer country than these two, Fay Buck and Frank Brandis, can show, and I do not think two better or more competent guides exist anywhere. Certainly they were very kind and careful with us, and I do not forget them for it.

Fay Buck, Norris and I started from the Turtle Lake camp for Manitowish on a bright winter day, and traveled steadily, with pretty fair shoeing. We ate lunch at the logging camp near Circle Lily Lake. From there in to Manitowish the sled road was now perfectly broken out, so we slung our shoes over our backs and walked in afoot. We wanted to catch the 3 P. M. train up to Mercer, which would save us three miles of walking, so we struck a good gait, and made the last five miles in just an hour and fifteen minutes, which in view of our packs was fast traveling. I have rarely met a better walker or packer than Fay Buck.

At Mercer I stopped with the Bucks over a day, Norris going on home to Chicago. I visited an abandoned wickiup which a fishing party of Winnebago Indians from the Flambeau Reservation had recently abandoned. These Winnebagoes are fond of ice fishing (spearing), and the jaw bones of many muscallonge showed they had been successful here. A great heap of deer hair showed they had been tanning deer hides. There were deer feet and legs about, and pieces of partridge skins, and worn-out moccasins. In the wickiup I found rolls of cordage made of elm bark. Here also I found an Indian curio with which for a long time I puzzled callers at the FOREST AND STREAM office—an odd sort of rough racquet, made by splitting a stick into three limbs and braiding across these with splints. I found no one who could tell me what this was. Some thought it a dish to keep meat warm upon at the fireside. At length Joe Blair, an old trapper on Lake St. Germaine, told me that my enigmatical implement was a tobacco-drier, used by the Indians in curing their strips of kinnikinick over the fire. In my Indian wickiup I saw the architectural origin of the "wigwam" camp of our trapper friends. It had the circular form, but had no lean-to or sleeping apartment. The Indian family slept around the circle, back under the sloping sides, the fire being in the center and the roof open in the middle, as our wigwam was. A piece of a rag and a thick, bushy balsam bough had served for a door to this winter house. I made out the party to have been two men, three women and three children. The poles of their house were unromantically fastened with hay wire, that great convenience of the pine country. Hay wire is to the pine woods dweller what rawhide is to a Mexican. There is no hay except store hay in the lumber regions. Nothing can be raised there and probably the region never will be farmed. It is the Wilderness, the home of the trapper and of the Indian, albeit the latter does use wire instead of thongs.

I was obliged to leave Mr. Buck and his stories, Mrs. Buck and her sausage, and Fay Buck and his furs after awhile, and was reluctant to do it, one may be sure. I am going to see them all again some time. It seemed to me that FOREST AND STREAM needed yet a little rougher and wilder trapping trip, and a little further look into the ways of the Northern trappers. These things I thought might perhaps be found along the Manitowish and Wisconsin River waters, where I had word of another trapper or two. I accordingly dropped down along the Northwestern Railway to Woodruff, Wis., out of which town the second part of the trip was made. E. HOUGH.

909 SECURITY BUILDING, Chicago.

Mr. Burnham's Moose.

MR. J. B. BURNHAM, of the FOREST AND STREAM, went up into Maine for a moose the other day and got it. This he does not deny, but he wishes it understood that he did not write nor cause to be printed the special dispatch dated in this office and printed last week announcing the moose capture. The note was written by the trap editor, its printing was encompassed by the kennel editor, and the only person concerned who knew nothing of it whatever was Mr. Burnham himself. While it is pleasant enough to wake up of a morning and find one's self famous, Mr. Burnham claims the privilege of telling about his own moose in his own way, and in his own chosen time; and when that time comes the reader of these pages will have a moose story worth the following.

OUT AND BACK AGAIN.

The jolly and genial fifteen men that compose the Three States Hunting Club have been to Arkansas on their outing for 1895, and it is possible that your readers will be glad to read of the sport that we so much enjoyed.

We left the K. C., F. S. & M. R. R. at Marked Tree, thirty-nine miles out from Memphis, and went by wagons to what is known in that section as Fuller's Camp, on the Right Shoot of Little River, twenty miles from the railroad. We were on the road nearly a day and a half before we decided the exact spot on which we would strike camp, because we were suspicious of our ground. The great waste of wilderness around us was made up of swamps and glades, with here and there a little 10ft. ridge of "blue stem," and beside this we saw but little that it seemed to us would be attractive for deer or turkeys to range upon. Within an hour after we had stretched our tents it began to rain, and the balance of the day was soaking wet. The next morning we were all pretty blue, and were wishing we had selected some other place for our hunt. But as the wagons were returned to the town we could do nothing but stay in the locality selected, and make the best of it we could.

We had four dogs with us that we expected would help us in our hunt for venison. But they proved to be of little service, as they were without any previous training. We entered the woods with a determination to do what we could in getting game. It was apparent before the first day's hunt was over that we were in the midst of a very fine range of deer, though we had all failed to get one. Several of us saw the shy creatures as they were dexterously avoiding our stealthy efforts to become somewhat familiar with them. The day was nearly gone, and not one of us had killed anything more than a few squirrels. The next day would be Sunday, and this club never violates the Sabbath by the boom of gun or the chase of game. What were we to do for our Sunday meat?

Just before sundown some four of us took our fish hooks and a few minnows we had caught, and thought we would tempt the finny tribe a bit, to see what our luck would be in that line. The river was near by and the signs of fish were good. It took us but a little time to be ready for a cast. We selected a large tree top that had fallen in the edge of the river, and while others of us were rigging our lines, our genial and lucky hunter and fisherman, Tom Harris, cast his hook into the water, and before he could take in the situation a fine "croppie" had it and was gone. He landed the fish promptly and cast in his hook a second time, and under went the cork and out came another fine fish. All became excitement to those of us not yet ready, for fear we would not get a chance at the fish until the luck would turn. But our fears were needless, as we were able to land twenty-five of these very excellent fish within about thirty minutes, and they were just as ready to take our bait at the close as when we began. In fact, we found this to be the best fishing locality we had ever seen. There seemed to be no possibility of our affecting the supply of fish. We caught all we wanted and could catch them any time we went after them. Not only the splendid perch fish, but the lively black bass was easily taken, and we had all we wanted in camp and carried some of them home to our wives and children. I have never seen the equal of Little River for fine fishing.

We rested on Sunday and early Monday morning we were out for a chase. The rain had measurably erased the tracks of the deer that had been made before our arrival and we could easily determine about the supply by carefully noting the evidences of their perambulations. It was a wonder to think of the number of these denizens of the forest that must have been in that locality, and the size of some of them must have been enormous. They had actually made roads through the passages between the fields of tall saw grass that spread itself out over the country. Our dogs could get up a deer as easily as they could get up a rabbit in the old sedge fields at home; but they would not stay with the deer. They seemed to become disgusted with them because they could not stay close enough to them. Because of the incompetency of our dogs we did not get as many deer as we would have secured if there had been no dogs in the crowd. We were inclined to depend on the dogs to bring the deer to us, and for that reason we did not go out to take them on our own account.

We walked and hunted with tolerable faithfulness until Tuesday before we had killed a single thing, except some squirrels. We had plenty of fish, but no other game. On Tuesday a gang of wild turkeys ventured into the section where we were hunting, and Tom Harris, Ben Hillsman and Wellington Ethridge were not slow in taking their chances at them and brought in seven fine gobblers. Joe Browder had also taken his chances on some ducks that same day and brought in some fat mallards. Others of us had squirrels and had caught fish until we had an abundance of meat on hand.

The next day we determined to do better on the deer business. We were beginning to feel ashamed of ourselves. We had never failed to get a nice lot of deer in any hunt we had ever had before. We had some good deer hunters in the crowd and we must do better. This was the decision of the camp. So out we went early in the morning. We walked, we listened to the dogs as they passed by us again and again on the hot trail of a buck. We looked at their tracks, and slipped up easily and with the most perfect stealth on to many tree tops and briar thickets, but never a deer did we get. The crafty fellows would outgeneral us at every turn. We were beaten; we had no deer meat. We were getting thirsty for blood and hungry for deer meat.

About 2 o'clock in the afternoon, when but two of our men were in camp, two gentlemen rode up and in a familiar way said: "Gentlemen, we have been visiting the different hunting camps up and down the river to ascertain if the hunters had paid the license tax, and we did not want to slight you. We have come to ask if you have a license to hunt in Arkansas." Great goodness! License! Why, of course not. We had hunted in Arkansas for seven years and had never been called on for license before. No, we had no license; didn't want any license. We were not getting game enough to require the getting of license, surely. But the gentlemen soon convinced us that they meant business, whether they had any right to the money or not, and as others of the boys got in from the day's chase they held a consultation and decided to pay the license on eight of the boys, the officers agreeing to let the remaining seven go free on that condition. This amounted to $6.40 for each of us, which we paid. The officers took their departure, the rest of the boys finally strolled into camp and the time we did have over the fact that we were licensed hunters in Arkansas was worth all that the license had cost us. We were all satisfied that the whole proceeding was a fraud, but as we were getting full receipt for the money we were paying out we believed we would find out about it more fully later on. And we are engaged in that business now, with a good prospect of getting our money back and getting the man that collected it in jail. He had the audacity to go into another county than the one in which he lived, and of which he was an officer, and collect the license in a territory where he was without authority.

Well, on Thursday we decided that as we had paid for the privilege of killing some deer in Arkansas we were determined to do it. So out we went, resolved to bring in some of those bucks that had been playing around us. We had a good crowd of faithful fellows, who would stay in the woods as long as there seemed to be any use of it. So it was late in the afternoon when we began to assemble in camp. As each man made his way into the circle of his fellows he was eagerly scanned to see if he had signs of dead game about him. Several of us brought in squirrels and ducks, but it was left to our excellent friend, George Dent, to bring down and bring in the first buck. He killed a very fine fellow, and when we got him stretched in camp we all agreed that if we had paid our license a little sooner it is probable we would have killed more deer. Each man joined in the rejoicing over the fine buck we had in camp, as he himself joined in the company. It was nearly sundown, and everybody was in camp except Dr. De Myers, one of our most excellent men. Inquiry was made and no one had seen him during the day. It was soon agreed that he must be lost. The evening shadows longer grew, and yet he did not return. We began to figure as to what we should do. To be lost in that vast wilderness was a very fearful thing. It was miles and miles to where anybody lived, and the awful loneliness of a night in such a forest was hardly bearable. But to our delight a while before dark the Doctor walked into camp, telling us the experiences of the day. He had really been lost, and had walked about twelve or fourteen miles in his hunt for camp, although he was at no time more than four miles from camp. We were tired and slept well, after a good supper of course, and were set on doing something the next day, which was to be our last in camp.

We were out early on Friday morning. Some went fishing, so as to get some fish to take home with us. They had fine success, and got all they wanted. Prof. McCall got a fine turkey, and Mr. Barry killed the largest deer we had seen. Mr. Browder also knocked down a deer, but it got away from him. We had a pretty fair day's hunt for our closing day. In fact, we had just got on to the range and run of the deer, and if we had been able to stay a few days longer the probability is that we would have had a very successful time of it. As it was, we felt that we had had a very pleasant time. Our company was a very fine lot of men, all of one spirit, and not a fractious or heady man in the lot. We had no profanity, no drinking, no quarreling, no fighting. We did well, paid our license, ate all the game we could while in camp, never saw better fishing, all of us improved in health, and we returned home in good time, with our minds made up to do better next fall.

Wasn't that a fine hunt? J. N. Hall.

Fulton, Ky.

LITTLE SUNNY SPOTS.

St. Augustine, Dec. 7.—*Editor Forest and Stream:* There are sunny spots in life that stick. I am about as old as Methuselah was at the same age, and have consequently had opportunities for skimming off the very cream of shooting and fishing in the early days of our worn-out country, when quail, partridges and woodcock would pop up anywhere in the woods and fields upon the slightest provocation, and when a man who put up a trespass sign was considered the meanest cuss in Christendom. But though the finest bird shooting has been fairly thrust upon me all my life, there were certain little trips that were so enjoyable as to make impressions that can never be effaced, though they may have counted very little in the eyes of record hunters.

One of the most delightful afternoons I ever spent was in the woods near Boston. It was a soft and warm October day, with not a breath of wind, and the few leaves left upon the trees were of the richest color. It was altogether tempting enough to make a sportsman break his business chains even if starvation stared him in the face for doing it. On the spur of the moment I went to my room and got my gun, fully bent on having a delightful autumn stroll, though I had not even a dog for a companion. The Providence cars were just about to leave the depot, and I bought a ticket to one of the stations a few miles out, with the intention of buying another if the place did not look wild enough. When I reached a place that pleased me I got out and walked across a little meadow to a thicket of small trees, and had scarcely taken twenty steps before a woodcock rose and fell. I proudly picked him up and strolled on very leisurely—as my object was more a pleasant stroll than shooting—and I had scarcely gone ten paces when another whistle sounded, and he shared the fate of his predecessor. I went a few steps further and a third was bagged. I began to think, very naturally, that "the woods were full of them," and expected that by thoroughly hunting the little thicket over I'd be loaded down, but there was not another in it. I had gone to all three as straight as the best nosed pointer could have done it.

After assuring myself that I had left nothing there, I walked leisurely down a beautiful ravine through the open woods, killing in the course of an hour three partridges in three successive shots.

I felt that day as if a bird could not escape if he got up near enough. The whole business was so quietly and neatly done that I could not have gained more satisfaction if I had bagged a grizzly or an elephant.

Another little episode in my life that is equally bright in my memory was at Chicago, when that grimy and wicked city was little more than a cluster of small wooden houses with their gable ends toward the street. I went out on the prairie three or four miles from town to look for ducks, and was standing by the side of a stream with not a duck feather in sight when I heard a peculiar sound a long distance off, and on looking for the cause I saw in the distance two large birds coming directly toward me and keeping up that peculiar laughing sound.

I hastily made myself flat and inconspicuous—though the grass was hardly high enough to hide me—examined my gun to see that all was right, and waited. I saw they were a pair of Canada geese, and scarcely 50ft. high. When they got to within 15 or 20yds. of me I jumped up and they separated, and I dropped one on each side of me. As they flopped around on the grass it seemed to relieve the monotony of the dull old prairie amazingly. That spot is now almost in the heart of the city, but still I see that pair of beautiful white geese as plainly as when the grass was there.

There was shooting enough around Chicago then—in fact so much that we seldom took the trouble to go so far as the Calumet (where even a record hunter could find ducks enough), because we could find enough game nearer.

My health was at one time so disturbed by drinking the sewerage water from the Chicago River that I went up to Madison, Wis., to recruit. It was just at the time when they were trying to give the embryo town a boom, and everything was wild and new. In these degenerate, worn out days Chicago sportsmen are willing to go even to Dakota for the glory of bagging a dozen grouse, vulgarly called prairie chickens—while the sportsmen of those days found them in such numbers that the sport was not appreciated.

I very soon wearied of it and would always leave them if we stumbled on quail or snipe, because no skill was required in killing the grouse. It was simply tiresome, stupid work. One time only did I put myself on a par with the record hunter. An Englishman who was living in Madison at the time and kept a fine dog said that a farmer who lived some miles out wanted him to kill off some of the "chickens" that were destroying his grain, and he was willing to go if I would join him, to which I agreed. Under the circumstances it was not disreputable to slaughter as many as we could, and we went back to town with our two-horse box wagon heaping full, and the thanks of the farmer for our services. We distributed our bag among the hotels and all who wanted them, so they were not wasted.

When I go out now and hunt a whole section of creation over for a bird I think of those days and heave a sigh.

Even so late as twenty years ago I had some of my most enjoyable shooting days in the vicinity of New York city, days that I look back on with the greatest pleasure. I would take the Erie cars as far out as Hohokus, and sometimes to Turner's, and get to my shooting ground by about 9 o'clock, and usually went back in the evening with several woodcock and partridges, after a most delightful autumn stroll. On one of these trips I got eight fine woodcock and not a partridge. I was never annoyed by trespass signs in those blissful days, and these little trips were far more enjoyable than a tiresome prairie tramp even with 50 or 100 grouse as a result. Didymus.

IN THE COLVILLE.

Some day, not so very distant, the Government will open the Colville Indian reservation in Washington to white settlement. It is made possible with the opening of this reserve for the enthusiastic sportsmen of this wide country to enjoy an entirely new hunting ground; one, too, which has been for a quarter of a century unknown to the white hunter, and whose mysteries are yet to be explored. That they will appreciate it cannot be doubted, for here is a grand game country indeed, with many mountain streams, in which myriads of trout show their glittering sides to the sun, and picturesque camping places in snug valleys convenient to the haunts of deer, bear, ruffed grouse and prairie chickens.

It was my good fortune last summer to spend five months with the Government surveyors in this land of delight, and I can say truthfully that five months were never more pleasantly spent, nor were any five months ever so fraught with good sport and good luck.

With a crew of twelve hungry men to supply with fresh meat, one man found his job a sinecure. He did not hunt one-quarter of his time, and that was done on horseback at no great distance from camp. Game was so plentiful and so easy to get that the men rebelled at it as a steady diet, and demanded bacon at least once a day as a luxury they were entitled to.

This land, as has been said, is a new country, and its trails and bypaths are known only to a few, and this knowledge is confined mostly to the half-breeds and Indians who have made this country their home since it has been a reservation. Fortunately for us, our guide, packer and hunter, Maxime Deshottle, had lived many years in the reserve, and knew the twistings and turnings of the trails, the ins and outs of this land, so well that whenever duty would permit, and we were so inclined, with him to show the way, we were certain to get good sport in the minimum amount of time and with the least amount of climbing.

To descend from the general to the particular the best sport is to be had here in the fall. From September until December deer are found in great numbers; they are constantly on the move, frequent the valleys and open hillsides, and at this time are the easiest come at. If there was a choice of hunting ground in the reserve I would say that around the base of Mt. Bonaparte, and particularly east from it to the Curlew Valley, is the best place on the reserve for good diversified sport. From this mountain the immediate four beautiful creeks, Bonaparte, Mill [illegible] Terroda creeks. They teem with mountain [illegible] the hills and valleys through which they flo[illegible] alive with grouse and prairie chickens, and eve[illegible]ere—one place is no better than another—deer are [illegible], with now and then an occasional bear to relieve the monotony.

The easiest way into this country is over the Spokane Northern R. R. from Spokane to Marcus, and then up Kettle River to Terroda Creek, then up Terroda Creek as far as you wish to go. This is the easiest way; the road winds over bunch-grass hills, through lovely valleys and cultivated farms; crosses Kettle River repeatedly and is withal a delightful way into the reserve. But for picturesque scenery, and for those who like to rough it when out for a good time in the mountains, the old Hudson Bay Company's trail from Marcus to the Okanogan is the ideal way into this country. This trail begins at the confluence of Kettle River and the Columbia, follows down the Columbia six miles, then climbs over a spur of the mountains to the Sin-pail-hu, then up this stream, cross-

ing many noisy rivulets and winding among tall pines and green firs to the summit, 5,000ft. above the sea. If one is not in a hurry to push ahead and would like to try his hand at once it will pay him to camp upon this stream. Here is good trout fishing, and deer and bears will be found in no inconsiderable number on the ridges back from the creek. But if you want to push on to better sport in a better land do not let this tumbling, noisy stream beguile you into lingering by its side.

After you have reached the summit of the first range of mountains you are in the very heart of the reserve, and have a fine panoramic view of your hunting ground and the entire country for several hundred miles north and west of you. The charming valley at your feet is the Curlew Valley, twelve miles away. Push on and you can sup off of prairie chickens and ruffed grouse, and mayhaps if you are in luck a few speckled beauties from the San Puel will be added to your menu.

Now you are on the eastern edge of the best hunting ground, and in the morning take your rifle and go out on the hills north of the San Puel, and you will begin to reap the harvest which is the reward of every ardent sportsman. If in the morning you are not satisfied with your sport, take your gun in the afternoon and have a try at the curlew and prairie chickens in the field at the head of Curlew Lake, and I am sure that this sport will repay you for any disappointment you may have had in the morning. If this programme is not enticing enough, take your fishing tackle and whip the San Puel for trout, and I feel sure that you will return to camp at night owning this to be the best day's sport you ever enjoyed.

No two of the valleys of the reserve are just alike; each one has a beauty peculiar to itself; each one has its creek flowing through its center, a raging torrent in the spring, but dwindling to a streak of glittering, glistening silver in the autumn sunlight. So, when you tire of one locality do not hesitate to move on, for what you leave behind will only add zest to what is before you.

Kettle River should be your next halting place, for here opposite Dick Crugan's is one of the most picturesque camping places on the reserve. Not only has it the charm of diversified scenery to please the lover of the beautiful, but it is convenient to good sport with rod and gun. After reaching this camping place untie your fishing tackle and have a try at the big but wily trout which lurk in the depths of the pool just above the camp. Be circumspect about it, throw your fly in and be ready for the rush and fight which will surely follow when you strike one of these big fellows, whose impetuous rushes fill your soul with joy. Remember though that this pool is only one of the many strung up and down the river, and if success does not attend you at this one whip the next and the next, for they are here, and their hungry maws will not long refuse the fly.

When this sport palls try stalking the white-tail deer (*C. leucurus*) which frequent the alder bottoms back on the mountains to the south. If you wish something bigger than these little deer, something with the spice of danger in it, pay no attention to them, but put your dogs into the alder thickets and keep your eyes open for the black bear which are surely there.

There still remains to be visited the valley through which flows Terroda Creek and the country around the base of Mt. Bonaparte, and it is probable that it is this country which will appeal more strongly to the feelings of the sportsman than any section that he has yet visited on the reserve. As you leave Kettle River and start up Terroda Creek you notice that the topography is different from anything you have yet seen. The valley up which you are climbing is but little more than a cañon, the mountains are higher, more rugged and their north slopes are densely timbered, and withal the country, as you travel on, begins to more and more fit your ideal of what a game country ought to be. These feelings but do the country justice, for here is where you will find the big mule deer (*C. macrotis*) and the columbian or black-tail deer (*C. columbianus*). This country is the fall and winter feeding ground of these deer, and when the rutting season begins in October they are constantly on the move and are found on the high mountains and in the valleys alike.

The most dangerous of our big game is the grizzly bear, and the hunter whose prowess enables him to wear a grizzly's scalp at his belt is justly proud of the fact that he has met and conquered this monarch of the woods. They are gradually disappearing from the mountains of the West and as each year goes by they are still further and further back in the wild uninhabited districts. They are found upon the reservation, but from the fact that they seldom remain long in one locality few of them are killed in comparison with the number of black and brown bears slain each year. This constant traveling through the country makes it extremely uncertain when you will meet with one. Consequently when you are going out for mule deer you want to be prepared to have a shot at the grizzly, which the next turn in the trail may bring face to face with you. A visit to this land of sport ought to be at least of one month's duration, and the sportsman should come prepared to rough it in the widest sense of the word. He should have pack horses and a complete camp outfit, and it would be advisable to employ one of the half-breeds as a guide and packer, being sure that he has an accurate knowledge of the country he is going into. And the one making the trip under these conditions in the fall will surely be fully repaid in good sport for the hardships of camp life, and will vote with me that this is the coming Mecca for the sportsmen of this broad [illegible].

SEATTLE, Wash. GEO[illegible] OFFICER.

Noah's Ark on Wheels.

MR. HOWARD EATON, of Medora, N. D., came [illegible] last week with a carload of live stock, and by the time he reached the end of the journey he knew just how Noah felt when the Ark landed on Ararat. In the car were four horses, a mule deer, a porcupine, three mountain sheep, two coyotes, a lynx, two elk, an antelope and ten swans. The specimens were all very much alive when they started, and lost none of their native vivacity on the way. They came through without accident, and Mr. Eaton divided up the menagerie between the Philadelphia Zoölogical Garden and Schenley Park in Pittsburg. Two of the sheep, a 4-year-old ram and a yearling doe, went to the Philadelphia Zoo, where they will be cared for intelligently by Mr. Arthur Erwin Brown, the superintendent. Mr. Eaton tells us that the buck is a magnificent specimen. The animals come from Idaho and the Bad Lands of North Dakota.

TWO MEN IN THE WOODS.

To Say Nothing of the Dog.

SITTING on the veranda at The Oaks one pleasant evening last summer after a particularly good day with the bass I casually mentioned to D. L. Hall, the proprietor of that justly famous resort, that for a long time there had been a deep-seated conviction in my mind that to kill a bear was strictly necessary to my future happiness. (The Oaks, I might mention, is on the shore of Lake Cossayuna, which means: Where the black bass live.)

Once while partridge hunting in the Sawkill Swale in Pike county, Pa., I strayed away from my shooting companion and was soon thoroughly lost in the dense jungle of laurel bushes.

Night was coming on, and just as I arrived at the edge of a small creek that cut its way through the clay bottom of the swale I saw a bear track in the soft mud bordering the stream.

There were, in fact, several unmistakable signs that a bear had been in that vicinity, and very recently at that. Yet, so contradictory is human nature that for the first time since I could carry a gun I had no desire whatever to meet that bear, or in fact any bear. But that was because it was late, and I was not hunting bear anyway.

Now the fever was on again, and when Hall also confessed to a hankering for a bear hunt and suggested that when things were ripe we should go over into the Green Mountains and loaf around for a week or so with the hope of at least seeing a bear, my satisfaction was unbounded.

Sept. 25 found things ripe, and at 10 A. M. we started from Salem. Don went with us. Don is a dog over whose rigid back we had poured many a pound of shot in times gone by. And Don is very wise in woodcraft.

At Arlington, Vt., we stopped over one day, shooting woodcock in company with Mr. C. B. Warner, of that place, and on the following day started for Glastonbury.

Our aim was to find one Norman Madison, a veteran bear hunter whose fame was great, and who moreover had been thrice elected a member of the Vermont Legislature.

We learned that he also held the offices of supervisor, road commissioner and district lister. Hall argued that a man holding all these offices would have no time to lay down the reins of state and go hunting. Later on we learned that there was no ground whatever for any such idea.

Away in the heart of the Green Mountains we came upon the object of our search. He said he always had time to go hunting, and accepted with enthusiasm our proposition that he act as our host and guide while we were there.

"Were there any bears in the vicinity?"

"Undoubtedly."

"Three had been seen within a mile of his house a short time ago."

"Could we get a shot at one?"

"Very likely."

We put out at the house, got dinner, went out for partridge that afternoon, flushed a good many birds, killed four, ate a light supper, and spent three hours of solid comfort listening to our host's tales of bear hunts past and gone.

In the morning it was foggy, and the frost clothed the stubble so that our trail was marked as in snow, as we tramped up toward the woods half a mile away.

We had intended taking only the bearhound (Madison's) and leaving Don behind, but to this he (Don) entered an emphatic protest: "He had walked the better part of fifty miles, worked every bit of birdy ground in transit, and to be left just now, just when things were beginning to happen, was outrageous."

It was pointed out to him that a liver and white pointer, with an abnormal bump of curiosity, might get in trouble interviewing an excited bear, who would probably be in a hurry anyway, and he was forthwith shut in the stable, from which he emerged immediately through a broken window with an unnecessary celerity.

Then we tied him to the corner of the woodshed and started for the woods. He overtook us a few minutes later, wearing an air of unwarranted cheerfulness and 3ft. of broken strap.

Then on his solemn assurance to stay close to heel we took him along. The morning, as I have said, was cold and foggy.

Within 100yds. of the house, Madison, who was a few yards ahead, stopped, pointed to the ground and beckoned to us excitedly. We ran up and there, plainly outlined on the frosty stubble, was the track of some large animal.

The hound, which was ranging some distance off, was called in, and while waiting Madison informed us that it was a bear track, and a recent one; that he had probably been feeding in an old orchard near by and had been frightened off at our approach, and consequently could not be far away.

Presently the hound came in, and after sniffing excitedly at the trail for a moment, started for the woods at a pace that soon left us far behind.

Now that dog had, on ordinary occasions, a voice that might be called "peculiar," but the changes he rang in on this occasion were startling. When he struck the ground he would yell, and his clamor while in the air was a thing to be remembered.

There was a curious little break in it now and then, that suggested to one's mind the idea that he had swallowed something sharp. We were all on a run by this time, and even Don forgot his solemn promise. He probably argued, that when an honest hunting dog made such a noise as that it was fair to assume that things were going to happen, and he went to see; which was quite human, indeed.

Tearing through the dense thicket of alders at the edge of the woods, we paused to listen. The hound was not more than 100yds. ahead, and even while we listened there came a break in the yells ahead, and then a series of howls of an entirely different nature, and then silence. Madison swore softly to himself, and as we crowded through the underbrush we gathered from his lurid remarks that things were not panning out exactly as he wished. Immediately after this we met Don. He was returning with an enthusiasm that left no doubt of his determination of abandoning bear hunting as a pastime in the future. He was in a hurry, and evidently worried about something. Every few steps he would stop and try to look at the back of his neck. Then we saw that he was bleeding from a cut just back of the ears. He was thoroughly consumed with pity for himself, and his efforts to see just how badly he was hurt were interesting. To all attempts to have him lead us to the scene of conflict he turned an absolutely deaf ear. He said substantially, "Go on if you want to. I'm done. I'm going back to the house." Which he promptly did.

Further on, just at the edge of a narrow but deep gulley, we found the hound. We gathered from some remarks that he let fall that he, too, was dissatisfied about something. He was bleeding from an ugly lacerated wound of the shoulder, and there were many curious designs drawn in his hide in red.

It was clear that the two dogs had plunged into the gulley after, or rather on top of, the bear; that he had said something discouraging to them, and then pursued the even tenor of his way up the mountain side.

We went back to the house then. Madison carried the hound, which was really unable to walk. Hall walked behind, and made remarks chiefly concerning hunting dogs that didn't know how to hunt, and it was obvious that our chance for getting a bear in that neighborhood was slim indeed. There was no other bear dog at hand, and even the next day it required much diplomacy and tact, to say nothing of force, to get that hound out from behind the stove, and even then it was noticed that he always came out on the side furthest from the woods.

Even partridge hunting after this was not a success, because Don insisted that we heave a stone into every thicket before he would work it. So the following day we left our statesman guide and came down the mountain to Sunderland, and as the guest of Mr. Charles Bacon, of that place, put in two days of fine woodcock shooting over his marsh flats.

And here, by the way, Don's courage revived, and to see him stop and tell those honest farm collies the details of that battle in the woods was a sight to be remembered.

They would gaze at him in admiration and awe, and he would yawn and walk around to imply that it was quite a common occurrence with him, and in time he grew to be quite as conceited as a human over it. But I shall always believe that he lied to those dogs about the details of that battle in the gulley. F. J. TOMPKINS, M.D.

Natural History.

WHAT OLD DEER HUNTERS SAY.

Deer and Lilypads.

LANSING, Mich.—Deer will always go to a lake to feed on or among the lilypads if there are any lilies in the lake, and they will be there feeding during the early morning, the early evening, and often during the entire night, if the nights are moonlight. Whether a deer will eat lilypads is questioned. It is stated that the moose will eat lilypads and dig in the mud for the roots, but the deer will only eat the finer grasses which grow in the water among the lilies, and seldom, or never, touch the lilies. A deer park I sometimes visit has a small swamp in one corner. This swamp has a large quantity of lilies growing in the soft mud. The deer are constantly rooting around among the lilies, but the owner tells me that they never touch a lily. It is the small water weeds and slender water grasses that the deer seem to be hunting for.

Deer in the Water.

Deer go to water quite as much to bathe and to get away from the flies and to enjoy a swim as to drink. Deer will go a long while without water if the water is not accessible to them, but when they are really thirsty and want to drink they will go a long distance to get water and cover the distance in a remarkably short time. Deer often swim a long distance just for the sake of the swim, and they take these long or short swims of their own accord quite as often as when driven to the water.

In the winter in our northern country deer are often run down by wolves, and a remarkable part of it is that deer when pursued by wolves in the winter, when the lakes are frozen over, will run for the ice exactly as they run for water in summer when closely pursued, and as they make slow progress on the ice they fall an easy prey to their pursuers.

Some years ago I was spending a few days in the early fall at a lumber camp. One morning I discovered a big buck swimming down the lake near the camp, so I walked along the shore, in plain sight of the deer all the while, for nearly a mile, and when the deer came out of the water I was not to exceed four rods from him, standing in plain sight, and made no attempt to conceal myself. The buck looked at me a few moments, shook himself, and leisurely trotted away. I have often wondered if they had an idea when the close season was. Deer sometimes seem to be very stupid and dull, and will act in a manner hard to explain; but usually it will require all the shrewdness of a good hunter to get well within gunshot of a deer.

Deer on the Burned Lands.

In our northern country fires often run over large strips of woodland, and almost before the ground is cool the deer will begin to travel over the burnt off district. The weeds spring up quickly after these fires, and the deer seem to enjoy eating the weeds more than they enjoy browsing. They will frequent these burnt places and play in the ashes, and it requires quite a little persecution to drive them away.

Local and Migratory Deer.

Deer in Michigan are known as local deer and migratory deer. The local deer are those that remain in a certain neighborhood during the entire year, and the migratory deer are those that are simply passing through a certain section, either in the fall going south or in the spring going north. The residents of a country frequented by deer soon learn to distinguish the local deer from the migratory deer quite readily. Their habits differ, and their actions differ greatly, in different parts of the country. Deer like their old homes, and will come back to them year after year if the feed is good and they find plenty of timber and water, and they are not driven away by hunting.

Deer Beds.

Deer lay down often, and the difference between a

night bed and a day bed depends largely upon the nature of the country, the feeding grounds, and whether they are hunted or not. Deer rise from their beds exactly as cattle do—that is, they get up on their hind legs first and then rise up on their front legs; in that way their feet are placed in the beds and they mark the bottom of the beds. Deer stretch, and stick out their hind legs, and grunt, and wiggle their tails, and leave some droppings usually before leaving their beds if they are not driven out. They take plenty of time to get up and stretch themselves before starting from their beds if undisturbed. The amount of droppings on the edge of a bed will indicate to a certain extent the length of time that the deer has remained in that particular bed. When a deer gets up, if he leaves no droppings in the bed, he will be pretty sure to leave some so near the edge of the bed that some of them will roll into the bed. He will nearly always do so.

Deer Feeding.

Deer are usually on foot and feeding during the early morning and early evening, and if the nights are moonlight they are often on foot and feeding during the entire night. They sometimes move about considerably on dark nights, but not as a rule. They usually have finished their feeding by 9 o'clock in the morning, and retire to some quiet place to rest and sleep. If not disturbed they seldom come away from their sleeping and resting places before 4 or 5 o'clock in the afternoon, but this will depend largely upon whether the day is bright and sunshiny or dark and lowery; on dark days they begin to stir about earlier.

They have no special hours for going, or coming, or feeding, but the rule is that they go and come and feed as stated. Very likely the governing cause for their actions is hunger. When they have fed, and their stomachs are full, they are inclined to quiet, but when hungry they start for their feeding grounds. JULIAN.

[TO BE CONCLUDED.]

Woodcock Weights.

ONTARIO, Canada, Dec. 11.—*Editor Forest and Stream:* The following remarks *re* woodcock may be interesting to your correspondent E. C. B., of Osceola Mills, Pa., whose letter I read in FOREST AND STREAM of Dec. 7, and perhaps to others of your readers. About the middle of last October my brother and a friend drove into the country about ten miles for a day's woodcock shooting. My son, who does a little taxidermy, requested me to ask them to save any good specimens which they happened to secure. They returned with three small birds, attributing their small bag to the fact that the northern birds had not yet arrived. Subsequently the same party revisited the same grounds and brought back a splendid specimen, a large bird, which on being weighed on a platform scale, used for weighing grain, tipped the beam at 12oz. The smallest divisions on this scale were ¼lbs. I have no doubt, had this bird been accurately weighed on a fine scale, it would have weighed a couple of ounces more. My son mounted the bird and has it in his possession. A few days later my son shot two birds equally as large, but shot up too much for mounting. On the following day he shot another bird just as large, which he mounted. One day two years ago, on the same grounds spoken of, our party shot seven or eight birds apparently as heavy as the one written of by your correspondent. Every fall for the last fifteen years we have killed quite a number of birds as large as the one weighed. When, years ago, birds were plentiful about here, we never secured in the summer time such large birds as we got in the fall. It appears, therefore, to me as if these large birds were of a different species and bred further north.

WM. HOLLIDAY.

Three Duck Broods in a Season.

ESSEX, Conn., Dec. 11.—*Editor Forest and Stream:* A friend of mine in town has a pair of Long Island call ducks which have raised three broods this last summer. The last brood was hatched about six weeks ago. Is not that something quite unusual? P.

[What are the "call ducks?" The three broods are unusual.]

Camp-Fire Flickerings.

"That reminds me."

SOME time since while hunting in company with three other sportsmen, and jolly good fellows they were too—whom we will call Bill, Tomp and Jack—among the dense thickets several miles off to the northeast of Lakewood, the dogs followed a big rabbit up near to where Bill and Tomp were standing.

As it was going from them like a streak of lightning, they both banged away, but missed it, seemingly, mind you; the dogs continuing in its track. Soon afterward Jack came up, and when he learned that it had got away he started after the dogs, which were barking at a little distance, saying as he crashed through the bushes that he'd "have that rabbit or die in the attempt." In a short time bang went his gun and soon after that he emerged from the thicket, and in answer to our inquiries said that he had made a most splendid shot; for the rabbit, after having run some distance into the brush, had doubled, and while it was coming on the full jump along a wood path directly toward him he "had knocked it over with that shot just as slick as grease."

Then he took bunny from the pocket of his hunting coat, and while showing it to the rest of us we noticed it had received several shot in the rear, but not a single one could we find in front, which naturally had a tendency to make us set up a thinking. "How in thunder did you fill that rabbit's hind part full of shot when he was coming toward you?" asked Tomp, after having examined it closely. "None of your business how I did it," answered Jack with a show of anger, "but I shot it all the same just as I told you." "Then it must have been coming along that path tail foremost," again put in Tomp, which brought out a horselaugh from the rest of the gang at Jack's expense, and the conclusion we came to in regard to his "splendid shot" was that either Bill or Tomp or both had hit the rabbit and the dogs had run it down, which as soon as Jack had found, he fired off his gun to make the rest of us think that he had shot it, little thinking that the dead game would show to the contrary.

But it was some time before he heard the last about the effect of his unaccountable shot. A. L. L.

Game Bag and Gun.

FIXTURES.

March 16 to 21, 1896.—Second annual Sportsmen's Exposition, under the auspices of the Sportsmen's Association, at Madison Square Garden, New York city. Frank W. Sanger, Manager.

UNUSUAL SCORE AT RUFFED GROUSE.

No bird, I believe, is prized so highly by a majority of field shooters as the ruffed grouse, generally called partridges in the States of New York, New Jersey and Connecticut, and pheasant in Pennsylvania. If it were left to a vote of the sportsmen the ruffed grouse would certainly be voted the most difficult to hunt successfully for man or dog. No bird knows better how to baffle and evade its pursuers and none will dish out more disappointments to the average shooters than it.

There are hundreds of good field sportsmen in the States above mentioned who have killed hundreds of heads of quail, woodcock, snipe and other game, but who have never killed a single grouse, or at least not over half a dozen of them, in their lives, although birds are within easy reach of them.

Years ago I had learned successfully to kill snipe, ducks, woodcock and quail, could shoot pigeons from the trap and handle the gun as well as most men, yet I could not kill ruffed grouse with deliberation, and they would beat me oftener than all other game birds combined. Dozens of failures to kill fair shots in former years are indelibly impressed upon my memory, yet I hunted these birds in preference to any other game bird, as they had an irresistible attraction for me which no other game bird could begin to equal. Never have I ever experienced the same sensation of pleasure, pride and satisfaction when bagging any other game as when making a good clean kill at a ruffed grouse. From my earliest career as a field shooter I loved and at the same time respected this bird until my shooting companions called me a crank on partridge shooting.

And yes, I plead guilty. I am still a crank, only in a more pronounced degree, and form more dangerous to the bird than during my early experience. During the last dozen years I have paid up for old debts, and since these years I have hunted ruffed grouse almost to the exclusion of all other game, and believe I have since bagged more of these noble birds than any other man in New York city.

My difficulty, like that of most unsuccessful grouse shooters, was that the bird with its thunderous noise would rattle me, and ever since I learned to control myself upon the bird taking wing I began to improve my success in killing them until I have repeatedly succeeded in making scores which I believe are seldom equaled or surpassed. At the same time I repeatedly meet with conditions while hunting grouse which make good scores on paper impossible.

During my four days' Thanksgiving hunt in Sullivan county I shot two days and made an unusual score over an orange and white coarse native setter, Duke, whom I broke on grouse some four or five years ago. The dog is difficult to keep in proper condition, as he has bad feet and other faults, but when physically fit he is about the most killing partridge dog I have ever seen. He is not a slow dog; on the contrary, ranges off and goes over a good deal of ground, and has a way of using both foot and body scent that enables him to approach and hold birds which under other conditions would act wild.

During these two days I fired in all at game nineteen cartridges, never once firing the second barrel, and killed and bagged eighteen head of game, consisting of fourteen ruffed grouse and four cottontails, firing only one shell at a grouse unsuccessfully. The shooting was not easy, on the contrary, rather hard and of all descriptions. I shot at everything that I would shoot at under any ordinary circumstances, and that there was no picking of shots is shown by the fact that I only saw eight birds and killed seven of them each day.

The eighth bird the first day was one of two flushed together on the edge of a hillside laurel thicket, of which I killed one, not being able to shoot at the other. Following up the remaining bird the dog flushed and pointed it in high laurels in a corner of a swamp, it lying close, its mate having been killed and the cover being very dense. After taking a position on top of an old stump, raised about 3ft. off the ground, I ordered my companion, Charlie Snyder, who carried my game and accompanied me both days, to flush the bird. It went out of the thicket low into the open and across the next cover. I fired this shot only—well, I'll make no excuses, but few men would have wasted a shell at it.

The eighth bird on the second day was being trailed by the dog late in the evening and got out of a low tree and was not shot at nor found again, it being quite dark. I mention the above score not for the purpose of bragging, but as a curiosity and an instance of a remarkable combination of all that brings success, and give my word as a man that my statement is true and not stretched in any way. I fired during these two days nineteen shells and bagged eighteen head of game, fourteen grouse and four rabbits.

Of course luck played a part in the success, as two birds at least were killed outside of 60yds. and several at long range. One bird was bagged after flying 100yds. or more. All birds of course were killed on the wing, most of them over points or while the dog was trailing, but several were killed on unexpected rises.

Successful runs like the above are almost or quite beyond the belief of some occasional grouse shooters, yet similar scores are sometimes made, and I have seen good scores made by others. I started in this season killing the first five or six grouse straight, with as many shells. Three or four years ago, while hunting with a brace of dogs, I killed nine ruffed grouse with ten consecutive single shots in a single day. The same year I averaged over eight birds to my gun during the whole season. Several years ago I made two good doubles in succession after having hunted for years and having killed hundreds of birds without ever having made a fair and square double, but have made other doubles before and since.

Birds are not plentiful this season—in fact scarce in such parts of New York State and Pennsylvania as I have hunted. In New York and New Jersey, near home, there are a good many birds, but so wild that good bags are practically impossible, birds rising out of sight.

I am using for all my field shooting a 12-gauge, 26in. barrel, 6¼lb. Francotte gun, both barrels choked—though not full choked—and consider it the most perfect gun in weight and length of barrel I have ever handled for upland field shooting. My ammunition for ruffed grouse is 42grs. of Schultze powder and 1⅛oz. of No. 7 chilled shot in a U. M. C. No. 3 primer case. J. VON LENGERKE.

GROUSE TRICKS AND DOG WAYS.

NEWT and I have been doing some hunting this fall, and so far have improved a bit over last year, although I cannot yet shoot a partridge on the wing, but did get one duck nicely on the wing once this season.

We had rather a strange experience one afternoon on Shefford Mountain. We had put up several partridges, managing to get one and a gray squirrel. Newt said he knew that some we had raised had by that time got back to the beech trees for their supper.

We went cautiously that way, going up an old road ascending quite a hill, when turning a corner near some ground hemlocks we saw two partridges feeding near the foot of a large beech.

It was a fairly long shot, but we could not get nearer, so I let drive at them, when one flew away, the other starting straight up in a flustered manner through the branches of the beech, finally arriving among the small limbs at the top, where she caught on a twig, her wings still spread, supported by other twigs. She appeared to be fairly alive, so I tried the other barrel, the shot knocking twigs and nuts all around her, but she never stirred. That was my last cartridge. Newt pulled up and tried her with the same success. He had one cartridge left, which he insisted I should use, get a little closer and bring her down.

I slipped in the cartridge, approached about 20ft. nearer and fired at her carefully, but she never stirred, although through her outstretched wings we could plainly see shot holes.

Newt said she was dead, the limbs holding her there, but I said her head stood out too well for that.

We went up under the tree, talking and making a noise, but she never stirred. I had one cartridge loaded with buckshot and smokeless powder, which I carry this fall, as a deer has been frequently seen around here this summer. I did not want to shoot her with that, as it would tear her all up, but Newt said to try it anyway. I kneeled down right under her, she being about 60ft. above my head, took careful aim at her head, "*à la* Cunningham," but missed her, the shot cutting off a limb a few inches in front of her beak. She still stood there.

Newt said if the tree was not so large he would climb it, as he was sure he could shake her out, as he had no doubt she was dead. The tree was about 15in. through, and about 25ft. to the first limb, so I said I would try it.

It pulled my wind a bit to get to the first limbs, where I rested, the partridge in plain sight. I then started up through the limbs, and nearing the partridge told Newt she was alive, but perhaps was badly wounded, that to be ready for her, as when I shook the limb I believed she would run when she struck the ground.

He assured me that he would catch her if I shook her out.

I was then within about 8ft. of the partridge, and placing my hand on the limb I commenced to shake; at the first vibration the partridge spread her wings and sailed away down through the woods apparently as strong as ever. From my height I could see just about where she lit among some ground hemlocks, but on going over there could not find a feather.

It has been a great mystery to us what become of her, Newt still maintaining she was dead, but I am sure when I saw her bright eyes up in the tree within 8ft. of her that she was not hurt, and yet with five shots at her, all the noise we made climbing the tree and all, I don't see why she did not fly before.

Newt had another experience at the same place a day or two after. He came cautiously up the hill, I going in another direction, when he saw one partridge in a small beech tree, one just under it and another in a birch at one side. He had a single barrel, first shooting the one on the ground, which heeled right over. He then fired at the furthest one in the birch, which flew away. He then tried the one in the beech, noticing while loading that the first one was still at the foot of the tree dead, and brought her down. It was on the bank of our trout brook, which just there was rather steep, so that the one from the tree in striking the ground fluttered and was rolling down the bank. He made for it, secured it and then went to pick up the one at the foot of the tree, but could not find her. Hearing so much shooting I had come over, and although we both searched diligently we could not find her, but at the foot of the tree it was strewn with feathers and could plainly see where the shot had struck right under and all around her.

It is still a mystery what became of her.

He had a similar experience up near Warden, where he found two in different trees, downing both, but we could find only one, although we found feathers at the foot of the tree and could plainly see where her body struck.

We have been out a number of times, hunting all afternoon and coming home empty-handed after seeing plenty of birds, but we are never discouraged. When driving home we talk the matter over and try and plan how to get ahead of them the next time, but somehow the next time they have some other trick, and at times it seems discouraging, as we never appear able to know just where they are going to be or what they are going to do about it.

We are going to try them some more now that we have some snow, but presume we will have to learn a lot about their tricks on snow before we can come up to their cunning, so perhaps the season will be over before we have them down pat, and then no doubt we will have to learn it all over again next season.

Still I believe we enjoy it as much in anticipation, yes, even more than in participation; at any rate we both agree that we would be ashamed of ourselves if we went out eight afternoons and shot 147 partridges, as one of your correspondents did early in the season. We have not heard much about "game hogs" this season, but what would Dick of Connecticut think of him for a sportsman?

By the way, I suppose he considers me a "pot hunter," as no doubt many of your readers will, for shooting a partridge sitting, but I believe the man that will go to the woods, leaving his dogs at home, hunt up his own birds

and successfully stalk them in the month of November, will be willing to take them wherever he can get them, and I say he is entitled to them, at least he would be in this part of the country.

Along this summer I was anticipating some great partridge hunting, as one of my travelers told me he could get me a good bird dog. About the first of September he advised me he had shipped me a dandy. Newt happened to be in Montreal that day, and coming down a little early to take the train noticed some excitement around the express car, and on inquiry found that a dog had chewed his way out of the crate and escaped. Some one suggested to the messenger that he pick up some cur and put it in, as the consignee would never know the difference; but Newt, knowing I expected a dog, asked him who it was consigned to in Granby, and learning it was for me, told them he was the owner and that they had better catch the right dog, as the one shipped was a very valuable one.

It appears the dog ate his way out of the crate, the car being one of those compartment ones with express one end, mail in the center and baggage at the other end.

When the dog got out of his crate he simply walked through the place where the stove is in winter, and out through the mail car, the door of which stood open.

The American Express Co. would not settle, claiming the dog was at owner's risk from death or escape; but I contend there is no receipt that will exonerate any common carrier from negligence, which in this case is simply proved, as they locked the express car door and left the stove hole open. Considering the number of partridges I might have shot had the dog reached me, I have sued them for only $50, which I think is cheap.

I wrote my traveler I would have to have another dog, but it took him till about two weeks ago to find one. He wired me one day to look for a dog by that express, writing later that, although the dog was not handsome, the man he secured him from vouched for him as a first-class bird dog.

He safely arrived, and seemed much pleased to see me when I opened the crate, much more pleased to see me than I was to see him, as I had very grave doubts of his being a bird dog, in my opinion not being the right breed. However the next afternoon I took him out a little ways from the village where I knew there was a stray bird, but on entering the woods he did not appear to want to leave my heels, acting as if he was afraid he would get lost in the woods. I urged him on in English, French, Spanish and tried it in German, but he would just sit down at my heels and look around innocently.

I did not know but that he was fooling with me, that he knew there were no birds there; thought I was trying to fool him, 'cause, don't you see, he came to me highly recommended.

I never had a hunting dog, and thought perhaps I did not know how to handle him. I have read in FOREST AND STREAM of handlers getting big pay, of getting ahead of the judges at times, so they must be smart kind of people, and I concluded I would have to hire a handler. I started along through the woods, thinking that perhaps if I put up a bird he might then show some interest and show me how to do it, but unfortunately I could not find a bird.

Getting further into the woods, I heard a blue jay call, and that being the only thing I had heard or seen I thought I would try a shot at it and see if the dog was gun shy, or what he would have to say when he heard the noise.

The blue jay finally appeared in a beech a long distance off, but not caring whether I hit him or not I blazed at him, carefully watching the dog, who was not at all gun shy, but sat down near me, seeming to wonder what I was doing. The jay flew to another tree and, offering a better shot, I took careful aim and downed him. I was a little surprised at it myself, so long a shot, but the dog did not seem a bit surprised at anything. I thought I noticed a little disdainful curl of his upper lip, as much as to say, you must be a healthy partridge man, but at any rate I would go over and see if I had hit that bird. I paced it off and found it was forty-five paces to the tree he was in, and looking a little further along saw Mr. Jay.

The dog had wandered away about 15ft. from me while I was pacing this off, but all the time was looking back wistfully.

Finally he seemed to think I would stay there a little while, so he ran along on a log quite briskly. Then I says to myself he is going to hunt. I brought my gun up ready, not knowing whether he was a pointer or setter, but he soon stopped up, sniffing around leisurely, and I spied a squirrel going up a tree, coming to the conclusion that that was what he was after.

I came back from there, when my office boy asked if he was a good dog. I said I did not think so, that during the whole time I was out he never even whined. The boy wanted to know if that was not a sign of a good bird dog. The boy is English, the terrier is Irish.

The next day I took him out again, and thinking that the woods were strange to him the day before took him back to the same place so he would not be lonesome. But he stayed right at my heels. I told him to go ahead a bit, to hunt, to get a move on, but he would not. I fancied I smelt a partridge near there and tried to coax him to it with a stick, but he would not, would just lie down and I could lay down the stick (in view;) didn't even whine.

Along a little further I was on the top of a steep ridge and thought there was a partridge in the little valley, and asked the dog to go down and flush him so I could pull him down, see that bunch of feathers float away as he raised up over the other ridge, etc., but the dog would not. I took him by the cuff of the neck and threw him down there, but he would not go any further; as soon as I moved away he was quickly at my heels.

Coming along an old road I asked him to go over by some hemlocks about 10ft. away, but he would not, so I sat down to cogitate, trying to think of all I had read in FOREST AND STREAM about handling dogs, but somehow did not seem able to find any rule to apply to this breed of a dog.

After sitting there a few minutes the dog thought he might stretch his legs, so he moved over toward that bunch of hemlocks standing on a piece of ledge, the roots of the trees coming from under it. He looked back at me to see if I was still there, then started cautiously to go in, when out went a partridge with an awful noise. The dog stepped back and looked at me as much as to say, "What was that?" I sat there looking at the dog and wondered if he was pointing, but did not see him get rigid at all; his eyes did not get glassy, nor did he seem all of a tremble—nothing like what I had ever read of. I went in after that partridge and when I got where I thought she was I asked the dog to go ahead, but he would not. I stopped, reached back and pulled the dog in front of me, rubbed his ears, as I had seen them do with roosters down in Texas to make them fight, but the dog would not. I tried to push him along, but just then the partridge went up and the dog got under my feet, nearly tripping me down the hill.

From there we started home, and when we reached the clearing he seemed to be more at home, and run around a bit.

I noticed him go over behind a ledge, putting a hemlock between us, and thinking he might have gone over there to have a laugh at me all to himself I went to investigate; but all he was doing was trying to dig out a chipmunk.

When I got home I sat down and wrote the former owner, asking him if he was trying to play a joke on my traveler. If the cigars I had sent him were so bad that in revenge he was sending me a "sooner" dog, telling him he would not hunt partridges for me; if he would for him I would return him, but if he did not want him I would on the next occasion promptly shoot him. By the next mail I had a reply apologizing, saying a friend of his had left him there to keep, saying he was a good partridge dog, and that was all he knew about it.

I thought I would give the dog one more chance, so took him out for a long walk and managed to put up some partridges quite close, but somehow the dog never seemed to be looking that way, or did not hear them. I put him on the "spoor"(?) of the bird, but he did not seem to be able to follow the trail.

Finally, as I was coming home through the woods, I stopped at a place where I knew there was a bird and looked cautiously around. While peering through the hemlocks I caught a shadow over my head, and looking up saw the partridge sailing from afar toward me at a ninety-mile-an-hour gait. I thought of the picture "Stopping an Incomer," but before I could bring my gun up she had settled down in a little cedar swale.

I went in after her, the dog following around, but he did not seem to like it and was always making for a log to walk on, as he did not seem to want to get his feet wet.

I stopped often, looking under the trees, around old stumps and knolls for the bird, and finally the dog finding I was on a dry place came up to me and sat down. While contemplating his beauty, he looking straight up at me, the partridge went out of a tree not over 6ft. from my head.

It took me by surprise, but the dog did not seem at all anxious, except he wanted me to get out of that swamp.

That was the last straw. I looked him over carefully, considered the ground, whether it would make a good graveyard for dogs, and came to the conclusion everything was favorable.

I had made up my mind to shoot the dog. I put in a BB cartridge and asked the dog to move off a little, but he would not.

I found him a dry spot to stand on and moved off into the water, but he would not. It took me about five minutes to get him in the proper position, then I fired. The dog was no more. He came to a dead point, became quite rigid, but the bird had gone, been flushed some time before. He still lies up there if the foxes have not found him, and I am still open for a bird dog.

J. BRUCE PAYNE.

BOSTON SPORTSMEN.

THE dinner committee of the Megantic Club have fixed on Saturday evening, Jan. 11, as the date for the coming annual club banquet, and the Copley Square Hotel, in Boston, as the place. It is the intention of the managers to excel, if possible, all previous efforts on this gala occasion, and the club members are promised a royal good time and a gorgeous repast. These occasions serve to unite old friends and to renew acquaintances formed, in many instances, in the woods and by the stream, and as such are a valuable arrangement toward increasing the club's prosperity and quickening interest in its affairs. With a full membership of 300, which they now have, the committee expect a large attendance, and no doubt their expectations will be realized.

A sportsman friend, too modest to have his name mentioned, has just returned to Boston with a record of large game unsurpassed by any one of whom I have heard this season. A bull moose, a bull caribou and two buck deer, the full allowance by law to one individual, are the spoils of his trip, and each and all were killed by himself. He went into the woods with one guide, and being confident of his ability to kill all the game wanted, the guide left his gun behind. This method, followed by sportsmen generally, would in many cases largely reduce the amount of big game killed, for without doubt many large animals are brought home as the sportsman's prize which were really killed by the unerring aim of a competent guide. The northern Aroostook wilderness was the region in which my friend found his good luck, and although he has visited in the past nearly all the other good hunting sections of Maine he thinks this country excels them all.

The frigid weather of the past week has put the final touch on the shore bird shooting along the Massachusetts coast. Several Boston sportsmen returned the first of the week, and one party, consisting of Moses Bamber, Charles Stimpson and Fred Hersey, express regret that they could not have stayed over to get the flight borne in by the heavy northeast gales of the past few days. They have been down to South Orleans, near Chatham, for two weeks, and killed about forty black ducks, sheldrakes and whistlers. The weather was warm and clear, with bright moonlight nights—too nice altogether for the best results. Quail shooting was quite good and they saw a number of partridges, but did not get any of the latter, as they were very wild. On Thanksgiving Day they attended an old-fashioned rooster shoot. The plan was for each man to shoot at a small paper 60yds. distant with No. 8 shot. He who put the most pellets in it captured a bird. One of the natives appeared on the scene with a whole arsenal of guns, determined to sweep the deck. He had four in all, the largest being and old 4-bore single gun. His great preparations yielded him but three birds, much to his chagrin. Two flocks of geese were seen by my friends, one of about fifty birds and the other seventy-five. Strange to say, these birds seldom light in the fall in this vicinity, but almost invariably do so in the spring. Another party of Boston sportsmen who have lately visited the Cape are Eben A. Thacher, C. W. Gammons, Lindsey N. Oliver and J. Howard Edwards. They enjoyed good coot and sheldrake shooting down at Sandy Neck, near Barnstable, and considering the lateness of the season did extremely well.

The Cedar Beach Gun Club, of Boston, are mourning the loss of their shooting grounds down on the south shore. The property has been taken for a part of the new boulevard which is to be built through that section, and the gun club people are now looking for other quarters. They have in view several good locations on the north shore, but have not yet decided just where to pitch their tent. They were well pleased with the old place, and I hope will find another equally as good. Thomas Sedgwick Steele, the sportsman artist, spent a short time in Boston this week, visiting among old friends who like him are lovers of the rod and gun. He is enthusiastic over an European trip which he has lately completed, having been as far south as Egypt and north to that land of beauty surrounding the North Cape, the northern limit of Norway. Mr. Steele is the artist who painted the well-known picture, "Two at a Cast," and also other paintings of almost equal note.

A Boston sportsman who has been shooting in northern Maine returns quite convinced that the reports published in many papers during the past three months, stating that the game laws in that State were being properly enforced, are far from true. He says that illegal shooting of game as regards quantity allowed to each individual is constantly going on, while the killing of moose for their hides by Canadians who cross the border for that purpose is a very common occurrence. More game wardens is the only remedy he can suggest, and I think FOREST AND STREAM'S many readers who are interested in the preservation of game in Maine will agree with him on that point.

HACKLE.

BOSTON, Dec. 13.—The weather has lately been somewhat in favor of the big game hunters. Snow has been universal in New England for a week, and it was not followed by rain and crust. The number of hunters absent from Boston and vicinity has dwindled to a few, and the success of most of these is yet to be heard from. T. C. Smith writes to a friend here from Kenebago that he has taken the biggest buck he ever saw. F. E. Newell is back from Green Lake, Washington county, Me., with a deer, the first one he has ever killed. F. E. Whiting, one of the junior proprietors of the Boston *Herald*, is back from the camps of the Inglewood Club, in New Brunswick. He was accompanied by his friend, Mr. Jewett. They found deer tracks in plenty at the preserve, but the snow was wet and crusted and not favorable for deer hunting, and deer hunting was accordingly abandoned for duck shooting at the head of the bay. They had excellent success with coot, butterbills and numerous other ducks.

Mr. E. Frank Lewis, of Lawrence, is again out of the woods—from his second deer hunting trip this fall. This time there is a buck to his credit, though his first trip was not a success. He was with a party of friends, including F. W. Sprague and Col. L. W. Walsh, Byron Horn and Mr. Nelson. They went to Lee and from that point to townships No. 3 and No. 4, and were quartered at Camp Homer. They had snow, enough of it, only 15in. falling to their credit, and the most of it wet and hung to the trees. But they brought out two bucks and a doe, poor as the shooting was.

A Boston traveling salesman, who has his eye out for things as they are and is considerably interested in big game, says that he has been on the Bangor & Aroostook Railroad a good deal this fall and has been noting the shipments of moose, deer and caribou. The weight of the moose shipped has particularly attracted his attention. He reads in the Bangor papers that Mr. So-and-So has killed a big moose weighing 1,000 or 1,100lbs. He sees the big moose of Mr. So-and-So on the train and in the hands of the express company, where it is carefully labeled as weighing 500lbs. He says that he has not seen a moose being shipped this fall that has been marked as weighing over 700lbs., and but one of that weight. The express company is presumed to weigh the animals carefully and to carry them by weight. His idea is that the average weight of the moose carried out this season over that road is not above 450lbs. Let some one who has an exact record speak up.

The pleasures of hunting are not all of shooting. The camera is playing a most important part in the hunter's outfit. There is many a hunter to-day who would as soon be in the woods without his gun as without his camera. Mr. Geo. T. Freeman, a Boston gentleman exceedingly fond of both fishing and hunting, has lately added the camera to his outing kit. His success has been remarkable, for the reason that he has gone into the matter in a painstaking manner. His annual trip to Anisquam after coot this fall was fairly successful. The pictures he took and the snap shots he made are truly worth looking at in every case, besides including one or two gems, representing himself and his friends, C. W. Whittemore and Bart. Hill, all in "oilskins" and "tarpaulins." The native guide or boatman also forms a character study. Mr. Freeman thinks that the ducks slain were a small part of that hunting trip compared with the pictures.

I came across a gunner yesterday who had six black ducks and one hooded merganser, which had been killed at Scituate, he said. He also remarked that the shooting was holding out remarkably late there. His idea was that there would be still another flight of ducks there as soon as the weather "softened" again. He says that he has hunted in that section for years, but has never known the ducks to remain so late.

SPECIAL.

We are advised that the FOREST AND STREAM'S statement last week that Dr. Bishop had killed a moose in Maine this year was an error, as he killed no moose. Also that in the hunting regions of the State snow has been on the ground continuously since the mlddle of November.

Game Laws in Brief.

THE *Game Laws in Brief*, current edition, sold everywhere, has new game and fish laws for more than thirty of the States. It covers the entire country, is carefully prepared, and gives all that shooters and anglers require. See advertisement.

THE BEAUTIFUL ST. JOHNS.

MANY localities of the country in which we live are justly famed for the beauties which one may see and the sport which one may experience while in that district, but none more justly than that far-famed hunting ground, the Upper St. Johns River, Florida. Many of these same famed resorts are famous not owing to the quantity or quality of their game, but to the vivid imagination and ready pen of a fluent writer, who exercises his talents for so much per column. As to the St. Johns, let me add my testimony (valueless though it may be), which was gained by actual experience during a week's stay upon its waters, in company with some of the best wing shots to be found North or South.

On Saturday, Jan. 27, 1894, the prosperous town of St. Francis, Florida, was the scene of busy preparations for the departure of the steam yacht Lolliboy with a lighter in tow, which was to be the home of a party of nine for a week.

The yacht was in charge of Capt. John E. Harris, who was ready, as all good captains are, at all times for any emergency; while Mr. Chas. Knickerbocker took the wheel and shoved the spokes from port to starboard as necessity demanded with the skill of an old timer. Mr. J. E. Dreggors took charge of the culinary department, and the good spirits which the party maintained was sufficient evidence that everything which went to feed the inner man was well prepared, and the quantity devoured also bore testimony to the same fact. Mr. C. K. Harris and myself, who were upon our winter vacation from college, completed that portion of the party which went aboard from St. Francis. All day provisions, cooking utensils, fishing tackle, guns, ammunition, etc., were being carried aboard; at 6 o'clock all the preparations were complete, and at 6:50 the party were well started amidst the shouts and good-byes of our many friends.

An all-night trip took us to Sanford and Lake Monroe. The landing was made at 5:45, and after breakfast the party was completed by the addition of four (all Pittsburgers), who had just returned from a week's trip on Lake Walken Water, where they had been guided by George Tallahassee and Laton Wilson. This contingent consisted of Dr. Joseph Dickson, otherwise known as Tom Tiger, which title he won by his skill in slaying alligators while with the Indians; Dr. James Dickson, who is better known among Northern shooters as Jim Crow, and who has made his record in many contests at clay as well as feathered birds; Dr. Thos. McCann, who holds a line and reel as well as pulls a trigger, and who has made somewhat of a reputation as a swimmer; and Joseph W. Graff, who although young has learned the art of handling a gun, and whose string of ducks and curlew holds its own with any of the party. These four having settled themselves and their varied paraphernalia on board, the real start of the trip was made from Sanford at 1:20 P. M., Sunday, Jan. 28.

Soon after starting the heavy rain which set in from the west kept the party indoors, and the time was well spent listening to the tales of the old hunters, who, although they spoke with great gravity, refused to swear to an affidavit vouching the truth of their statements.

The lake was soon left behind and a successful run made to Lake Harney, during which great quantities of game birds, large and small, could be seen winging their flight in a southern direction. The reputation of Lake Harney for beauty as well as game was well established, except as regards squirrels, which did not appear in and about Geneva Landing. This, however, was our only disappointment of the whole trip.

Geneva was left at about 4:30 in the afternoon, and before we could reach the river darkness had settled and a high wind had arisen, which prevented us from making sufficient headway to cross the bay; pulling and hauling on ropes and pushing with poles failed to float the boat from where she had grounded within a skiff length of the channel, so we all turned in and refreshed tired nature with that blessed remedy, sleep.

Bright and early we were at work again endeavoring to get afloat, but all our efforts were vain till Jim Crow ran short of his supply of equilibrium and falling overboard raised the water sufficiently for us to glide peacefully on our way.

After proceeding a short way up the river we anchored for our first duck shoot. The country was level and marshy, really an ideal place for ducks; two boats, after having stationed the several men, kept stirring up the game, and the rapid and almost constant reports of the guns assured us that the feathered tribe were being well received, and not a few bowed to the report of a gun. Our string, when we had reassembled after a few hours' hunt, set all doubts at rest as regards the character or quantity of the birds in that section. Tom Tiger and Joe Graff topped the crowd by bringing in six curlew and a heron besides mallard and teal.

Dinner over we proceeded up the river and Dr. Tom bethought himself of the lines, and ere long, with but little assistance from the rest of the party, had a string of seventeen fine bass which aggregated 22lbs. Night fell and all were well satisfied with the day's sport, and resolved to tempt the finny tribe on the morrow.

Early, while the Lolliboy steamed up river, the lines were prepared, and soon six white streaks in the water brought consternation to Fishtown and joy to the hearts of the fishers. A small pound bass was the first catch, and soon the merry dance was on to the full extent. Double catches were frequent, and each fisherman vied with each to surpass in number and size the catch of the others. Jim Crow had a fine bite, and pulling him in landed about a four-pounder in the galley; but he was game, and making a flop soon had left that unfriendly place, only to be again put back by the alert Jim. Again the fish led, and this time with one tremendous leap cleared galley door and end of boat. Landing in the water, he turned and putting his head above the surface smiled sarcastically at the astonished Jim. All day the sport went on until Dr. Tom thought the water was being depopulated, and having lost his hold added one more to the number of the inhabitants. After prospecting for a short while near the bottom he evidently saw his mistake, and appeared at the top, the picture of surprise and determination. He soon clambered aboard, but in the meantime an obliging bass, while endeavoring to lend a fin, became entangled upon the line and was ruthlessly landed; poorly paid for his attempt to assist his enemy, man. Our string for the day amounted to twenty-five fish, weighing somewhat over 45lbs.

That night we tied up for the night in Snake Creek after passing lakes Ruth and Luffman, a party of three taking a row boat went to place the ducks which we intended to meet the next morning. Their return brought a favorable report and we rose bright and early next day and soon were away upon the day's expedition.

Dr. Tom, Jim Crow and Joe Graff, with Enoch, were the first to leave, and Tom Tiger, with Capt. John Knick, and myself soon followed them. Graff was soon stationed from one boat, while Captain John and Tom Tiger were put out from the other, all in advantageous positions, and the rest of the party kept the game on the wing. A strong wind soon necessitated a change in the position of the stations and we picked them up and followed on to Shad and Salt lakes, where the rest of the party were constantly shooting, which assured us of the fact that they had found the proper place for sport. Having reached the field we placed Joe Graff on a good stand and soon saw him drop his first duck of the day before getting out of sight of his stand, when placing Tom Tiger on his stand we were surprised to hear the report of his trusty weapon and turning I saw a large moccasin spring in his death agonies. The Doctor says the reptile had plenty of running room, but had deliberately turned to attack him. Game soon began to rise from all quarters and soon a large osprey fell a victim to the same gun as the moccasin.

The morning's sport was intense, and when we returned to the boat we found that every gun had scored at least one bird, and many of them five or six. Jim Crow carried off the honors of the day, while two were a close second. The boat looked much like a well-stocked game stand, and the table was well supplied with the fruits of the chase.

The return trip was as pleasant as the forward one, and the fish were deluded to such an extent that the table was well supplied even to the last meal. While lying at the dock at Geneva, with only Dr. Dickson and C. K. Harris aboard, the lake was violently disturbed by a high wind which threatened for a time to tear the tow from the Lolliboy. After much trouble they were separated and the yacht anchored out in the lake, where she rode the waves in peace during the night.

Altogether the trip was one of great enjoyment and productive of much game. Mallards, bluebills, blue and green-winged teal, jacksnipe, several ospreys, about twenty curlew, heron, moccasins and about 120lbs. of bass, the largest of which weighed 6lbs., makes up the list of the week's game.

The scenery from the start to the finish of the trip was of the finest, and Dr. Dickson has preserved several photographic views of the party as well as of the country. A hope for another such trip by the whole party testifies to the enjoyment experienced, and the report of Florida's wonderful game resources will be spread far and wide by those who enjoyed the trip on the Upper St. Johns.

RUSSELL K. SMITH.

ST. FRANCIS, Fla.

CHICAGO AND THE WEST.

Desperate Days in Wisconsin.

CHICAGO, Ill., Dec. 12.—Does the sportsman public know how limited the game regions of the United States have now become, and how intense is the scramble of all sorts of hunters to get at them? Let us take the State of Wisconsin, which has been advertised to its death in these matters, treating it more especially in regard to the deer shooting season.

I have already spoken of large parties of deer hunters from other States who went into Wisconsin the first week of the deer season. A gentleman of Fox Lake, Dodge county, Wis., writes me that he and his friends intended to go to Star Lake (on the new spur of the C., M. & St. P. from Woodruff), but learned that there were 250 hunters at that point. He says the hunting began Oct. 20, with set guns, hounding, jacking and platform shooting at night. The deer had no chance at all. The law was defied by the non-resident shooters.

The local men have at last awakened to the situation, and have been trying to do what they can to stop the extermination of their deer. A secret committee of Eagle River citizens was formed to aid in arresting illegal pot hunters. The local paper there speaks thus of the plague of non-resident invasion:

"Never has the northern part of Wisconsin been swarmed with foreign hunters as at the present writing. Every incoming train brings in scores of them, some of them arriving ten days before the opening of the season.

"Vilas county is receiving a little more than its just proportion; by actual count nearly 100 hunters, chiefly the pot hunters, hailing from Ohio and Indiana, have arrived in this village and are now scattered about in every direction. They never fail to bring all the necessary articles of 'grub,' ammunition, etc.; they come to slaughter deer, but it will be a miracle if this is all that falls before their carelessness; generally they are a class of hunters that would not hesitate to pull the trigger at any object moving in the brush. This is the reason our local hunters are timid about going out when the woods are full of this class of hunters. This is no dream. Already two hunters in Michigan have fallen under the aim of just such hunters as are swarming in this locality.

"The Michigan Legislature at their last session grabbed 'time by the fore-lock' and compel non-residents of the State to pay a license fee of $25 for the privilege of hunting deer within the State bounds. The Ohio and Indiana pot hunters are too penurious a set to pay this license fee and in consequence poor Wisconsin is getting within its commonwealth every pot hunter west of the Alleghanies."

The Marinette *North Star* has the following to say on this: "There are two kinds of animals that Marinette and Florence counties are pestered with this fall, wolves and pot hunters. The former destroy everything in sight, but they are not nearly so destructive as the bullets of the Ohio and Indiana deer hunters. If by some dispensation of providence the wolves and pot hunters should wage merciless war on one another and the wolves should win it would not cause bitter tears up this way and the deer slaughter would also be greatly curtailed. To save the complete extermination of the deer in this State there is but one thing for Wisconsin to do, and that is at the next session of the Legislature to enact a stringent license law and see to its strict enforcement."

The Milwaukee *Sentinel* covers the same situation thus: "According to deer hunters who have returned from the northern part of the State during the past few days, the game laws in northern Wisconsin and the upper Michigan peninsula were being violated openly and in defiance of the large number of deputy game wardens who are scouring the woods. Dr. J. W. Coon, registrar of the Health Department, returned yesterday morning after a week's hunt near Tomahawk. He reports that though the State laws prohibit the use of dogs for hunting deer scarcely a hunter is found in the woods who is not accompanied by one or more hounds.

"Dr. Coon went to Tomahawk, where he joined a party of hunters who were in the woods before he arrived. The party included Col. Wagner, of Madison; Register of Deeds Schultz, of Monroe county; S. C. Basse, of Madison; Charles and Clarence Macomber, of Tomahawk; and Fred Withey, who lives near Tomahawk. The party had already killed thirteen deer, but during the time that Dr. Coon was with them not a single deer was shot. Of the thirteen deer killed, Withey shot six, which is the largest record made by any one hunter this year.

"Dr. Coon says that the woods are swarming with hunters, and every deer trail is followed for miles. Deer are numerous along the Wisconsin River, but there are also plenty of hunters in the field. Among them there was a Chicago party of sportsmen who came to Tomahawk in a special car. The party brought six deer hounds with them and established a camp several miles up the river. Last Sunday it was rumored that game wardens had been dispatched from Madison to make a raid on the illegal hunters in the vicinity of Tomahawk. This report caused a stampede among the hunters, who scattered in all directions. Monday night, while coming home on the train from Grand Rapids, where the Doctor went on Sunday to visit friends, the trainmen reported that the game wardens had made a raid that day and captured a number of hunters who were chasing deer with dogs. It was stated that the Chicago sportsmen were among those arrested. Their names could not be learned."

A Result.

MARSHFIELD, Wis.—George Gray, at work in one of the Lowry lumber camps north of Medford, while out hunting last Saturday was mistaken for a deer by Robert McAdams, of Neillsville, who was also out hunting, and terribly shot. Gray was in a stooping position when the shot was fired, the ball entering his body just above the right hip, tearing away three ribs, passing through the right lung and coming out near the neck. His father, Albert Gray, of this city, was sent for and was with him until yesterday, when he returned home with the sad news that his son's life hangs on the merest thread, and he expects at any moment to hear of his death. Mr. Gray is a young man of good habits and has a wife and one child.

A Result.

MARSHFIELD, Wis.—Edwin Stockly was shot and killed by his brother-in-law, Jesse Morgan, of Ironwood, Mich., on Tuesday. Morgan mistook Stockly for a deer and shot him dead. The shooting was pronounced accidental. Stockly was a track maker, from Chicago. The accident occurred at Lone Rock, Wis., about ten miles from Hurley.

A Result.

MARSHFIELD, Wis.—Jacob Hochwart, of Morse, was shot by George Bidgood last Wednesday, near Morse. The latter was hunting, and lying near a deer runway waiting for game. He mistook Hochwart, who was on his way home from work, for a deer. Hochwart is in the hospital at Ashland in a precarious condition.

A Result.

ASHLAND, Wis.—This afternoon Mr. Brayton, of the Geneva Optical Company, of New York, who was hunting deer near Sanborn with two Chicago men, drove into Ashland after a doctor, announcing that he had shot a 17-year-old boy, supposed to be named Hallock. The party hurried back with physicians. This is the third accidental shooting case of the kind during the week. One man was killed near Hurley and one is now at Rinehart's hospital. Officer MacDonald announced late this afternoon that he and Under Sheriff Firth would leave for Saxon and arrest Brayton.

Net Results.

I have heard of eleven cases this fall, including those mentioned above, of men shot for deer in the State of Wisconsin. I presume over 1,000 rifles were out in a region sixty-five by fifty miles in extent.

What does the sportsman public think of the scramble?

Wait till I have told about the scramble in Mississippi, from which country I have just returned.

What will the sportsman public do when it wakes up, sudden and sharp, and finds that the game is gone in Wisconsin, in Mississippi, in Texas, everywhere? That day is coming, very, very fast. True, we may sleep and dream yet a little while. It is very pleasant to sleep.

Locked Horns.

A good specimen of locked deer antlers was on exhibition this week at a local taxidermist's.

The two bucks were engaged in combat when the hunter, W. L. Brown, of Albion, Mich., came upon them, near Bismarck, N. D., Nov. 15 last. It became evident they could not separate, even if they tried, so Mr. Brown ended the fight by killing them. Their antlers were found to be perfectly locked. The head and neck of each were then separated and sent to Chicago to be preserved and mounted. The owner has refused $300 for the trophy.

Another White Deer.

Mr. W. E. Warren, of Wisconsin, writes of having seen the white deer which was killed near Eagle River, Wis., last August. This animal was beautiful in life, but is grotesque as mounted. Some of the local hunters thought the animal was "not a mule deer, but a species of antelope," which is certainly a trifle startling. The effigy as shown in a photograph determines nothing, but leads one to guess the albino was an albino spike buck of the white-tail. The mate of this deer was "spotted red and white," so the report goes, though its age is not stated; so that we suppose it to have been a fawn. The albino was, of course, killed illegally.

It is Related.

It is related that State Treasurer Peterson and Railroad Commissioner McKenzie, of Madison, Wis., while out deer hunting in that State recently came upon a track,

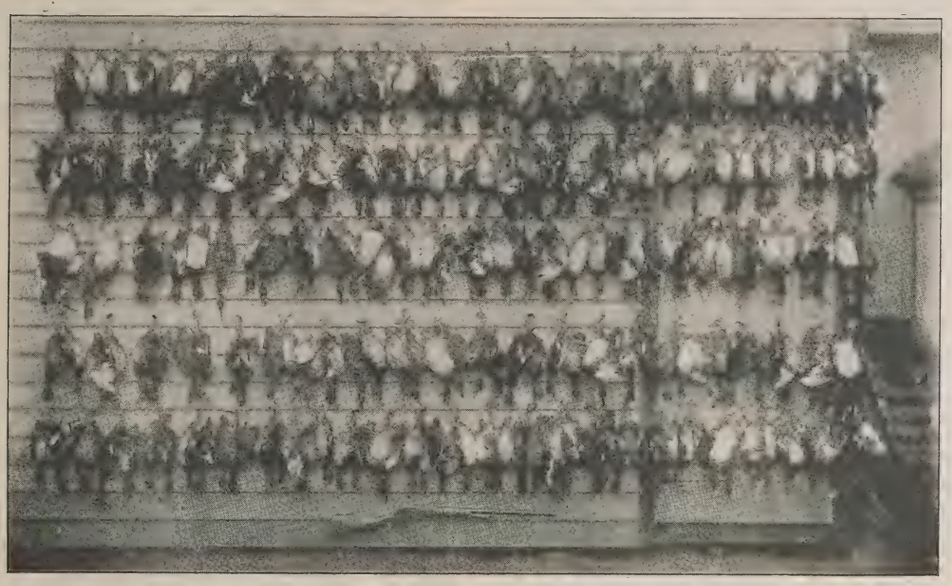
thought to be that of a deer, which measured 4in. across. They trailed it for some distance.

(P. S.—It was an ox track.)

Close of Navigation.

Leon Pomel, of Kezar, Col., reports a foot of snow in the Gunnison country the first week of November. He killed two bucks one day and sent the head of one, a grand one, to Mr. J. W. Oswald, of Toledo, O.

On Nov. 26 the river at Edmonton, Alberta, N. W. T., froze hard enough for foot passengers.



Among the Clubs.

The Swan Lake Shooting Club elected officers at the Great Northern Hotel yesterday afternoon as follows: E. W. Bangs, President; W. C. Nash, Vice-President; Samuel Jewitt, Secretary; S. Mack, Treasurer, and Cummings and G. H. High, directors. The club house is at Henry, Ill.

Representatives of the Tolleston Hunting Club, which is composed of over 100 of Chicago's leading shooters, appeared in court at Crown Point, Ind., Dec. 11, as defendants in the case of the State vs. the Tolleston Hunting Club. The State is endeavoring to secure a clear title to several thousand acres of swamp land in Calumet Township now occupied by the Tolleston Club. The case goes to the Supreme Court for final decision.

Calumet Heights Club had a Thanksgiving turkey shoot and coon hunt. Two foxes were killed one week on the club grounds. The club meeting is held at the Sherman House this week.

Messrs. J. E. Dreudel, Charles E. Erbet and George R. Frankland, all of Chicago, have purchased a tract of land, including a lake, thirty miles from Ellis Junction, Wis. The lake and tributary streams are well stocked with fish. Game is also very plentiful. The intention is to form a club of friends and spend the summer at the place.

A LONG ISLAND MARKET-HUNTER'S HARVEST OF 264 BIRDS IN A DAY.

They Want the Fish.

The Fox Lake *Representative*, of Wisconsin, thinks FOREST AND STREAM too suspicious in advising against the marketing of the fish in the drying lakes near that city. It claims the only intention is to prevent a pestilence in the spring, and so thinks the fish should be killed by dynamite and marketed. "Any way will suit our people," it says, however, "so long as the fish are taken care of and not allowed to rot. If Mr. Hough would come up we could convince him in five minutes there is no suspicious commercial transaction in the deal. We are pleading for the lives of our people."

The fish are not frozen to death yet. The pestilence is not yet a certainty. Yet it is certain that dead fish tell no tales later on.

Personal.

Dr. French, Mr. Frank Burdo Huntington, Mr. Edward Herbert Holmes were among the callers at the FOREST AND STREAM Chicago office the past week.

Mr. Edward Little Rogers, of Kinross road, Boston, was also among the callers at the FOREST AND STREAM Chicago office during the past week.

A Near Thing.

CHICAGO, Dec. 14.—"*Special*" *to Forest and Stream:* Fire broke out at 9 P. M. this (Saturday) evening in the building at 149–151 Wabash avenue, occupied by A. G. Spalding & Bros. The fire was on the fourth floor. It was soon extinguished, not extending to the main floors, where the most valuable sporting goods are kept. The chief damage will be from water. It was an extremely near thing for the entire store and its heavy stock of goods. E. HOUGH.

909 SECURITY BUILDING, Chicago.

Indiana Quail Shooting.

"SAY, Bill, let's go and shoot some quail this evening before the snow goes off."

"I'd like to go, Sam, but you know I can't shoot quail flying."

"Oh! you can shoot them on the ground while the snow is on. I was out this morning and shot eighty-eight in two hours."

"Well, Sam, I thought you was a sportsman, but a fellow that does that I'd call a game hog."

"You may call it game hog if you want to, but I got $8.80 for them, and am going to hunt them as long as the snow lasts."

"Hello, Sam! Bill told me you had good luck this morning."

"Yes, Jim; I went out for two hours; just had 100 shells and shot ninety times; killed eighty-eight birds. I tell you I did some good shooting."

"What did you do with them, Sam?"

"Why, I sold them to H., and he is going to ship them to New York to-morrow."

"Don't you think, Sam, that H. is liable to get in trouble for shipping quail out of the State?"

"Oh, no; he ships them in with rabbits, and the game warden thinks they are just rabbits and lets them go."

This is the way most of our quail freeze in the winter. Give them a chance and they will survive our most severe winters. This one man is not the only one I hear bragging about the number of quail they shot that day when this snow was on the ground.

Our game law should be stricter in respect to shipping quail; then there would not be so much pot-hunting.

J. G. M.

BRUCEVILLE, Ind.

PROTECTION IN MICHIGAN.

Editor Forest and Stream:

Michigan seems to be somewhat jealous of her rights to the fast disappearing deer within her borders.

In making the license fee for the resident hunter the paltry sum of 50 cents, while the stranger without her gates is compelled to pay $25 for a like bit of paper, she has followed in the footsteps of Missouri and North Dakota in discriminating against non-resident sportsmen. Personally I do not approve of such legislation. It smacks too strongly of the "What's yours is mine and what's mine is my own" policy. Whether it will put money in her coffers and preserve the deer remains to be seen. The season which has just closed has proved nothing. If one may believe newspaper reports, there were but just two non-resident deer hunters in the State. One of these paid for his license like a little man. It is to be hoped that he killed a deer or two. The other, being of a more daring disposition, concluded to take his chances. How he came out the following extract from the Grand Rapids *Herald* of Dec. 11 will show:

"TUSTIN, Mich., Dec. 10.—Irving J. Lane, a resident of New York State, has reason to believe that the game laws of Michigan are not a farce. He has been tried and convicted on a charge of hunting deer without having secured a non-resident's license, and sentenced to three months in the Hersey jail at hard labor. Thus Mr. Lane will have ample opportunity to compare the sport of hunting deer with that of sawing wood for Osceola county."

I should like to know if this party killed a deer. I confess to feeling a decided sympathy for him—not because he violated the law, however; the law, good or bad, should be respected—and hope that he has something pleasant to remember while he is sawing the wood.

My sympathy is his because he is an outsider and has felt the weight of Michigan justice as administered to all outsiders when they are caught violating the fish and game laws. That there is a strong discrimination against the non-resident in the matter of punishment for violations, the following extract from the same issue of the same paper quoted above will prove:

"ROSCOMMON, Mich., Dec. 10.—Seven fishermen from some of the towns along the F. & P. M., in Clare county, were caught spearing fish in Houghton Lake, Roscommon county, by one of the deputy game wardens and fined $3 and costs."

Three months at hard labor (for the non-resident) for hunting deer without a license! Three dollars and costs (for the resident) for spearing fish! Truly, "the punishment fits the crime" in each case. Great is Michigan justice.

Nor is this an isolated case of severity on the outsiders. I have seen just such in my own county, and have read of many others in different parts of the State. Five dollars and costs is the heaviest fine that has ever been assessed upon the resident violator in this county so far as I know, even in the most flagrant of cases.

Protection is not making rapid strides in this section for reasons which I have stated in these columns before. Most of those who were genuinely interested in it have lost heart. I feel like giving a Semitic shrug myself whenever I hear the word, although continuing to "saw wood" whenever the opportunity presents itself.

But it must be apparent to every man who is in the habit of taking a yearly deer hunt that the deer are rapidly disappearing. I think it safe to say that not half as many deer were killed in this county this season as were killed five years ago. It was a remarkably favorable season for the still-hunter, too, the snows coming early and remaining on the ground. Many hunters attribute their poor success to the fact that they did not dare to run their dogs. Deputy State Warden Brewster and his satellites were known to be near, and that fact had a salutary effect. Still there was a great deal of dogging done. Two or three men in a sparsely settled country like this can guard but a small territory. They might protect a township, but not a county.

It is not the slaughter in the legal season which is so reducing the deer. The "mossback," the Indian, and the man who kills to supply the lumber camps keep right on with their work all winter. Now and then one is caught, but so rarely and with so slight a punishment that the rest of his stripe are not deterred from pursuing their evil course.

It would bankrupt the State to protect the deer by a force of wardens large enough to cover all the deer-inhabited territory. They will be all gone long before "popular education" can accomplish the end. The rank and file care nothing about the deer, and the majority of those who do care are so ignorant and narrow-minded that they consider a deer in the hand to-day worth far more than all they might kill in the years to come.

It may be that I am a pessimist on this subject; it may be that this is, so far as protection is concerned, a dark corner of the State; but I must confess that I see little hope for the preservation of the deer.

I was out deer hunting for a few days this year, and if I can ever find time to reduce my experience to writing may tell your readers about it. F. A. MITCHELL.

MANISTÉE, Dec. 12.

NORTH CAROLINA GAME NOTES.

NEW BERNE, N. C., Dec. 12.—The steam yacht Sybilla, of Philadelphia, with a party of ten sportsmen, came up to New Berne from Pamlico Sound last Saturday and sailed again for Roanoke Island early on Sunday morning. They landed 500 ducks, geese and brant, which were shipped north by express. On Monday Mr. Carroll Winchester, wife and party of seven, from Baltimore, came up from Beaufort with his sailing yacht and left again on Thursday for Bogue Sound. He has rented a house in New Berne for the winter. Mr. A. W. Howkins, wife and family, of Great Barrington, Mass., have winter quarters at the Hotel Chattawka. He puts in his off days on quail. Fayette S. Giles, Esq., and wife, are also guests of the Chattawka. They are recently from Paris, France, where Mr. Giles has had a watch and jewelry establishment for many years. Mr. Giles is well known as the originator and first president of the Blooming Grove Park Association. He is writing a book on "sociology," and divides his time between work and hunting. He scoops anything whatever from quail to bears, but is especially struck on wild turkeys, of which there is a great abundance this season. A train on the Wilmington, Norfolk & New Berne R. R. ran into a large flock the other day, and Captain Pittman shot a big one from the deck of his steamer May Bell while on his regular trip up the Neuse River. Three wild turkeys were shipped north on Monday by a shooting party from Norwich, Conn., who are camping on Catfish Lake. The same outfit captured a fine fox squirrel whose head and fore paws were entirely black. Its tail measured 15in. in length, being 3in. longer than the body. The fine lake wilderness, eighteen miles from New Berne, is becoming much frequented by Northern sportsmen. Joe Ballard and his brother have killed and shipped twenty deer from there within the month. Perhaps a better deer and bear country than this would be on Core Creek and White Oaks River. There is a heavy timber country in there very little frequented. Dr. W. S. Bell and family, of Philadelphia, are at the Chattawka for the winter, and Mr. Compton, of Plainfield, N. J., is at Riverdale, eight miles out, in the center of a good turkey ground.

Pierre La Montague, of New York, was showing a bunch of seven fine woodcock the other day. Woodcocks are quite abundant in certain localities and are very little looked after. N. S. Richardson, job printer, of New Berne, gathers more quail than most any one else. He says they are quite plenty around Grifton, up the Neuse River, reached by steamboat or train. Short trips up river or by rail are quite in vogue by parties who prefer New Berne for permanent headquarters. Messrs. Giles and Howkins speak very highly of the table at the Hotel Chattawka.

C. H.

Wildfowl in Currituck Sound.

VAN SLYCKE'S LANDING, N. C., Dec. 8.—The opening of the shooting season here in Currituck Sound did not promise much sport. The fowl were singularly few, and but little was done by those gunners of the North who sat in blinds on the opening day. Up to about Dec. 1 but little shooting was done, the best score of which I heard being forty birds, all of them common ducks. Up to that time no blackheads, redheads or canvasbacks had been seen.

The change of weather which came about Dec. 1 brought on a lot of birds, and since that the shooting has greatly improved. Bags of fifty, sixty and seventy birds have been made and a good proportion of those shot are widgeons.

It seems evident that the scarcity of birds at the opening of the season was due to the mild weather, and that a little severe cold will drive the birds to us in something like their usual numbers. We shall know more about this, however, by Christmas time.

A number of gunners from the North, members of the clubs owning property on these waters, have been down here, and some of them have had excellent success. No doubt others will visit us during the winter, and the right sort of weather will probably bring them down here in numbers.

Little quail shooting has been done, but the birds are as numerous as ever, and we may expect to have good sport with them later in the season. A. C.

Mr. George W. Naugle killed some pheasants Thursday, and in the craw of one of them was a green snake about a foot long. About half of the reptile was digested, but the other half, including the head, protruded from the gizzard of the bird. Mr. Naugle preserved the gizzard in alcohol, and you can see it if you call at his store. Don't look at it if you value your liking for pheasants.—*Phillipsburg, Pa., Ledger.*

Who Shoots Deer with Bird Shot?

COLD SPRING HARBOR, N. Y.—*Editor Forest and Stream:* One day last month I bought a venison steak in Fulton Market. It was a small round steak, from the hindleg, and in the portion served to me at home there were two fine shot which I judged to be No. 8s. The deer was never killed with the charge that these shot belonged to, for an examination showed them to be but a short distance under the skin, and they were surely not near any vital part. It is evident that some heartless fellow peppered the deer without expecting to kill it; perhaps some wanton boy. I prefer to believe it was a boy, for they shoot at everything, and if there is one thing a boy should not be allowed to have it is a gun. I speak from experience, for I was a boy who roamed with a gun, and killed or shot at every living thing in range or out, from a wren to larger life. Speaking of venison, of which I am fond, there seems to be a scarcity in New York markets of rib chops, which, if fat, I consider the choicest portion of a deer. Dealers say that saddles, long and short, are mostly received, and that carcasses are bought up by restaurants.

FRED MATHER.

Mr. Thorne's Big Bag.

Editor Forest and Stream:

The present wildfowl season on Long Island has been one remarkable, in some ways, one feature being the large numbers of birds that have been seen in some localities.

Some local as well as visiting gunners have secured good day's sport. Among the fortunate local gunners has been Mr. Edwin Thorne, of Babylon, L. I., who on Nov. 23, while shooting from his battery, anchored on Yellow Flats, opposite the town, killed 264 birds. Of this number Mr. Thorne and his helper brought to shore themselves 253. The 264 birds were divided as follows: 249 broadbills, five whistlers, nine coots and one sheldrake. Mr. Thorne used a 10-gauge lever action Winchester repeating shotgun and Winchester Rival shells loaded with black powder. Mr. Thorne having his home near the feeding grounds has a decided advantage over any visiting gunner, and has always taken advantage of the same, and has made many good bags in previous years, but none to compare with the one here recorded. W.

In the Indian Territory.

LOCO, I. T., Dec. 10.—Game with the exception of quail is not so plenty as last season. I have been out three times and have killed six chickens, ten or twelve ducks and forty or fifty quail.

There are no pecans this year, consequently the squirrels are scattered out over the hills instead of along the creeks as usual, which makes hunting them slow work.

L. D. W.

NEW PUBLICATIONS.

The Singing Mouse.

ONE of the most attractive and artistic books of the season is Mr. Hough's "Singing Mouse Stories," just published; but although its mechanical beauties are great, it is not these that will chiefly attract the public. They may no doubt commend the volume to many a purchaser, but that in it which is really valuable is the tender spirit reflected in the stories themselves, which will cause the book to be read and pondered and re-read.

The scheme of the book is attractive. The simple machinery employed is that of a singing mouse, which visits the author and by its song calls up to him memories of happy scenes of long ago, and thoughts on problems of life and death and past and future. These are given in a series of chapters or essays written with so much feeling and so much sympathy as to move and charm the reader. There are sixteen of these chapters, making up the 177 pages of the book, and unconnected by any thread of story save the presence of the Singing Mouse. They touch a wide range of subjects, but through them all runs a deep undertone of love for nature, and in all of them are found sweet and tender pictures, memories of country scenes, of the free wild creatures of fields and woods, of innocent childhood, of manhood tried and true, and of pure and perfect age. All these, under the magic of the Mouse's song, are beheld again as once they were seen through the eyes of youth, unstained by contact with the rough world and unknowing of its evil, and they are softened by a mist of distance which conceals all that was bitter, and intensifies all that was sweet.

Mr. Hough has a touch at once strong and nervous, yet tender and sympathetic. Without effort he strikes, by some simple form of words, that cord which in every human heart is stretched ready to respond, and yet which most writers fail to reach, notwithstanding all their striving, all the elaboration of art. In his writing is found that touch of nature which proves the universal kinship of humanity.

Indeed these stories of the Singing Mouse are worth reading, for in them there is that which appeals to every man and to every woman. With a change of name, or place, or circumstance, the story is the reader's own. They are stories of human things, told in a human way and with a feeling so deep an insight so keen, a sympathy so broad and a simplicity so real, that they move to sadness or to joy, inspire pure thoughts, raise lofty ideals and so give renewed strength and courage to meet life's heavinesses and to fight life's battles. They are prose poems, which, if sometimes they fill us with sadness and regret, also sometimes exhilarate and uplift us. But however they may affect our spirits they make us better.

Mr. Hough, who is a writer, a traveler and a man of business, is also a philosopher, and we shall do well to borrow from him a little of his philosophy. It will be helpful to all of us.

From an artistic standpoint, the "Singing Mouse Stories" are entitled to high praise. In appearance it is altogether a book of the end of the century; clear and handsome as to type, well balanced as to page, and printed on excellent paper. The cover design is most artistic, and shows up well on the green buckram of the binding, while the beautiful marginal thumb-nail illustrations add much to the volume's attractions. Thus these charming pictures are well set off by a handsome frame.

A Stray Shinplaster

Comes to us once in a while for a copy of "Game Laws in Brief;" but shinplasters nowadays are scarcer than Moose in New York; and 25 cents in postage stamps will do just as well.

Sea and River Fishing.

FISH, ICE AND AIRHOLES.

Read before the Muscatine Academy of Science, Oct. 22, 1895, by J. P. Walton.

THE destruction of our native fish during the cold weather is getting more general as the country gets older. We learn that during the last winters great numbers of our best fish died in the lakes and sloughs all over Iowa, and especially in this locality. In Keokuk Lake alone I am told that car loads died. It is supposed they were frozen to death. This has gotten to be a common occurrence of late years.

In the winters of 1893–94 and 1894–95 they died in many places where forty years ago they wintered well. In fact, this fatality did not occur forty or fifty years ago. Very rarely did we hear of such an occurrence previous to 1860. It was not because the winters were not severe enough. In the winter of 1843–44 there were seventy-three days of continuous freezing, the ice got to be 3ft. thick on the Mississippi River and in many of the lakes. No fish froze or died that winter. The question is asked, why do they die now and not then? We will answer that the fish die for the want of air. The supply has been cut off during the recent winters and no arrangements have been made to supply them. The fur-bearing animals—the otter, the mink, the beaver and the muskrat—were the great air suppliers. These animals always kept the water opened and made it accessible to air in a limited way, but sufficient for the use of the fish. It is true that while they supplied the fish with air the otter and mink lived on the fish. I think the beaver and muskrat rarely, if ever, touched a fish, but what the otter and mink ate was a small amount as compared to the number that now die for the want of air.

The muskrat is the best friend to the fish. He either lives in a house where he thinks there will be water all the winter or at least where he can reach the water from it at all times, or in the bank, if one can be found steep and the water deep. A muskrat house in appearance resembles a shock of hay from 2 to 3ft. high. They are erected during the autumn months, and the high waters in the spring and summer generally wash them away, hence a new one is built every year. They are built with rushes, roots, grass and mud. If one would cut a house open they will find a nice arched dome, with a raised platform above the level of the water on which the rat resides when not out in the water feeding or gathering food. We know how they look. We have cut open many a one to get the rat after spearing him with a long sharp, one-tined spear through the shell of the house. From their houses they have roads running to other houses and to deep water. To large houses they have three or four of these roads. In the roads the rushes and mud are cleaned out and they are kept in constant use, the rat going to or from the house by no other route. If the roads freeze over with clear ice sufficiently strong to bear a man, these roads make an excellent place to spear the rats through the ice. My brother and myself speared 130 one day in the Big Sand Mound Pond. These roads are white with air under the ice, carried in by the rats, I presume for their own use, and to keep the ice from freezing so hard over the road. This air and the open water at the end, kept in motion by the rat, supplies the fish with air.

It is possible that the rat may feed on the fish if hard pressed, but I think not often. He feeds on the roots and nuts in the bottom of the ponds, and when the water is not frozen, on clams or mussels.

When the water is deep or the bank above the water is steep he digs a hole back into the bank beyond the reach of frost, then he runs another outlet under the surface of the ground into the water, which he always keeps open under the ice, making the same traveled roads with a deposit of air along them under the ice, running from one hole or house to another.

The otter makes his home in the bank like the muskrat and keeps the water open in the same manner, but in place of living on roots and mussels, as the rat does, he lives on the fish that resort there for air.

The mink is a regular pirate. I think he never makes a hole of his own, but uses the muskrat's when he wants a mess of fish. I am not familiar with the beaver. There were but few in this locality.

In shallow ponds where muskrats do not work the fish usually die, while in similar ones with a few rat houses on the side no fish die.

In the early days the muskrat was abundant and had his houses or holes in almost every pond where roots, clams or mussels could be found. It could be frozen almost dry; if the muskrat would stay the fish would live. When the muskrats were abundant, as they were say in 1840 to 1845, one could calculate to find a house or hole in use from every 60 to 100ft. along the shores of all our ponds and sloughs. I think we can place to the credit of the muskrat the preservation of the number of fish we had at an early day in our waters.

In deep ponds, where moss grows in the bottom, a few fish survive the hard winters. The growth of moss, although but slow in the winter, makes some air or oxygen which the fish live on. If a person will go to a pond of this kind in the winter when everything is frozen hard, cut a hole in the ice and drop a hook baited with a live minnow, he will catch a pike if there is one in the pond. The fish in these deep ponds wear hollow places in the under side of the ice which catches the air that rises from the moss. During the past winter one of my acquaintances struck one of these inverted hollow places that had a little air in it and got a fine mess of fish.

It is evident that if we have fish we must take care of them. In connection with the legal protection we now have, we should include set lines. For instance, two parties set a row of poles and lines for six or eight miles along Muscatine Slough. They had over 500 lines each and made a business of it. At one time it was thought they had caught about all the fish in the slough. Also some means should be provided for supplying the fish with air. For the present the supervisors should employ at county expense some one to keep holes open in all ponds or sloughs where the fish are during the exteme cold weather. Or perhaps, better than this, keep a supply of fresh warm air pumped or forced in under the ice. I am inclined to think it would spread out and be more accessible to the fish than a hole of small dimensions, or by adopting a device now in use in carp ponds, which is simply making a muskrat hole with tiling placed below frost. And protect the muskrat, who is a harmless, prolific animal, who if not molested would in a few years help to if they did not entirely take care of the air supply for our fish. They can be easily protected, as they are worthless for anything but their fur; the sale of it could be prevented as easily as the sale of game. The Legislature should make provision for these purposes at the coming session.

One word in regard to the habits and abundance of fish in former years. In the winter, if possible, they gathered in deep holes where there was moss, after the surface of the water was frozen over, and when they began to suffer the want of air they started out to look for it. If a rat hole or springy place was to be found the fish went there. In Muscatine Slough there were several springy places where the ice did not freeze thick and it opened easily. These places are well known to the residents along the slough. For the past fifty years they have been in the habit of cutting holes at these springy places and taking out the fish. Large numbers were taken out during the winter of 1894–95.

We frequently have what we call a January thaw: If this thaw is extensive enough and wet enough to make water run in the slough the fish are safe. They leave these places and do not return again.

In regard to the abundance of fish in former years, I will say that when a person would go along the sloping banks of the river almost any still time in the summer and autumn months he would see the wake of a fish that would weigh from 1 to 10lbs. every two or three rods, all swimming up stream, probably all looking for food. In late years but few can be seen. Fish in those early days grew to great size. I recollect seeing one that Mr. Gilbert caught in the summer of 1838 that weighed 165lbs.

We hardly expect to see them as abundant again, but if they are cared for in this and other States their numbers can be greatly increased with but little expense. We have thought that if the fish were cared for at county expense they would be considered worth something, and would be less liable to be stolen by the net fishermen.

NOTE.—The question was discussed at length by the members of the Academy, and it was the unanimous opinion that the Legislature should provide a way by which the Board of Supervisors or some one else be required to protect the fish by supplying them with air during the cold weather at the expense of the county. Also that the game law be so amended as to protect the muskrat.

HOW THE TYEE FELL.

THE sun was just beginning to paint the eastern sky with broad flashes of crimson and start the fog curls winding up among the firs when I came to the head of the rapid and fastened on a governor and a coachman to start with.

Down at the foot of the swirl I knew I would find the biggest fish in the stream, for I found him there every time I came out, and every time I found him he took a fly away and then laughed at me.

That is, I thought he laughed, for his mouth looked like a grin, and he had a way of turning his side toward you so he could get a better view, and then his mouth looked more like a grin than ever.

I was reasonably sure I could get a fair showing without him, and I didn't mind the loss of a fly once in awhile, so I didn't think much about him this trip. This particular morning the rainbows were lazy and didn't seem to care much whether they got foul of my hook or not, so I didn't get as many as I was figuring on and was a little out of sorts in consequence.

I fished on down toward the foot of the rapid and an idea got loose about that big one I had lost so many times.

I saw him rise once in awhile and I thought I would just sneak up in a quiet way and see what it was he was feeding on this time.

A short time after that I was flat among the bushes looking over at him as he lay in the stream, twisting his broad tail like a screw propeller and balancing on his fins as the water swung him about. He looked big and good enough to eat, so I thought I'd eat him if I could and wondered how I would get his consent.

Then a yellow grasshopper, about a day old, I guess, dropped down on the water, or maybe he didn't drop that far before that big old rainbow met him; any way he went out of sight very suddenly and I concluded the trout was partial to that brand of 'hopper maybe. It didn't take me very long to find another 'hopper about the same size and build and get him comfortably seated on the hook. Then I tossed him down in just about the same way the first one fell, and—do you think the trout was fooled? I should say not. He turned over in a lazy kind of a way and I think he winked his northwest eye, but maybe he didn't. Anyway he didn't want that 'hopper a little bit, and I got a trifle mad about it.

I tossed all kinds of flies to him and he wouldn't look at them, just sulked until I was ready to give him up, and I caught my fly on a limb overhead.

I jerked it to free it and did get it off the limb—and stuck it in the yellow silk top of my old tobacco sack that stuck out of my coat pocket.

Now, an ordinary fisherman would consider that worse luck, but I just gave the hook a jerk and tore a piece of the sack out. Then I dropped the hook and the wind blew it out over the water and I let it blow while I got out the fly-book. Then I laid the rod down and was picking out the right fly when the rod took a start toward the stream and I grabbed it.

That was the exact time I found out that the big trout was on the other end and chuck full of business too.

He took a lot of line out to start with and went to see some relative of his that lived about a mile down stream.

That was a point we could not agree on, so he gave it up and came back. He shot up stream, down stream, across, jumped out in the air, sulked, tried to tangle up with a fallen tree and acted real mean in several ways, but somehow it didn't do him any good that time, and at last I towed him up in the shallow water and flopped him up on the bank. Then I took him a hundred yards or so back into the brush, where I thought he couldn't run back, and I sat down and looked at him. Then I smiled a few times.

After I had looked at him I prospected for the hook and I found it clear down in his stomach.

He was too cute for any kind of a fly or any kind of decent fishing, but that old piece of yellow tobacco sack

had fooled him completely. After I found out what he had done I lost about all the respect I had for him and had a big notion to throw him back—but I didn't. He weighed just 4lbs. and I painted his portrait.

I look at the picture once in a while, and then visions of a new fly of tobacco sack yellow crosses my mind's eye. I would recommend them as just the thing for big rainbow trout in swift water. EL. COMANCHO.

THE OREGON TROUT QUESTION.

Editor Forest and Stream:

In your editorial comment (FOREST AND STREAM, Dec. 7) on the construction given our trout law by our courts, whereby any kind of trout may be taken from salt water at any time of the year, and the consequent pernicious results that must necessarily follow such an ignoble, imbecile construction, you suggest that if myself and my allies are shrewd we may yet make a case against some of the trout sellers, and add: "There is one infallible test of these fish as to the source of capture. If the trout have the red spots they come from fresh water, for in salt water the spots are lost."

At the trial of the case before Justice Geisler authoritative evidence was introduced to the effect that the trout in question could not have been taken from salt water for the reason that their spots and markings were bright and as perfect as those of any trout in the upper waters of the Molalla or Clackamas. But the court held that this was only theoretical, while for the defense there was direct and positive evidence that the trout were caught out of salt water with hook and line in the testimony of the party that caught them, and theory must defer to fact. In other words, a lie well stated and supported by the sworn declaration of a man that has neither respect for his own solemn asseverations under oath nor for the country that harbors him and affords him protection and an opportunity to do it mischief will knock out the best of theories—theories susceptible of complete demonstration and in fact already fully demonstrated by the observations, investigations and experiments of earnest, honest, painstaking, capable and conscientious scientists.

Dr. Jordan, in a letter just at hand, points out plainly and forcibly the net results. He says: "If people can catch mountain trout in the Pacific at all times of the year, the day will soon arrive when there will be no trout. Why should they go to the mountains when the ocean is inexhaustible?"

Sorrowfully we are forced to the conclusion that the only way to educate the American people in the matter of protecting fish and game is to exterminate the fish and game. Then, after it is all gone, maybe FOREST AND STREAM and its allies will not be regarded by the general public as such villainous enemies of their rights, liberties and privileges. S. H. GREENE.

PORTLAND, Ore., Dec. 11.

Nepigon and Saguenay Rivers—Correction and Note.

Editor Forest and Stream:

Your compositor is ag'in' me. Otherwise why did he shoot at the vital points in my Nepigon and Saguenay sketch? He made Monsieur Duton out of Monsieur Dutou and thereby crippled my nice little literary trick—for who could translate Duton? Then he fiendishly hunted over the article and made me inform botanists that the gardener developed petals out of the stems of roses, and thus turned up the point of my moral. In all of the rest of the article where a typographical error would have been powerless there were no errors. My kingdom for a Nordau to sic on to that compositor!

It was my intention to add a foot note relative to the color of Saguenay water. When the manuscript was mailed to FOREST AND STREAM I wrote to our Department of Agriculture at Washington and also to the Department of Agriculture at Ottawa asking for an explanation for the dark stain of northern river waters. From Washington I received a brief reply stating that the department had no information on the subject. From Ottawa I received a long personal letter from Secretary H. B. Small, who kindly informed me that no official answer could be given, but that he believed the stain to be caused by the action of tannin. Acting upon this suggestion I at once experimented by adding tannic acid to iron oxide in a weak aqueous solution, and obtained a reaction which gave tannate of iron and a color rather more reddish than that of river water. The next thing naturally was to obtain a tannate of manganese in the same way. This gave a smoky colored water. On mixing the solutions of tannate of manganese and tannate of iron, and allowing the mixture to stand in the light for a couple of days, a precipitate formed, leaving the water stained the old familiar color. From this experiment there seems to be evidence that the stained water streams are colored by tannate of manganese and iron principally, and the explanation looks simple enough, for water percolating through the dead bark of tannin bearing trees would take tannin into solution, and this water percolating through a soil containing manganese and iron would be pretty well loaded with the tannate stain by the time that it had reached a stream. In some unclean streams in peat regions the color is due to vegetable matter in suspension.

ROBERT T. MORRIS.

Eighty Fish Portraits, Painted in Oil

At the moment of capture and then lithographed in life colors, size 12×18in., can be obtained by subscribing to "The Fishes of North America," an exhaustive work on American fishes and their modes of capture, with nearly 2,000 illustrations of individual fishes. For $1.50 will be mailed Part I., containing two colored plates with introductory chapters of the book. Descriptive booklets free. Address The Harris Publishing Company, 19 Park Place, New York.—*Adv.*

The FOREST AND STREAM *is put to press each week on Tuesday Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.*

FIXTURES.

BENCH SHOWS.

1896.

Feb. 19 to 22.—Westminster Kennel Club's twentieth annual dog show, Madison Square Garden, New York. James Mortimer, Supt.

March 10 to 13.—Chicago.—Mascoutah Kennel Club's bench show. John L. Lincoln, Sec'y.

March 17 to 20.—St. Louis Kennel Club's show, St. Louis. W. Hutchinson, Sec'y.

April 20 to 23.—New England Kennel Club's twelfth annual show. D. E. Loveland, Sec'y.

FIELD TRIALS.

1896.

Jan. 20.—Bakersfield, Cal.—Pacific Coast Field Trial Club. J. M. Kilgarif, Sec'y.

Jan. 30.—West Point, Miss.—U. S. F. T. C. trials. W. B. Stafford, Sec'y.

Feb. 3.—West Point, Miss.—Southern F. T. C. seventh annual trials. T. M. Brumby, Sec'y.

Feb. 10 or later.—West Point, Miss.—The Field Trial Champion Association's first trial. W. B. Stafford, Sec'y.

Sept. 2.—Morris, Man.—Manitoba Field Trials Club. John Wootton, Sec'y.

THE A. K. C. AND CROPPING.

THE matter of cropping and the action which the A. K. C. may take thereon at its meeting this week have evoked much argument for and against cropping. In a general way the arguments advanced in favor of cropping touch all the degrees from fact to much of the fallacious, the irrelevant, the absurd and the immaterial. The arguments against cropping are founded on its cruelty, its uselessness, its harmfulness, its degraded origin, its violation of modern humane sentiments, and possibly its violation of established law, and in respect to the latter the law of New York (Title XVI. of the Penal Code, Sec. 655) reads as follows:

"A person who overdrives, overloads, tortures, or cruelly beats or unjustifiably injures, maims, mutilates, or kills any animal, whether wild or tame, and whether belonging to himself or to another, or deprives any animal of necessary sustenance, food or drink, or neglects or refuses to furnish it such sustenance or drink, or causes, procures, or permits any animal to be overdriven, overloaded, tortured, cruelly beaten, or unjustifiably injured, maimed, mutilated, or killed, or to be deprived of necessary food or drink, or who willfully sets on foot, instigates, engages in, or in any way furthers any act of cruelty to any animal, or any act tending to produce such cruelty, is guilty of a misdemeanor.

"Sec. 669. The word 'animal,' as used in this title, does not include the human race, but includes every other living creature. The word 'torture' or 'cruelty' includes every act, omission or neglect, whereby unjustifiable physical pain, suffering, or death is caused or permitted."

Here at the outset the question is confronted by the set ruling of statutory law, which applies not to the dog fancier alone, but to every human being within the State of New York; and as nearly all States have similar laws, it may reasonably be inferred that the same sentiment which so universally established the law is in force everywhere.

The question then is not one solely between the advocates of cropping on the one side and the opposing canine sentiment and powers on the other; it first is a question whether in itself it is not unlawful under the laws of the land. No doubt the law in specifying justifiable mutilations had in mind those which were materially necessary, as in castrating horses and bulls, etc.; but whether a mutilation, made to gratify a whim or fancy, would be considered justifiable, there is much doubt. In fact, in analogous cases of mutilation to gratify a fancy—that is the docking of horses' tails—everyone knows of its established unlawfulness in most States and the swift punishment which follows conviction.

The A. K. C. is thus placed in the peculiar position of being able to abolish the practice within its jurisdiction, but not able to indorse it without a possibility of running counter to the statutory law; and as the trend of public opinion is toward a more general and stricter observance of the humanities, it is possible that in the future cropping may be specifically unlawful.

Having set forth the broad scope of the question, the seriousness of which is readily apparent, and which strips it of the sentimentalism so liberally charged—though why one man has not quite as good a right to be sentimental as another has to be fanciful is not explained—we will now consider it in its narrower bearings, as set forth by different writers.

First of all, it is maintained by a few advocates of cropping that the matter is one which should be passed on by the specialty clubs of the cropped breeds; that to them properly belongs the jurisdiction in the matter.

On the face of it this seems to be a plausible plea, but on analysis it has not a leg to stand on; for, first of all, the specialty clubs have already passed on the question by their acts, their literature and their usages. Second, any action of a specialty club would have but a limited effect, as it would carry no penalty and would generally be confined to its membership. It would not be representative of public opinion. Type and related matters could very properly be left to the club, but a question of mutilation is one in which the public at large has asserted its interest.

As the scope of a specialty club is necessarily confined to establishing a type and promoting the interests of the breed it adopts and represents, it can have no other than advisory influence outside of the interests of its own breed. Even within its own scope it has no arbitrary powers. For instance, the world at large may accept a specialty club's standard or not, as it deems fit. The specialty club, being a club of individual experts or promoters of the breed, may have the confidence of the people in it as a club, which embodies the highest knowledge and friendly interest toward the breed it champions, and its dicta may be accepted as the highest expositions in respect to such breed, or they may not. The acts of the specialty club may not even be accepted as final by its own members, and if the minority as individuals choose to foster some type differing from the type adopted and set forth by the club, there is no penalty for it. Often the members of a specialty club are few in number, and reside in a small section and form a provincial group, strong in their own environment. As the specialty club is composed of individuals, sometimes few, sometimes many, but never composed of all the individual owners or admirers of the breed, often differing radically on club matters, it will readily be perceived that the acts of the specialty clubs carry no more force with them than the public at large voluntarily concedes.

On a question of cropping, in which all dog fanciers and the public at large are interested, since it involves questions of humanity, the issue if left to a specialty club would be settled by a vote of the members, and as the public thus could not have a voice in the matter the results could not be satisfactory to all.

Specialty clubs do a great deal of good within their province. The only point raised here is that they are confined to too narrow a field to settle questions of common and general interest. To settle a question of humanity on a basis of a fancy for a certain type would not satisfy the humanitarian.

A. K. C. Letters.

In the *American Kennel Gazette* of November, on the subject of cropping, there appear letters from Messrs. Wm. J. Bryson, Chicago; Geo. W. Schenk, Lyons, Iowa; M. R. Fonda, New York; F. P. D. Brereton, secretary of the Bull-Terrier Club; and Clifford Wood, of the Great Dane Club. As these letters embody many of the main points advanced, it may be proper to here consider them.

W. J. Bryson.

Mr. Bryson is well known in the bench show world as an owner of bull-terriers and an active officer of the Mascoutah Kennel Club. He most unreservedly denounces both docking and cropping. He stigmatizes them as senseless and cruel and a relic of barbarism. He says: "This brutal and disfiguring operation is simply the result of ignorance, and introduced by dog fighters. Now, if a man wants to be brutal enough to keep a dog for the purposes of fighting, let him keep his dog in his own circle." He adds: "I am in favor of the A. K. C.'s proposed rules to prohibit the cropping of dogs' ears and hope the same may be passed."

This is from an owner and admirer of the breed, and it dwells not upon the commercial interests at stake, or the value of a morbid fancy, but upon the principles of humanity.

Geo. W. Schenk.

Mr. Schenk misses the real point at issue—that is, the uselessness and cruelty of the custom. He objects to any action on the part of the A. K. C. prohibiting cropping, and adds: "I have at present thirteen great Danes and intended to import a stud dog, but under the circumstances I would be foolish to do so; in fact, I shall quit breeding if such a rule is passed, for great Danes uncropped will not be admired and are unsalable."

As Mr. Schenk's ideas do not concern the matter further than the expansion and contraction of his pocket book, his opinions may be dismissed as being purely commercial and outside of the issue.

M. R. Fonda.

Mr. Fonda, although an owner of a cropped dog, is on record in opposition to cropping. Touching its artistic features, which are made so much of by its admirers, he says: "While I like the appearance of cropped ears better on that breed (great Danes) when well done, I venture to say that in three-quarters of the cases the job is very poorly done. I know the ears of my own dog were miserably cut. That it is a cruel practice goes without saying. Anyone who has seen the poor puppy writhing in agony under the shears, or suffering for weeks afterward with its tender ears, cannot for a moment doubt that. Moreover, the necessity for the operation has almost passed away. It is justifiable only as a measure to prevent laceration in the hunt. I will not consider protection in fight, for any man who fights dogs is not fit to belong to any kennel club. I apprehend opposition to a reform in this matter by bull-terrier and great Dane owners, but trust they will be defeated. But they will soon get used to long ears and their dogs will be the better for it. There are too many men in the dog business for money only, the sooner they are weeded out the better. The true sportsman is ambitious for the welfare of his dogs."

The foregoing and other letters show that there is not a unity of sentiment on the cropping question among great Dane and bull-terrier owners and admirers, and that there are those who tolerate it because it is conventional with a class, yet who personally believe it is cruel and useless. They would oppose it were there a general movement against it. No more valuable testimony of its cruelty could be obtained than that of the owners of cropped dogs, men who know the pain it inflicts.

F. P. D. Brereton.

Next in order is the letter of Mr. Brereton, secretary of the Bull-Terrier Club of America, who, in official behalf of his club, remonstrates against the A. K. C. disqualifying after a certain date dogs which had been cropped, and sets forth their reasons for remonstrating as follows:

"That bull-terriers having been cropped for many years, in fact, ever since the breed has become a fixed one; that in consequence it was unnecessary to pay particular attention to the ear-natural, nor has there been any such recognized; and that natural ears appear of every known description, from the semi-erect bat wing to the pendulous ear of the beagle.

"To disqualify now would be to upset the work of 75 or 100 years. The fact that the English Kennel Club now has this rule in force is an added reason why it should be left alone here for the present, as they have yet to establish the ear, before even breeding, to produce it. If the same task be attempted here there will in all likelihood be two specimens of natural ear evolved, giving rise to endless confusion and wrangling, as it is not likely that all fanciers and breeders will adopt the same ear as desirable to breed to.

"Still further, it is our opinion that in a few generations, if cropping be persisted in, nature, aided by judicious cropping, will stop reverting to such useless and unsightly appendages as most bull-terriers' ears naturally are."

The reasons are badly chosen. If the bull-terrier has been cropped "ever since the breed has become a fixed one," how can Mr. Brereton possibly know "that natural ears appear of every known description, from the semi-erect bat wing to the pendulous ear of the beagle?" Such universal and immemorial clipping of the ears in youth would cut off at the same time all knowledge of their mature forms.

He adds that "to disqualify now would be to upset the work of 75 to 100 years." What work? Clipping ears? He admits that they have established no type of ear. It seems that, instead, it is time to perfect the type of dog and establish a typical ear. If cutting off parts of a dog make a type, then the knife and shears are more potent than breeding.

In "Stonehenge on the Dog," bearing date 1873, on page 167 is stated: "The *points* of the bull-terrier vary greatly in accordance with the degree of each in the specimen examined." That is rather an indeterminate statement as compared to what is claimed by Mr. Brereton for the work of 75 or 100 years.

In the revised edition of Stonehenge, bearing date 1882, n the scale of points ears are valued at 5 out of a total of 100, and it is further stated that the ears are always rimmed for show purposes. At its greatest, the penalty or uncropped ears in those days of cropping was trifling.

Mr. Brereton's prediction that in all likelihood there will be two specimens of natural ear evolved, giving rise o endless confusion and wrangling, is a direct accusation of incompetency against his club rather than a sound plea against cropping. What is a specialty club for? Breeds have been perfected from a much greater diversity of parts than differences of ears, and of the breeds so perfected the bull-terrier is not the least. As for confusion and wrangling, they are irrelevant to the subject.

His last plea, that it is their opinion that in a few generations, if cropping is persisted in, nature if so aided will stop reverting to such useless and unsightly appendages as most bull-terriers' ears naturally are, is not at all easy to understand. What is meant by aiding nature? since cropping is a perversion of nature. Moreover, what is common to a type is not reversion. If he means that in a few years dogs will be bred with ears ready cropped, he ignores the fact that mutilations are rarely inherited. The great Dane has been cropped from time immemorial and still there is no sign of nature deferring to the whims of men.

Mr. Brereton's statement that the English Kennel Club now having the anti-cropping rule in force is an added reason why cropping should be left alone here at present,as the English breeders have yet to establish the ear, is most illogical and inconsequential. After the ear had been established in England, granting that an ear is to be established at all instead of a type of ear, American breeders would have made no progress in the meantime and they would still have before them the task that Mr. Brereton endeavors to evade now. On the whole he has made a most illogical plea, begging the question entirely and evading all discussion of the real issue, its cruelty and its offensiveness to fanciers at large and the public in particular.

Mr. Clifford Wood.

Mr. Wood predicts that if the rule against cropping be passed it would result in the general abandonment of the breeding of great Danes in this country.

It is difficult to imagine that depriving the fancier of the privilege of cutting off his dog's ears should have such far-reaching and serious results. The dog's nobility of character, majestic mien, activity, symmetry, usefulness and fidelity count for nothing as against his ears being cut off. Is the pleasure entirely in owning a mutilated dog? Does this artificial feature of the ears transcend in importance all else combined? The affection for the dog which rests on such a plea has not a very genuine lodgement in the bosom of an owner who advances it. It has more of the flavor of dollars and cents than true sportsmanship.

Mr. Wood further sets forth that "the great Danes imported to improve that breed of dog are imported from Germany and not from England. It is idle to claim that the prohibition of showing cropped dogs in this country will produce any modification of the practice in Germany, where the dog has been cropped from time immemorial. If the proposed resolution prevails no one will import for the improvement of the breed."

So far as what Germany may or may not do in relation to the matter, it is entirely irrelevant and immaterial to the question. When cropping was abolished in England similar pleas and similar interests had to be opposed. Many predictions of dire disaster remain unfulfilled since the dawn of creation.

Mr. Wood states as a fact what he merely holds as an opinion, namely, that if cropping is ruled out by the A. K. C. no one will import for the improvement of the breed. No one can possibly know that. The implication, however, is that all great Danes are ruled out of competition and all incentive to improvement is at an end; in fact, a universal destruction of interest comes because an owner can not cut off his dog's ears and force the mutilated animal upon those who disapprove of it.

Mr. Wood rather dramatically asks, by way of peroration: "Do the members of the A. K. C. wish to legislate the great Dane out of the country? If so, pass the resolution and kill great Dane interests; if not, kill the resolution."

That is entirely a perversion of the issue, as the whole argument presented by Mr. Wood is a begging of the question. He evades the main issue—the cruelty of the custom. Show that the custom isn't harmful and cruel, and the matter ends.

This in the main treats of those who have letters in the *Gazette*.

James A. Lawrence.

Mr. Lawrence, who is noted as a breeder and owner of great Danes, presents a letter in support of cropping—a letter in which all logic and consistency is thrown to the winds. He uses contradictory terms in the same breath and appears to be charmingly unconscious of it. He describes the manner and conditions of cropping: "Clear, cool or cold weather, cocaine hypodermically injected into the ear, dressings with Friar's balsam and carbolated vaseline every other day for eight or ten days, the puppy in the meantime being kept in a well ventilated and comfortably warm room." How many men observe all these conditions? Mr. Lawrence says: "At no time during the dressing of a sore ear will a young puppy ever make much effort to get away or show any perceptible sign of pain."

He has a "sore ear," but unlike cases of other sore ears in general the puppy shows no sign of pain. This statement is in marked contrast to that of Mr. Fonda quoted before. All the conditions mentioned by Mr. Lawrence would apply equally well to the cutting off of a leg, or docking a horse, and if done with knife or scissors, cocaine, and afterward dressed well, it would be "sore," not painful. He adds: "Ear cropping, as done to-day by those thoroughly understanding it, is among the minor cruelties imposed upon the dog," First it was "painless," then "sore," now we have got so far as a "minor cruelty" when practiced by those who thoroughly understand it! And what is it when done by those who do not thoroughly understand it? Yet almost in the next breath he adds: "I have no hesitancy in saying ear cropping is not necessarily a painful or inhuman operation." No, it is a painless "minor cruelty." He mentions with irrelevancy, as it happens, that he once owned a St. Bernard bitch which had canker, and of the hundreds of great Danes he owned he never had a case of canker; therefore, cut off a dog's ears and he will not have canker—not in the part cut off.

Mr. Lawrence then cites the practice of dehorning Jersey cattle which are "wicked" to each other—a most convincing argument that a dog's ears should be cut off to please his owner's artificial standard of beauty. Then he mentions that he saw a man training a setter afield—first the man whipped the dog, then he shot him for flushing, inflicting a painful wound.

The inhuman acts of one man or several men are reasons why such acts should be suppressed instead of citing them as being acts of greater cruelty to justify the minor cruelties. It is not logical to assume that the minor cruelties should be approved because greater cruelties exist. But as Mr. Lawrence plainly had no perception of the true question at issue, and was striving awkwardly to prove what he wished to establish, it is but a natural consequence that he should be unable to make a correct interpretation, and should be inconsistent throughout.

Then Mr. Lawrence says: "If the object of the American Kennel Club is to lessen the suffering of the dog by prohibiting one custom practiced on three or four breeds, what will they do with a custom so broad, disastrous and cruel as exhibiting is to dogs? For what can possibly be more cruel than to put a dog (and often four or five) in a hamper or box and take them long journeys from one show to another, in an overheated car one minute and on a truck perchance in a piercing cold wind the next minute; handled by strangers, after suffering for many hours from want of food and water"—and so on with an exaggerated picture of what might possibly happen if an owner sallied forth with special intent to impose every possible hardship on his dog. With all the exaggerated striving for effect, but conceded as good for the sake of argument, the hardships enumerated are incidental to a journey in striving to accomplish a useful purpose. The owner himself may suffer many of the hardships enumerated; but unavoidable discomforts are distinctly different from deliberate and willful mutilation of the dog, and are entirely irrelevant in that relation.

Mr. Lawrence continues: "Thus the unfortunate canine, born more handsome than rich, undergoes dog show hardships, rough-tracked chases, thorny hunts, the pit, and other cruelties without number, all for the fancies and pleasures of man." Such a jumble of cant is rarely seen. "Rough-tracked chases" afford the greatest delights known to dog nature, and thorny hunts (of course all hunts are thorny!) are no less to his pleasure. Left to his own choice, the dog often goes hunting voluntarily, and sometimes in his enjoyment of it remains away for days. "The pit" is abhorred by all true fanciers, is unlawful, and is confined to a very small class; but Mr. Lawrence calmly groups dog show hardships, rough-tracked chases, thorny hunts, the pit and "other cruelties without number" as being in the same class, all being presented as good reasons why the small matter of cutting the dog's ears off should be added thereto; for the implication is that if the dog suffers cruelties without number, the addition of a "minor cruelty" is of no consequence, the more so as that cruelty is "painless."

J. H. H. Maenner.

Mr. Maenner somewhat summarily disposes of the matter by saying that "the breeders of those kinds of dogs whose ears are cropped would, as dog fanciers, doubtless discontinue the practice of cropping if it would be a torture to their pets, and they ought to and do know more about that business than other people. It is a good maxim that all persons should mind their own business." (See Section 655, Title XVI., of the Penal Code, which shows that people in New York will not mind their own business. See other penal codes also.)

He further remarks: "In a treatise on the great Dane, written by me for 'The American Book of the Dog,' published in 1891, I stated several views on the cropping of great Danes as follows: 'The ears of the German *dogge* are generally cropped because it gives the head a bolder and livelier expression and appearance. In England, however, a strong opposition prevails against the cropping of the ears of any breed, and the wish of the Queen of England, as well as the exertions made by the Society for the Prevention of Cruelty to Animals, to put a stop to this so-called cruelty, may be of no little consequence.'"

Why did the S. P. C. A. exert itself? Why did not they mind their own business?

He continues: "The Queen of Würtemburg, who visited the exhibition at Cannstadt, 1889, expressed also a wish, when admiring the beautiful German *dogges*, that the ears might be left to them just as God created them. The French, on the contrary, do not want a *dogge* with uncropped ears, and a German sporting paper, *Hunde-Sport*, remarked not long ago: 'There is danger that America will follow the example of England. We in Germany do not crop the ears of our *Hatzrude* since the day before yesterday; our ancestors did so centuries ago, and if it will be admissible to draw a general conclusion from a Greek coin, the cropping of ears was customary 2,000 years ago, and neither England nor America will alter it."

The Greeks had a number of customs which we do not imitate or approve at this day.

He continues: "The same paper had in its issue of Jan. 22, 1890, the following: 'We have been informed that in two cases owners of young *dogges* were indicted by societies and fined for cropping the ears of dogs. Should any one of our readers be fined on that account he is requested to enter protest against it, and to ask us to name him two experts who are ready to declare under oath that the non-cropping of ears was the cause of continual suffering in the ears, so that the cropping had to be performed in advanced age. Not the cropping of the ears is tormenting, but their remaining uncropped. We are convinced that on such evidence the parties indicted will be acquitted.'"

Undoubtedly that was a day of hard swearers.

Mr. Maenner is not quite so explicit in his recent communication as he was in his article in "The Book of the Dog," for he added after the above quotation: "On the other hand, experts spoke and wrote against the fashion of cropping ears. Professor Weiss, of the Veterinary College at Stuttgart, says in the book, 'The Dog, his Qualities, Breeding and Treatment in Healthy and Sick Condition': 'The operation of cropping ears consists in a tormenting for the sake of satisfying a nonsensical taste; besides, according to the opinions of the greatest dog fanciers, the dog looks, in his natural condition, much better than after squandering any cruel art upon him; moreover, the consequences of this useless mutilation do not cease when the ear is healed. The irritation caused by it often has an injurious effect on the internal ear and frequently deafness is the result.'"

Mr. Maenner supplements this by saying: "Not a few dog fanciers affirm that the exterior ear of the dog, being movable, prevents the free entrance of insects, dust, rain, snow, hail, etc., protects against the changes of temperature, assists the animal in catching the sound waves and thereby renders the sense of hearing more acute."

Then he sums up by saying: "Thus we see the opinions of experts as well as of fanciers differ and are diametrically opposite with reference to the cropping of ears."

It would seem further that even in Germany there were people who heeded not the maxim that all persons should mind their own business.

The editor of "The American Book of the Dog," Mr. G. O. Shields, in an editorial foot note said: "I wish to record here a most earnest and emphatic protest against cropping, docking or otherwise mutilating dogs of any breed. In my judgment these practices are cruel and useless, and the taste or notion that fosters them is erroneous."

In the scale of points which Mr. Maenner gave he treated the ears as follows: "Ears very small and greyhound-like in carriage when uncropped; they are, however, usually cropped." Here Mr. Maenner recognizes uncropped ears.

Thus it will be seen that the admirers of the cropped breeds are not a unit in advocating cropping, while society at large has uttered a warning in its statutory laws. The strongest admirers of cropping admit its cruelty in a more or less direct manner, and that it serves no purpose other than to please the eye which is trained to an artificial standard of beauty.

The Jurisdiction of the A. K. C.

Let us now consider the powers of the A. K. C. in so far as they relate to the subject. It is national in the scope of its jurisdiction, and each of its members is an organized body formed on certain requirements concerning purposes and competition. The clubs in the confederation, through their delegates, make laws and determine the action of the central body. Writers too often assume and set forth that A. K. C. legislation has an arbitrary and exclusive source within the four walls of the A. K. C. office. Nothing could be more mistaken. Every club within the Association has a right to representation, and the acts of any meeting are the acts of the delegates present. If any club neglects its right to representation, its own negligence is not a just cause of complaint, and it cannot justly complain of any legislation in which it was too negligent to take part. If a number of clubs neglect to send delegates, the cumulative negligence forms no just ground for fault finding with those clubs which did take action.

As the jurisdiction of the A. K. C. is over bodies which are public, and whose mission is the improvement of the dog through public competition and exhibition, it can exercise the powers with which it is clothed for the general good of all its members. While it may not be able to enforce direct and positive punishment for any infraction of its rules if an offender objects to the punishment, it can enforce a negative punishment by refusing all participation to this offender in its membership and benefits. Its legislation is not for the benefit of a class; it is for the benefit of all concerned.

Should, therefore, the A. K. C. decide that cropping is harmful or obnoxious to the majority and the general good, it does not thereby abolish cropping, but it abolishes it from its jurisdiction.

The voices of those who have an interest in the general competition is to be heard with as much consideration as the voices of those who are in favor of cropping, and if the majority considers that cropping is a cruelty—so obnoxious that they do not care to compete against or be identified with dogs so mutilated—they do not transcend their powers when they do so rule.

In the rules governing bench shows, rules VIII. and IX., castration, spaying, total blindness, deafness or lameness absolutely disqualify. The power to make this ruling is indisputable; the matter of cropping is of like character for ruling if the A. K. C. chooses to take cognizance of it.

If cropping is abolished in A. K. C, shows it in no wise deprives an owner of the pleasure of keeping as many cropped dogs as he chooses. He can hold shows of his own or with those who will join him if he so pleases. It, however, leaves all specialty clubs free to act as they choose; they can indorse cropping or abolish it. The A. K. C. can only act within its jurisdiction, and within that it has powers to act, for it would be an absurdity to assume that a central governing power has not the necessary power to take necessary action.

Cropping.

As to the merits of the case, it is easily understood that though cropped ears may please an eye long accustomed to an artificial standard of beauty, they may and do offend the sense of humanity of many others. If the humanitarians are so numerous that their members are in a majority, and their sentiments so earnest that they will force an issue in the matter, there is no good reason why the majority should not rule

The plea that the changes would prove destructive to the interests of the breed is not to be entertained for a moment. It rests entirely upon an assertion, *ex parte* at that. When a standard is more or less conventional, made so in part by mechanical means, thus being more or less artificial, it is not difficult to modify it. In this case it is only whether a dog's ears shall be cut off or not. If any fanciers retire from the field because their favorites, in their mutilated form, do not meet the recognition of those who object to the mutilation, there may be others who will come to the support of the breed—others who now may hold aloof for humane reasons.

As to the action taken in England against cropping, there is no possibility of misunderstanding it by the unprejudiced. It is simply one of the acts which come into tangible being in all civilized countries when the causes become of sufficient importance to interest the general public. It is in keeping with the better sentiments of humanity.

To sum up, the custom has the sanction of relatively a handful of individuals, whose fancy for it is correspondingly small as against the general opinion of fanciers at large and of the general public.

The specialty clubs which have the interest of the

cropped breeds in charge undoubtedly should receive every deference on matters of type, if they have the confidence of the fanciers they claim to represent; but mutilation is not a part of a type. It is a matter in which all claim an interest. As the specialty clubs contain but a handful of members as compared to the members of society at large, and therefore those clubs would have but a corresponding handful of opinion, they could not possibly pass on a measure of general public interest as a representative body of the public.

Moreover, the members of the specialty clubs and the owners of the cropped breeds are not a unit in its favor. Many of them admit that it is cruel, and some tolerate it because it is conventional with the majority of their special fellow fanciers. In Germany, the home of the breed, it has its earnest opposition, as will be noted by Mr. Maenner's writings, which are hereinbefore quoted and which are admissions from an advocate of cropping.

Cropping having been abolished in England by the canine powers, does not prove that it is useful to practice it here. On the contrary, America, being civilized, should not be behind any country in the world in a sincere observance of the humanities.

The plea that cropping should not be abolished because there are greater cruelties practiced is too absurd to treat seriously. Admit it as sound, and all law is abolished. Nor does the plea that it has been a custom from time immemorial carry any weight; for if it is admittedly a cruel practice, the plea of antiquity merely calls attention to the fact that it has been a cruelty from time immemorial. Furthermore, many customs which once were cited as being immemorial have been thrown into the ash barrel of the past, and the rejection of the objectionable is what makes progress.

The claim that it improves the dog's appearance is merely the claim of those who by long association and education have come to look upon the artificial changes in the dog's appearance as parts of the real dog. Those who fancy the cropped dogs are not debarred from that pleasure by any act of the A. K. C., if it should bar cropped dogs from its shows. A fancier who will not own a dog because he cannot have the pleasure of owning it cropped, and at the same time force his fancy on those who object to cropping, cannot have any genuine affection for the nobility and intrinsic worth of the breed. The plea of its beauty at best is not well taken, as it originally was not practiced as a measure by which to improve the dog's appearance. The practice outlived its material purposes, but the eye of many became habituated to it, and with many habit is as strong as nature.

These remarks apply alike to other unnecessary forms of mutilation when they are practised for the purpose of gratifying a fancy.

W. K. C. Bench Show Judges.

NEW YORK.—Following are the names of the gentlemen who have kindly accepted our invitation to judge at the coming show; premium lists will be ready for distribution next week:

Mastiffs, St. Bernards, bloodhounds, Russian wolfhounds, deerhounds, greyhounds, English foxhounds, collies, old English sheep dogs, poodles, bulldogs, bull-terriers, fox-terriers, Irish terriers, Scottish terriers, Bedlington terriers, pugs, toy spaniels and miscellaneous—Mr. George Raper, Sheffield, Eng.

Great Danes, American foxhounds, Basset hounds and dachshunds—Mr. G. Muss-Arnolt, Tuckahoe, N. Y.

Pointers—Mr. Jas. L. Anthony, Netherwood, N. J.

English and Gordon setters—Mr. Wm. Tallman, Plainfield, N. J.

Irish setters—Dr. Wm. Jarvis, Claremont, N. H.

Irish water, clumber, field and cocker spaniels—Mr. Andrew Laidlaw, Galt, Ont., Can.

Beagles—Mr. W. S. Clark, Linden, Mass.

Boston terriers—Mr. W. C. Hook, Boston, Mass.

Black and tan, white English, Yorkshire, toy, Dandie Dinmont and Skye terriers, whippets, Italian greyhounds and schipperkes—Dr. H. T. Foote, New Rochelle, N. Y.

JAMES MORTIMER, Supt.

Mascoutah Kennel Club.

THE premium list of the Mascoutah Kennel Club is ready for distribution and can be obtained by addressing the Mascoutah Kennel Club, 952 Monadnock Building, Chicago. As is a feature of this club's prize list the specials are numerous and valuable. The specialty clubs are materially in evidence also. Mastiffs, St. Bernards, setters and collies, in challenge classes for dogs and bitches respectively, have $15 to first, $10 to second; in open classes, dogs and bitches respectively, $15, $10, $5 and $3; puppies, $5 and $3. The prizes in other classes range from $10 in challenge, and $10, $5 and $3 in open classes, to $5 and $3 in some of the breeds which are not strong in bench show numbers. Entry fee $3. Entries close February 16. All express companies will return free to point of origin all dogs that will be sent to Chicago over their lines on which charges have been paid at time of shipment, providing ownership remains unchanged. Geo. H. Hill, superintendent. This show is one of the great annual events in the canine world, and it is worthy of the attention and support of all fanciers.

City of the Straits Kennel Club's Show.

DETROIT, Dec. 13.—*Editor Forest and Stream:* The City of the Straits Kennel Club has claimed March 3, 4, 5 and 6, 1896, as the dates for its fourth annual bench show. The club will also hold a show for dogs owned in Wayne county, Mich., and Essex county, Ontario, on Dec. 20 and 21. This will be purely a local show, the idea being to give resident enthusiasts a chance to find out the relative merits of their favorites without compelling them to run up against the cracks going around the grand circuit. Our new officers are: Geo. M. Hendrie, President; W. Howie Muir, First Vice-President; Guy D. Welton, Second Vice-President; Arthur D. Welton, Secretary; Chas. F. Backus, Treasurer; A. T. Knowlson, Ed. Wiles, R. Humfreyes Roberts and T. C. Ouellette, Directors.

ARTHUR D. WELTON, Sec'y, C.S.K.C.

We are indebted to Mr. W. H. Mullins, Salem, O., for a photograph of a sheet copper statue of a setter dog. Also for a photograph of a group of statues, also made by him, for the Cotton States and International Exposition Co., Atlanta, Ga.

Meeting of the American Spaniel Club.

A MEETING of the executive committee of the American Spaniel Club was held at the residence of Dr. S. J. Bradbury, 110 East Twenty-second street, New York, on the 10th inst. Present, E. M. Oldham, President; R. P. Keasbey, Secretary; S. J. Bradbury, Treasurer; James Watson and Marcel A. Viti. The minutes of the last meeting were read and approved. The following resolutions were carried.

That the annual meeting be held on Thursday, Feb. 20, 1896, at 4 P. M., at Madison Square Garden, and that the club hold their annual dinner on that evening, and that the following be the committee or arrangements: E. M. Oldham, R. P. Keasbey and S. J. Bradbury. That the following club cups, etc., be offered for competition at the New York show in February next:

The Whitehead trophy (value $50) for best cocker stud dog with two of his get.

The Bell cup (value $30) for the best brace of other colored cockers.

The Smith trophy (value $150) for the best other than black cocker spaniel.

The American Spaniel Club trophy (value $100) for the best cocker.

The American Spaniel Club trophy (value $100) for the best field spaniel.

The Saybrook trophy for best American-bred field spaniels.

The Brace Challenge Bowl (value $200) for best brace of American-bred spaniels over 28lbs.

It was also resolved: That we instruct our delegate to the A. K. C. to vote to lay the question of cropping on the table, and if the matter comes to a vote to refrain from voting, and to request the secretary to so record him.

POINTS AND FLUSHES.

Henry Lacy, late of Manchester, England, father of the celebrated writer and editor, Mr. H. W. Lacy, died on Dec. 12, in New York city, and was interred in Woodlawn Cemetery. He was well known to the dog fanciers of the Old World and the New. Our sympathies are extended to his family in their bereavement.

The entrance fee for the local show of the City of the Straits Kennel Club is 50 cents. Challenge, open, novice and puppy classes will be made for dogs and bitches. Entries should be addressed to Arthur D. Welton, secretary, 25 Larned street, West, Detroit. The act of the club in giving local exhibitors encouragement and opportunity is worthy of high praise.

Mr. W. E. Warner, manager of Mr. Gould's kennels, has received very favorable accounts of the dogs' performances from Mr. Armstrong, who is at Pheba, Miss., giving the dogs their winter training.

Dr. G. G. Davis's faith in the Irish setter has brought forth material results, as will be seen by our report of the Philadelphia Kennel Club's Members' Stake last week. It is gratifying to note that the Doctor's plucky competition and honest enthusiasm are reaping success.

The following is the list of officers elected by the National Fox Hunters' Association at its recent meet at Owingsville, Ky.: President, Dr. Wash Miller; First Vice-President, A. B. F. Kinney; Second Vice-President, Hayden C. Trigg; Third Vice-President, Roger D. Williams; Directors, W. S. Walker, Walter Rice, A. Ware, G. W. C. Gregg, R. H. Pooler, W. C. Huffstetter, Col. A. W. Hamilton; Secretary and Treasurer, F. J. Hagan, of Louisville, Ky.

In a personal letter, dated Dec. 7, Mr. W. W. Titus mentions that "Mr. Geo. Richards has settled at Vinton, Miss., for the winter, and has room for a dog or two to train. W. H. Hammond, of the Eldred Kennels, arrived in Mississippi after many vexatious delays through getting mixed up in the crowd going and coming to the Atlanta Exposition, and he is now located near West Point. Chas. Tucker and son and N. B. Nesbitt came on with him, the former going to Stanton, Tenn., the latter's home. The Messrs. Young are making the foxes hustle these days. Last Thursday and Friday they had some big races, having a pack of twenty-two dogs, all of which were in the chase. As a negro by the name of George Washington would say, 'They made the welcome ring.' It is raining here to-day in the regular old Mississippi greasy style, making no fuss, but just raining. Up to date there has been less rainfall than common, but I expect that from now on it will come in broken doses."

In our advertising columns this week will be found the announcement of the Championship Stake of the Field Trial Champion Association, to be held at West Point, Miss., on Feb. 10, 1896. This stake has evoked much interest among sportsmen, and if the results are the success that its organizers and promoters have reason to believe they will be, the stake undoubtedly will be a permanent fixture.

We have received from the author a copy of "The American Foxhound," a new contribution to kennel literature, which we will take pleasure in reviewing next week.

Here is an extract from the lady's letter which I commend for its downright and unalloyed straightforwardness and business-like tenor: "My dog does not require any cheap advertisements. In place of wasting £5 to £20 on a challenge I would advise a stud advertisement, which would do more good and save a considerable sum." —*Our Dogs.*

The world do move, as the following from a St. Louis paper will show:

"A. E. Flickenger, a prominent citizen of Burrton, Kan., believing that the tax of $1 on his pups was unjustly assessed, refused to pay the amount and was sent to jail. His friends secured several hundred signatures to a petition to the City Council asking that body to repeal the ordinance under which the tax had been assessed and the penalty imposed. A special session of the Council was held last night and speeches were made in support of the petition. The ordinance was repealed and a committee of business men, armed with an order for his release, waited on Mr. Flickenger at the jail and escorted him to the principal hotel, where he was given an elaborate banquet. Speeches were made extolling the prisoner for his heroism in accepting martyrdom for a principle."

Mr. J. B. Stoddard, in a personal letter, writes that he arrived safely at West Point, Miss., and will locate at a convenient point within easy distance of the trials to be run at West Point in a few weeks. He mentioned tha birds were reported plentiful.

Yachting.

Practical Yacht Designing.

IT can hardly be said that any pressing need exists of treatises on naval architecture and of its application to the designing of yacht and boats; any deficiency in this direction has long since been made good by the standard works of several well-known writers. For those who can afford the expense of several rather costly works, and the time necessary to their careful study, there is no lack of practical and reliable information; but the inquiries which we constantly receive from the readers of the FOREST AND STREAM prove that there are many to whom, for one reason or another, the existing works, extensive and thorough as they are, must be practically sealed books. There has been for some years a growing demand for a simple treatise on practical yacht designing, presenting the subject in a way that may be readily understood by anyone of ordinary intelligence and possessing a desire to learn and a knowledge of arithmetic.

With the first number of the coming year the FOREST AND STREAM will begin the publication of a series of articles designed to meet this demand, the author being Mr. W. P. Stephens, for the past twelve years in charge of the Yachting and Canoeing Departments of the paper. Mr. Stephens is specially qualified for this task by his long experience as an amateur designer and builder, and as a critical and technical writer on yachting; and by his close intercourse through the FOREST AND STREAM with those for whom the work is specially intended. His personal experience as an amateur designer and builder dating back to a time when text-books on these subjects were unknown, have shown him what the amateur and the tyro want to know and his later work at building, designing and writing has fully qualified him to teach what he has learned. His book on "Canoe and Boa Building for Amateurs," though written in 1883, is still recognized as the standard work on small craft; and within its limited scope a thorough text-book of the subject.

The new work will cover a much wider field; the designing of pleasure craft, from canoes and boats up to such sizes of yachts proper as would be likely to engage the attention of the amateur. The same methods will be followed as have proved so successful in "Canoe and Boat Building," the thorough presentation of the leading principles and the elaborate attention to these details, apparently trivial, which are essential to success in any mechanical work.

The opening chapters will deal first with the object of designing—the production of some sort of floating vessel—the means to this end from the first consideration of the conditions of the particular case to the turning over to the builder of the drawings, specifications and tables of offsets. The many intermediate steps will be treated of in detail, the first considerations, the selection of the class, the principal dimensions and the elements of the design, the tools, materials and work of drawing, the calculations and the specifications. The articles will be fully illustrated, and will continue through the year to such a length as the subject demands.

ONCE again has Lord Dunraven been the victim of most unwarranted interference on the high seas. On Dec. 11, as he had announced, the Earl boarded the White Star steamer Germanic at Liverpool with the intention of proceeding to New York to take part in the inquiry of the special committee in the matter of his charges against Mr. Iselin. When off Crosby Lightship, at the mouth of the Mersey, and in a dense fog, the Germanic was interfered with by the Glasgow steamer Cumbrae, Capt. Blair, bound in to Liverpool. The Cumbrae struck herself nearly beam on against the Germanic's bow, forcing herself on to it for a distance of 14ft., and disabling the latter steamer so badly that she was obliged to abandon the voyage. A perfect panic ensued among the frantic rabble of Anglo-Gaelic excursionists on the offending steamer. Lord Dunraven escaped personal injury, and as his captains and crew were not with him their lives were not imperilled. After the Cumbrae's passengers and crew were taken off the Germanic backed away and the Cumbrae rapidly sank. The bows of the Germanic were stove in for a distance of 20ft. above the waterline, and she anchored, her passengers being returned to Liverpool by tugs.

THE Royal Yacht Squadron has distinctly disowned all responsibility for Lord Dunraven's latest action, leaving him to answer personally to the New York Y. C. We are by no means certain that under the circumstances the New York Y. C. has not a perfect right to disregard Lord Dunraven personally, and to look to the Squadron to defend its representative; but as the club has elected to take a different and more direct course, no more need be said on this point. It is, however, as we believe, desirable in all negotiations for international matches to increase the responsibility of the club which vouches for a challenger; the negotiations being made, as far as possible, between the two clubs, and not between the defending club and the challenger as an individual.

It is quite evident that the Squadron is by no means out of the whole matter; as in the event of Lord Dunraven's charges being clearly disproved, the New York Y. C. would still have good grounds for looking to the Squadron for some official condemnation of its representative for making such serious accusations.

IN speaking of the various challenges for the Seawanhaka cup in 1896, the *Yachting World* remarks: "We must say that we do not consider the Seawanhaka-Corinthian Y. C. are treating Mr. Brand too well. If he is really willing to undertake another trip in quest of the cup and is again backed by the Minima Y. C., we think he ought to have first claim to a race." In answer to this it may be said that over two months have elapsed since the finish of the races, and yet nothing more than a most informal statement that he would challenge if he could arrange a syndicate and secure again the indorsement of the Minima Y. C. has been received from Mr. Brand. Ample time has elapsed for a communication from the Minima Y. C., but none has been received, and in the meanwhile other *bona fide* challengers have some rights in the matter.

No news has yet been received as to Lord Dunraven's future movements. He did not sail on the Umbria on Dec. 14, as did some of the passengers of the Germanic, but returned to London. The special committee had arranged to begin the inquiry on Dec. 20, but has postponed the opening to Dec. 27. Capt. Haff has been to Deer Island to

secure the attendance of some of Defender's crew. A late dispatch states that Lord Dunraven will sail on Dec. 19 on the Teutonic.

It is now understood that the inquiry will be held in the model room of the New York Y. C. house, and will be private, not even members of the club being admitted. We are surprised that, in view of the importance of the matter abroad, the committee has decided to make the inquiry private. The interests of the defense, which presumably has nothing to conceal, demand the fullest publicity throughout the entire proceedings, and there should be nothing in the evidence which in the interest of either side must be suppressed or concealed from the public. The press at least should have full liberty to attend and report the proceedings. Without questioning the good faith and good judgment of the Cup committee in failing to make public on the instant Lord Dunraven's first charges, it is evident that had this been done the matter could never have assumed its present serious phase.

Boucanier.

ONE-RATER, 1895.

The accompanying design was made last summer by Capt. Henry E. Bayly for a shoal-draft one-rater under the Y. R. A. rule; but the yacht was not built. Under the classification adopted with the new Y. R. A. rule (the new limit being 24ft. racing length) she would be outclassed by craft specially designed for the rule. The design promises a fast boat of the extreme shoal type in the 20ft. or 15ft. class in this country, and we hope that some of those now intending to build in the latter class may be induced to test it next season. The two scales give dimensions for both 20-footer and 15-footer. As a one-rater, the boat would be 18ft. l.w.l., with a displacement of about 1,350lbs., or, crew, 450; knife plate, ¼in. steel, 100; hull, rig, etc., 800.

We have shown a waterline of 18ft. 3in. as a 20-footer, which would allow a sail plan of 470sq. ft., a large area, but the boat would carry it in ordinary summer racing, with three good men on the weather side. If made of bronze, the centerboard might be $^{5}/_{16}$in. thick. The waterline of the 15-footer is 14ft 7½in., allowing 237sq. ft. of sail; but the sections might be spaced sufficiently closer to make the waterline 14ft., with 256sq. ft. of sail, under which the boat should be very fast. There are two bulkheads, as shown, and a small well. The rudder is fitted in a trunk through which it may be lifted out in beaching. The dimensions are:

	20ft. Class.		15ft. Class.	
	Ft.	In.	Ft.	In.
Length over all	22	7	28	1½
l.w.l.	14	7⅛	18	2⅛
Overhang, bow	3	10	4	9½
stern	4	1½	5	1½
Beam, extreme	6	5	8	
l.w.l.	5	10⅛	7	4
Draft, hull		4		5
with board	5		6	2
Freeboard, least		8¼		11
bow	1	3½	1	7½
stern		11¼	1	2¾
Centerboard, length	5		6	2
width	1	8	2	1
thickness		1¼		$^{5}/_{16}$
Sail area, sq ft	237		470	

Royal St. Lawrence Y. C.

A special general meeting of the Royal St. Lawrence Y. C., of Montreal, to receive the report of a special committee on classification and measurement, was held on the evening of Dec. 11, at the Windsor Hotel. The report strongly urged the adoption of the present Seawanhaka rule for the measurement of all the club's fleet excepting such rigs as can not be readily measured by formula, in which case the actual sail area, as nearly as it can be ascertained, to be taken. It recommends also the establishment of a fixed crew limit for each class, and a reclassification of the smaller boats in the fleet by the abolition of the present 21ft. and 18ft. racing length class, and the creation of a 20ft. class with a three-man crew limit, and of a 15ft. class with a two-man crew. The report was adopted, and all the changes it recommended were duly legalized.

The correspondence with the Seawanhaka-Corinthian Y. C., in reference to the club's challenge on behalf of G. H. Duggan for the 15ft. trophy, was submitted to the meeting and provoked much enthusiasm. Mr. James Ross offered to present the club with three substantial prizes for the first, second and third boats in a series of races for 15-footers during the coming year. The steam yacht members of the club also offered a first and second prize, to be given to the winners either in the 20ft. or 15ft. class, as the club should provide. It has been the custom in the past for the executive committee to appoint a sailing committee at its first meeting after election in February, but in view of the 15ft. challenge, and the necessity of getting the programme for 1896 arranged for as soon as possible, it was decided to appoint a sailing committee to take office at once, and a notice of a motion to amend the constitution to permit of this being done was given. It was decided to hold the annual ball in January, and the meeting adjourned to meet in the new town chambers in two weeks.

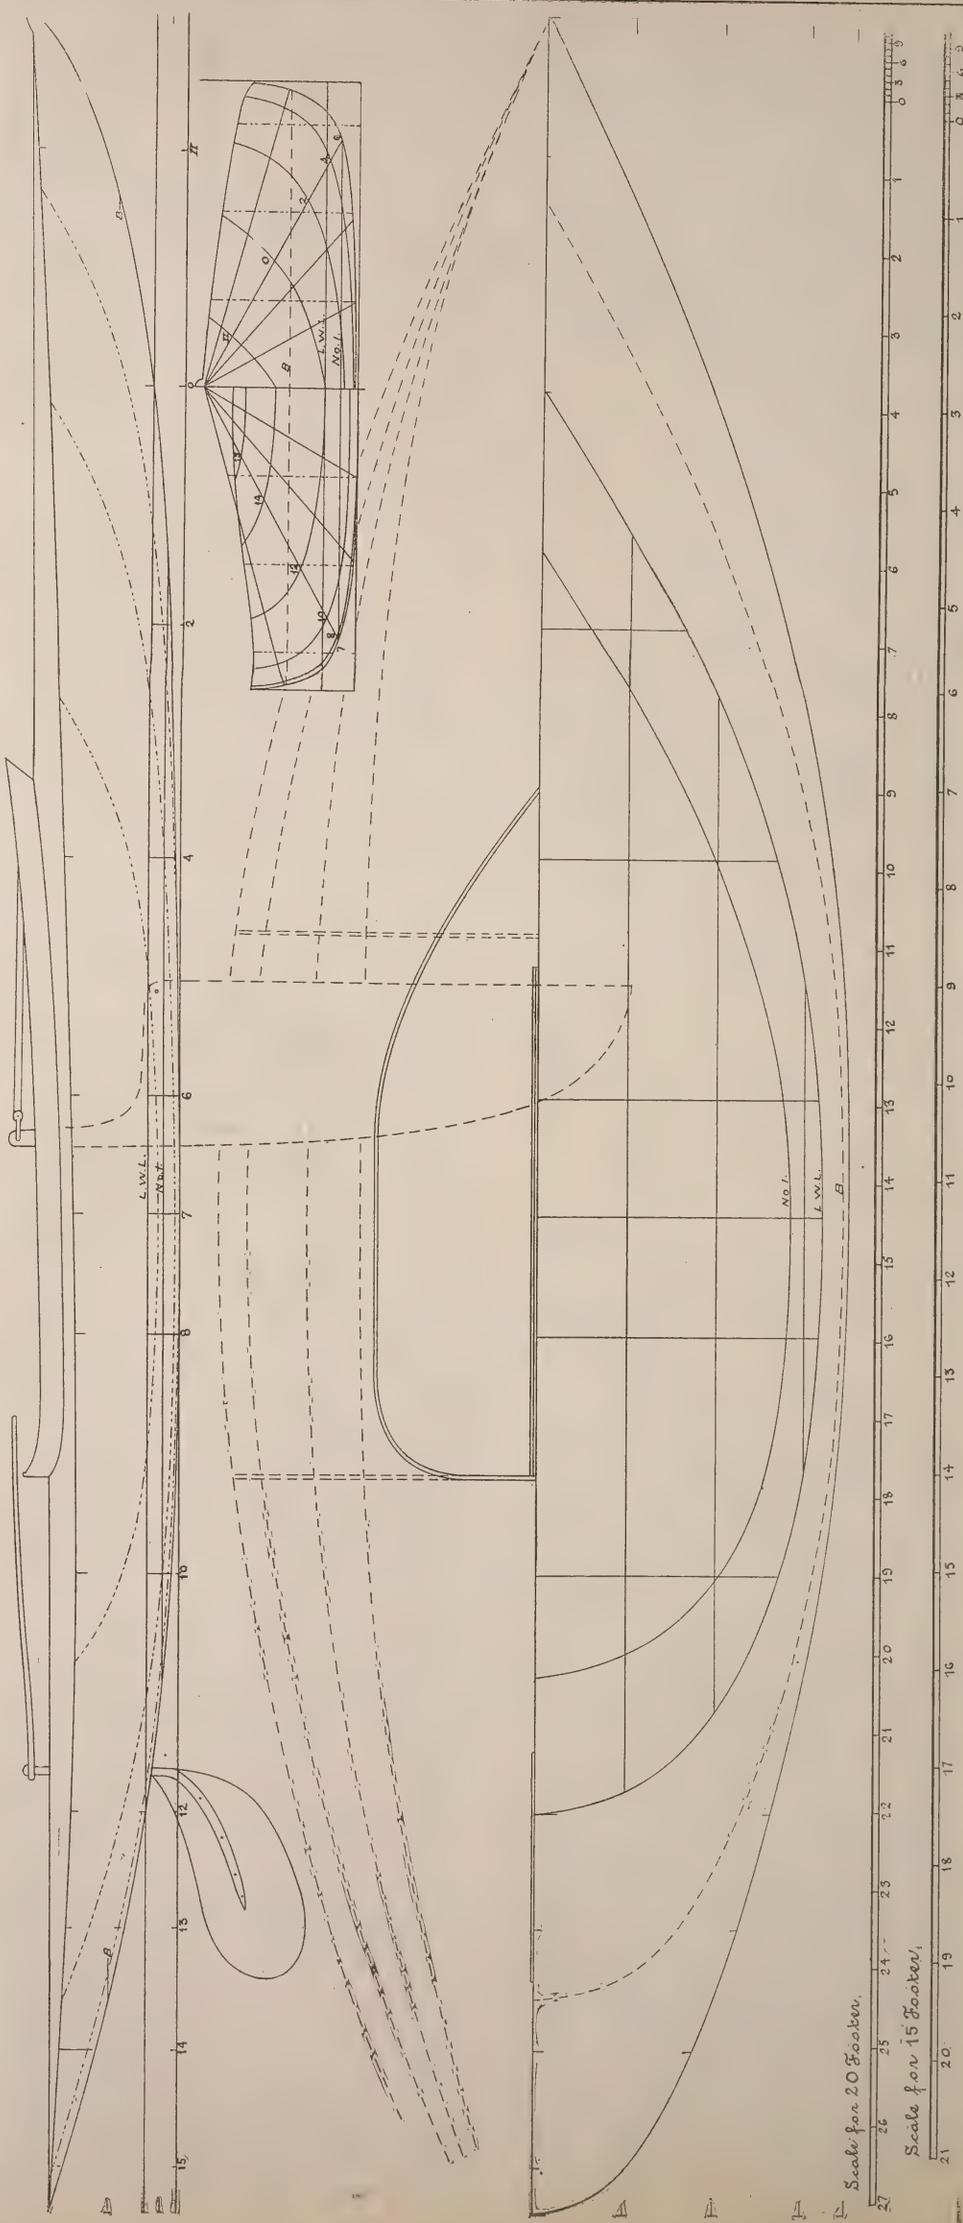
There is every prospect that a fleet of from six to eight 15-footers will be built during the winter, and the challenger for the Seawanhaka cup will have a couple of months hard racing at home before she goes down to salt water. The new 20ft. class will include such undeniably fast boats as Folly, Flatiron, Tombola, Vixen and Jubilant, and therefore good racing among existing boats is insured by its creation, and it is a more desirable class to build into than either the former 21ft. or 18ft. class.

Naphtha Yachts.

Within the past two years the Gas Engine and Power Company has turned out a number of craft considerably larger than the launches which have made the reputation of the firm, and this new type of twin-screw cabin launch promises to be quite as popular and successful as the old. It includes a 63ft. yacht built in 1894 for F. G. Bourne, owner of the steam yacht Reverie; a 67ft. yacht built last year for Col. A. B. Hilton, and one of the same size for D. L. Armstrong; two 64ft. yachts for Charles Fleischmann and Charles F. Ulrich, a 59ft. yacht for H. L. Terrell, a 50ft. for Pierre Lorillard, and a 65ft. for the Lighthouse Department, U. S. A. In this size of craft, with the engines well aft and out of the way, the center of the yacht gives two good saloons, pilot house and space for galley, toilet, etc.; the accommodation greatly exceeding that in a steam yacht with engines and boiler amidships. The company has now under way two still larger craft, one of 76ft. for J. A. Mollenhauer, and one of 75ft. for Alfred Van Santvoord, owner of the side-wheel steam yacht Clermont. The yacht, which will be used in Florida waters, has a draft of under 3ft., with a beam of 12ft. 6in. The motive power includes two naphtha engines of 12 h. p. each, located well aft; the naphtha tank being in the bow. The engines are entirely independent. The pilot house is raised about 4ft. above the main deck house and is placed aft, the floor being sunk so that the steersman stands practically on the ice box. This forward end of the main deck house forms a large saloon and dining room, abaft which are two staterooms. The stairway to pilot house and gallery are in the after end of the house; a permanent awning deck being carried out to cover engines and after deck. The yacht is now nearly completed and will go South early in January.

Absolutely Uncapsizable.

Roslyn, L. I., Dec. 14.—*Editor Forest and Stream:* Replying to Mr. Stryker's letter about uncapsizability, etc., in your issue of this week, I would refer him to an illustrated description of the Roslyn yawl Minocqua which was published in the Forest and Stream of Feb. 9, 1895.



This boat is absolutely uncapsizable, that is to say she can be knocked down squarely on her beam ends with sails in the water. She may be forcibly held in that position for hours, yet will at once right herself on being released from the force that has knocked her down. She draws, as before stated, only 26in. of water.

Mr. Stryker or any one sufficiently interested can see her shape and her style of rig by looking up the number of your paper referred to.

I have no wish to revive the tiresome old discussion of cutters, etc. The cutter is dead; she died in peace, after serving her purpose, and left her effects to a nondescript which I am pleased to see is also showing signs of giving up the ghost. Let her bones or lead rest in peace. Sharpies and Bouncers still live, especially the latter, for all men who look may see the Bouncer's typical "spoon bow," full water lines, long forward overhang, and segmental curves in every winning yacht of to-day.

Thomas Clapham.

[It is but fair to state that the "sharpie" Minocqua carries a lead keel of 1,250lbs. Sharpies, including, we believe, some of Mr. Clapham's build, have at times capsized; but one of Minocqua's section, with nearly all her bulk out of water and a small amount of ballast, would probably float safely when thrown on her beam ends; and would right if her ballast and stores did not get adrift.]

BOUCANIER.—One-Rater. Designed by Capt Henry E. Bayly, 1895.

Yacht Designing.

THE following letter is a fair example of many that we receive:

Editor Forest and Stream:

Will you kindly spare enough of your time to answer the following question?

What book would you advise me to get to learn more about the designing and building of yachts, say from ½ to 5-raters? I have built two ½-raters and am much fascinated with the work.

I have Stephens's "Canoe and Boat Building," also an English book by Nelson, but I should like a book that will explain such things as these:

Why one boat is good "on the wind" and how she differs (or her lines differ) from one whose best point is "down the wind," etc.

How to figure how deep a boat will set in the water, not by "rule o' thumb," but by scientific calculation.

A chapter on the relation of fine lines to stability and just how much can be sacrificed, one for the other, to advantage.

The advantages of big headsails over large mainsails (as in some of Dyer's boats) and vice versa.

Why a boat will be improved (sometimes) by taking out a heavy plate board and substituting a wooden board which must offer more resistance in passing through the water.

To be brief, the whys and wherefores of a great many such things that I know are so, but do not know the reasons for.

I trust that you will not consider these as fool questions and will favor me with a reply. W.

[We know of no book which will answer even a part of our correspondent's questions, and will be very glad to learn that there is one, no matter at what price. The standard works on naval architecture and designing will not answer them; the best that they will do is to put the student in the way to seek his own answers by experiment and close observation. We have no expectation of being able to give final and satisfactory answers to them in the articles on designing which will shortly appear in the FOREST AND STREAM, but we shall endeavor to meet as fully as possible the requirements of the large class of eager amateurs represented by our correspondent.]

Massachusetts Y. R. A.

THE following letter will be sent by Pres. L. M. Clark and Sec. A. T. Bliss, of the Massachusetts Y. R. A., to all clubs eligible to membership in the association:

Gentlemen—The Yacht Racing Association of Massachusetts was temporarily organized at a meeting held Oct. 24, 1895, from what was formerly known as the Congress of Regatta Committees. A complete set of by-laws, racing rules, etc., has been arranged and a permanent organization will be formed, officers elected and dates assigned for open races for the season of 1896 at the meeting to be called on March 19, 1896.

Uniformity in classification, measurement, etc., in open races is of vital importance, and the rules to be presented have been compiled with considerable care and are simply the usual written and unwritten rules which have governed our races in the past.

The stimulating effect given to local yacht racing for the past two seasons through the work of the congress of regatta committees gives evidence of the benefits of concerted action among the clubs.

Each club is to be represented by one delegate. The annual dues are $5, payable in advance. Applications for membership must be made in writing to the secretary of this Association and must be signed by the commodore or secretary, and must contain a correct list of the members and yachts of the club.

In presenting this matter to your club it is hoped you will appreciate the benefits of such an organization to the interests of yacht racing and yacht building and co-operate by sending a delegate to this Association.

YACHTING NEWS NOTES.

The Spaulding-St. Lawrence Co. are now at work on a fin-keel cruising yawl of 26ft. 6in. l.w.l., designed by C. E. Davis and C. J. Field, and owned by the latter. She will have a trunk cabin and will draw 6ft. Her name will be Ethelwynn II.

The history of steam navigation in America is well told in the volume "American Steam Vessels," by Samuel Ward Stanton, published by Smith & Stanton, New York. The volume is made up of well-executed drawings by Mr. Stanton of steam craft of all classes, several hundred in all, from the Clermont of 1807 down to the yacht Eleanor, the Sound steamers Peck and Lowell, and the American liner St. Louis. Mr. Stanton has devoted much time to securing accurate portraits of the early and more historic steamers, and has succeeded in making a most interesting and valuable collection. Each plate is accompanied by a short history of the vessel. The volume will have a permanent value as a reliable record of many famous craft.

The Orange Lake Ice Y. C. has elected the following officers: Com., H. C. Higginson; Vice-Com., Willett Kidd; Sec'y-Treas., A. N. Chambers; Meas., C. A. Dixon. Com. Higginson appointed the following regatta committee: Dr. Willett Kidd, Frank G. Wood, Charles A. Dixon, Alonso Krom and B. B. Moore. Sailing began on Dec. 12, several good races being sailed.

Mr. Wm. Elsworth, owner of the yawl Mary, is still in the South looking for news of the yacht. She left Beaufort with good weather and an offshore breeze, but after passing Frying Pan Shoals a heavy N.E. gale was encountered. The yacht was finally obliged to anchor in a bad cross sea, which increased so that when at 9 P. M. on Dec. 1 the coasting schooner Nellie W. Howlett, Capt. Steelman, was sighted, she was signaled with a gun, and her mate put off for the yacht in the yawlboat. After getting his cousins, Wm. B. Elsworth and Philip E. Van Buskirk, into the yawl, Mr. Elsworth declined to leave the yacht, but was finally induced to do so, as the seas were threatening to overwhelm her and crush in decks and cabin house. The schooner was loaded with phosphate rock and bound for Norfolk. As the gale increased she labored badly, the weather being very bad off Hatteras, and she came in leaking. While his companions came North from Norfolk, Mr. Elsworth returned to Carolina, but as yet has heard nothing of the yacht. She was left with two anchors down, in 15 fathoms, about 27 miles off Georgetown, S. C.

Mr. Parker H. Kemble, of the Corinthian Y. C., of Marblehead, has designed a fin-keel cruising yawl which is now under construction by William Acker, who has recently established a boat shop at East First street, foot of E street, South Boston. The yacht will be 30ft. 6in. over all, 20ft. 6in. l.w.l., 6ft. 3in. beam, 4ft. 6in. draft and 570sq. ft. of sail. There will be 4ft. 4in. headroom under a house 6ft. 6in. long, and the yacht will be fully fitted for single-hand cruising. The sails will be made by Cousens & Pratt.

The *Journal of the American Society of Naval Engineers* for November contains a very thorough and interesting account of the steam yacht Yosemite, by Chief Engineer Isherwood, U. S. N.

Lawley & Co. have begun work on the 30ft. yacht for Dr. Williams, designed by Chesebrough, and are also busy with several naphtha launches, one of them for Eugene Tompkins, and one, just finished, for B. F. Hutton, who will use her on the Honosassa River, Fla. She is 32ft. over all, with a cabin house.

The Knockabout Association has adopted the following resolution: "It is agreed that no Association knockabout boat shall enter or sail in the class in any open race unless the race for said class shall be governed by the rules of the Knockabout Association, and without time allowance."

The wedding of Capt. Chas. Barr and Miss Emily Smith took place at Southampton on Dec. 9.

Herbert F. Otis, of Boston, has ordered of Ambrose Martin, of East Boston, a schooner of 79ft. over all, 65ft. l.w.l., 20ft. beam and 10ft. 6in. draft, to be named Hesperus. She will be of wood and intended solely for cruising.

According to report, Mr. Will Fife has an order for a racing cutter similar to the very successful 40-rater Isolde, designed and built by him last winter.

Luella, schr., owned by L. A. Shaw, of Providence, and Daniel Lanton, of Pawtucket, sailed from Boston on Nov. 28 on a cruise to Florida, and on Dec. 5 started across Nantucket Shoals. She was caught in a gale and rode it out near Cross Rip Lightship, losing mainsail and jib, breaking boom and wheel, before she reached Nantucket Harbor. She will be laid up at Nantucket for the winter.

Black Pearl, steam yacht, owned by the late Earl of Pembroke, and recently purchased by George R. Sheldon, of Chicago, arrived at New York on Dec. 8, after a rough voyage of thirty-one days. She left Southampton on Nov. 7 with Capt. Bond in command, calling at St. Michaels on Nov. 22, after passing through a heavy gale off Cape Finisterre, in which her decks were swept and jib boom carried away. On Dec. 6 the decks were swept by a sea which carried away the forehatch and flooded the forecastle, the gig being swept away and a seaman thrown down and injured. Black Pearl was designed by Will Fife, Jr., and built by him while he was manager of the Culzean works for the Marquis of Ailsa in 1885. She is of 345 tons, 144ft. between perpendiculars, 23ft. 2in. beam and 13ft. 2in. depth, with engines 19 and 36 by 24in. She is of composite build, with iron frames. She did excellent service for nearly ten years under her late owner. Mr. Sheldon will probably send her to Chicago. Capt. Eldridge, so long in command of Yampa, will be in command.

The annual meeting of the Yacht Racing Union of Long Island Sound will be held in Parlor F, Fifth Avenue Hotel, at 8 o'clock, on Monday evening, 30th inst.

The annual meeting of the Douglaston Y. C. was held on Dec. 10, the following officers being elected: Com., Charles A. Gould, steam yacht Nearea; Vice-Com., Clay M. Green, steamer Viola; Rear-Com., F. R. Parsons, slp, Cresent; Sec'y, James B. Hixon, Jr.; Treas., George A. Corry. Com. Gould and C. F. Robins will each build a 30-footer, and another member will build a racing 15-footer, so the club will be well represented in the Sound races next season.

The annual meeting of the Rochester Y. C. took place on Dec. 6, followed by the annual banquet. The following officers were elected: Com., F. S. Todd; Vice-Com., J. E. Burroughs; Fleet Captain, J. W. Robbins; Sec'y, Thomas B. Pritchard; Cor. Sec'y, F. S. Peer; Treas., George H. Clark; Meas., W. H. Pillow, Jr.; Fleet Surgeon, Dr. J. W. Herriman; Directors, J. F. LaClaire, J. R. White, R. K. Dwyer and A. T. Hagen; Delegates to the L. Y. R. A., J. E. Burroughs, Thomas B. Pritchard and F. W. Bickford.

Saunders, the Bristol builder, has just completed a small fin-keel schooner for the Samana Bay Fruit Co., of San Domingo, for use as a dispatch boat between the company's plantation and the port of San Lorenzo, fifteen miles distant. She is named San Lorenzo, and is 35ft. over all, 28ft. l.w.l., 8ft. beam, and 4ft. 9in. draft, with a bulb-fin of cast iron weighing 3,600lbs. The rig will be two leg o' mutton sails and jib. The construction is particularly strong and designed to stand in hard work and a hot climate.

The annual meeting of the Pavonia Y. C. was held on Dec. 11, the following officers being elected: Com., David W. Kohn; Vice-Com., James Johnston; Fleet Captain, Robert H. McFarland; Fleet Surgeon, Dr. Louis Baumann; Treas., Benjamin H. McClain; Fin. Sec'y, Wm. F. Tobin; Cor. Sec'y, Wm. A. Miller; Meas., Asher P. Curtis.

BOAT BUILDERS WANTED to plank and build throughout modern racing and cruising yachts of the smaller types. Only first-class, experienced men wanted. Constant employment to right parties. Write S. L. B., FOREST AND STREAM office, 318 Broadway, New York city.—*Adv.*

Canoeing.

New York C. C.

THE annual meeting of the New York C. C. was held on Dec. 12 at the club house, Bensonhurst, President Coudert being in the chair. The reports for the year showed a large membership list and a very good financial condition, considering the heavy losses of several previous years and the great expenses of the new station. Last spring the club leased a large plot of ground at Bensonhurst, with a very roomy and comfortable dwelling house, which was refitted to suit its uses. A small canoe house was built on the beach, and a long pier with float and bridge. The cost of the pier and float was $1,200, and many other expenses accompanied the furnishing of the house. Through the season and even up to the present time members have lived in the house, a very good table being provided at moderate prices. A good deal of sailing and cruising has been done, and new members added. The floating house, which is useless in the present location, has been docked at Bay Ridge through the season, and will be sold as soon as an opportunity offers; the club having a five years' lease of the present premises, with the option of purchasing. The task of the officers through the year has been trying and difficult; but winter the club had no money to meet its old obligations or to warrant new and heavy expenditures, and that so much has been done is greatly to the credit of the president, Mr. L. L. Coudert, and the chairman of the house committee, Mr. H. C. Ward. The officers elected for 1896 are: President, C. Bowyer Vaux; Secretary, John C. Mowbray; Purser, Woolsey Carmalt; Captain, H. C. Ward; Mate, John E. Plummer; Trustees, Louis L. Coudert, Frank C. Moore, L. J. Boury.

On Dec. 14 a mess dinner was given at the club house, at which forty members and guests were present. After dinner the question of a "one design" 15-footer of cheap construction was discussed, and steps were taken toward securing designs and estimates for such a boat; the expectation being that at least a dozen will be built if the cost can be made low enough.

American and English Canoeing.

IT is a matter of regret that international canoe racing is no longer possible between America and England, in consequence of the great difference in the rules of the two nations. The *Field* discusses the subject as follows:

The leading canoe sailing authorities, both of England and of America, have now settled the classifications and places of canoe sailing for 1896, and we are again facing the fact that the classification rules differ so widely between the two countries that international canoe sailing competition is almost impossible, or at least extremely unlikely to take place. A canoe constructed in England to the full allowance of the racing class, that is, of 36in. beam, is not eligible under the American Association rules; so also is the English cruising class of 42in. beam barred; and yet, as the English rule requires a rating of 0.3 ($L \times S \div 6000$), the sail area of the English canoe is limited to probably 130sq. ft. or less; whereas the Americans may carry at present anything up to 130sq. ft. (that is if the vote of the A. C. A. executive committee is indorsed by the Association) no matter what the waterline length may be, so long as it does not exceed 16ft., the English allowance of sail for such length being only 112sq. ft.

An English canoe, fitted with a bulb-liftable keel, where the bulb remains below the boat's wooden keel when hauled up, is barred by the American rule that "the centerboard when hauled up must not project below the keel."

On the other hand, the American canoe coming to England would, unless her loadwaterline did not exceed 14ft., have to reduce her sail area in compliance with the 0.3 rating. She would be a very small and touchy craft to sail on a windy day at Burnham-on-Crouch, especially as she would probably have to meet some of the new class of 42in. beam craft fitted with bulb-plate keels, and with 42in. slide seats against hers of 30in., for it appears that another recommendation agreed to by the A. C. A. meeting is to limit the length of slide seats to the width of the canoe. But, after all, there is of course still the possibility of men in either country building specially for racing in the other country, building fully up to all allowances; but this means building and fitting for practically one race, with very scant chance of test races or tuning up.

The American Canoe Association camp meet for 1896 will be held Aug. 14 to 28, and the old 1886 site in Grindstone Island on the St. Lawrence is again to be the place of meeting and racing. Were it not for the classification difficulties above mentioned, why should not 1896 be a repetition of 1886, and bring together on the old camp ground, on the border between Canada and America, a large muster of the old hands of America and of England and her colony? Would the younger blood make a clean sweep of all the prizes? We doubt it; that is to say, if gymnastically handled revolving machines were either barred entirely or reasonably clouded, by being made to compete, and at some disadvantage, with larger and more powerful, perhaps more "tubby," canoes.

Unfortunately, it is now only too clear that no practical line has been taken in America for next year to arrest the downward course and dwindle of canoe sailing, proved and admitted, as it is, to be caused by sailing having degenerated into "trick riding." Why has no attempt been made in the United States even to test, by a vote, the easily possible amendment of the classification rules, with the object of encouraging a better type of sailing canoe?

In England, at least, the way is now open, and the possibility for a better type than the racing machine has been placed before canoemen. The revolving machine—in some places called a "racing canoe"—has this past season, in open water sailing, covered herself ignominiously with water and ridicule. But, if half the present forecasts should prove true, this type has about finished its career; its flame may not be quite extinguished, and it may yet make a flicker or two in 1896, but a couple of miles of Burnham salt water with wind against tide will soon snuff out that last flicker. The poetical fiction of rats leaving sinking ship is not of much import, but when the skippers leave, things are probably going down. We had it last week from three of last season's "skippers," and two lately racing men, that they intend to build for 1896, and race in the "cruising canoe" class. It is the conglomeration of organic molecules which creates a world, and the "atoms" aforesaid may make a class and a world of sport.

The B. C. A. Meet.

THE British Canoe Association, at its annual meeting of the general committee at Liverpool on Nov. 29, decided to hold the annual meet at Falmouth, from July 27 to Aug. 17.

Rifle Range and Gallery.

Walnut Hill Scores.

WALNUT HILL, Mass., Dec. 7.—The regular weekly shoot of the Massachusetts Rifle Association was held to-day, the weather conditions being entirely favorable for good scores. There are only three more weekly shoots before the series of prize competitions are brought to a close; as a natural result, much interest was taken in the result of to-day's shoot. The scores made to-day are given below:

200yds. range, standard American target:

Off-hand prize match: F. Williams 83, C. A. Coombs 82, M. T. Day 77, J. A. Smith 75, B. E. Hunter 74, D. S. Martin 71, W. F. Hart 65.

Medal off-hand match: S Gleason 76, D. S. Martin 74, M. T. Day 73, B. E. Hunter 62.

Military prize match: C P. Nutter 45, 45, 45, J. Boardman, Jr., 44, I. B. James 43, W. F. Hart 42, B. O. Wood 41.

All-comers' military match: W. O. Burnite, Jr., 45, 45, 44, W. F. Hart 43, S. R. Ames 42, C. W. Lamb 41, P. N. Cooke 40.

Military medal match: A. J. Litchfield 40, P. N. Cooke 39, A. W. Hill 37, C. S. Snow 36.

Revolver medal match, 50yds., six shots in one minute: J. H. Keough 28, 28, 28, 28, A. W. Hill 27, 27

Pistol prize match, 50yds: H. S. Harris 97, M. T. Day 91, F. Williams 87, W. A. Wesson 86, A. W. Hill 85, P. N. Cooke 82, C. B. Jameson 81

Pacific Slope Riflemen.

SAN FRANCISCO, Dec. 8.—To-day ended the members' medal shoots for the year in the Columbia and Germania Clubs, a summary of which I shall soon send you. Two weeks from to-day the All Comers' contests of the Columbia Pistol and Rifle Club will also be completed for 1895. Some of the medal hunters are neck and neck in the race.

Am pleased to learn that the New York police are learning how to shoot. One of Columbia Club's champions, Smith Carr, is an officer on our force, and has recently been detailed to train the men in revolver practice.

Scores of the Columbia Pistol and Rifle Club:

Medals and cash prizes, open to the world, re-entry, rifle, 200yds.:

Target rifle, Kuhnle medal: D. W. McLaughlin 93, F. O. Young 88, Dr. Rodgers 85, A. Gehret 83.

Military rifle, Glindermann medal: Frank Poulter 48, Ed. Hovey 47.

For members only, no re-entry:

Champion class: Dr. Rodgers 84, F. O. Young 84, D. W. McLaughlin 82.

First class: P. Bohr 76, A. Gehret 76, Dorrell 72, Schulz 70.

Second class: H. R. Crane 77, E. Jacobsen 76, J. E. Gorman 70, Dennis 70, Fetz 69, Kennedy 62, Hess 61.

Medals for members only, no re-entry, pistol, 50yds.:

Champion class: A. H. Pape 92, F. O. Young 91

First class: Dr. Rogers 90, J. E. Gorman 90, A. B. Dorrell 86, McLaughlin 82.

Second class: F. Dennis 83, E. Jacobsen 82, Crane 75, Fetz 72.

Open to all comers, re-entry:

Pistol, Blanding medal: C. M. Daiss 96, F. O. Young 91, E. Jacobsen 90. ROEEL.

Zettler Rifle Club.

NEW YORK, Dec. 10.—The following scores were made by members of the Zettler Rifle Club at the club's weekly shoot this evening:

Dr J A Boyken	244	244	241	244	243
S Buzzini	232	239	240	237	240
G W Downs	232	237	234	236	233
M B Engel	245	241	240	242	240
L Fiach	242	246	247	247	245
H Holjes	237	242	244	245	247
H D Muller	244	231	240	242	234

Gus Nowak	234	237	238	236	242
S Buzzini	244	244	237	243	243
C Overbough	235	244	242	240	246
F C Ross	243	243	249	241	249
C G Zettler	242	241	245	235	242
B Zettler	244	240	239	242	245
C F Roedel	207	209	218	219	211

Turtle Bay.

NEW YORK, Dec. 17.—The regular outdoor shoot of the Turtle Bay Rifle Club took place at Woodside, L. I., Sunday, Dec. 15. A 50-shot team match was to be shot by Messrs. Plate and Ochs vs. Walter and Fuchs, but the latter two had failed to appear, so they had to forfeit the purse. Scores:

C H Plate	222	224	210	216	209—1081
J Ochs, Jr.	220	219	217	208	208—1072
J F O'Berle	201	202	204	206	205—1018
Aug Eberhardt	200	212	196	200	199—1007

Range 125ft., 22cal. short. J. OCHS, JR., Sec'y.

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

Dec. 25.—MARION, N. J.—Monthly prize shoot of the Endeavor Gun Club, of Jersey City, N. J.; targets. Shooting commences at 10 A. M. J. A. Creveling, Sec'y.

Dec. 26.—YARDVILLE, N. J.—Team race between 15-men teams of the Climax Gun Club, of Plainfield, N. J., and the Keystone Shooting League of Philadelphia, Pa.; live birds.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 318 Broadway, New York.

Tell, our correspondent at Mountville, Pa., writes us as follows: "The Lancaster County Shooting Association will hold an all-day target tournament at its grounds at Mountville, Pa., on New Year's Day. The club has a large and commodious club house, well heated, with the whole of the front inclosed with glass; the shooters and the whole field can be seen from the inside of the house. This year's programme will be in touch with all the boys, as it will include the 3 moneys, class shooting; the 25 cents miss-and-out, and purses divided on the A. I. I. or the N. P. L. system, *i. e.*, the 'all in it,' or the 'no person left' system. We have never shot this system yet, but many of our shooters are tired of shooting right along and getting nothing. We propose at this shoot that everybody shall have some sport. In the A. I. I. system we foot up the targets broken by the shooters, dividing the net purse by that number so as to get the value of each broken target; we then multiply each shooter's score by the value thus obtained, etc. All get something back; all go in again and the sport goes on. Mountville is midway between Columbia and Lancaster, on the electric railway, with grounds not a minute's walk from the track." The above system, as we have pointed out several times, is a variation of the old jack rabbit system—a capital system for club shoots. A man who shoots a good clip can do better than break even, while a poor shooter only pays a fit sum for his day's sport; under this system there are no big winnings and no big losings—both mighty good things for the best interests of the sport of trap-shooting.

The O. K. Gun Club, of Kansas City, Mo., at the beginning of the season of '95 purchased a fine medal, for which it paid $125. This medal was contested for monthly, and was to become the permanent property of the shooter making the best average during the season. The conditions were 15 live pigeons per man, with an added dead bird handicap. The final contest for the trophy took place Tuesday, Dec. 3, Chris. S. Gottlieb proving the winner of the same, he having an average of 100 per cent., including his added handicap. Up to the final contest Chris. Gottlieb and A. Rube were tied for the trophy, but in this shoot Gottlieb scored 14, while Rube only scored 11. Twenty-three shooters took part in this last contest; of that number fifteen tied for the medal. In the shoot off Durrant won, and he will therefore be permitted to wear the medal for the current month. After that it will revert back to Mr. Gottlieb, who becomes the permanent possessor of it.

August Holzapfel, of Cuero, Texas, died at San Antonio, Texas, on Dec. 4. Mr. Holzapfel, or Holz, as his friends generally called him, went to San Antonio about the middle of November to receive medical treatment. His sickness was incurable, and he died as stated above on Dec. 4. As a trap-shooter, Holz was one of the most popular men that ever attended a tournament; he was quiet and unassuming in his manner and was never heard to raise his voice in protest of a referee's decision. He was the acknowledged all-round champion shot of the Lone Star State, and his absence at the tournaments of the great Southwest will be felt for some years to come. Holz came North last summer and was a guest of the New York State Association at the State shoot at Saratoga in June. He also made many friends in the vicinity of New York, when he attended the club shoots of the Climax Gun Club, of Plainfield, N. J., and of the Endeavor Gun Club, of Jersey City, N. J.

We are told that doubts have been expressed as to the capabilities of the managers of the San Antonio (Tex.) midwinter tournament to carry out their programme successfully; that is, to add $2,000 to the purses. No such expressions of doubt have reached the office of FOREST AND STREAM; but, on the contaary, we have heard much that goes to bear out the statement of the management that it will add $2,000 to the purses. The promoters of the midwinter shoot are: J. M. George, Postmaster of San Antonio; Albert Steves, of the firm of Ed. Steves & Son, of the same city, and O. C. Guessaz. Mr. George is easily worth half a million, while Mr. Steves is one of the wealthiest young men in the vicinity of San Antonio. The addition of $2,000 to the purses at their tournament by either Mr. George or Mr. Steves would be a matter of little moment to them. The added money at the midwinter tournament is all right.

Arrangements are being made for a match between teams from the Climax Gun Club, of Plainfield, N. J., and the Keystone Shooting League, of Philadelphia, Pa. The match is to take place at Yardville, N. J., neutral grounds, on Dec. 26, the day after Christmas Day, the conditions of the race being as follows: teams of from 12 to 15 men, 15 live birds per man, optional sweep of $5 or $10, losing team to pay for the birds. Charlie Zwirlein will see to it that each man has as good birds as he wants to shoot at, and also promises to furnish dinner free to the members of both teams. As this is the third match between the two clubs, both organizations will make a strong effort to get together as strong a team as possible during the holiday season.

The amateur championship, as it is termed, will be a big event. The dates for it are Jan. 10, 11, the shoot being set to come off at the grounds of the Westminster Kennel Club, Babylon, L. I., where the birds, under the care of Superintendent George Mott, are always of the very best quality. Over a dozen entries have been already received, with a prospect of an additional half dozen before the date for closing arrives. The conditions are: 100 live birds per man, $100 entrance, all at the 30yds. mark.

We have not heard directly from the hunting party formed of members of the Altoona, Pa., Gun Club, that has been camped for some time in the wilds of Fulton county, Pa. From what has reached our ears, we learn that "Van Dyke is punching holes in the air around the ruffed grouse, the same as we all do!" Deer had been seen pretty often, and the party was only waiting for a tracking snow before going for them; no hounding is permitted, all the deer driving being done by sportsmen who are self-denying enough to place their friends on the runways and then go off and follow a fresh track.

Jas. A. R. Elliott, of Kansas City, Mo., and T. W. Morfey, of Paterson, N. J., have agreed to shoot a 100 live-bird race as soon after Jim Elliott's return from the San Antonio midwinter tournament as possible. In all probability the match will take place the latter part of January. According to the terms of the agreement Elliott is to use a Winchester repeating shotgun, Morfey using his double gun, both standing at the 30yds. mark. Morfey says: "I'll make him kill 90 to win, and I don't believe he can do it." Jim says: "I'll try hard to get that 90."

The death of August Holzapfel, of Cuero, Tex., as reported elsewhere in these columns, is a sad loss to the ranks of the trap-shooters of the great Southwest. "Holz," as he was familiarly called by his friends, made many new friends during his visit to the North last June and July. He was present at the New York State shoot at Saratoga, and, as the guest of Tom Keller, made his appearance at shoots held on the Climax and Endeavor Gun Clubs' grounds prior to his departure for his Texas home. Holz was a good shot and a great favorite. His absence will be felt at many a shoot in the Southwest for some years to come.

The Cook County Trap Shooters' Association, under the secretaryship of W. F. de Wolf, promises to boom things next season in the vicinity of Chicago. A live body of trap shooters, as long as there is an energetic body of officers at its head, can do more to help trap shooting than can be accomplished by the holding of a dozen large tournaments. The New Jersey Trap Shooters' League is another organization, of a similar character to the Cook County Association, that has done a lot of good for trap shooting in the neighborhood of New York city.

The Jockey Club of San Antonio has offered the use of its grounds to the managers of the midwinter tournament for the purposes of the shoot, and the traps will be located directly in front of the grand stand. The Jockey Club has also placed its club house at the disposal of the visitors to the shoot, the creature comforts of the shooters thus being assured. We understand also that the officers of Fort Sam Houston have proffered their aid, and that there will be a grand military display. In fact, the midwinter tournament will be a gala occasion.

There is another shooter at Pittsburg, Pa., besides those who are well known in trap-shooting circles, such as the Denny brothers, King brothers, Messner, Bessemer, etc. The one we refer to is C. A. May; readers of FOREST AND STREAM who have followed the scores made in the live-bird shoots of the Herron Hill Gun Club will have noticed the frequency with which Mr. May's name appears at the top of the list. The name May is, by the way, an assumed one, but "the rose by any other name," etc.

Arkansas will be represented at the San Antonio midwinter tournament; so writes our Little Rock correspondent, Paul R. Litzke. He tells us that an effort will be made to have an Arkansas squad in attendance. John J. Sumpter, Jr., and G. W. Hughes, of Hot Springs, and W. R. Duley, of Little Rock, have signified their intention of being present at the shoot, while several others from the same cities are contemplating a trip to Santone.

In our report of the winning of the "President's Cup" at the Carteret Club by J. P. Knapp on Dec. 4, we made an error in the name of the maker of the gun used by Mr. Knapp, who uses a Francotte gun made after the Purdey model, not a Purdey gun pure and simple. As the performance, a win from the 32yds. mark, is indeed a meritorious one, we gladly make the above correction.

William Terry, of Plainfield, N. J., and John Benner, of the Fanwood, N. J., road house, are booked to shoot a match at 25 live birds per man, $25 a side, on Christmas Day, the shoot coming off at the grounds of the Climax Gun Club. There will be sweepstake shooting both before and after the match.

Elias Helgans, one of the crack shots of Brooklyn, N. Y., a member of the Parkway Rod and Gun Club, has matched himself to kill 85 live birds selected by Mr. Lippack, of Dexter Park, the birds to be trapped from the Mott traps. The stake at interest is the price of the birds.

On Saturday, Dec. 7, H. G. Wright and J. Seaver Page shot a 100-bird race on the Carteret grounds, Wright winning with a capital score of 89 to 85. As Superintendent Lumbreyer always has good birds on hand at the Carteret Club grounds nowadays Wright's score of 89 is pretty nearly first class.

George Work defeated J. Seaver Page in a match at 50 pairs of live birds on Monday, Dec. 16. The shoot took place on the grounds of the Westminster Kennel Club, Babylon, L. I., Work laying odds of 2 to 1 on himself.

Elmer Shaner, manager of the Interstate Association, is in the city and was present at the annual meeting of the Association held on Tuesday, Dec. 17, at Taylor's Hotel, Jersey City, N. J.

The regular monthly prize shoot of the Endeavor Gun Club, of Jersey City, N. J., will be held on the club's grounds, Marion, N. J., on Dec. 25. Shooting commences at 10 A. M.

In their series of three matches shot last week Clark and Willey both used Greener guns and Schultze powder.

EDWARD BANKS.

Interstate Association Annual Meeting.

THE annual meeting of the stockholders of the Interstate Association was held Dec. 17, in Taylor's Hotel, Jersey City.

Those present were: Justus von Lengerke, of Von Lengerke & Detmold; J. A. H. Dressel, secretary-treasurer of the Association, representing the U. M. C. Co.; Paul North, of the Cleveland (Blue Rock) Target Company; Capt. A. W. Money, of the American E. C. Powder Company; J. L. Lequin, of the Hazard (Blue Ribbon) Powder Company. Proxies were held by Mr. Dressel on behalf of the Leroy Shot and Lead Works and the S. S. Powder Company, Messrs. Wiebusch & Hilger, of New York.

In the absence of President Chas. Tatham, Mr. Paul North, on motion, took the chair.

Mr. Dressel stated that the following had joined since the meeting of 1894: Hazard Powder Co., Parker Bros., and the Winchester Repeating Arms Co. The active membership of the Association is thus ten, the Standard-Keystone Target Co. having retired.

It was voted that in future all candidates for membership be elected by ballot of the stockholders, two negative votes to exclude; the ballot to be by mail or in meeting. Motion carried.

The report of the manager of the Association, Mr. Elmer E. Shaner, was then read, as follows:

MANAGER SHANER'S REPORT.

PITTSBURG, Pa., Dec. 14, 1895.—*To the president, officers and members of the Interstate Association:*—Gentlemen: I would respectfully present to your notice the following as a detailed report of the transactions of the manager's office for the season of 1895.

In the review of tournaments, copy of which is hereunto annexed, will be found briefly yet clearly outlined all the interesting statistical data of the work accomplished by this Association.

As will be remembered, at the annual meeting held last December, the board of directors decided to confine the work of the Association for the then coming season mainly to the South. After a calm, careful review of the work and its ultimate and far-reaching results, the wisdom of that decision will not now be seriously questioned.

When we consider the permanent, lasting and active character of the many gun clubs organized throughout the South, attributing in many cases their origin and success to the well-directed efforts of the Interstate Association, and further note the advancement of trap-shooters of both sections of the country, it will be admitted that the trap-shooting interests of the South are in the same position to-day relatively that the same were in the North some five years ago; and at that time, as is well known, trap-shooting took a decided boom.

While each particular tournament given was more than ordinarily successful, it will be noted by readers of the "Review of Tournaments" that in the aggregate the number of shooters taking part, and the number of targets trapped, was, as predicted in my last annual report, not quite as large as that of the phenomenal season of 1894, which was confined principally to the North. With this single exception, it was the most successful season, numerically, in the existence of the Association. In a general summary, the incalculable good done by this series of tournaments to the sporting goods trade can be readily discerned by the increasing demands for and sale of sporting goods in their respective localities and surroundings, and it will be understood how this must eventually redound to the practical benefit of your subscribers individually and collectively.

For the season of 1896, when we take into consideration the lasting and permanent interest manifested throughout the South, I deem it quite advisable to devote another year's work to that particular locality, not overlooking the fact that the gun clubs of the far West and Northwest are making such insistent demands upon us that their claims cannot much longer be ignored.

As advised by the board of directors at the last annual meeting, I purchased one large tent 36 × 22ft., with full equipments for same, as well as new gun racks, cartridge tables, coat racks and large cases for the carrying of the *impedimenta* of the Association. This was undoubtedly one of the wisest movements ever made by the Association, as the gathering of shooters in the one large tent brought to their particular attention the exhibits and advertising matter of all the subscribers without any preference in position, as possibly might have been construed in the arrangement of several tents. Another advantage of the one-tent plan is the great saving in freight tolls, the rate of which throughout the South is exorbitant. While on this subject it might be well to call the attention of the board of directors to the necessity, if practical and possible, of having the outfit franked, or even pro-rated throughout the circuit for the coming season.

The red-letter event, the annual Grand American Handicap, and all the details connected therewith, should be given serious and decisive consideration at this meeting.

The system of handicapping, if any, to be adopted for the target tournaments during the year of 1896, should be given the mature deliberation of the board of directors.

The paraphernalia of the Association is all stored at Pittsburg, fully covered by insurance, and with the exception of incidental wear and tear, resultant from frequent shipments, is in strictly first-class condition.

In conclusion, gentlemen, I thank you for the many kindnesses and timely advice tendered the management, which, by me, has always been gratefully received, and has proved an incentive to me to strive for the further success of the Interstate Association. Very respectfully submitted, ELMER E. SHANER, Manager.

On motion it was agreed that an auditing committee be appointed to go through the books, and that a report be made in writing by the treasurer to each member of the Association.

This board of directors was elected: Chas. Tatham, O. D. Delano, J. A. H. Dressel, Justus von Lengerke, Noel E. Money, Paul North and Charles F. Wiebusch.

The meeting of stockholders was adjourned, and a meeting of the board of directors, with Paul North as temporary chairman, then went into session.

The board elected these officers of the Association: President, Chas. Tatham; Vice-President, O. D. Delano; Treasurer-Secretary, J. A. H. Dressel; all the above were unanimously re-elected. The executive committee for 1895—Messrs. Dressel, Chas. Tatham and Justus von Lengerke—was re-elected to serve for 1896. Classification and Tournament Committee, J. von Lengerke, Noel E. Money and J. L. Lequin. Club Organization Committee, Paul North, Noel E. Money and Justus von Lengerke.

The Association unanimously appointed Elmer E. Shaner manager for 1896. The chairman paid Mr. Shaner a very high compliment for the manner in which he has handled the affairs of the Association in the past.

The other business of the board was connected with the programme for 1896.

Washington Heights Gun Club.

NEW YORK, Dec. 10.—The Washington Heights Gun Club held a shoot at its grounds, 169th street and Kingsbridge, this afternoon. The main event was at 10 live birds, ties being shot off miss-and-out. The scores were as follows:

	Ties.		Ties.
J A Belden.....1012011102—7	1	W Dishrow.....0110000122—5	10
J J Organ.....1121020110—7	0	J Power.....1001011010—5	10
C E Twiliger....1200012211—6	121	R B Saul.....0111100010—5	20
H Harrison.....2010110011—6	120	H Knose.....0000000212—3	
E Leach.....0010221201—6	220	F Sherry, Jr....2000001000—2	
H H Oliver.....2100110002—5	11	F Sherry, Sr....0001000000—1	

Belden won the first prize, Twiliger second prize and Oliver third prize.

Trap Around Buffalo.

BUFFALO, N. Y., Dec. 4.—Two friendly races were shot to-day at Audubon Park, the two shooters breaking even, each winning a match. The first was at 30 live birds and in this match Smith used his second barrel but four times, twice unsuccessfully, he finished his score with a run of 21 straight, 19 of them one-barrel kills. The target match was won by Edwards, although Smith led up to the 53d round. Scores:

Match No. 1, 30 live birds, $10 a side and the price of the birds:

B F Smith	101111101111121111211111111—28			
J Edwards	1210211•1211011211221211212—26			

Match No. 2, 75 targets, unknown angles, $10 a side and the price of the targets:

J Edwards	101111110111111111101111100111111111111101111111101—43 11111101111111111101111 —23—66			
B F Smith	111111111111111111011001111111011111111111111100—44 11001000101111011111111 —18—62			

Dec. 6.—A few targets and live birds were shot at Audubon Park this afternoon in cold, raw weather, with a very strong wind blowing. The sweeps resulted as follows:

No. 1, 15 targets, unknown angles, $1 entrance: McClure, 13; Mallory and Smith, 10; Storey and Charles, 9; C. Orr, 7.

No. 2, same: Mallory, Charles and Smith, 10; McClure, 9; Storey, 5.

No. 3, 5 live birds, $2.50 entrance, two high guns, tie shot off miss-and-out:

Charles	1212•—4	1122—4	Mallory	1•211—4	1• —1
Smith	22•21—4	222•—3	Storey	00221—3	....
Kirkover	12021—4	120 —2	McClure	01•21—3	....

Dec. 7.—The Audubon Gun Club held its badge shoot this afternoon at its grounds, Audubon Park, Main street. There was an excellent attendance of members, nineteen taking part in the main event, while the two sweeps also shot off had eighteen and seventeen entries respectively. A very high wind was blowing directly from the shooter toward the traps, making the targets fly hard and fast. Following is the score in the badge shoot:

C S Burkhardt	1000111111011010111001111—17
E C Burkhardt	1110101101001100111011110—16
E W Smith	0111111100010011110001111—16
G McArthur	1110010111010011101110001—15
C J Haigh	1000010101011011011110011—14
L J Northrup	0001110100100110010101111—13
J J Reed	0011110010111010000101100—13
H D Williams	0010101011111110101001000—13
E H Rounds	0111010110001101010010010—13
J P Philips	1101101010010000100010011—12
N E Storey	0110000011111000101010101—12
B Talsma	0111100000110101010100000—10
Dr McMichael	0000000111011010010101010—10
Dr Sawer	0101010001000000011111000— 9
L Erb	0111001001010100000000111— 9
G E Miller	0000101000101010010110000— 8
A Combs	0000010010000111100000000— 6
P Meyers	0000000100000100111000001— 6
Dr Woodbury	0000000010000100010001000— 4

Two sweeps were also shot with the following results:

No. 1, 10 targets: G. McArthur 9, J. P. Fisher, P. Meyers and E. W. Smith 7, E. C. Burkhardt, E. H. Rounds, N. E. Storey, L. Northrup and J. J. Reed 6, B. Talsma, C. S. Burkhardt, Dr. McMichael, Dr. Sawer and Philips 5, H. D. Williams and G. O. Miller 3.

No. 2, same: G. McArthur 9, E. C. Burkhardt and P. Meyers 8, E. W. Smith, C. S. Burkhardt, E. H. Rounds and G. O. Miller 7, Dr. Sawer, N. E. Storey and L. Northrup 6, J. J. Reid, Dr. McMichael and B. Talsma 5, H. D. Williams 3.

Eden Gun Club.

EDEN, N. C., Dec. 11.—The annual meeting of the members of the Eden Gun Club was held here to-day. In connection with our annual meeting we held a live-bird shoot which, being something new to us in this country, was well attended, several of our visitors coming twelve miles to be present at the gathering. The scores, which are given below, were made on some of the fastest birds I have ever seen trapped. A feature of the day's fun was the placing of a rabbit in one of the traps instead of a pigeon; the trap fell to Mr. I. N. Dorsett, and it is hard to say which was the more surprised of the two—the rabbit or Mr. Dorsett; anyway, bunny got away without a hair being ruffled. Before the shoot commenced the following gentlemen were elected officers of the club for the ensuing year: President—Richard Regan, ex-president of the Emerald Gun Club, of New York; Vice-President—M. F. Briles, of Eden, N. C.; Treasurer—E. H. Dorsett; Secretary—George H. Yow. The scores made in the shoot were as follows:

Dr G V Hudson (28)	0211212—6	E H Dorsett (26)	0•112•0—3
J W Rush (28)	1121012—6	A S Miller (26)	020•102—3
R Regan (26)	2211021—6	J W Lambeth (25)	1•00120—3
I M Dorsett (21)	1012122—6	M F Briles (21)	2002010—3
G H Yow (28)	111•102—5	Dr Flippin (28)	0•20001—2
J D Laflin (28)	•210012—4	J T Grimes (28)	001•002—2
R L Hoover (26)	12•0120—4	A E Andrews (25)	0•02010—2
C Skeen (21)	2•02101—4	D Thomas (21)	00••201—2

The first prize, a silver cake basket presented by Dr. Hudson, fell to Richard Regan; second prize, a silver sugur bowl and a dozen spoons, presented by Mr. Regan, was won by I. M. Dorsett; the third and fourth prizes, a shooting vest and shooting hat respectively, both presented by W. Fred Quimby, of New York, were won by Dr. Hudson and J. W. Rush.

After the presentation of the prizes the members and their guests sat down to dinner in the residence of E. H. Dorsett, our worthy treasurer, the menu being varied and of an excellent character. It is unnecessary to add that the Eden Gun Club is a live organization.

Trap Around Pittsburg.

PITTSBURG, Pa., Dec. 10.—Several members of the Herron Hill Gun Club held a shoot to-day at Brunot's Island. The birds were an excellent lot. Scores:

No. 1, 10 live birds: Farmer and C. A. May 9, Rickey 8, W. S. King 7, J. O'H. Denny 6, Hays 5.

	No. 2, same.	No. 3, same.

Rickey, Farmer and C. A. May then shot at 20 live birds per man: Rickey scored 20 straight, Farmer 17 and C. A. May 16.

The Newburgh Men were Victorious.

NEW YORK, Dec. 11.—A team of 9, representing the West Newburgh Gun and Rifle Association, of Newburgh, N. Y., shot a race to-day on the Baychester, N. Y., grounds with a team from the Cobweb Gun Club. The race throughout was a most exciting one, the Newburghs winning at the finish by the narrow margin of 1 bird—77 to 76. The day was bright and clear, but cold, with a strong wind that blew from left to right across the traps; this wind carried several birds out of bounds, notably the two scored lost to Gus Greiff. Coldren Defeats Harrison.

READING, Pa., Dec. 12.—Harry Coldren, of Adamstown, and Brooke Harrison, of this city, a member of the Reading Shooting Association, shot a race at live birds to-day. Coldren winning easily with a score of 88 to 80. The birds were a selected lot, Coldren's score being a very creditable piece of work, as it was his first appearance as a match shooter in a long race. Score:

G. P. Christianson, of Webster City, Ia., has issued a challenge to H. Gilbert, of Spirit Lake, Ia., for the Du Pont cup, now held by the latter. The match will be shot during the holidays.

The Clark-Willey Matches.

WILLEY WON TWO OUT OF THREE.

THE series of three matches arranged to take place between W. G. Clark, late of Altoona, Pa., and Allen Willey, of Hadlyme, Conn., was brought to a conclusion late on Saturday afternoon last, Dec. 14. The three matches had been fixed for three consecutive days, one match each day. The first was to be shot on the grounds of the Elizabeth (N. J.) Gun Club, Dec. 12; the second at Charlie Zwirlein's Yardville, N. J., grounds on Dec. 13, and the final match on the Dexter Park, L. I., grounds on Dec. 14.

The above programme was successfully carried out, the weather—barring the cold on the first two days—being all that could be asked for. The birds at Elizabeth and at Yardville were a rattling good lot, while at Dexter Park the first 100 flew well, many of them being extremely hard birds; the last 100 were shot at in a fast falling light, the consequence being that incomers were far too numerous. As a matter of fact the match at Dexter Park was commenced at least an hour too late for this time of the year, the first shot not being fired until 2:25 P. M. The last 25 for each man were shot in such an uncertain light that many of the kills of outgoing birds were little short of marvelous.

Taken as a whole, the work of the two men in the series was a disappointment to their friends, the scores being low ones with the exception of Willey's 50 out of 56 in the match at Yardville. In that match he shot an excellent race, killing some extra fast birds and shooting in good, quick time. Clark did by far his best work of the series in Saturday's match, when at one time he ran 53 out of 61, two of his lost birds falling dead out of bounds. This was from the 10th to the 70th rounds inclusive. In the same match Willey scored 31 out of 32 birds, from the 39th to the 70th rounds inclusive.

The scores in the three matches were as follows: First match—Willey 83, Clark 80. Second match—Willey 50 out of 56, Clark 36 out of 56, Clark withdrawing, owing to reasons given below. Third match—Clark 85, Willey 80. These figures show that out of the 256 birds shot at by each man Willey scored 212, Clark only 201.

The combined records of the way the traps fell in the three matches are as follows:

	No. 1.	No. 2.	No. 3.	No. 4.	No. 5.	Total.
Willey	49	53	56	49	49	256
Clark	48	52	43	59	54	256
	97	105	99	108	103	512

From the above it will be seen that Willey drew No. 1 and No. 2 each once more than Clark did, but he had No. 3 just thirteen times more than his opponent. Clark, on the other hand, drew No. 4 ten times and No. 5 five times more than Willey did. As 102 would be about an average for the five traps, each trap kept wonderfully close to the average. At Elizabeth and at Yardville an indicator was used, while at Dexter Park the Mott automatic electric pulling apparatus was used. Each match is treated in detail below.

WILLEY WON BY TWO BIRDS.

Dec. 12.—The first match of the Clark-Willey series was shot to-day on the grounds of the Elizabeth, N. J., Gun Club. These grounds are capital ones for a pigeon match, and Nate Astfalk to-day showed that he can provide as good birds as anybody else. The birds were really an excellent lot of flyers, quick to take wing and strong when started. Notwithstanding the penetrating cold of the northeast wind, they were not allowed to feel it, the match birds being kept inside the warm club house and being brought out a dozen at a time as they were

W. G. CLARK.

needed. The consequence was that they were never the least bit chilled and flew as well as any we ever saw. This probably accounts in a great measure for the comparatively low scores made, 82 winning the match by 2 birds.

It cannot be said, however, that it accounts entirely for the low scores, because each man showed that he could kill good fast birds when they were dealt out to him. Of course there were a few that "nobody could have killed," and they naturally got away. Then again the cold was very severe and few shooters, if any, can do their best work when they have to be blanketed, like a horse, after each shot. Clark appeared to feel the cold the most, particularly after the interval of ten minutes for warming up, which took place at the half-way notch. Willey, on the other hand, seemed to be in need of the stove at the close of his second string; he did the best shooting of the match after the first 7 birds in the third string had been shot at. Out of the next 31 birds he lost but 2, and one of the two went out of bounds after being knocked down apparently as dead as a doornail.

As regards the luck of the birds, Willey drew the hardest birds in the first half, but Clark's birds in the second half made up whatever was lacking in the previous 50. Taken as a whole, therefore, the luck of the birds was about even. The fall of the traps, an indicator and a rope pull being used, was as follows:

	No. 1.	No. 2.	No. 3.	No. 4.	No. 5
Clark	11	21	17	14	27
Willey	21	28	21	19	11
	32	49	38	43	38

It will be noticed that Nos. 1 and 5 fell very unevenly to both men; Clark had No. 1 ten times less than Willey, while he drew No. 5 sixteen times more than his opponent did.

The match commenced at 1:15 with Willey at the score, Al Heritage acting as referee, Aaron Woodruff as trap-puller and Edward Banks as official scorer. Carl von Lengerke looked after Clark's interests.

The first bird of the match was a corker. It left No. 5 like a flash and twisted like a snipe, but Willey was too good for him and he made the first kill of the shoot. Willey missed his 4th and gave Clark the lead, but the latter followed suit in the next round and the pair were even. Next Willey lost his 7th bird dead out of bounds, but Clark once more evened things up by losing his 8th bird, also dead out of bounds. In the 13th round Clark drew a very hard bird from No. 5, the bird carrying both loads of shot just outside the boundary. This gave Willey the lead and he held it for the next 5 rounds. In the 19th round he drew a fast bird from No. 2 that beat him entirely, the bird losing only a few feathers; the score was once more a tie when Clark landed another good bird from the same trap. In the 21st round both men lost their birds, the score being still a tie. Each killed the next 4 birds, the score at the end of the first 25 showing 21 all.

Willey was the first to lose a bird in the second series, his 28th bird falling dead outside the boundary. Both men lost their birds in the 31st round, but Willey added one more to Clark's lead by losing his 10th bird. The next ten rounds were productive of some of the poorest work in the whole match, each man losing 4 out of his 10 birds. Killing the next 4 straight, the score at the half-way showed: Clark 41, Willey 39.

After the recess of ten minutes Jim Elliott took Al. Heritage's place as referee, the cold being too severe for Heritage's comfort. The official scorer also went inside the club house, where it was warm. Willey's 54th bird fell dead out of bounds, Clark's lead being increased to 3 birds. The next round, however, saw Clark lose a bird, but as Willey lost his 57th, Clark still had a commanding lead of 3. After that round, though, the match quickly took on another aspect; Willey ran 23 straight, while Clark lost 8 birds, the latter losing his 74th, 75th, 76th and 77th birds in rapid succession. Both men lost their 81st birds; Willey also had his 87th go out of bounds after being supposed to be a dead bird. When Clark lost his 93d the match was all over, as Willey had a lead of 5 with only 7 more to shoot at. Then Willey gave his backers a temporary scare; he let an easy bird from No. 2 beat him in the 94th round; his 95th was a fast driver that jumped clean out of the first load, not a pellet apparently striking him. Willey held his second barrel for a long time, finally bringing down the bird at least 35yds. from the score, the wing being broken; it was one of those 10 to 1 shots that come off now and then. His 91st and 92d both escaped, the 92d being a particularly fast bird. As Clark had killed his 4 birds, this work of Willey's reduced the lead to 2, with 3 more birds to shoot at, but the 3 he drew were all that one could ask for in a tight place and he scored them, winning as above by 2 birds to the good. Clark shot well at the close, killing 21 out of his last 23; he had struck his gait, but he came too late. The match occupied three hours all but five minutes.

The full scores, showing flight and number of trap, are as follows:

CLARK'S GUN GOES BACK ON HIM.

Dec. 13.—The second match of the series was shot to-day at Yardville, N. J., on Charlie Zwirlein's grounds. The weather was even colder than that of the previous day—Dec. 13, 1895, making a record for itself by being the coldest Dec. 13 since 1872. A strong wind blew in such a manner as to make right-quartering incomers a probability, but so good were Zwirlein's birds that 68 out of the 112 trapped in the match were outgoers, while 17 more were either direct right-quarterers or left-quarterers; in other words, inclusive of two hoverers, 87 out of 112 showed no incoming tendencies. Those figures tell most conclusively what was the quality of the birds.

The 9:10 A. M. train over the P. R. R., arriving at Yardville at 11:21, had on board it a small delegation of shooters and others interested in the match. In addition to three newspaper men, there were Allen Willey, W. G. Clark and J. L. Brewer, of New York; Al. Heritage, of Marion; Aaron Woodruff and Nate Astfalk, of Elizabeth. The party was joined at Pennsylvania Crossing by John S. Hoey, of Long Branch, N. J., who kindly consented to act as referee in the match.

Charlie Zwirlein's dinner was first disposed of, the rabbit stew finding much favor. The party that sat down to the dinner included, besides those named above: L. W. Budd, of Pemberton, N. J.; John Rothacker and Ed. Johnson, of Philadelphia; etc. After dinner an adjournment was made to the grounds and a 7-bird sweep, $5 entrance, three moneys, was shot, with the result given below. The birds shot at in this sweep were not as quick to start as is usual with Yardville birds; they were apparently suffering a little from the intense cold; once started, and with the wind behind them, they went as fast as any one could ask.

The match itself started at 1:33 and by 3 o'clock it was all over, Clark withdrawing at the end of the 56th round, his gun having gone back on him and his opponent being 20 birds in the lead. The accident to Clark's gun was not of a serious nature, but still it prevented him from using his second barrel with effect, in addition to which he slowed up perceptibly in his time with his first barrel, apparently with the idea of making surer work with it. This made his birds appear to be harder than Willey's; as a matter of fact the luck of the birds may be said to be about even. In the matter of the traps, a rope pull and an indicator being used, the result was as follows:

	No. 1:	No. 2:	No. 3:	No. 4:	No 5:
Willey	13	8	11	7	17
Clark	13	11	10	14	8
	26	19	21	21	25

The hardest trap of the lot, with the wind as it was, No. 5, fell to Willey with a frequency that was remarkable, while Clark drew No. 4 just twice as often as Willey did. An average for the 112 times the traps were pulled would be 22.4; the result as given above shows that the traps fell very regularly, observing the average very closely.

The story of the match is not a long one and is best told by the detailed score, with FOREST AND STREAM's trap-score type to indicate the flight of each bird. Clark changed guns in the 42d round, trying two or three before he finally withdrew. He was unfortunate enough, also, to cut his trigger finger on the first joint with the first gun he changed to, the second one making the cut still larger. Willey shot very well indeed, shooting in quick time, centering his birds well with the first barrel, and, in fact, shooting like a winner all through the match. The fact that he naturally grew more confident as his opponent rapidly fell behind him cannot detract from his work, which was as good as any we have ever witnessed, and was, we think, the best he has ever done. His kill of the 43d bird was a splendid piece of shooting. He made a run of 21 straight and another of 11, scoring 32 out of his last 34 birds. Clark made good kills also, notably on his 37th bird, a second barrel kill that called forth rounds of applause. The traps were pulled by Mr. Hill, the father of Eddie Hill, of Trenton, N. J., the official scorer being Edward Banks. It took one hour and nine minutes to shoot the first 100 birds, the delay being due to the dilatory movements of the shooters themselves, the work of the trappers and Nig, the black setter, being all that could be desired.

After the match sweepstake events were shot off, the shooters just managing to catch the 5 o'clock train for New York. Scores of all the events:

CLARK TOOK THE THIRD.

Dec. 14.—The third match of the Clark-Willey series took place this afternoon on the Dexter Park, L. I., grounds. The weather was very pleasant, perhaps a trifle cold for anyone to stand around and do nothing, but by no means a bad day for live-bird shooting. The wind was in favor of the birds, helping right-quarterers very considerably. Mr. Lippack, the proprietor of the grounds, provided a very nice-looking lot of birds, and the first 100 or 150 proved to be as good as one generally sees on most grounds, many of the birds being as fast as any ever trapped. Still there were a number of sitters, birds that required the scarecropes, and this delayed the progress of the match very much; the fault seemed to lie not with the birds so much as with the fact that they had been quite recently fed, the crops of many of them being full of food.

The Mott disappearing traps, with the Mott automatic electric pull, were used. The only fault we can find with these traps is the lack of a flipper to start a bird that has refused to fly when the trap has opened. Unlike the King or the Clark trap, these traps have no attachment that can be worked after the trap has once fallen out of sight; if the bird does not start at once scare ropes or balls must be used to start them off. When birds are really fast, we believe, despite some opinions to the contrary, that these traps are two, if not three, yards faster than the King trap.

A mistake was made in starting the match at such a late hour as 2:25 P. M., the time it actually commenced. No dogs for retrieving were used; the consequence was that, owing to several of the birds having to be flushed, and also owing to the fact that the birds had to be retrieved by hand, it was 2 hours and 40 minutes later before the 200th bird had been shot at. During the last 40 minutes the light was very poor, and at the close it was hardly possible to see a bird leave the traps, while the official scorer had to light matches to see that he was placing the figures where they belonged. Gus Greiff acted as referee; Herman Voss as trap-puller; Billy Mills did the trapping and retrieving. As at Yardville, W. R. Hobart looked after Willey, Jim Elliott handling Clark. The attendance of spectators was quite large, among the number being: J. A. H. Dressel, of the U. M. C. Company, and Secretary-treasurer of the Interstate Association, Mr. Dressel having acted as stakeholder for Clark and Willey; T. W. Morfey, of Paterson, N. J., who is booked to shoot a race with Jim Elliott in the latter part of January next; C. Wash Floyd, S. Julian Held, Dr. Allen, F. A. and W. H. Thompson, Tom Short, Al. Heritage, John L. Brewer etc.

Clark won the toss and went to the score first; both men killed their first birds. The next round saw Clark's bird go out of bounds before coming down; the 2d round saw both men miss their birds, Willey letting off an easy incomer; in the 7th round both men missed again, Clark's being a low fast driver, Willey's bird being an extremely hard one to score. When Clark lost his 9th bird dead out of bounds, thus giving Willey a lead of 2, it looked as if the latter was going to make it 3 straight. After that piece of bad luck, however, Clark settled down and ran 19 straight before losing a low driver from No. 1 in the 29th round. While Clark was making that run Willey lost 3 birds, his 12th, 14th (dead out of bounds) and his 22d, Clark having a lead of one at the end of the first quarter, the scores standing 21 to 20 in Clark's favor. The loss of Clark's 29th bird did not affect the score, as Willey for the third time in this match followed suit by letting his 29th bird get away.

Then came a break on Willey's part, his next 4 birds adding as many ciphers to his score, both the 32d and the 33d falling dead outside the boundary; this gave Clark the big lead of 5, a lead which Willey still further increased by the loss of his 36th and 38th birds. Then Clark lost his 44th dead out of bounds, reducing the lead to 6, the score showing Clark 44, Willey 38 at the halfway post. Willey lost his 50th, a comparatively easy bird as it looked to us; this made Clark's lead 7 once more, but the loss of Clark's 57th, dead out of bounds, made it 6 again. The 71st round saw both men spoil nice runs by losing their birds, this being the fourth time in the match that Willey followed Clark's example. The latter then lost in rapid succession 2 more

ALLEN WILLEY.

birds, his 73d and his 74th, the last one dead out of bounds; for the fifth time Willey lost an opportunity to gain on Clark, also losing his 74th bird. The score at the commencement of the last 25 showed Clark 65 to Willey's 60.

The next losses to be recorded were in the 82d round, Clark losing an easy incoming bird from No. 1, while Willey for the sixth time failed to take advantage of his chance by losing a good bird from the same trap, the pigeon falling just out of bounds. Willey's 83d and 86th birds both got away, Clark's lead being once more 7, the latter's loss of his 87th and 91st bringing back the difference to 5 again. As Clark lost his 96th and 98th birds both dead out of bounds, and as Willey let his 93d and 98th also escape him, the lead was unchanged, Clark winning by the score of 85 to 80. It will be noticed that for the seventh time in the match Willey missed in the same round that his adversary did, the 98th round.

The high runs were: Clark, 19, 14, 13 and 12; Willey, 19 and 12. Clark had 7 of his 15 lost birds fall dead outside the 50yds. boundary, Willey losing 4 in that manner. The traps fell to each man as follows:

	No. 1.	No. 2.	No. 3.	No. 4.	No. 5.	Total.
Clark	24	20	16	21	19	100
Willey	15	17	24	23	21	100
	39	37	40	44	40	200

Though both men drew plenty of hard and fast birds in the match, Clark had the best of it in the luck of the birds; no less than 40 out of his 100 showed an incoming tendency, Willey having 29 of a similar character. It took 1 hour and 12 minutes to trap the first 100, the last 100 taking 1 hour and 28 minutes, 16 minutes more than the first 100. The difference in Clark's style of shooting in this, the last, match of the series was very marked as compared with that in which he shot during the first two matches after his gun went back on him. The cause of the trouble was easily remedied by J. P. Dannefelser this morning. The gun is a Greener that Clark has had for a long time, and out of which he has fired many thousands of shots. Owing to heavy wear and tear the bolt that locks the grip had worn a little loose, allowing the gun to open slightly. This fact Clark had not noticed until halfway through the first match. After he had regained confidence in his weapon this afternoon he got back into his old-time form and did some good work, as the following score shows:

In New Jersey.

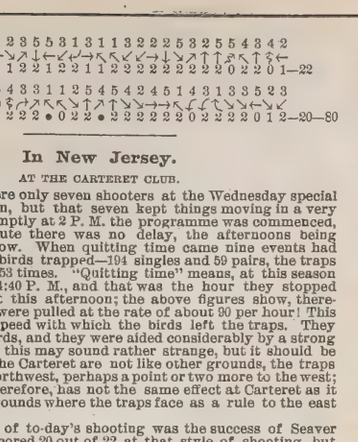
AT THE CARTERET CLUB.

Dec. 11.—There were only seven shooters at the Wednesday special shoot this afternoon, but that seven kept things moving in a very lively manner. Promptly at 2 P. M. the programme was commenced, and from that minute there was no delay, the afternoons being short enough just now. When quitting time came nine events had been shot and 312 birds trapped—194 singles and 59 pairs, the traps having been pulled 253 times. "Quitting time" means, at this season of the year, about 4:40 P. M., and that was the hour they stopped shooting at Carteret this afternoon; the above figures show, therefore, that the traps were pulled at the rate of about 90 per hour! This speaks well for the speed with which the birds left the traps. They were indeed good birds, and they were aided considerably by a strong east-northeast wind; this may sound rather strange, but it should be borne in mind that the Carteret are not like other grounds, the traps facing about west-northwest, perhaps a point or two more to the west; a northeast wind, therefore, has not the same effect at Carteret as it has at most other grounds where the traps face as a rule to the east of north.

A curious feature of to-day's shooting was the success of Seaver Page at pairs, who scored 20 out of 22 at that style of shooting, but could only score 18 out of 21 at singles! The best work of the afternoon must be credited to George Work, who scored 26 out of 30 at singles, and 19 out of 22 in the pairs. Mr. Godchalk, a member of the Riverton Gun Club, started off at a great rate, killing his first 15 straight, dividing both the first two events. The following table will show the work of each shooter during the afternoon:

	Singles.		Pairs.	
	Killed.	Shot at.	Killed.	Shot at.
Chapin	14	21	15	20
Seaver Page	13	21	20	22
Edey	26	33	5	10
Godchalk	27	33	6	12
McAlpin	25	28	6	12
Knapp	23	28	15	20
Work	26	30	19	22

In connection with the above figures it should be stated that Work was not shooting his own gun, having sent it in for some repairs; he was shooting a gun that belongs to Mr. W. Watrous, and although it was strange to him, he handled it all right on fast birds, but the loss of a couple of slow, easy birds may very properly be laid at its door. McAlpin shot well, as usual, at single birds, but strangely enough he was not in it this afternoon when it came to pairs. He got mixed somewhat on his first pair in event No. 3, losing a bird by killing one on the ground and then missing the second when it flew; the latter of course was scored lost, and he shot at another pair, the last bird shot at to count; he killed both and was accordingly credited with a miss and a kill.



The traps were pulled as follows:

	No. 1.	No. 2.	No. 3.	No. 4.	No. 5.	Total.
Chapin	11	7	5	3	5	31
Page	7	5	10	5	5	32
Edey	6	8	7	4	13	38
Godchalk	8	5	9	10	7	39
McAlpin	9	8	5	4	8	34
Knapp	10	11	4	8	5	38
Work	12	6	10	5	8	41
	63	50	50	39	51	253

As 50 would be about an average, it will be noticed that the fall of the traps was very even so far as Nos. 2, 3 and 5 were concerned, No. 1 making up No. 4's deficiency.

Nos. 1 and 4 were 5 birds, $5; No 2 was a miss and out with a handicap allowance of misses as kills, viz , 31 and 30yds. men allowed two misses before being out, 29yds. men allowed three misses, 28yds. men four misses, 27yds. men and under five misses; $10 entrance. This event was divided between McAlpin and Godchalk, who had each missed but one at the end of the 11th round; Nos. 3, 8 and 9 were at pairs, No. 3 being $10 entrance; Nos. 8 and 9, $5; Nos. 5, 6 and 7 were $5 miss-and-outs. In all the events except the miss-and-outs the purse went to the two high guns. Scores in detail were as below:

CLIMAX GUN CLUB.

Dec. 11.—The Climax Gun Club, of Plainfield, N. J., held its last monthly shoot for the season of 1895 on the Fanwood Road House grounds. Fifteen members put in an appearance and shot their strings. At the first shoot of the 1896 series the prizes will be distributed to the winners and new handicaps awarded. The score in today's shoot was as follows:

Brantingham (25)	1111111111111111111110111 —24
D Darby (30)	1111011111111101111101001111 —24

WALSRODE GUN CLUB.

Dec. 11.—The banner shoot in the history of the Walsrode Gun Club, of Newark, N. J., was held to-day on the club's grounds, foot of Elm Road, Newark. Nineteen shooters took part in the seven sweeps, over 1,200 targets being thrown in the events decided. Both Piercy and Perment shot well up, while several others were not far behind them. Scores:

AT YARDVILLE.

Dec. 12.—Gib Geiberson, of Allentown, N. J., and Will Weidmann, of Trenton, N. J., shot a match here to-day on Zwirlein's grounds. The conditions were: 25 live birds per man, $25 a side. Geiberson won by two birds, scoring 21 to his opponent's 19. The race was a tie at the end of the 16th round, at which stage of the game both men had lost three birds. Weidmann then lost his 18th, 20th and 21st, thus giving Geiberson, who failed to score his 25th bird, the match, as stated above. Score:

Gib Geiberson	1011112112121202012111210—21
W Weidmann	1201122111212120010100121—19

SOUTH SIDE'S SATURDAY.

Dec 14.—The South Side Gun Club, of Newark, N. J., opened its club house and grounds as usual this afternoon. Owing to many counter attractions the attendance was small. The weather was bright and clear, but a strong wind at times made the targets hard to locate. Scores:

Events:	1	2	3	4	5	6	7
Shaw	8	7	10	7	4	8	..

On Long Island.

THE LAIR-IBERT MATCH.

Dec. 9.—The Lair-Ibert match was shot to-day on the Dexter Park grounds, Lair throwing up the sponge at the close of the 50th round. The conditions of the match were: W. H. Lair, of the Fountain Gun Club, to stand at the 30yds. mark and shoot at 100 live birds; Frank Ibert, of the Coney Island Rod and Gun Club, to stand at the 25yds. mark and shoot at 125 live birds, a side bet and the price of the birds depending on the result. Although as a rule Lair is the much superior shot, the enormous allowance he was giving Ibert made several people favor the latter's chances; but even those people must have been astonished at the outcome of the match.

Lair started off at a capital gait, killing 18 without a skip, Ibert losing 3 out of that number; then Lair stopped gaining on his adversary, both losing 4 out of the remaining 12 of the first string of 25, the score showing Lair 21, Ibert 18. In the next 25 Lair fell to pieces, only killing 16 out of his second string. Ibert, on the other hand, was shooting very well, killing no less than 20 out of his 25, and actually was in the lead by one bird when the 50th round had been shot. With the match in such a shape it was wise of Lair to withdraw and save the price of 125 birds. The scores were:

W H Lair (30)	1122211121211012021200211—21
	1202101010200102012111112—16—37
F Ibert (25)	2220102112221011011202011—18
	0121102028211012221221210—20—38

A sweep at 10 live birds finished the afternoon's sport. The scores were: L. T. Duryea (30) 10, W. H. Lair (28) 9, Frank Ibert (28) 8, S. J. Held (28) 8, Louis Neir (25) 7.

NORTH SIDE GUN CLUB.

Dec. 10.—The North Side Gun Club held its monthly shoot this afternoon in cold and raw weather. The birds were a very uneven lot, the vast majority needing flushing with the scare ropes. Chris. Meyer during the afternoon shot at 29 birds, killing 28 of them, many of the 28 being really hard birds, as Meyer seemed to have the faculty of drawing most of the fast birds in the traps. Harry Heyer and J. H. Jennings are still a tie for the club championship, both of them losing a bird in to-day's club shoot. There are three more contests yet before the badge can be awarded. John Tiernan, of Rockaway Park, led in to-day's shoot with the only straight score; J. N. Meyer was shooting a 10-gauge that was too heavy for him, a gun that he has not shot for a long time; the result is apparent in his score. The scores of the club shoot, and of the miss-and-outs that followed, are given below:

J J Tiernan (28)	1222112—7
J H Jennings (30)	12212●1—6
C M Meyer (28)	2221●22—6
Harry Heyer (28)	2202222—6
E B Edwards (28)	121●111—6
Herman Ollen, Jr (28)	2010122—5
Dr Halsey (28)	1001122—5
J N Meyer (30)	02●112●—4

No. 1, miss-and-out, $1: E. M. Meyer 6, Jennings 5, Tiernan 5, Edwards 3, J. N. Meyer 2.

No. 2, same: C. M. Meyer 5, Tiernan 4, Heyer 4, J. N. Meyer 3, Edwards 2, Jennings 1.

BUSHWICK GUN CLUB.

Dec. 10.—The Bushwick Gun Club held a shoot this afternoon at its grounds in Newtown. There were ten entries in the club event, George Schaefer winning the handsome gold badge with the score of 18 out of 20 targets; H. J. Williams was second with 17 breaks. The scores in this event and in the two 10-target sweeps that followed are given below:

Club shoot, 20 targets:

G Schaefer	11110111111111101111111—18
H Williams	01111111111111111110—17
J H Nolan	11101110110011111111—16
Johnston	11101110110101011101—14
Richards	11001001011111001011—12
G Morrison	01111100000111001110—11
P Young	00011111010001100101—10
A Murphy	11110000001100101000— 8
J O'Brien	11000010001101000001— 7
E Hudson	10000100010000110000— 5

Sweepstake, 10 birds: Schaefer 10, Williams 8, Morrison 8, Nolan 7, Murphy 6, O'Brien 6, Richardson 6, Johnston 5, Young 5, Hudson 3.

Sweepstake, 10 birds: Johnston 9, Young 9, Schaefer 8, Nolan 8, Murphy 8, Williams 7, Morrison 7, O'Brien 7, Richardson 7, Hudson 3.

VERNON ROD AND GUN CLUB.

Dec. 7.—The attendance at the weekly shoot of the Vernon Rod and Gun Club, held this afternoon on the club's grounds, Enfield street, near Liberty avenue, Brooklyn, was very small, only three shooters putting in an appearance. The brothers W. H. and F. A. Thompson shot a 50-target race, F. A. winning by 3 breaks, scoring 39 to 36. The scores were:

F A Thompson	10011111111101101011101—19
	00111111110111010111111111—20—39
W H Thompson	11101111111111001011010—19
	01111110100010011111111011—17—36

During the afternoon F. A. Thompson shot at 30 more targets, breaking 16 of them. W. H. shot at 10 extra and broke 8 out of the 10. Dr. Allen shot at 30 targets for practice and scored 19 of them.

PARKWAY ROD AND GUN CLUB.

Dec. 11.—The Parkway Rod and Gun Club held its regular monthly live bird shoot this afternoon. In the club shoot, C. M. Meyer, J. Bennett and Henry Bramwell tied for the medal, the tie being shot off miss-and-out, Bramwell forcing Meyer to kill 8 straight to win. After the club shoot several sweeps were decided. Scores:

Club shoot, 7 live birds: C. M. Meyer (30) 7, H. Bramwell (28) 7, J. Bennett (28) 7, A. Botty (28) 6, S. Short (28) 6, D. S. Van Wicklin (28) 6, J. Wye (28) 6, G. Clark (30) 5, H. J. Selover (28) 5, A. Andrews (27) 5, E. Helgans (28) 4, H. J. Bookman (28) 3.

Tie for Medal: C. M. Meyer 8, H. Bramwell 7, J. Bennett 3.

No. 1, 10 birds: C. M. Meyer (30) 10, A. Botty (28) 9, H. Bookman (29) 9, T. Short (28) 8, H. J. Selover (28) 8, J. Wye (29) 8, A. Andrews (27) 7, H. Bramwell (28) 7.

No. 2, same: E. Helgans (30) 10, C. M. Meyer (30) 10, H. J. Bookman (28) 10, T. Short (28) 8, A. Andrews (27) 8, H. Bramwell (28) 7.

Tie for first money: E. Helgans 5, C. M. Meyer 4, H. J. Bookman 4.

No. 3, 5 birds, tie shot off miss-and-out: A. Andrews 5 and 4, C. M. Meyer 5 and 3, H. J. Bookman 5 and 3, E. Helgans 5 and 2.

UNKNOWN ROD AND GUN CLUB.

Dec. 12.—The Unknown Rod and Gun Club held its December club shoot this afternoon, 7 members taking part in the main event. This competition is at 7 live birds per man, handicap rise, the scores in the monthly shoot counting in the yearly averages for the gold championship medal. To-day's shoot resulted as follows:

H. Housemann (30), M. Brown (28) and J. Akhurst (25) 6 each, W. J. Skipmore (25) 4, E. A. Vroome (28) and H. von Staden (23) 3, A. C. Rankin (23) 2.

Sweep at 3 live birds, then miss-and-out; Brown (28) 4, Housemann (30) and Von Staden (25) 3, Rankin (25) 2, and Skidmore (35) 1.

NEW UTRECHT GUN CLUB.

Dec. 14.—Seven members of the New Utrecht Gun Club faced the traps at the club's grounds, Woodlawn, L. I., in the club shoot at 10 live birds per man. Three of the seven scored 9 birds, Chris. Meyer losing 2 out of his 10, but dividing the third event with 8 straight. Scores:

	No. 1, club shoot.	No. 2.
Dr Littlefield (A)	2220122121—9	.....
C M Meyer (A)	2221122022●—8	.....
A Eddy (B)	1222221101—9	1111202●2w—7
J N Meyer (B)	1202221121—9	.....
W F Sykes (B)	1●22220202—7	12222222202 —9
C Katfenstroth (B)	22●0212202—7	.....
P Adams (B)	2●02102021—6	121001●110 —6

No. 3, 5 live birds, then miss-and-out, nominal entrance: C. M. Meyer 8, Dr. Littlefield 7, J. N. Meyer and Jere Lott 4; P. Adams 3.

CRESCENT ATHLETIC CLUB.

Dec. 14.—Messrs. F. Geddes, White, Chapman and Bunn, members of the Crescent A. C., of Brooklyn, N. Y., met on the club's target grounds at Bay Ridge this afternoon and shot a series of strings at 25 targets per string. Geddes averaged 19 out of 25 for 5 strings, White averaging 14 for 4 strings. The best scores made by the four shooters above named were as follows:

Geddes	1111110111111111101110111—22
White	1110011111011110101100101—17
Chapman	0111011010110100110101111—16
Bunn	0001100001011000100000001— 7

IDLE HOUR GUN CLUB.

Dec. 16.—The Idle Hour Gun Club held its regular monthly shoot this afternoon. The club shoot is at 7 live birds and, although there were ten entries, W. Sandford was high with a score of 5. Result:

W Sandford	1212100—5	H Meyers	2201000—3
A Busch	1100302—4	H Offerman	0200102—3
H Boemmermann	2002002—3	H Hoffman	0001020—2
C Lakemann	1202000—3	G Veimeister	0020000—1
F Elfers	0210002—3	F Wilsheausen	0000020—1

After the main event a 3-bird sweep, $1 entrance, was shot off: Sandford, Offerman, Meyers and Wilsheausen, 3; Busch and Boemmermann, 2; Elfers, 0.

Are You Going to Texas?

ARE you going to Texas? Have you ever been to Texas? Have you ever seen Oscar Guessaz, the indestructible man? Have you ever seen Joe George (which is postmaster), the innocent man? Have you ever seen the Alamo? Have you ever seen Sadie, the chile queen; or Marie, the new chile queen? Have you ever seen old Santone? Have you ever seen quail shooting in Texas? Have you ever seen duck shooting where there are ducks? Have you ever seen the South in the winter time, when the days are short? Have you ever seen the Southern men? Have you ever got the idea in your mind that you would like to meet a red-hot lot of shooters who were right in your own class? Have you ever had trouble with your liver? Are you blue, depressed, cast down, despondent, melancholy? Have you ever felt that tired feeling in the morning? Have you megrims, spells, fits or personal peculiarities? Have you ever seen a shoot where you could shoot for money and for sport at the same time, and enjoy yourself every living, breathing minute of the day?

Well, if you have, or if you haven't, you want to go to the

MIDWINTER TOURNAMENT

at San Antonio, Tex., Jan. 7, 8, 9, 10 and 11. This is the shoot run by Joe George and Oscar Guessaz. They add $2,000, and that goes. If you have ever been to San Antonio you will want to go again this winter, and you will want to meet all the Southern gentlemen at the San Antonio Midwinter. If you never have been to Texas, you have never lived.

Don't pay rent. Don't buy an overcoat. Save your money and buy a ticket to San Antonio (which will not cost you much). Take the word of every man who has ever seen San Antonio, or Texas, or Oscar Guessaz or Joe George, and believe them that you will never regret the trip. The experience is a most enjoyable one that you have ahead of you. Go to the Midwinter, and take your friends. You will meet a hundred men you ought to know, and you will make friends whom you will remember for many a year. Incidentally, you will feel as though you had been at a shooting match.

The time is short now. Load your shells for Santone and the big Midwinter shoot. Remember the Alamo. Remember Oscar and Joe. Address them at 101 Commerce street, San Antonio, Tex.

909 SECURITY BUILDING, Chicago, Dec. 14. E. HOUGH.

PUBLISHERS' DEPARTMENT.

Ducks, Quail and the Sunny South.

THE picturesque Shenandoah Valley route, a railroad that carries its passengers through the finest scenery and the best hunting grounds of the sunny South, offers this winter special attractions to the sportsman tourist. Among the points mentioned in its list of itineraries are the following places in Texas: San Antonio, Rockport, Houston, Galveston, El Paso, Eagle Pass, Austin and Corpus Christi (who hasn't heard of "The man from Corpus Christi?").

The list of California tours, going and returning same route, or returning by another way, with San Diego, Los Angeles and San Francisco as objective points, is one that cannot be passed over. The rates for "same route" are $135; for "another route" $133.

Winter excursion tickets to points in the Land of Flowers, via the Shenandoah Valley route, are another specialty of this railroad's business.

Full particulars and all details can be obtained by addressing W. B. Bevill, Gen. Pass. Agt., Roanoke, Va.; or J. E. Prindle, N. Y. Pass. Agt., 317a Broadway, New York City.

PHILADELPHIA, Oct. 29, 1895.—*Messrs. G. W. Cole & Co., New York, N. Y.*—Gentlemen: On July 15 last I received from you a small oiler of "Three in One," and with the object of keeping my firearms free from rust, I applied it to probably thirty rifles and upward of 100 revolvers belonging to my private collection.

After a lapse of over three months I find that not a particle of rust has accumulated upon any of the weapons, while they are clean to handle, which would not have been the case had they been coated with oil.

I also used "Three in One" as a lubricant for a few gun locks, and have found it to give the best of results.

N. SPERING, 1330 South 13th street, Philadelphia, Pa.—*Adv.*

The Trapper's Guide.

A Manual of Instructions for Capturing all Kinds of Fur-bearing Animals, and Curing their Skins; with observations on the fur-trade hints on life in the woods, narratives of Trapping and hunting excursions. By S. NEWHOUSE and other trappers and sportsmen.

This is the best book on trapping ever written. It gives full descriptions of all the animals which the American trapper is likely to meet with, tells how they live, how to trap them and how to care for and cure their pelts. No man who is interested in trapping animals, whether it be muskrats or bears, should be without this complete manual of instruction.

The FOREST AND STREAM is put to press on Tuesdays. Correspondence intended for publication should reach us by Mondays and as much earlier as may be practicable.

THE UNITED STATES FISH COMMISSION.

THE project of handing the United States Fish Commission over to the politicians has been brought up again in Congress. Representative Haines and Senator Thurston, both of Nebraska, have introduced a bill to make the Fish Commission a bureau of the Agricultural Department; and the measure has in each house been referred to the Committee on Agriculture and Forestry.

The conditions have in no wise changed since the previous attempt to give the Commission into the control of the Agricultural Department in 1890. It is just as evident now as it was then that the proposed transfer is for politics, and not in the best interests of economy and efficiency. The Commission's work has been done under the direct and constant supervision of committees of both Houses of Congress; the details of its expenditures have been scrutinized annually; various departments of the Government have contributed to its scope and, in turn, utilized its results. Leaders among business men and scientific associations at home and abroad have expressed their admiration of the very efficiency which has provoked the envy of political creed. From far and near, wherever the Fish Commission is known, protests have come against any experiments with this successful branch of the public service. Clearly this proposition has its origin, not in the public demand, which is unreservedly opposed to it, but in a supposed political necessity. It aims simply to pull down the organization to the level of a fish-distributing machine, double appropriations, and provide additional places in reward for partisan service.

It is preposterous to assume that the Fish Commission would be benefited if put under the erratic control of Secretary Morton.

CROPPING AND CRUELTY.

THE issue in the matter of cropping, which has been engaging the attention of the American Kennel Club, is one deserving more than a passing consideration, since it involves more than a mere matter of fancy on the one hand or sentimentalism on the other, though when sentiments are in favor of greater kindness to animals or the stopping of cruel practices, such sentiments are worthy of respectful consideration and earnest admiration.

The question is not a new one in itself, nor is the principle involved one of doubtful issue. In all civilized countries, cruelties which can not show material justification have received the stamp of public condemnation. Statutes have been passed by practically all the States in the Union making unlawful all forms of unjustifiable cruelty.

Nor is public opinion in a passive state in respect to these matters. Innumerable thousands of men and women throughout the civilized world have raised their voices and devoted their time, effort and means to the suppression of cruelty and to the punishment of the offenders whose sensibilities were so dead or dormant that they could not be touched by suasion or example, and they still continue to do so. The humane sentiments are growing stronger day by day. The cause has its own special journals, in which humane considerations impel hundreds of writers to advocate a proper observance of greater humanity between man and man and man and the lower animals. The opposition to cruel practices has a firmer foothold and a greater influence at present than ever before, and it has its sentiments in the tangible form of statutory law with vigilant and zealous officers to enforce it.

So far as cropping is concerned the question is whether it conflicts with the law or not. The presumption is that it does, since many of its advocates admit its cruelty. Nearly all of those fanciers who have no special interest in the breed disapprove or condemn it. The public at large looks upon it with an unkind eye. There is thus no question but that it conflicts with humane sentiments. It is a question worthy of grave consideration, not only as it concerns the present, but as it also concerns the future. The action of the A. K. C. at its recent meeting is not a final disposition of the matter. On the contrary, it will serve to bring the question conspicuously before the public, it will draw the sharp scrutiny of the humane societies to it, and it will become so momentous that its future will be out of the hands of the original parties at interest.

The question of the right or wrong of it is one which cannot stand public agitation. Agitation means thought, discussion, reflection, the moulding of sentiment, and in the end a condemnation of ear cutting. The vote of the American Kennel Club last week was not sufficient to abolish the showing of cropped dogs on the bench, but it did reveal the existence of a preponderating sentiment against cropping. Had every delegate present been at liberty to vote as his personal convictions dictated, the two-thirds majority required to amend the club's rules would have been voted. As it is, the discussion which has begun will continue, and in the end the American Kennel Club, or the several specialty clubs themselves, will rule against the ear cutting. The specialty clubs may well take note of the signs of the times. It would be a graceful thing on their part to recognize the growing sentiment, and by their own suitable action to win the credit for voluntarily doing away with cropping. If it is left finally to the action of the A. K. C. or statutory law to abolish the cruelty, it will carry with it a rebuke to its advocates that will be avoided by voluntary action on the part of the specialty clubs interested in the matter. And it would be wise for the specialty clubs to give prompt attention to the matter and prompt action to their good intentions.

BEE HUNTING.

THAT survival of man's primitive wildness which is termed the sporting instinct exhibits itself in some forms that are not recognized as legitimate by those who arrogate to themselves the title of true sportsmen. Yet who shall say that they are not, since they have the authority of most ancient usage and are entered upon with as keen a zest by those who affect them as are the so-called legitimate methods by those who practice only them?

Even the fish spearer and the trapper find in the excitement of their pursuits and in the acquirement and exercise of skill an enjoyment quite distinct from the acquisition of gain, and as keen as that of the acknowledged sportsman.

They may have, too, their purely æsthetic quality, for it is possible that the wielder of the spear may be as contemplative as the caster of the fly, and that a man may commune with nature as profitably while he sets a trap as does another while he sights a flying bird.

More apt than either of these to fall into such gentle moods one might fancy the bee hunter. His lines are cast in pleasant places in the delightful weather of late summer and early fall, and he spends the golden hours of busy indolence with bees and flowers for his most intimate associates.

He has time and opportunity to observe the ways of wild things, and he can hardly help but grow into some accord with nature while he breathes the fragrance of her ripeness, hears the drowsy hum of the bees, the faint trickle of the spent rills, caught and lost amid the fitful stir of leaves and the farewell notes of lingering singers. What his craft has trained his senses to catch and much besides he may use to a finer purpose than its own object.

No man needs a keener eye than he to follow such swift, diminutive quarry, nor keener wits, and he must be cool and resolute, for this hunting has its spice of danger.

Who shall say that bee hunting may not become a fine art among sports, and that in the increasing dearth of fish and fowls and beasts of venery the wild honey bee may not come to be legitimate game and the hunting thereof the contemplative man's recreation?

SNAP SHOTS.

THE fact that wild turkeys are still found in Michigan, as stated in another column, would certainly seem to call for prompt action on the part of the Michigan Legislature and of all the game protective associations of that State. Surely some effort should be made to protect absolutely the few remaining individuals of this superb species, and this can only be done by enacting a statute which shall absolutely protect them for a long term of years and by arousing within the State a public opinion which shall come to the support of such a statute, and make it appear to every one who carries a gun a crime to destroy one of these splendid birds. Almost all the States where the buffalo used to range now have laws absolutely protecting them, and in States where exotic species have been introduced similar protective laws are passed to prevent their slaughter, so as to enable them to gain a firm foothold. If such action is taken with regard to exotic species, how much more should this be done when the most splendid game bird in America, if not in the world, is in question. The wild turkey is to other birds what the buffalo or moose is to mammals, and it should be a matter of pride with all residents of Michigon to protect and foster the species within the State's borders.

In his report of the Black River Association for the Protection of Fish and Game, Secretary Wolcott writes that some of the members have expressed much dissatisfaction at the non-enforcement of the game law, and have gone so far as to question the advisability of keeping up voluntary protective associations. We sincerely trust that such sentiments will not prevail. In the present condition of affairs the only hope for game and fish protection in this State lies in the existence of voluntary associations. Protection by the State is at the lowest possible ebb. We have a $9,000 Commission, the president drawing a salary of $5,000, and without funds left sufficient to pay the district protectors, who are being dismissed right and left. We have a law, which was advocated by the president of the Commission, allowing the sale at all times of game killed outside of the State, which means in practice also the sale of game killed in the State. So long as that law shall remain in force it will be impossible to stop the selling of our own game in close season. Without a reasonable law, and without protectors, the outlook at present is dark. It is no time for voluntary associations to disband.

For the North land the coming of Christmas marks the end of the shooting season on almost all game. Usually by that time the ground is snow-covered and often ice-bound, and upland birds are in a measure safe from pursuit with dog and gun, while the cold has locked the waters of lakes and bays of the seacoast, and the waterfowl have disappeared to seek open feeding grounds. The end of 1895 has been remarkable for its mild and pleasant weather, which has constantly invited the gunner to be abroad in the fields and woods, and the wildfowl still linger along the coast, by night sleeping in the open waters and in the gray of the morning winging their way into the bays, where with much splashing and with hoarse cries they dive for food or playfully pursue each other under the mild sky.

In the East it has not been a good season for the upland gunner. Birds have been scarce in the more thickly settled districts or rather in many places there have been none at all. Wildfowl, on the other hand, have been unusually abundant along the North Atlantic coast, largely, no doubt, because of the autumnal drought, which made many of their inland feeding grounds unavailable.

The mild weather of the autumn made fowl shooting in Southern waters rather unsatisfactory for some time after the season opened, but the cold snap of early December sent a large flight of birds to the Chesapeake and the waters of Virginia and North Carolina, where there has since been fair shooting. We are told in the old saw that "When the days begin to lengthen, the cold begins to strengthen," and no doubt a little later fowl will be very abundant along the Southern coast.

Those men are to be envied who can take the time for a few weeks' outdoor life in the sunny South at this season to bask in a blind waiting for fowl to come, or to stretch their legs for quail over the old fields behind the dogs, or to flounder through the marshes after snipe. These sports do not carry with them the bracing vigor of the long stalk through the snow-clad forest on the track of big game, nor the tramp over frozen swamps for a cunning old partridge, but they are none the less delightful and restful. Let him enjoy them who can.

This is our Christmas number. It brings with it, whether it find you near at hand or in the remotest corners of the continent, our sincere wish for your Merry Christmas, and we hope that this generous fund of stories and sketches which the FOREST AND STREAM contributors have provided for your entertainment may add to your enjoyment of the holiday season.

For Christmas Week.

HOPKINS'S POND.

Echo hiding up among the rocks quietly reproved the boy who yelled too loudly when he pulled the croaking bullhead out of the warm pond water, and with a low, forbearing voice showed with nice modulation how the sound of joy ought to be made next time.

It was a quiet pond, without a single bad trait, excepting that it smelled rather pondy in summer when the water was low, but that is nothing to a boy. Its tranquility was in keeping with the tranquil farms that extended part way around it, but it nevertheless had certain subdued sounds of its own, for in the spring the honest toad sat in a leaky bog and trilled a serenade to his love who was largely immersed in the cool water below. Little frogs chuckled and big frogs rumbled in bass, while the old mill wheel, which labored irregularly, mingled its thumpings with the sound of water plunging over the low wooden dam. Such sounds were very different, though, from the rattle and bang of a noisy engine and the screech of a steam saw that one is in danger of hearing nowadays if he is not judicious about his selection of ponds. We never heard anything of that sort about old-fashioned Hopkins's Pond, which was very dear to the heart of the boy, and very dreadful in the mind of his mother, who imagined that its eager depths were always yawning for her dirty little darling, who had safely outgrown the cistern and the well.

As a matter of fact it was about as good a pond as we could imagine, though it really was rather deep, down by the flume where the water silently moved underground in a slow, portentous current, and the sticks and rusty bait boxes that we boys threw in there disappeared forever. If such things went as completely out of sight in the bonfire in the garden it was a different matter. When the agrostis ghosts and dead leaves had all been raked out from under the currant bushes and piled upon the heap of trimmings from the grapevines and apple trees, a cloud of crackling smoke rolled up into the balmy spring air that was more fitted to receive the bluebirds' song, and into the fire we threw various garden rakings: a tail from a wornout buffalo robe, and the heavy dried paint-pot, a chicken's foot, a recently unearthed spool that little sister begged us to spare for her wagon, a piece of bagging with plaster on it, the remnant of a hoop-skirt, an old tow chignon that the pup had dragged over from the minister's yard, a sole from grandfather's boot, the wooden cover of a Webster's spelling book, a cabbage stalk with roots deeply entwined in a hunk of dirt, a mouldy corncob, a rusty screw, and a good new clothespin if nobody was looking. We watched the disappearance of these things in the fire with great glee, and there was none of the sober feeling that came over us when the sticks and bait boxes went out of sight in the flume.

A large part of the pond was spread with lilypads which shaded the reticulated pickerel, and round about the margins amphibious arrow weeds lifted themselves up high enough to whisper to the companionable willows which leaned over the water as far as they dared, and which canopied the nest of the woodthrush when she pressed her warm spotted breast over the satin-lined blue eggs that held hours and hours of coming song.

Twittering swallows slid in graceful curves over the surface of the pond, dipped their bills into the water as they flew, circled out over the hayfield and back to the pond again as lightly as mere allusive emblems of flight. Gaudy opercled sunfish built round nests in the yellow sand where the quawk waded with his phosphorescent breast lantern at night, and gauzy winged dragon flies no heavier than mid-day air balanced upon the tippiest tips of the sedges. Archippus and argynnis butterflies drifted about over the clustered asclepias on the bank and the colias fleet luffed on the half dried mud.

In the autumn the muskrats built cosy houses of calamus and cat tails at the head of the pond, and one could find a raccoon track under the button bushes if he knew just where to pull the branches aside to look for it. Wood ducks floated among fallen leaves in the shallow cove where sere and brown grasses hung their loads of rich nutritious seeds within easy reach, and sometimes a black duck spent two or three days among the frost killed weeds on the low islands where splashy waves and autumn rains had made good woodcock ground under the alders. Katydids and tree crickets katydided in the venerable and respected maple tree, while the disbanded chorus of hylas piped with solitary voices in the woods which had been littered by a departing season. The old rickety bridge lay slanting upon its abutments. Its beams had been obliged to yield a little in the spring freshet when the ice had jammed against them. The chestnut planking of the bridge was warped, and where horses' feet had punctured the rotting boards pine slabs were nailed as a provision against accident and unwise expenditure. Hay seed that had sifted down from August loads sprouted in the dust on the girders, and it rattled down into the water when we turned up a plank in order to slyly poke a copper wire noose in front of the unsuspicious white-nosed suckers as they patiently worked from rock to rock along the bottom under the fancied protection of the bridge.

When winter came over the pond the hemlocks sighed very often, for they loved rivalry with other trees in foliage, and the bluejays went to them to offer sympathy. Green and blue added a bright bit of color to the white landscape and persuaded the distant winter sky to come nearer. Soft-footed rabbits carelessly left whole rows of rabbit tracks in the snow where blackberry briers offered tempting nipping, and the thick rushes were as full of quail tracks as an egg is full of meat. In the cold, still winter midnight, when the belated traveler blew his frosted finger tips and trudged noiselessly along through the fluffy snow in the lonely pond road, allowing superstition to keep one eye on the lookout, the muffled quunk, quunk, quunk, of uncaused ice sounds suddenly admonished him to take longer steps and to get some kind of a door behind him.

There was nothing mysterious about the pond in the daytime, and it was great fun to kick a stone out of the frozen ground and send it bounding across the ice; to hear the musical whunk, whenk, whink, ink, inkle, inkle, inkle, inkle, until the stone bounced into the bushes on the further bank. How the ice did ring to the clipping skate strokes when we youngsters, red-mittened and with flying tippet ends, played shinny in the moonlight until the driftwood fire burned low and we realized that we had been out three hours later than the time when we had promised to be at home, where our good parents were consoling themselves with the thought that we always had come home previously. No matter how frosty the night, or how keenly the wind blew, we knew nothing of that while the fun lasted, but it began to feel chilly when Susie had chosen to go home with Dave, and it became shivery when Ed had been accepted as escort for Nellie. Pretty brown-eyed Nellie with warm home-knitted woolen stockings and glowing cheeks, her mirthful eyes shining out through a loosened lock of dark hair under her fur-lined hood. We knew that Ed would bashfully steal a cold-nosed hurried kiss at the gate, and that Nellie would hit him with her skates, but not very hard—not as hard as we would have done it. We knew what would happen because Ed had looked sheepish for a whole week after he had gone home with Nellie the last time, but we told each other that we didn't care if Nellie did like Ed the best. We didn't care a darn bit, 'cos he wa'n't nobody nohow. Couldn't set rabbit twitch-ups, nor snare suckers, nor play nibs for fair, and he only knew 'rithemtick and school things. A feller like that wa'n't no good and nobody 'ceptin' the teacher and Nellie liked him. How little did we realize in those early days that there was something green-eyed as well as something brown-eyed out for an outing when the weather was right, but boys who are supposed to have no troubles at all are all full of them, because they have the emotions of older folks without the training to discover the locality of a thorn. Many are their troubles which make a lasting impression through life.

One of us boys was so enthusiastic about trapping muskrats that he got up at 4 o'clock every morning all through the winter and tramped miles along the streams before breakfast, watching the habits of the warmer coated denizens of the brook, hunting for their holes under the banks and the paths where they came up into the meadow for grass. A heap of unio shells had for him a meaning. A burrow under the snow to a certain apple tree showed which frozen apples the muskrats liked best. A soggy, decayed log in the water always carried a definite evidence of their fondness for that spot, and the boy knew that his trap would be sprung and the sweet apple pulled from its stick when he went to that log in the morning. The boy's interest and labor were well rewarded, and he caught more muskrats than any of the other boys who went to their traps when it was convenient and who did not set them in very good places anyway. It was a matter of so much pride to the boy to be successful that he told all of the other boys about his luck, and expected that they would pat him on the back and sing his praises as a famous hunter; but, ah! how much more had he learned about muskrats than about human nature. The other boys simply would not believe at first that he had such luck as he described, but he made them believe it by taking them out to the barn and showing them the skins carefully stretched upon shingles with flat tails all in a row. Did that end the difficulty? No indeed! The other boys straightway got ugly about it and said that if he had such luck as that he must have taken the muskrats out of their traps, and they told Nellie and Susie what they thought about it. Nellie and Susie responded with that sympathy which is the sweetest of feminine characteristics, and promptly sided with the injured ones. Such was the boy's first experience in competing for gains; but in later life he found that whenever perseverance and work made him successful over others who were less interested than he they at first refused to believe, and when forced to believe decided that he must have employed unfair means.

The boy was very much grieved at the attitude of his companions, whose esteem and good fellowship were more to him than the muskrat skins or the powder and shot that they would buy. The problem at one time seemed to end at nothing short of his giving up the profitable trapping and letting the other boys do it all; but finally he hit upon the plan of telling them of his best tricks, and showing them the good trapping places that he had discovered at times when they were comfortably snoozing in bed. That eased the strained relations somewhat, but as the best luck, unfortunately, continued to pursue the boy, his companions persisted in showing their disapproval. Innocently looking for praise, knowing that he had earned it, there was not only no praise forthcoming, but actual antagonism.

One day while lying upon the ground by the dam, listening to the roar of the water and thinking of the ways of different animals, like a flash the thought came to the boy that this antagonism on the part of the other fellows was just simply one of the habits of the boy animal. All at once it was just as clear to him as were the habits of the woodchucks and of the partridges, and he remembered that the perspicuousness of their leading traits had been as unexpectedly revealed to him. So firmly did this thought seize the boy that he did not go home to dinner or to supper, but lay there in the grass by the dam and formulated an hypothesis which to this day has made him happy and contented, even though successful in life. That hypothesis assumed that if one made the habits of antagonists a matter of interest from a natural history standpoint, there would be no necessity for defense or revenge, and all of the energy that would otherwise be diverted into such channels could be utilized for accomplishing something of real importance. One would expect of course to defend principles, but separately from self. Under the hypothesis there was no need to care for either praise or blame, and one could laugh up his sleeve and watch unmerited praise and unwarranted blame striking a balance with each other while he was engaged in doing something useful.

The more disagreeable a person was, the more interesting he became as a specimen, but the most beautiful feature of the hypothesis was the ability which it gave one to forgive his worst enemies for anything at any time and to find that insults could neither be given nor received.

If it had not been for the muskrat crisis, which took place at Hopkins's Pond, the boy might to this day be wasting energy in complicated strife instead of enjoying comfort and pleasure while working for himself and for others. The boy lives a long way from the pond now, and his hair is grayer than it was in muskrat days, but it is a pleasure when visiting the old homestead to go over to the pond and hunt for the heaps of unio shells and the burrows under the bank. Ed and Nellie are married and have sons and daughters of their own, and he as a man of wide renown has proven that fraudulent estimates were furnished to us boys by the green-eyed dealer in the game of life. Dave and Susie drifted away from each other when Dave went off to college, and while his tastes were ascending hers remained stationary, so that after a few years they were not companions for each other at all. She as a household drudge is very different from the happy Susie whose skates rang merrily with ours on the black ice under the winter stars. Joe and Pete, who failed to do much with the muskrats and who were ugly about it, have failed to get up early in any of their undertakings, and they often go for aid to the boy who tried to show them how to succeed in former days, but it is of no use. They still grumble and complain of their lot and are ever ready to impugn the motives and the methods of any man who is prosperous. Jerry, who was about the dullest boy in school, went West and has made a fortune in railroads, so that it seems as though almost anybody could do that; but Henry, who was one of the very best scholars, is an extremely respectable clerk in Jerry's employ, and he has never as yet perceived opportunity standing out in as bold relief as a fly in the milk. Tom was drowned at sea, and no one seems to know what has become of George. Everything has changed excepting Hopkins's Pond, but to-day the water pours over the dam as of old, and the cricket's sharp chirp finds its way through the duller sound. The muskrat makes a rippling wake in the moonlight, but I do not know whose boy eagerly marks its course now. Pickerel still suspend themselves under the lilypads, and a bullhead will pull any one's cork 'way down under water on almost any warm, misty evening. The pond that once entered so much into the boys' life is now entering into the lives of a new generation of boys.

One day recently Echo up among the rocks was heard protesting more loudly than ever before, and soon a coaching party of sightseers with four bang-tailed horses and a brazen horn came rolling along the road. One of the ladies touched a gentleman on the arm and said, "There is a pond." The gentleman answered, "Yes." And the coach rolled on.

That was all that it meant to them, for they were sightseers.

Robert T. Morris.

A BEE HUNTER'S REMINISCENCES.

"So you like to hunt bees, Uncle Jerry?" I asked my old friend, who had mentioned that pastime with a glow of animation.

"Of course I du," he answered, "anything that's huntin' an' that comes the fust on't when the' hain't no other huntin'. It's a pleasant time o' year tu be a shootin' 'raound the aidge o' the woods an' intu 'em, an' you're like tu run ontu litters o' young partridges an' l'arn their ha'nts an' come ontu signs o' young foxes bein' raised, that 'll be hendy tu know 'baout, come fall. An' it hain't every dodunk 'at c'n hunt bees, le' me tell ye. If you think so, you jest try it.

"A feller's got tu hev sharp eyes, an' use 'em, an' be pooty well l'arned in the critter's ways, an' hev some gumption, in a gin'ral way. An' it hain't all lazin' 'raound nuther. I've lined bees nigh ontu three mild, an' when a feller's done that an' fetches up ag'in a tame swarm in someb'dy's do' yard it makes him feel kinder wamble-cropped.

"O, bee-huntin' hes its disappointments julluk all huntin' an ev'ything else in this airth. Oncte I got some bees tu workin' an' come along towards night, I'd got 'em lined up clus tu where the tree was. I knowed, 'cause the' was a dozen on 'em comin' back tu the box in no time, but it was gittin' tew late tu foller 'em, so I set a chunk o' comb on a rock, an' quit an' went hum, 'spectin' tu make a short job on't next mornin'. But come tu git hum, word hed come 'at my ol' womern's mother, Mis' Perry, was a hevin' one o' her spells, an' wa'n't 'spected tu live, an' so we hypered off tu Goshen in the mornin' an' didn't git back for a week, an' then when I went tu finish findin' my bee tree, darned if someb'dy er 'nuther hadn't got ahead o' me an' took up the tree, an' a big one it was tew. An' by grab, ol' Mis' Perry didn't die arter all."

Uncle Jerry drew his pipe from one pocket and from another a great oval japanned tin tobacco box, bearing on its cover the device of a bee-hive and the legend, "Industry brings plenty," on which his eyes rested with an abstracted, retrospective gaze. He continued after a pause:

"I allers thought it was Hi Perkins an' Joe Billin's 'at got that honey, but I got square wi' 'em. That very same day I lined a swarm stret tu a tree an' put my mark on't, an' as I went moggin' along back towards home on the line I met the critters a-workin' up on it, an' they looked cheaper'n dirt when I told 'em 'at I'd faound the tree, for they'd be'n a-workin' the line ever sence mornin'."

Uncle Jerry filled his pipe and found a time-worn match out of his vest pocket, which he succeeded in lighting after repeated scratchings with both ends on his trousers. Then having got his pipe in blast he resumed his reminiscenses.

"Yes, bee huntin' hes its disapp'intments an' oncertainties, an' mebby that's what makes all sorts o' huntin' interestin'. One time I was goin' tu Ch'lotte, on the New Rwud, an' as I druv along past Wheeler's woods a gawpin' up int' the trees, I see a swarm o' bees a skivin' in an' aout of a hole abaout 25ft. up a big ellum, an' thinks, says I, there's luck for ye, a-findin' a bee tree 'thaout huntin' a minute, an' it's big 'nough for a hunderdweight o' honey. So nex' day I took my hired man an' each on us an axe an' hitched on t' the one-hoss lumber box waggin an' lwuded a big brass kittle into 't, an' off we went tu take up the tree 'fore anybody else diskivered it.

"The on'y way we c'ld fall it was right across the rwud, but hev that honey we must, and so at it we went, hammer an' tongs, an' it hotter 'n blazes. In 'baout an haour daown she come, ker-onch, right acrost the rwud. An' haow much honey du ye su'pose we got?"

"Well, 50lbs.," I guessed, after considering the size of the tree, and meaning to get within reasonable limits.

"Not a tarnal drop! Not one speck!" cried Uncle Jerry. "By grab, they wa'n't bees; they was abaout a hatf'l o' blasted yaller-jackets. An' there we hed that tree tu git aouten the rwud an' them a sockin' on't tu us red hot, an' whilst we was a choppin' an' a boostin' an' a fightin' hornets, along come the fust s'lec' man an' faound the highway blocked up, an' that made him mad an' he give me Hail Columby, an' I was mad tew, but tew 'shamed tu say anything back, but it done me some good when a

hornet took him in the forwead, an' 'fore he got by they stung his hoss—an' he went, I tell ye.

"An' 'fore we got away one on 'em gin it tu aour hoss jest as we got ready tu start, an' the way that 'ere kettle baounded an' rattled an' we a hangin' ont' the seat an' the ol' hoss a humpin' hisself for all he was wu'th, if it wa'n't a circus—wal."

A chapter of description was condensed in that concluding word, and Uncle Jerry did not spoil the picture by adding another touch.

"Bees is cur'us critters," he began again, after a few minutes of meditative puffing. "I got terribly bothered oncte on the saouth eend o' Shellhaouse Maountain. I'd ketched a bee an' got tu work an' got his line right up a holler int' the woods, an' he'd be gone jest five minutes every time, but the' was a place I'd lose him an' couldn't find the tree ner foller him one inch furder. He never fetched a bee back with him. I fussed with him all day an' when I went hum at night I tol' my neighbor, ol' Uncle Pa'sons. He was an ol' bee hunter, an' says he, 'I c'n find 'em in ten minutes, I bet ye.'

"So next mornin' he put up a bite o' suthin' t' eat an' went 'long wi' me an' he fussed wi' that pleggid bee all the forenoon, an' all he c'ld du was tu git up ontu a ridge, an' he said it was one o' Barnses tame bees an' no use in follerin' on 't no furder, an' so he eat his grub an' went hum, but I wouldn't give it up yit.

"I got the bee in the box an' kerried it up on the ridge an' let him go, an' the fust time he come an' went I got his line right stret along the ridge, an' didn't go ten rod 'fore I faound the tree, a big ches'nut oak. We hed a time a-takin' on 't up, for the' was a snarl o' bees an' they was uglier 'n sin. But we got over a hunderdweight o' honey. It was 'cause the swarm was so rich 'at that 'ere bee worked so slow an' come back alone, but I never see one travel so crooked. Suthin' 'baout the laidges, I s'pose."

"Another cur'us thing is if you kerry bees past the' tree they won't come back tu the box.

"Twicte I got scairt a-bee huntin'. Once was when I went tu 'the Patrimony' wi' Sol Mead tu take up a bee tree. It was an all-killin' hot day, an' we daowned the tree an' slabbed off a piece where the honey was, an' was a-takin' on't aout when all tu oncte Sol he was took sick, an' I tell you he was awful sick. I kerried him off an' laid him 'n under a tree, an' he kep' a-growin' sicker, an' I reckoned he'd die sartain an' folks 'ld say I killed him.

"But he made me go an' finish taken' up the honey, an' I did, an' the' was a whole lot on't which I wished the' wa'n't none. A tree full o' honey an' a dyin' man on my hands tu oncte was more'n I wanted. But I got the honey, took keer on an' it an' Sol int' the waggin an' started the percession. He begin tu git better 'fore we got hum an' was all right nex' day. I cal'late 'twas the heat an' the smell o' the mad bees a fumin' up int' his face 'at ailded him.

"T'other time I was alone, linin' some bees on Shellhaouse, an' 't was gittin' late an' I'd got tu quit, when I hearn the awfulest yowlin' right daown the wood rwud I was cal'latin' tu go. Fust I thought 't was a woman who was lost, an' then I knowed it wa'n't, but some sort of an annymil. Mebby it was a painter, but more likely it was a lynk, but I wa'n't hankerin' arter a lynk fight wi' nothin' but a bee box an' a jack-knife for weepyns, an' I jest hypered right over the maountain best foot for'ard. Last I hearn the critter was yowlin' right where I quit off, but I didn't stop to listen much till I got int' the lots. The' was a lynk killed in the west part o' the taown the week arter, but mebby it wa'n't mine.

"You sh'ld like tu go a-bee huntin', hey? Wal, 't ain't much use nowerdays, the's so many tame ones tu bother a feller. An' I guess y' eyes hain't good 'nough. Nigh-sighted, hain't ye? An' it hain't ev'y dodunk 'at c'n hunt bees. But come nex' summer, we'll try it a hack if you wantu."

Uncle Jerry's words are not encouraging to one whom he evidently considers a "dodunk," and summer seems far off as one looks across the dun, flowerless fields to bleak, gray woods, and I doubt if we ever "try 'em a hack."

ROWLAND E. ROBINSON.

FERRISBURGH, Vt.

A CHRISTMAS ON THE RIO GRANDE.

AWAY off in the cow country, out on the range where cattle are left to shift and find for themselves, they are said in the quaint vernacular of the ranchmen to "rustle." Just so, one December in the last decade, when I found myself foot-loose on the Texas prairie, with my hat chalked wherever I listed to travel, catching some inspiration of the locality and occasion, I felt as if I too had been turned out to rustle, for the field was vast and the pasture rich. I sniffed the keen air of unlimited adventure afar off and all around, yet was unable to formulate any definite plan of campaign; so, like a long-horn yearling just from the branding pen, I kicked high and started incontinently for the uttermost border.

The Christmas tide was at its flush when we approached Laredo. Christmas lights were burning all along the Rio Grande. High over every Mexican hovel (hakels they are called) lanterns, suspended on tall poles, threw out their fitful gleams into the starlit night. They blazed from every shadowy hilltop, symbolizing the Star which Scripture tells us hung over the manger where Christ was born, guiding thither the "wise men of the east," some few of whom, I may venture parenthetically, were possibly included among my fellow passengers on the arriving train. Inside the hovels the squalid inmates devoutly rehearsed some crude expression of the Passion Play in commemoration of the Nativity, after the custom introduced into the country by the Spaniards, and by them taught to the natives. The personages of the play, as presented in due form, represent the Shepherds and the Magi, the archangel Michael, and also Satan, Lucifer and Beelzebub, with a full caste of supernumeraries. The head demons attempt to prevent the shepherds from presenting their offerings to the child Christ, and a scrap ensues between the trio and the archangel, which results in a touch-down for Michael amid general rejoicing. This religious drama is locally known as "The Pastors," and is pretty generally celebrated at Christmas tide by the Mexican residents on the American side of the Rio Grande as well as on the other, the greasers comprising even now, at this late day, a very considerable portion of the population.

Until 1850 there were no American residents in Laredo, and there was no settlement between it and San Antonio, 153 miles distant. The whole intermediate country was overrun with desperadoes, horse thieves and Indians, but when Fort McIntosh was established some degree of protection was afforded and the town began to improve. In the course of the next thirty years the population increased from 2,000 to 4,500, of whom some 250 were Americans; and in 1881, with the advent of railroads, a new development began. Laredo has now 12,000 population, and 75 per cent. of the increase is American. Nevertheless, the native *fiestas*, or holiday sports, have been scrupulously kept up all the time, and it is only within the year 1895 that public sentiment has abolished the popular bull ring. Hereafter curious visitors must cross the river to the Mexican town of Nuevo Laredo to witness a bull fight. But for the rest—the cock fights, dog fights, horse races, mule races, foot races, sack races, fireworks, puppet shows, theatrical performances, fandangos and picnics—they still stand. The Feast of the Nativity to the devout *pelado* would be inane without them.

It was early morning, cold and foggy, when we were driven in a modern bus from our comfortable Pullman to the Commercial Hotel, kept by Victor Calvayroe, proprietor. Anticipations of a blazing fire and grateful warmth had sustained our spirits throughout a long and cheerless ride from the depot, but the moment we were dumped upon the hard cement floor of the old stone *maison*, where no fire had ever burned, whose walls reeked with dampness, and whose dismal emptiness of all furniture except a deal table and high desk (it was the office) was barely revealed by the flicker of a wretched lamp, we felt as if we had landed in a crypt. We heard the sepulchral rattle of our heavy trunks upon the pavement like coffins from a hearse, and when the upholstered and varnished bus departed, it seemed as if all comfort drove off with it. The experience was all the more doleful because we, in common with all verdant visitors from the North, expected to find figs, oranges and bananas in perpetual fruitage, and a summer climate all the year round.

The Commercial Hotel, like all the old Mexican buildings in town, was originally built on three sides of a square; one story high, with thick walls and flat cemented roof; but an American architect had added a second story of wood with a gallery around it, well adapted to ten months of the year, but woefully deficient in comfort in midwinter. There were many rooms, but no chimneys. Cooking was done in a detached kitchen. In frigid weather when stoves were set up the pipes were thrust through a broken pane in a window or skylight. After four hours' patient waiting for daylight breakfast was announced, but the dining room was cold, the food was cold, and copious draughts of frigid air from open doors swept the apartment. French and Mexican culinary art combined to produce the most execrable abominations of overcooked and imperfectly disguised dishes that the human palate was ever called upon to identify or determine. The menu sent down to the Apostle Peter in a sheet was clean in comparison. For a three-dollar-a-day house the experience was altogether the worst I ever had. Subsequent meals I found in a fairly good restaurant.

Breakfast over, I took a turn down the street in front of the hotel, and discovered in the fog a shadowy figure leaning against a corner of the building, muffled in a big blanket shawl, with a stupendous felt sombrero pulled down over his face. He looked like the villain in a play, but seeming to be an early riser I allowed he must be a gentleman, and approaching him deferentially accosted him in English. Without moving a muscle he remarked laconically, "Mucho frio." Not caring to argue the matter, I sauntered back to the hotel office and leaned in the doorway. Half a dozen bullet holes in the jamb attracted my curiosity, and I was in the act of sizing up the caliber with the end of my little finger when the negro porter volunteered the information that a man was shot a fortnight before just where I stood by the barber opposite. Then I asked if I could get shaved right then by the same barber, and he said I could. I also ascertained that the victim was "only a greaser," and that there were a good many of the same sort in town, and that they chiefly followed the occupation of the man I had seen on the corner. Later on, while wandering about town with a resident, I noticed a small mob at a corner. It looked like a football rush, and I was pulling my friend over across the street to investigate; but he held me back, saying, "We don't pay attention to such things here." The next day I read in the *Two Laredos* (the morning paper) that two Mexicans had been stabbed there and one of them killed. It was simply a case of *aguardiente*.

By this time the whole town was alive, and an undertone of festivity pervaded the place like the hum of electric wires on a telegraph pole. Groups and throngs were everywhere. Merchandise stalls and gambling booths stood in the main plazas. Pens were put up for the exhibition of horses, cattle and sheep. Bands of music made the streets noisy. In the distant suburbs an immense amphitheater loomed up, inclosing the bull ring, where bull fights always took place twice a week during the holiday period, enlisting the best blood and fiercest talent of old Mexico. The bull ring is an immensely strong wicker inclosure, formed of 3in. saplings closely interlaced and reinforced by stakes driven into the ground at close intervals. There are two exits, or rather an entrance and an exit, by the first of which the bull enters. The moment he appears he is saluted with "bravos" from the gaudy assembly surrounding the arena, and all wait impatiently to see what he will do next. If stolid and the clatter and glitter have failed to excite him sufficiently, manifold expedients are employed, and if he does not then show game he is ignominiously removed and another substituted. In these *fiestas* the exhibition is one of agility rather than bloody cruelty. There are no matadors, as in old Spain, with the disemboweling of horses and dragging out of dead victims. The bull is only teased into irascibility without great torture, and there is actually much more danger to the picador, his opponent, than to the animal itself. The picador gives big odds, and his play is to decorate the bull's frontlet with little steel-pointed rosettes of gay ribbon, which must be planted exactly between the eyes and on either cheek, while he dexterously avoids the bovine thrusts and lunges. The feat is seldom perfectly accomplished, and it naturally elicits the wildest applause when wholly successful. The suppleness of some of the performers is truly wonderful, and the marvel is that they are not repeatedly thrust through and gored by the bull's impetuous charges.

During the continuance of these *fiestas* there is much drinking of *mescal*, gambling and boisterous hilarity, but there is less disorder than one would expect to see in a frontier town. The remarkably cold weather of that Christmas (1883) nearly brought the festivities to a standstill, but milder temperature followed, and the programme was in a fair way of being carried to a satisfactory conclusion when suddenly one of those terrific sandstorms, which occur periodically in the Rio Grande basin, tumbled over the booths, filled every one's eyes with dust and blew the whole holiday business into irrevocable smithreens. This catastrophe incontinently squelched the lively mood into which the native greaser had been temporarily stirred. For the rest of the year he will mope on the sunny streets or in the shade, and with eyes half closed take little heed of the march of improvement which is filling the town with business, swelling its population and making it the most important emporium on the Mexican boundary. All this will make but little difference to him, so long as he can get his cigarette and *mescal*, his *frijoles*, and full allowance of sleep. Only when called upon to vote will his aspirations take momentary flight. Then will he arise from his well-worn seat by the wayside to find himself an important factor in politics—sometimes on one side of the Rio Grande, sometimes on the other. But, whichever republic wins his permanent allegiance in the end, he will always favor the largest amount of liberty and the smallest amount of work.

CHARLES HALLOCK.

CLOSE QUARTERS WITH A GRIZZLY.

WE were following the trail up Swift Current. We had thirty horses. This included our pack train and riding horses and our wagon horses, which we could not leave alone with the wagons below. The *personnel* of our outfit was interesting: Two special Indian Commissioners, a hunter, Jack Monroe, a packer, Joe Brown, an agency surveyor, a Chinese cook, George Taylor, and an escort of eight men from the agency—four half-breeds of influence and four of the full-blood Indian head men. We were on a Government errand, not a hunting trip, and I, who was to have my initial experience in the Rocky Mountains, was taken along as an unofficial appendix. My new gun was of the Winchester make, "take down," .45-70 caliber. One of the Commissioners carried his old Sharps single-fire .45-70, and, barring three old-fashioned Henry carbines of .44 caliber carried by the Indians, these constituted our armament. I had also my 5½lb. feather weight Francotte shotgun.

The day was crisp and clear. The trail followed the appropriately named Swift Current River lying below us at the left, and on the right the hills sloped gradually to the top of the divide between Swift Current and Kennedy's Creek. On the opposite side of the stream the heavy timber rose steeply to the snow, which glistened brightly in the morning sun at the gray and rocky summit of the great divide. The slopes on the right were diversified by small timber and openings, the timber consisting of quaking asp, service berry and scrub pines or fir, the

ONE OF THE INDIANS.

openings carpeted with long grass, the cured and succulent fodder of the country. The morning had opened frosty and we had put on our overcoats and wore gloves. My gun lay in its scabbard beneath my left thigh.

Jack Monroe had suggested that I should head the cavalcade, as the trail was a clear one, and I might have a chance at deer or elk. The horses moved along at a walk and needed no attention. The bracing air filled my lungs, and I greatly enjoyed the beauties of the landscape and the various forms of animal life which from time to time presented themselves. The blue-gray waters of the river tumbled roaring and splashing down on their way to the Saskatchawan or broadened out into miniature lakes with sluggish current and deep blue color. Far ahead of us, but seemingly quite close, were the gray, beetling fronts of the Rocky Mountains, the backbone of a continent. We could see in the river bottom, where the beaver of years ago had built their houses, the cut off stumps showing their patient labor, and at times causing us to marvel as to how they could handle trees so large. Birds flew up in front and at our side, the sharptail grouse, the dusky grouse and the Rocky Mountain ruffed grouse. Occasionally a Lanner falcon would shoot by, hardly recognized before becoming a speck in the distance. The noble war eagle poised, a mere speck in the sky above, the next instant might fall like a shooting star to seize an unlucky kid or rabbit. My sure-footed nag carried me slowly along the trail, absorbed in dreamy enjoyment of the novel sights and sounds. The hoof-falls of the train behind, or the occasional shouts of packers or Indians as they drove back the horses straying from the trail in crossing the open spots, were the only sounds to indicate that man was there.

I was about 100yds. in advance of the outfit when I rounded a small grassy knoll, and found myself gazing with unnatural stare at a grizzly bear. He stood on the side slope about half-way up, and not more than forty

paces off. He was broadside on, but was intently looking down the trail and wondering what the distant noises might mean.

I have stood in front of the bear cages in the London Zoo and Central Park and read: "*Ursus horribilis*—habitat North America," but here in front of me, a few paces off, on a sunny slope of the Rocky Mountains, stood the biggest old brown-gray silver tip that ever turned over stones for grubs or scraped off "service berries" in Montana. I was a tenderfoot, a pilgrim, and can I be blamed for wondering what was the proper method of procedure? I slipped the glove off my right hand and reached for the gun; then, what to do with the horse? To turn and half gasp to Jack Monroe, who was only a few yards behind, "There's a bear," was the work of a few seconds only, but it was long enough to call the attention of the bear to us, and also to show his presence to the hunter. I was told to drop off the horse and "pump into him," and I tried to obey orders, but by the time I was ready to shoot the bear was disappearing over the crest of the hill. I was ordered to follow, and we two left the trail in hot pursuit.

Jack Monroe had brought his two dogs with him. They were nondescript in breed, black in color and of medium size. The older one, Prince, was well scarred about the face from previous encounters with mountain lions and bears, while Bummer understood deer stalking, but had never had a scrap with a bear. On the summit of the hill we found a thick growth of quaking asp and pines, and the dogs took different trails. We picketed our horses and spent a profitless and uncomfortable five hours in following trails of bears, which crisscrossed the timber in every direction. At 3 o'clock it began snowing heavily, and cold, wet and disappointed we mounted our horses and turned our faces up the stream and arrived in camp at dark. Here we recounted our experience, of which the rest knew nothing, and I had the satisfaction of being told that I did right in not shooting, for had I wounded the creature he might have stampeded the whole train on the narrow trail.

The following morning I was awakened by Jack Monroe at daybreak. I was stiff and sore. My enthusiasm had cooled, but the few sparks left were fanned into flame by Jack Monroe's positive assertion that we would have a grizzly by noon. Upon the ground the snow lay soft and feathery to the depth of 5in. Jack Monroe said that meant that we had a "cinch" on the bears. So after a cup of coffee and some bacon and bread, we saddled and started down to the scene of yesterday's exploits, four miles below. Before starting Jack Monroe went over to the Indians' tepee and borrowed one of the antiquated carbines, "just to have something to carry." The snow was still falling in a desultory sort of way and the scenery was magnificent. Our camp was at the Swift Current Falls, at the base of the towering Show Mountain. Away up on its perpendicular face we saw a flock of seven goats, seven white specks threading their way along its sheer sides. The snow clung to every leaf and twig and came filtering down one's back in a chilly kind of way, but this could not keep us from enjoying the scene.

Before leaving camp we were told that two of the Indians, excited by our bear story of the night before, had gone down ahead on their ponies to see what they could do. Shortly after leaving the camp we came across two fool hens (Franklin's grouse). They flew up into the low quaking asps, and Jack Monroe, after two or three trials, knocked one down with his rope. We left the trail a mile above where the bear was seen the day before, and clambered up the snowy hills on our horses, and across coulees and through timber, where I thought it impossible for man or beast to travel. Jack Monroe told me it was easy going. As we sat on the summit of a hill laying out our course, I descried far up on the mountain side a black object emerging from the timber and immediately another. Outlined against the snow we easily made out our Indian friends on horseback. They seemed somewhat excited and when they saw us began to make signs. They signaled us to come to them. They did this by riding their horses in short circles. Suddenly one of them disappeared, then the other; and floating down the mountain side and echoed from the opposite hills came the crack of their rifles. Five shots followed in quick succession and then the Indians appeared, riding to and fro. Their figures were sharply silhouetted against the white and distant background, and we sat motionless, awaiting an explanation. A moment later we saw a large black object emerge from the timber above them, and, unseen by them, gallop up the slope and disappear over the snow-capped summit beyond. Jack Monroe waited no longer, but calling "There's our meat," started to ascend the mountain side on the full run. We floundered along for 100yds.—two men, two horses, two dogs—when Jack Monroe (in the lead) suddenly halted, and gazing down in front of his horse, remarked that we need go no further.

I followed his eyes, and even a tyro could see where one or more animals had swept a path in the snow at right angles to our course. It looked to me as though some one had swept the snow aside with a broom, and in the path were footprints. Jack Monroe said it was an old she bear with two yearling cubs. I could not make all this out, but I saw that the claw marks of one set of feet were much larger than the others. Of course, the bear we had seen far up on the mountain side, running toward Kennedy's Creek, was abandoned, and the dogs immediately took the new trail. Prince went slowly. Bum wanted to hurry on. So did I. The trail was so fresh that visions of grizzly bear filled my brain. Jack Monroe called Bum a fool, and told him that he would get enough bear before night, and to go slow. His diagnosis and prognosis were both right. The trail was very hot, and after a few hundred yards turned into the timber. Jack Monroe said that the timber was not a very large piece, and that we should skirt it and find where the bears came out. It would save time. Around it we went. It was easy enough to see whether anything had come out. A chipmunk track could easily have been followed in that light snow. Having completed our circuit, we were surprised to find that although three bears had entered the piece, no bears had emerged. They were still inside. A quarter mile square was approximately the size of the cover.

Jack Monroe made some remarks about the intelligence of the bear, and after we had tied our horses and entered the timber requested me to keep close to him and the dogs, as he had no confidence in his popgun.

The cover into which we plunged was of scrub pines, service berry and quaking asp trees. All was covered with snow and very thick. Before going far we crossed the trail of the bear family and slowly and silently followed it. We followed it in and out, north and south. We described circles and arcs of circles, triangles and trapezoids. We came across our own tracks and found the bear tracks overlapping our own of twenty minutes before. The bears were following us! After two hours of weary work through the densest kind of cover my wind was about gone and my muscles were refusing to perform their functions. Only once Jack Monroe caught sight of the old bear, just for an instant, but he did not shoot. At last the tracks led down the hill toward the river, and soon we were following as rapidly as the steep and slippery ground would permit. The sun had come out bright and warm, and the snow was melting fast. Halfway down the hill the tracks separated—the old bear keeping straight on and the cubs turning off to one side. A halt was called and a very short and epigrammatic lecture on the grizzly bear was given me by Jack Monroe. I was about done up and decided to return to the horses and to camp. Jack Monroe said that he was going to follow the old bear a little further, but would be back in fifteen minutes. After about a half hour I concluded to try to find my way up the hill and to the horses.

In this I was unsuccessful, and finally concluded that I was lost. From an open spot, however, I could see the Show Mountain, and knew that by keeping straight on I must cross our morning's trail in the snow, and by following this in its devious windings must eventually come upon the horses. Acting on this plan, I finally found myself more dead than alive in the opening where the horses were. Scarcely was I ready for the home journey, and wondering where Jack Monroe could be, for it was now nearly two hours since we parted, when a distant "pang" away below in the valley told me that he was either engaged in conflict or signaling. Something seemed to tell me that the latter was the case, and I went to the crest of the hill and fired a shot, which was answered at once, and then a distant whoop was heard. I mounted and sat waiting for Jack Monroe's coming. After ten minutes I could see him toiling up the hill, and as he came nearer I noticed that something was radically wrong with his dogs. Prince was dragging his hindquarters in the snow and lying down now and again, and Bum left a trail of blood and seemed to have no tail worth speaking of. When within talking distance the following dialogue took place:

"What did you shoot your dogs for?"

"Hell, I didn't shoot the dogs."

"What's the matter with them?"

"I've had a scrap with that old bear and we've got to get her."

By this time he had got to me and was preparing to mount his horse.

Picking our way down the hillside, stumbling, slipping and falling—tired to death, yet fired to renewed life by what I heard—Jack Monroe told me his adventures as follows:

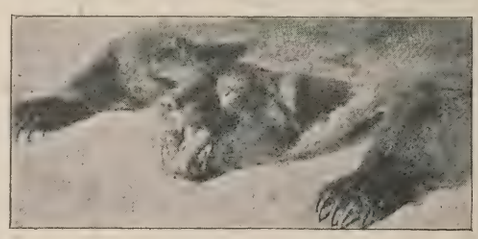
"When I left you, I followed the old gal's tracks down to the river. Just before reaching it, I saw where one of the cubs had rejoined the old one. I was interested in the tricky intelligence of the old bear and determined to follow on further. I waded the stream, the dogs swimming, and took the trail on the other side. It led up the mountain into the big timber, across that dead piece, and up into the green timber beyond. I saw fresh signs of moose, elk and blacktail, but kept on up and up until I got about three-quarters of a mile above the river. The trail was pretty hot and Prince kept close to me, but Bum was generally behind. All of a sudden, and it was pretty dark, I thought I saw a bear to my left about 20yds. ahead. I raised my gun, and just as I did so the old she one came out from a thick spot to my right. She was upon her hindlegs, and I supposed after the dogs. I had no time to think and blazed away. She dropped on all fours with a growl and the dogs were on her. I did not care for any more just then, and throwing my gun down, I swarmed up a fir tree, the only one small enough to climb. I don't know how it was, but I did the squirrel act in great shape. I saw that Bum was at her head and Prince worrying her behind. She made one sharp snap at Bum and off went his tail, and then with a quick turn she caught Prince by the seat of his pants and both dogs ran howling back into the forest. The old bear kind o' winked at me and then trotted down the hill. Now she is wounded and ugly and won't go far and we can get her."

Of course I agreed. By this time we were nearly down to the river. We forded it on our horses, picketed them on the opposite side and entered the dark and silent forest. Everything since morning indicated that it was a toss up whether we were hunting the grizzly bear or she was hunting us. But at the time we did not think of anything but the fact that we had here a foeman worthy of our steel. That we had but one gun, that I was a tenderfoot and unused to "pumping into" things, that it was foolhardy to the last degree to hunt a wounded grizzly in thick timber, did not occur to us.

Did you ever reach the point in hunting or tramping or in any outdoor exercise when it seemed a physical impossibility to go further? When you could just, by great exertion, and on the level, put one foot in front of the other and keep on simply because there was something to eat and a place to sleep at the other end of the line? This was the way I felt before beginning to climb that mountain side. But Jack Monroe is a most encouraging man and I am a pliant branch, and after many stops to catch my wind we finally reached the scene of the late encounter. It was indeed a dark spot. The giant trees stood so thick that little or no snow had filtered through, and the sunlight flecked the ground only at midday. Down timber everywhere made the going difficult, and the querulous cry of the Canada jay or meat hawk and the sighing of the wind through the pines made the whole scene seem like a Mayne Reid tale to me. Corroborative evidence of Jack Monroe's story was plainly to be seen in the torn-up ground, the blood of the canines, the tail of Bum and the trail of bruin down the slope. The dogs had followed us, and our hope was that Prince could be persuaded to drag his mutilated carcass along the trail to our quarry. Then for the first time Jack Monroe told me of the danger of our undertaking and gave me my instructions.

"That old bear is ugly. She is after us now just as much as we are after her. The first you see of her will be when she comes straight at us from some dark spot. My gun is no good; you must do the shooting. I think Prince will show us where she is, but he won't do any fighting. Now keep close to me, not more than a few feet away. Look at every piece of fallen timber, every bit of undergrowth, carefully, and when Prince stops, you stop."

I thought Jack Monroe was over careful, but I obeyed orders. So we started. Poor old Prince had to be coaxed a good deal before he would go on, and he kept very close to us, looking back occasionally as much as to say, "Master, must I go on?" Bum was not in it. Most of the time he was lying down 50yds. behind and licking his tailless rear. Not a word spoken. I looked every log and bush out of countenance. After a time I imagined I saw a flock of grizzlies behind every stump and tree. So we crept along, and I began to think it was all for naught. We had descended into a narrow basin. The trees were a little more open in its center and snow had collected there. The dog, about 15yds. ahead and going very slowly, had turned sharply to the left, and Jack Monroe had just stepped off a little snow-covered bench down about 6in. and I turned with him, standing 3 or 4ft. to his left. I saw Jack Monroe turn suddenly toward me and heard him say, "There." I heard old Prince growl and I saw him turn back, and I heard a roar and saw a mass of brown-gray hair, preceded by some glistening teeth, springing from the foot of a giant fir tree and making directly for us. The bear was not more than twenty steps away at the start. There was no time to get "rattled." I heard Jack Monroe's popgun go pang, but with no result, and I raised my Winchester, shotgun fashion, and fired.



The bear fell with a crash as though struck by lightning, and for an inappreciable interval I thought myself one of the greatest of heroes. But she had hardly struck the ground before she was on her feet again and coming at us. I fired a second shot into an enormous ball of hair less than 10ft. away. She was on us. Jack Monroe, who had fired only once, tried to dodge backward. His heels caught on the bench behind him and he fell flat on his back, and I saw him poking the muzzle of his short gun into the grizzly's mouth, evidently trying to fire, while she tried to slap him with her ugly paws.

THE TAIL OF THE DOG.

Jack Monroe did not preserve an imperturbable calm, but made the forest aisles ring with fervid requests, coupled with the names of saints and others, to "pump into her." I did pump a last shot before the dying bruin had done more than mental injury. It was at the closest range, and the noble old beast quivered and sank slowly backward, down and down, until her massive head lay pillowed in the snow while her wicked claws were only a short 12in. from Jack Monroe's precious carcass.

In trying to dodge he had turned the old-fashioned safety latch on his borrowed gun and it had placed him out of the fight after his first shot. Examination showed that my first shot had cut the base of the heart in two and torn the aorta, the largest blood vessel of the body, into shreds. This beast proved to be a 5 or 6 year old silver tip, with the grayish collar—the most intelligent and dangerous of her kind. MORTON GRINNELL.

THE HEAD OF THE BEAR.

MALISEETS AND MOHAWKS.

THE Maliseets of the St. John River have many traditions respecting the Mohawks, who were their most deadly enemies in bygone times. Many years since I was standing in a country shop in New Brunswick, where there were some squaws waiting to be served; they had with them a little boy, who called his mother's attention to a colored engraving, which, serving as an advertisement for Wright's Indian pills, represented an Indian warrior all painted and plumed. I heard the child say to his mother in a whisper, "Mohawk." "What is that?" I asked him. His reply was, "Bad Indian; kill you and eat you."

Some years ago a party of Mohawks came down the St. John River and slaughtered great quantities of moose on the head of Tobique. The Maliseets living on the mouth of that river made great threats, but took very good care to keep out of the reach of the Mohawks.

Mr. A. Beveridge, who had a shop some years since on the Upper St. John, about four miles below the mouth of the St. Francis, told me that two or three Maliseet squaws were seated in his store one day, when a tall, fine-looking Indian walked in to make some purchases. As he passed the squaws he cast a contemptuous glance on them, at which Mr. B. said these women actually shivered with fear. "What is the matter?" said Mr. B., "don't be afraid."

"Mohawk!" was he trembling reply, and it was a real Mohawk who was descending the St. John in his canoe and who had come to Mr. B.'s shop to replenish his store of food.

The Maliseets yet think that the Mohawks are still peering at them out of the darkness of the forests with a view to doing them some injury, and they have told me that their women have had their baskets of food stolen from them by these Mohawks when the former were picking berries.

There is a hill on the east side of the St. John, a few miles above Fredericton, which is usually known as Currie's Mountain by the old Maliseets. It is called "Mohawks' Lookout," as it overlooks the islands near the mouth of the Keswich which were once the favorite summer resort of the Maliseets.

"It was from the top of this hill," said Gabe, one of the ancients of the tribe, "that the Mohawks, when they came down the St. John to attack us, used to spy out our place so that they might come upon us when we were not prepared."

The Maliseets have a tradition that the last treaty of peace between them and the Mohawks was made at the mouth of the Muniac, about forty miles above Woodstock, and which river is called by the former Amwé-nek. "Here," said Gabe to me, "we buried the hatchet deep under the bed of the stream." EDWARD JACK.

FREDERICTON, New Brunswick.

THE TALKING PINE.—I.

THE street cars passed and repassed with their customary jangle of bells and rattle of wheels. A muffled roar of many feet in motion came to my listening ear as the endless multitude of city people surged along the street like the twisting lines of ants I had sat and wonderingly watched when a boy.

Other noises added their mite until a dull and ceaseless murmur like surf on the ocean sand filled the air with a monotonous, heavy sound.

Smoke from a thousand black-throated chimneys drifted across the sky like the black scuds of the southwest storm winds off Cape Flattery.

It was late at night and the full moon tried to send its rays down to the streets of this big, busy city, where people live a lifetime and never know what deeds old nature does.

What does one moon amount to against so much smoke and so many electric lights? These are inventions of these white people, who all live in one place and dig up the trees so they can put big houses in their places and fill the air with black smoke. The moon is too far behind the times, it is too old for these new things, yet it is better than they. The moon is always kind and will listen to the troubles of the sea and the troubles of the pines when the wind chills them and they cannot sleep.

Do you know the language of the pines? O, yes, they can talk and they can tell many, many things, for they are old—very old. They can tell all the secrets of the mountains and the wind is always gossiping with them, so they are very wise.

Have you not heard the wind and the pines talking? You may have heard them and yet not have known it, for the voice of the pines is very low, and one must sit close to them, and must know their language too, else he will never know what the pines say. Some people have said that the pines moan and shriek like crazy folks, but those people did not know the language of the pines, and only heard them when the wind was blowing hard and the pines were dancing and singing the wind song, which is wild and mournful and is the song they sing only when they dance. They have other songs too, but some people cannot hear them because they are so soft and faint.

Then again the pines talk best at night when the moon shines and the south wind is walking by and not many people are in the deep woods, and so not many know the language of the pines.

When the pines have friends who are away they send messages by the wind, which you know is a great traveler and finds the pines' friends and always gives them the message.

So it happened that I had a friend among the pines which stand together on the bank of the lake of the mountains, far, far toward the sundown. Nobody knows how deep the lake is, but it must be very, very deep, for the mountains are in the bottom of it, and the water is very blue.

The pine stands close to the lake and has lived there for a great many years and knows all the secrets of the lake, and like a great many people who are very old the pine tells tales and gossips.

The pine is very tall and is so old that its arms are beginning to wither and its top to turn gray, yet it is a good pine, and it can remember the days before the white men came—the days when the red men were the only men in all the woods.

I like to listen to the pine when it tells of the strange things it has seen the red men do in those days, and the pine always tells me when there is anything to know about them now.

The red men come sometimes to the pine and dance as they did a long time ago when the pine was young, and the pine always sends me a message to come when the moon rises and sit close to its feet, so it can talk when the red men dance.

So to-night as the wind hurried out of the west it called and whispered until I heard it and asked for its talk.

This the wind told me as the message from the pine: "My friend, the wanderer, listen: The Chinook wind tells me that in three moons from the ripening of the salmon berry there is to be a kloo-kwallie with the red men. It is to be here at my feet, where it has been many times before. The red men will dance and sing strange songs that even I do not know. There will be tortures and feasting, for S'dokes, the wise one, S'dokes, the son of Yelth, the raven, is to be made a new tah-mah-na-wis—a medicine man. I have seen the like before and it is a good sight, though wild, and blood may flow, but not in anger. There will be fire—good red fire to light the scene and to burn the masachee tah-mah-na-wis away. There will be paints of many colors to blind the evil eye. There will be chanting and music of the wild kind they do not know in the land of the white men across the mountains. There will be many canoes and a brave gathering.

"Come then, my friend the wanderer, and sit by my feet and see this, the kloo-kwallie, that will not be danced maybe again in all time, for the white men say the red men must stop, and the white men are strong while the red men are weaker each time the snow comes. Come when the leaves turn brown, the third moon after the first salmon berry ripens, and you will see it."

So said the great pine by message of the wind.

I sat and looked at the moon and thought how I could leave the big city of the white people and go to my friend, the talking pine.

After I thought a long time I called to the wind and gave it this message for the pine:

"Say to my friend the wise one, the talking pine that lives by the lake of the mountains, say this message from the wanderer: 'At the third moon from the ripening of the first salmon berry I will come to the lake of the mountains and rest by the feet of the wise one, the talking pine, at a time when the moon is only so high as the top of a pine that is one winter old.

"'I will come then, and we will watch the kloo-kwallie together and listen to the red men sing the chant that nobody knows but them, and we will see the torture fire that burns for the masachee, and paint with the paint that blinds the evil eye.

"'We will see S'dokes become the tah-mah-na-wis man by the dances and the torture. It is well.'"

So was the message I sent to my friend the talking pine.

Then I sat and listened to the murmur of the street, which was not now so great, and fell asleep there.

Many things may happen in the time of three moons, and things did happen, yet at the time I told the pine I would come I was at the place where the pine lives by the lake of the mountain, and there I saw the sight of the kloo-kwallie as it was when the pine was young.

Of that sight I will tell the story at another time, for it is a good story, and it is well to know of the ways of these different men as they lived a long, long time ago, when the talking pine was very young.

EL COMANCHO.

CAT, KITTENS AND KID.

BELIZE, British Honduras, is a pretty town, where for several months we occupied a picturesque cottage surrounded by a large garden. A lawyer, with a stiff leg and a reputation for sending in a bill to any one who happened to ask him a question on any subject, even in the street, knocked at our door regularly every day to ask how soon we intended returning to the North. He wanted that cottage.

There was an outhouse which, during our stay, served as an asylum for stray creatures. A good-looking turkey generously insisted again and again on working her way through a hole in the fence for the express purpose of bestowing on us her unhatched progeny.

One morning on entering the asylum we heard sounds issuing from the depths of a barrel. Behold! Cat and kittens nestling in some straw. Without ceremony, presuming that she had more than once been baptized, we named the elder feline Miz. She was large, pale gray, pretty faced and starved; it was not difficult to study her anatomy. The kittens had but just arrived. One was larger than the other and a perfect image of a spotted leopard. We therefore named it Chaacmol, an Indian word for leopard, and we called the smaller one Balam, another name for the same animal.

We took the strangers under our protection, and Miz expressed gratitude, never eating the food without first rubbing her pretty head against the hand which offered it. Before those kittens opened their eyes they knew our voice, and crawled to us when we uttered their names.

Miz introduced her husband, for whom she always reserved part of her ration. Tom was young, handsome, loving and respectful to his spouse.

On the ninth day Chaacmol's eyes had a perceptible slit in them. Balam was more backward. When Chaacmol was 12 days old he could fairly look around on this gay world, and that very day Miz removed her family to a square box.

A little before sunset we heard a piteous screaming, and, on investigating, found that Miz's supper had attracted that troublesome, spiteful and persistent plague, the red ant. Not content with devouring the food, those aggressive insects had almost covered the wretched little Chaacmol, who, perpetually on the move, had crawled from the box. He was sprawling in the plate in a most deplorable condition. An excellent substitute for the bite of a red ant is a red-hot needle thrust into the skin. We carried the unlucky kitten and his brother back to their native barrel.

On the following morning Miz failed to come for her breakfast. We went to see what new calamity had befallen the family. A startling tragedy was revealed. Miz stared at us with wild eyes while she kept on licking Chaacmol, helping to restore him to animation, what remained of him, for his forepaws and the lower half of his body had disappeared. The unfortunate little wretch, not satisfied with his ant adventure, had started out on a second expedition, and the land crabs which infested the premises having stumbled upon him enjoyed a tender supper.

Two days later Balam died. Perhaps he missed his brother, for they used to sleep embracing each other. Miz showed violent displeasure when we attempted to remove the kitten, and until the small body was cold she licked and coaxed it. For several days she fasted and mourned, while Tom suffered a good deal of ill-treatment because Miz relieved her feelings by exercising her paw on him, and he never retaliated.

Later on the bereaved mother had another kitten, which she deliberately starved to death. Afterward whenever we asked her what she had done with her offspring she ran to the box where it used to be, looked in, then sat down and mewed softly, showing that she understood and remembered.

Our interesting cat was friendly with a white kid that we had trained to perform tricks, but if the kid attempted to enter a door when Miz was stretched across the threshold that amiable feline would use her paw so deftly on the nanny's face as to induce a hasty retreat. When we amused ourselves with the kid Miz showed extreme jealousy. She was a very dainty puss, and when the dinner did not please her would turn her back to the dish and whip the floor with her tail.

As soon as we began to dismantle the cottage prior to deserting it, Miz disappeared, to our annoyance, we having promised her to a friend. Apparently that cat understood that we were going away, for she, though seen in the neighborhood, did not again come near us.

Ours was a charming garden. The royal palm towered above every other tree. Next in size was the African flambeau, introduced in British Honduras by the early settlers; its gorgeous flame-like flowers and dark pods nearly a foot long were a gorgeous sight. There was one of the mimosa family, whose sensitive leaves quivered and shrank at the slightest contact.

beautiful, with its large wax-like, highly perfumed blossoms that maidens came begging for in the month of May to place on the church altars. Among the fruit trees, mangoes and others, there were two bearing soursops (allied to the custard apple), each fruit weighing 3 or 4lbs. Another tree was loaded with the shining yellow cashew, whose external kidney-shaped nut is for marking linen. Foremost among the flowers was the brilliant tiger lily.

It was all very nice, the neighbors said, but we must look out for the goats, because in Belize they would go astray and "the plant touched by a goat's tooth dies."

Effectively, a troublesome white kid, already mentioned, repeatedly entered our grounds. At last we caught the intruder and notified the police, but nobody claimed the prisoner. We named her Bianca and shut her up in a fenced grass-grown plot, letting her out at a certain hour each day for educational purposes. She soon learned to walk on her hindlegs, twenty or thirty steps, and perform a little valse before letting herself down. A banana was her reward. Many ingenious tricks she planned to steal her favorite fruit from kitchen and dining room. Always on being liberated she bounded up to me and performed her dance to obtain the morsel that she liked. Thus the trait first manifested by the goat was diplomacy, instigated by greed. But the biggest bump in Bianca's head was that of inquisitiveness. It occupied about two-thirds of her skull. Perched on a box by the front fence, she remained for hours at a time almost motionless, losing sight of nothing. Sunday was a great day for her, when she could watch the people going to church. Day or night, if she heard any unusual noise in the street, she would bound to her favorite box and poke her nose over the fence, craning her neck to see up and down the street, indulging her very vulgar curiosity. What a gossip she would have been could she have chatted!

Affection was not Bianca's strongest characteristic, but she always answered my call, and generally sought me on being freed, sometimes lying at my feet as a dog might. We gave her a companion of her own species, a gentle, handsome creature, but because we petted him she was so angry that she pierced him with her sharp horns in a way that caused his death. She herself was alive and well when we sailed out of Belize Harbor, leaving her in possession of a faithful little maid, whose complexion was of a sufficiently close tint to contrast artistically with the glossy coat of Bianca. ALICE DE LE PLONGEON.

TEAL AND TARPON AT TAMPICO.

FROM this alliterative title it might be inferred that the delicious little duck and the king of fishes had been killed by the writer in Mexican waters. This is not true. Neither fell to my rod or gun.

I had left the Floridian at Vera Cruz for a week's visit to the City of Mexico, intending to rejoin the ship at Tampico, and arrived at that city a day in advance of her coming. Sunday exhausted the sights and resources of the place, the most attractive being the market held by the natives on the slope of the public square or plaza, leading down to the marshes which ended at the river, a short distance from the upland. This square was well set with some kind of leafy tree, the branches of which were filled with a kind of golden-eyed and very tame black bird, whose incessant and musical calls filled the air. On the sloping cobblestones the natives spread out their wares: gaudy handkerchiefs, blankets, sombreros, small fish, tomatoes (very small and seemingly the only vegetable), bananas, little oranges, and among the other exhibits I observed some teal, which I found to be worth 25 cents Mexican, or about 13 cents United States currency. The inference was that teal were abundant around Tampico.

An Englishman who was with me, and had the same inference brought before him, had in the hold of the Floridian two "scatter" guns, and he proposed that we pursue the ducks the next day, to which I assented. We had found a very courteous man in a New Orleans creole, who was a clerk in the office of the Mexicans who were agents for the English company which ran the Floridian, who agreed to provide us with a boatman the next morning at daybreak for the purpose of pursuing the teal. We also obtained some (very badly loaded) cartridges from one of the shops.

Our steamship arrived and anchored opposite the city that night, and the next morning, at 6 o'clock, we took our bath and coffee and were ready to slaughter the 13-cents-a-pair teal. We found at the ladder a most villainous-looking brigand of a Mexican (who was doubtless really a most respectable fellow) in a canoe formed of the trunk of a ceiba or silk-cotton tree, hollowed out by fire, at least 30ft. long and about 2ft. wide. The bottom was filled with a kind of asphaltum or coal tar pavement. There was a single thwart near the bow, upon which Steel and I sat, facing the bow, and the brigand worked a setting pole in the stern. The canoe was wonderfully steady, however.

There was the densest fog over the river I ever saw. We had not left the ship 20yds. when she was invisible. We had not reached that distance when there was a whistle of wings and I made a quick shot and dropped a shearwater gull, which seemed to give the brigand some satisfaction. We pushed over to the shore and pushed up the river with the rising tide. There was a strip along the bank 20ft. wide of black mud, very deep and very soft. The next object which loomed up close at hand in the dense bog was a blue heron (or silver crane, as they call the bird in Florida) and I was inclined to disregard this animal, but the brigand began to jump up and down and gesticulate, and I found that it was his ardent wish to have the creature reduced to possession, which Steel, at at my suggestion, accomplished. The pride and delight of the brigand were gratifying. "Mucho bueno! Mucho bueno!" he shouted.

We poled slowly along the shore, looking anxiously for a passage to the lagoons where the teal frequented, as our amiable friend the clerk had assured us, without finding any, and the next animated object I saw was a bird about the size of a quail, having a brilliant yellow breast, black wings and head, and black hairs (like a butcher bird growing from the base of the bill. I shot this specimen, and then we had great trouble to get the brigand to go into the mud after him. It was a grewsome job, but he finally retrieved the bird. And so we pursued our way, bagging four more blue herons, three more yellow birds and a white crane—a most contemptible collection, but which were highly acceptable to the brigand.

Every once in a while I would hear the blow of a tar-

pon out in the river, and occasionally see the side of a rolling fish, with the rosy gleam on the scales which is seen on the unharmed and unalarmed animal alone.

About 10 o'clock there were signs of clearing weather, and we turned to retrace our course. On the way back the brigand became exceedingly demonstrative, and I fired into a large tree and brought down a green parrot which fell into the worst kind of a cactus thicket, whence our boatman really could not extricate it. On the way back I shot at four graceful birds running on the mud which resembled small turkey hens; I do not know what they were and got none. I also killed three doves, which were the only edible results of the trip.

The sight of the tarpon made me to desire a tussle with that fish, and having the proper tackle with me, I engaged men and mullet to meet me at the mouth of the river the next day. With a fellow passenger (from Chicago) I fished faithfully the whole day without a strike.

I am satisfied, from reliable sources, that the tarpon on the west coast of the Gulf of Mexico will not take the bait before the month of May. I do not generalize on this single experience at Tampico; that would be foolish. But men of large experience at Aransas Pass and places with some musical but forgetable Spanish names, who are hunters of wildfowl and in the region every winter, tell me that the natives tell them that the fish will not strike before May. I have seen Texas scores in FOREST AND STREAM, and they always deal with summer and autumn months. There is no tarpon fishing worth considering for winter or early spring except the Charlotte Harbor region, and notably at Fort Myers on the Caloosahatchie. F. S. J. C.

THE CHRISTMAS GROUSE.

FOR a man who is passionately fond of the country and of outdoor life and sports to find himself, at the vigorous age of 30, condemned to the slavery of office work in a great city is a striking instance of what has been called "the irony of fate." Such was my lot when I first began to really live; that is (for I use the term advisedly) when I "married me a wife" and began to look about me for a little home.

I swore a mighty oath—and there be mighty oaths which are not profane—that, though doomed to toil within the dark and rumbling depths of the great town, I would not live there. My home at least should be where God's breezes kiss the grass and the trees, and where God's sunlight strikes on other than glaring pavements and brick walls. So I rented me a cottage twelve miles from town in the suburbs of a suburb. To be sure, the trail of the city was over it all—the deafening buzz and rumble of the trolley cars; the suburban trains following one another like an endless pack of hounds on a hot scent; the scream of the newsboy and the howl of the huckster; the prim park system, where no man feels that his soul, or the twig that brushes his hand, is his own; the proudly exclusive "estates," with their stone walls and their frightful threats against trespassers—all these things and others like them took the charm off the seeming country. Still it was better than pavements and brick walls; and by locating upon the extreme edge of this pert little suburb, called Underwood, I found myself able to have a bit of garden, swing a hammock and even look over my back fence upon an unprotected field and, beyond it, some woods.

I do not remember how long I had been living in Underwood before I discovered the grouse—the Christmas grouse; only he wasn't a Christmas grouse then, and probably never dreamed of being such. I imagine I must have been a resident about six months. It took me all that time to get over my dread of being arrested if I should venture out of the main traveled ways and delight my presumptuous soul with a bit of woodland ramble. But one August afternoon, a Saturday half holiday, I did defy law and precedent by crossing my unknown neighbor's bit of pasture and striking boldly into the woods beyond.

Then it was to my utter amazement, unbounded delight and startled apprehension that I discovered there was actually a living grouse within the borders of Underwood—only twelve miles from the stalls of one of the greatest game markets in America.

He launched from the foot of a thorn-apple bush in the good old whirring, thundering way; I saw him plainly. He was a grouse and no mistake—a goodly old cock grouse, apparently in a state of vigorous nature, independent, self-reliant, and undismayed by the presence of an advanced civilization which had put its ban upon trespassing. What music his thunderous wings made for me! And yet how strange, how almost incongruous, that he should be there; strange as finding a gray hair in a baby's head.

That afternoon's discovery gave me new lease of life. It brought back all the romance of my gunning days to know that there was actually a grouse, a live, wild grouse, within two gunshots of my own back door. From that time on I lived in a new and more endurable world.

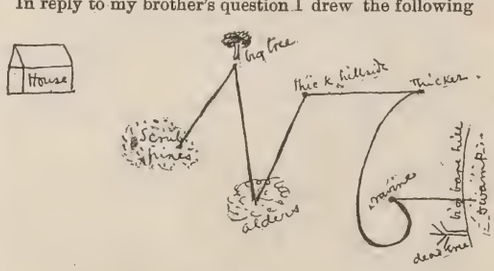
Gradually I overcame my fear of those awful hobgoblin trespassing signs, which I found to be as harmless as Irish bogies, and roamed far and wide through the forests of Underwood. And I was surprised to find what a large area of woodland there was—acres and acres of it at a stretch. But no more grouse did I discover. That one lusty fellow in the woods behind my house was all that remained of an otherwise locally extinct race. And he was spared, doubtless that he might become the Christmas grouse.

But of that in due time.

I became so bold, so reckless, so defiant of consequences that I bought me a gun and began to hunt that solitary grouse. Not that I would have killed him—no, not for the world. There was not the slightest danger of that. I must not—I could not hit him. I bought my gun with distinct reference to this necessity. It was a 16-gauge and choked so lightly that both barrels threw their contents in the shape of a hen's egg up to 60yds. No living man could have hit a healthy, flying grouse with a gun like that. And furthermore, my feathered friend having discovered that I was after him with a persistency which might probably prove dangerous, made up his mind to discourage any undue intimacy by rising in my presence at the coolly courteous distance of 80yds. on an average.

But for two successive years what fun I did have hunting him! How my health improved—how my eye brightened—how my homesickness for the dear old woods of Vermont decreased! Every day when I could get off for a few hours, during the open season, I was out popping at him—popping at 80yds., with no more expectation of getting him than a leap-year spinster has of getting a millionaire. And I was never arrested—that was the wonder of it. Twice, by mistake, I threaded a trespassing sign with daylight, and once I fired at the grouse so near the house of the man who owned the woods that my shot rattled down on the glass roof of his conservatory. Yet I was not arrested. It was marvelous, it was inexplicable, it was almost demoralizing.

So came—or rather approached—Christmas of the third year. And my grouse still lived, thrived and gave me joy.



Then came a letter from my favorite brother. He had been in the far West, had returned and was now at the old home in Vermont. How I longed to see him! I wrote, begging him to come and spend Christmas with us, and by way of extra inducement, remembering that his fondness for sport was as keen as mine, I mentioned that there was a wily old grouse in the woods back of my cottage and invited him to come and help me "circumvent" him, as we used to the shy old birds in Vermont that everybody else had given over as beyond the reach of mortal skill.

To my delight he came, and to my dismay he brought his 10-guage. It was then that, for the first time, I began to seriously consider the possibility of grouse as an afterpiece to the Christmas goose. The more I thought of it the more inclined I felt to sacrifice my cherished bird upon the altar of Yuletide cheer. Think of the magnificent thrill, the triumph of it, to begin with! Then, it must be remembered that my grouse was growing old. Before another season he might die an inglorious natural death—unless we saved him from that ignominy by shooting him. Besides, why could I not import another and younger grouse for next year's sport?—my brother could send me one from Vermont. All things considered I decided to immortalize the old log-drummer of Underwood by making of him—a Christmas grouse.

To this end, on the evening of Dec. 23 my brother and I sat planning.

"Do you know his flyways?" asked my brother. "It will all depend on posting ourselves rightly, so as to cut him off on some flyway, as we used to do with the old tricksters at home. One of us must drive, the other one stand ready on the flyway."

In reply to my brother's question I drew the following

THE MAP.

map. So long had I pursued the old grouse that I knew, every time he rose, exactly where he would go.

"That is exactly the way he will fly, to a dot," I said.

My brother examined the map closely. Then he broke into a laugh.

"Do you see what it spells?" he asked.

"No," I replied, with some curiosity. "Does it spell anything? What?"

"It spells 'N. G.,'" laughed my brother. "No grouse, I suppose that stands for."

I joined in the laugh, but added: "Wait till Christmas! Before that day has passed it may stand for 'now guzzled.'"

The following afternoon I returned from my office at 2 o'clock, and we started in pursuit of the old grouse. The day was still and rather warm. No snow had as yet gathered on the ground, and one might easily have imagined it an overcast day in late October. My brother carried his 10-gauge gun, with twenty shells in his shooting-jacket. I had my little 16-bore.

"Now, Rob," said I, "you are to do the shooting, and I will play dog. I shall station you first among the hardwood trees. The bird will surely come that way, though I can't tell which one he will select to light in. Be ready for him."

The big hardwoods were quite near the road, and I cautioned my brother not to fire low, lest he should hit somebody. Leaving him near the center of the grove, I circled back again and came up on the opposite side of the scrub pines, where I was confident the old grouse was hiding. Sure enough, up he got, with resonant wings, long before I came in sight of him, and less than a minute later I heard the boom of the 10-gauge. But I listened in vain for Rob's exultant yell. When I reached him he was creeping with cat-like steps about the grove, his neck bent back almost at right angles to his body, and his eyes fixed on the tree tops.

"The rascal is hiding here somewhere," he said. "I took an incoming overhead shot at him and missed. But I heard him light somewhere. '

Just then the old fellow launched with a mocking roar of wings from the very tree under which my brother stood. So arrow-like was his flight that by the time the 10-gauge reached Rob's shoulder the grouse was more than 200yds. away.

"Well, sir, he's a corker!" exclaimed Rob.

"You may wager your boots he is!" I replied. "Do you suppose I have had him in training two years for nothing? But come on. Let's waste no time. He is now among the alders down by the brook. I will station you on the hillside, just off the road, below here. It is thick there, but I will put you in the clearest place, and you must take your chances. You will hear him at least."

It was quite a long trip from the hillside, around the edge of the woods to the opposite side of the alders, but I got there at last, and drove my bird just as I expected to. I heard him tearing away toward the hillside; but this time there was no boom from the 10-gauge.

I found, as I expected, that the grouse had alighted in the thick brush, about 50yds. from my brother, and at the latter's first move to get a flying shot had whirred away, unseen, below the cover, and given him no chance at all.

"Oh, he's full of his tricks," said I, "but we will have him yet. I guess we'll drive him over to the ravine now, and get him away from the houses and the road. Then we can peg at him as we please. Hark! There he goes!"

Warned by the sound of our voices, the wily old bird had left the hillside and was now making his sweeping curve around the shoulder of a long ridge into the ravine beyond.

"Now, Rob," said I, drawing out the map, "I am going to put you on the top of that bare hill where the dead tree is. The grouse has to cross it in order to hide in the swamp, which is the last and winning move. If he gets into the swamp we may as well go home. But don't you let him pass you. I will fire when I start him from the ravine, whether I get a fair shot or not, in order to give you warning. Then do your prettiest. The bird isn't likely to cross out of range."

Twenty minutes later Rob stood like a statue behind the old dead tree on the hill, and I was on my way back to the ravine. It was nearly sunset. The clouds had broken away in the west, and the gray landscape was bathed in a deep, soft, almost crimson light. I scaled the ridge and began creeping down toward the mouth of the ravine. For the first time that season the old grouse lay like a stone, and I almost stepped on him before he rose. Crack went the little 16-gauge, and the egg of shot buried itself in a neighboring hemlock. Crack went the other barrel, but the grouse kept right on.

Half a dozen flying leaps took me out of the ravine into a little open space, where I could see the bare hill opposite, toward the sunset. Just as I emerged there was a thunderous report from behind the old dead tree, and the lurid sunset seemed flecked for a minute with the floating particles of a cloud of mist. Then came Rob's well-known yell of triumph.

"Hi-yi! hoo-oo-oo! whoop!"

When I reached the spot, I found him searching for the poor old Christmas grouse. The ground was sprinkled with feathers for yards around, but not a particle of anything more substantial could we find, until at last I spied something pinkish white lodged in a crotch of the old tree. I poked it down with a long stick, and we found that it was part of the stripped breast of Rob's victim.

And that was what we had for the after-piece of the first course at our Christmas dinner. Did I say we? No! the cat had it. But we all tried it. PAUL PASTNOR.

AT SUNRISE IN THE SIERRAS.

SHASTA MOUNTAINS, California.—Anticipating my usual custom by about four hours, I arose recently at 3 o'clock in the morning. I got out of a comfortable bed at that early hour because there was no fresh meat in the house, and I wanted venison.

My house is several miles from a meat market. In fact, my house is a rather obscure hermitage, and for the past three years I have lived as near the solitary life of a hermit and as near absolute solitude as I care to exist.

An erratic individual several years ago conceived the plan of erecting a sawmill in this out-of-the-way niche in the California mountains. The mill did not continue for several sundry reasons, and the machinery was removed. A quantity of sawed lumber was left on the ground in among the mighty granite boulders of a little flat on the banks of Bowlder Creek. For several other sundry reasons I collected some of the boards and timbers, and after an expenditure of much labor and some money built a house here.

My house is worth writing a great deal more about, in my opinion; but in deference to the unknown reader I will say no more than to add that it is at the terminus of a rough mountain road and at the foot of at least five very steep spurs from a lofty range of mountains to the west. These spurs, or radials, from the high ridge almost intersect or unite near my house, forming, after a fashion, one-half of a huge wheel, with a bend in the swift, rocky stream for the hub. The spurs coming in together at this point made the place desirable for a mill site.

These same spurs puzzle me a great deal. As they are separated by gulches, ravines and cañons, I find it impossible to climb more than one of them at a time. Hence, when I decide to go out hunting I have also to decide between the spurs. More than once, after getting my rifle and causing my dog to go into one of his customary fits of joy at the prospect of a hunt, I have stopped to consider which spur to select. Consideration often leads to hesitation—at least I am sure it does on Bowlder Creek—and hesitation always implies delay.

> "Enterprises of great pith and moment
> With this regard their currents turn awry
> And lose the name of action."

The chances for finding deer are about equal upon either of the several slopes and there is not much choice as to their ascent. Some are steeper in one place or another, but they are all steep most of the way, and all finally end at about the same altitude, where they join the main ridge.

But there are always considerations or "strings" appended to everything, it seems to me. The sun may shine in my eyes if I go up the south spur, the wind may be wrong if I select the north; perhaps I was up the middle one last and had no luck, or there may be a band of cattle there now and they would start the deer over to the next spur, and so on until

> —"the native hue of resolution
> Is sicklied o'er with the pale cast of thought."

Sometimes my dog seems to fathom my speculations, and fearing I may abandon the hunt he sets off in advance with great manifestations. In fact my present dog is a sort of "confidence operator." He has operated upon my confidence until I begin to suspect him. He has of late assumed airs and simulated sagacity in what I fear to be a bogus kind of a way. He elevates his nose and steps high, as though he scented deer, and he has betrayed me and led me astray.

One day he took me down into a deep cañon on the trail of a big deer. He pretended to be excited and I followed the track after him for a half mile over very rough ground. Finally when he began to sniff at pine burrs, where squirrels had been feeding, my suspicions were aroused. I got down and examined the deer tracks and I'll be ding-donged if there wasn't grass sprouting in them.

But I was about to say: I arose at 3 o'clock to go out after venison. My rifle gleamed in the corner, having been freshly cleaned and oiled the night before. She is a .38 56-255, model 1876, Winchester. I selected her myself

from the hundreds of guns in the Winchester Company's store in San Francisco. She has seen service, and if the deer and other victims, grouse, squirrels, pigs, skunks, hawks, foxes, catamounts, etc., etc., were in cold storage, the supply would furnish Delmonico's for quite a period. I shot a deer once and killed it at so great a distance that it took me fourteen hours to reach it and carry it back to the point from which I shot—but this is a long story, although simply true. I will reserve it for a separate tale. All truths cannot be briefly stated to advantage.

As appears somewhat heretofore, I was astir at 3 o'clock A. M. I made a fire in the cook stove and compiled a hasty breakfast; for, look you, hermits addicted to eating, and eating cooked provender, must through necessity cater to themselves. My coffee was soon steaming (together with such alien ingredients as chicory, burnt acorns and other refuse that some villainous purveyors mix with it to make an honest dollar. In northern California we get, at present writing, three pounds of alleged coffee for one dollar. If Congress desires to elevate itself in my opinion, it can do so by making a law that will permit us to lynch all adulterators of common foods or beverages. It can soar higher toward the top of admiration by making another law to make it a capital crime for speculators to corner and batten upon the necessities of life, or common foods. These abuses cover a great deal of man's inhumanity to man in this country. When a mountaineer sends for miles over rough roads and trails to get his little supply of necessaries, and meets with swindles, impositions and thievery, his confidence in his fellow man—in human nature itself—totters).

Ah, well; I say my coffee was soon steaming, and I had a couple of slices of bacon browned and a couple of honest eggs (turned over) alongside.

Speaking of eggs, I pray you take notice, reminds us of chickens or hens. Then, too, there is the rooster. I have a notable group of fowls. If you desire to glean a little natural history and a few eggs you should have a lonely hermitage, all by yourself, and raise some poultry. I have also a garden. My garden fence is 10ft. high. It did not incommode the hens, however, until I trimmed their wings; then they had to dig under. After they get through with my garden (and meantime) they roost on my veranda, on top of my house, and besiege my domicile perpetually. The rooster is a black knight, and he fools away more time crowing to no purpose (for he has no cotemporary) than any fowl I ever heard of. Blast him if he don't crow all day and most of the night. If a door is left open he comes into the house and crows. Sometimes he makes me weary, and, during moments of irritation, I have thrown everything at him within reach, except the stove. Never touched him. I am daily tempted to assassinate him with the shotgun, but that would make widows of about seventeen hens and leave a host of orphans, with no apparent possibility of acquiring a stepfather in this region. If I can kill him, however, with a frying pan or one of my ballasted biscuits he is subject to the vicissitudes of fate.

Well, then, by the time I had breakfast and had fed the dog and the cats—now, there's the cats. At present, I have only three cats left. I have had at different times—or, that is, at the same time—as many as nine cats. I have been troubled at my ranch by a steady accumulation of cats. I have sent surplus cats away—have carried several abroad and given them to distant neighbors (in an unostentatious manner), but periodically, or rather oftener, my domain is oversupplied with cats still. My affections cling to but one cat. I have tried to name him Don Quixote, but I always call him Tom, for short. He is a blue, smoky-colored Maltese, and one of the sneakiest, catlike felines in existence. He has no especial pedigree, but he has a history. I will reserve his record until he finishes his promising career.

And so, after these things weredisposed of, I took my rifle in hand and set out. It was yet an hour before dawn, and I was confident of getting off the premises before the chickens came out. When I start out during the day with axe or gun, I always head a procession. The order of march is as follows: First, myself; second, Shep, the dog; then Tom, the cat; then two or more other cats; the rooster; a platoon of hens; three ducks; various chickens; a sow and pigs; one gray horse; finally, scattering chickens.

The horse and the hogs are not always in line, as they range off on their own account frequently. I have also noticed that a number of bluejays, a pair of pileated woodpeckers and a kingfisher bring up the rear, or flank my line of march. When I glance back at my following I incline to a belief in the story of Noah and his Ark. If he had only had room enough in his boat for the elephants, giraffes, boa constrictors, anacondas and the Texas steer, I would conclude that he really did make the scheme work.

These creatures court my society. Their taste is in no manner to be criticised, as they have no choice. They instinctively like the companionship of man, and I am the only resource within their realm. They do not follow for food, for the whole cavalcade of them know where to look for or expect that. The instinct does not exist in domesticated creatures alone. It is evident that birds of many kinds follow and keep as near as permitted to human habitation. And not birds alone, but every creature coming under my observation has shown the same desire to some extent. If deer were not hunted by dogs or men, they would domesticate themselves. Bears would, of course, appropriate the pen, hogs and all, but I believe they could be civilized and made as harmless as Daniel's lions.

It is, in my opinion, complimentary to human civilization that dumb brutes, birds and beasts, seek the society of man. Allowing that some do so for food, some for protection or what not, it implies that all creation acknowledges his superior intelligence and power and try to get near it.

Now, every once in a while it occurs to me that perhaps we are not advancing in humanity. According to my definition of the word it implies consideration for all creation, and especially for all living creatures. We are wont to refer in boastful terms to modern advance in civilization, arts, sciences, enlightenment. Perhaps we can advance in all these and halt, or even retrograde, in humanity.

How far have we really advanced in humanity since—say since authentic history began? It is a searching query. Were not the most ancient people we know of humane where it profited them to be so—or where they thought it did? Do we in the present day protect any creature from any higher motive? Who retrieved the dog from his wild state and preserved him to be the benefactor of mankind? Who the horse? Who the first cattle? In the discovery and occupation of this vast continent has the Anglo-Saxon set up any particular monument to humanity? Has he not swept its native population, Indians and all, into oblivion as rapidly as the advance of civilization?

Here is a chance for some humane society. Among the thousands of birds and beasts of a great continent, can not some new species be domesticated, fostered and passed down to posterity as a token of the humanity of the nineteenth or twentieth century?

Over 300 years ago Shakespeare caused poor old King Lear, himself exposed to the midnight tempest, to exclaim:

> "Poor naked wretches, wheresoe'er you are,
> That bide the pelting of this pitiless storm,
> How shall your houseless heads and unfed sides,
> Your loop'd and window'd raggedness, defend you
> From seasons such as these? Oh, I have ta'en
> Too little care of this! Take physic, pomp;
> That thou may'st shake the superflux to them,
> And show the heavens more just."

The melancholy and philosophic Jacques moralized—but I beg the patient reader thereof to pardon me. As I glance back over the course of my pen, it looks to me as though I have permitted it to wobble. I began in good faith the story of a deer hunt in the remote and western Sierras. I will continue, and hope to conclude my story without so much subsequent deviation. I will, after the manner of Polonius, give you "more matter with less art."

To proceed, therefore; together with my dog, I say I got off before dawn and for results, perpend:

I selected one of the spurs which led most directly to the high ridge, and after about an hour's steady climbing I found myself within a couple of hundred yards of one of the most prominent mountain tops of the vicinity.

It had been a hard climb, and as I was now well in the midst of the best deer ground, I sat down to rest to recover my normal respiration and quiet my nerves. It was not yet light enough to shoot, and as I had an unobstructed view to the east I decided to watch for the first purpling of dawn.

About seventy miles to the north Mount Shasta could be faintly seen. The clear, cold air of October tasted almost like a dram from the crystal water of Bowlder Creek. The forest fires of summer had seemingly been all extinguished, and the clarified atmosphere was as pure as any to be found in the world. The stars, as if anticipating the coming of the sun and their obliteration from the sky, fairly sent out flames of glittering greenish fire and seemed to exaggerate and increase in brilliancy.

The hills about me were as silent as a quiet sea. There was not a breeze to rustle in the giant pines. Even the half dry foliage of the black oaks and maples had ceased to rustle, and only at long intervals an acorn broke the silence by falling to the ground, doubtless released from its cup by some early and industrious worm. His enemy, the bird, was not astir.

In the faint light the hills in the immediate foreground looked like huge waves of a yellow sea, except where covered and darkened by the forest. To the north and east the hundreds of mountains and ridges shaded away into the darkness until, away off on the horizon, Shasta broke the mighty arch with its lofty silver-gray outlines, and its great flanking chains of mountains.

Ha! the summit of the snow-covered peak grows paler. Far beyond him, to the south, the sky assumes color! Its dull cold gray begins to purple; the purple slowly changes shade by shade, until radiating waves of yellow faintly appear, deepen to orange, and then to blue and gold. Almost suddenly the east is arrayed in gaudier colors! The mountains are as purple as grapes, but their summits are fringed with ruby and emerald, and then they blaze as if crusted with molten gold. Mount Shasta in his robe of snow first changes from gray to white, then glistens into gilded outlines fringed with the plumes of Iris.

Ha! there he blazes! The majestic glory of the universe, the source of light and life for creation, rises above his western mountain tops and flashes his herald rays of power and command over the mighty Pacific and away toward the celestial empire of the Orient again, where there are 400,000,000 Chinamen or more.

Ho! watching the sun rise is not looking for deer. I look about in my more adjacent vicinity and observe that the denizens of the mountains and the wilderness are up and astir. See the gray squirrels, three—four of them, and as blue as indigo in their winter furs. As I rise to my feet whir-r-r-r, cuck! cuck! cuck! goes an old blue grouse from that clump of firs, followed quickly by her brood, nearly grown. I am discovered, the alarm is given! The squirrels climb the nearest sugar pine, a covey of mountain quail (as large as three or four Bob Whites in one) whiz away down the ravine. The squirrels bark and chatter in their squeaky accents. Their voices need lubrication. So do those of the jays, that add their clatter to what is now a general hubub.

I thought I heard the crash—thud—thud—thud of a deer as it bounded away down through that thicket of buck brush. If it was a deer he is evidently of a very retiring disposition and safely out of reach and sight. I survey the ground about me, and yes, sure enough, here are tracks. Does and fawns; there a yearling's track. I don't want them. I want a buck with something on his ribs besides hide. Ho, there's a track. He's a smasher—same track I saw around here last fall. My talented canine sniffs the track. He pronounces it fresh. Now, go slow, watch close.

My aforesaid dog is alert, and as John Gilpin said, "So am I." There is a promising thicket—scrub oak and blue brush—slow now, easy there! I hear brush breaking—there is something just below the big pine log there; down, Shep, —— you, down! If you break this time I'll—. Just about this time I see the straight blue back of what must be the big buck. Ah, I saw his ears flap. But he keeps low down, and I'll have to flank him by going around the point. I am puzzled that I saw no horns. He ought to be wearing 'em at this time o' the year.

I sneak as softly as possible down the point and am luckily to the windward. About 30yds. below is a cattle trail. He is following that; I hear him. My ambitious dog is excited. I can hear his heart throbbing against his gizzard or ribs or somewhere. I am not exactly placid myself. He's coming; now then!

My rifle is ready. I try the set trigger as a final precaution. It is all right. Now then, if he passes that clump he's mine!

Just at this particular instant I am jarred. A loud voice above me to the left exclaims in mighty poor English, "Vat in h—l vill you been doing dere now, Mister?" At the same particular instant a blue line-back donkey, or burro, stalks into my view on the trail. I can recognize a jackass at a glance, especially when he has a pack saddle on. I did not shoot. I lowered my rifle and looked up at the man who had shouted at me in such blasted bad taste and grammar. He had a rifle across his arm in a convenient kind of way, and he again shocked me by observing audibly—very peculiarly audibly—"Ef you vill shoot my shack vy vill you been sneakin' dot vay apout me?"

I began to convalesce, and then I began to explain. I could only say, "Sir, I thought the jack was a deer. I don't want the jack." I further intimated that my eccentric canine didn't know any better than to hunt jacks, as he had probably never seen one before.

The stranger succumbed to my apologetic attitude, held his gun less conspicuously, and finally came down where I was. He said his name was Arizona Pete, and that he "vas brosbecting all ofer ef'ryveres." He inquired the nearest way out of the vicinity, and I told him how to go. I went with him and his "shack" as far as my road home took me, and we parted fondly. Then, preceded by my faithful but erratic dog, I hied me home.

I have been hunting since then. I have met with success; but I have already been verbose. I will pause.

RANSACKER.

TO THE ECONLOCKHATCHEE.

AT 9 o'clock on the morning of the 16th of January, 1895, the steam yacht Lolliboy, in command of Capt. John E. Harris, gave the signal of departure and drew quietly away from the St. Francis dock, Lake county, Florida, with her head toward the upper St. Johns, and bearing a party of tourists and explorers, who though few in numbers were not lacking in enthusiasm. Following is a roster of the party: Capt. John E. Harris, Mr. Chas. Knickerbocker, Mr. Clifton K. Harris, Messrs. Ed. S. Wright and W. S. Smith.

The first stage of our journey, although uneventful, was not devoid of interest, particularly to those who had never passed up the river by daylight. One feature that attracted our attention was the numerous picturesque fishing camps which dotted the river banks here and there, particularly for a few miles below Lake Monroe, where shad fishing is extensively carried on.

Our progress up the river was slow, and marked by no mishaps except those which befell a few ducks which indiscreetly ventured so near the party as to fall victims to the guns with which the party was amply provided. To Mr. Charles Knickerbocker is due the credit of the first contribution to the commissary, and it may be added, he made many more of a like character during the trip. The party was well supplied with ammunition, ducks were abundant, and the bombardment that was kept up indicated nothing short of entire extermination. Although at no time were the feathers that were plucked from the ducks over a foot deep on the steamer's deck, there was a gratifying prospect that we might sleep on feathers and live on roast duck during our entire cruise.

We have not space in which to mention the numerous points of interest below Lake Monroe, which we reached just as the sun was about to don its night-cap.

We lay safely moored at Sanford over Wednesday night, during which a heavy rain prevailed, and the prospect looked gloomy, but Thursday morning the rising sun soon pierced the clouds and dispelled the gloom, and our hopes of a pleasant trip were renewed.

Passing out of Lake Monroe we began to realize a wonderful change of scenery, and also soon became aware that a stream may have more than two sides—that is, reckoning by the points of the compass. The thirty miles between lakes Monroe and Harney are of a character to make a charming trip, the interesting features of which are enhanced by the bewildering sinuosity of the stream. Throughout much of this distance the river is bordered with long and narrow low-lying islands, frequently thickly studded with picturesque palms and grand live oaks. Intervening between these islands and the high lands, whose lofty pines we occasionally discern in the distance, stretches mile upon mile of prairie, now partially covered with water. Upon these vast plains is a luxuriant growth of grass, which furnishes food to thousands of head of cattle. These cattle seem equally at home on dry land or in the water, hence the plausible story that they are web-footed.

Leisurely we proceeded on our way. The beauty of the scenery seemed to become more and more striking as we advanced until at 5 P. M. we reached a point in close proximity to the north shore of Lake Harney. Here upon a shell mound we found an inviting camping ground, which had previously been the rendezvous of a fishing party. Pitching a tent and necessary preparation for cooking supper is quickly accomplished when sharpened appetites furnish the stimulant. The gastronomic feats that were accomplished at those open air meals were wonderful exhibitions of human capacity and endurance.

On Friday morning—bright and beautiful as only a Florida morning can be—we drew out upon Lake Harney, a beautiful body of water of perhaps five miles in average diameter. At Geneva landing, on the west side, we made a stop of a couple of hours, and, just to stretch ourselves—a proceeding that might seem entirely superfluous so far at least as one of the party was concerned—took a two-mile walk to Geneva, a pretty location in the high pine woods of east Orange county. At 1 o'clock P. M. we resumed our journey and an hour later once more entered the channel of the river. On the upper or south side of Lake Harney the river channel is much narrower than below the lake, but otherwise the general characteristics are about the same. Wide ranges of Florida prairie dotted here and there with herds of cattle, apparently thousands of head. Here, too, on these vast watery expanses, surrounded and partially covered with tall grass, is the winter home of millions of ducks, coots, curlew, cranes, herons and other aquatic birds, which furnish to gunners, who find convenient shelter in the tall grass, such sport as is rarely found elsewhere, even in Florida. Here the water also contributes liberally to the gratification of angling sportsmen, who, if their skill is equal to the occasion, may shoot ducks with one hand and catch fish with the other. In fact, between fish and fowl they come near

being an insurmountable obstruction to navigation—to sportsmen, who can only get through by shooting and fishing their way out, as did our party. Guns and fishing tackle were in active service for hours, and for a time the pleasures of sight-seeing were given over to the excitement of sport.

About one mile above Lake Harney we finally reach and enter the mouth of Econlockhatchee Creek. From this point forward all our party were on unfamiliar waters, and soon made the discovery that the channel was so crooked that it was necessary to keep a lookout on the bow of the boat for fear of doubling on our track and running ourselves down. We have been unable to learn the meaning of the Indian name of the creek—Econlockhatchee—but there certainly must be something crooked in its significance as well as its pronunciation. This way, that way, backward, forward, and in every direction but up or down, we finally threaded the bewildering maze and found ourselves at last in a plainer but little less tortuous channel. Here, too, the banks were higher above the water, and we found ourselves, at a distance of perhaps five miles from the St. Johns, entering upon the most attractive portion of our cruise. As night was once more falling we again selected a camping place; this time among the immense moss-draped monarchs of a forest in which, we can readily imagine, the stealthy and solitude-loving Indian once found favored haunts.

Here the usual interesting episodes of camp life are once more enjoyed. Out of respect for our readers we will refrain from rehearsing them, only mentioning a terrible wild beast which invaded our camp and disturbed our slumbers, and which one of the party failed to catch in a trap which he set for it. No one saw the ferocious animal, but all agreed that its track very closely resembled that of a razor-back hog.

After a hearty breakfast of fish, duck and squirrel, with all the necessary accompaniments, we once more resumed our journey. We were not long in discovering that we had entered a veritable land of enchantment.

Before us, winding here and there between high banks which ran back into beautiful heavily-wooded hammocks, flowed the stream, appearing in the morning sunlight like a silver-paved and emerald-bordered highway. The waters, clear and cold, like those of some mountain stream of the North, flowed rapidly downward, yet seemed at times to linger for a brief period beneath some particularly lovely spot to reflect the beautiful picture upon its mirrored surface; then again rushing reluctantly forward to mingle in the general flow. First to the right bank, where drooping willows and alder brush its shimmering surface with their branches, then in a graceful sweep across to the left, where it laves the bared roots of lofty palmettos and grand, grotesque and gloomy live-oaks, which seem to have stood as silent sentinels upon its shore for ages, the stream flits hither and thither like a restless bird, yet seeming to preserve a dignity becoming to its magnificent setting.

We find numerous points at which the channel seems to divide, and are allured into some beautiful estuary which seems to have been set there by nature to draw unwary travelers from the main channel.

The beauty of the stream is not in the volume of its flow, for it has but a narrow channel, but in the picturesque and almost bewildering surprises which its many turnings bring into view are presented pictures which the hand of art could not adorn and but nature alone could copy.

We continued up the stream—not to its head by about thirty miles, but to a point where we found with regret that the narrowing channel and numerous obstructions prevented our going further, and so, after a brief stop, we reluctantly retraced our course. The scenes of the upward trip were presented to us again, but in a new and no less charming light, as we proceeded down the stream, and the panoramic changes that seemed to pass before us were such as to leave a lasting and most agreeable impression on our minds.

It was our good fortune, while coming down the creek, to meet Mr. G. M. Jacobs and his sons, of Chuluota, which place lies some four miles from the stream. Mr. Jacobs has long been a resident of that vicinity, and it is a pleasure to talk with him of the country with which he is so familiar. He informed us that the point at which we turned back was the highest point on the creek ever reached by a steamboat.

Passing from the creek we once more successfully thread the mazy channel and find our way into the St. Johns without mishap, thence across Lake Harney to our former camping ground, where we again spend a night in invigorating sleep.

At 8:30 o'clock Sunday morning we resumed our journey, and the gallant little Lolliboy bore us swiftly homeward.

After what we had passed through the homeward trip seemed a tame affair in comparison, but it was nevertheless enjoyable. At 6 P. M. we reached St. Francis, having made the seventy-five miles from Lake Harney in a little less than nine and one-half hours.

Thus ended a trip which will not soon be forgotten by those who participated in it. To Capt. Harris is due from the party a vote of thanks for the pleasures the cruise afforded. Those in pursuit of sport or pleasure will do well to place themselves under his care and guidance for a like trip.

W. S. SMITH.

ST. FRANCIS, Fla.

Five Hundred Dollars for a Buffalo.

CHANUTE, Kan., Dec. 17.—It may be of interest to you to know that a carload of deer and buffalo passed through here this evening *en route* from Cedarvale, Kan., to Kansas City. The circumstances are as follows:

Mr. Ed Hewins, a prominent stockman of Cedarvale, recently sold his ranch of 1,600 acres, on which was an inclosed park of about forty acres, which he has for many years kept stocked with deer and buffalo. Being unable to take them with him to Woodward, I. T., where he is now located, he sold them to Kansas City parties, and yesterday they were all killed and shipped to market.

Fourteen deer and one immense buffalo bull, which had been in captivity over sixteen years, were killed, Mr. Hewins himself firing the shot that laid low the monster bull, which weighed, after being disemboweled and ready to ship, 1,800lbs. He had for years been very ferocious, and could not be approached.

I understand Mr. Hewins received $200 for the head, $100 for the skin, and $200 for the carcass. G. H. M.

HOW FUR IS CAUGHT.—V.

Life in a Lumber Town.

THE village of Woodruff, Wis., is in the fishing season the port of entry for Trout Lake and the Manitowish muscallonge waters, and at that time it has a sort of transient life. In the winter season it is dull, squalid and tough with a toughness not easily to be paralleled. I think there is no population in America of so low a grade as the riff-raff of the lumbering regions. The small towns of the Western frontier are tough, but they have a brilliant wickedness which gives them a fascination of their own. The logging town is low, sodden, degraded, and does not rise to the dignity of wickedness. The inhabitants, or the transient loggers who enable the inhabitants to live, are assorted foreigners of beast-like habits and tendencies. Cleanliness is unknown. Dirt, vulgarity, depravity, low-downness are the characteristics that meet you. One can mingle with clean wickedness without personal discomfort, but dirty vulgarity is far worse in consequences. Even the style of fighting (and where cheap whisky abounds fighting must ensue) is of poor type in the pine woods. In the Rockies we used often to see gentlemen who were in their cups have disagreements, and pull their guns and shoot it out like gentlemen, others not interfering. In the lumbering regions the weapon is the fist and the hobnail. Etiquette demands that when one has knocked an enemy down he shall stamp on him or pound him. Often half a dozen will set upon one man, and custom seems to dictate that all one's friends shall help him pummel a single adversary. Woe be to the "river jack" who starts into a fight without a "gang" behind him, for if the other man has a "gang" with him they will all go into action as soon as it seems safe. There are many nationalities, and the feuds between the different clans always break out at the bar where the red-eye moveth itself aright. All the hotels are small, and the bar in each is the biggest half. Quiet is there unknown. As I could not personally approve of the style of fighting customary in this region, I was a good deal bored during my three days' stay at Woodruff, while I was waiting for my camera to come up from Chicago. Moreover, the express agent was of the smart-Aleck class, and no doubt thought I was a lumber jack out of a job, as I had adopted the costume of the country and perhaps looked a trifle hard. I relieved my feelings by discourse with him about himself, in return for which I believe he held my package over a day for me. It was a bad time I had of it, alone at Woodruff in the winter, and had I not found a good fellow by name of Glover, who ran a jewelry store, I should have perished of fretting. Glover sells cheap jewelry for cash to the Indians, and cheap watches to the lumber hands on time, having out agents who visit the camps and "stand in" with the foremen. He being something of a hunter, and having a quiet room to sit in, we got along well together. Since then he has wandered away out to the gold fields of Washington, and I don't know what I should do if I had to loaf three days in Woodruff now.

Hitting the Trail.

But at last my camera came, about 3 o'clock in the afternoon, and I hurriedly got ready for the start into the woods again. I wanted to get over to O. W. Saynor's place on Plum Lake, expecting there to get to a trapper by name of Joe Blair, who was a guide on those waters in the fishing season. There was a new line of railroad built up through that country to Star Lake, but there were no regular trains running on it, except that a logging train went up from Minocqua every day. No one could tell what the prospect was of that train stopping at Woodruff Crossing, and no one knew where it would stop up in the Plum Lake region. Evidently Minocqua and Woodruff were not friends. Moreover, as proof of the general looseness and inaccuracy of the human intellect in that region, no one could tell me how far it was to Plum Lake—or rather, no two could tell it alike. It was somewhere between eleven and twenty-one miles, I supposed, those being the limits assigned. And I was to take a trail which led to the left from the railroad, after crossing a high trestle over the first big creek. There was no main trail but the railroad, and the snowshoeing there was bad, for the snow was melting between the ties, and there was no ballast on six or eight miles of the roadbed. These being the circumstances, and only an hour of daylight remaining, it seemed best not to run the chance of lying out all night in the snow; so I only went four miles that night, stopping at the little sawmill town of Arbor Vitæ, on the lake of that name.

At Arbor Vitæ I was directed to a good boarding house kept by a Mrs. McGregor, who was out visiting when I called. I hunted around among the neighbors until I found her, and asked her if I could stop over night. She looked at me critically for a few moments, and then said:

"No, we don't keep anybody from the lumber camps. We don't dare to. I have always kept a clean and respectable house, and I don't let just anybody in."

When I heard this it seemed funny to me, and I laughed a long peal of silvery laughter, which startled Mrs. McGregor very much. We then engaged in conversation, and when I said I was from Chicago, and proved it after much difficulty, the lady began to thaw out, and eventually invited me to go over to her house and take off my pack. (Everybody carries a pack in that country.)

At Mrs. McGregor's house I was very well treated, and in the morning I got an early start after a good breakfast, having decided to take no chances on the railway train, but to go on through on foot. It was bad going, part hard walking and part wretched snowshoeing, but I made the distance, whatever it was, 7, 9, 11 or 17 miles, by about noon, luckily hitting the faint trail in the snow which led across the railroad to Plum Lake. The wind had blown snow over the trail, about half a mile from the railway, so there was no telling which way it went, but I could then see the lake. Going next on the ice, I saw a windvane whirling on top of a tall pole near the shore—the only sign of a human agency—and pushing on over, I found Saynor's house, where I was well received. Mr. Saynor keeps a good summer resort, and often has Chicago parties up in the summer time, enjoying the fine muscallonge fishing of those waters.

I learned that Joe Blair was living *en bachelor*, over on Big St. Germaine Lake, about six miles or so from Mr. Saynor's place, and that probably he would go out on a trapping trip; so Mr. Saynor and I walked over to Big St. Germaine after lunch and interviewed Joe.

The Trapper's Cabin.

Here I found the trapperiest looking cabin I had seen, full of the dozens of handy appliances the lone man in the woods usually gets about him. There were traps, paddles, knives, spreaders, all sorts of things interesting to handle and talk about. Joe himself, middle-aged, long haired, dressed in buckskin and wide hat, made a good figure of a trapper, and proving to be also companionable and cheerful, I concluded I had blundered into pleasant places. He said he was just going over to look at some new otter country, near Buckatabon Lake, some thirty miles or so, and if I cared to go along he should be glad to have me. We agreed to start from Mr. Saynor's the next morning, and I arranged to spend the night with Joe, Mr. Saynor going on back home.

That night Joe and I had fresh perch for supper, just out from under the ice in Big St. Germaine. And we baked some bread, and had beans (of course) and tea (of course). Then we sat down and had a long talk about sport and work in general, and trapping in particular.

Trapping Lore.

Joe told me that nearly every winter he caught an otter or two on Lost Creek, a little stream near his cabin. He had lately caught one, and showed me the skin, a very large and beautiful one, stretched nicely on the spreading boards. He had heard of a black fox being seen that winter. (Billy McArthur, on Trout Lake, the winter before, had caught one black and one silver-gray fox, and this winter had caught a black fox. He got only $75 or $100 for the best of the skins, and was probably worsted by the dealer, as prime skins of the silver-gray often bring twice or three times that amount.)

"I will show you how I trap otter when we get out together," said Joe. "For foxes I don't care so much, for a common red fox is only worth a couple of dollars or so, and a prime otter may bring $10 or $12 this winter.

"Foxes are sort of mean to trap, but you can trap 'em—you can trap anything. I mostly find it easiest to trap a fox around an old camping place. A fox will come up to a dead camp-fire and move around and pick up scraps. I make a bed in the ashes and put a trap under it. A fox will lie down in a bed that way, like a dog. Sometimes a lot of straw or chaff will attract them that way. Sometimes I put a trap at a stick or tree which they are using, and sometimes I use scent for them, at a water-set, putting the trap under some moss a little way out from the bank, so the fox will step on it. He don't like to get his feet wet, you see.

"A lynx is a fool, and can be trapped anyhow. I use castor scent for lynx a good deal. Sometimes I put up a red rag near the trap.

"Nearly every fellow has his favorite scent. Castor is good, and the oil from decayed fish is good, but the best scent is made by putting in the bottle certain parts of the female animal. That is good for foxes, for mink, or most any sort of animal.

"Wolves are poisoned easiest by putting strychnine in lard and putting it in a hole or narrow place, where they lick it out or get it a little at a time. You can fill a whole deer carcass up with poison, but somehow you won't get many wolves; anyhow, not unless the poison was put in as soon as the deer was killed, so the poison could be absorbed by the blood all through the body.

"I would rather trap bears than anything else. I usually set a deadfall for a bear. We are going over into a good bear country, and we will build a deadfall in there somewhere. It won't be long now before bears begin to come out and travel. They are hungry at first and there isn't much to eat, so they go right into a pen of any kind for a chunk of meat.

"You have seen how to trap marten, fisher and the like. In my trapping I use a 'natural set' for about everything. I never build a house for anything but a marten. Sometimes I catch them by covering the trap with a bark or slab house for the marten to poke his head into. Usually the less monkeying you do around a trap the better it is.

"Of course there are some 'secrets' about trapping, but the best secret is to use judgment and common sense, and to keep your eyes open and not be in too big a hurry. Every fellow learns something for himself and trappers don't all work alike. For instance, maybe not everybody knows about the beeswax bait for bears. Sometimes I take two red hot flat rocks and put a big chunk of beeswax between 'em, and let it smoke and burn. That smell will go a long way on the wind, and if there is a bear anywhere in the neighborhood he'll come to it, sure.

"Then sometimes I go out through the woods in a big circle and drag a piece of meat to make a track for the bear to follow to the trap. I don't always trap alike, and no good trapper does. If he is any good he will act the way circumstances seem to show him is best."

The Deer Range.

I had seen a great deal of deer sign that afternoon and spoke of it to Joe. He said there were few better deer countries than that around Big St. Germaine. Deer wintered in a heavy thicket there. He thought the law was not broken much in winter, except that the residents might once in a while kill a deer to eat. In the summer hundreds were killed illegally by night shooting around the edges of the lakes. Most of this was done by city fishermen, nearly all of whom brought rifles in with them. He knew one so-called sportsman who fired at seventeen different deer one night on Big St. Germaine, using a shotgun. He killed one and wounded a number, which were afterward found dead.

"But I suppose it was a sportsman that did that," said Joe, reflectively, "so it isn't so bad as if I had done it." (Yet on another occasion that same "sportsman" was fined over $100 for illegal shooting of deer.)

Muscallonge Waters.

Joe said that Lake Big St. Germaine had not been fished by the 'lunge anglers much for six or eight years. He thought the fishing ought to be good. The biggest 'lunge he ever saw came out of that lake. He admitted that one spring he speared two 'lunge (illegally), either of which weighed over 45lbs. He told me of a party of gentlemen fishermen from Kansas who put up at Saynor's place the summer previous. They sold their fish and marketed over 1,000lbs. (so Gaynor told me also), but they kicked because they did not pay expenses! There was an amateur photographer in that same Kansas party who sold Saynor pictures of his house at $1 a picture. It would seem that the Kansans put up rather a hard game for Mr. Saynor to lay up money on.

The Dog Sledge Express.

In expectation of this trip to the Buckatabon region, Joe had already taken his toboggan and camping outfit up to Saynor's place on Plum Lake, intending to make that the starting place. (It seemed that I was to see yet another style of trapper's transportation.) We had therefore little to carry on our six miles' journey in the morning, from Joe's cabin to Plum Lake. By noon we had our supplies all ready, Mr. Saynor generously helping us out in that line, and offering to go with us and help us get our stuff over to Buckatabon Lake.

We had a tent, a sheet iron stove, blankets, cooking utensils, axe, camera and supplies for a week or more, besides our outfit of traps. This would not appear to figure up much, but it makes a big load for one toboggan, more than one man can pull unless the snow be very good. It is more than two men can pack on their backs. We decided therefore to use not one, but two toboggans, for part of the way at least. Moreover, and most interesting of all, part of our rolling stock was to be the dog sledge express operated by Mr. Saynor's son, a chunky, rosy-cheeked little fellow about 7 years old.

Joe and I both agreed that this boy was "an awful good kid." If I said that he hauls all the wood the family uses in winter time, and brings it a mile and a half from the forest to the house, I might not be believed, yet this is true. His playmate and fellow-laborer in this is a big, strong staghound, only 16 months old at that time, but apparently strong as a mule. The boy has a collar and traces for the dog, and when he wants a load of wood he hitches up, gets into the toboggan, cracks his whip and goes off across the lake a good deal faster than a man could run. He gets his toboggan full of wood, heads back for the house, and the big staghound, with head down, comes trotting in about as fast as he went out. If the sledge sticks at a hummock, he stoops, strains in the collar, the muscles on his thighs standing up like those of a cart horse, and over any ordinary obstacle he will snatch the load or break something trying. When the toboggan is loaded very heavily the boy trots along at the head of the dog, carrying his short whip, and young as he is, I should woefully dislike to have to keep up with him. That boy will surely grow up with good legs and lungs. He and his dog have a perfect understanding, and the latter does not work so well for anybody else. Together they make a freighting outfit about equal to three powerful men, and very much faster than any man on foot. This was the oddest sort of transportation I ever saw in the pine country, and the best for the locality where it was used—mostly on the level, frozen lakes.

The Real Toboggan.

The best toboggan is made of maple, which is hard and wears smooth. The toboggan should be 1ft. to 16in. wide and 6 to 8ft. long. The front end is curved up and back, the bottom being tight and solid, with no cracks. There should be a light sideboard on each side and an end board, all nailed tightly on to the bottom and extending 3 or 4in. high clear above the bottom. This keeps the snow out of the toboggan, and makes it run much more easily. When the sideboards break and the snow gets in on the bottom board, one quickly finds he is pulling three times the load.

Our able monthly magazines sometimes print pretty pictures of jaunty-looking sportsmen pulling a moose or two along swiftly on a toboggan which is apparently made of a piece of board turned up round and nice at one end. Perhaps the artists get their ideas from the toboggans in the show windows, which usually are simply slats cleated together and bent up forward, but with no tight bottom and no sideboards at all. That is a very pretty style of toboggan, and it is also very worthless for woods work, though it might do to slide down hill on. If you want a trapping toboggan, you want one of the sort above described. And then you want a good dog and a husky kid, such as we had. Supplied that way, you can surely travel.

Dog Train and an Ice Trail.

We loaded up our two sledges at Mr. Saynor's house, as I was saying, about noon, and pulled out, Mr. Saynor, Joe and myself, the kid and the dog. I have rarely started out under more picturesque conditions. It was biting cold—for everybody at least except for the kid and the dog, who didn't mind it—when we got out on the lake, but I could not forbear halting the procession and getting some pictures of our singular outfit. Then the boy cracked his whip and started off ahead over the trail up Plum Lake to the Star Lake portage. He trotted at the dog's head, and the time they made was a caution. The rest of us, taking turns at the other toboggan, soon were laboring far in the rear.

A Nervy Boy.

The Star Lake portage is over a quarter of a mile of high, rough ridge, and here we had hard work, though the big staghound buckled into the traces nobly and left little to be done except to help him over the logs. Then we had a smooth run to Star Lake settlement, a little sawmill town at the terminus of the new line of railroad lately built in. This was about five miles, I believe, from Mr. Saynor's house. Here we transferred the boy's sled load on to Joe's toboggan, and I put on my pack, which till then had been on Joe's toboggan. It was necessary for the boy to leave us here and go back home. The day was bleak and cold, and the forests looked wild for a youngster to travel alone. His father had no fear for him, however, and the boy was unconcerned, except that he wanted to go on with us and not go back home. The last we saw of him he was going a clinking pace toward the portage, the dog trotting like a thoroughbred, the boy sitting up straight on the toboggan and driving like a king. He got home all right in about three-quarters of an hour.

Night at a "Summer Resort."

We three men now found that we had our work cut out for us. We wanted to get over to Lake Laura that night, about four or five miles further on our way. The way was over choppy hills, and the trail was awful, being cut up by logging teams which had plunged through once or twice and left a double row of icy ridges and holes in the deep snow. It was nearly dark and we were all tired when we felt that strange, cold breath in the forest by which one knows that a lake is not far off. Then we soon made Laura Lake, which neither of my companions had visited over this trail. We were now getting well into wild country—though indeed all the country, from Woodruff to where we now were, is wild enough in the winter time. Laura Lake is the very head of the Manitowish waters. We were here at the divide between the Manitowish and Wisconsin River systems. Laura Lake was once a famous bass lake. An enterprising man started a "summer resort" here, and sought to lure city people to his place for the fishing. Meantime he and his family fished for market all the time, all seasons, spring, summer and winter, and cleaned all the bass out. They shipped 900lbs. of bass at one shipment. Laura Lake today is a denuded water, as thousands of other lakes in that wonderful region soon will be.

Apparently business had not been good lately, for we found the "summer resort" (which was a three-room, story and a half frame house) abandoned. There were many deer legs and horns about. The hide of a skunk was flapping idly in the wind. Inside the "summer resort" we found, to our joy, that the cook stove had not been moved, that there was a good pile of wood already cut, and that there were two old mattresses on the floor in the room where the stove was. Being thus saved from pitching camp on the snow, we joyfully kicked off our snowshoes, moved in, and soon had made ourselves thoroughly comfortable over a meal of hearty pine woods food, after which we rolled down our blankets and passed a good winter night on the floor of the "summer resort."

E. HOUGH.

909 SECURITY BUILDING, Chicago.

CURLY.

WISCONSIN.—The subject of my narrative is not a myth, but a solid reality, one of which the poets have never sung and whose deeds, though heroic, were never recorded in history. And though Curly was a dog and only a dog, his memory is cherished by every member of our family. He was a true friend; and he who despises the friendship of a dog misses one of the choice things in life.

Curly was a large, square, black water spaniel, with an intelligent face, large brown eyes, and a silky coat that resembled the choicest Astrakhan. He was presented to our youngest son by the janitor of the academy where our boys were attending school, and he became attached to every member of our family, but his love for his young master was something out of the ordinary. He followed him like his shadow. On one occasion, when there was preaching at the schoolhouse on a beautiful Sunday afternoon, the family attended, and when the boy came in and took his seat with other boys Curly was on hand and insisted upon sitting beside his master. He sat sedately and quietly for a while, but he grew tired of this monotony and would look wistfully out at the door, then up in his master's face and whine, then again he would look wistfully out of the door, as much as to say, "Can't you see how lovely it is out in the sunshine?" Then his master would point his finger at him and whisper, to the delight of every urchin present, "Now, Curly, you sit still and listen to the sermon, and you'll be a better dog if you do." He then settled down and went to sleep, but as soon as the congregation rose to sing Curly jumped up and gave one joyous bark!

When he was two years old the boys went to Minnesota and took him with them. He learned many bright tricks in his absence, and when they returned at the end of a year it would have been hard to tell which was most delighted to get home, the boys or the dog. One of the tricks he had learned was to toss up crackers, candy or peanuts and catch them, never missing one. He was a general favorite, and never entered a grocery but what some one was ready to lay crackers and candy on his nose to see him toss them up and catch them. He had a great appetite as well as capacity for sweetmeats, and his appetite, without doubt, shortened his days. Curly was very neat in his habits, never failing to bathe in the morning when conditions were favorable, said conditions requiring nice, high, wet grass or light snow; he seemed delighted with either, and would frolic and roll until he was thoroughly clean, whereupon he would dry himself before coming into the house. He was extremely sensitive, and would show as much chagrin at being laughed at as would a sensitive boy.

He came in one day in a frolicsome mood, frisked into the conservatory, where a fresh sheet of sticky fly paper had just been spread. The tip end of the long wavy hair on his tail just touched it and lifted it high over his back. He shook it, barked and growled, but his efforts only made it stick the tighter. He wouldn't let us touch it, and finally becoming frantic, went out in the dooryard, rolled over, spreading it the length of his back. After we stopped laughing, he seemed perfectly willing to have us free him from his tormentor, and in a few minutes was as cheerful as ever.

After awhile one of the boys married. Curly became greatly attached to the bride, and finally, as his master was much from home, took up his abode with the young couple, who lived on a farm on the opposite side of the road from the homestead. Still he was a frequent visitor at the old home. While the young people were at breakfast he would walk around the table and greet each one, expecting and getting a choice morsel from each, then he would trot right over to his old home to see us. Our houses stood about eighty rods apart, but he generally managed to get there before we had left the table. If the door was shut he would scratch it gently. We always made it a point to meet him and open the door. He would come in laughing, as we termed his peculiar short breathing when he was pleased. He was greatly disappointed if we had left the table before he arrived. If his young mistress scolded him or told him his feet were dirty, he would march right over to his old home.

We could always tell by his manners when he was in disgrace. Then sometimes we would scold him just to see him perform. He would put on such a "woebegone" expression and start right back, but never at such times would he go more than half way, where he would sit down on the turnpike, with his face to the west, and stick his nose up as high as he could, shut his eyes and sulk it out, then he would be his own lovable self again; but with all his redeeming qualities he had his faults.

He was jealous to a human degree, but was not human enough to be revengeful. He was not only jealous, but was a thief, a petty thief, his weakness being for peanuts and candy. I well remember one Christmas, when a little girl brought a bag of peanuts and candy for the Christmas tree, and not wanting to eat them that night, put them on the top shelf in the conservatory. In the morning when we entered the dining room the carpet was strewn with peanut shucks and paper. Curly could not resist the temptation, and like any other thief waited until all was still, then feasted. He had torn the bag to pieces, evidently fearing a little peanut or bit of candy had escaped him. Of course he was only petted for his sagacity. We told him it was no crime, and that there was no law against dogs stealing as long as they didn't steal sheep.

He would carry packages as well as a boy. One time his young mistress intrusted him with packages, among them a little bag of peanuts. He no sooner got a sniff of the freshly roasted peanuts than he sat right down in the middle of the road in the snow, tore open the bag and ate every one, then trotted on home with the other package.

Curly was a privileged character, and on account of his neat habits was allowed to roam all over the house. Sometimes, when a room got too warm for his majesty, he would get up and walk to the door, asking us in his mute way to open the door, and when we had complied with his wishes he would sit down just inside the door and sniff the fresh air to his satisfaction, then go back and lie down and watch to see if we shut the door.

He would never eat like other dogs. If we offered him scrapings from the table he would turn up his aristocratic nose and walk away. At such times we would draw upon his jealousy by calling the cats. Soon as we called, "kitty, kitty," he would fly at the food and eat it in a trice. I saw his young mistress take some dry biscuit out one day to feed the chickens. Curly asked for the biscuit and ate every one before the chickens got there. If we had offered him fresh biscuit well buttered, he would have refused it.

On one occasion one of the boys went to the library in the second story to write some letters. Curly, of course, followed; he laid down under the secretary and went to sleep. The young man went out, closed the door, and went to town. Curly slept on until the sun was far down in the west; then we were startled by hearing a rumbling noise and feeling a jarring sensation overhead, then the library door would shake violently. None of the girls or kitchen help dared go up and see what was the matter. All at once there was a calm followed by a crash, and broken glass fell from the large east window and lay in a thousand pieces on the ground. We rushed out and looked up at the window, expecting to see something, but alas! nothing met our gaze but broken sash and space. Then we commenced daring one another to go up and open the door. A girl in the kitchen said the racket was caused by spirits. "Well!" said I, "spirits were never known to hurt anyone, and I am going," and suited the action to the word. Judge of my surprise when I opened the door and met only the black face of Curly with a malicious gleam in his dear old brown eyes. "You black rascal!" said I, "why didn't you finish the job by jumping out and breaking your old neck, after you had made a way?" He looked up at me complacently and wagged his tail, as much as to say, "I knew too much for that." Strange, none of us even thought of Curly; strange too, that he didn't bark or howl. I suppose when he awoke and found himself a prisoner he became frantic.

Curly was always civil to other dogs, and tried to keep out of trouble. He tried in a doggish way to live up to the golden rule, but if a dog persisted and seemed bent on a fuss he would accommodate him. Curs would frequently run out after him when he would be passing farm houses in the country; then he would trot to the opposite side of the road and whine, as much as to say, "I am a peaceable dog and don't want to fight;" but if the canine still persisted Curly would stop and shake him well, and send him yelping back whence he came, "a wiser if not a better dog." Then Curly would trot on after the team as if nothing had happened. He in this way gave many a mongrel a lasting lesson, and many of them twice his size. At one time he followed our teams, which were going to the pinery, sixty miles away, got tired of it and turned back, reaching home the following day, and after a good supper and a night's rest was as frisky as ever.

His young master went to England and imported some fine horses. After they were rested and well groomed they were led to the door for the ladies to look at. After their long and perilous journey they naturally became objects of interest, and in proportion to the interest we lavished upon them Curly's jealousy was aroused. When he could stand it no longer he walked off a few feet, struck his peculiar attitude, and all the while the horses stood there he sat with his back toward them with his nose elevated in the air, his eyes closed, perfectly oblivious to everything until the horses were taken away to their stalls; then at the first sound of his name he would give one sigh and bound around as playfully as ever.

To prove his jealousy we took to petting old Jack, the house dog, more than usual. We petted the chickens, kittens, anything, just to see Curly sulk; but soon as the obnoxious object was banished he was his own dear self again, and would look at us in such a confiding manner that it would give us a pang of remorse; then he always got an extra amount of petting to pay for it. His forgiving spirit would put many a human to shame.

At one time when the craze was on for advertising cards, the girls brought some home from an upholsterer's. Among them was the picture of a pug dog. Now, said the girl, I am going to plague Curly if I can. She stood it in the middle of the floor, then called, "Come, Curly, and see the pretty doggie." He came, walked up to it, sniffed around it, gave a little low growl and left the room, and could not be prevailed upon to return until the inanimate and offensive object was removed. We hung a pier glass opposite the entrance to the parlor, and when Curly first saw himself in that the hair raised up on his back and he gave his picture a saucy growl and looked behind the glass to see where the dog was that dare go in the parlor, and when he found nothing he looked silly, but was really quite jealous of his own handsome profile.

Curly was quite useful as well as entertaining. He learned to retrieve without being trained in any way. The first time he showed his ability was one day while his young master and a friend of his went out to a little preserve or pond to shoot some ducks. They shot several and found all but one, a wounded one, and were getting ready to return home when they heard a rustling among the willows; in a minute out walked Curly holding gingerly in his teeth a large wounded mallard.

At one time one of the boys had to make a business trip to Minnesota, and as his train left at 3 o'clock the next morning he thought he would pack his trunk over night,

Curly watched him closely and the young man thought to slip away in the morning without his notice. When morning came the dog was nowhere to be seen. The young man on arriving at the train went in and took a seat, looked around, and there stood Curly, wagging his tail and seeming to say, "Well, here I am, you see I am on time."

The train was already moving when the conductor came in. The young man asked him to stop the train and put Curly off. He looked at him a minute and Curly returned the look with such a self-satisfied and innocent expression that the conductor said, "No, he has earned his ride; let him go," and no nabob ever enjoyed a pass better than Curly.

But our pet was growing old, which made us all regret that dog life was limited to so short a span. His sight was growing dim, his hearing dull. He always hated flies, and when they lighted on him he would catch nearly every one and eat them. After his sight began to fail we concluded shadows like spider-webs came before his eyes in like manner as we had heard old people complain of, for right in midwinter he would catch and appear to eat imaginary flies.

Curly was a great guard; he would never see a woman go home alone. He went home with many a pretty girl, and we often remarked that she might have been in far worse company; and woe to any one who came meddling in the night or who came in rags in the daytime.

It seemed as though one of the family was pluming their wings for flight, for the older he grew the more he seemed to care for our society. I would talk to him and sometimes quote a favorite poem to him, one written by a friend.

Well do I remember the last time I saw old Curly. He tried to come home with one of the girls, but his gouty old feet gave out, and he sat down and watched her until she reached home, faithful to the last; then he turned sadly around and with difficulty reached his home again. He was shot the following day to end his misery. It saddened all our hearts, for the twelve years he spent with us were among the brightest of our lives. It made us sad to reflect that all that was left of his beauty and his love were a sunken grave beneath a tree and the crumbling earth above.

MRS. M. E. WARREN.

THE REALIZATION OF A DREAM.

EVER since I began visiting the Triton Game and Fish Club territory, comprising some 550 square miles of wilderness, 100 miles north of Quebec, I have been told of tremendous brook trout which frequent its innumerable lakes and streams; but up to this fall I have never assisted at the obsequies of any running over 3½lbs. in weight. That this is large enough most fishermen will agree, but the fabulous five and six pounders always haunted their imagination. In many a dream have I seen my fly taken by a monster with a back fin "like a ladies' fan," only to find my trusty rod transformed into a punky cornstalk, my reel singularly like an ice cream freezer, or to suddenly awake to the dull roar of a never sleeping city. I had heard of a lake far away in the wilds which was reported to be a paradise of game and fish, unknown, except by one flying visit, to any except Indian hunters. It was said fairly to boil with huge speckled beauties, while the evasive moose was credited with relaxing his habitual aloofness about its "savannes" secure in solitude.

The fascination of exploring unknown regions also added its weight to the arguments in favor of a departure from usual lines, and so Lake Moise (pronounced Mcéés) was determined upon. The motto then became "Moise or bust." Fortune favored me by providing an unexpected companion in Mr. W. L. Pierce, of New York city, who was lured by my tales of moose into joining forces.

We reached Quebec Sept. 6, and noon next day found us at Skroder's Mills, the temporary headquarters of the club. By previous arrangement our guides had carried in all provisions and camp plunder to Lac des Passes, coming out to meet us with the canoes. This enabled us to save a day and travel light.

The next night, after we had unsuccessfully whipped several streams and lakes *en route*, found us in a delightful camp at the above lake.

It had been a rather sad beginning. No fish where there were plenty the previous year, and at Lac des Passes eight new club members, forming with their sixteen guides a regular encampment on my old point, while canoes were visible in every direction. The lake fairly bulged with them. In that camp were about twenty-five 2 to 4lb. trout drying in the smoke, and we found upon sampling that the 33-year-old fly paint in general use was entitled to warm commendation. These trout had all been caught by trolling flies with a bit of bait attached slowly about the bays. The prospect wasn't very gay. After supper, at our own camp a mile below, we decided to rest one day and then push on.

We had no luck whatever the next day, try as we would. Tuesday morning we broke camp early, and at night we were at the head of navigation on the River Moise, the last of our cleared carries. We had been assured that an old trail existed along the river, but that there was much deadwater in the stream, up which we could pole and save carrying. It was thought wise, however, to emulate the children of Israel under similar circumstances, so early next day two of our guides started up stream with orders to get to the lake and come back with a report.

Pierce and I, with the other two, went down the river to visit another old camp of mine on Lake Batiseau. *En route*, and just as we had smashed our canoe in a lively shute, necessitating debarkation for repairs, we met two other members going out after a brief outing. They had just seen two caribou cross the river below out of shot.

After the usual interchange of civilities and nerve food they pushed on, while we made repairs in nine places. While thus employed a cannonade above drew our attention. A large lady caribou was fairly sailing across in shallow water, while the rifles barked or cracked as black or smokeless spoke. We saw no faltering, but perhaps we were deceived by the sulphurous cloud which hung low over the scene. Pierce suspected that this might have been caused by the conversation, but I am inclined to believe that at least one rifle used black powder.

We lunched at the old camp at the end of nine-mile Lake Batiseau, returning up river in a driving rain. We had caught as many small trout averaging about ½lb. as we cared to take but none over 1½lbs.

It was good fun, and by no means effort wasted, as I learned when calling for trout at breakfast next morning. The reply came, "No trout, Monsieur." We looked blank, for we had brought in over seventy, of which we had eaten perhaps six, but inquiry evolved the fact that all the rest had been boiled and eaten at one afternoon tea. It is impossible to waste fish in such society.

But we digress. Our arrival at camp found the two spies comfortably chatting by the fire. The report was short and sweet—no deadwater, no trail, no lake, no possibility of advance in that direction. This was fairly sickening. After all our planning and eager anticipation, to be stopped at the very threshold was not to be thought of. Again, a very shrewd suspicion existed of the gen-

A PRETTY WOODS PICTURE.
Photograph by H. N. Curtis.

uineness of the difficulties. It was too complete a catalogue. It probably really meant a prospect of hard work which was not favorably regarded. Therefore the head guide was tersely and emphatically advised that we took no stock in him or his story; that we had come from New York to reach Lake Moise and proposed to do it; that he was too old to go in the woods any more, but should sit by a fire and smoke all day, etc. This last taunt acted as was intended.

"Sacr-e-e-e! I good man yet—I go where any—the man lie who say trail there or can go up river—no can go—all bad shutes and big rocks—take maybe seven day to get through."

"Stop there," I said. "To-morrow morning we shall all begin to chop a trail, and we will see how far we can go in one day, at all events."

There was no reply possible, of course; but stubborn looks and muttered comments prevailed about their fire, while Pierce and I tried to cheer up and feel hopeful.

Which end of the motto was to win was the problem.

After breakfast we crossed the river with two guides, who within ten minutes found the blazes of the old trail.

This was a good beginning, and all hands were soon working away for dear life. At first it was fairly easy. We only cut wide enough for a canoe, and left all logs which we could straddle.

The old blazes were only of use as indicating the direction; but the trail most of the way was full of fallen trees or young growth. The order of attack finally resolved itself into my going ahead with the least useful guide to pick out the easiest route and blaze for the choppers. Pierce acted as rear guard to drive them along.

At noon we had made about a mile and were feeling very well satisfied. After lunch I started on again, determined to get as far as possible before turning back. It was slow progress, sure enough.

There was no soil whatever, but only stones and boulders of every size, carpeted with deep green moss as full of water as a soaked sponge. This effectually covered the crevices and chasms, so that every few steps the foot would go down between rocks, barking the shin or ankle or causing a heavy fall. Occasionally I would fall into a cleft wide enough to take in my whole body and higher than my head. Then the forest had its own seductions. In all places it grew so thick as to necessitate chopping for the width of a canoe, and near the river the alders formed a perfect network; but not content with this, fallen trees were every few feet, while in every direction lay tangled windfalls acres in extent, in which the spruces, balsam and birch were piled in inextricable confusion. Usually the old blazes led cheerfully up to one of these and disappeared in the shuffle. Then came the fun of unraveling the skein. If it was not too large we would circle in opposite ways, picking up the blaze as it emerged generally at some wholly unexpected place; but in most instances there was no alternative but to start in, crawling, climbing, jumping, falling, and when we had any breath to spare commenting earnestly on the surroundings. After careful search perhaps a fallen tree would be discovered bearing a blaze, then another a long distance away and entirely out of line, but often we simply smashed along the most feasible route, trusting to find the blaze somewhere ahead. As a matter of fact, we found and lost it many times, but in general both trails followed the river.

To make it wholly and completely cheerful and satisfactory it began hailing and raining at noon, so that in a few moments each branch became an eager and diabolically intelligent shower bath loaded with ice water. It would have been drier swimming the river. At about 4 o'clock I stood on a big rock at a bend in the river, with only a rushing torrent in view above in which no canoe could live. It was three long and hard hours to camp, but the choppers had made good progress and hope still sprang as eternal as mentioned by the poet. Moreover it had become a matter of pride now.

The next day was practically a repetition, except that we carried our canoe and several light loads as far as we had chopped the day before.

As before I was ahead, and at about 2:30 came to a sure enough deadwater with lilypads in it. This I took to be an arm of the lake. No rapids were visible above, and an attempt to go further through the forest led into an almost impassable deadfall of great extent. Moreover the old blaze, again recovered and followed for the last half mile, ended here at a big flat rock.

This then must be the gateway to Mecca. We started back full of satisfaction and hope, but reasonably hollow in other respects. In about a half hour we found the choppers, told our story and sent them all on to finish up.

Then came the long return tramp to camp. In the morning we started out with the remaining canoe and dunnage, reaching deadwater at about noon. While the boys were getting lunch Pierce, Lavan (our head guide) and I paddled up the stream, when on rounding a bend the sickening spectacle of more rapids presented itself. It was pretty hard luck. We found the blaze on the left bank at the head of the deadwater, and leaving Pierce at the canoe Lavan and I took it up. We lost it almost immediately, but kept on over a little shoulder of the mountain toward an apparent opening in the forest. After a time we again found the trail, which without

more ado brought us out on the shore of a bay—the lake this time beyond doubt.

Returning down the deadwater we had a snack, and then while two of the men returned half-way for the remaining loads, the rest of us went on. I was pioneer as usual, and after a hard and tangled scramble was approaching the shore, blazing as I went, when I heard the brush snap ahead. I stopped short to listen, several repetitions of the sound convincing me that some large animal was not far ahead. Leaving my axe, I hurried back as fast as possible for my rifle. With this and my pack I again made my way back and stopped to listen. Whatever it was, it was still there, so I crept forward silently, visions of moose or caribou vividly in my mind.

When within about 100yds. of the shore I saw a movement in the bushes, and carefully shifting to get a good look, saw an unmistakable human arm clad in a crimson sweater wielding an equally tangible fly-rod.

We are told that thirsty travelers in the desert become insane when the beautiful streams and groves of the mirage fade from view. I can sympathize with them.

Utter and unspeakable disgust filled me to overflowing. I was conscious of a strong temptation to put a bullet into that shining mark—and apologize afterward, if necessary—but what I did was to sit down on a wet log and wrestle with my spirit. It would have been no greater shock and surprise suddenly to have come out on the corner of Broadway and Fulton street. Here was our fabled wilderness, reached after days of mortal toil, crowded with fly-fishermen in red jerseys. They must have come in from some other region east of us and were clearly interlopers. I became stern and righteously indignant, and in this frame of mind went ahead prepared for frigid and sarcastic rebuke, but as it suddenly occurred to me that my dark moving form might equally invite a leaden messenger I stopped and forgot my dignity long enough to yell loudly. The dark face of an Indian appeared over a pile of fallen timber while a phlegmatic grunt answered my bird-like notes.

I scrambled over to him. He stuck out his hand, grinned, called me by name and said: "You got my boy." This called for a new deal. I probably looked very blank, but he said: "I am Tomas Sivi. My boy, young Tomas, is with you."

My intellect began to work as I recalled the young daredevil, one-third Indian, one-third Irish and two-thirds monkey, who formed a part of our retinue. "Who is with you?" I gasped.

"Mr. Mowry," said he. "We heard that you were coming here, so I brought him in another way." Then he grinned.

It was a pretty good joke—for him. Well, it was only one, a fellow member, and he had just arrived. I went back and told Pierce, and we proceeded in state to present ourselves. Mowry was mildly jubilant at being the first to arrive. He had struck the lake at the upper end by way of an old Indian hunting trail, coasted its entire length to find if we were ahead of him, and having found no signs was tranquilly fishing for his supper. Upon comparing notes, however, we found that we must have reached opposite ends of the lake at about the same time.

As he stood talking and casually casting from the rocks he got a heavy strike, soon after landing a 3-pounder. In a few minutes he followed this with a 3¾ fish. Our eyes began to protrude. My rod was at hand, so I tried my luck, but not possessing his skill I only succeeded in hooking the trees behind.

Just then one of our men came with a canoe. Launching this, Pierce paddled me out clear of the shore, and in a few moments I had one on which scaled 4lbs. 1oz., and shortly after struck an infant terror, which, after towing Pierce all over the basin, came reluctantly to net, tuning up to 5lbs. 2oz.

It was then getting pretty dark, so we went ashore and forgave Mowry several times.

We camped right on that spot, dark and damp as it was. The next morning Mowry was out bright and early, getting several big fellows. We breakfasted leisurely, then while Pierce and Mowry began their labors in the basin at the head of the river, the lake's outlet, I went with young Tomas to a pool and falls said to exist about two miles below.

Passing through narrows not more than 50ft. wide, connecting wide bays, we went up a lagune for several hundred yards, guided by the roar of the falls. Here it broadened out into a pool perhaps 60yds. in diameter, nearly circular, into which plunged the little river over a series of rocky steps, a total fall of about 20ft.

Paddling slowly and cautiously around its edges, I whipped as scientifically as my limitations in that line permitted, but with no result. This went on for twenty minutes. The place was ideal, but we all know that ideals do not exist for trout. Apparently no trout existed for this ideal.

We had slowly edged our way up to the foot of the fall, holding by a rock which rose in the eddy. Suddenly the water boiled close to the canoe as my flies left the water after a short cast. Nothing was visible, but I dropped in again not 15ft. away, let the flies rest an instant and began to recover. There was a tug and then a surge, and I struck firmly twice before the rush began. How the reel sung. It was music for a king, or better yet, for an ardent sportsman. For a few moments it was hot work, then succeeded a time of sulks and pulls which indicated big game. The canoe was worked back to a sloping sand beach where I could stand up. Then I began to get the mastery. The circles became smaller, the plunges fewer, but in spite of the arc of the rod and a reel to take in every spare inch the strain was heavy. "He is a whale," I said to Tomas.

Just then a fin and broad tail flashed up into the air, and just beyond what looked like the tip of another.

Deux! deux! Monsieur!" yelled Tomas; "deux gros truite."

"Oh, no," I replied, trying to be indifferent, "only one big one, I guess."

But he was wild with excitement and sure of two. He was right. The leader was strong, the fish fought and helped drown each other, and in about twenty-five minutes after the strike I swung them by him as he stood waist-deep with the net, when with one swift but careful swoop he netted both.

I thought the steel hoop would break as he raised them out of water, but it only sprung down at an angle, thus partially closing the mouth of the net. Before they could well flop he had them in the canoe. One weighed 5lbs. 8oz. and the other 4lbs. 6oz.; total 9lbs. 14oz. of fighting trout. To say I was proud is putting it very softly. Not even my first luck many years ago gave me any deeper thrill. I stopped right there and then. There was no probability of equaling that feat and anything less would be sacrilege.

In a few moments Mowry paddled in with half a dozen beauties, "picked up anywhere along." We exchanged congratulations. When we got back to camp Pierce had twelve fine fish close at hand.

That day's catch figured up thirty-three trout with an aggregate weight of 110lbs. 4oz.

Mowry said to me at the pool: "I feel guilty about catching so many magnificent fish; it's murder. I'm going to stop."

"Well," said I, "I have stopped because I don't care to break the spell of my double, but I advise you to land every one you can. This is our day. We will probably never hit such luck again, and you can rest assured that nothing will be wasted."

C. H. MOWRY AND "THE BABY."

Photograph by H. N. Curtis.

"I guess you are right," said he, "the temptation is certainly very great."

He proudly showed the top notcher at night—a six and one-half pounder. "And the one that got away with my bottom fly was a yard long—wasn't he, Tomas? And would weigh over 8lbs.—wouldn't he, Tomas?" and Tomas said, "Yassir."

The fun of Mowry's catch was that his improvised landing net consisted of an old piece of burlap—originally an envelope for pork—stretched in a shallow bag to a looped pole.

The following morning was devoted to photography and the skinning of four of the finest fish, which were rubbed with salt and alum for preservation. (Here I may say that they came through all right and have been beautifully mounted by Mr. Henry Squires, of New York city.) In the afternoon we explored the whole lake, picking out a better camping ground, on a point about midway. Mowry went out next day after accomplishing a feat for which he had longed, viz., the catching of a 5lb. trout and putting it back. "That," said he, "is what I have always wanted to be able to say—that I had found them so beautiful that I had put them back. That will please any man who comes back at me with a bigger story."

That same morning we shifted our camp to the new location. It began to get hot and sultry. The fish were not in general evidence as hitherto; in fact, as it became necessary to fish for the pot (the ravening maws of our tubular guides having worked destruction upon all our flour, biscuit and over 120lbs. of trout), we were driven back to our first pool for any luck at all. Here we picked up eight one afternoon and eleven the next morning, running about as before. This finished our big fishing, as we went out the day following. Here is the demnition total—fifty-two fish weighing 168lbs. 11oz.—a grand average of 3lbs. 4oz. Leaving out ten which weighed under 2lbs., the average for forty-two was 3lbs. 11oz. Seventeen of the catch went over 4lbs.

Each of us had something to be especially proud of. Mowry had the largest, 6½lbs.; Pierce the largest number, twenty-one, with the highest average, 3lbs. 7oz., and I held the championship in doubles.

These fish were all taken scientifically with the fly. There was no bait-fishing. They were without exception the most brilliant fish I have ever seen. The colors were so vivid as to be incapable of reproduction by brush or description by the pen. They were a deep-bodied, heavy fish, full and strong. When struck it was a matter of fifteen to thirty minutes to bring them to net, and for the whole of that time perhaps after the first rush it would be a steady sulk about 6ft. below the surface, from which no effort could raise them. Time and again, after long spells of this, in which the rod butt was held perpendicular at the edge of the canoe, the pliant cane describing a perfect arc with its tip close to the water, I tried to raise my fish by lifting the butt straight up to full arm's length; but the tip stayed right at the surface, notwithstanding the tremendous and long-continued strain. Often a lost fly or part of leader showed that two had been on at once, but one had broken away.

Again, the smaller fry, under 2lbs., had a disagreeable habit of snatching the top fly after a big fellow was fast below, making difficult work of bringing him to net. It took sharp work to save the rod when a rush was made under the canoe; but we proudly remark that not a tip was broken, not a fish lost except such as broke the leader or carried off a fly in case of a double strike.

I have never heard of equal luck for both number and size. It is something to brag of for a lifetime.

The trip out was severe because of the excessive heat, and uneventful but for one clean miss of a caribou, the only shot we had, although I saw a big bull swim the lake a half mile away, going out before we came within shot.

NEW YORK.

THE SPELL OF AN OTTER'S EYES.

Editor Forest and Stream:

By the Adirondack woodsmen along the banks of the West Canada Creek the otter is regarded as quite as sly as the fox, inasmuch that it is very difficult to trap in any kind of contrivance. There are fewer stories about the creature's intelligence, as the animals are scarce and have not been so much observed as have the foxes.

There has been, and probably is, an otter that for six years anyhow, and perhaps longer, has traveled down the creek winter and summer about every two weeks. In the winter it left a running, sliding trail in the snow on the ice, seldom leaving the creek bed to go into a cove or overland for a dozen or fifteen rods. In summer weather it fished and caught frogs in the coves of the flats. A good many shots have been fired at it and a lot of traps set for it, but none were ever successful. It is believed by woodsmen that the otters, like the hell-divers, loons, mink and others, dodge shot or ball.

I saw this otter once some years ago in the summer time, and while only one feature of the animal is distinct in my mind, I do not recollect any other wild animal so well. The body is a mere glimmer of black in waving swale grass. Even the head is a burly, rusty gray shadow, a sort of background for the two eyes.

I have seen deer when they were standing still looking at me, have looked at squirrels, rabbits, partridges, foxes and other wild animals alarmed by my presence, but their forms, rather than their eyes, are more or less distinct. In fact, the eyes seem secondary in the mind pictures, except in the case of the otter. It seems to me that the otter did not merely look at me; it was more as if it looked into me, the same as the sensation one has when some one—a man or woman—"reads your innermost thoughts." These eyes were large and full rounded, dark brown with a shimmer of light gray skating across and around the center, and with a lively beauty as different from the dead beauty of a deer's full eye. It sent precisely such chills up and down my back as dark human eyes have done. It was a tense particular look, and not the general gaze of a bird or other animal. The otter, I think, hypnotized me, for I did not shoot, although my impression is that we looked at one another for a minute or two.

THE VERDICT.

IT was a shooting club. They were men of thought and they met in solemn conclave. They discussed momentous matters pertaining to their beloved pastime. And this is what they said about the question of

Nuisances.

No. 1. "The greatest nuisance is the dog that breaks and runs when a man fires."

No. 2. "But a greater is a dog that, with that awful fault, also gulps down the fallen bird."

No. 3. "I can bear with a poor dog, but the worst nuisance I meet are these posters all over and around, 'No hunting.'"

No. 4. "But a greater, added to the posters, is a man's head and the muzzle of a gun just above the fence, crying, 'Git out o' there.'"

No. 5. "As for me, I despise more than these a mad bull rushing down upon a fellow and driving him to the fence."

No. 6. "And worse still, a bulldog on the other side of the fence." [Cheers.]

No. 7. "Gentlemen, you have all spoken—spoken as becomes members of this noble club. But there is one thing above all that I abominate, abhor and despise. It is a nuisance *par excellence*. The man who conceived it ought never to have been born. The dog that breaks and eats his bird has not bitten me; the selfish curmudgeon behind the fence has not shot me; the mad bull has not gored me, nor the bulldog torn my pants. But my poor flesh has been lacerated and my corduroys torn to shreds by this most terrible of all nuisances—a cussed barbed wire fence." [Amens and deafening cheers.]

Natural History.

FOREIGN BIRDS IN MAINE.

BOSTON, Dec. 12.—*Editor Forest and Stream:* The three letters which my observations and questions on the Auburn, Me., bird-hatching experiment have brought into your columns have, naturally, been interesting reading to me. Two of the writers seem to look upon the matter as I did, viz.: that it is absurd to try to stock Maine with foreign game birds by an attempt to breed in captivity, as an intermediary phase in the process.

I confess I cannot see how anyone ever thought of such a thing.

If the original promoters of the Auburn scheme thought the matter out at all, must it not sooner or later have dawned on them that, even if they did succeed in rearing a few birds in their cages, the number they could raise there must always be infinitesimal as compared with the number needed to appreciably stock the State, and that for this larger number they would always have to depend on the natural increase of the birds in the wild state?

Perhaps they were under the impression that during the transportation of the birds from their native haunts to Maine they would forget their natural instincts and never know how to breed again until they were put through the persuasive treatment of confinement in a wire cage and a restricted diet, and of such a character as they had never before experienced. Whatever was the theory, I still think a statement of it would be psychologically, if not otherwise, valuable. Your last correspondent, Mr. Blomstrand, of Canton, S. D., hopes to "see the experiment carried on." I am not quite certain whether he means the Auburn experimant or merely an effort to introduce capercailzie and black game into Maine. I think it likely that he means the latter, in which case I heartily agree with him. I envy Mr. Blomstrand his personal knowledge of these fine game birds and wish he and others who know about them (and there must be many in America) would give through the columns of FOREST AND STREAM all the information they can which may tend to increase interest in this subject and give the data needful to secure success in any future experiments.

From what I have heard of the capercailzie, I feel great assurance that it is well fitted to flourish in the forests of Maine, New Brunswick, Nova Scotia and much of Canada, and I hope to live to see this noble bird—certainly one of the very finest of all the grouse family—thoroughly installed in our northern woods.

If a few dozen pairs can be brought to Maine in fair condition and liberated at the right season in the wilderness, far enough from the settled country to insure comparative freedom from molestation by man, and if they can, in addition, receive complete protection by law for a few years, I feel hopeful of a great and valuable addition to the interest which now draws the hunter to these northern wilds.

But we should know many things before money is again spent in this matter. We should know more of the habits of the bird in regard to breeding, food, and as far as possible disposition toward other game birds, ability to protect itself from enemies such as it would encounter here, etc., etc. We should also know the best time of year for liberation. We should also know how it compares with our native game birds for the table. I, for one, would much like to know how it is hunted and shot, and hope some capercailzie hunters will give us full accounts of the sport they have had, that we may know something of what we may expect when we get this bird fairly established in the Maine woods. Mr. Blomstrand certainly has my cordial invitation to give us from his rich store of experience. I am capercailzie hungry.

C. H. AMES.

Bluebirds near Washington, D. C.

AT the last congress of the American Ornithologists' Union I heard Mrs. Stephenson's paper about bluebirds read—I refer to the one that subsequently appeared in FOREST AND STREAM, on page 510 of the issue of Dec. 14, 1895. It interested me both at the time and since, while in some respects I was surprised at the information it conveyed. There can be no question now, of course, that since last winter bluebirds have been extremely rare in many localities; yet during the autumn migration just passed (1895) I did not find them extraordinarily so about Washington, D. C. During my daily rambles in and about that city, from the middle of October to the middle of November, I frequently heard them overhead, and in one week during that period I counted eighteen individuals along the roadsides. There was something surprised me the other day, however, for upon walking in from a point sixteen miles north from the city on a cold, windy afternoon (Dec. 10, 1895), I saw a number of single individuals of this species, heard others far overhead, and in one flock counted six males and two females. These last were associated with juncos and a mixed company of other small winter birds.

I am inclined to believe that if we are blessed with one or two, more or less, mild winters now, and a certain class of insane collectors, who may come to think that the bluebirds are upon the high road toward utter extinction, why, in a season or two, this, one of the very loveliest of all our lovely spring migrants, will become abundant once more.

SENATOR PROCTOR'S MOOSE.

LUDLOW, Vermont, Dec. 16.—*Editor Forest and Stream:* On my return from Indianapolis I put in my spare moments in reading FOREST AND STREAM, and I was surprised to see in the issue of Nov. 23d last an unfavorable comment on Senator Redfield Proctor's moose hunt. You do that gentleman great injustice. I did not see the Maine papers and of course do not know what they contained. I take it for granted they claimed the moose were killed in that State; the Vermont papers said Canada, which was correct. In the latter part of September Senator Proctor invited my brother and myself to accompany him on a trip to Canada and join him in a hunt while there. I could not go, but the Senator and my brother did go, and had a grand time and a most successful hunt. Their moose were all killed in a legitimate manner and in season. You will find they killed no more than the law allowed. I quote from a letter written me by my brother: "I won't write you the details of our hunt, but will tell you and the boys our thrilling experiences and hair-breadth escapes when I see you. The Governor [Senator Proctor] is the luckiest man I ever saw. He stayed two days in the woods and got two fine bull moose. He killed one when only a few hours out from the railroad station and sent it in by a flat boat he found. He reached camp that night and the next morning was out bright and early and had another one in less than an hour. After resting he returned to the station, leaving me in camp. I stayed eleven days and shot two bull moose and a caribou—all of them fine specimens. Altogether the most successful hunt ever having taken place here, so they say.

"This is the finest fishing and shooting place one ever saw; I think if you saw it you would bring your family here for the summer. As I sit here I can look out of the window down the lake eight miles south, and it runs twenty the other way. I send you to-morrow a haunch of the last moose I killed."

Now when you consider that Senator Proctor left the railroad, killed two moose and was back again on the train in less than forty-eight hours you can see that no explanation from him is necessary. Another year I propose to be one of the party if I can possibly go. I have just returned from central Indiana; there are no quail there this year to speak of.

Ruffed grouse are extremely plentiful here. Hares are thick, in fact I never saw so many. Foxes everywhere; there is one old silver gray that everybody sees occasionally, but no one can get a shot at. Above Ludlow about six miles there is quite a herd of deer and they are increasing all the time and are extremely tame. No one ever bothers them.

Last fall Chas. Sumner got two black bears, an old one and a cub, just a few miles above Ludlow near Patch Pond.

CHAS. B. FLETCHER.

HALIFAX LAW QUESTIONS.

Editor Forest and Stream:

As it is in contemplation to consolidate the game laws at the ensuing session of the House, the Game Society has sent out the following circular with a view of gathering the opinions of those interested in the subject on some disputed questions.

The question as to whether all shooting for birds should open at one day is a difficult one, the project having been tried the past two years as an experiment. Such a law is much easier to enforce, because shooting of birds out of season cannot go on under the pretense that the party is shooting those in season; while on the other hand it is contended that, so far as woodcock are concerned, the best shooting is over by Sept. 1, and that any date at all suitable for all birds must be too late for some.

As to the protection of cow moose, some persons contend that there are now many more cows than bulls, and that this, together with the difficulty of knowing, in the woods, whether the animal seen is a bull or cow, overbalances the undoubted evil of killing cows when with calf. Those who receive the circulars are asked to write answers to all or some of the following questions, and return with as little delay as possible to the secretary.

Questions.

1. Are you in favor of having one day to begin open season for all birds alike? And if so, what day? At present it is Sept. 15. If you think different days should be fixed, will you say what days you approve of for each?

2. Do you approve of a law which would make illegal the sale of any game, birds or animals, either permanently or for a time?

3. Do you consider a close season for some years, for either birds or large game, either necessary or desirable? And if so, for which birds or animals?

4. In your opinion is it desirable to continue the law making it illegal to kill cow moose?

5. Do you approve of the continuance of the law making it illegal to kill otters?

GEORGE PIERS, Sec'y Game Society.

DUTCH VILLAGE, Halifax, N. S.

CHICAGO AND THE WEST.

Sportsmen Tourists in Texas.

CHICAGO, Ill., Dec. 14.—In earlier issues of FOREST AND STREAM I mentioned the invitation of Col. A. B. Pickett, editor of the Memphis *Scimitar*, to join a party of sportsmen in a special car party to Texas. The inability to join this party meant the loss of one of the enjoyable experiences one always regrets. The party was most fortunate in every regard and the trip was a succession of happy events. On his return from the voyage in Texas Col. Pickett gave his paper an outline of the doings of the party, and from that account I take the following:

The party consisted of the Hon. Josiah Patterson, Gen. Sam. T. Carnes, Col. Napoleon Hill, Mr. J. S. Dunscomb, Mr. E. L. Boyle, Mr. Fred Schmidt, Mr. Robert Galloway and Mr. A. B. Pickett, of Memphis; Mr. W. C. Gillette, of Chicago; Mr. T. K. Riddick, Mr. Tom Williamson and Mr. John G. Hendon, of Somerville, Tenn., and Mr. John R. Sloan, of Covington, Tenn. John Graham, of the *Scimitar*, went along as purser, and Ben Stansberry, the colored porter of the *Scimitar*, had charge of the baggage. The Pullman company sent an experienced French cook, an expert pantryman and one of its most efficient porters. Harry, Floyd and Preston were three of the most important members of the party.

The car left Memphis at 7 o'clock Thursday evening, Oct. 31, and dinner was announced when the Arkansas shore was reached. Mr. Pickett was elected the manager for the party, and his instructions were carried out without objection from any source from the day of departure until the return home at 8:30 yesterday morning.

The first stop was made Friday night at Waco, where Col. Parrott and other distinguished citizens entertained the party. A stop of a few moments was also made at Corsicana.

Saturday morning Mr. Warner, of the Cotton Belt, who had joined the car at Tyler, piloted the excursionists to San Antonio, via Kennedy and Yoakum, over the San Antonio & Aransas Pass Railroad. Mr. O. C. Guessaz and Mr. Joe George, at the head of a distinguished party of San Antonio gentlemen, met the car on its arrival, entertained the visitors royally that evening, taking them to the plaza, where they were served rare Mexican dishes by the chile genus, to the fort and the famous Alamo, and the following day accompanied them to Rockport.

Leaving the car at Rockport, sail was set on Monday morning for Aransas Pass, about fifteen miles away. The weather was everything that could be desired, and several of the party had strikes that afternoon, although no fish were landed. The next morning the tarpon hunt was resumed, and during the day three of the monsters were captured, the smallest weighing 102lbs., caught by Mr. Boyle; the largest weighing 140lbs. and measuring 6ft. 3in., captured by Mr. Gillette; and the third, about the same size, pulled in upon the sand by Mr. Schmidt, but lost through the carelessness of the boatman, who cut the line with his gaff in the act of hauling the fish in out of the surf. Any quantity of sea bass and redfish were caught, besides several sharks and stingarees.

Several of the party remained at Aransas Pass the entire week, the remainder returning to Rockport ahead of them and going out to Sorenson's Camp for a duck hunt. Several canvasbacks and redheads were bagged, and Monday morning early the car left Rockport for Gregory, where they were again met by Mr. Guessaz and Mr. George, who arranged for the day the most novel duck hunting expedition anybody ever saw or heard of before. Wagons were secured, and at 10 o'clock in the morning the entire party, with the exception of Mr. Galloway, who returned home, were lined up in the willows on top of the high levee, which dams the waters of the gulch and separates the pond which they make from the waters of Nueces Bay. Corpus Christi could be seen across the bay, four or five miles distant. From time to time flocks of from five to fifteen ducks would attempt to cross the levee on their way from the sea to the fresh-water pond, and at the right moment, when the command to fire was given, fourteen guns would be turned loose almost at the same moment. It was a rare thing for a duck to get over the levee with his life. One wild goose, which came honking down the valley just before sundown, fell with a hatful of lead in his body.

Leaving Gregory Tuesday morning the car made its next stop at Tyler, where the party was joined by Mr. Warner, Mr. John Durst (a leading capitalist of Tyler) and Mr. J. J. Daglish, a prominent hardware dealer of that place. Both of these gentlemen are experienced deer hunters, and under their guidance tents were pitched the following day eight miles below Lufkin, in the heart of an immense forest of pine, oak, beech and magnolia, with the Angelina River on one side and the Nueces River on the other. A large pack of fine deerhounds was secured, and in less than an hour a big doe was brought into the camp and turned over to the tender mercies of Harry, the cook. Eight deer were killed the next day and three the following morning, all within less than a mile of the camp. First honors fell to Mr. Riddick, second to Mr. Schmidt and third to Mr. Williams. Mr. Hill and Col. Patterson, who were mounted on Texas mustangs, rode the woods from morning until night each day and slept in the leaves with the balance of the boys.

Saturday afternoon the bird dogs were taken out for their first run, and half a dozen big coveys of quail were found within an hour.

Leaving Lufkin at 7 o'clock Sunday morning the party came straight home. The last dinner was eaten on board the car at 3:30 o'clock after leaving Tyler. When the cloth was removed a business meeting was held, at which Mr. Pickett presided. Resolutions were adopted thanking the railroad officials and gentlemen of the Lone Star State for the many courtesies lavished on the party.

When seen at Memphis last week by the FOREST AND STREAM representative, Col. Pickett was full of enthusiasm over the delightful time he and his friends had had.

E. HOUGH.

909 SECURITY BUILDING, Chicago.

Reasons for Sticking.

FIRST HUNTER—"I'm going to stick to black powder. I kill as well as any of them and it is cheaper."

Second hunter—"That's all right if you take the chances. I won't. You see there are so many notices put up all around, 'No shooting allowed,' that I concluded to do no more shooting aloud, but in a whisper. See?"

E.

DEER HORNS AND VELVET.

What Old Deer Hunters Say.—II.

[*Concluded from page 535.*]

LANSING, Mich.—*Editor Forest and Stream:* A spike-horn buck is a one-horn or yearling buck, a prong-horn is a two-spike or a 2-year-old buck. After 2 years old a buck will add a single prong each year for two years, which would indicate a 3-year-old with three prongs, and a 4-year-old with four prongs. After 4 years old you can tell very little of the age of a buck by the number of tines on his antlers; after 4 years old the antlers often grow irregularly, and the number of tines on each antler may differ greatly in number and form. A 5-year-old buck may have five, six or more tines on his antlers, but he cannot be less than 5 years and have a greater number of prongs than four.

The tips of the antlers in deer up to 5 years old are usually close together, say 4 to 6in. apart, and sometimes the tips will meet almost. I have seen several antlers of which the tips passed each other, and in two cases the tips hit together in the center, and the terminal ends are bent out of their natural course to get past each other. After a deer is 5 or 6 years old the end of the antlers will each year spread wider and wider apart till in old deer the antlers are wide open, and oftentimes almost at right angles to the frontal bone. In old deer the antlers are usually whiter than in young deer, and the grooves where the blood vessels run are smaller and not so well marked.

The antlers of the buck are shed, or thrown off, in the latter part of winter or very early spring. Exceptionally they are shed somewhat earlier or a little later, but as a rule the antler is thrown off late in winter or early spring. When the vital process begins which results in the casting off of the antlers, the buck loses his strength and ambition and vitality, and he hides away in some thick cover where he can be quiet and not disturbed. Whether one antler is shed before the other, or they are both shed at the same time, I am unable to say. What becomes of the antlers after they are shed is something of a conundrum, but it is supposed that they are eaten up by mice and porcupines. At any rate, they all disappear quickly. A cast-off antler is seldom found.

A deer-hunting friend has often seen bucks with one antler gone. He thinks that the antlers would drop off in time, but they are nearly always broken off accidentally before the time has come for them to drop off. He has often found deer antlers in the North Woods years ago. He doubts the truth of the statement that the antlers are eaten by mice or porcupines. He states that all rodents must carry out their nature and have something to gnaw. This they must have to keep their teeth in proper condition. When they find an antler on the ground they gnaw it, because it is handy to get at and serves their purpose, and not because they like it or derive nourishment from it.

Previous to the horn-shedding period the buck has been wild and crazy to get at the does, and he would chase and run them all the time, for at this time of the year the does are in season, and they remain in season for some time during the months from September to January or a little later. This is called the running time or rutting time.

During the horn-shedding period and during nearly the entire time the antlers are growing and hardening the buck does not molest the does. This seems to be nature's way of protecting the does and their fawns during the spring and summer, for if the bucks were as crazy during this period as they were during the time when the antlers were fully developed, they would kill the does and fawns by their furious actions.

A few weeks after the antlers are shed the frontal bone becomes greatly loaded with blood and the parts are intensely congested. A little later projections appear where the antlers ha e come off. These projections grow very rapidly and in about three months this soft growth, which is to be converted into bone, has attained its full growth. This new growth is soft like a link of sausage, is intensely charged with blood, and if the parts are touched they will bleed very freely, and if they are much broken or bruised the buck may bleed to death.

During this formative period the antlers are covered with a velvet-like substance, or skin, and the buck is said to then be in the velvet. During this period the buck has shed his coat of hair and has passed the stages called the red or the blue coat, later when the antlers are hard he has his regular winter coat of gray. A singular fact is that if a buck is shot and killed in the water in the gray coat he will float, but if shot and killed in the water when in the red or blue coat he will sink at once.

When the antler is growing and the parts are injured or broken they remain permanently so, and this accounts for many blemishes to be found on the antlers. When this new growth has reached its full size and form and shape, the burr or ridge around the base of the antler begins to harden and contract, and soon strangulates the bone and cuts off the blood supply, and the new growth begins to grow hard and in a very short time is converted into bone substance. The grooves in the substance of the bone and on the outside mark the course of the blood vessels during the period of horn growth. When the blood supply is cut off and the horns begin to harden the velvet covering dies and loosens somewhat, and the buck begins to rub his head and antlers against bushes and stones to get the velvet off. A few days ago I sent a piece of this velvet covering to FOREST AND STREAM to show how little nature had to do with shedding the velvet when the buck could not get at it to rub it off.

About the time that the horns are well hardened and the velvet is off, the buck begins to feel the intense blood flow to the head, which has become a habit, and for lack of its accustomed relief—horn-building—the head is deeply congested and the neck begins to swell to oftentimes a great size, and the buck gets full of life and vitality. He is strong and crazy and furious to get at the does. Nature has so arranged the whole matter that the does come in season about the time the horns are well hardened, and the bucks get in form to serve them, and the rutting season begins.

As the horns begin to harden the buck begins to roam, hunting for the does, and for the next three or four months he chases them all the time. He is crazy and wild to find them. About the time the does are all served and the bucks are no longer needed nature steps in and begins the process again, which results in horn-shedding, and again sends the buck to his yearly summer retreat, where the horn-shedding goes on as before.

When the buck is running after the does he smells strong and musky, and an old buck will often be so musky that his flesh is not fit to eat.

A gentleman from Lake Superior was just in, and I asked him what became of the deer antlers after they were shed. His reply was, "Eaten up by mice and porkies." The horns are soon covered up by leaves and snow, and wherever a horn has dropped you will find mice. Their runways will be all around and about the antler, and they will winter there and eat up the horns, every bit of them.

JULIAN.

HALIFAX, N. S., Dec. 10.—*Editor Forest and Stream:* I have noticed considerable discussion in your columns recently as to how deer get rid of the velvet on their horns. That they do so by rubbing their horns on small trees, I can furnish any one with ample proof of during the proper season; but although they get rid of the velvet by rubbing, they do not rub to get rid of the velvet.

Some one asks, however, why do they rub? That I cannot answer. That they begin to rub as soon as the horns are ready and rub vigorously, I know; also that they continue the rubbing until the horns are almost ready to fall, although with much less frequency and vigor. For example, a tree which in the early part of the season would be almost stripped of branches may in the late fall have only a few bruises on it; perhaps our deer will only give it a friendly poke in the ribs while passing.

After the velvet is gone a deer will stand and hook at a small tree with every manifestation of fun and pleasure in so doing; or again, he will attack one as if it was a mortal enemy to whom he could show no mercy. I have in my mind's eye now a tree, a great pine rampike, whose hardness any woodsman knows, 18in. in diameter at 6ft. from the ground. It also had a big knotty growth as big as one's head on it. This tree had been attacked by a bull moose and the ground all around the tree was trodden over and over. The knotty growth was lying on the ground. Several long splinters had been knocked off the trunk, and as high as the moose could reach that old tree was bruised and marked by his horns. I never before saw a tree so marked, and I never expect to see another. I would have given a good deal to have seen the actual conflict. What a sight it must have been—a mighty moose hooking madly at a tree mightier even than the moose himself. No other impulse than anger pure and simple provoked the attack, and it was long after the velvet had gone.

I was in a great caribou country this year and had splendid opportunities to look into the rubbing question. Parts of the country, miles in extent, were covered almost exclusively with small pine trees, 5 to 10ft. high, and also contained hosts of caribou, owing to the abundance of white moss, which forms their food. In that section you scarcely can walk 20ft. in any direction without finding some tree or bush marked by the caribou horns; and mind you, I only speak of the rubbing done in the current year. Let us look closely at a few of them. What is this dry, stringy stuff sticking to the tree? It is long strips of the velvet torn off and dried upon the tree.

I have been in caribou and moose country during the season when the velvet comes off, and found the velvet still with the blood undried adhering to the trees which had been rubbed. I could go on and give instance after instance to prove that the velvet is got rid of by rubbing.

My experience is all with moose and caribou. I cannot answer for any other deer; and the little I have written may help the many writers on the subject toward arriving at a conclusion.

TIAM.

HALIFAX, N. S.

OROVILLE, Wash., Dec. 14.—*Editor Forest and Stream:* You are certainly correct in your editorial comments in regard to the general belief, that all of the cervine quadrupeds rub the velvet off from their horns on bushes and small trees. Have you ever killed a deer or an elk that showed on the outside of the velvet green bark or leaves? Do you believe that after the horn has performed its natural functions] the deer or elk has to knock the horn off against a tree? Now I claim that the velvet dro ps off after it has performed the duties for which nature has intended it, just the same as they shed their hair, and should I live until next fall I shall try to send you a pair of horns that have shed their velvet before they have been rubbed against any brush.

LEW WILMOT.

GRAND VIEW, Tenn.—*Editor Forest and Stream:* I believe that Mr. Lew Wilmot claims that the buck deer does not rub while shedding the velvet from the ripening horns.

The rubbing and rasping proclivities of the buck deer are well known by all the old-time deer hunters. They begin to rub when the velvet begins to peel; whether they do it to clean their horns or satisfy their natural inclination to rub is immaterial. All the same they continue to rub and rasp the young saplings occasionally until the horns drop off in December and January.

I once had a tame buck that carried his horns until March. But I never knew any wild deer that cast their horns later than the middle of January. As far as I have known the elk shed their horns in March.

I have heard it said and have seen it written that when the buck deer drop their horns they chew them up and eat them—rather a flinty morsel to chew, I should say! The hardest of all horns is the buck's horn, and it is grown and perfected in five months.

Rubbing bottoms was a familiar term among the old Pennsylvania deer hunters. The Clarion River and its tributaries drained some of the roughest country in the State, where the mountain sides generally reached down to the water's edge, excepting some very small river or creek bottoms, ranging in size from a half acre to two acres, the surfaces of which were a little above high water mark. These patches of level land were nearly destitute of large trees, and were called rubbing bottoms from the fact that the elk and deer had used these places for rubbing and scraping since time immemorial, girdling the saplings as fast as they grew up, which accounts for the absence of large timber.

ANTLER.

The FOREST AND STREAM *is put to press each week on Tuesday Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.*

Michigan Elk.

WATERFORD, Oakland County, Mich.—I notice that Mr. Hough seems to be searching for information as to the fact whether the wapiti or American elk ever inhabited the lower peninsula of this State. It certainly did, and probably about the beginning of this century elk were quite numerous, judging from the many skeletons and antlers of theirs found in the lakes and bays. As late as the fall of 1859 or '60 my father and I tracked a drove of eleven elk some distance while encamped in a hunting expedition on White Creek, a tributary of Cass River, in the northern part of Tuscola county; but the herd had too much the start of us and got into an almost impenetrable thicket of wild plum and willow bordering a small stream, and we ceased our pursuit of them, thinking we would look for them again. Then we followed a bear whose track looked so fresh that we expected momentarily to overhaul it; but didn't in going some miles, and had to give it up also when night came on. It went through all the windfalls in its course, which we had to go around, and lost time. While encamped there a day or two afterward a party of five or six Indians came along, each bearing a heavy load of elk meat, on their way to Hart's Mill, or Wajamega, as it is called now, some five or six miles away. We had a chance to buy some of it, but it looked bloody and dirty from having been badly handled, and we thought we would kill our own meat; but we neither saw nor got any at that time nor since.

The adjoining counties of Sanilac and Huron were very much frequented by these fine animals, and it is a shame that they have all been exterminated, the last one about the year 1876–7.

Tipseco, an Indian of giant stature and the strength of two men, who was a great hunter, is said to have killed a drove of seven elk up there in that section in one day.

J. W.

In a Texas Game Country.

VELASCO, Tex., Dec. 15.—A party consisting of Messrs. T. W. Gregory, Edgar Nalle, A. F. Rose, J. A. Jackson and C. J. Johnson, of Austin, Tex.; W. A. Jones, of Waco, Tex.; G. F. Tarlton, L. A. Carlton and W. C. Morrow, of Hillsboro, Tex.; Dr. J. D. McGregor, of Houston, Tex., and J. M. Moore, of Velasco, Tex., have been camping in the Colorado River country west of this place for the past week, hunting and fishing.

Messrs. Moore and Morrow came in with a load of game yesterday to express to the various families of the nimrods. I inclose you a photograph made in front of Hotel Velasco the evening of their arrival. They report twenty-nine deer so far and splendid sport with the birds. Partridges and jacksnipe are plentiful, while the late norther brought in large numbers of duck and geese.

A party consisting of well-known railroad officials from the Gould system have been here the past ten days fishing and oystering at Cridar Lake. They report a heavy catch of redfish and sheepshead, shipping several barrels of fish to their families for the holidays. The silvery-scaled tarpon, the king of the game fishes, is plentiful here, but while it is no trouble to hook them the fishermen are amateurs and have not yet learned the art of killing their game. Mr. J. A. Russ, auditor of the Pacific Express Co., and Mr. W. J. Taylor, general baggage agent, both of Palestine, Tex., and both leading members of the Palestine Rod and Gun Club, lead the party of railroaders.

The weather is delightfully cool and bracing, in fact our mild winters make it the finest country in the world for camping.

J. B. SHEA.

Wild Turkeys in Michigan.

HOLLAND, Mich., Dec. 16.—*Editor Forest and Stream:* The wild turkeys which old man Buck reported to Mr. E. Hough as occurring below Grand Rapids, Mich., thirty years ago are still there in very small numbers. Nine out of a flock of about thirty have been shot there during the open season, which closed yesterday. Of these the last, a pair, were killed the 7th inst. The hen, which weighed 12lbs., was brought to me for mounting. The gobbler was spoiled by the dog, having been pretty well denuded of feathers.

The turkeys are found in or near an almost impenetrable swamp, where it is very difficult to secure them; yet I fear that owing to the number of hunters who are desirous of bagging some that they will be totally exterminated in a year or two.

I have a report which, however, I have been unable to verify, but have no reason to disbelieve, that a flock has made its home in a piece of heavy timber within ten miles of this city for some time past. This fall a party of hunters found them and shot most of them. Thus will vanish our largest game bird to join the buffalo and elk on their way to extinction.

Speaking of elk reminds me that a few days ago I was shown a section of an elk horn which a farmer plowed up on his farm in Olive, eight miles from here, four years ago. Another friend has nearly the entire antlers, though in parts, of an elk. These were found in Laketown, seven miles from here, twenty years ago.

ARTHUR G. BAUMGARTEL.

In Michigan.

EAST SAGINAW, Dec. 17.—Winter has set in in earnest with us. Very soon after the shooting season on quail and ruffed grouse opened heavy snows commenced and have kept up ever since. I do not think the birds have been injured any, but I do know that it has prevented piles of them from being shot. I have not seen or heard of one being in market this year, showing that that portion of our game law is a success, and I do know that the snow has been too deep for sportsmen to tramp after them. I never have seen ruffed grouse in the last ten or twelve years more plentiful than this year, and if all goes well, will be in great luck another season.

W. B. M.

In West Virginia.

CENTRAL CITY, W. Va.—*Editor Forest and Stream:* Game is unusually scarce, owing, as some think, to the severe winter we had. Some attribute it a good deal to lawlessness, such as trapping, shooting out of season, etc. To their great shame, it is said, even some of the members of a gun club kill quail unlawfully, men who, most of all, are expected to respect the laws. I have not pulled a trigger this season.

E.

Camp-Fire Flickerings.

"That reminds me."

A Snap Shot.

A MODEST, smiling, good-natured young lawyer is Ben. Ben and Blackstone always did agree. But Ben understands rifle shooting too. And in the ordinary course of events Ben became possessed of a pretty little .32 Marlin. And so when he visited us a few months ago his rifle was conspicuous among his trappings. He sometimes gently hinted in his remarks that he had strong notions of extinguishing the squirrel breed in our section. Later, however, he seems to have turned his attentions toward snipe, as will appear from the following:

Sauntering forth on one beautiful summer's morn in company with several of the fair sex and a certain Mr. H., Ben thought fit to take his rifle along, probably as a defense to the piercing darts of Cupid—who knows? In their ramblings they stirred up a snipe in a thicket in the vicinity of our house, that immediately arose and started down the swamp. At the sight of this little snipe Ben reasoned somewhat like the little boy:

"His body will make me a nice little stew,
And probably he will make me a little pie too."

However, he raised and fired. The snipe fell at the crack of the rifle with a bullet hole right through his body. Mr. H., who is a splendid rifle shot, looked on for some time in silence. Finally he collected his senses sufficently to remark, "Ben, did you kill that snipe on the wing with a rifle? Impossible!" "Oh yes, Mr. H.," Ben replied in all seriousness. "But I don't think that I could make the center shot every time."

Much speculation has been indulged in as to how Ben managed to kill that snipe. That the angel of death was hovering over the snipe, or that one of the fair ones gave Ben a "killing" look, are both plausible theories. Then too Ben was "dressed to kill."

BANG-BANG.

Sea and River Fishing.

BLACK RIVER ASSOCIATION.

Editor Forest and Stream:

The Black River Association for the Protection of Fish and Game has elected the following officers for the ensuing year: President, George G. Chassell, Holland Patent; Vice-President, John W. Hicks, Oriskany; Secretary, W. E. Wolcott, Utica; Treasurer, Bion H. Kent, East Steuben. Directors, John W. Hicks, Oriskany; Bion H. Kent, East Steuben; John H. Williams, Remsen; Benjamin Sanders, Marcy; H. A. Pride, Holland Patent; W. E. Wolcott, John E. Roberts, Utica. Delegate to State Sportsmen's convention, W. E. Wolcott.

An abstract of the secretary's annual report is given: "It can scarcely be said that there has been any very noticeable advancement in the line of fish and game protection during the past year, and in some instances sportsmen have expressed much dissatisfaction at the non-enforcement of the game laws in certain localities. Some have even gone so far as to question the advisability of maintaining protective associations, arguing that it was a waste of time and money to continue them. But cooler and, we think, wiser heads have counseled patience, believing that the influence of such associations as ours is manifested for good in may ways, and that it would be a great mistake to give up the struggle just when concentrated efforts are most needed. The mere fact that protective associations exist has a wholesome effect in preventing flagrant violations of the law in the districts in which they are particularly interested and their influence is felt in creating a healthy public sentiment. That much good has been accomplished in the past can not be gainsaid, and there certainly never was a greater need for concerted action on the part of sportsmen than there is at present. This Association applied to the State Commissioners of Fisheries a year ago for 200,000 brook trout fry. The application was granted for 30,000 brook trout and 10,000 brown trout fry, which were received in the spring and deposited in Oneida county waters. For years past this Association has stocked the waters within its jurisdiction with infant fish and the good results attained warrant the recommendation that the practice be continued. Much regret has been expressed that boards of supervisors in this State no longer have the power of passing acts for the protection of fish and game in their respective counties. Many of the local laws enacted in former years were working well. Partridges were uncommonly numerous in Oneida county this fall, which fact was no doubt due in a great measure to the wise act passed by our board of supervisors two years ago shortening the shooting season at both ends. The law was perhaps not as vigorously enforced as it might have been, but nevertheless its salutary effect was apparent in the increase of birds. Unfortunately, however, the law being now inoperative, the shooting season opened early this year and is not yet closed. Birds have been slaughtered in great numbers, especially by market hunters, who have been unusually active in all parts of the county. The following proposed changes in the game laws have been forwarded to the chairman of the legislation and law committee of the State Association: Prohibiting floating for and hounding deer at any time. Making the open season for deer, grouse, woodcock and squirrels commence Sept. 1 and close Nov. 15. Repealing the section providing for a bounty on bears. In conclusion, I desire to call attention to a step which appears to be desirable as the only solution to a problem which has long been puzzling sportsmen. Owing to the rapid increase in the number of hunters and the alarming decrease in game of all kinds, it seems likely to be a matter of only a few years before certain kinds of game will become extinct. In view of this fact it would seem to be wisdom to prohibit absolutely, for a term of years at least, the sale of any and all kinds of game killed in this State.

Resolutions were adopted declaring it to be the sense of the Association that the sale of game and speckled trout killed in this State should be prohibited, and that the open season for hares and rabbits in Oneida county should be from Sept. 1 to Feb. 1.

The secretary was instructed to apply for 200,000 brook trout fry and a committee was appointed to attend to their distribution.

PORTSA.

UTICA, N. Y., Dec. 20.

A SUMMER AT SAN CATALINA.

PHILADELPHIA, Pa., Dec. 16.—*Editor Forest and Stream:* It is I know rather late in the day to report such a thing, but if you care to have it, here in brief is the result of a delightful summer's sport at Santa Catalina Island, the wonderful fishing resort of the southern California coast. Too much cannot be said for this charming sport from the point of view of the angler or the lover of splendid scenery, wherefore these few words of mine may possibly tempt others to go where I have been and enjoy the same pleasures.

My trip was an unalloyed season of delight to me, and now as I look my long list of photographs over I take pleasure in recalling many a tussle with the game fish of those waters, whose number is legion. The great game fish is, of course, the famous yellow-tail (*Seriola dorsalis*), whose terrific rushes, pluck and unyielding strength try both the patience of the angler and the pliancy of his rod. The giant jewfish (*Stereolepis gigas*) too is an adversary as tireless as the world can stand, and when once roused to action one of the most tremendous fighters for which an angler can ask. To kill fairly with rod and reel a fair-sized jewfish represents, as I well know from experience, a good day's work. My largest one took me three hours and thirty-five minutes to bring to gaff, and I think he towed our boat nearly four miles.

During the whole summer I used a 7ft. Hall striped bass rod—perfection it proved too—capable of lifting at most 4½lbs. of dead weight; a powerful, best make, Abbey & Imbrie multiplying reel, and from 900 to 1,000ft. of Cuttyhunk line.

I found a thumb-stall absolutely necessary, and of these I wore out six as well as two stout leather brakes in the course of my sport.

Here is a summing up: Jewfish, four specimens, 98, 148, 168 and 210lbs. respectively; total, 624lbs.; yellow-tail, 131 fish, total 2,332lbs. Rod and reel catch for the whole summer, 5,412lbs.

STUART-MENTETH BEARD.

Fishermen's Luck.

THE pranks that Dame Fortune plays with us poor fishermen are enough of themselves to fill a book. How many a fisherman has gone down to the riverside to give a novice his first lesson in the gentle art, and then and there has had his nose put out of joint by the novice's luck. There was that big trout beneath the log. Fly after fly had you put over him with all the nicety that a split-bamboo rod and the experience of years could command; and yet it was not by your skill that he was caught at last, but to the clumsy efforts of a youth with a strong line, rough pole and large hook with a worm on. Shall I ever forget a certain expedition along a river bank in search of trout, where a small boy of eight summers killed a round dozen of good fish, when I, within a few yards of him, could not so much as get a rise? What advice or instructions he did offer me, and how my good friends laughed when I told the tale. Ah, well, it is a strange world, this little world of fish. We live and learn, and then we live and prove our learning wrong again.

FIXTURES.

BENCH SHOWS.

1896.

Feb. 19 to 22.—Westminster Kennel Club's twentieth annual dog show, Madison Square Garden, New York. James Mortimer, Supt.

March 3 to 6.—City of the Straits Kennel Club, Detroit, Mich. Arthur D. Welton, Sec'y, 25 Larned street, West.

March 10 to 13.—Chicago.—Mascoutah Kennel Club's bench show. John L. Lincoln, Sec'y.

March 17 to 20.—St. Louis Kennel Club's show, St. Louis. W. Hutchinson, Sec'y.

April 20 to 23.—New England Kennel Club's twelfth annual show. D. E. Loveland, Sec'y.

FIELD TRIALS.

1896.

Jan. 20.—Bakersfield, Cal.—Pacific Coast Field Trial Club. J. M. Kilgarif, Sec'y.

Jan. 20.—West Point, Miss.—U. S. F. T. C. trials. W. B. Stafford, Sec'y.

Feb. 3.—West Point, Miss.—Southern F. T. C. seventh annual trials. T. M. Brumby, Sec'y.

Feb. 10 or later.—West Point, Miss.—The Field Trial Champion Association's first trial. W. B. Stafford, Sec'y.

Sept. 2.—Morris, Man.—Manitoba Field Trials Club. John Wootton, Sec'y.

A. K. C. MEETING.

A SPECIAL meeting of the American Kennel Club was held at 55 Liberty street, Dec. 19.

The Vice-President, James H. Terry, presided.

There were represented: Associate members (H. H. Hunnewell, Jr.; and H. T. Foote), Brunswick Fur Club (B. S. Turpin), Scottish Terrier Club (J. L. Little), Southern California Kennel Club (C. D. Bernheimer), Bull-Terrier Club (A. Thomson), American Mastiff Club (G. G. Stephenson), American Spaniel Club (E. M. Oldham), Boston Terrier Club (L. Burritt), Bull Dog Club of America (E. W. Roby), Collie Club of America (J. Watson), Columbus Fanciers' Club (J. M. Taylor), Gordon Setter Club (J. B. Blossom), Great Dane Club (C. Wood), Mascoutah Kennel Club (C. F. R. Drake), National Beagle Club (H. F. Schellhass), New England Kennel Club (Edward Brooks), New Jersey Kennel League (E. H. Morris), Northwestern Beagle Club (F. S. Webster), Pacific Kennel Club (James Mortimer), Pointer Club of America (G. Jarvis), Westminster Kennel Club (Thomas H. Terry). And by credentials the following: New England Beagle Club (H. S. Joslin), Rhode Island State Fair Association (Marcel A. Viti), Scottish Terrier Club (James L. Little), Bull-Terrier Club (Arthur Thomson).

Vice-President Terry having resigned, Mr. Edward Brooks was elected to the office and took the chair.

The secretary's report was read, adopted and placed on file.

The following amendments were made to the constitution:

ART. IV.—Sec. 2. Before such delegate shall be entitled to qualify in the Association he must be accepted by ballot by the Association or its executive committee. A majority vote will be necessary to accept

and such acceptance may be withdrawn by a two-thirds vote by ballot at any meeting of the Association or its executive committee.

ART. VII.—Sec. 2 amended to read "Finance" instead of "Advisory."

ART. VIII. amended by adding (after "election") "by ballot at the next meeting of the executive or advisory committee."

ART. XII.—Sec. 1 to read: An advisory committee of eight, consisting of the president and vice-president of the Association, the president of the associate members and the chairman of each of the standing committes, as provided for in Article XIII. Sec. 4. At all meetings of this committee four members shall constitute a quorum.

ART. XIII.—There shall be elected at each annual meeting the following standing committees, the members of which shall serve until their successors are elected.

I. A stud book committee, composed of three members, which shall have the business management of the stud book, investigate all charges submitted to it, and shall render an account of its proceedings to the executive committee at each meeting.

II. A finance committee, composed of three members, to which all bills must be referred for approval, and which must audit and certify to the accounts of the secretary-treasurer in January of each year.

III. A constitution and rules committee, composed of five members, one of which shall be the secretary-treasurer of the Association, to which must be referred all proposed amendments to the constitution or rules. This committee must report to the Association its recommendations upon all amendments offered before they can be acted upon. It can also suggest such amendments as it considers advisable.

IV. A field trial and coursing committee, composed of delegates representing field trials and coursing clubs, to which all matters pertaining to field trials or coursing must be referred.

V. A membership committee, composed of three members, one of which shall be a secretary-treasurer of the Association; it shall have the power to report its recommendations upon all applications for membership. Sec. 2. At the annual meeting of the Association the delegates shall elect first the chairman, to be followed by the remaining members of each standing committee. No delegate can be elected as chairman of more than one committee.

Section 1 of Dog Show Rule 15 was amended to read: "One of which shall have been at a show offering not less than $1,000 in cash prizes. This qualification does not apply to shows held west of 95° of west longitude."

The Rule V. of Regulations Governing Clubs to read: "No show held under American Kennel Club rules at which the prize money is less than $500 can provide any challenge classes; this rule does not apply to shows held west of 95° of west longitude."

A proposed amendment empowering the advisory committee to license clubs to give shows under A. K. C. rules was tabled.

The committee on rules also submitted this proposed amendment: "No dog whelped after January 1, 1896, can be a competitor for any prize offered at a show held under A. K. C. rules that has been cropped." It was warmly abated.

The additional rule recommended in the report, to wit: "No dog whelped after June 30, 1895, can be a competitor for any prize offered at a show held under A. K. C. rules that has been cropped," was read.

DR. FOOTE—I move the adoption of that rule, and in doing so I want to present the argument which gives the idea of the committee. When we suggested the abolishment of cropping we supposed that the sense of humanity in our breeders would surmount all other considerations, and that it would receive not only general, but hearty indorsement. We did not suppose that the legal aspect of the question would have to be considered, nor had we imagined the extent to which personal money consideration would influence the result. As it is, we find a strong opposition, with absolutely no argument that cannot be met by those who favor the step.

The most extensive protest comes from the great Dane and bull terrier breeders, but, sifting the matter, it is now or never; for the longer cropping is permitted the stronger will become their reasons for its continuance and the greater would be the hardship should a change be made. In the case of the great Dane it is claimed that their natural ears come too large and spoil their expression. We question if they would look any worse with natural ears than they do now with their miserably butchered ears, for a well cropped one is a rare exception, and we believe it would have been impossible to breed a good appearing ear on these dogs. The breeders claim that the cropping will be continued in Germany, and that they will not be able to get good uncropped ones. This statement is not well founded. When the Germans find that we want uncropped Danes they will be only too glad to save the best ears for American and English purchasers. Furthermore, we contend that any breed that cannot live without mutilation is not worth fostering.

As to bull-terriers, we all know that some of them carry good natural ears. The protest from the Bull-Terrier Club is a *reductio ad absurdum*. It reads: "If cropping be persisted in, nature aided by a judicious cropping will stop reverting to such useless and unsightly appendages as most bull-terriers' ears naturally are." If we continue to countenance cropping the English breeders will be most pleased to crop their worst-eared specimens and send them to us, keeping their good ears to improve their breed, while we will be worse handicapped than ever to obtain good ears. In black and tan and white English terriers cropping has been their curse, and yet I question to-day if the breeders in this country would have the courage to meet the temporary loss and inconvenience by supporting the non-cropping amendment. The same argument applies to these breeds as to the bull-terriers. Toy and Yorkshires can be improved in appearance with well carried natural ears that could easily be produced.

The opposition in our kennel club is somewhat astonishing. We can understand the vote from the Dane and Bull-Terrier clubs, but the others are suggestive of setting aside principle that no offense may be offered. What other explanation can general clubs, such as the New England Kennel Club and the New Jersey Kennel League, give?

The Boston Terrier Club takes the most remarkable step in directing its delegate to oppose the amendment. Its scale of points as published in their constitution not only in no way recognizes cropping, but calls for natural ears, and we fail to see how judges can recognize a cropped specimen. (Read from the Boston Terrier constitution.)

The action of the Spaniel Club can only be explained in their desire to protect shortening of tails, and we are only sorry in forming this amendment that we did not cover all unnecessary mutilation, but the tail cutting is so infinitesimally small as compared with cropping that it never occurred to us as entering into the subject, and the plea that it is justifiable might be reasonably claimed in at least one breed.

Mr. Higginson, of the Bull-Terrier Club, has been the leading opponent to the amendment so far as his breed is concerned. In one of his letters he says: "I believe that I am a law-abiding citizen; I believe that ninety-nine out of every hundred bull-terrier men are the same, and when it is laid down that cropping ears is cruel in the eyes of the law I am going to give up the practice; but I want the law of the country to say this, not the whims of a lot of pug, bulldog or mastiff men, very worthy men, but not bull-terrier men, and I want bull-terrier men to have a say about prohibiting cropping bull-terriers."

In the Penal Code of this State we find Section 655, on page 208, together with Section 15, on page 4. We are assured by Mr. Haines, the president of the Society for the Prevention of Cruelty to Animals, that this law is general throughout the United States; so after all Mr. Higginson and ninety-nine out of every one hundred bull-terrier men, with all that they have written against the amendment, must be with us, and no doubt had the law been better understood there would have been less opposition at this meeting.

The E. K. C. would have taken their action in opposition to cropping long before they did, had they appreciated its illegality. A conviction under the law was enough, and like law-abiding citizens they gracefully bowed to the situation. You can have no doubt but that the law we have read to you fully covers the question. Can we afford to ignore it and give our indorsement to an illegal act? Is it necessary for us to await a conviction? and would such conviction influence the present opposition? Croppers may say what they please about the little suffering incurred by the operation, but those of us who have seen it in all its phases and in all breeds in which it is practiced know better, and your committee can not understand how one who loves a dog—and the dog alone—can sanction the continuance of this practice.

MR. WOOD (representing Great Dane Club)—It seems to me that the legal aspect which Dr. Foote objects to has been first called in by himself. I know of no case in which it has been brought in except by the ponderous brief and by reference to the penal code he has made here to-day. I shall only speak of the matter so far as it relates to the Great Dane Club, of which I am a delegate. I have heard in opposition three arguments: one that the practice is cruel; the second that cropping is prohibited in England; the third that it is a showing of the dog in a mutilated condition. The great Dane dog is not one which has been in this country for many years. He is comparatively new to this country. We have not the best specimens here in this country. You all know the quickest way to improve a breed of dogs is by judicious importation—such dogs as are imported either from England or from Germany. In Germany the dog has been cropped from time immemorial, and he will be cropped in spite of and without regard to any action taken by this club. Now, if the great Dane breeder wishes to import dogs he either has to import an immature specimen or one which is cropped; he will not import for the improvement of the breed an immature specimen; therefore he has to import one cropped. If he imports one cropped he cannot win prizes with him in this country. He cannot make that dog known to other breeders in this country by showing him at bench shows.

Another matter which plays an important part with great Danes is that a large number of great Dane dogs in this country are owned by Germans. They have been in the habit for years of seeing a certain type of dog, a certain type of head and a certain form of head, which can only be obtained by cropping the ears of the dog, and an expression that the dog will never have if his ears are allowed to hang down. A great many Germans have told me that if they could not continue to keep their dogs with cropped ears and show them in competition in that form they did not care to keep the dog at all. This is not a matter of sentiment; it is a matter of actual tangibility. The action of this club has already had a vast effect upon the Great Dane Club. Mr. George W. Schenck wrote a letter to the Great Dane Club which has been published, which in substance was that he had thirteen dogs in his kennel; that he was endeavoring to import a dog, but that he would not do so until this question was settled. I have since received a letter from Mr. Schenck, and although he is a large breeder and seems to be very faint hearted, as some one seems to have told him fairy stories, he says that thinking it was reasonably sure that this amendment was passed, he has already sold his kennel and dogs. I think that disposes of any validity of the argument that the English Kennel Club is also prohibiting cropping so far as the great Dane is concerned. So far as the question of cruelty is concerned, as I understand it the legislation which was taken by the English Kennel Club was taken under these facts: It is a misdemeanor under the English law to crop the ears of a dog, and in England they obtained a conviction for the cropping of a dog's ears, and after that conviction was obtained the English Kennel Club took cognizance. The effect of that rule was that they simply stood by the law of England. Here the case is entirely different. Dr. Foote has read you the section of the penal code which applies if any does. It is the only section of the penal code upon this subject, and nowhere else except in this section does it touch the question of cropping either directly or indirectly. I have made diligent search and I have also made inquiries at the office of Horace Russell, the counsel of the Society for the Prevention of Cruelty to Animals, and I have yet to learn of any instance where a jury of this State has declared that cropping a dog's ears was unjustifiable injury, maiming or mutilation of an animal.

The position in this country is radically different from what it is in England. In England they adopt the straightforward course. They obtain their conviction and then the action of the English Kennel Club followed. In this country they are trying to get the American Kennel Club by its action here to express its opinion that cropping is cruel. Then when the next trial under this section comes up the action of the American Kennel Club may be used in enabling them to obtain what they have not been able to do, that is, obtain a conviction. I think that the American Kennel Club has sufficient to do without aiding anyone in pulling out chestnuts from the fire.

Then Mr. Wood read a letter written by Dr. Phillips, the surgeon at the hospital at Hornellsville, surgeon of the Erie Railroad, and special agent of the Society for the Prevention of Cruelty to Animals, as follows:

In reply to your question, "Do I consider the cropping of dogs' ears a cruel proceeding?" I would say that, in my opinion, if the cropping is properly done under an anæsthetic and dressed properly, it is not cruel, as it occasions no pain; but if done without an anæsthetic, with a dull pair of shears, or, as is very often the case, a chisel and a block, it is decidedly cruel, and should be prevented in all cases.

A case came to my attention the other day, as agent of the American Society for the Prevention of Cruelty to Animals, when a cropping was attempted with a carpenter's chisel and hammer. I appeared upon the scene just in time to prevent the mutilation, and showed how it should be done humanely. I gave the dog anæsthetics, cropped the ears with a sharp pair of shears, and brought the cut surfaces of the skin together with a continuous catgut suture. I dressed the ears with iodoform gauze and cotton, and got union by first intention. This method diminishes the amount of partissure at the cropped surface and leaves the edge of the ears covered with hair, which prevents flies from biting the bare surface, which greatly annoys the dog in the summer.

I need hardly say to you, an experienced dog fancier, that it is dangerous to give your anæsthetics carelessly. You should always have an experienced man to give the anæsthetics, and I think you will find the "A. C. E." mixture safer than chloroform, and very little is required to place the dog entirely oblivious to his surroundings.

MR. C. A. BATHBONE'S TOLEDO QUEEN.
From a painting by Edw. H. Osthaus.

I do not think that the question of the difficulties which we would encounter in breeding the great Dane with uncropped ears need be touched upon. I think that everybody will admit that it is an impossible thing to do for at least a great many years. So far as the question of humanity is concerned, the great Dane breeders are as humane as the breeders of any other dog. The dogs' tails are never cut and none of the other practices which are sometimes spoken of as cruel are permitted. Before this question ever came up and before the American Kennel Club took any steps, action was taken upon this subject by the Great Dane Club. It was suggested that the Great Dane Club modify its type so that the dogs could not be shown with cropped ears. The question was argued and discussed at great length, and it was considered that the action was inadvisable at that time.

It seems to me that this whole question is one that applies to certain breeds of dogs, and it seems to me that the action which the American Kennel Club should take on this subject is to leave the type of dog to the specialty clubs which have charge of that breed of dog, bringing forward their interests and promoting that breed. It seems to me that it might be possible for the American Kennel Club to say that no dog should be shown with his hair cut. It is within their scope and power. They can do it if they want to, just the same as they can pass this resolution, but that is a question of type just as much as the cutting of dogs' ears is a question of type, and I think the American Kennel Club will act wisely in leaving it to the specialty clubs to deal with the type of dogs which they represent especially.

Mr. Webster made a telling speech in reply to Mr. Wood. He divided Mr. Wood's arguments under two heads: first, that cropping would be a pecuniary loss. Mr. Webster considered the letter, read by Mr. Wood, a splendid argument against cropping, and that it supported the claim that cropping is a brutal custom, followed by men of inexperience, and who, as a rule, have no fine instincts whatever. He touched on the use of anæsthetics and dressings, and held that

most of the cropping is not done in that manner. He showed that the A. K. C. should not wait for a conviction before taking action. He assured his hearers that the Humane Society was investigating the matter and under the statutes would have a clear case. The difficulty was simply in catching a man in the act. He commended observance of the laws. Mr. Watson said that the cruelty was admitted. He suggested that cropping was more cruel than putting a dog in a turnspit, and the latter was held as being cruel.

Mr. Schellhass held that there was no legitimate argument advanced in favor of cropping, except the part referring to the importation of dogs from Germany. He referred to the Bull-Terrier Club's argument as unworthy of consideration. He warned them that the S. P. C. A. was watching the matter, and that if a conviction was made it would place the A. K. C. in a cheap position. He touched on the matter in its pecuniary features and otherwise showed the fallacy of the arguments advanced in favor of cropping, most of which are touched upon by later speakers.

Mr. Watson—I do not think that the clubs which oppose this resolution look at the matter in a proper way. What will be the result of this? You say you are willing to accept it in a few years. The Bull-Terrier Club stated that same thing, and that was one reason why we did not adopt the rule before. They said they were willing to have the resolution go through in a short time; until that is done what happens? We have all the best dogs cropped over in England. We have the bad ones sent away. We have the good-eared dogs sent to England as great Danes, and as Mr. Wood says, England is the best market that Germany has for great Danes to-day. If we do not pass this cropping law, we will have the bad-eared dog over here from Germany. The good ones go to England. There is a great deal of theory about this. Let us know what has happened. Ten or fifteen years ago the Irish Terrier Club was established. I was a member of it. It had been in existence about five years, and they passed a rule prohibiting any cropped dogs winning any of their prizes. There was a great outcry. Columns of matter appeared in the press—more than we have to-day—attacking a committee for suggesting such a thing. Even such a well-known authority as Wm. Graham said that was the end of the breed, but nevertheless he turned around and bred natural dogs, and sold them for better prices than he did his cropped-ear dogs. You cannot get a cropped-ear Irish terrier in England now, and none have been obtainable for some years. Now, we will have the same thing here if you bull-terrier men will breed good dogs and keep them. There is the rule of the Irish Terrier Club before you, which can not be gainsaid. It is not theory—it is fact. The Irish terriers look just as smart and as clever as ever the cropped dogs looked when they were shown.

Mr. Burritt—My own views are something that I have no right to voice here. I am before you as a delegate of the Boston Terrier Club, and I am instructed to vote against this resolution, and I am forced to take the position of an advocate of the Boston Terrier Club and its wishes, regardless of what my own personal views may be.

The Boston Terrier Club feels that the American Kennel Club is dealing with something that does not concern it. The American Kennel Club is made up of bodies who foster individual interests. They are supposed to look after its individual interests themselves, and so far as each of their dogs in the ring is concerned it is done on a standard adopted by them as specialty clubs, and the Boston Terrier Club questions the right of the American Kennel Club to say what its standard shall be for its dogs.

We do not come before you on the ground that the cropping of ears is not cruel. We admit, as Mr. Wood and all men of any brains and sense will admit, that the operation as performed in days gone by and is now performed among illiterate and uneducated people is cruel. The argument that a great amount of cruelty results after the operation we say falls to the ground so far as our dogs are concerned, for the reason that there is no manipulation used after the cropping. The point we make is that you are attempting to make law for all the States in the Union, where laws differ. Your New York law will not apply in Massachusetts or New Jersey, and your New Jersey law will not apply here. Bring us a Federal law against such an operation, then we will admit you have some legal grounds on which to stand.

I think that the proper course of this meeting to-day is to lay that amendment upon the table and adopt a resolution to the effect that it is a matter with which you have no business.

Mr. Brooks—I am a delegate from the New England Kennel Club, and their sentiment is practically what the Boston Terrier Club's representative has stated, that the American Kennel Club has no right to enter into this matter; but it belongs to the specialty clubs, and I shall vote no.

Mr. Thomson—I am here as a delegate of the Bull-Terrier Club and endorse everything that the gentleman from the Boston Terrier Club has said. I think he has covered the ground exactly. I do not think that it is a question at all with these other clubs, who probably know a great deal about it, but at the same time who do not take the same interest that the Boston Terrier Club does or the Bull-Terrier Club men do. I think it should be left to those clubs to decide.

Mr. Little—On behalf of the Scottish Terrier Club I beg to say that our sentiments agree exactly on that point; that the American Kennel Club is formed for the mutual benefit and protection of its members, and to take any action which would be against the interests of any of its members would be against the constitution of the American Kennel Club.

Mr. Morris—I agree with Mr. Burritt in all his remarks. I represent the New Jersey Kennel League, and I have here the resolution passed by that club.

Mr. Oldham—I am directed by the American Spaniel Club to move that the amendment be laid on the table, and if that motion is lost, and it should come to a direct vote, I should refrain from voting. The American Spaniel Club feels that it behooves the American Kennel Club to be careful, in view of the fact that there are so many specialty clubs among its members, how it legislates on such an important matter as cropping. I therefore move as an amendment that the proposed amendment be laid upon the table. Motion lost.

Mr. Blossom—It is against the law and we may argue it as long as we please. We have got to vote upon it. We have got to either say we approve of it or that we blink at it, and it is cruel, and it is against the law, and for one I do not want the American Kennel Club to occupy such an undignified position as to say that they are in favor of a crime. It is something which if it is done has got to be done behind closed doors, and if a policeman catches the man in the act he will haul him up before a magistrate.

Mr. Burritt—I move, before this resolution is to be taken up for action, that the date named therein be changed from June 30, 1895, to Jan. 1, 1896. Motion carried.

Dr. Foote's motion for the adoption of the amendment was put, and a roll call resulted in the following vote: Ayes—B. S. Turpin, C. D. Bernheimer, G. G. Stephenson, H. T. Foote, E. W. Roby, James Watson, J. M. Taylor, J. B. Blossom, C. F. R. Drake, F. S. Webster and G. Jarvis. Nays—J. L. Little, A. Thomson, H. H. Hunnewell, Jr., L. A. Burritt, C. Wood, Edward Brooks, E. H. Morris and J. Mortimer.

The chair decided the motion lost, as, under the constitution, a two-thirds vote was necessary to pass the resolution.

Mr. Mortimer—I should like to say for the information of the gentlemen who are here assembled, and who are interested in the breeds that are properly cropped, that the ground I took in the first place was the very best means in the world to do away with cropping, and that was to offer prizes for uncropped dogs; and I brought that before the committee of the Westminster Kennel Club show and they were kind enough to recommend a clause, and a clause has been made in our premium list, in which we make a classification of uncropped dogs of all different breeds which are generally cropped. I have expressed my views on this cropping question pretty thoroughly, and I may say that I am not in favor of cropping, and had I been left to my own personal views of the matter I should have voted in favor of the amendment, but in representing the Pacific Kennel Club I thought I had better write them and get instructions from them, and I received their instructions that it is their desire that I should vote against the resolution as to the cropping of dogs.

Mr. Hunnewell—I voted against it on the ground that I think it is not the business of this club to stop it.

The regular quarterly meeting of the American Kennel Club was next held, Vice-President Edward Brooks presiding. All the clubs mentioned at the special meeting were represented except the Bull-Terrier Club and Westminster Kennel Club.

The minutes of the last meeting were read and approved. The secretary's quarterly report was read. We give these extracts from it:

The charges against the Western Kennel Club for nonpayment of prizes at its show of 1895 were laid on the table at our last meeting, with directions to bring them before this meeting. Under date of Dec. 8 Mr. Bacon informs me that the prizes won by his dogs had not yet been paid, and in a letter from the late secretary of the club he neither denies nor affirms the charges, but says it has been referred to the president of the club, and that his "impression is that those who have been putting up the money are getting tired."

I found it necessary to protest the exhibition of two litters of puppies at the late Milwaukee show. The treasurer of the club replied with a very satisfactory explanation, and although the catalogue published two litters of puppies among its entries, I am assured that the puppies were not present in the show building at any time.

Mr. Franklin G. Bixby has filed an appeal from his suspension.

The Rhode Island Fair Association has filed a complaint against one of the delegates of this club, and requests an investigation.

I beg to call attention to an unfortunate habit of the exhibitors, in making their entries to the several bench shows, of repeatedly changing ownership. At one time a dog may be entered in the name of the individual owning it, the following show the same dog will be entered in the name of the kennel, while at a third show the same dog will be entered in the name of either the individual or his wife, or some other member of the family, and at the next in his own individual name again. This habit not only makes it difficult to compile the records, but may give an impression that our rules are violated. It should be made plain that in entering a dog at any show it should be continued in the same name as first shown unless it has been conveyed to another owner in the regular way.

I give notice that Mr. Cromwell, President of the Associate Members, has appointed a nominating committee for the year 1896. Nominations made by that committee will be mailed to all associates having paid their dues and who are thus entitled to vote on Jan. 21, 1896, as provided for in our constitution.

I desire to submit a proposition: That beginning in 1897 at New York and Chicago, to be followed the next year at Boston and St. Louis, and to continue each year with two shows, one in the East and one in the West, at which shows the American Kennel Club shall provide a class in each breed of dogs, where competition can be had, to be known as a "Champion Class," open only to dogs having won at least three first prizes in a challenge class at any recognized show, the winner to be styled and known as "The American Kennel Club Champion."

The treasurer's report was also read:

I herewith submit my quarterly report of all moneys received and dispensed by me since January 1, 1895:

Balance on hand January 1, 1895	$2,003.94
Receipts from all sources to date	6,560.05
	$8,563.99
Disbursements from January 1, 1895, to date	6,703.41
Balance on hand	$1,860.58

Respectfully submitted, A. P. Vredenburgh, Treasurer.

The report of the Stud Book Committee was also read.

No case out of the ordinary routine has come up for decision since the previous report was rendered. The present year, as was expected, shows an improvement upon 1894 in the matter of registrations, but is still behind the more prosperous years of 1892 and 1893. Bids for the printing of the *Gazette* and Stud Book have been advertised for, and the placing of these matters in public competition will undoubtedly result in a reduction of the expense of their publication without making any change in their appearance. It is anticipated that there will be a reduction in expense of possibly $200 on both publications during 1896. Yours respectfully, Jas. Watson.

The report of the special committee to prepare an open letter to the *Stock-Keeper*, of London, in reply to allegations made by Mr. James Taylor in said paper, was read, stating as to the Woodiwiss plate: "In a later issue of the *Stock-Keeper* the Messrs. Woodiwiss published a letter in which they stated that the plate said to have been sent to them had never been received. Your committee at once communicated with Mr. Terry on the subject and learned, greatly to its surprise, that through an oversight the plate in the form of medals had been lying in his safe for months. These medals were promptly shipped to Messrs. Woodiwiss, Mr. Terry mailing a letter apologizing for the delay, duly published in the *Stock-Keeper* Nov. 22, 1895, and which was gracefully accepted by the Messrs. Woodiwiss."

The charges against the Western Kennel Club was referred to the advisory committee.

The appeal of Franklin G. Bixby was referred to the stud book committee.

The complaint made by the Rhode Island Fair Association alleging certain derogatory statements made by E. H. Morris, and published in the *Turf, Field and Farm*, was taken up for consideration. On the charges being read Mr. Morris denied that he had made any such statements as reported, and a motion was made that the matter be referred to the advisory committee. Mr. Mortimer moved that Mr. Morris be exonerated from blame so far as said newspaper article was concerned. Motion lost, and the original motion carried.

The following requests for kennel names were on motion granted: E. J. Weiser, Hotfoot; C. D. Bernheimer, Morey; Henry Cannon, Riverside; H. G. T. Martin, Ridgewood; A. C. Wilmerding, Watnong; D. J. Maich, Wakefield; Toel & Brower, Ampere.

The recommendation of the secretary as to the collection of outstanding debts owing to the American Kennel Club to the amount of $475 was called up, and on motion of Mr. Mortimer the secretary was empowered to place said claims in the hands of a collection agency for collection.

The recommendation that shows be given each year, one in the West and one in the East, at which the American Kennel Club shall provide a "Champion Class," was referred to the advisory committee.

Charges preferred by L. A. Van Zandt against Andrew Laidlaw for misconduct in connection with dogs were referred to the advisory committee.

The secretary then read a letter to him from Mr. E. H. Morris, which as a part of the charges against Mr. Morris was referred to the advisory committee. Motion carried. It was voted that the New Jersey Kennel League be requested to send another delegate to this club.

Applications for membership of the Binghamton Industrial Exposition and the Dachshund Kennel Club were accepted.

Messrs. Watson, Schellhass and Fiske were elected members of the Stud Book Committee; Mr. Watson, chairman.

Committee on Field Trials and Coursing Meetings: Major J. M. Taylor, chairman, the other members of the old committee being continued in office.

Mr. Webster was elected chairman of the Committee on Constitution and Rules, the remaining members being re-elected.

Finance Committee: Mr. A. C. Wilmerding, chairman; Mr. Blossom and Mr. Mortimer.

Membership Committee: Mr. Oldham (chairman) and Mr. Bernheimer.

The American Foxhound.

That foxhound interests have advanced to a stage where a special literature of their own begins, is a source of just pride to fox hunters and foxhound owners in particular and all dog fanciers in general. "The American Foxhound," by Haiden C. Trigg (Glasgow, Ky.), is devoted specially to foxhounds, giving in particular a history of the Trigg, Birdsong and Maupin strains.

The pleasures of the chase are most charmingly set forth, the care and feeding is described, the methods of different sections are kindly and temperately treated. Some short biographies and letters of famous fox hunters are given, and pedigrees of famous dogs and much other matter. The "Death of Hornet" has a most pathetic vein; a famous dog, dashing, swift and a leader of leaders, he met death in full cry at the head of the pack while crossing a railroad in close pursuit of a red fox. Paper covers, 94 pages.

POINTS AND FLUSHES.

By the death of Dr. Samuel Fleet Speir, of Brooklyn, Long Island loses one of its best known sportsmen. Dr. Speir was a founder of the Robins Island Club, and always took genuine enjoyment in the club's field trials, where he would handle his own dogs in the members' stakes and win with them. He was a type of those who find in field sports relaxation from arduous professional work, and among the sportsmen of the day none stood higher in the respect of friends.

Mr. W. W. Welch, 20 and 21 Loan and Trust Building, Milwaukee, Wis., writes us that all communications for the Milwaukee Kennel and Pet Stock Association should be directed to him, and that Mr. Morrison is no longer secretary.

The mention of the premium list of the Mascoutah Kennel Club's show in our last issue was an error. A copy of this year's premium list was mailed to us, and not noticing the date and assuming it was the list of the forthcoming show, it was treated as such.

Concerning the cropping question Mr. A. H. Heppner, in defense of the practice, lays down this startling law: "The higher a dog is bred the stronger his inclination to degenerate." This effectually settles the question of prepotency, transmission of good qualities, the benefits of pure breeding, etc. The sun do move.

Philip Bauer, Tivoli, N. Y., offers different kinds of dogs. Mr. M. Baker, Washingtonville, O., offers setters. Box 14, Whitestone, N. Y., offers pointer. Standard Kennel, Georgetown, N. Y., offers beagles. Geo. T. Robinson, Philadelphia, offers dogs for sale or exchange.

The vote of the A. K. C. on the cropping question failed to abolish cropping from A. K. C. jurisdiction on account of the constitutional restriction concerning a two-thirds vote, but a majority of the votes were against cropping, and many of the delegates, who as such voted in favor of cropping, repudiated the sentiments of their clubs and announced their personal disapproval of the practice.

The Southern Field Trial Club has declared its trial off and the club has disbanded.

The judges who have been engaged for the first Champion field trial competition are: Messrs. A. Merriman, W. S. Bell and John King.

Yachting.

Practical Yacht Designing.

IT can hardly be said that any pressing need exists of treatises on naval architecture and of its application to the designing of yachts and boats; any deficiency in this direction has long since been made good by the standard works of several well-known writers. For those who can afford the expense of several rather costly works, and the time necessary to their careful study, there is no lack of practical and reliable information; but the inquiries which we constantly receive from the readers of the FOREST AND STREAM prove that there are many to whom, for one reason or another, the existing works, extensive and thorough as they are, must be practically sealed books. There has been for some years a growing demand for a simple treatise on practical yacht designing, presenting the subject in a way that may be readily understood by anyone of ordinary intelligence and possessing a desire to learn and a knowledge of arithmetic.

With the first number of the coming year the FOREST AND STREAM will begin the publication of a series of articles designed to meet this demand, the author being Mr. W. P. Stephens, for the past twelve years in charge of the Yachting and Canoeing Departments of the paper. Mr. Stephens is specially qualified for this task by his long experience as an amateur designer and builder, and as a critical and technical writer on yachting; and by his close intercourse through the FOREST AND STREAM with those for whom the work is specially intended. His personal experience as an amateur designer and builder, dating back to a time when text-books on these subjects were unknown, have shown him what the amateur and the tyro want to know, and his later work at building, designing and writing has fully qualified him to teach what he has learned. His book on "Canoe and Boat Building for Amateurs," though written in 1883, is still recognized as the standard work on small craft; and within its limited scope a thorough text-book of the subject.

The new work will cover a much wider field: the designing of pleasure craft, from canoes and boats up to such sizes of yachts proper as would be likely to engage the attention of the amateur. The same methods will be followed as have proved so successful in "Canoe and Boat Building," the thorough presentation of the leading principles and the elaborate attention to these details, apparently trivial, which are essential to success in any mechanical work.

The opening chapters will deal first with the object of designing—the production of some sort of floating vessel—the means to this end, from the first consideration of the conditions of the particular case to the turning over to the builder of the drawings, specifications and tables of offsets. The many intermediate steps will be treated of in detail, the first considerations, the selection of the class, the principal dimensions and the elements of the design, the tools, materials and work of drawing, the calculations and the specifications. The articles will be fully illustrated, and will continue through the year to such a length as the subject demands.

LORD DUNRAVEN and Mr. Glennie sailed on the Teutonic on Dec. 18 and are due at New York on Christmas Day. Mr. Herreshoff was recently in New York for a day and in conference with Messrs. Iselin, Kane and Duncan. It is about settled that Joseph H. Choate will represent Mr. Iselin before the committee; but it is not known whether Lord Dunraven will have a legal adviser. The first meeting of the committee will be held on Dec. 27.

A Handy Sailing Boat.

THE accompanying design for a small sailing boat of light draft was made by Messrs. Carl L. Holmer and F. J. Trist, of Cleveland. The form of the boat is very easy and at the same time powerful, and with the lead ballast outside she should make a comfortable little craft for those who do not care for the lively hiking called for in a racing 15 or 20-footer. The after end would have been improved in appearance by a longer overhang. The boat is arranged for afternoon sailing, with large cockpit and seats for several people. The dimensions are:

Length over all	22ft. 6 in.
l.w.l.	18ft.
Beam, extreme	6ft. 6 in.
l.w.l.	5ft. 10 in
Draft, hull	1ft. 3½in.
with board	3ft. 4 in.
Freeboard, bow	2ft.
least	1ft. 0½in.
stern	1ft. 3 in.
Displacement, fresh water, lbs	1,920
Ballast, lead, on keel, lbs	500
Mainsail, sq. ft.	220
Jib, sq. ft.	50

The boat is shown with both jib and mainsail and canoe rig, gunter sails being used in each case.

New Steam Yachts.

IN addition to the 135ft. composite steam yacht Hiawatha, which Messrs. Charles L. Seabury & Co. are building for Mr. Charles Fleischmann, and which will be commanded by Capt. B. F. Smith, and the 85ft. twin-screw steam yacht building for a Brooklyn gentleman, they have also secured another order for a composite steam yacht, which they are to build for a New York yachtsman and member of the New York Y. C. The principal dimensions are 140ft. over all, 114ft. l.w.l., 17ft. beam, 9ft. 6in. depth, 7ft. draft. The keel, stem and sternpost will be of white oak; frames, reverse frames, keelsons, breast hooks, deck beams, diagonal straps and fore and aft plates of steel. The planking will be of yellow pine, one thickness below waterline and two thicknesses above. All fastenings will be of Tobin bronze through bolts. There will be four steel bulkheads made watertight. The rudder will be of bronze. The yacht will be flush decked and schooner rigged, with awning to extend full length of the vessel, and fitted over bridge. The dining room and pantry will be in the deck house.

A chain locker will be fitted in the forehold; aft of chain locker will be the crew's toilet room. Aft of toilet room will be fitted berths and lockers for crew. Next aft will be arranged two staterooms—one for captain and one for engineer—fitted with wide berth each, with drawers underneath; also small dressing case. All these rooms will be thoroughly ventilated and lighted by port lights. Aft of the staterooms will be the galley, to extend full width of the vessel and fitted with large ice box, dish rack, dresser, locker for coal, sink and pump, range, etc. Large skylight fitted over same for ventilation and light. A large ice box will also be fitted under floor of crew's quarters.

Aft of galley will be arranged the boiler and engine room. The bulkhead aft of boiler will be protected with a non-conducting material.

Aft of the boiler space will be arranged owner's staterooms, 8ft. 6in. long, and the two to take up the full width of the yacht. These staterooms to be finished in maple with bird's-eye maple panels. There will be one berth thwartship and one fore and aft. There will be a dressing case, folding washstand and clothes closet arranged in either room. A sliding door with full length mirror on both sides will connect the rooms. There will also be a sliding door connecting with a starboard room with a toilet room directly aft, which will be fitted with w. c. and wash basin, to drain overboard. This room finished in mahogany.

Aft of the toilet room will be arranged a single stateroom, mahogany finished. Aft of stateroom will be arranged the bath and toilet room, fitted with copper tinned bathtub arranged to pump water from the sea or tank, fitted with w. c., wash basin, etc. Also furnished with hooks, towel rack, etc. This room will be lighted and ventilated by part of a skylight in deck, also by ports in sides. Aft of toilet are arranged two closets for use of clothes, painted white inside.

On the opposite side of the yacht will be arranged two guests' staterooms, with a passageway 30in. wide between these rooms and the rooms on the starboard side, the passageway to be finished in white and gold. These two rooms to be fitted with two berths, dressing cases, etc.

Directly aft of the owner's staterooms will be the main saloon, finished in ivory and gold. This room will be furnished with desk, racks for bric-à-brac, and space for piano. The headroom will be 6ft. 4in.

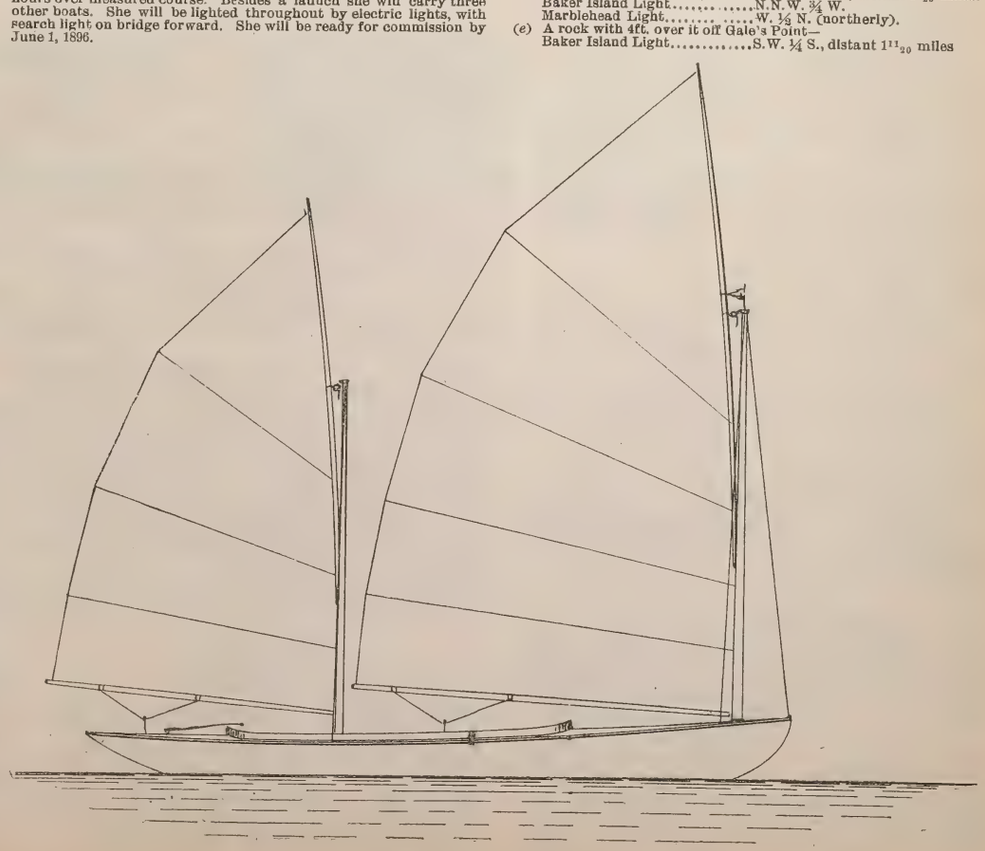
The engine will be a Seabury design triple expansion of latest type and a Seabury safety water tube boiler, fitted with everything necessary to conform with the U. S. Inspection Service. The guaranteed speed in contract is sixteen miles per hour for three consecutive hours over measured course. Besides a launch she will carry three other boats. She will be lighted throughout by electric lights, with search light on bridge forward. She will be ready for commission by June 1, 1896.

SAIL PLAN—JIB AND MAINSAIL RIG.

Important Changes in Hydrography.

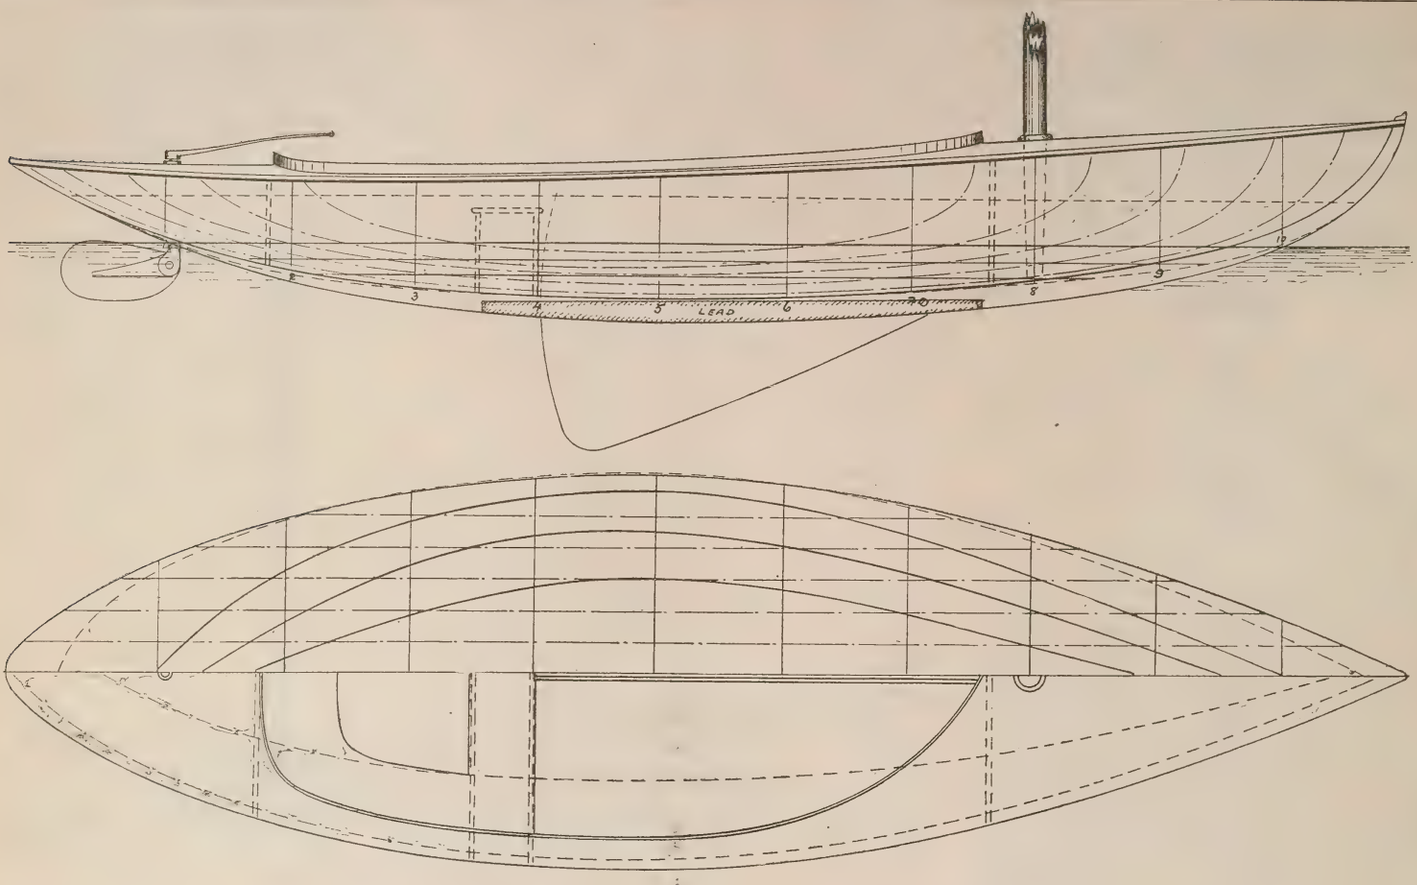
THE U. S. Coast and Geodetic Survey gives notice of some important changes in the hydrography of two localities much frequented by yachtsmen, off Marblehead and in Long Island Sound.

The resurvey of the coast of Massachusetts, between Boston and Cape Ann, has developed many changes in the hydrography. The following dangers to navigation, recently determined by Lieut. Robert G. Peck, United States Navy, Assistant, Coast and Geodetic Survey, commanding the steamer Bache, have been reported to the office of the Survey and are shown on the charts on the bearings:



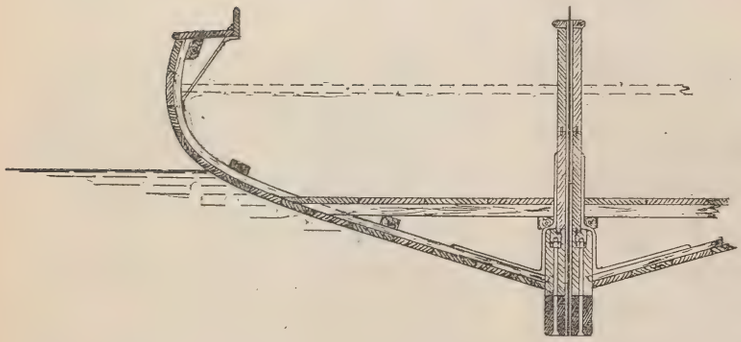
(*a*) A rock with 12ft. over it—
Roaring Bull Spindle.....N.E. 5/6 E., distant 7/8 mile.
Dread Ledge Spindle.....W. 5/8 S.
Ram Island (center).....N.W. 1/2 N.

(*b*) A rock with 16ft. over it—
Roaring Bull Spindle.....N E., distant 1/4 mile.
Ram Island (center).....W. by N. 1/4 N. (northerly).
Flying Point.....N. 3/4 E.

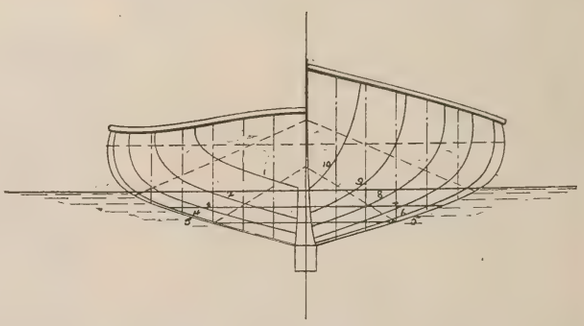


(*c*) A rock with 18ft. over it—
Roaring Bull Spindle.....S W. 3/4 W., distant 9/10 mile.
Tom Moore's Rock Spindle.....N.N.W. 3/8 W.
Marblehead Light.....N. by W. 1/2 W.
This is the rock on which the yacht Volunteer struck in 1892.

(*d*) A rock with 18ft. over it near S.E Breakers—
Halfway Rock Beacon.....W.S.W. 3/8 W., distant 1 1/20 miles.
Baker Island Light.....N.N.W. 3/4 W.
Marblehead Light.....W. 1/2 N. (northerly).



(*e*) A rock with 4ft. over it off Gale's Point—
Baker Island Light.....S.W. 1/4 S., distant 1 11/20 miles



SAIL PLAN—CANOE RIG.

SAILING BOAT—Designed by Carl L. Holmer and F. J. Trist, 1895.

SECTION SHOWING CONSTRUCTION.

BODY PLAN.

Chubb's Island (N. tangent)....W.N.W. ½ W.
Salt Rock.....E. ⅝ N.

(*f*) A rock with 15ft. over it off N. point of Marblehead Neck—
Marblehead Light.....W.S.W. ¼ W., distant $^{3}/_{20}$ mile.
Marblehead Rock Beacon.....S.E. by S.

(*g*) A rock with 10ft. over it off N. point of Marblehead Neck—
Marblehead Light.....W. ½ S., distant $^{3}/_{20}$ mile.
Marblehead Rock Beacon.....S.E. ½ S.

(*h*) A rock with 10ft. over it near Boden's Rock, Marblehead Harbor—
Marblehead Light.....E N.E. ¼ E., distant ⅛ mile.

(*i*) A rock with 7ft. over it in Marblehead Harbor—
Marblehead Light.....N.E. by E. ⅜ E., distant $^{13}/_{20}$ mile.
(Nov. 21, 1895.)

This affects Charts 335, 109, 6 and 7; United States Coast Pilot, Atlantic Coast, Part III., pp. 30, 31, 32, 36, 37.

Long Island Sound, between Cornfield Point and Clinton Harbor, the more important changes developed by special examinations made by Lieut. L. M. Garrett, United States Navy, Assistant, Coast and Geodetic Survey, commanding the steamer Endeavor, are indicated on the charts on the bearings:

(*a*) A rock with 16ft. over it off Stone Island Reef—
Kelsey Point.....N. by E. ⅞ E., distant 1⅛ miles.
Falkner Island Light.....W. ⅜ S.

(*b*) A spot with 18ft. over it off Duck Island—
Duck Island (S. Point).....N. ¾ E., distant ⅜ mile.
Saybrook (Lynde Point) Light.E. ¼ N.

(*c*) The 18ft. curve, marking the shoal making off from Duck Island, has been extended to a point where the southern end of Duck Island bears N. ¾ W., distant about 1½ mile.

(*d*) A small bare rock is shown in the continuation of the line of ledges making off from Menunketesuck Point, to the westward of Westbrook Harbor in a position from which Saybrook (Lynde Point) Light bears E. 1⅛ S., distant 5⅜ miles.

(*e*) A rock with 1½ft. of water off Chapman Point—
Chapman Point.....N. ½ E., distant ¼ mile.

(*f*) A rock with 15ft. over it off Cornfield Point—
Hen and Chickens Beacon.....W.S.W., distant ⅛ mile.
Saybrook Breakwater Light....E.

(*g*) A spot with 18ft. over it off Cornfield Point—
Hen and Chickens Beacon.....S.W. by W. ¼ W., distant $^{7}/_{16}$ mile.

(*h*) The 18ft. curve now extends ¼ mile from Cornfield Point in a westerly direction toward Hen and Chickens Beacon; it includes a 15ft. spot at its outer end and shoaler water inside.
(November 23, 1895.)

This affects Charts 253, 115, 52 and 8; United States Coast Pilot Atlantic Coast, Part IV., pp. 51, 67, 68.

A New Linton Hope Yacht.

The Racine Yacht and Boat Works have now on the stocks a new racing craft from a recent design by Linton Hope, to be 18ft. l.w.l., 30ft. over all and 7ft. 8in. beam. The hull will be of double-skin mahogany and will weigh not over 600lbs. The shoal racing craft of the Sorceress type is growing rapidly in numbers among the racing yachtsmen on the smaller Western lakes, and is displacing the older type of centerboard skimming-dish and sandbag racer.

Edmond Redmond, a Rochester yachtsman, has obtained a patent on a device consisting of a long tube running out at right angles to the side of a vessel and held by guy lines, the outboard end of the tube being fitted with a tank for water, and the inboard end being connected with a pump, suitable valves being arranged so that the tank may be quickly emptied after being filled by the pump. It is proposed to rig the tube out on the windward side and pump the tank full of water, thus, by means of the longer lever and the weight of the tank of water, obtaining stability sufficient to dispense with lead ballast.

YACHTING NEWS NOTES.

Colonia, cutter, one of the Cup trial yachts of 1893, has just been sold by her owners to Chas. A. Postley, formerly owner of Resolute, schr., which he rebuilt and renamed Ramona. Under the direction of A. Cary Smith the yacht will be converted into a schooner, a centerboard being added. She has lain at Tebo's since she was in use last season as a practice ship for Defender's crew, but has just been, towed to Elizabethport, where she will be docked at Nixon's yard for examination. The original syndicate included Archibald Rogers, J. E. Brooks, J. Pierpont Morgan, F. W. Vanderbilt, W. K. Vanderbilt and F. Augustus Schermerhorn.

On Dec. 14 an adjourned meeting of the Lake Sailing Skiff Association was held at the Victoria Y. C. clubhouse, Hamilton. It was resolved to establish a 15ft. class under the regulations of the Seawanhaka C. Y. C. class; and that a meet be held at Toronto from July 2 to 4 inclusive under the management of the Toronto S. S. Club.

The book of the Corinthian Fleet of New Rochelle, formerly the Corinthian Mosquito Fleet, for 1895, shows a membership of 117 and a fleet of 57 yachts. The club has done well during the season in its new quarters on Harrison Island, New Rochelle Harbor.

A rumor, that was contradicted before it was well on its way, was started in London last week to the effect that Mr. Watson had an order for a cutter to carry 20,000sq. ft. of sail, to be built by Hendersons, to challenge for the Cup.

At the Herreshoff shops two steam yachts of 100ft. are in hand and the first of the new 30-footers is on the stocks. These boats will be 47ft. 6in. over all, about 30ft. l.w.l. and 9ft. beam. The inner skin will be of ⅝in. yellow pine and the outer of ½in. mahogany.

"Bound Foreign": Yampa, schr., R. S. Palmer, to the West Indies; Comanche, stmr., H. M. Hanna, to the West Indies; Valiant, stmr., W. K. Vanderbilt, to the Mediterranean; Talisman, stmr., under charter to K. H. Ballatyne, to the West Indies; Sultana, stmr., J. R. Drexel, to the Mediterranean; Navahoe, cutter, R. P. Carroll, to the West Indies.

The steel steam yacht building by Nixon at the Crescent yard for P. A. B. Widener will be named Josephine.

Whileaway, sloop, has been sold by the estate of the late G. F. Randolph to Dr. F. H. Boynton, of New York.

The first mess dinner of the winter will be given by the Seawanhaka C. Y. C. at the Hotel Brunswick on Dec. 30 at 7:30.

Canoeing.

AMERICAN CANOE ASSOCIATION, 1895.

Commodore, Wm. R. Huntington, Rome, N. Y.
Sec'y-Treas., Thos. H. Stryker, Rome, N. Y.
Librarian, W. P. Stephens, Bayonne, N. J.

PURSERS.

Atlantic Division, H. M. Dater, 307 Adelphi street, Brooklyn, N. Y.
Central Division, Wm. H. Martin, Rochester, N. Y.
Eastern Division, R. H. Hammond, Worcester, Mass.
Northern Division, Douglas H. McDougal, Toronto, Canada.
Annual dues, $1; initiation fee, $1.
Annual meet, Aug. 14-28, Grindstone Island, St. Lawrence River.

Rochester C. C.

The annual meeting of the Rochester C. C. was held at the uptown headquarters, 901-903 Granite Building, on Dec. 16. There was the largest attendance at this meeting for years, much important business being transacted. Several important amendments to the constitution were adopted, among which was one putting the control of the club in the hands of a board of trustees of five members. Only one meeting will hereafter be held during the year.

Officers for the ensuing year were elected as follows: Capt., Al. T. Brown; Mate, C. F. Wolters; Purser, Chas. A. Bruff; Meas., Robert B. Mimmack; Regatta Committee, H. M. Stewart, H. S. Moody and H. V. Backus; Board of Trustees, Al. T. Brown, C. F. Wolters, Robert B. Mimmack and H. M. Stewart.

An annex for the members' families and lady friends will be built this spring, and will also contain quarters for the steward and a repair shop.

The annual banquet will be held on Jan. 11, 1896.

The ice boating season has already opened and several members have had an opportunity to run their flyers. There will be seven boats on the bay this winter, all built within this year. A new one by Polk, of Poughkeepsie, will make its appearance.

Rifle Range and Gallery.

Empire Rifle Club.

New York, Dec. 19.—The Empire Rifle Club, of this city, closed its prize shoot this evening. During the two days that it was open the tunnels at Zettler's gallery, 219 Bowery, the club's headquarters, were kept quite busy. Wm. Rosenbaum, of the Empire Rifle Club, and M. Dorrler, of the Zettler Rifle Club, tied for first honors. The conditions were: German ring target reduced, 3 shots, off-hand, 75ft., .22cal. rifle, best two scores to count. The winners were: Wm. Rosenbaum, 75, 74; M. Dorrler, 75, 74; L. Busse, 74, 74; M. Engel, 74, 74; P. Kossek, 75, 73; G. Worn, 74, 74; F. Ross, 74, 74; L. Flach, 74, 73; J. Dietz, Jr., 74, 72; Charles Horney, 73, 73; Ivo Eberhart, 73, 73; P. Knoetgen, 73, 72.

Zettler Rifle Club.

New York, Dec. 17.—The members of the Zettler Rifle Club made the following scores at the regular weekly shoot of the club held this evening:

R Busse.....	236	240	245	244	243	H D Muller.....	239	235	241	244	238
Dr J A Boyken	244	243	240	241	240	H Muenz.....	227	230	227	232	237
S Buzzini.....	233	238	229	233	226	F C Ross.....	240	243	244	245	247
G W Downs....	217	220	230	234	230	C G Zettler.....	244	234	244	244	239
M B Engel.....	243	242	245	238	243	B Zettler.....	237	245	244	240	247
L Flach.....	244	242	242	247	248	F Fabarius.....	222	207	206	215	231
H Holjes.....	244	241	244	245	244						

Rifle Shooting at Paterson.

Paterson, N. J., Dec. 15.—Messrs. Irons and Johnson, of this city, shot a match to-day at the Bunker Hill range. The conditions were: 25 shots per man, 20-ring target, ¾in. circles, 6in. bull, $10 a side. Referee, W. Dutcher. Score:

Irons.
16 17 17 18 0 17 20 18 18 18 19 18 17 17 17 15 19 19 13 18 18 18 18 18 20—424

Johnson.

Dutcher.

Cincinnati Riflemen.

CINCINNATI, O., Dec. 15.—The following scores were made by members of the Cincinnati Rifle Association at their range to-day. Conditions: 200yds., strictly off-hand, 3lbs. trigger pull, at the standard target, 7 ring black. Mr. Frank Speth, one of our old members who for the past three years has been living in Colorado on account of ill health, is now with us again, and we are happy to note a great change for the better in his appearance.

	10	9	6	7	8	5	9	6	6	5—69

Hasenzahl, Roberts and Payne shot a three-cornered match of 50 shots per man to-day. The veteran, Wm. Hasenzahl, won, carrying off the honors with a total of 400 points; Payne was second with 397; Roberts third with 386. Another match of a similar nature, will be shot by these three men in the near future.

Pistol Shooting in Massachusetts.

SPRINGFIELD, Mass., Dec. 20.—The Smith & Wesson Pistol Club, of this city, have been practicing considerable at their range lately, and the following scores are evidence of the fine work they are doing at the targets.

Dec. 17.—Scores made to-day at 50yds. on Standard American target:

C S Axtelle	7	10	10	10	9	9	10	10	10	10—95
Re-entry	7	10	10	8	10	7	8	10	10	10—90
Z C Talbot	9	10	8	10	9	9	10	9	10	10—94

Greenville Rifle Club.

GREENVILLE, N. J., Dec. 16.—The members of the Greenville Rifle Club held their annual election of officers this evening, the meeting taking place in the club's headquarters, Jersey City Heights. The following is a list of the officers elected and committees appointed: President, Edward Barr; Vice-President, John Hovindon; Treasurer, Edward Wuestner, Jr.; Financial Secretary, Henry Gotthardt; Recording Secretary, George W. Plaisted; Captain, Colin Boag; Assistant Captain, Charles H. Chavant; Sergeant-at-Arms, Frank Wuestner. Trustees: John H. Hill, William H. Robidoux, James Boag, William C. Collins and Charles H. Chavant. Shooting Committee: Colin Boag, chairman; Charles H. Chavant, Michael Darrler, George W. Plaisted, Henry Lutz, William L. Collins and George Purkess.

Rifle Notes.

THE Ideal Manufacturing Co. has perfected a mould and reloading tool for the new .30-30 Winchester and Marlin smokeless cartridges.

The mould casts a bullet with a beveled groove near the front end, around which the shell is crimped, thus preventing undue pressure on the powder.

The Iroquois Rifle Club, of Pittsburg, Pa., held a prize shoot at its indoor rifle range, 1717 Jane street, on Christmas Day; $50 was given away in prizes.

The opening prize shoot of the Empire Rifle Club, of New York, was held on Wednesday and Thursday evenings, Dec. 18, 19, at the club's headquarters, Zettler's gallery, 219 Bowery. The club gave away $124 in prizes.

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

1896.

Jan. 1.—NEWARK, N. J.—Fifteenth annual New Year's Day reception and tournament of the South Side Gun Club; targets. Shooting commences at 9:30 A. M. W. R. Hobart, Sec'y.

Jan. 1.—INDIANAPOLIS, Ind.—Shoot of the Limited Gun Club. Royal Robinson, Sec'y.

Jan. 4.—WILMINGTON, Del.—Second team race between All-Philadelphia and the Delaware State League, 25 men to a team; all day shoot on the grounds of the Wilmington Rod and Gun Club.

Jan. 4-5—PHOENIX, Ariz.—Annual tournament of the Arizona State Sportsmen's Association.

Jan. 7-11.—SAN ANTONIO, Texas.—Grand mid-winter tournament, under the auspices of Texas State Sportsmen's Association and management of J. M. George and O. C. Guessaz (Texas Field), $2,000 added.

Jan. 23-24.—UTICA, N. Y.—Mid-winter tournament on the grounds of the Oneida County Sportsmen's Association; live birds and targets. J. W. Fuiford, Manager.

Feb. 1.—————.—Third team race between All-Philadelphia and the Delaware State League, 26 men to a team. (Place of shoot not fixed.)

April 1-3.—NEW YORK.—Interstate Association's Fourth Annual Grand American Handicap.

April 14-17.—ATCHISON, Kansas.—Thirteenth annual open to all, and second annual manufacturer's amateur tournament; $1000 added money and manufacturers' prizes. Lou Erhardt, Sec'y.

April 22-24.—WELLINGTON, Mass.—Tournament of the Boston Shooting Association; targets. P. R. Dickey, Manager.

April 30-May 2.—NEWBURGH, N. Y.—Annual spring tournament of the West Newburgh Gun and Rifle Association; targets and live birds; added money announced later.

May 5-8.—NEW YORK.—Tournament of the American E. C. Powder Company; $2,000 added money.

May 12-15 — MEMPHIS, Tenn. — Tournament of the Memphis Gun Club, $2,000 added money.

May 12-14.—DAYTON, O.—Annual tournament of the Ohio Trap-Shooters' League. Ed. Taylor, Sec'y.

May 19-22.—CINCINNATI, O.—Tournament of the Hazard Powder Co. R. S. Waddell, Agent.

May 20-24.—KANSAS CITY, Mo.—Nineteenth annual convention and tournament of the Missouri State Fish and Game Protective Association. J. H. Durkee, Sec'y.

May 26-28.—FRANKFORT, Kan.—Annual tournament of the Kansas State Sportsmen's Association.

May 30-June 1.—MILWAUKEE, Wis.—Eleventh annual tournament of the South Side Gun Club.

June 1-6.—CHICAGO, Ill.—Twenty-second annual tournament of the Illinois State Sportsmen's Association. H. B. Meyers, Sec'y.

June 8-13.—BUFFALO, N. Y.—Thirty eighth annual tournament of the New York State Association for the Protection of Fish and Game, under the auspices of the Audubon Gun Club. E. W. Smith, Sec'y.

June 17-19.—CLEVELAND, O.—Third annual tournament of the Chamberlin Cartridge and Target Company.

July 30, 31.—GOSHEN, Ind.—Midsummer tournament of the Goshen Gun Club.

Oct. 7-9.—NEWBURGH, N. Y.—Annual fall tournament of the West Newburgh Gun and Rifle Association; targets and live birds; added money announced later.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 318 Broadway, New York.

The selection of Elkwood Park as the scene of the next grand American handicap should meet with the general approval of all intending shooters. The only objection that can be brought to bear upon the selection is on the score of distance, and that in point of time is not as bad as it was to Willard Park last April. One hour and a half without a change, with trains stopped right at the entrance to the park, is nothing compared with the conveniences when one gets there. Shooters who don't want to sleep in New York every night can find ample and excellent accommodation at Branchport, not a mile from the park, or at Long Branch, about one and one-half miles away, with plenty of stages at hand to carry them to and from their hotel. The breezes from the Atlantic Ocean, which can be enjoyed to the full at Long Branch, are calculated to make a man shoot straight whether he wants to or no.

A special feature of the programme for the Grand American Handicap meeting will be radically different from that presented last year. As we understand it, all events under 10 birds will be high guns; 10 birds and over class shooting, with the exception of the Grand American Handicap itself. It is possible that even in this event the management may throw out some additional inducements to the general shooting public to enter, a suggestion being made to divide $1,000 between the three high guns, the balance being divided as in class shooting among those who have not got placed. Manager Shaner will tell everything in his programme, which he will go to work upon at once. There will be three sets of traps, one of the three being devoted entirely to miss-and-outs. This last set is bound to be a popular one.

Paul North, the gentleman "from Ohio," was present at the annual meeting of the Interstate Association last week. While talking about the prospects for next year, Paul said that he thought there would be more target shooting than ever; his sales told him that, he said. Regarding the E. C. tournament in May, he said it ought to be the biggest affair of the kind ever held. "You've never had a large tournament, with such an amount of added money—$2,000—for the boys to come after. They'll come from all over the country to see New York and to get a slice of that $2,000." We think Paul is right, and also think that the championship event will be a grand success, and that after it is over we will be able to hail a real all-round champion at targets.

The New Utrecht Gun Club is launching out into the target field, and will shoot a team race with a team from the Boiling Springs Gun Club, of Rutherford, N. J., some time in January. In making a match with the Boiling Springs Club, the New Utrechts are flying at high game, as the Jersey boys can get together a very hot team. We understand the teams will be quite large, probably twenty-four men a side. Among the target shots of the New Utrechts are: Capt. Money and his son, Noel; L. H. Schortemeier, Charlie Floyd, H. P. Fessenden, A. A. Hegeman, D. Deacon, Gus Greiff, W. F. Sykes, Dr. Sheppard, Dr. Pool, etc.

Judge Lindsay's handicap will be adopted at the Chamberlin tournament next May. This handicap, it will be remembered, handicaps not by distance nor by style of shooting; it merely makes winners pay more money into the next event they shoot in than those do who were unlucky enough not to get a portion of the purse. Roila Heikes *et hoc genus omne*, literally the crackerjacks, will pay about $15 a day *more* into the purses than do the "contributors." This will reduce winnings and losings; a mighty good thing for trap-shooting in general.

The decision of the board of directors of the Interstate Association to adopt the Rose system with a view to giving it a trial at some of their tournaments in the season of 1896 is on a par with the progressive nature of the work done by the Association in past years. In our issue of March 16, 1895, we gave an exhaustive review of the workings of this system under the title of the "straight-out" system, believing that the scheme for the division of purses was the right one, and the one best calculated to attract the rank and file of trap-shooters.

We learn from H. A. Penrose, who was in the city last week, that all challengers for the Du Pont Smokeless championship cup, now held by Fred Gilbert, of Spirit Lake, Ia., must use Du Pont in their matches for the cup. It was originally stated that challengers might use any powder, but such was not the intention of the donors of the trophy. G. P. Christianson, who has challenged for the cup, has a good reputation in Iowa and in the West as a live-bird shot, so Gilbert will have to look out.

The departure of B. G. Empie from Lynchburg, Va., will be a sad blow to the Lynchburg Gun Club. Mr. Empie was very popular in that city, and was a moving spirit in its trap-shooting affairs. In his new home, New Orleans, he will find ample opportunities for testing his skill at targets, and, judging from the scores made from time to time by members of the Louisiana Gun Club, he will have to put his best foot foremost if he wants to hold his own.

Capt. Adrian C. Anson took part in the live-bird events on the second day of the Elizabeth, N. J., bi-monthly tournament. Anson shouldered Brewer's 8lb gun, marched to the 28yds. mark, shoved in a couple of Brewer's 3¼in. Roman candles, called "Pull," and knocked down his birds in capital shape; the close shooting qualities of the gun bothered him a little when he had to put it on to incomers.

John Benner, of Fanwood, N. J., has been laid up for about six months with a broken leg that stubbornly refused to heal. Within the past week or two, although going on crutches, John has been trying his hand at the trap. He took part in the Elizabeth Gun Club's 25-bird race on Dec. 20, scoring 20 for the 27yds. mark, making some good second barrel kills.

A meeting of the executive committee of the Missouri State Fish and Game Protective Association will be held in Kansas City, Mo., during the first week in January, for the purpose of completing arrangements for the nineteenth annual tournament of the Association, which will be held in that city May 20-24 next.

The third match between ten-men teams of the New Utrecht Gun Club, of Brooklyn, N. Y., and the Riverton Gun Club of Riverton, N. J., will be shot on Wednesday, Jan. 15, on the grounds of the Riverton Gun Club. The match is at 15 live birds per man, 29yds. everybody.

Are you going to San Antonio? That's about the most common remark hereabouts just now. The Northern contingent will be a strong one, both in point of numbers and in shooting powers. Added money to the amount of $2,000 cannot fail to attract the boys.

Bert Claridge, one of the best shots of the Baltimore Shooting Association, made a good record on Dec. 13, the second day of the Fairview Gun Club's tournament at Lancaster, Pa. In three 10-bird races at live birds he scored 29 out of 30.

EDWARD BANKS.

The Lancaster Tournament.

LANCASTER, Pa., Dec. 13.—To-day was the second day of the Fairview Gun Club's tournament. The programme for the day consisted of four 10-bird races at live pigeons. The scores in the various events were:

No. 1: Farmer 9, Martin 8, Benner and Paine 7, Johns and Brant 6, Young 3, Garber 1.

No. 2: Coldren, Claridge and Gent 9, Penrose, Esterly and Russell 6, Myers and Zellers 5.

No. 3: Franklin and Claridge 10, Coldren and Gent 9, Penrose, Esterly, Dommell and Adams 8, Clover 7, Russell 6, Myers 4.

No. 4: Claridge 10, Clover and Franklin 9, Gent 8, Taylor 7, Adams and Penrose 6, Anderson and Myers 4, Hart 3.

The Interstate's Pro ramme for 1896.

OUR report of the Interstate Association's stockholders' annual meeting, held on Tuesday, Dec. 17, was given in full in last week's issue. At the time of going to press, however, the board of directors had not yet decided upon a plan of action for 1896.

Mr. Shaner, the manager, suggested that, in view of the success that had attended the Association's efforts in the past season, the Association confine its attention, for one more season at least, to the South. He put forward the claim of the Palmetto Gun Club, of Charleston, S. C., to another Interstate tournament on its grounds, and recommended that the tournament and classification committee act favorably on the club's application, in consideration of the way in which the bad weather spoiled the tournament in Charleston in October, 1894.

A letter from A. R. Rose, of Salida, Col., was also read by the manager. In his letter Mr. Rose urged that the Association adopt his system of dividing purses with a view to giving it a practical trial. The system was thoroughly explained to the board of directors, examples worked out by Mr. Rose being placed before it in order that the board might the more readily understand the system. It was evident that the directors thought well of the system, as they decided to give it a trial at some of the Association's tournaments in 1896.

It was also decided by the board that the programme for the Grand American Handicap meeting be drawn up on these lines: All events of 10 birds or more except the Grand American Handicap should be class shooting; all events of less than 10 birds should be high guns. There will be three sets of traps in use: one for the Grand American Handicap, another for sweeps, and a third for miss-and-out events.

The board was also unanimous that the traps over which the Grand American Handicap are shot should be King traps. This was ordered because it was thought best that the traps for this event should be those which were commonly in use all over the country and to which, therefore, the public were accustomed.

A motion was made and carried unanimously that an admission fee of 50 cents per day to witness the shooting be charged alike to all except those who had entered in the Grand American handicap. It was positively stated that such admission fee (gate money) could not possibly be construed as taking away from any shooter his amateur status, since he would in no way be benefited by the same. The Hurlingham Club, the Gun Club of London, Circle des Patineurs, of Paris, etc., all charge a round sum as admission fee to witness the shooting at their grounds.

This concluded the business before the board of directors.

CLASSIFICATION AND TOURNAMENT COMMITTEE.

The classification and tournament committee met Dec. 18 at the store of Von Lengerke & Detmold. The chief business was the selection of the place where the Grand American Handicap was to be held. Elkwood Park was decided upon. The dates are April 1-3. It was decided to charge everybody except contestants in the Grand American Handicap the sum of 50 cents per day for admission to the grounds, as decided upon by the board of directors; but it was also agreed that each shooter upon paying his first entrance fee each day into any sweepstake event shot on the grounds should be credited in that entrance fee with the 50 cents he had paid as admission fee to the park.

The circuit for 1896 was arranged as follows, subject, of course, to alteration: Six target tournaments to be held during the season, three of them in the Southern States and three in the New England States—Maine, New Hampshire and Vermont; the three last being conditional upon the Association receiving applications from gun clubs in those States warranting the holding of such tournaments.

Elkwood Park, N. J., is located on the New York & Long Branch R. R., about a mile from Branchport station and two miles from Long Branch. Two trains each way will be stopped at the platform at the park gates, thus doing away with the necessity of a transfer of guns and shellbags to hacks. At Branchport and at Long Branch there is plenty of good hotel accommodation. The fare from New York over either road is $1 50 the round trip.

Lynchburg Gun Club.

LYNCHBURG, Va., Dec. 11.—Messrs. Nelson, Dornin and Scott, three members of the Lynchburg Gun Club, braved the snow and cold wind that blew over the shooting grounds and made the following scores at the club's weekly shoot:

No. 1:

Nelson	1101101111111111110111100—20
Dornin	0111001011011110111011111—18

A FAREWELL TO EMPIE.

Dec. 17.—This afternoon the members of the club gave a farewell complimentary shoot to our friend and fellow sportsman, B. G. Empie. Mr. Empie goes South in a few days to make his home in New Orleans; he carries with him the best wishes of the many friends he has made while in this city, who part with him with the greatest regret. During the afternoon the following scores were shot:

No. 1.		No. 2.	
Nelson	0101011111111101111111111—21	1111111101111111100101101—20

F. M. D.

Singac Gun Club.

PATERSON, N. J., Dec. 17.—The first shoot under the auspices of the new gun club at Singac, N. J., was held to-day on the club's grounds in rear of Arthur Bunn's hotel. The grounds have been much improved of late, a shooting platform, tables for scorers, seats for the shooters, etc., having been added to them since the last shoot was held. As Bunn always has a lot of good birds on hand anyone wishing to have a little shooting cannot do better than make the trip to Singac.

To-day the attendance was not very large, but it was decidedly fast, Jack Brewer, Jim Elliott, Frank Class, etc. The birds were an excellent lot of fast flyers. It will be noticed from the scores that even the cracks seemed to find them hard enough; the pigeons were all blue birds, not a light colored one among the lot. Class won first money alone in the main event with 13 out of 15; Elliott missed his first 3 birds and then killed 12 straight by some capital shooting, Eddie Morgan, who came late and borrowed a gun, tieing him for second money. Chris. Wright missed his 1st, 5th, 13th and 15th, but took third money alone with 11 out of his 15. Brewer shot in bad luck, several of his birds getting away extremely hard hit. A peculiar feature of the event was the fact that five out of the seven shooters missed their first birds; at the end of the 5th round Class was high with 4 out of 5. Brewer's handicap of 33yds. was very severe considering the character of the birds. Elliott, of course, was shooting his Winchester; his mark was 32yds.

After the main event—the New York contingent had to leave to catch a train—a couple of handicap sweeps were shot, with the result that Morgan won the first with 4 out of 5, Chris. Wright taking the second with a straight score of 5. Out of the 150 birds trapped during the day, 43 were scored lost. Scores:

No. 1, 15 live birds, $10 entrance, handicap rise, 50yds. boundary, Hurlingham rules:

F Class (31)	0212222020122222—13	J L Brewer (33)	2101021022210022—10

DUTCHER.

In New Jersey.

AT THE CARTERET CLUB.

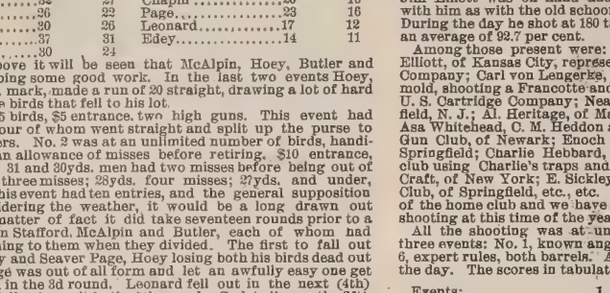
Dec. 18.—Eleven shooters took part in the afternoon's programme at the Carteret Club to-day. Shooting commenced as usual about 1:55 and stopped at 4:40, a total of 291 birds, exclusive of practice birds, being shot at in the above space of time, an average of about 105 per hour. There was scarcely a breath of air to aid the birds, but the lack of it was hardly noticed, the pigeons flying very strongly and taxing the skill of the shooters to the utmost. The following table shows the work of each man for the afternoon:

	Shot at.	Scored.		Shot at.	Scored.
McAlpin	32	29	Stafford	30	23
Butler	32	27	Chapin	20	16
Hoey	26	22	Page	23	16
Wright	20	26	Leonard	17	12
Thomas	37	31	Edey	14	11
Godchalk	30	24			

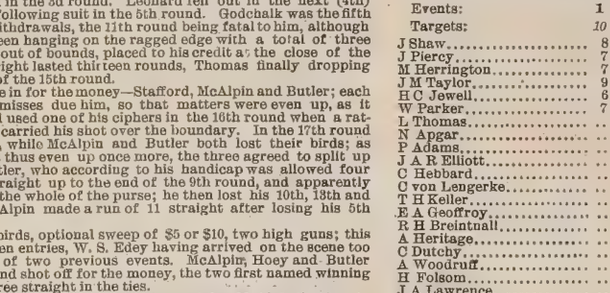
From the above it will be seen that McAlpin, Hoey, Butler and Wright were doing some good work. In the last two events Hoey, from the 31yds. mark, made a run of 20 straight, drawing a lot of hard ones among the birds that fell to his lot.

No. 1 was at 5 birds, $5 entrance, two high guns. This event had eight entries, four of whom went straight and split up the purse to facilitate matters. No. 2 was at an unlimited number of birds, handicap rise, with an allowance of misses before retiring. $10 entrance, two high guns; 31 and 30yds. men had two misses before being out of it; 29yds. men, three misses; 28yds. four misses; 27yds. and under, five misses. This event had ten entries, and the general supposition was that, considering the weather, it would be a long drawn out affair. As a matter of fact it did take seventeen rounds prior to a division between Stafford, McAlpin and Butler, each of whom had still a miss coming to them when they divided. The first to fall out were Fred Hoey and Seaver Page, Hoey losing both his birds dead out of bounds; Page was out of all form and let an awfully easy one get away from him in the 3d round. Leonard fell out in the next (4th) round, Chapin following suit in the 5th round. Godchalk was the fifth on the list of withdrawals, the 11th round being fatal to him, although Thomas had been hanging on the ragged edge with a total of three losses, all dead out of bounds, placed to his credit at the close of the 7th round. Wright lasted thirteen rounds, Thomas finally dropping out at the end of the 15th round.

This left three in for the money—Stafford, McAlpin and Butler; each man had two misses due him, so that matters were even up, as it were. Stafford used one of his ciphers in the 16th round when a rattling good bird carried his shot over the boundary. In the 17th round Stafford killed, while McAlpin and Butler both lost their birds; as everything was thus even up once more, the three agreed to split up the purse. Butler, who according to his handicap was allowed four misses, went straight up to the end of the 9th round, and apparently had a cinch on the whole of the purse; he then lost his 10th, 13th and 17th birds; McAlpin made a run of 11 straight after losing his 5th bird.



No. 3 was 10 birds, optional sweep of $5 or $10, two high guns; this event had eleven entries, W. S. Edey having arrived on the scene too late for either of two previous events. McAlpin, Hoey and Butler went straight and shot off for the money, the two first named winning after killing three straight in the ties.



No. 4 was a $5 miss-and-out with ten entries, McAlpin having to hurry away to catch a train. Thomas, Page and Wright divided the purse after killing 8 straight, Hoey dropping out in the eighth round. The traps fell to the shooters as follows:

	No. 1.	No. 2.	No. 3.	No. 4.	No. 5.	Total.
Thomas	9	8	8	8	4	37
Godchalk	8	4	10	2	6	30
Stafford	7	6	2	9	6	30
Page	0	10	9	2	2	23
McAlpin	11	6	3	8	4	32

ELIZABETH GUN CLUB'S BI-MONTHLY.

Dec. 20.—The two days' shoot of the Elizabeth (N. J.) Gun Club, which was brought to a conclusion this afternoon, was entirely satisfactory in every way. The weather, as is usual at this club's tournaments, was all that could be desired, the days being as springlike as the pleasantest days in April. In point of attendance, the club cannot find any ground for complaint, while the comfort of the shooters was well looked after. The catering department, too, was in the same capable hands that have handled it since the institution of the Elizabeth Gun Club and its bi-monthly tournaments.

First Day.

On Dec. 19, the first day of the tournament, targets were used, the club issuing a long and varied programme of events. Altogether twelve regular events and two extras were shot off, the total calling for 205 targets. J. S. Shaw and G. Piercy both started in at the commencement of the programme and went right through to the end. M. Herrington, the popular representative of the W.-A. powder, and Neaf Apgar, who shoots Walsrode, shot in thirteen out of the fourteen events. Major Taylor took part in the first two events, scoring 19 out of a possible 20. He then had to leave to attend to other business. Jim Elliott was on hand and easily carried off the honors. It was with him as with the old schooner America—"Elliott first, no second." During the day he shot at 180 targets, scoring 167 out of that number, an average of 92.7 per cent.

Among those present were: J. S. Shaw, of Long Branch; J. A. R. Elliott, of Kansas City, representing the Winchester Repeating Arms Company; Carl von Lengerke, of the firm of Von Lengerke & Detmold, shooting a Francotte and Schultze powder; T. H. Keller, of the U. S. Cartridge Company; Neaf Apgar and Dutchy Smith, of Plainfield, N. J.; Al. Heritage, of Marion; R. Heber Breintnall, L. Thomas, Asa Whitehead, C. M. Heddon and E. A. Geoffroy, of the South Side Gun Club, of Newark; Enoch Miller, from the Union Gun Club, of Springfield; Charlie Hebbard, of the Empire Target Company, the club using Charlie's traps and targets; J. Grier, of Dunellen; Harry Craft, of New York; E. Sickley, one of the cracks of the Union Gun Club, of Springfield, etc., etc. Add to the above number four or five of the home club and we have quite a large entry for a day's target shooting at this time of the year.

All the shooting was at unknown angles with the exception of three events: No. 1, known angles; No. 4, traps in reversed order; No. 6, expert rules, both barrels. About 2,700 targets were thrown during the day. The scores in tabulated form are as follows:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14
Targets:	10	10	15	10	20	15	20	15	25	10	15	10	15	15

Second Day.

The shooting to-day was at live birds. The programme contained three events: No. 1, 7 birds, $5; No. 2, 10 birds, $5; No. 3, 25 birds, $10 (birds extra), handicap. The birds, under the superintendence of Nate Astfalk, flew remarkably well; taking into consideration the fact that they had absolutely no wind to help them, they were a wonderful lot, and reflected great credit on the gun club's management.

The day being a lovely one, the attendance of spectators was quite large; the number of shooters was not as numerous as might be expected, but this is a busy time. As it was there was an entry list of eleven in the big event. No. 1 had six entries, Elliott and L. Thomas going straight. No. 2, the 10-bird event, had seven entries; in this event Class and Allen Willey went straight, while three others came out with 9 apiece.

For the main event Elmer E. Shaner, manager of the Interstate Association, acted as referee. In connection with Mr. Shaner's work it should be mentioned that a point came up for consideration that caused a lot of argument, several holding that the referee's decision was not correct. We uphold the referee, claiming that his decision was absolutely correct. As there appeared to be much doubt on the point, and as there also appeared to be a lack of knowledge of the rules (A. S. A. by the way), we give the circumstances and the rule on the point:

In the 9th round Willey drew a white bird from No. 1 trap that flew a short distance as soon as the trap was pulled, alighting about 6ft. on the far side of the trap from the shooter; Willey did not shoot at it, but seeing that it had gained about 2yds. on him, called "no bird," turning away from the score as he did so. He was then told that he must kill it, so fired at it on the ground, wounding it, whereupon it flew away, the second barrel doing it very little harm; outside the fence the scouts took good care of it. "Lost bird," called the referee. Then ensued quite a lot of talk on the subject, several claiming that as Willey had called "no bird" he was entitled to another; Willey himself, under the impression that he had a right to another bird, took his place at the score until the referee told him to let the next shooter, Anson, go to the score.

The whole point is this: The bird had been on the wing, and therefore could not be refused by the shooter; *it had not refused to fly.* A. S. A. rules say: "The shooter may declare a bird refusing to fly when the trap is pulled a 'no bird'!" After the bird had flown a short distance and alighted, the shooter had the option of two methods of dealing with it: either to wait for it to be flushed in the manner usual at the club's grounds, or to kill the bird on the ground, thus making it a "no bird." It must be remembered that the rules do not permit a shooter to call a "no bird" for any other reason than its refusal to fly. The bird in question had not in our opinion refused to fly; it had only refused to fly far enough to suit the shooter.

In regard to the work done by the shooters, Brewer shot a good race, losing a bird that was hard enough to take advantage of a temporary slip up on the part of the man at the score. Elliott shot well, but drew far more than his share of the hard birds; he did not draw an easy bird while we were watching the shooting. Aaron Woodruff shot well up as usual, handling Allen Willey's Greener as if he had been used to it for a long time. Class went straight up to the 20th round, but then fell away; the first bird he lost was a rasper from No. 1; it was a bad bird to see, and Class "fudged," the bird gaining 5 or 6yds. on him before he got his first barrel off. H. Koegel, a good shot from the East Side Gun Club, of Newark, N. J., was lightly handicapped at 27yds., and should have landed higher up on the list than he did; he is a left-handed shooter, and like all other south-paw shooters is able to point his gun very straight. Willey also shot well, and but for his piece of bad luck mentioned above should have landed a notch higher than he did.

The scores in the three events shot during the day were:

	No. 1.	No. 2.
J A R Elliott	1112112—7	2120112211—9
F Class	1120121—6	1122232222—10
Jas Timmons	1122030—5	0121112111—9
A C Anson	1211102—6	1111122021—9
N Astfalk	1020011—4	0200201101—5
L Thomas	2221122—7	.....
A Willey	.....	1122122222—10
A Bunn	.....	2022012012—7

No. 3, 25 live birds, handicap, $10, birds extra, 3 moneys, class shooting. Brewer (32) 24, Willey (30) and Woodruff (29) 23, Class (31), J. G. Piercy (27) and H. Koegel (27) 22, Timmons (28) 21, Elliott (31), Anson (28) and Bonner (27) 20, Bunn (28) withdrew in the 10th round.

EDWARD BANKS.

Trap Around Buffalo.

BUFFALO, N. Y., Dec. 14.—At the Audubon Gun Club's weekly shoot to-day, Secretary E. W. Smith and C. S. Burkhardt chose sides for a live bird match under the following conditions: 10 live birds per man, $3, losing team to pay for the birds and a supper for the winners. As a result of some good work on the part of J. A. Phillips, one of the oldest shots in Buffalo, who scored the only 10 straight, and also on the part of E. W. Smith and H. Erb, each of whom killed 9 out of 10, the ten men captained by Secretary Smith will eat a good supper at the expense of Capt. Burkhardt's team. Score:

E. W. Smith's Team.		C. S. Burkhardt's Team.	
J A Phillips	1112112211—10	Schwartz	1111101112—9

On Long Island.

HELL GATE GUN CLUB.

Dec. 17.—The members of the Hell Gate Gun Club turned out in force at the club's monthly shoot held at Dexter Park this afternoon; twenty men put down their names and shot their 10 birds in the club shoot. Of this number only two, Louis Schortemeier and Trostell, killed their 10, three others losing but one bird. The following are the scores in full:

F Trostell (28) 2111112121—10	J P Dannefelser (28) 0010121122— 7
L Schortemeier (28) 2211111211—10	C Dege (28) 0121001121— 7
E Doeinck (25) 1221011212— 9	Gus Nowak (28) 2●22●00222— 6
A Kodel (28) 1220221112— 9	W Rabenstein (28) 0021221200— 6
A Schmitt (28) 0221122211— 9	J Sehm (25) 0000211202— 5
J H Voss (28) 2●2●211112— 8	C G Riger (28) 0011100002— 4

In sweeps for the price of the birds Held beat out A. Schmitt by the score of 9 to 8.

BERGEN ROD AND GUN CLUB.

Dec. 17.—Robert L. Valentine and James W. Reynolds, both members of the Bergen Rod and Gun Club, shot a match to-day on the club's grounds at Flatlands, Reynolds winning after a very close race. The conditions were: Reynolds 29yds., Valentine 30yds., 25 live birds per man, Valentine also conceding his opponent two misses as kills. The score was: Reynolds 22, Valentine 21.

After the match a sweep at 5 birds, $1 entrance, two high guns, was shot with the following result: John S. Fletcher (26) 4, Robt L. Valentine (28) 5, James W. Reynolds (28) 3, Alfred W. Morton (26) 2, Peter K. O'Brien (28) 3, John A. O'Donnell (26) 2, John G. Schaeffer (27) 3, Charles W. Reynolds (26) 2, Daniel G. Quinn (26) 1, Louis G. Wilson (26) 3, Thomas P. O'Dell (26) 4.

NEW YORK GERMAN GUN CLUB.

Dec. 18.—A few sweeps were shot this afternoon by some members of the New York German Gun Club at Dexter Park, the following scores being made:

	No 1.	No. 2.	No. 3.	No. 4.
A Schmitt	11100—3	22111—5	22202—4	0222—3
F Radle	20022—3	20220—3	02010—2	2001—2
S J Held	22222—5	11011—4	12202—4	2012—3
B Koenig	10100—2	10121—4	22201—4	1211—4
C Weidmann	10121—4	10001—2	12010—3	1211—4
F Sauter	.....	12011—4	00120—2	.....
J Racky	.....	11011—4	22001—3	0100—1

August Schmitt, president of the club, and C. Weidmann also shot a race at 15 live birds, Schmitt winning easily by scoring 12 to 9.

IDLE HOUR GUN CLUB.

Dec 16.—The Idle Hour Gun Club held its monthly shoot at Dexter Park this afternoon, and some of the best birds in the coops were trapped, the consequence being that 5 out of 7 was high, two out of the nine competitors killing that number. The score was as follows:

Club shoot, 7 live birds, A. S. A. rules governing: Henry J. Boemmermann (28) 5, Richard Sandiford (28) 5, Adolph Busch (25) 4, Christopher M. Lakeman (25) 3, John F. C. Elfers (25) 3, Henry A. Meyn (25) 3, Henry J Offermann (23) 3, Frederick A. Wilshusen (25) 1, Gus. Viemeister (23) 1.

After the club shoot a sweep at 3 live birds, $1 entrance, was shot with the following results: Sandiford, Offermann, Meyn and Wilshusen 3; Busch and Boemmermann 2, Elfers 0.

ENTERPRISE ROD AND GUN CLUB.

Dec. 19.—The Enterprise Rod and Gun Club, of Brooklyn, N. Y., held its monthly shoot this afternoon at its grounds, North Beach, L. I. The club event is at 7 live birds per man, handicap rise, scores to count in the yearly averages. John H. Cameron was the only one to score 6 out of 7, making the top score for the day. Result:

John H. Cameron (26) 6, J. G. Williamson (25) 5, F. C. England (27) 4, A. B. Whyland (25) 3, F. B. Weedon (23) 2, J. W. O'Rourke (25) 2, P. C. Kennedy (26) 2, A. G. Hudson (25) 3, W. H. Greene (25) 3, S. G. Porter (26) 1, J. A. Andrews (25) 3.

Sweep No. 1, 3 live birds, $1 entrance: Andrews, Hudson and Porter, 3; England, Whyland and Greene, 2; Weedon, O'Rourke and Kennedy, 1.

No. 2, same: Andrews, England, O'Rourke and Kennedy, 2; Porter, Weedon and Greene, 1; Whyland, 0.

Ideal Gun Club of St. Paul.

ST. PAUL, Minn., Dec. 15.—The Ideal Gun Club, of this city, held its second shoot of the season to-day. There was a good attendance of members, twenty-nine shooters taking part in the various events decided. Speaking of the club and its members the St. Paul *Pioneer Press* says: "The Ideal Gun Club is not a misnomer. It is composed of a number of the best and most enthusiastic marksmen in the city, and their outings so far this season have been of the most interesting and successful character. Among its members are champions at the trap and in the field, and one of them, Tom Poucher, is said to be hard to defeat on a duck pass by any sportsman in the State, or out of it, perhaps. The Ideal has had a standing challenge out all season to any other club in the State, but so far it has not been taken up."

Live birds were used to-day and so good were they that, though the events were two of 8 birds and one of 6, only one straight score was made. Scores:

Donnelly Defeats Doremus.

PATERSON, N. J., Dec. 14.—Shooting around Paterson has not been very brisk lately. The Paterson Gun Club expects to get to work again as soon as Boyle Bros. get the grounds in shape after the Rugby football season they have passed through. The birds furnished for to-day's match at Willard Park were an excellent lot, and were entirely too fast for Doremus, who is a great shot in the brush and under Long Island rules. His match to-day with Donnelly was something new to him, and notwithstanding his allowance of five misses as kills, he was beaten one bird, the score standing 16 to 15.

Conditions: 25 live birds, $25 a side, 30yds. rise, 50yds. boundary, loser to pay for the birds:

Three New Books of the Field.

North American Shore Birds.

A History of the Snipes, Sandpipers, Plovers and their Allies inhabiting the beaches and marshes of the Atlantic and Pacific Coasts, the prairies and the shores of the inland lakes and rivers of the North American Continent; their popular and scientific names, together with a full description of their mode of life, nesting, migration and dispersions, with descriptions of the summer and winter plumages of adults and young, so that each species may be readily identified. A Reference Book for the Naturalist, Sportsman and Lover of Birds, by Daniel Giraud Elliot. With seventy-four plates. Price $2.50.

Mr. Elliot's purpose being to make a book which should be for the sportsman and bird lover rather than for the naturalist, he has written his descriptions so that they shall be plain and easily comprehended.

Scientific Duck Shooting in Eastern Waters.

By R. S. NYE. Cloth, 116 pages. Price $1.25.

The author has something to say about duck shooting, and he says it without drawing on a thousand extraneous circumstances, or dwelling on others beyond their value, and having skillfully presented what he had to say, he stops—a matter not always truly appreciated by speakers and writers.

Caribou Shooting in Newfoundland, 1894.

By DR. S. T. DAVIS ("Shongo"). 52 Illustrations. Price $1.25.

A vast fund of practical information is embodied, which will be invaluable to any one who takes a similar trip, and which was obtained by the author only after much correspondence, study and personal experience.

ANUALS.

Game Laws in Brief.

Laws of the United States and Canada Relating to Game and Fish Seasons. For the guidance of sportsmen and anglers. Compiled by CHARLES B. REYNOLDS, Editor of *Forest and Stream*. Paper. Price, 25 cents. Gives all sections relative to game and fish seasons, limit of size or number, non-residents, transportation, etc. All in brief, but full enough for the practical guidance of sportsmen and anglers. Carefully compiled, and shorn of verbiage. Handsomely illustrated with numerous half-tone engravings from *Forest and Stream*.

Woodcraft.

By NESSMUK. Cloth, 160 pages. Illustrated. Price $1.00. A book written for the instruction and guidance of those who go for pleasure to the woods Its author, having had a great deal of experience in camp life, has succeeded admirably in putting the wisdom so acquired into plain English.

Tricks of Trapping.

Camp Life in the Woods, and the Tricks of Trapping and Trap Making. Containing hints on camp shelter, all the tricks and bait receipts of the trapper, the use of the traps with instructions for the capture of all fur-bearing animals. By W. HAMILTON GIBSON. Illustrated. Cloth, 300 pages. Price, $1.00.

... Cabins.

...ow to Build and Furnish Them. By WILLIAM S. WICKS. New and enlarged edition. Price, $1.50. Mr. Wicks might have called his book "Every Man His Own Log Cabin Builder," for he has set out to describe fully and particularly each detail in the process of construction. Plans are given for cabins, large and small, with details of exterior and interior.

Hints and Points for Sportsmen.

Compiled by "SENECA." Cloth. Illustrated, 224 pages. Price, $1.50. This compilation comprises six hundred and odd hints, helps, kinks, wrinkles, points and suggestions for the shooter, the fisherman, the dog owner, the yachtsman, the canoeist, the camper, the outer, in short for the field sportsman in all the varied phases of his activity.

SHOOTING.

Names and Portraits of Birds

Which Interest Gunners, with Descriptions in Language Understanded of the People. By GURDON TRUMBULL. Cloth, 222 pages. Price, $2.50. The average gunner with this work at hand would have little difficulty in identifying the contents of his bag from the text alone. Identification is further facilitated by portraits of the birds.

Antelope and Deer of America.

A comprehensive scientific treatise upon the natural history, including the characteristics, habits, affinities and capacity for domestication, of the Antilocapra and Cervidæ of North America. Second edition. By JOHN DEAN CATON, LL.D. Cloth, 426 pages, 50 illustrations; steel portrait. Price, $2.50.

The Gun and Its Development.

With Notes on Shooting. By W. W. GREENER. Breechloading Rifles, Sporting Rifles, Shotguns, Gunmaking, Choice of Guns, Chokeboring, Gun Trials, Theories and Experiments. Fully illustrated. Cloth, 770 pages. New edition. Price, $2 50.

The Art of Shooting.

An Illustrated Treatise on the Art of Shooting. With Extracts from the Best Authorities. By CHARLES LANCASTER. Illustrated with numerous drawings from instantaneous photographs. Price, $3.00. New edition.

Field, Cover and Trap-Shooting.

By CAPTAIN ADAM H. BOGARDUS, Champion Wing Shot of the World. Embracing Hints for Skilled Marksmen; Instructions for Young Sportsmen; Haunts and Habits of Game Birds; Flight and Resorts of Waterfowl; Breeding and Breaking of Dogs. With an appendix. Cloth, 493 pages. Price, $2.00. There is no other man in this country—or in any other, for that matter—better fitted to teach a novice the art.

The Still-Hunter.

A Practical Treatise on Deer-Stalking. By T. S. VAN DYKE. The information contained in "The Still-Hunter" is as exhaustive as it is possible to make it. 390 pages. Price, $2.

The Breech-Loader and How to Use It.

288 pages. Price, $1.00 A book for that numerous class of sportsmen who delight in a day's shooting, but have neither the time nor the means to make the sport a life's study.

CAMP AND HOME.

Uncle Lisha's Shop.

Life in a Corner of Yankeeland. By ROWLAND E. ROBINSON. Cloth, 187 pages. Price, $1.00. "Uncle Lisha's Shop" is brimful of quaint humor and sentiment, and there is an unmistakable touch of human nature in Uncle Lisha himself and his good old wife, Aunt Jerushy; in Sam Lovel, the hunter, and in fact in all the other characters introduced.

Sam Lovel's Camps.

A sequel to "Uncle Lisha's Shop," by ROWLAND E. ROBINSON. Cloth. Price, $1. When Uncle Lisha went West, Sam Lovel took Antoine as his partner, and the fortunes and misfortunes of the two as trappers are described with all the charm of our author's quaint style, while their friends and enemies, and all with whom they are brought into contact, in the course of the story, step on to the stage real living creatures.

Pawnee Hero Stories and Folk-Tales,

With Notes on the Origin, Customs and Character of the Pawnee People. By GEORGE BIRD GRINNELL. Cloth, 417 pages. Illustrated. Price, $1.75. New edition, revised. Like most Indian tribes, the Pawnees are story tellers. They have a vast fund of folk-tales and traditions, which have been handed down from father to son, and transmitted from generation to generation. Years ago, when the tribe lived in Nebraska, the author of the present volume camped and hunted with them, and joined in their village life. The nights were given up to story telling, and many of the tales told in the lodge and by the flickering camp-fire were carefully translated and written down. When published they excited great interest. They are tales of daring and adventure, weird accounts of magic, mystery and the supernatural; relations of the ways of life in the old, wild days; stories of war and the craft of war parties, the history of the tribe as treasured by the very old men. There is mother-wit in these stories, they are full of humor, sentiment, pathos and human nature.

Blackfoot Lodge Tales.

The Story of a Prairie People. By GEORGE BIRD GRINNELL. Cr. 8vo., $1.75. In this volume the story of the Blackfoot tribe is told by a friend, one who has hunted with them on the prairies, slept in their lodges, lived in their camps, and shared their daily life. The stories which constitute this history have been taken down by the author from the lips of the narrators, and are given without change as told to him. There is a singular and charming freshness about the stories, which give the history of renowned warriors of ancient and modern times, show how ancient customs arose, and explain natural phenomena. The account of the daily life, customs, and history of the Blackfeet presents a series of graphic pictures of savage life in peace and in war.

Our New Alaska;

Or, The Seward Purchase Vindicated. By CHARLES HALLOCK. Cloth, 209 pages, illustrated. Price, $1.50. Mr. Hallock's writings are always vivid and full of life.

THE KENNEL.

Dogs: Their Management and Treatment

IN DISEASE. A Study of the Theory and Practice of Canine Medicine. By ASHMONT. Cloth, 208 pages. Price, $2.00. The *Forest and Stream* says that this is one of the most valuable treatises on canine management and therapeutics that has appeared on this side of the water.

Kennel Record and Account Book.

Boards, $3. An indexed volume of 180 pages, consisting of a series of carefully prepared blank entry forms suited to the registration of all kennel events and transactions.

Dog Points and Standards.

First Lessons in Dog Training, with the Points and Standards of all Breeds of Dogs. Paper, new edition, 106 pages, revised to date. Price, 50 cents.

Training vs. Breaking.

Practical Dog Training; or Training vs. Breaking. By S. T. HAMMOND, Kennel Editor of *Forest and Stream*. Revised and re-written. To which is added a chapter on training pet dogs, by an amateur. Cloth, 165 pages. Price, $1. A book for dog owners, who, by the instructions here plainly given, can successfully train their hunting dogs.

Modern Training;

Handling and Kennel Management. By B. WATERS. Illustrated. Cloth, 373 pages. Price, $2. This treatise is after the modern professional system of training. It combines the excellence of both the suasive and force systems of education, and contains an exhaustive description of the uses and abuses of the spike collar.

House and Pet Dogs;

Their Selection, Care and Training. Paper, price 50 cents.

Lee's Modern Dogs.

History and Description of the Modern Dogs (Sporting Division) of Great Britain and Ireland. By RAWDON B. LEE, kennel editor London *Field*. Illustrated, 584 pages. Price, $6. This is a standard work by an acknowledged authority, and is up to date. It treats all sporting breeds exhaustively. The illustrations are idealized portraits of typical specimens.

Kennel Secrets.

How to breed, exhibit and manage dogs. By ASHMONT. The dog from the time he is conceived to the time he curls himself up for his last long sleep is treated from every standpoint that could possibly occur to a man of wide experience with dogs. Every important subject that has engaged attention has been fully discussed, generalities being held practically valueless and misleading. Illustrated, 344 pages. Price, $3.00.

The Spaniel and Its Training.

By F. H. F. MERCER. To which are added the American and English Spaniel Standards. Cloth. Illustrated. Price, $1.

Scientific Education of Dogs for the Gun.

By H. H. Cloth. Price, $2.50. The instructions are the result of the author's amateur practical experience of 37 years. *Forest and Stream* says: "This work is a very well written treatise upon the subject, containing some new ideas and much that is interesting and instructive to the new beginner as well as not a little that will be beneficial to even old hands to study."

YACHT AND CANOE.

Small Yachts.

Their Design and Construction, Exemplified by the Ruling Types of Modern Practice. With numerous plates and illustrations. By C. P. KUNHARDT. New ed., 470 pp. of type and illustrations and 87 plates. Size of page, 14½×12½. Price, $10. This book is intended to cover the field of small yachts, with special regard to their design, construction, equipment and keep.

Steam Yachts and Launches;

Their Machinery and Management. By C. P. KUNHARDT. With plates and many illustrations. New ed., 267 pp. Price, $3.00. A complete review of the development and present status of the marine engine and boiler as applied to steam yachting.

Canoe and Boat Building.

A Complete Manual for Amateurs. Containing plain and comprehensive directions for the construction of Canoes, Rowing and Sailing Boats and Hunting Craft. By W. P. STEPHENS, Canoeing Editor of *Forest and Stream*. Cloth. Fourth and enlarged edition, 264 pages, numerous illustrations, and fifty plates in envelope. Price, $2 00.

Canoe Handling.

The Canoe: History, Uses, Limitations and Varieties, Practical Management and Care, and Relative Facts. By C. BOWYER VAUX ("Dot"). Illustrated. Cloth, 168 pages. Price, $1.00.

Yacht Architecture.

By DIXON KEMP, Associate of the Institute of Naval Architects and Member of Council. Second edition. Super-royal 8vo., 530 pages, numerous plans and designs. Price, $16.80.

A Manual of Yacht and Boat Sailing.

By DIXON KEMP, Associate Institute of Naval Architects (Member of the Council). 750 pages, with numerous plans and designs. New edition. Price $12.00.
